6. RIGHT TO APPEAL DECISION

Persons who are dissatisfied with a decision of the City Council may have the right to a review of that decision by a court. The City has adopted Section 1094.6 of the California Code of Civil Procedure, which generally limits to ninety days (90) the time within which the decision of the City Boards and Agencies may be judicially challenged.

7. CONSENT CALENDAR

The following items listed are considered routine and will be enacted by a single motion and roll call vote by the City Council. Items may be removed from the Consent Calendar upon request of a Councilmember or a citizen in which event the item will be considered at the completion of all other items on the agenda. The motion by the City Council on the Consent Calendar will approve and make findings in accordance with Administrative Staff and/or Planning Commission recommendations.

AGENDA SUMMARY REPORT

SUBJECT: Notification of Grant Funds Received and Disbursed Related to the Proposition 84 Integrated Regional Water Management Program Funding Source for the Construction of Water Wells 4 and 9 and the Recycled Water Project.

DEPARTMENT: Water Resources **PREPARED BY:** Jarod Thiele, Public Works Management Analyst
PRESENTER: Consent Calendar

ATTACHMENTS:
None

Summary: Council will receive notification of grant funds received and disbursed related to the Proposition 84 Integrated Regional Water Management Program funding source for the Construction of Water Wells 4 and 9 and the Recycled Water Project.

Background: On June 1, 2019, City Council authorized the City Manager to negotiate and execute agreements with Humboldt County and the California Land Stewardship Institute (CLSI) for grant funds awarded through the Integrated Regional Water Management Program funded through Proposition 84.

Discussion: In 2016, Staff was successful in preparing and submitting grant applications for two separate projects. The first project was for partial construction of Phases 1-3 of the Recycled Water System and the construction of offsite storage ponds in collaboration with the CLSI. The second project was for the replacement of Water Well 4 and the installation of Water Well 9. This project included collaboration with Humboldt County as the grant administrator and Redwood Valley, and Millview County Water Districts as sub-grantee partners for the construction of new interties in each district.

The City was awarded $2,062,570.85 for the first project and $1,554,450 for the second project.

Construction was complete on the Recycled Water System and the offsite storage ponds in the fall of 2019, and the well and intertie project was complete in the spring of 2019.

Staff submitted disbursement requests in order to receive the grant funds from CLSI and Humboldt County. Once the funds were received, they were disbursed to the partners as follows and by project:

Recycled Water Project:
City- $2,020,026.20
Milovina Brothers- $22,917.44
K2 Farming Co, LLC- $19,627.21

Well and Intertie Project:
City- $1,317,212.56
Redwood Valley County Water District- $123,870.99
Millview County Water District- $113,366.45

Recommended Action: Receive notification of grant funds received and disbursed related to the Proposition 84 Integrated Regional Water Management Plan funding source for the Construction of Wells 4 and 9 and the Recycled Water Proejct

BUDGET AMENDMENT REQUIRED: Yes

CURRENT BUDGET AMOUNT: $0

PROPOSED BUDGET AMOUNT: 82227113.52100- $237,237.44

AGENDA SUMMARY REPORT

SUBJECT: Adoption of Resolution Establishing Fee for Mailing the Agenda or Agenda Packet, Per the Ralph M. Brown Act, Section 54954.1.

DEPARTMENT: City Clerk **PREPARED BY:** Kristine Lawler, City Clerk
PRESENTER: Consent Calendar

ATTACHMENTS:

1. Proposed Resolution

Summary: The City Council will consider adopting a resolution establishing a fee for mailing the agenda or agenda packet, per the Ralph M. Brown Act, Section 54954.1.

Background: Government Code Section 54954.1 for the Ralph M. Brown Act reads as follows:

Any person may request that a copy of the agenda, or a copy of all the documents constituting the agenda packet, of any meeting of a legislative body be mailed to that person. If requested, the agenda and documents in the agenda packet shall be made available in appropriate alternative formats to persons with a disability, as required by Section 202 of the Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12132), and the federal rules and regulations adopted in implementation thereof. Upon receipt of the written request, the legislative body or its designee shall cause the requested materials to be mailed at the time the agenda is posted pursuant to Section 54954.2 and 54956 or upon distribution to all, or a majority of all, of the members of a legislative body, whichever occurs first. Any request for mailed copies of agendas or agenda packets shall be valid for the calendar year in which it is filed, and must be renewed following January 1 of each year. The legislative body may establish a fee for mailing the agenda or agenda packet, which fee shall not exceed the cost of providing the service. Failure of the requesting person to receive the agenda or agenda packet pursuant to this section shall not constitute grounds for invalidation of the actions of the legislative body taken at the meeting for which the agenda or agenda packet was not received.

Whenever an agenda is posted, an electronic email goes out to all those who have signed up for the distribution list – made free and easily available on the Agendas & Minutes page of the City's website (www.cityofukiah.com/meetings). However, the Brown Act provides that an individual may obtain a mailed copy of the agenda or agenda packet upon request. For clarification, the request per the Brown Act to receive a copy of the agenda or agenda packet is different from a Public Records Act request.

Discussion: Staff is recommending that Council consider adopting the resolution (Attachment 1) establishing a fee of .10 cents per page plus postage, to compensate for the cost of providing the service.

Recommended Action: Adopt resolution establishing fee for mailing the agenda or agenda packet, per the Ralph M. Brown Act, Section 54954.1.

RESOLUTION NO. 2020 –

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF UKIAH ESTABLISHING A FEE UNDER CALIFORNIA GOVERNMENT CODE SECTION 54954.1 - RALPH M. BROWN ACT - FOR MAILING AN AGENDA OR AGENDA PACKET.

WHEREAS,

1. An electronic agenda or agenda packet may be obtained free by signing up on the distribution list made available on the Agendas & Minutes page of the City's website at: www.cityofukiah.com/meetings; and

2. Government Code Section 54954.1 under the Ralph M. Brown Act reads, "The legislative body may establish a fee for mailing the agenda or agenda packet, which fee shall not exceed the cost of providing the service;" and

3. The City Council has never established a fee for mailing the agenda or agenda packet under Government Code Section 54954.1.

NOW, THEREFORE, BE IT RESOLVED:

1. That requests to mail an agenda or agenda packet for the City Council, all City Boards & Commissions, and all legislative entitles within the City of Ukiah, will be subject to the following established fee:

   $ .10 cents per page plus cost of postage.

2. Fee shall be payable prior to receiving documents.

AGENDA SUMMARY REPORT

SUBJECT: Approval of Amendment No. 2 with SHN Consulting Engineers and Geologists in the Amount of $10,000 for Additional Design Services for Pressure Zone 2 South Reservoir and Approval of Corresponding Budget Amendment.

DEPARTMENT: Water Resources **PREPARED BY:** Jarod Thiele, Public Works Management Analyst
PRESENTER: Consent Calendar

ATTACHMENTS:
1. Agreement w SHN
2. Amendment 1- Signed
3. SHN Amendment 2

Summary: Council will consider approval of an amendment with SHN Consulting Engineers and Geologists (SHN) in the amount of $10,000 for additional design services for Pressure Zone 2 South Water Reservoir and approval of corresponding Budget Amendment.

Background: On October 5, 2016, Council awarded a contract to SHN Consulting Engineers and Geologist for the design of replacement Pressure Zone 2 South Reservoir in the amount of $84,472 (Attachment 1). Staff recommended this Water Reservoir be replaced due to its age and poor condition.

On May 6, 2020, Council approved Amendment No.1 (Attachment 2) in the amount of $21,680 for additional services related to lead and asbestos testing of the existing reservoir.

Discussion: Upon testing of the existing reservoir it was determined that the external coating did contain lead based materials. Additional resources were required by SHN Consulting Engineers and Geologists to develop a Lead Compliance Plan in order to ensure the tank demolition is in compliance with regulations involving lead based substances. Staff has requested assistance in reviewing submittals for the project.

Staff is requesting approval of Amendment No. 2 (Attachment 3) in the amount of $10,000 for a total contract amount of $116,152 and approval of corresponding Budget Amendment

---

Recommended Action: Approve Amendment No. 2 with SHN Consulting Engineers and Geologists in the Amount of $10,000 for Additional Design Services for Pressure Zone 2 South Reservoir.

Attachment 1

AGREEMENT FOR
PROFESSIONAL CONSULTING SERVICES
[Design Professional]

This Agreement, made and entered into this 31st day of October, 2016 ("Effective Date"), by and between the CITY OF UKIAH, CALIFORNIA, hereinafter referred to as "City" and SHN Consulting Engineers and Geologists, Inc., a Corporation 0rganized and in good standing under the laws of the state of California, hereinafter referred to as "Consultant".

RECITALS

This Agreement is predicated on the following facts:

a. City requires consulting services related to Engineering Design, Geotechnical and Construction Oversight Services for the rehabilitation/replacement of the Pressure Zone 2 South Reservoir.

b. Consultant represents that it has the qualifications, skills, experience and properly licensed to provide these services, and is willing to provide them according to the terms of this Agreement.

c. City and Consultant agree upon the Scope-of-Work and Work Schedule attached hereto as Attachment "A", describing contract provisions for the project and setting forth the completion dates for the various services to be provided pursuant to this Agreement.

TERMS OF AGREEMENT

1.0 DESCRIPTION OF PROJECT

1.1 The Project is described in detail in the attached Scope-of-Work (Attachment "A").

2.0 SCOPE OF SERVICES

2.1 As set forth in Attachment "A".

2.2. Additional Services. Additional services, if any, shall only proceed upon written agreement between City and Consultant. The written Agreement shall be in the form of an Amendment to this Agreement.

3.0 CONDUCT OF WORK

3.1 Time of Completion. Consultant shall commence performance of services as required by the Scope-of-Work upon receipt of a Notice to Proceed from City and shall complete such services within a reasonable time from receipt of the Notice to Proceed. Consultant shall complete the work to the City's reasonable satisfaction, even if contract disputes arise or Consultant contends it is entitled to further compensation.

4.0 COMPENSATION FOR SERVICES

4.1 Basis for Compensation. For the performance of the professional services of this Agreement, Consultant shall be compensated on a time and expense basis not to exceed a guaranteed maximum dollar amount of $84,472. Labor charges shall be based upon hourly billing rates

for the various classifications of personnel employed by Consultant to perform the Scope of Work as set forth in the attached Attachment B, which shall include all indirect costs and expenses of every kind or nature, except direct expenses. The direct expenses and the fees to be charged for same shall be as set forth in Attachment B. Consultant shall complete the Scope of Work for the not-to-exceed guaranteed maximum, even if actual time and expenses exceed that amount.

4.2 Changes. Should changes in compensation be required because of changes to the Scope-of-Work of this Agreement, the parties shall agree in writing to any changes in compensation. "Changes to the Scope-of-Work" means different activities than those described in Attachment "A" and not additional time to complete those activities than the parties anticipated on the date they entered this Agreement.

4.3 Sub-contractor Payment. The use of sub-consultants or other services to perform a portion of the work of this Agreement shall be approved by City prior to commencement of work. The cost of sub-consultants shall be included within guaranteed not-to-exceed amount set forth in Section 4.1.

4.4 Terms of Payment. Payment to Consultant for services rendered in accordance with this contract shall be based upon submission of monthly invoices for the work satisfactorily performed prior to the date of invoice less any amount already paid to Consultant, which amounts shall be due and payable thirty (30) days after receipt by City. The invoices shall provide a description of each item of work performed, the time expended to perform each task, the fees charged for that task, and the direct expenses incurred and billed for. Invoices shall be accompanied by documentation sufficient to enable City to determine progress made and the expenses claimed.

5.0 ASSURANCES OF CONSULTANT

5.1 Independent Contractor. Consultant is an independent contractor and is solely responsible for its acts or omissions. Consultant (including its agents, servants, and employees) is not City's agent, employee, or representative for any purpose.

It is the express intention of the parties hereto that Consultant is an independent contractor and not an employee, joint venturer, or partner of City for any purpose whatsoever. City shall have no right to, and shall not control the manner or prescribe the method of accomplishing those services contracted to and performed by Consultant under this Agreement, and the general public and all governmental agencies regulating such activity shall be so informed.

Those provisions of this Agreement that reserve ultimate authority in City have been inserted solely to achieve compliance with federal and state laws, rules, regulations, and interpretations thereof. No such provisions and no other provisions of this Agreement shall be interpreted or construed as creating or establishing the relationship of employer and employee between Consultant and City.

Consultant shall pay all estimated and actual federal and state income and self-employment taxes that are due the state and federal government and shall furnish and pay worker's compensation insurance, unemployment insurance and any other benefits required by law for himself and his employees, if any. Consultant agrees to indemnify and hold City and its officers, agents and employees harmless from and against any claims or demands by federal, state or local government agencies for any such taxes or benefits due but not paid by Consultant, including the legal costs associated with defending against any audit, claim, demand or law suit.

Consultant warrants and represents that it is a properly licensed professional or professional organization with a substantial investment in its business and that it maintains its own offices and staff which it will use in performing under this Agreement.

5.2 Conflict of Interest. Consultant understands that its professional responsibility is solely to City. Consultant has no interest and will not acquire any direct or indirect interest that would conflict with its performance of the Agreement. Consultant shall not in the performance of this Agreement employ a person having such an interest. If the City Manager determines that the Consultant has a disclosure obligation under the City's local conflict of interest code, the Consultant shall file the required disclosure form with the City Clerk within 10 days of being notified of the City Manager's determination.

6.0 INDEMNIFICATION

6.1 Insurance Liability. Without limiting Consultant's obligations arising under Paragraph 6.2 Consultant shall not begin work under this Agreement until it procures and maintains for the full period of time allowed by law, surviving the termination of this Agreement insurance against claims for injuries to persons or damages to property, which may arise from or in connection with its performance under this Agreement.

A. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office ("ISO) Commercial General Liability Coverage Form No. CG 20 10 10 01 and Commercial General Liability Coverage – Completed Operations Form No. CG 20 37 10 01.

2. ISO Form No. CA 0001 (Ed. 1/87) covering Automobile Liability, Code 1 "any auto" or Code 8, 9 if no owned autos and endorsement CA 0025.

3. Worker's Compensation Insurance as required by the Labor Code of the State of California and Employers Liability Insurance.

4. Errors and Omissions liability insurance appropriate to the consultant's profession. Architects' and engineers' coverage is to be endorsed to include contractual liability.

B. Minimum Limits of Insurance

Consultant shall maintain limits no less than:

1. General Liability: $1,000,000 combined single limit per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, the general aggregate limit shall apply separately to the work performed under this Agreement, or the aggregate limit shall be twice the prescribed per occurrence limit.

2. Automobile Liability: $1,000,000 combined single limit per accident for bodily injury and property damage.

3. Worker's Compensation and Employers Liability: Worker's compensation limits as required by the Labor Code of the State of California and Employers Liability limits of $1,000,000 per accident.

4. Errors and Omissions liability: $1,000,000 per occurrence.

C. Deductibles and Self-Insured Retentions

Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects to the City, its officers, officials, employees and volunteers; or the Consultant shall procure a bond guaranteeing payment of losses and related investigations, claim administration and defense expenses.

D. Other Insurance Provisions

The policies are to contain, or be endorsed to contain, the following provisions:

1. General Liability and Automobile Liability Coverages

a. The City, it officers, officials, employees and volunteers are to be covered as additional insureds as respects; liability arising out of activities performed by or on behalf of the Consultant, products and completed operations of the Consultant, premises owned, occupied or used by the Consultant, or automobiles owned, hired or borrowed by the Consultant for the full period of time allowed by law, surviving the termination of this Agreement. The coverage shall contain no special limitations on the scope-of-protection afforded to the City, its officers, officials, employees or volunteers.

b. The Consultant's insurance coverage shall be primary insurance as respects to the City, its officers, officials, employees and volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be in excess of the Consultant's insurance and shall not contribute with it.

c. Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the City, its officers, officials, employees or volunteers.

d. The Consultant's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.

2. Worker's Compensation and Employers Liability Coverage

The insurer shall agree to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses arising from Consultant's performance of the work, pursuant to this Agreement.

3. Professional Liability Coverage

If written on a claims-made basis, the retroactivity date shall be the effective date of this Agreement. The policy period shall extend for the duration of the project.

4. All Coverages

Each Insurance policy required by this clause shall be endorsed to state that coverage shall not be suspended, voided, canceled by either party, reduced in coverage or in limits except after thirty (30) days prior written notice by certified mail, return receipt requested, has been given to the City.

E. Acceptability of Insurers

Insurance is to be placed with admitted California insurers with an A.M. Best's rating of no less than A- for financial strength, AA for long-term credit rating and AMB-1 for short-term credit rating.

F. Verification of Coverage

Consultant shall furnish the City with Certificates of Insurance and with original Endorsements effecting coverage required by this Agreement. The Certificates and Endorsements for each insurance policy are to be signed by a person authorized by that insurer to bind coverage on its behalf. The Certificates and Endorsements are to be on forms provided or approved by the City. All Certificates and Endorsements are to be received and approved by the City before Consultant begins the work of this Agreement. The City reserves the right to require complete, certified copies of all required insurance policies, at any time. If Consultant fails to provide the coverages required herein, the City shall have the right, but not the obligation, to purchase any or all of them. In that event, after notice to Consultant that City has paid the premium, the cost of insurance may be deducted from the compensation otherwise due the contractor under the terms of this Contract.

G. Subcontractors

Consultant shall include all sub-contractors or sub-consultants as insured under its policies or shall furnish separate certificates and endorsements for each sub-contractor or sub-consultant. All coverage for sub-contractors or sub-consultants shall be subject to all insurance requirements set forth in this Paragraph 6.1.

6.2 Indemnification. Notwithstanding the foregoing insurance requirements, and in addition thereto, Consultant agrees, for the full period of time allowed by law, surviving the termination of this Agreement, to indemnify the City for any claim, cost or liability that arises out of, or pertains to, or relates to any negligent act or omission or the willful misconduct of Consultant and its agents in the performance of services under this contract, but this indemnity does not apply to liability for damages for death or bodily injury to persons, injury to property, or other loss, arising from the sole negligence, willful misconduct or defects in design by the City, or arising from the active negligence of the City.

"Indemnify," as used herein includes the expenses of defending against a claim and the payment of any settlement or judgment arising out of the claim. Defense costs include all

costs associated with defending the claim, including, but not limited to, the fees of attorneys, investigators, consultants, experts and expert witnesses, and litigation expenses.

References in this paragraph to City or Consultant, include their officers, employees, agents, and subcontractors.

7.0 CONTRACT PROVISIONS

7.1 Documents and Ownership of Work. All documents furnished to Consultant by City and all documents or reports and supportive data prepared by Consultant under this Agreement are owned and become the property of the City upon their creation and shall be given to City immediately upon demand and at the completion of Consultant's services at no additional cost to City. Deliverables are identified in the Scope-of-Work, Attachment "A". All documents produced by Consultant shall be furnished to City in digital format and hardcopy. Consultant shall produce the digital format, using software and media approved by City.

7.2 Governing Law. Consultant shall comply with the laws and regulations of the United States, the State of California, and all local governments having jurisdiction over this Agreement. The interpretation and enforcement of this Agreement shall be governed by California law and any action arising under or in connection with this Agreement must be filed in a Court of competent jurisdiction in Mendocino County.

7.3 Entire Agreement. This Agreement plus its Attachment(s) and executed Amendments set forth the entire understanding between the parties.

7.4 Severability. If any term of this Agreement is held invalid by a court of competent jurisdiction, the remainder of this Agreement shall remain in effect.

7.5 Modification. No modification of this Agreement is valid unless made with the agreement of both parties in writing.

7.6 Assignment. Consultant's services are considered unique and personal. Consultant shall not assign, transfer, or sub-contract its interest or obligation under all or any portion of this Agreement without City's prior written consent.

7.7 Waiver. No waiver of a breach of any covenant, term, or condition of this Agreement shall be a waiver of any other or subsequent breach of the same or any other covenant, term or condition or a waiver of the covenant, term or condition itself.

7.8 Termination. This Agreement may only be terminated by either party: 1) for breach of the Agreement; 2) because funds are no longer available to pay Consultant for services provided under this Agreement; or 3) City has abandoned and does not wish to complete the project for which Consultant was retained. A party shall notify the other party of any alleged breach of the Agreement and of the action required to cure the breach. If the breaching party fails to cure the breach within the time specified in the notice, the contract shall be terminated as of that time. If terminated for lack of funds or abandonment of the project, the contract shall terminate on the date notice of termination is given to Consultant. City shall pay the Consultant only for services performed and expenses incurred as of the effective termination date. In such event, as a condition to payment, Consultant shall provide to City all finished or unfinished documents, data, studies, surveys, drawings, maps, models, photographs and reports prepared by the Consultant under this Agreement. Consultant shall be entitled to receive just and equitable compensation for any work satisfactorily completed hereunder,

subject to off-set for any direct or consequential damages City may incur as a result of Consultant's breach of contract.

7.9 Duplicate Originals. This Agreement may be executed in duplicate originals, each bearing the original signature of the parties. When so signed, each such document shall be admissible in administrative or judicial proceedings as proof of the terms of the Agreement between the parties.

8.0 NOTICES

Any notice given under this Agreement shall be in writing and deemed given when personally delivered or deposited in the mail (certified or registered) addressed to the parties as follows:

CITY OF UKIAH DEPT. OF PUBLIC WORKS 300 SEMINARY AVENUE UKIAH, CALIFORNIA 95482-5400	SHN CONSULTING ENGINEERS & GEOLIGISOTS, INC. ATTN: THOMAS M. HERMAN 335 SOUTH MAIN STREET WILLITS, CA 95490-3977

Project Understanding and Approach

The City of Ukiah is requesting Engineering Services to assist with the assessment of the condition of an existing 150,000 gallon welded steel water which is located in pressure zone 2 of the City's water system. The subject water tank is situated on a pad above the municipal golf course with a bolted steel water tank that serves the same pressure zone. These tanks are two of the four major water tanks that provide gravity flow in the water distribution system that serves a daytime population exceeding 35,000 people. The welded steel tank currently has two major leaks that have necessitated the inspection of the tank to analyze the condition of the interior protective coatings, and the degree of metal corrosion that has occurred to date. The initial goal will be to perform an exterior visual inspection of the tank and foundation and a detailed interior inspection of the water tank to determine the feasibility of performing rehabilitation repairs on the existing tank or the need for replacement. Upon formalizing the findings of the inspections the next phase of work will be to prepare contract specifications and plans as needed for the repair or replacement of the tank. Upon award of a construction contract, construction management and inspection services for quality control and contract management during the performance of repairs or new construction will be required.

This proposal identifies how SHN will approach performing the necessary tasks to assist the City with the successful rehabilitation or replacement of the existing 150,000 gallon welded steel water tank. The critical elements of our project approach will be to perform an initial on-site visual inspection of the water tank and foundation and coordinate the timely inspection of the interior of the water tank. SHN staff would also anticipate meeting with City staff and reviewing existing plans and documentation about the tanks and distribution piping in the vicinity of the pad. We have included a highly experienced sub-consultant that specializes in the inspection of the interior and exterior of water tanks, performing video documentation, and measurements of metal thickness, pitting depths, joint weld integrity, and sampling of metal coating.

The following is the Project Approach and Scope of Services. A more detailed description of services by Potable Divers, Inc. can be found in Attachment A.

Exceptions

SHN has extensive experience contracting with the City of Ukiah and has no exceptions to the terms and conditions described in the Scope of Services.

Scope of Services

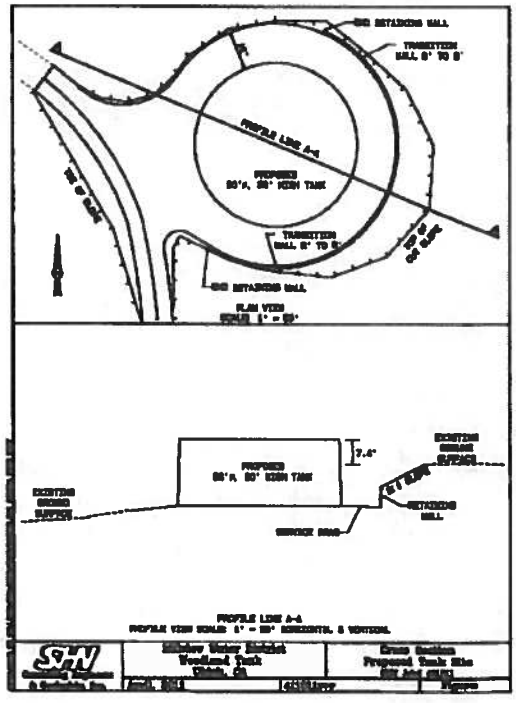
Phase One - Tank Assessment

SHN and Potable Divers Inc. will perform the following services relative to the inspection of the existing PZ2S welded steel water tank and foundation, together with the preparation of a Technical Memorandum with comments and recommendations as to the condition of the existing tank. (See Attachment A for a complete description of the services and procedures of Potable Divers, Inc.)

- Conduct initial site visit and coordination meeting with City staff.
- Conduct surficial geotechnical investigation to determine if the existing tank foundation is acceptable for reuse or will require replacement.
- Conduct an exterior visual inspection of the welded steel water tank to determine if a more in depth inspection of the tank's interior is warranted.
- Coordinate an extensive tank inspection to be performed by diving and conducting under water video documentation, thickness measurements, and sampling of coatings.
- Potable Divers Inc. will perform an in-depth inspection of the interior and exterior of the welded steel tank and prepare a report with photographs and video documentation.
- Prepare a Technical Memorandum summarizing the geotechnical investigation and tank inspection, with recommendations for rehabilitation or replacement of the existing foundation and water tank.
- Meet with City staff to review our recommendations submitted in the technical memorandum.

Phase Two - Preparation of Construction Documents

SHN will perform engineering services for the preparation of plans for rehabilitation or replacement of the existing welded steel water tank, new tank foundation, and associated yard piping, and technical specifications for the bidding of work to be performed as follows:

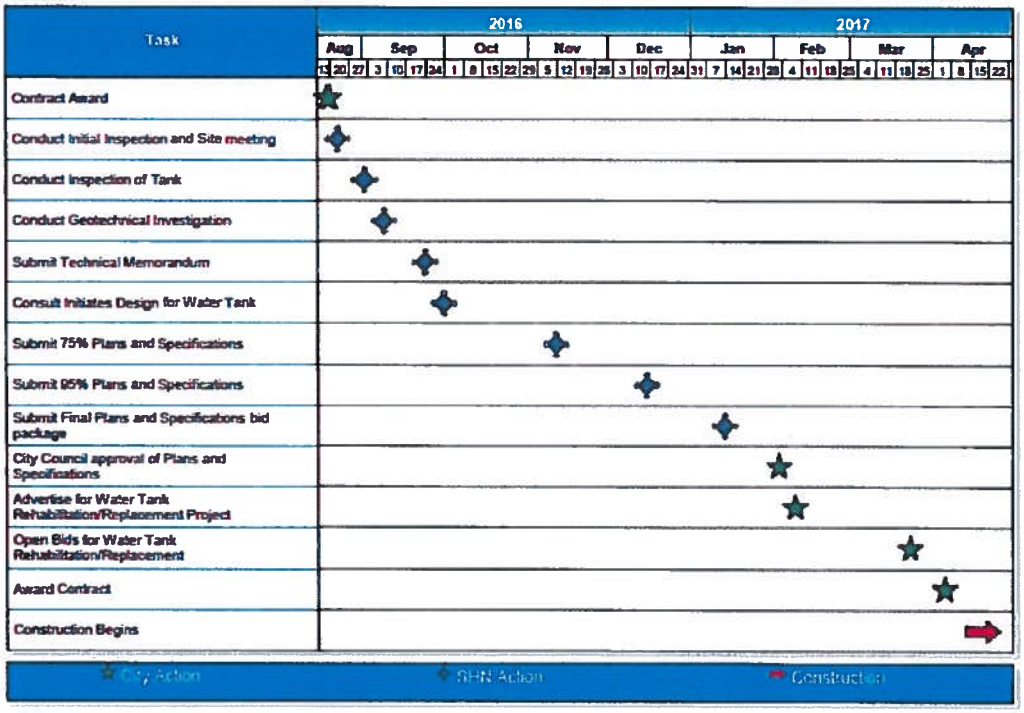


- Perform a field survey of the water tank pad, the existing water tanks and the existing inflow piping; drain piping, and any water system telemetry.
- Perform a subsurface geotechnical investigation consisting of two test holes for the analysis of soils under the tank pad to facilitate the design of a new tank foundation per the latest building and seismic design codes and American Water Works Association (AWWA) standards.
- Prepare plans and technical specifications based on the recommended alternative noted in the Technical Memorandum.
- Prepare and submit 75 percent plans and technical specifications to the City staff for review and comment.
- Incorporate City comments; prepare and submit 95 percent plans and technical specifications for review and comment.
- Prepare a finalized set of plans and technical specifications for final approval and advertising for bids.
- Prepare a detailed bid schedule with

quantities for incorporation into the contract documents.
- Prepare a detailed engineer's opinion of cost of the water tank improvements.
- Provide one set of reproducible Mylar plans and one copy-ready set of contract documents and technical specifications.
- Provide one copy of contract documents, and plans and specifications in digital format.

Phase Three - Bidding Assistance, Inspection, and Construction Management

SHN will provide the City with assistance during bidding of the construction project, perform construction inspection, materials testing, and construction management during construction of water tank improvements as follows:



- SHN will provide services during bidding to answer technical questions and requests for information, as directed by the City.
- Prepare a draft addenda as required for the City for distribution to bidders
- Review bids received and provide recommendations to the City
- Conduct a pre-construction conference with the Contractor awarded the project.
- Review submittals provided by the Contractor.
- Provide daily inspections during the course of the project and coordinate with the City and the Contractor.
- Maintain a field record of any modifications to the contract drawings.
- Review certified payroll documentation provided by the Contractor to assure that they are in compliance with State and Federal labor laws and provide to the City at close of project.
- Review progress payment invoices submitted by the Contractor and make recommendations for payment.
- Provide materials testing as needed during construction of the water tank and foundation.
- Provide copies of inspection and testing reports to the City for their records.
- Provide one set of reproducible Mylar "AS-BUILT" drawings after the completion of the construction project.

SHN provided geotechnical investigation and topographic mapping to Millview County Water District for the Woodland water tank replacement site.

Schedule

Schedule
City of Ukiah Water Tank Project

Fee Proposal

SHN proposes to complete the work on an hourly rate with a "not to exceed maximum" cost for each Phase.

Phase 1	• Perform an inspection of the existing PZ2S welded steel water tank and foundation. • Prepare a Technical Memorandum with comments and recommendations as to the condition of the existing tank.	$ 8,614
Phase 2	• Prepare plans for rehabilitation or replacement of the existing welded steel water tank, new tank foundation, and associated yard piping • Prepare technical specifications for the bidding of work to be performed.	$ 37,008
Phase 3	• Provide assistance during bidding of the construction project. • Perform construction inspection, materials testing. • Construction management during construction of water tank improvements.	$ 30,850

See Attachment B for a full breakdown of costs and man-hours budgeted for each team member. An itemized hourly rate schedule can be found in Attachment D.

Consulting Engineers & Geologists, Inc.

Fee Schedule
January 1, 2016

When accurate definition of the proposed work is not possible, an hourly charge out rate for determining compensation shall be used. Hourly charge rates include payroll costs, overhead, and profit. Hourly services are billed portal to portal and are subject to a 2-hour minimum. Current rates are as follows:

Hourly Charge Rates			
Position[1]	**Hourly Rates**		
Principal Engineer	$ 135.00	-	$180.00
Principal Engineering Geologist	$ 125.00	-	$155.00
Principal Surveyor	$ 125.00	-	$155.00
Project Manager	$ 85.00	-	$155.00
Senior Planner	$ 100.00	-	$140.00
Senior Engineer	$ 115.00	-	$150.00
Senior Geotechnical Engineer	$ 125.00	-	$155.00
Senior Geologist	$ 115.00	-	$145.00
Senior Surveyor	$ 105.00	-	$135.00
Engineer	$ 85.00	-	$120.00
Traffic Engineer	$ 85.00	-	$140.00
Geologist	$ 85.00	-	$115.00
Certified Industrial Hygienist	$ 95.00	-	$140.00
Environmental Specialist	$ 75.00	-	$130.00
Environmental Planner	$ 75.00	-	$115.00
Staff Surveyor[3]	$ 75.00	-	$105.00
Assistant Engineer	$ 75.00	-	$120.00
Survey Party Chief[3]	$ 75.00	-	$105.00
Junior Engineer	$ 65.00	-	$ 90.00
Engineering Technician/Draftsperson[3]	$ 65.00	-	$ 90.00
Lab/Field Technician[3]	$ 65.00	-	$ 100.00
Survey Technician[3]	$ 65.00	-	$ 90.00
Technical Writer	$ 55.00	-	$ 70.00
Clerical	$ 50.00	-	$ 70.00
Expert Witness[2,4]	$155.00	-	$255.00

1 Incidental expenses, i.e., lodging, meals, airplane tickets, etc., are billed at cost plus 15%.
2 Minimum daily charge is four hours.
3 Rates depend on the specific personnel assigned and if prevailing wage rates are required in the area of work.
4 Rates for Expert Witness are charged for preparation and testimony for both deposition(s) and trial(s).

Reimbursables The following direct charges are charged in addition to the hourly charge rates set forth above.	
Direct Charges:	
CADD plots (black & white)	$ 4.00/ea.
CADD plots (color)	$ 20.00/ea.
Copies	$ .15/ea.
Equipment and other expenditures (required for projects)	Cost + 15%
FAX	$ 2.00/sheet
Field office	Cost + 15%
Filing fees, telephone expense, etc.	Cost + 15%
Iron pipe, monuments, flagging, etc.	Cost + 15%
Mylars	$ 2.50/sq. ft.
Services of other consultants	Cost + 15%
Stakes, hubs, lath, etc.	Cost + 15%
Subsistence, air travel, etc.	Cost + 15%
Vehicles	$ 50.00/day
Field Testing and Equipment:	
Anchor bolt tension testing	$ 80.00/day plus operator
CO_2 Meter	$ 10.00/day
Concrete Compression Impact Hammer	$ 25.00/day*+
Core Drilling Machine	$ 75.00/day + $3.00/inch cored
Dissolved Oxygen Meter	$ 53.00/day*+
Expendable Supplies	$ 40.00/day*+
Fyrite Meter	$ 33.00/day*+
Generator	$ 53.00/day*+
Geophysical Equipment	By Quotation
Grundfos Controller & Pump	$275.00/day
Hand Auger	$ 33.00/day
Health & Safety Level D	$ 35.00/day*+
Health & Safety Level C	$ 60.00/day*+
High Pressure Controller	$ 60.00/day*+
Inclinometer	$200.00/day*
LEL Meter	$ 66.00/day*+
Nuclear Density Testing	$ 25.00/hour plus operator
Other equipment including drill rigs, backhoes, etc.	Cost + 15%
ORP Meter	$ 15.00/day
OVA	$132.00/day*+
Ozone Sparge Trailer	$2,000.00/day
Peristaltic Pump	$ 50.00/day*+
pH/Conductivity Meter	$ 53.00/day*+
Power Auger	$100.00/day*+
Pumps	$ 45.00/day*+
Quad (ATV)	$150.00/day
Rebar Locating Device	$ 40.00/day plus operator

* 1/2 Day Minimum Charge.
\+ 25% Weekly Discount, 40% Monthly Discount.
(1) If concrete is sampled and delivered to SHN lab by outside contractor, add $5.00/ea. for processing and curing per ASTM C-31.

Reimbursables, Continued	
Field Testing and Equipment, Continued:	
Roto-hammer	$ 50.00/day*+
Skidmore-Wilhelm Bolt Tension Calibration	$ 50.00/day
Soil/Gas Purge Pumps	$ 30.00/day*+
Soil Gas Probes	$200.00/day*+
Torque Wrench (0 to 250 ft lbs)	$ 25.00/day
Torque Wrench (250 to 1,000 ft lbs)	$ 50.00/day
Turbidity Meter	$ 26.00/day*+
Ultrasonic Test Device	$ 20.00/hour plus operator
Vapor Extraction System	$500.00/day*+
Water Level Data Logger	$ 60.00/day*+
Water Level Meter	$ 33.00/day*+
Well Point	$ 50.00/day
Well Wizard	$100.00/day*+
Survey Equipment:	
GPS Station	$300.00/day*
Level	$ 25.00/day*
Robotic Total Station	$ 200.00/day
Total Station	$ 7.50/hour
Total Station w/Data Collector	$ 100.00/day
Laboratory Tests:	
Asphalt Briquette Compaction	$ 50.00/ea.(1)
Asphalt Bulk Specific Gravity	$ 30.00/ea.
Asphalt Content by Nuclear Method	$ 75.00/test
Asphalt Content Gauge Calibration	$190.00/ea.
Asphalt Extraction (% Bitumen)	On Request
Asphalt (Hveem) Mix Design	On Request
Brass Tube (Liner)	$ 5.00/ea.
Cleanness Value (CT 227)	$ 75.00/ea.
Compaction Curves (ASTM D 1557 or Caltrans CT216):	
4-inch Mold	$150.00/ea.
6-inch Mold	$150.00/ea.
Check Point	$ 50.00/ea.
Concrete Compressive Strength (CT 521 or ASTM C39)	$ 25.00/ea.(2)
Concrete Linear Shrinkage (3 Bars)	$200.00
Concrete Moisture	$ 25.00/test (floor test)
Consolidation Test	$300.00/ea.
Direct Shear, per point: (ASTM D3080)	
Consolidated-Drained (CD)	$130.00/point
Unconsolidated-Undrained (UU) (Modified ASTM)	$100.00/point
Consolidated-Undrained (CU) (Modified ASTM)	$115.00/point
Additional cycles (each)	$ 50.00/ea.
Disposable Concrete Molds	$ 2.00/ea.

* 1/2 Day Minimum Charge.
\+ 25% Weekly Discount, 40% Monthly Discount.
(1) If asphalt is delivered to SHN lab unmixed, add $75.00/ea. for processing and mixing per Caltrans CT304.
(2) If concrete is sampled and delivered to SHN lab by outside contractor, add $5.00/ea. for processing and curing per ASTM C-31.

Reimbursables, Continued	
Laboratory Tests, Continued:	
Durability Index	$ 75.00/ea.
Expansion Index	$150.00/test
Fireproofing Density	$ 50.00/ea.
Grout Compressive Strength	$ 40.00/ea.
LA Rattler (abrasion resistance)	$150.00/test
Liquid Limit	$ 75.00/ea.
Masonry Block Compressive Strength	$ 65.00/ea.
Masonry Block Linear Shrinkage	$ 85.00/ea.
Masonry Block Prism Compressive Strength	$125.00/ea.
Masonry Core Shear Test	$ 50.00/core
Moisture Content	$ 15.00/ea.
Moisture-Density Test	$ 25.00/ea.
Particle Size Analysis (ASTM 422)	$100.00/ea.
Percent Crushed Particles	$125.00/ea.
Percent Entrained Air In Concrete	$ 10.00/ea.
Percent Organics	$ 50.00/ea.
Plastic Limit	$ 50.00/ea.
Plasticity Index	$125.00/ea.
R-Value	$250.00/ea.
Rice Specific Gravity of Asphalt (ASTM D2041)	$ 70.00/ea.
Sand Equivalent	$ 50.00/ea.
Sawing Rocks and Concrete Cores	$ 30.00/unit
Sieve Analysis--Coarse	$ 45.00/ea.
Sieve Analysis--Fine	$ 55.00/ea
Sieve Analysis--Passing 200	$ 45.00/ea.
Specific Gravity, Rock	$ 45.00/ea.
Stabilometer of Premixed AC	$ 75.00/ea.
Sulfate Soundness	$ 80.00/cycle
Swell Test	$ 55.00/point
Triaxial Compression	
Unconsolidated Undrained (TXUU) (ASTM D2850)	$115.00/point
Consolidated Undrained (TXCU) (ASTM D4767)	$385.00/point
Consolidated Drained (TXCD) (ACOE)	$500.00/point
Consolidated Undrained (TXCU–3 stage) (ASTM D4767)	$810.00/test
Consolidated Drained (TXCD–3 stage) (ACOE)	$860.00/test
USDA Bulk Density Test	$ 30.00/ea.
USDA Textural Suitability Test	$ 50.00/ea.
Unconfined Compression	$ 50.00/ea.
Unit Weight of Lightweight Concrete	$ 50.00/unit

Notes:

All samples of soil or rock from physical testing are discarded 30 days after submission of final report unless prior arrangements are made. Samples of soil or rock submitted for testing for hazardous substances will be returned to the Client, who is responsible for proper disposal.

This fee schedule is subject to review and adjustment, as required.

Certain services may require prevailing wages or overtime at premium pay to SHN employees. In such circumstances, fees will be adjusted to reflect increased labor costs.

CITY OF UKIAH
AMENDMENT NO. 1
TO AGREEMENT FOR PROFESSIONAL CONSULTING SERVICES
DATED OCTOBER 31, 2016

TERMS AND CONDITIONS

All terms and conditions of the Agreement for Professional Consulting Services dated October 31, 2016 shall remain in force and effect except as modified by this first amendment.

AUTHORIZATION

Upon execution of this amendment, service provider is authorized to provide the service described under the Scope of Additional Work identified in this Amendment No. 1.

SCOPE OF ADDITIONAL WORK

Work authorized by this amendment shall include that work described in the June 13, 2019 and April 16, 2020 Project Modification Agreement from SHN Consulting Engineers & Geologists, Inc. A copy of said letter is included in this first amendment.

COMPENSATION

Compensation for the performance of the additional work shall be made on a time and expense basis at Consultant's customary fees. Expenses shall not exceed a maximum total cost of $21,680 for a total contract amount of $106,152.

Project Modification Agreement

Project Title:	PZ2S Water Tank Replacement
Client:	City of Ukiah
Job Number:	416086
Project Manager:	Tom Herman
Change No.:	1

Project requirements or conditions encountered indicate that the Scope of Services included in this Project must be revised. CLIENT and SHN hereby agree that the Project Scope of Services, Schedule, and/or Budget shall be revised as described below.

Scope of Services Change:

Asbestos/lead testing of existing PZ2S tank materials in advance of demolition. Contract assumes all laboratory testing to be paid for by direct billing agreement between the City of Ukiah and Alpha Labs. SHN will provide a summary report of results.

Impact To:

Initial Budget:	$84,472	
Current Budget:	$84,472	(Reflecting Prior Changes)
Budget Change:	$6,680	(Addition or Reduction +/-)
Revised Budget:	$91,152	
Initial Schedule:		(Wks)
Current Schedule:	TBD	(Reflecting Prior Changes)
Schedule Change:	NA	(Addition or Reduction +/- Wks)
Revised Schedule:	TBD	(Wks)

Project Modification Agreement

Project Title:	PZ2S Water Tank Replacement
Client:	City of Ukiah
Job Number:	416086
Project Manager:	Jason Island
Change No.:	2

Project requirements or conditions encountered indicate that the Scope of Services included in this Project must be revised. CLIENT and SHN hereby agree that the Project Scope of Services, Schedule, and/or Budget shall be revised as described below.

Scope of Services Change:

Modify plans, specifications, and engineer's opinion of probable cost to include a glass fused to steel bolted water tank in lieu of the epoxy coated tank that is currently specified in previously developed bid documents. Remaining funds not expended in this effort will be applied to construction management budget.

Impact To:

Initial Budget:	**$84,472**	
Current Budget:	**$91,152**	(Reflecting Prior Changes)
Budget Change:	**$15,000**	(Addition or Reduction +/-)
Revised Budget:	**$106,152**	
Initial Schedule:		(Wks)
Current Schedule:	**TBD**	(Reflecting Prior Changes)
Schedule Change:	**NA**	(Addition or Reduction +/- Wks)
Revised Schedule:	**TBD**	(Wks)

Attachment 3

COU NO. 1617-133-A2

CITY OF UKIAH
AMENDMENT NO. 2
TO AGREEMENT FOR PROFESSIONAL CONSULTING SERVICES
DATED OCTOBER 31, 2016

TERMS AND CONDITIONS

All terms and conditions of the Agreement for Professional Consulting Services dated October 31, 2016 shall remain in force and effect except as modified by this second amendment.

AUTHORIZATION

Upon execution of this amendment, service provider is authorized to provide the service described under the Scope of Additional Work identified in this Amendment No. 2.

SCOPE OF ADDITIONAL WORK

Work authorized by this amendment shall include that work described in Project Modification Agreements 1, 2 and 3 from SHN Consulting Engineers & Geologists, Inc. A copy of said letter is included in this first amendment.

COMPENSATION

Compensation for the performance of the additional work shall be made on a time and expense basis at Consultant's customary fees. Expenses shall not exceed a maximum total cost of $10,000 for a total contract amount of $116,152.

Project Modification Agreement

Project Title:	PZ2S Water Tank Replacement
Client:	City of Ukiah
Job Number:	416086
Project Manager:	Jason Island
Change No.:	3

Project requirements or conditions encountered indicate that the Scope of Services included in this Project must be revised. CLIENT and SHN hereby agree that the Project Scope of Services, Schedule, and/or Budget shall be revised as described below.

Scope of Services Change:

Additional funds are needed to cover costs associated with providing Tasks 4-12 of Phase 3 as described in SHN's original proposal dated 6/27/2016. Because over four years have passed since the proposal was originally submitted, costs of providing services have increased. In addition, the submittal review process is anticipated to require more time than originally projected to review tank submittals as well as a lead compliance plan for tank demolition.

Impact To:

Initial Budget:	**$84,472**	
Current Budget:	**$106,152**	(Reflecting Prior Changes)
Budget Change:	**$10,000**	(Addition or Reduction +/-)

AGENDA SUMMARY REPORT

SUBJECT: Approve Change Order to Purchase Order #46701 for the installation SCADA Server UPS Replacement Batteries to JM Integration in the Amount of $7,603.19, to Bring the New Total Purchase Order to $26,823.46.

DEPARTMENT: Water Resources
PREPARED BY: Mary Williams, Buyer II
PRESENTER: Consent Calendar

ATTACHMENTS:

1. Proposal Jun 23 2020
2. Proposal Jul 22 2020 (002)

Summary: Council will consider approving a change order to Purchase Order #46701 to JM Integration in the amount of $7,603.19, to bring the new total purchase order to $26,823.46.

Background: The Water Resources Department has been in the process of procuring a contract for a complete overhaul of the SCADA system at the Water Treatment Plant. However, some critical components failed before the completion of the purchasing process.

Discussion: On June 24, 2020, Purchase Order #46701 (Attachment 1) was issued to JM Integration in the amount of $19,220.27 for emergency work to repair and update the SCADA Servers based on proposal received June 17, 2020.

During the repairs authorized in the original proposal, it was discovered that some of the backup batteries for the SCADA system had also failed.

On July 13, 2020, another proposal (Attachment 2) in the amount of $7,603.19 including tax was received for change order to do the additional work found to be needed.

Recommended Action: Approve change order to Purchase Order #46701 to JM Integration in the amount of $7,603.19, to bring the new total Purchase Order to $26,823.46, to install SCADA Server UPS Replacement Batteries.

BUDGET AMENDMENT REQUIRED: No.

PROPOSAL
Rev09JUN2020

Attn: Shelly Whyburn
City of Ukiah
Water Treatment Plant
935 River Street
Ukiah, CA 95482

June 17, 2020

JM Integration LLC is pleased to submit this proposal for services to support City of Ukiah in achieving its goals for improving customer satisfaction by providing the following scope of work listed below.

Scope of Work

- Furnish and install total of 128GB of RAM for each server of: four (4) each of Crucial 32GB Kit (16GBx2) DDR3/DDR3L-1600 MT/s (PC3-12800) DR x4 RDIMM
- Furnish and install total of 1.6TB for each server of: two (2) each of 400-ALXT Dell 800-GB 12G 2.5 MU SAS SSD w/G176J
- Furnish and install total of two (2): Dell E Series 23-Inch Screen LED-lit Monitor (Dell E2318Hx),Black and peripherals (mouse and keyboard).
- Furnish, install and configure Windows Server 2016 Standard (includes Windows Defender) on SCADA servers using best practices and industry standards
- Update Wonderware Intouch and Historian software with any related patches or revisions. Test existing applications on updated versions to verify operations. Customer will provide licensing required for use.

Pricing

The following table details the pricing for delivery of the services outlined in this proposal. This pricing is valid for 30 days from the date of this proposal:

Description		**Price**	
Labor		$	8,126.00
Travel		$	1,926.00
Materials		$	8,420.91
Tools & Equipment			Included
	Total	$	18,472.91

RFP:
Repair/Update SCADA Servers

The prices listed in the preceding table are an estimate for the services discussed. This summary is not a guarantee of final price. Estimates are subject to change if project specifications are changed or costs for outsourced services change before a contract is executed.

Exclusions

None

Conclusion

We look forward to working with City of Ukiah and supporting your efforts to improve and maintain your system. If you have questions on this proposal, please contact me at your convenience.

PROPOSAL
Rev09JUN2020

TERMS AND CONDITIONS

Base Terms: Quotation is valid for 30 days from above date. Our terms are due and payable 30 days from date of invoice. Payments must be made on a minimum of a monthly basis. If payment is not received by the 30th day, a 1.5% monthly service charge (18% annually) will be charged on all accounts past due. Attorney's fees, court costs and costs of collection will be paid to prevailing party. Permits and bonding are excluded unless otherwise noted herein. Our standard insurance applies unless agreed to in writing by JM Integration LLC. We accept no responsibility for consequential damages and our standard warranty applies. Please reference the above stated quote in all correspondence and purchase orders. Unless otherwise noted, this quote is based on standard straight time hours and does not include any prevailing wage rates unless agreed in writing by JM Integration LLC. The price quoted herein is for the labor and materials specifically listed within the body of this quote. Service calls carry a 4-hour minimum per person. Cancellation charges apply including engineering, labor, materials, quote and estimating time, markup, % of profit, return goods fees, etc. at the time of written cancellation notice to JM Integration LLC.

Limitation of Liability: (a) In no event shall JM Integration LLC, its suppliers or subcontractors be liable for special, indirect, incidental or consequential damages, whether in contract, warranty, tort, negligence, strict liability or otherwise, including, but not limited to, loss of profits or revenue, loss of use of the Equipment or any associated equipment, cost of capital, cost of substitute equipment, facilities or services, downtime costs, delays, and claims of customers of the Purchaser or other third parties for any damages. JM Integration LLC liability for any claim whether in contract, warranty, tort, negligence, strict liability, or otherwise for any loss or damage arising out of, connected with, or resulting from this Agreement or the performance or breach thereof, or from the design, manufacture, sale, delivery, resale, repair, replacement, installation, technical direction of installation, inspection, operation or use of any equipment covered by or furnished under this Agreement, or from any services rendered in connection therewith, shall in no case exceed one-fourth (1/4) of the purchase price allocable to the Equipment or part thereof or Services which gives rise to the claim. (b) All causes of action against JM Integration LLC arising out of or relating to this Agreement or the performance or breach hereof shall expire unless brought within one year of the time of accrual thereof. (c) In no event, regardless of cause, shall JM Integration LLC be liable for penalties or penalty clauses of any description or for indemnification of Purchaser or others for costs, damages, or expenses arising out of or related to the Equipment and/Services.

Force Majeure: JM Integration LLC shall neither be liable for loss, damage, detention or delay nor be deemed to be in default for failure to perform when prevented from doing so by causes beyond its reasonable control including but not limited to acts of war (declared or undeclared), Acts of God, fire, strike, labor difficulties, acts or omissions of any governmental authority or of Purchaser, compliance with government regulations, insurrection or riot, embargo, delays or shortages in transportation or inability to obtain necessary labor, materials, or manufacturing facilities from usual sources or from defects or delays in the performance of its suppliers or subcontractors due to any of the foregoing enumerated causes. In the event of delay due to any such cause, the date of delivery will be extended by period equal to the delay plus a reasonable time to resume production, and the price will be adjusted to compensate JM Integration LLC for such delay.

Cancellation: Any order may be cancelled by Purchaser only upon prior written notice and payment of termination charges, including but not limited to, all costs identified to the order incurred prior to the effective date of notice of termination and all expenses incurred by JM Integration LLC attributable to the termination, plus a fixed sum of ten
(10) percent of the final total price to compensate for disruption in scheduling, planned production and other indirect costs.

Entire Agreement: This Agreement constitutes the entire agreement between JM Integration LLC and Purchaser. There are no agreements, understandings, restrictions, warranties, or representations between JM Integration LLC and Purchaser other than those set forth herein or herein provided

Bonding: Cost of Bonding is not included. Contact JM Integration LLC for a quote if bonding is required.

MEETING DATE/TIME: 8/5/2020
ITEM NO: 2020-486

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Authorize City Manager to Negotiate and Execute a Subrecipient Agreement with North Coast Opportunities, for Implementing the City's Tenant Based Rental Assistance Program; and Approve a Corresponding Budget Amendment.

DEPARTMENT: Community Development

PREPARED BY: Craig Schlatter, Community Development Director

PRESENTER: Consent Calendar

ATTACHMENTS:

1. Draft Subrecipient Agreement- COVID TBRA Program

Summary: Council will consider authorizing the City Manager to negotiate and execute a subrecipient agreement with North Coast Opportunities for implementing the City's Tenant Based Rental Assistance (TBRA) program; and approve a corresponding budget amendment.

Background: On July 15, 2020, Council provided input and direction to Staff regarding amending the City's Tenant Based Rental Assistance (TBRA) program guidelines to provide rental and utility payment assistance to lower income households impacted by the COVID-19 pandemic. The City's TBRA program is funded by the California Department of Housing and Community Development (HCD) Home Investment Partnerships Program (HOME), under 16-HOME-11376. Given the coordination and implementation effort needed to quickly set up and deploy COVID TBRA financial resources and lack of adaptive capacity (staffing) within the City, Staff has been exploring alternative options for COVID TBRA implementation.

One of the options available to the City through HCD HOME is designation of a subrecipient nonprofit organization to implement the activity. By designating a nonprofit organization, the City can avoid the lengthy federal and state-required procurement process and more quickly implement and deploy the program activity.

Discussion: Staff was made aware that North Coast Opportunities (NCO), in partnership with The Community Foundation of Mendocino County, had been operating a program similar to the City's COVID TBRA program. Staff met with and discussed the City's program with NCO staff, who were interested in further partnering on implementation efforts. Given the synergies between NCO's program and the City's TBRA program, there should be good economies of scale in having one organization, NCO, implement both programs. NCO's Executive Director Patty Bruder confirmed on July 28, 2020, that NCO would be interested in being the City's designated subrecipient for the COVID TBRA program.

Although a budget amendment is required, the revenue from the City's existing 16-HOME-11376 contract and other HOME administrative funds will be adequate to fully reimburse the implementation costs incurred by NCO for delivery of the COVID TBRA program. There will thus be no net cost to the City for this service. Staff and NCO have tentatively agreed to a not-to-exceed direct delivery fee of 7.5% per client/household assisted.

Staff recommends that Council authorize the City Manager to negotiate and execute a subrecipient agreement (Attachment 1) with North Coast Opportunities for implementing the City's TBRA program; and approve a

corresponding budget amendment.

Recommended Action: Authorize the City Manager to negotiate and execute a subrecipient agreement with North Coast Opportunities, for implementing the City's Tenant Based Rental Assistance Program; and approve corresponding budget amendment.

BUDGET AMENDMENT REQUIRED: Yes

CURRENT BUDGET AMOUNT: N/A

PROPOSED BUDGET AMOUNT: 61223400.52100.TBRA: $17,750

COU No. _____

SUBRECIPIENT AGREEMENT
16-HOME-11376 TENANT BASED RENTAL ASSISTANCE

This Agreement, made and entered into this _____ day of _____, 2020 ("Effective Date"), by and between CITY OF UKIAH, CALIFORNIA, hereinafter referred to as "City" and North Coast Opportunities, a nonprofit corporation [sole proprietorship, corporation, partnership, limited partnership, limited liability company, etc.] organized and in good standing under the laws of the state of California, hereinafter referred to as "Consultant".

RECITALS

This Agreement is predicated on the following facts:

a. City requires consulting services related to implementation of the City's Tenant Based Rental Assistance program, funded through 16-HOME-11376.

b. Consultant represents that it has the qualifications, skills, experience and properly licensed to provide these services, and is willing to provide them according to the terms of this Agreement.

c. City and Consultant agree upon the Scope-of-Work and Work Schedule attached hereto as Attachment "A", describing contract provisions for the project and setting forth the completion dates for the various services to be provided pursuant to this Agreement.

TERMS OF AGREEMENT

1.0 DESCRIPTION OF PROJECT

1.1 The Project is described in detail in the attached Scope-of-Work (Attachment "A").

2.0 SCOPE OF SERVICES

2.1 As set forth in Attachment "A".

2.2. Additional Services. Additional services, if any, shall only proceed upon written agreement between City and Consultant. The written Agreement shall be in the form of an Amendment to this Agreement.

3.0 CONDUCT OF WORK

3.1 Time of Completion. Consultant shall commence performance of services as required by the Scope-of-Work upon receipt of a Notice to Proceed from City and shall complete such services within _____ from receipt of the Notice to Proceed. Consultant shall complete the work to the City's reasonable satisfaction, even if contract disputes arise or Consultant contends it is entitled to further compensation.

4.0 COMPENSATION FOR SERVICES

4.1 Basis for Compensation. For the performance of the professional services of this Agreement, Consultant shall be compensated on a time and expense basis not to exceed a guaranteed maximum dollar amount of $18,000. Labor charges shall be based upon hourly billing rates for the various classifications of personnel employed by Consultant to perform the Scope of Work as set forth in the attached Attachment B,

which shall include all indirect costs and expenses of every kind or nature, except direct expenses. The direct expenses and the fees to be charged for same shall be as set forth in Attachment B. Consultant shall complete the Scope of Work for the not-to-exceed guaranteed maximum, even if actual time and expenses exceed that amount.

4.2 Changes. Should changes in compensation be required because of changes to the Scope-of-Work of this Agreement, the parties shall agree in writing to any changes in compensation. "Changes to the Scope-of-Work" means different activities than those described in Attachment "A" and not additional time to complete those activities than the parties anticipated on the date they entered this Agreement.

4.3 Sub-contractor Payment. The use of sub-consultants or other services to perform a portion of the work of this Agreement shall be approved by City prior to commencement of work. The cost of sub-consultants shall be included within guaranteed not-to-exceed amount set forth in Section 4.1.

4.4 Terms of Payment. Payment to Consultant for services rendered in accordance with this contract shall be based upon submission of monthly invoices for the work satisfactorily performed prior to the date of the invoice less any amount already paid to Consultant, which amounts shall be due and payable thirty (30) days after receipt by City. The invoices shall provide a description of each item of work performed, the time expended to perform each task, the fees charged for that task, and the direct expenses incurred and billed for. Invoices shall be accompanied by documentation sufficient to enable City to determine progress made and to support the expenses claimed.

5.0 ASSURANCES OF CONSULTANT

5.1 Independent Contractor. Consultant is an independent contractor and is solely responsible for its acts or omissions. Consultant (including its agents, servants, and employees) is not the City's agent, employee, or representative for any purpose.

It is the express intention of the parties hereto that Consultant is an independent contractor and not an employee, joint venturer, or partner of City for any purpose whatsoever. City shall have no right to, and shall not control the manner or prescribe the method of accomplishing those services contracted to and performed by Consultant under this Agreement, and the general public and all governmental agencies regulating such activity shall be so informed.

Those provisions of this Agreement that reserve ultimate authority in City have been inserted solely to achieve compliance with federal and state laws, rules, regulations, and interpretations thereof. No such provisions and no other provisions of this Agreement shall be interpreted or construed as creating or establishing the relationship of employer and employee between Consultant and City.

Consultant shall pay all estimated and actual federal and state income and self-employment taxes that are due the state and federal government and shall furnish and pay worker's compensation insurance, unemployment insurance and any other benefits required by law for himself and his employees, if any. Consultant agrees to indemnify and hold City and its officers, agents and employees harmless from and against any claims or demands by federal, state or local government agencies for any such taxes or benefits due but not paid by Consultant, including the legal costs associated with defending against any audit, claim, demand or law suit.

Consultant warrants and represents that it is a properly licensed professional or professional organization with a substantial investment in its business and that it maintains its own offices and staff which it will use in performing under this Agreement.

5.2 Conflict of Interest. Consultant understands that its professional responsibility is solely to City. Consultant has no interest and will not acquire any direct or indirect interest that would conflict with its performance of the Agreement. Consultant shall not in the performance of this Agreement employ a person having such an interest. If the City Manager determines that the Consultant has a disclosure obligation under the City's local conflict of interest code, the Consultant shall file the required disclosure form with the City Clerk within 10 days of being notified of the City Manager's determination.

6.0 INDEMNIFICATION

6.1 Insurance Liability. Without limiting Consultant's obligations arising under Paragraph 6.2 Consultant shall not begin work under this Agreement until it procures and maintains for the full period of time allowed by law, surviving the termination of this Agreement insurance against claims for injuries to persons or damages to property, which may arise from or in connection with its performance under this Agreement.

A. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office ("ISO) Commercial General Liability Coverage Form No. CG 20 10 10 01 and Commercial General Liability Coverage – Completed Operations Form No. CG 20 37 10 01.

2. ISO Form No. CA 0001 (Ed. 1/87) covering Automobile Liability, Code 1 "any auto" or Code 8, 9 if no owned autos and endorsement CA 0025.

3. Worker's Compensation Insurance as required by the Labor Code of the State of California and Employers Liability Insurance.

4. Errors and Omissions liability insurance appropriate to the consultant's profession. Architects' and engineers' coverage is to be endorsed to include contractual liability.

B. Minimum Limits of Insurance

Consultant shall maintain limits no less than:

1. General Liability: $1,000,000 combined single limit per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, the general aggregate limit shall apply separately to the work performed under this Agreement, or the aggregate limit shall be twice the prescribed per occurrence limit.

2. Automobile Liability: $1,000,000 combined single limit per accident for bodily injury and property damage.

3. Worker's Compensation and Employers Liability: Worker's compensation limits as required by the Labor Code of the State of California and Employers Liability limits of $1,000,000 per accident.

4. Errors and Omissions liability: $1,000,000 per occurrence.

C. Deductibles and Self-Insured Retentions

Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects to the City, its officers, officials, employees and volunteers; or the Consultant shall procure a bond guaranteeing payment of losses and related investigations, claim administration and defense expenses.

D. Other Insurance Provisions

The policies are to contain, or be endorsed to contain, the following provisions:

1. General Liability and Automobile Liability Coverages

a. The City, it officers, officials, employees and volunteers are to be covered as additional insureds as respects; liability arising out of activities performed by or on behalf of the Consultant, products and completed operations of the Consultant, premises owned, occupied or used by the Consultant, or automobiles owned, hired or borrowed by the Consultant for the full period of time allowed by law, surviving the termination of this Agreement. The coverage shall contain no special limitations on the scope-of-protection afforded to the City, its officers, officials, employees or volunteers.

b. The Consultant's insurance coverage shall be primary insurance as respects to the City, its officers, officials, employees and volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be in excess of the Consultant's insurance and shall not contribute with it.

c. Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the City, its officers, officials, employees or volunteers.

d. The Consultant's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.

2. Worker's Compensation and Employers Liability Coverage

The insurer shall agree to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses arising from Consultant's performance of the work, pursuant to this Agreement.

3. Professional Liability Coverage

If written on a claims-made basis, the retroactivity date shall be the effective date of this Agreement. The policy period shall extend from ------ to ----------.

4. All Coverages

Each Insurance policy required by this clause shall be endorsed to state that coverage shall not be suspended, voided, canceled by either party, reduced in coverage or in limits except after thirty (30) days prior written notice by certified mail, return receipt requested, has been given to the City.

E. Acceptability of Insurers

Insurance is to be placed with admitted California insurers with an A.M. Best's rating of no less than A- for financial strength, AA for long-term credit rating and AMB-1 for short-term credit rating.

F. Verification of Coverage

Consultant shall furnish the City with Certificates of Insurance and with original Endorsements effecting coverage required by this Agreement. The Certificates and Endorsements for each insurance policy are to be signed by a person authorized by that insurer to bind coverage on its behalf. The Certificates and Endorsements are to be on forms provided or approved by the City. Where by statute, the City's Workers' Compensation - related forms cannot be used, equivalent forms approved by the Insurance Commissioner are to be substituted. All Certificates and Endorsements are to be received and approved by the City before Consultant begins the work of this Agreement. The City reserves the right to require complete, certified copies of all required insurance policies, at any time. If Consultant fails to provide the coverages required herein, the City shall have the right, but not the obligation, to purchase any or all of them. In that event, the cost of insurance becomes part of the compensation due the contractor after notice to Consultant that City has paid the premium.

G. Subcontractors

Consultant shall include all subcontractors or sub-consultants as insured under its policies or shall furnish separate certificates and endorsements for each sub-contractor or sub-consultant. All coverage for sub-contractors or sub-consultants shall be subject to all insurance requirements set forth in this Paragraph 6.1.

6.2 Indemnification. Notwithstanding the foregoing insurance requirements, and in addition thereto, Consultant agrees, for the full period of time allowed by law, surviving the termination of this Agreement, to indemnify the City for any claim, cost or liability that arises out of, or pertains to, or relates to any negligent act or omission or the willful misconduct of Consultant in the performance of services under this contract by Consultant, but this indemnity does not apply to liability for damages for death or bodily injury to persons, injury to property, or other loss, arising from the sole negligence, willful misconduct or defects in design by the City, or arising from the active negligence of the City.

"Indemnify," as used herein includes the expenses of defending against a claim and the payment of any settlement or judgment arising out of the claim. Defense costs include all costs associated with defending the claim, including, but not limited to, the fees of attorneys, investigators, consultants, experts and expert witnesses, and litigation expenses.

References in this paragraph to City or Consultant, include their officers, employees, agents, and subcontractors.

7.0 CONTRACT PROVISIONS

7.1 Ownership of Work. All documents furnished to Consultant by City and all documents or reports and supportive data prepared by Consultant under this Agreement are owned and become the property of the City upon their creation and shall be given to City immediately upon demand and at the completion of Consultant's services at no additional cost to City. Deliverables are identified in the Scope-of-Work, Attachment "A". All documents produced by Consultant shall be furnished to City in digital format and hardcopy. Consultant shall produce the digital format, using software and media approved by City.

7.2 Governing Law. Consultant shall comply with the laws and regulations of the United States, the State of California, and all local governments having jurisdiction over this Agreement. The interpretation and enforcement of this Agreement shall be governed by California law and any action arising under or in connection with this Agreement must be filed in a Court of competent jurisdiction in Mendocino County.

7.3 Entire Agreement. This Agreement plus its Attachment(s) and executed Amendments set forth the entire understanding between the parties.

7.4 Severability. If any term of this Agreement is held invalid by a court of competent jurisdiction, the remainder of this Agreement shall remain in effect.

7.5 Modification. No modification of this Agreement is valid unless made with the agreement of both parties in writing.

7.6 Assignment. Consultant's services are considered unique and personal. Consultant shall not assign, transfer, or sub-contract its interest or obligation under all or any portion of this Agreement without City's prior written consent.

7.7 Waiver. No waiver of a breach of any covenant, term, or condition of this Agreement shall be a waiver of any other or subsequent breach of the same or any other covenant, term or condition or a waiver of the covenant, term or condition itself.

7.8 Termination. This Agreement may only be terminated by either party: 1) for breach of the Agreement; 2) because funds are no longer available to pay Consultant for services provided under this Agreement; or 3) City has abandoned and does not wish to complete the project for which Consultant was retained. A party shall notify the other party of any alleged breach of the Agreement and of the action required to cure the breach. If the breaching party fails to cure the breach within the time specified in the notice, the contract shall be terminated as of that time. If terminated for lack of funds or abandonment of the project, the contract shall terminate on the date notice of termination is given to Consultant. City shall pay the Consultant only for services

performed and expenses incurred as of the effective termination date. In such event, as a condition to payment, Consultant shall provide to City all finished or unfinished documents, data, studies, surveys, drawings, maps, models, photographs and reports prepared by the Consultant under this Agreement. Consultant shall be entitled to receive just and equitable compensation for any work satisfactorily completed hereunder, subject to off-set for any direct or consequential damages City may incur as a result of Consultant's breach of contract.

7.9 Execution of Agreement. This Agreement may be executed in duplicate originals, each bearing the original signature of the parties. Alternatively, this Agreement may be executed and delivered by facsimile or other electronic transmission, and in more than one counterpart, each of which shall be deemed an original, and all of which together shall constitute one and the same instrument. When executed using either alternative, the executed agreement shall be deemed an original admissible as evidence in any administrative or judicial proceeding to prove the terms and content of this Agreement.

8.0 NOTICES

Any notice given under this Agreement shall be in writing and deemed given when personally delivered or deposited in the mail (certified or registered) addressed to the parties as follows:

AGENDA SUMMARY REPORT

SUBJECT: Approval of Conditional Award of Contract to Center for Economic Development for Implementation of Community Development Block Grant (CDBG) Microenterprise Technical Assistance Services in the Amount of up to $140,000, and Authorize the City Manager to Negotiate and Execute Agreement.

DEPARTMENT: Community Development

PREPARED BY: Craig Schlatter, Community Development Director

PRESENTER: Consent Calendar

ATTACHMENTS:

1. RFP - CDBG META Program Op - Final
2. Center for Economic Development_City of Ukiah_Microenterprise Proposal
3. Proposal Evaluation Summary - MEA Operator

Summary: Council will consider conditionally awarding a contract to the Center for Economic Development for implementation of CDBG Microenterprise Technical Assistance services in the amount of up to $140,000.

Background: The Ukiah City Council approved Resolution No. 2020-20 on May 6, 2020, authorizing the submittal of applications for funding under the 2019-2020 funding year of the State Community Development Block Grant (CDBG) program. One of these applications was for a City of Ukiah Microenterprise Technical Assistance Program for up to $150,500, consisting of $140,000 for the microenterprise technical assistance activity and $10,500 for general administration. CDBG microenterprise technical assistance and business assistance applications are due to the Department of Housing and Community Development (HCD) by August 31, 2020.

During discussions with HCD representatives regarding the City's forthcoming applications, HCD representatives indicated that if the City would be procuring a consultant for implementation, the City would need to have this procurement completed and contract conditionally awarded prior to submitting the CDBG application.

CDBG microenterprise technical assistance services consist of such items as assisting a future microenterprise business owner on management development, preparation of business plans, cash flow, and preparation for financing. Such services also include connecting potential and existing microentrepreneurs to financing and other resources such that they can start up and/or expand their business. Defined by the CDBG program as "a commercial enterprise that has five or fewer employees, one or more of whom owns the enterprise," microenterprises range in type and capacity and represent a range of service providers and retail businesses. Because of the prevalence of existing and prospective new microenterprises in the Ukiah area, there is a need for a microenterprise technical assistance program that provides the services and expertise enabling these businesses to be successful- and that ultimately leads to job creation and retention.

Discussion: Staff revisited the Microenterprise program model that had been deployed in 2018-2019 through a 2016 CDBG Microenterprise grant and found a potential area of weakness to be that there was no direct connection of the microentrepreneur with financial and other resources, including the City's CDBG Business

Assistance program. A Request for Proposals (RFP) that was developed for a Microenterprise Technical Assistance services provider thus requested respondents incorporate this aspect into their program design. The RFP (Attachment 1) was issued on June 22, 2020, with proposals due July 23, 2020.

Two proposals were received in response to the City's RFP, and the proposal receiving a recommendation from the City's evaluation committee (Attachment 2) for conditional contract award was the Center for Economic Development (CED), in partnership with Morrison and the Economic Development and Financing Corporation (EDFC). Please see Attachment 3 for the Evaluation Summary for both proposals.

Because the City has not yet been awarded funding through CDBG for the new microenterprise technical assistance services program, Staff recommends Council approve an award to the Center for Economic Development, conditional upon the City receiving a CDBG grant for this activity, and authorize the City Manager to negotiate and execute an agreement for the work.

Recommended Action: Approve award of contract to the Center for Economic Development for implementation of CDBG Microenterprise Technical Assistance Services in the Amount of up to $140,000, conditioned upon the City's CDBG Microenterprise Technical Assistance Services application receiving an award of funding under the 2019-2020 CDBG Notice of Funding Availability, and authorize the City Manager to negotiate and execute agreement.

Microenterprise Technical Assistance Services Program

Request Date:	June 22, 2020
Deadline for Responses:	July 23, 2020 5:00 P.M. (PST)

CITY OF UKIAH

Request for Proposals (RFP) to provide Program Operator Services for
Community Development Block Grant Microenterprise Technical Assistance Services Program

1.0 INTRODUCTION

The City of Ukiah is applying for a Community Development Block Grant (CDBG) through the 2019-20 CDBG Notice of Funding Availability (NOFA) for the funding of a Microenterprise Technical Assistance Program. The City is seeking proposals from qualified operators interested in contracting for the provision of Microenterprise Technical Assistance services to micro-businesses and micro-business start-ups located in the City of Ukiah, participants of whom are members of the Low and Moderate Income population. The City is pursuing such procurement of services through the CDBG "Small Purchases Method," outlined in 2 CFR 200.320 (b).

If awarded, the CDBG grant will provide $140,000 for Program services including operation. Grant general administration activities will be performed by City of Ukiah staff. To obtain more clarity regarding the overall program design and use of funds, it is recommended that potential proposers review attachments to this document. In addition, potential proposers should review the City's current Microenterprise Technical Assistance Program Guidelines. The CDBG grant application and current Program Guidelines can be obtained by contacting the designated contact person for this RFP.

The microenterprise Program activities must be completed, and all funds expended, by the expenditure date listed in the Standard Agreement between the City and State. Although the term of the agreement between the City and the selected firm will conclude on this date, potential proposers should be advised that monitoring and file retention responsibilities will continue for up to an additional five years after the expenditure deadline.

2.0 SCHEDULE OF EVENTS AND DELIVERY

The schedule for this procurement is as follows:

Distribute Request for Proposals:	June 23, 2020
Deadline for Responses:	**July 23, 2020, 5:00 P.M. (Pacific Time)**
City Evaluation of Proposals:	By July 28, 2020
City Council approval requested for recommended firm:	August 5, 2020

The City must receive proposals no later than the time and date specified above. Those proposals received after this date and time will not be considered. Proposals will only be accepted electronically. Send your proposals to the following:

Mary Horger
Financial Services Manager
City of Ukiah
Email: mhorger@cityofukiah.com

3.0 SCOPE OF SERVICES

The scope of services shall include tasks described below. All services shall be provided in accordance with the following Attachments: Attachment A - City of Ukiah Insurance Requirements; Attachment B - City of Ukiah Professional Services Agreement; Attachment C - City of Ukiah Microenterprise Technical Assistance Program Task Matrix; Attachment D - City of Ukiah Microenterprise Technical Assistance Program Guidelines; and Attachment E - the Federally

required contract provisions for Community Development Block Grant (CDBG)-Aided Consultant Contracts. Attachment F is reserved for the future Standard Agreement between the City of Ukiah and State, if awarded. The City reserves the right to add attachments upon award of the CDBG grant for this activity.

1. Review, monitor, and recommend refinements to the City's most recent Microenterprise Technical Assistance Services Program Guidelines. Adhere to adopted Microenterprise Technical Assistance Services Program Guidelines.
2. Provide program outreach, networking and marketing as needed to identify, contact and attract prospective eligible microenterprises and micro-entrepreneurs.
3. Perform income screening and collection of demographic and other required data of applicants to determine eligibility and to comply with grant reporting requirements, utilizing appropriate income certification methods per CDBG regulations depending upon services to be utilized by clients.
4. Perform CDBG-compliant program eligibility reviews per City Program Guidelines and CDBG regulations.
5. Provide needs assessment and identify strategies for provision of service; provide referrals for business support and technical assistance when appropriate, and provide direct business support and technical assistance to eligible microenterprises and micro-entrepreneurs.
6. Utilize a program-tracking/evaluation system to provide client demographic statistics and evaluation data about services provided (number of clients served, number of business plans developed, etc.) as well as outcomes (number of jobs created, number of businesses formed, etc.) and provide reports to City as necessary for grant reporting and program monitoring.
7. Assist clients in accessing or arranging financing for their businesses.
8. Coordinate with City staff to ensure timely submittal of all data, reports and cash requests associated with the program.
9. Prepare for and attend grant monitoring visits as necessary.
10. Provide other needed support and technical assistance to ensure accomplishment of the City's microenterprise program. This may include, but is not limited to, hosting workshops and community events or organizing other training and networking opportunities for clients.
11. Indicate the location where services will be provided. With the exception of web-based remote trainings, all services should be provided in a location accessible to persons with disabilities. Services should also be provided in a location easily accessible to Ukiah-based low- and moderate-income participants, so that the cost of transportation is minimized.

4.0 REQUIRED PROPOSAL CONTENT

Firms interested in providing the services described in the section above must submit a proposal responding to all the questions below and providing all information requested in a format that mirrors the RFP by section and order listed. Proposals shall include the following:

1. Brief description of firm, contact person, address and telephone number.

2. A list of key personnel, as assigned their respective roles, and a resume or synopsis of their relevant experience.

3. Description of experience in the provision of microenterprise technical assistance services;; and experience in complying with CDBG grants or similar grant requirements.

4. Description of how the City's Microenterprise Technical Assistance program would be implemented by consultant such that microenterprises are connected with financing and/or other resources, leading to business start-ups and job retention. The City is seeking a consultant that can deliver results, similar to formats established by business acceleration and incubation programs throughout the U.S.

5. List of public agencies or clients for whom CDBG-funded Microenterprise Technical Assistance Services tasks have been performed, with the name, title and phone number of a contact person.

6. Proposed schedule of work and phased milestones for completion.

7. The individual or firm receiving the contract shall procure and maintain for the duration of the contract, insurance against claims for injuries to persons or damages to property that may arise from or in connection with the performance of the work hereunder by the Consultant, his agents, representatives, employees or subcontracts as set forth in the Professional Services Agreement which is attached hereto and incorporated by reference herein. The cost of such insurance shall be included in the consultant's proposal.

8. Identification of firm's ownership as a minority or women-owned business and/or identification of Section 3 hiring practices.

9. Submission of a list describing any lawsuits filed against the firm during the preceding three (3) years, and any litigation currently pending or threatened in conjunction with the types of services described in the RFP.

10. Specify a rate or dollar amount to be charged for each proposed Task, and including estimated hourly rates and time to be expended on each task. Please see the *City of Ukiah Microenterprise Task Matrix* (Attachment C) for assistance with allocation of tasks and costs.

11. The City's professional services agreement for CDBG contracts is attached as Attachment B. Please identify if your firm would have any issues with the provisions of the City's standard professional services agreement.

12. Federally required contract provisions for Community Development Block Grant (CDBG)-Aided Consultant Contracts are attached as Attachment E.

13. Proposals must be signed by an authorized employee in order to receive consideration.

5.0 PROPOSAL EVALUATION

The City of Ukiah is using the competitive proposal process, wherein the experience of each submitted proposal is evaluated as it relates to the Scope of Work. The City intends to select one firm to provide microenterprise technical assistance program services. The City will make its selection using the following criteria and rating schedule:

1.	Capabilities, resources, and applicable experience of the firm, especially as relates to performance on CDBG-funded activities.	15 Points, Maximum
2.	Responsiveness- how firm addresses the Scope of Work.	35 Points, Maximum

3.	Qualifications and experience of key individuals, especially as related to CDBG Microenterprise Technical Assistance Programs.	10 Points, Maximum
4.	Schedule for completion of the work.	5 Points, Maximum
5.	Budget and schedule of charges.	35 Points, Maximum
		100 Points, Total

The City reserves the right to reject any and all proposals. The City reserves the right to award a contract to the firm that presents the proposal, which in the sole judgment of the City best serves the City's interest. The City reserves the right to reject any or all proposals, to waive minor irregularities in said proposals, and/or negotiate minor deviations with the successful firm.

6.0 CONTACT PERSON

Please contact Mary Horger, Procurement Manager, if you have questions or require additional information. Questions must be submitted in writing via email. Contact information can be found below.

Mary Horger, Financial Services Manager
City of Ukiah
mhorger@cityofukiah.com

Communication between a proposing company and a member of the City staff, other than the Procurement Manager, or between a proposing company and a non-designated City representative regarding the selection of a proposing company or award of this contract is explicitly prohibited from the time the RFP is advertised until the selection of a proposing company or award of the contract. Questions pertaining to this RFP shall be addressed to the party specified above. Failure of a proposing company, or any of its representatives, to comply with this paragraph will result in their proposal being rejected.

7.0 ADDENDA

If it becomes necessary to revise any part of this RFP, an addendum will be provided to all proposing companies in written or electronic (i.e., facsimile or email) form.

8.0 INSURANCE REQUIREMENTS

Provided as Attachment "A" are the City's complete insurance requirements. Awarded firm, prior to performing any work, shall procure and maintain for the duration of the contract insurance against claims for injuries to persons or damages to property, which may arise from or in connection with its performance under the Agreement, certificates of insurance covering full liability under Worker's Compensation laws of the State of California, Comprehensive General Liability and Business Auto Insurance with policy limits of not less than $1,000,000 naming the City as an additional insured party.

9.0 CITY BUSINESS LICENSE

Awarded firm will be required to maintain a City business license for the duration of the contract. Information regarding the City business license can be found on the City website, at www.cityofukiah.com/businesses.

10.0 PUBLIC RECORDS

All materials submitted in response to this RFP are property of the City and will not be returned. The

materials will be a public record subject to the disclosure provisions of the California Public Records Act and any other related public law or provision of such laws.

11.0 FINANCIAL RESPONSIBLITY

The City accepts no financial responsibility for any costs incurred by a firm in responding to this RFP. Submissions will become the property of the City and may be used by the City in any way deemed appropriate.

ATTACHMENT A

INSURANCE REQUIREMENTS FOR CONSULTANTS

Consultant(s) shall procure and maintain for the duration of the contract insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the work hereunder by the Consultant(s), his agents, representatives, or employees.

I. Minimum Scope of Insurance

Coverage shall be at least as broad as:

A. Insurance Services Office **Commercial General Liability** coverage (Form No. CG 20 10 10 01 and Commercial General Liability – Completed Operations Form No. CG 20 37 10 01).

B. Insurance Services Office form number CA 0001 (Ed. 1/87) covering **Automobile Liability**, code 1 (any auto).

C. **Workers' Compensation** insurance as required by the State of California and Employer's Liability Insurance.

D. **Errors and Omissions liability** insurance appropriate to the consultant's profession. Architects' and engineers' coverage is to be endorsed to include contractual liability.

II. Minimum Limits of Insurance

Consultant shall maintain limits no less than:

A. General Liability**:** $1,000,000 per occurrence for bodily injury, personal injury and property damage including **operations, products and completed operations**, as applicable. If Commercial General Liability Insurance or other form with a general aggregate limit is used, either the general aggregate limit shall apply separately to this project/location or the general aggregate limit shall be twice the required occurrence limit. Insurance must be written on an occurrence basis.

B. Automobile Liability: $1,000,000 per accident for bodily injury and property damage. Insurance must be written on an occurrence basis.

C. Workman's Compensation Employer's Liability: $1,000,000 per accident for bodily injury or disease.

D. Errors and Omissions liability: $1,000,000 per occurrence. If written on a claims-made basis, insurance coverage must cover claims filed within 3 years after contract work completed.

III. Deductibles and Self-Insured Retentions

Any deductibles or self-insured retentions must be declared to and approved by the City. The City may require the insurer to reduce or eliminate such deductibles or self-insured retentions with respect to the City, its officers, officials, employees and volunteers; or the Consultant to provide a financial guarantee satisfactory to the City guaranteeing payment of losses and related investigations, claim administration and defense expenses; or to approve the deductible without a guarantee.

IV. REQUIRED Insurance Provisions

Proof of **general liability and automobile liability** policies are to contain, or **be endorsed** to contain, the following provisions:

A. The City, its officers, officials, employees, and volunteers are to be covered as **ADDITIONAL INSURED** with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Consultant including materials, parts or equipment, furnished in connection with such work or operations. General liability coverage can be provided in the form of an endorsement to the Consultant's insurance, or as a separate owner's policy.

B. **The workers' compensation policy is to be endorsed with a waiver of subrogation**. The insurance company, in its endorsement, agrees to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses paid under the terms of this policy which arises from the work performed by the named insured for the City. NOTE: You cannot be added as an additional insured on a workers' compensation policy.

C. For any claims related to this project, the Consultant's insurance coverage shall be **primary insurance** with respect to the City, its officers, officials, employees, and volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees, or volunteers shall be in excess of the Consultant's insurance and shall not contribute with it.

D. Each insurance policy required by this clause shall be endorsed to state that coverage shall **not be canceled** by either party, except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to the City.

V. RATING - Acceptability of Insurers

Insurance is to be placed with admitted California insurers with a current A.M. Best's rating of no less than A- for financial strength, AA for long-term credit rating and AMB-1 for short-term credit rating.

VI. Verification of Coverage

Consultant shall furnish the City with original certificates and amendatory endorsements effecting coverage required by this clause. The endorsements should be **on forms provided by the City**. If endorsements are on forms other than the City's forms, those endorsements must provide coverage that is equivalent to or better than the forms requested by the City. All certificates and endorsements are to be received and approved by the City before work commences. The City reserves the right to require complete, certified copies of all required insurance policies, including endorsements affecting the coverage required by these specifications at any time.

If you have questions regarding our insurance requirements contact:
Risk Manager
(707) 463-6287 or FAX (707) 463-6204

Revised: 11/20/08

ATTACHMENT B - AGREEMENT FOR
PROFESSIONAL CONSULTING SERVICES

This Agreement, made and entered into this _____ day of _____, 2020 ("Effective Date"), by and between CITY OF UKIAH, CALIFORNIA, hereinafter referred to as "City" and _____, a corporation organized and in good standing under the laws of the state of California, hereinafter referred to as "Consultant".

RECITALS

This Agreement is predicated on the following facts:

a. City requires consulting services related to providing program operator services for its Microenterprise Technical Assistance Services Program, funded by Community Development Block Grant (CDBG) #20-CDBG-_____.

b. Consultant represents that it has the qualifications, skills, experience and properly licensed to provide these services, and is willing to provide them according to the terms of this Agreement.

c. City and Consultant agree upon the Scope-of-Work and Work Schedule attached hereto as Attachment "1", describing contract provisions for the project and setting forth the completion dates for the various services to be provided pursuant to this Agreement.

TERMS OF AGREEMENT

1.0 DESCRIPTION OF PROJECT

1.1 The Project is described in detail in the attached Scope-of-Work (Attachment "1").

2.0 SCOPE OF SERVICES

2.1 As set forth in Attachment "1".

2.2. Additional Services. Additional services, if any, shall only proceed upon written agreement between City and Consultant. The written Agreement shall be in the form of an Amendment to this Agreement.

3.0 CONDUCT OF WORK

3.1 Time of Completion. Consultant shall commence performance of services as required by the Scope-of-Work upon receipt of a Notice to Proceed from City and shall complete such services by _____. The term of this agreement may be extended up to an additional _____ days/years, for a total of five (5) years, upon written approval by the City of Ukiah. Consultant shall complete the work to the City's reasonable satisfaction, even if contract disputes arise or Consultant contends it is entitled to further compensation.

DRAFT

4.0 COMPENSATION FOR SERVICES

4.1 Basis for Compensation. For the performance of the professional services of this Agreement, Consultant shall be compensated on a time and expense basis not to exceed a guaranteed maximum dollar amount of $140,000. Labor charges shall be based upon hourly billing rates for the various classifications of personnel employed by Consultant to perform the Scope of Work as set forth in the attached Attachment 1, which shall include all indirect costs and expenses of every kind or nature, except direct expenses. The direct expenses and the fees to be charged for same shall be as set forth in Attachment 2. Consultant shall complete the Scope of Work for the not-to-exceed guaranteed maximum, even if actual time and expenses exceed that amount.

4.2 Changes. Should changes in compensation be required because of changes to the Scope-of-Work of this Agreement, the parties shall agree in writing to any changes in compensation. "Changes to the Scope-of-Work" means different activities than those described in Attachment “1” and not additional time to complete those activities than the parties anticipated on the date they entered this Agreement.

4.3 Sub-contractor Payment. The use of sub-consultants or other services to perform a portion of the work of this Agreement shall be approved by City prior to commencement of work. The cost of sub-consultants shall be included within guaranteed not-to-exceed amount set forth in Section 4.1.

4.4 Terms of Payment. Payment to Consultant for services rendered in accordance with this contract shall be based upon submission of monthly invoices for the work satisfactorily performed prior to the date of the invoice less any amount already paid to Consultant, which amounts shall be due and payable thirty (30) days after receipt by City. The invoices shall provide a description of each item of work performed, the time expended to perform each task, the fees charged for that task, and the direct expenses incurred and billed for. Invoices shall be accompanied by documentation sufficient to enable City to determine progress made and to support the expenses claimed.

5.0 ASSURANCES OF CONSULTANT

5.1 Independent Contractor. Consultant is an independent contractor and is solely responsible for its acts or omissions. Consultant (including its agents, servants, and employees) is not the City's agent, employee, or representative for any purpose.

It is the express intention of the parties hereto that Consultant is an independent contractor and not an employee, joint venturer, or partner of City for any purpose whatsoever. City shall have no right to, and shall not control the manner or prescribe the method of accomplishing those services contracted to and performed by Consultant under this Agreement, and the general public and all governmental agencies regulating such activity shall be so informed.

Those provisions of this Agreement that reserve ultimate authority in City have been inserted solely to achieve compliance with federal and state laws, rules, regulations, and interpretations thereof. No such provisions and no other provisions of this Agreement shall be interpreted or construed as creating or establishing the relationship of employer and employee between Consultant and City.

Consultant shall pay all estimated and actual federal and state income and self-employment taxes that are due the state and federal government and shall furnish and pay worker's compensation insurance, unemployment insurance and any other benefits required by law for himself and his employees, if any. Consultant agrees to indemnify and hold City and its officers, agents and employees harmless from and against any claims or demands by federal, state or local government agencies for any such taxes or benefits due but not paid by Consultant, including the legal costs associated with defending against any audit, claim, demand or law suit.

Consultant warrants and represents that it is a properly licensed professional or professional organization with a substantial investment in its business and that it maintains its own offices and staff which it will use in performing under this Agreement.

5.2 Conflict of Interest. Consultant understands that its professional responsibility is solely to City. Consultant has no interest and will not acquire any direct or indirect interest that would conflict with its performance of the Agreement. Consultant shall not in the performance of this Agreement employ a person having such an interest. If the City Manager determines that the Consultant has a disclosure obligation under the City's local conflict of interest code, the Consultant shall file the required disclosure form with the City Clerk within 10 days of being notified of the City Manager's determination.

6.0 INDEMNIFICATION

6.1 Insurance Liability. Without limiting Consultant's obligations arising under Paragraph 6.2 Consultant shall not begin work under this Agreement until it procures and maintains for the full period of time allowed by law, surviving the termination of this Agreement insurance against claims for injuries to persons or damages to property, which may arise from or in connection with its performance under this Agreement.

A. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office ("ISO) Commercial General Liability Coverage Form No. CG 20 10 10 01 and Commercial General Liability Coverage – Completed Operations Form No. CG 20 37 10 01.

2. ISO Form No. CA 0001 (Ed. 1/87) covering Automobile Liability, Code 1 "any auto" or Code 8, 9 if no owned autos and endorsement CA 0025.

3. Worker's Compensation Insurance as required by the Labor Code of the State of California and Employers Liability Insurance.

4. Errors and Omissions liability insurance appropriate to the consultant's profession. Architects' and engineers' coverage is to be endorsed to include contractual liability.

B. Minimum Limits of Insurance

Consultant shall maintain limits no less than:

1. General Liability: $1,000,000 combined single limit per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, the general aggregate limit shall apply separately to the work performed under this Agreement, or the aggregate limit shall be twice the prescribed per occurrence limit.

2. Automobile Liability: $1,000,000 combined single limit per accident for bodily injury and property damage.

3. Worker's Compensation and Employers Liability: Worker's compensation limits as required by the Labor Code of the State of California and Employers Liability limits of $1,000,000 per accident.

4. Errors and Omissions liability: $1,000,000 per occurrence.

C. Deductibles and Self-Insured Retentions

Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects to the City, its officers, officials, employees and volunteers; or the Consultant shall procure a bond guaranteeing payment of losses and related investigations, claim administration and defense expenses.

D. Other Insurance Provisions

The policies are to contain, or be endorsed to contain, the following provisions:

1. General Liability and Automobile Liability Coverages

a. The City, it officers, officials, employees and volunteers are to be covered as additional insureds as respects; liability arising out of activities performed by or on behalf of the Consultant, products and completed operations of the Consultant, premises owned, occupied or used by the Consultant, or automobiles owned, hired or borrowed by the Consultant for the full period of time allowed by law, surviving the termination of this Agreement. The coverage shall contain no special limitations on the scope-of-protection afforded to the City, its officers, officials, employees or volunteers.

b. The Consultant's insurance coverage shall be primary insurance as respects to the City, its officers, officials, employees and volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be in excess of the Consultant's insurance and shall not contribute with it.

c. Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the City, its officers, officials, employees or volunteers.

d. The Consultant's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.

2. Worker's Compensation and Employers Liability Coverage

The insurer shall agree to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses arising from Consultant's performance of the work, pursuant to this Agreement.

3. Professional Liability Coverage

If written on a claims-made basis, the retroactivity date shall be the effective date of this Agreement. The policy period shall extend through the duration of the project.

4. All Coverages

Each Insurance policy required by this clause shall be endorsed to state that coverage shall not be suspended, voided, canceled by either party, reduced in coverage or in limits except after thirty (30) days prior written notice by certified mail, return receipt requested, has been given to the City.

E. Acceptability of Insurers

Insurance is to be placed with admitted California insurers with an A.M. Best's rating of no less than A- for financial strength, AA for long-term credit rating and AMB-1 for short-term credit rating.

F. Verification of Coverage

Consultant shall furnish the City with Certificates of Insurance and with original Endorsements effecting coverage required by this Agreement. The Certificates and Endorsements for each insurance policy are to be signed by a person authorized by that insurer to bind coverage on its behalf. The Certificates and Endorsements are to be on forms provided or approved by the City. Where by statute, the City's Workers' Compensation - related forms cannot be used, equivalent forms approved by the Insurance Commissioner are to be substituted. All Certificates and Endorsements are to be received and approved by the City before Consultant begins the work of this Agreement. The City reserves the right to require complete, certified copies of all required insurance policies, at any time. If Consultant fails to provide the coverages required herein, the City shall have the right, but not the obligation, to purchase any or all of them. In that event, the cost of insurance becomes part of the compensation due the contractor after notice to Consultant that City has paid the premium.

G. Subcontractors

Consultant shall include all subcontractors or sub-consultants as insured under its policies or shall furnish separate certificates and endorsements for each sub-

contractor or sub-consultant. All coverage for sub-contractors or sub-consultants shall be subject to all insurance requirements set forth in this Paragraph 6.1.

6.2 Indemnification. Notwithstanding the foregoing insurance requirements, and in addition thereto, Consultant agrees, for the full period of time allowed by law, surviving the termination of this Agreement, to indemnify the City for any claim, cost or liability that arises out of, or pertains to, or relates to any negligent act or omission or the willful misconduct of Consultant in the performance of services under this contract by Consultant, but this indemnity does not apply to liability for damages for death or bodily injury to persons, injury to property, or other loss, arising from the sole negligence, willful misconduct or defects in design by the City, or arising from the active negligence of the City.

"Indemnify," as used herein includes the expenses of defending against a claim and the payment of any settlement or judgment arising out of the claim. Defense costs include all costs associated with defending the claim, including, but not limited to, the fees of attorneys, investigators, consultants, experts and expert witnesses, and litigation expenses.

References in this paragraph to City or Consultant, include their officers, employees, agents, and subcontractors.

7.0 APPLICABLE STATE/FEDERAL GRANT PROVISIONS

7.1 Equal Opportunity.

1. The Civil Rights, Housing and Community Development, and Age Discrimination Acts Assurances

During the performance of this Agreement, the Consultant assures that no otherwise qualified person shall be excluded from the participation or employment, denied program benefits, or be subjected to discrimination based on race, color, national origin, sex, age, or handicap, under any program or activity funded by this contract, as required by Title VI of the Civil Rights Act of 1964, Title I of the Housing and Community Development Act of 1974, as amended, and the Age Discrimination Act of 1975, the Fair Housing Act of 1988, and all implementing regulations.

2. Rehabilitation Act of 1973 and the "504 Coordinator"

The Consultant agrees to comply with the City's implementation of the Rehabilitation Act of 1973, as amended, and its regulations, 24 CFR Part 8, including, but not limited to, the local designation of a special person charged with local enforcement of this Act, as the "504 Coordinator".

3. The Training, Employment, and Contracting Opportunities Assurance of Compliance:

a. The work to be performed under this Agreement is on a project assisted under a program providing direct federal financial assistance from the Department of Housing and Urban Development and is subject to the requirements of Section 3 of the Housing and Urban Development Act of 1968, as amended, 12 U.S.C. 1701u. Section 3 requires that to the greatest extent feasible, opportunities for training and employment be given lower income residents of the project area and contracts for Work in

connection with the project be awarded to business concerns which are located in, or owned in substantial part by persons residing in the area of the project.

b. The parties to this Agreement will comply with the provisions of said Section 3 and the regulations issued pursuant thereto by the Secretary of Housing and Urban Development set forth in 24 CFR Part 135, and all applicable rules and orders of the Department issued thereunder prior to the execution of this contract. The parties to this contract certify and agree that they are under no contractual or other disability, which would prevent them from complying with these requirements.

c. The Consultant will send to each labor organization or representative of workers with which he has a collective bargaining agreement or other contract or understanding, if any, a notice advertising the said labor organization or worker's representative of his commitments under this Section 3 clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment or training.

d. The Consultant will include these Section 3 clauses in every contract and subcontract for Work in connection with the project and will, at the direction of the State, take appropriate action pursuant to the contract upon a finding that any subcontractor is in violation of regulations issued by the Secretary of Housing and Urban Development, 24 CFR Part 135 and, will not let any contract unless the Consultant has first provided it with a preliminary statement of ability to comply with the requirements of these regulations.

e. Compliance with the provisions of Section 3, the regulations set forth in 24 CFR Part 135, and all applicable rules and orders of the Department issued thereunder prior to the execution of the Agreement shall be a condition of the federal financial assistance provided to the project, binding upon the Consultant and its successors, and assigns to those sanctions specified by the grant or contract through which federal assistance is provided, and to such sanctions as are specified by 24 CFR Part 135.

4. State Nondiscrimination Clause:

a. During the performance of this contract, City, and Consultant shall not unlawfully discriminate, harass, or allow harassment, against any employee or applicant for employment because of race, religion, color, national origin, ancestry, physical handicap, medical condition (cancer), physical disability (including HIV and AIDS), marital status, age (over 40), sex, denial of family and medical leave, and denial of pregnancy leave. Consultant shall insure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination and harassment. Consultant shall comply with the provisions of the Fair Employment and Housing Act (Government Code, Section 12900 et seq.) and the applicable regulations promulgated thereunder (California Code of Regulations, Title 2, Section 7258.0 et seq.) The applicable regulations of the Fair Employment and Housing Commission implementing Government Code, Section 12990(a-f), set forth in Chapter 5, of Division 4 of Title 2 of the California Code of Regulations, are incorporated into this agreement by reference and made a part hereof as if set forth in full. City, Consultant shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

b. City and Consultant shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform work under the contract.

5. Americans with Disabilities Act (ADA) of 1990

By signing this agreement, the parties to this agreement assure the State that they will comply with the Americans with Disabilities Act (ADA) of 1990, (42 USC 12101 et seq.), which prohibits discrimination on the basis of disability as well as all applicable regulations and guidelines issued pursuant to the ADA.

6. Assurance of Compliance with Requirements Placed on Construction Contracts of $10,000 or More

The City and the Consultant hereby agree to place in every contract for construction exceeding $10,000 the Notice of Requirement for Affirmative Action to ensure Equal Employment Opportunity (Executive Order 11246), the Standard Equal Employment Opportunity, Construction Contract Specifications. The City furthermore agrees to insert the appropriate Goals and Timetables issued by the U.S. Department of Labor in such contracts and subcontracts.

7.2 Monitoring and Audit. Consultant agrees to allow the Housing and Community Development Department, Bureau of State Audits, HUD, or other State or federal agencies or their representatives, upon reasonable notice, unrestricted access to all relevant records, documents, books, accounts, and all other materials for grant monitoring or auditing purposes, including the monitoring for conformity with any Grant Agreement. City will monitor for conformity with its State contract.

7.3 Copeland Act. Consultant shall comply with the Copeland "Anti-Kickback" Act (18 U.S.C. §874) as supplemented in Department of Labor regulations (29 CFR Part 3).

7.4 Copyright. Any documents furnished by City or produced by Contractor in the performance of this Contract belong to City which shall own any and all intellectual property and copyrights thereto. Any discovery or invention developed by City or Consultant in the performance of this Contract shall belong to City which shall have the exclusive right to seek patent protection therefor.

7.5 Access to Records. Consultant shall provide City, the U.S. Department of Housing and Urban Development ("HUD"), the Comptroller General of the United States, or any of their duly authorized representatives to any books, documents, papers, and records of the Consultant which are directly pertinent to that specific contract for the purpose of making audit, examination, excerpts, and transcriptions.

7.6 Retention of Records. Consultant shall retain all records related to its performance under this Agreement and City's payments hereunder for five years after final payment has been made hereunder and all other pending matters are closed.

7.7. Environmental Compliance. Consultant shall comply with all applicable standards, orders, or requirements issued under section 306 of the Clean Air Act (42 U.S.C. §1857(h)), section 508 of the Clean Water Act (33 U.S.C.§1368), Executive Order 11738, and Environmental Protection Agency regulations (40 CFR part 15).

7.8. Energy Efficiency. Consultant shall comply with all mandatory standards and policies relating to energy efficiency which are contained in the state energy conservation plan issued in compliance with the Energy Policy and Conservation Act (Pub. Law 94-163, 89 Stat. 871).

7.9. Anti-lobbying Requirements. The anti-lobbying certification attached hereto as Exhibit 1 is a material representation of fact upon which the City has relied in entering this agreement.

8.0 CONTRACT PROVISIONS

8.1 Ownership of Work. All documents furnished to Consultant by City and all documents or reports and supportive data prepared by Consultant under this Agreement are owned and become the property of the City upon their creation and shall be given to City immediately upon demand and at the completion of Consultant's services at no additional cost to City. Deliverables are identified in the Scope-of-Work, Attachment "1". All documents produced by Consultant shall be furnished to City in digital format and hardcopy. Consultant shall produce the digital format, using software and media approved by City.

8.2 Governing Law. Consultant shall comply with the laws and regulations of the United States, the State of California, and all local governments having jurisdiction over this Agreement. The interpretation and enforcement of this Agreement shall be governed by California law and any action arising under or in connection with this Agreement must be filed in a Court of competent jurisdiction in Mendocino County.

8.3 Entire Agreement. This Agreement plus its Attachment(s) and executed Amendments set forth the entire understanding between the parties.

8.4 Severability. If any term of this Agreement is held invalid by a court of competent jurisdiction, the remainder of this Agreement shall remain in effect.

8.5 Modification. No modification of this Agreement is valid unless made with the agreement of both parties in writing.

8.6 Assignment. Consultant's services are considered unique and personal. Consultant shall not assign, transfer, or sub-contract its interest or obligation under all or any portion of this Agreement without City's prior written consent.

8.7 Waiver. No waiver of a breach of any covenant, term, or condition of this Agreement shall be a waiver of any other or subsequent breach of the same or any other covenant, term or condition or a waiver of the covenant, term or condition itself.

8.8 Termination. This Agreement may only be terminated by either party: 1) for breach of the Agreement; 2) because funds are no longer available to pay Consultant for services provided under this Agreement; or 3) City has abandoned and does not wish to complete the project for which Consultant was retained. A party shall notify the other party of any alleged breach of the Agreement and of the action required to cure the breach. If the breaching party fails to cure the breach within the time specified in the notice, the contract shall be terminated as of that time. If terminated for lack of funds or abandonment of the project, the contract shall terminate on the date notice of

termination is given to Consultant. City shall pay the Consultant only for services performed and expenses incurred as of the effective termination date. In such event, as a condition to payment, Consultant shall provide to City all finished or unfinished documents, data, studies, surveys, drawings, maps, models, photographs and reports prepared by the Consultant under this Agreement. Consultant shall be entitled to receive just and equitable compensation for any work satisfactorily completed hereunder, subject to off-set for any direct or consequential damages City may incur as a result of Consultant's breach of contract.

8.9 Duplicate Originals. This Agreement may be executed in duplicate originals, each bearing the original signature of the parties. When so signed, each such document shall be admissible in administrative or judicial proceedings as proof of the terms of the Agreement between the parties.

9.0 NOTICES

Any notice given under this Agreement shall be in writing and deemed given when personally delivered or deposited in the mail (certified or registered) addressed to the parties as follows:

ATTACHMENT 1
SCOPE OF WORK

The scope of services shall include tasks described below:

1. Review, monitor, and recommend refinements to the City's most recent Microenterprise Technical Assistance Services Program Guidelines. Adhere to adopted Microenterprise Technical Assistance Services Program Guidelines.
2. Provide program outreach, networking and marketing as needed to identify, contact and attract prospective eligible microenterprises and micro-entrepreneurs.
3. Perform income screening and collection of demographic and other required data of applicants to determine eligibility and to comply with grant reporting requirements, utilizing appropriate income certification methods per CDBG regulations depending upon services to be utilized by clients.
4. Perform CDBG-compliant program eligibility reviews per City Program Guidelines and CDBG regulations.
5. Provide needs assessment and identify strategies for provision of service; provide referrals for business support and technical assistance when appropriate, and provide direct business support and technical assistance to eligible microenterprises and micro-entrepreneurs.
6. Utilize a program-tracking/evaluation system to provide client demographic statistics and evaluation data about services provided (number of clients served, number of business plans developed, etc.) as well as outcomes (number of jobs created, number of businesses formed, etc.) and provide reports to City as necessary for grant reporting and program monitoring.
7. Assist clients in accessing or arranging financing for their businesses.
8. Coordinate with City staff to ensure timely submittal of all data, reports and cash requests associated with the program.
9. Prepare for and attend grant monitoring visits as necessary.
10. Provide other needed support and technical assistance to ensure accomplishment of the City's microenterprise program. This may include, but is not limited to, hosting workshops and community events or organizing other training and networking opportunities for clients.
11. Indicate the location where services will be provided. With the exception of web-based remote trainings, all services should be provided in a location accessible to persons with disabilities. Services should also be provided in a location easily accessible to Ukiah-based low- and moderate-income participants, so that the cost of transportation is minimized.

Provide other needed support and technical assistance to ensure accomplishment of the City's microenterprise program.

Anti-Lobbying Certification

The undersigned certifies to the best of his or her knowledge or belief that:

a. No Federal appropriated funds have been paid, or will be paid, by or on behalf of it, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a member of Congress, in connection with the awarding of any Federal Contract, the making of any Federal Grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension of continuation, renewal, amendment or modification of any Federal contract, grant loan, or cooperative agreement;

b. If any funds other the Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a member of Congress, in connection with this Federal contract, grant, loan, or cooperative agreement, it will complete and submit Standard Form -LLL, “Disclosure Form to Report Lobbying” in accordance with its instructions.

COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG)
MICROENTERPRISE TECHNICAL ASSISTANCE PROGRAM GUIDELINES

1.0 INTRODUCTION

The City of Ukiah, here after called the "Grantee," has established a microenterprise Technical Assistance (TA) program, here after called the "TA Program." The TA Program is designed to stimulate economic growth and create businesses and jobs that will improve the living conditions of residents in Ukiah. The TA Program provides technical assistance services to eligible businesses and persons for business start-up or expansion activities. These TA Program guidelines have been formally adopted by the Grantee and approved by the California Department of Housing and Community Development, here after called "the Department." See **Attachment A** for copy of the adopting resolution.

2.0 MICROENTERPRISE TA SERVICES PROGRAM OVERVIEW

2.1 GRANTEE AND PROGRAM OPERATOR

The Grantee will secure the services of a qualified service provider, here after called "the Program Operator," who has experience in providing and coordinating microenterprise TA services and is familiar with CDBG state and federal requirements. In general, the Program Operator will: 1) market the TA Program; 2) accept and process participant applications; 3) document participant CDBG income eligibility and proper number of employees; and 4) ensure participant files are set up to document all participant TA services provided and documentation of all eligible costs. Grantee will assign one or more staff to oversee Program Operator's work with Program Applicants and Participants to ensure CDBG compliance with these guidelines.

2.2 PROGRAM SERVICE AREA

TA services are available to all eligible businesses/persons located within Ukiah's jurisdictional boundaries. These CDBG funds may not be used in entitlement jurisdictions that receive CDBG funds directly from the federal Department of Housing and Urban Development (HUD) entitlement program.

2.3 FUNDING SOURCE FOR TA PROGRAM SERVICES

The TA Program is paid for with CDBG funds provided by HUD to the Department, and as such these funds have a number of federal requirements that must be met as described below. These CDBG funds come to the Grantee from Department grant awards that are administered under a formal grant contract or from local CDBG program income (PI) funds administered under an approved PI Waiver.

3.0 CDBG PROGRAM REQUIREMENTS

3.1 ELIGIBLE PROGRAM APPLICANTS

All eligible applicants must meet the definition of a microenterprise. For CDBG

purposes, a microenterprise is defined as a commercial enterprise that has five (5) or fewer employees, including the owner(s). All employees, part or full time, on the business payroll at the time of loan application will be counted. The term "employee" includes all owners of the business on the payroll, even if the owner's "salary draws" are not done on a regular basis. The Program Operator will require all program Applicants "certify" the number of employees at the time of application using the Department's Microenterprise Income Self-Certification Form (see Attachment D).

An eligible Applicant may be an existing microenterprise business that needs TA program services to build capacity or a person without a business that wants to create one. Most existing microenterprise business Applicants will be sole proprietorships. However, eligible Applicants may include private for-profit corporations or partnerships that are legal, properly licensed and operating. Non-profits are not eligible microenterprise businesses. An eligible Applicant must provide documentation that the physical location of the business is within the program service area, per Section 2.2. If the business's physical address is outside of the program service area, then they are not an eligible Applicant. A business owner may have their personal residence outside the program service area as long as the business's principal operating location is within the program service area.

Eligible Applicants can also be individual persons who do not have a business but wish to start a business. These persons may receive microenterprise TA services to help them take all the necessary steps to build capacity and set up a new business. The TA services provided to persons will typically be much more time consuming and require more work from the Applicant as they seek to start a for profit business. Applicants that are persons without an existing business must document that their primary residence is located in the program service area per Section 2.2.

3.2 INELIGIBLE PROGRAM APPLICANTS

An ineligible existing business applicant is one that has a physical business location outside of the service area. An ineligible person applying for the program is one with a residence outside of the service area. As stated in Section 3.1 non-profit organizations are not eligible microenterprise business. An applicant currently participating in a microenterprise TA or Financial Assistance program offered in the same service area as this program is not eligible.

3.3 ELIGIBLE PROGRAM COSTS

Use of CDBG funds for TA program services is restricted to certain eligible costs. All costs associated with funding TA must be "indirect costs." Indirect is defined as third party costs to a Program Operator and other consultants that provide TA to program participants. Common TA costs may include: 1) business development workshops or classes restricted to CDBG eligible program participants; 2) "one on one" counseling using professional business

development staff; 3) opportunities for "structured peer networking;" and 4) online business training courses. The Grantee's specific CDBG TA services are outlined in Sections 5.3 to 5.6.

3.4 INELIGIBLE PROGRAM COSTS

Microenterprise "direct financial assistance" costs will not be funded under this program. Direct financial assistance may be provided only under an approved CDBG microenterprise financial assistance program. Direct financial assistance activities are typically any costs associated with day to day business operations. These operational costs are ineligible, whether the business is operating out of a private leased commercial space, their home, or a public facility.

Examples of ineligible direct financial assistance costs include but are not limited to: 1) payment of costs to produce/purchase marketing materials (printing, language translations or professional design costs); 2) payment of marketing ads or distribution of marketing materials; 3) payment of third party costs for website building or hosting; 4) payment of rents / lease payments, utilities or other business fees or operating / overhead expenses; 5) payment of purchasing real property or furniture, fixtures or equipment for the business; 6) payment of any personal or business debt; 7) payment of any cash or wages; 8) paying for credit reports; and 9) paying for loan or grant underwriting services.

In addition, no payment of food or drinks offered at the TA classes or other instruction sessions are eligible costs. Cash or like-cash payments and other undocumented TA costs are also not eligible.

3.5 TIMEFRAME FOR RECEIVING TA SERVICES

Under federal regulations, a program participant may receive TA services for up to three (3) years, after completing income verification as an eligible microenterprise. It is expected that most program participants will use all microenterprise TA services well before the three year limit.

3.6 MEETING CDBG MICROENTERPRISE DEFINITION REQUIREMENT

Program applicants for this Program must meet the CDBG definition of a microenterprise business. The CDBG definition of a microenterprise business is one that has five (5) or fewer employees, including the owner(s). All employees, part time and full time, on the business payroll at the time of loan application will be counted. The term "employee" includes all owners of the business on the payroll, even if the owner's "salary draws" are not on a regular basis. The Program requires a current CDBG income self-certification form which should be placed in the program participant file to document the number of employees and compliance with the HUD microenterprise definition.

3.7 MEETING CDBG NATIONAL OBJECTIVE REQUIREMENT

Under federal regulations, use of CDBG funds for microenterprise activities must meet the national objective of benefit to low/mod income persons under the

Limited Clientele definition. As such, all microenterprise owners must be documented as meeting HUD low/mod income definition prior to receiving any Program services. This is in addition to meeting the "definition" of a microenterprise, as described above in Section 3.6. The CDBG income self-certification form will be used to verify income of program applicants for the microenterprise technical assistance services program.

As with other microenterprise program activities, if the Grantee or Program Operator finds that the applicant income information is not accurate and the program participant is over HUD's income limits, then a program applicant is ineligible and program services currently being offered to program participants must cease immediately.

3.8 OTHER CDBG FEDERAL LAWS AND REGULATIONS

There are a number of federal laws and state regulations that are triggered with the use of CDBG funding for a microenterprise assistance services Program. The Grantee will take the lead and ensure compliance with these other CDBG regulations.

National Environmental Policy Act (NEPA) federal environmental laws per regulation 24 CFR 58 are not triggered for individual Program participants. Nor are there any compliance requirements for Davis Bacon and related Acts for TA activities under these guidelines. Acquisition and relocation laws are also not triggered when using CDBG funds for microenterprise TA services. However, these federal laws may be triggered as part of using the TA funds in conjunction with providing the program participant with financial assistance.

Federal regulations require that local program income be spent first prior to drawing down any federal funds from an open grant. If a Grantee has a program Income (PI) "Waiver" for funding technical assistance services and also has a Department grant contract award for technical assistance services, the local PI waiver funds must be expended first, prior to drawing down any funds from the open grant contract with the Department.

4.0 APPLICATION PROCESSING FOR TA PROGRAM SERVICES

4.1 PROGRAM MARKETING AND OUTREACH

Upon the Grantee's receipt of a Department letter releasing TA Program funding, and after successful procurement of a Program Operator, the Program Operator will conduct outreach and marketing to all businesses and individuals in the program service area. Program operator staff will develop a marketing plan for the program to outreach to businesses and persons in the community regarding the availability and accessibility of the TA program. This plan should be kept on file and updated as needed to ensure that all residents in the service area are informed about and have access to program applications.

4.2 EQUAL OPPORTUNITY COMPLIANCE

This program will be implemented in ways consistent with the Grantee commitment to state and federal equal opportunity laws. No person or business shall be excluded from participation in, denied the benefit of, or be subjected to discrimination under any program or activity funded in whole or in part with CDBG program funds on the basis of his or her religion or religious affiliation, age, race, color, ancestry, national origin, sex, marital status, familial status (number or ages of children), physical or mental disability, sexual orientation, or other arbitrary cause.

4.3 PROGRAM APPLICATION PROCESSING

Applications will be processed on a first come first served basis. See **Attachment B** for microenterprise TA services program application form. The Program Operator will accept applications and review for HUD income eligibility and an allowable number of employees, per Department standards.

All program applications received, both denied and approved, will be logged and kept on file in accordance with federal records retention act. Applicants who do not meet eligibility requirements of the program will be notified in writing with an explanation of ineligibility. Files will be set up for all eligible program participants to document compliance with all CDBG regulations, Department policy, and adopted guideline and all provided TA services.

4.4 PROGRAM PARTICIPANT / APPLICANT CONFIDENTIALITY

All personal and business financial information will be kept confidential. Program participant files with personal and business confidential information will be kept in locked secured storage units.

4.5 DISPUTE RESOLUTION / APPEALS PROCEDURE

Any person applying for TA services through the CDBG program has the right to appeal a denied application. The appeal must be made in writing to the Grantee. A written response to the appeal will be provided to the applicant by the Grantee within 30 days of receipt of the applicant's appeal letter.

4.6 EXCEPTIONS / SPECIAL CIRCUMSTANCES

Exceptions are defined as any action, which would depart from policy and procedures stated in the guidelines.

5.0 TECHNICAL ASSISTANCE PROGRAM SERVICE DELIVERY

5.1 PROGRAM PARTICIPANT CAPACITY EVALUATION

Eligible program participants will meet with Program Operator staff to receive a "capacity" evaluation. This evaluation process will be completed via a face to face interview and standard written format. The current capacity of the business owner or person wishing to start a business will be assessed. Areas of strengths and weaknesses will be identified; steps will be provided to address weaknesses.

5.2 CREATING CAPACITY DEVELOPMENT WORK PLAN

Based on the capacity evaluation, the Program Operator will work with the program participant to develop a "work plan." The work plan will outline the TA needed by the program participant and give a timeline for scheduling the services. The work plan will contain expected outcomes from the TA, explain how those outcomes will address the capacity issues identified in the evaluation and provide an estimated cost. The work plan will clearly state the expectations for the program participant and the Grantee. All parties will sign the work plan. Copies of the work plan will be provided to all parties and included in the program participant file.

Eligible program participants will be provided detailed information on the TA provided with this program. TA services will be tracked and documented in the program participant file. The Program Operator will remain in contact with the program participant throughout the process.

5.3 TECHNICAL ASSISTANCE VIA CLASSES

Business development classes will be offered on a regular basis, when sufficient demand for the classes is present. "Mixed TA classes" (eligible CDBG participants and non-eligible CDBG participants) may be offered by the Program Operator, with prior approval in writing from the Grantee. When mixed TA classes are offered, the Grantee has received prior written approval from the Department to ensure compliance with federal regulations. Some examples of topics for the classes may include: 1) business plan development or updating; 2) market analysis and marketing plan development; 3) managing employees and payroll services; 4) choosing a legal structure for a business; 4) financial management tools and cash flow projections; 5) controlling inventory and operating expenses; 6) collection of accounts payable; 7) use of the internet and other electronic resources for sales and efficiency; 8) access to capital for growing the business. Other classes may be offered based on the needs of the program participants.

5.4 BUSINESS DEVELOPMENT VIA "ONE-ON-ONE" COUNSELING

Business development "one on one" TA will be provided as needed, typically after program participant has attended necessary microenterprise TA classes in Section 5.5.

One on one TA will be scheduled with Program Participants a month at a time beginning at the start of each month. The one on one TA will cover similar topics to what is offered in the classes, but this TA will be much more detailed and specific to the Program Participant. The one on one TA may be conducted in person or via video conference call. The one on one TA may be conducted at the location of the program participant or at the Program Operator's office. Notes on the TA provided at these sessions, along with time and training materials used, will be documented by the Program Operator in the program participant file.

5.5 BUSINESS DEVELOPMENT VIA "PEER TO PEER" COUNSELING

The Grantee may choose to allow the Program Operator to organize Peer to Peer TA if a sufficient number of program participants with similar types of businesses are enrolled in the TA Program. Peer to Peer TA will be provided in a formal meeting format. The Peer to Peer meetings will be facilitated by the Program Operator. Topics for discussion at the meetings will be provided by the members of the group which may include small group exercises and projects to facilitate participants working together to identify and find solutions to common problems experienced in their respective fields.

The date and time for each meeting should be documented with sign-in sheets. Discussion notes, activities conducted and outcomes at the meetings should be documented in program participant files.

5.6 BUSINESS DEVELOPMENT VIA ONLINE COMPUTER TRAINING

Program participants may obtain approval from the Program Operator to complete business development classes online. The topics for the online classes being requested must be in support of the capacity evaluation objectives. A list of eligible online training classes will be provided by the Program Operator. Any online training or class not on the approved list must be reviewed and approved in writing by the Grantee.

Online classes may be taken remotely or in the Program Operator's office. Classes will be paid for directly by the Program Operator to the third party vendor. Documentation of completion of the online class is required and will be filed in the program participant file.

5.7 COMPLETION OF CAPACITY DEVELOPMENT WORK PLAN

Program participants commit to completion of TA services as outlined in the capacity building evaluation and plan document. The Program Operator will commit to providing the TA in the capacity building evaluation and plan. The program participant, Program Operator and Grantee understand that the CDBG microenterprise TA services are a limited public resource. Therefore, if a program participant does not consistently complete their business development classes, one on one TA counseling sessions, peer to peer meetings or complete online classes, they may be disqualified from receiving any further CDBG microenterprise TA. Disqualification will be in writing and fully documented in the program participant file.

6.0 PROGRAM OVERSIGHT BY GRANTEE

6.1 OVERSIGHT OF PROGRAM OPERATOR

Grantee staff will serve as the primary contact with the Department. The Grantee will be responsible for securing services of a qualified Program Operator for implementation of this TA Services Program prior to starting any activities under these guidelines. The scope of work for the Program Operator will include all

administration and documentation required for TA services in these guidelines and for CDBG compliance.

6.2 TRACKING TA SERVICES OF PARTICIPANTS

The Grantee's staff oversee and monitor all work conducted by the Program Operator. Monthly or quarterly meetings will be conducted to review the program status: 1) marketing efforts; 2) applications received; 3) eligible program participants being served; 4) successful program participant stories; 5) demand for different services and need for more resources or partners; 6) review of program tracking forms, **See Attachment C**; 7) review of Department reports and funds request for reimbursement of TA Services; and 8) preparation for Department monitoring of grant contract and TA Services. As per the [future] executed agreement between the Grantee and the Program Operator, all required reports under open grant contracts or PI will be reviewed and approved by the Grantee staff prior to Grantee's signature.

GRANTEE'S EXECUTED RESOLUTION ADOPTING MICROENTERPRISE PROGRAM GUIDELINES

RESOLUTION NO. 2017- 28

RESOLUTION OF THE CITY OF UKIAH COUNCIL ADOPTING PROGRAM GUIDELINES FOR COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG) MICROENTERPRISE TECHNICAL ASSISTANCE SERVICES PROGRAM

WHEREAS, a Public hearing was held pursuant to federal Citizen Participation requirements before the City Council on June 21, 2017 to receive public comment regarding adoption of the City of Ukiah's Microenterprise Technical Assistance Services Program Guidelines; and

WHEREAS, the City of Ukiah has been awarded a 2016 Community Development Block Grant (CDBG) from the State Department of Housing and Community Development (HCD) to operate a Microenterprise Assistance Program, including Technical Assistance Services; and

WHEREAS, HCD requires that in order to operate a CDBG Microenterprise Technical Assistance Services Program, jurisdictions must adopt Program Guidelines to govern program operation and to ensure compliance with CDBG State and Federal requirements; and

WHEREAS, HCD has provided a template for the Program Guidelines, and the template has been revised only for local program details while retaining language reflecting State and Federal requirements.

NOW, THEREFORE, IT IS HEREBY RESOLVED that the City Council of the City of Ukiah does hereby adopt Program Guidelines for the Community Development Block Grant (CDBG) Microenterprise Technical Assistance Services Program.

PASSED AND ADOPTED this twenty-first day of June, 2017, by the following roll call vote:

AYES: Councilmembers Scalmanini, Crane, Mulheren, Doble, and Mayor Brown
NOES: None
ABSENT: None
ABSTAIN: None

Jim O. Brown, Mayor

ATTEST:

Kristine Lawler, City Clerk

1. General Provisions

1.1. This project is funded wholly or in part by the State Community Development Block Grant (CDBG) Program and is subject to both Federal and State regulatory requirements. The Contractor and its sub-contractors agree to comply with all State and Federal laws and regulations that pertain to construction, health and safety, labor, fair employment practices, equal opportunity, and all other matters applicable to the Contractor and any subcontractors. The Contractor further agrees to comply with all Federal laws and regulations applicable to the CDBG Program and with other Federal provisions as set forth below and as described in 24 CFR Part 570, including OMB Circular A-87 and applicable provisions of 24 CFR Part 85 for governmental entities, or OMB Circular A-122 and applicable provisions of 24 CFR Part 84 for non-profit entities.

1.2. These contract provisions shall apply to all work performed on the contract by the Contractor's own organization and with the assistance of workers under the Contractor's immediate superintendence and to all work performed on the contract by piecework, station work, or by subcontract.

1.3. Except as otherwise provided for in each section, the Contractor shall insert in each subcontract all of the stipulations contained in these Required Contract Provisions for CDBG-Aided Contractor Contracts, and further require their inclusion in any lower tier subcontract or purchase order that may in turn be made. The Required Contract Provisions for CDBG-Aided Contractor Contracts shall not be incorporated by reference in any case. The prime Contractor shall be responsible for compliance by any sub-Contractor or lower tier sub-Contractor with these Required Contract Provisions for CDBG-Aided Contractor Contracts.

1.4. The Contractor and its sub-Contractors shall perform the project in accordance with Federal, State and local housing and building codes as are applicable.

1.5. The Contractor and its sub-Contractors shall retain all books, records, accounts, documentation, and all other materials relevant to the agreement for a period of five (5) years from date of final payment under this agreement; or five (5) years from the date of termination of the City of Ukiah CDBG Grant Agreement; or five (5) years from the conclusion or resolution of any and all audits or litigation relevant to this agreement and/or to the CDBG Agreement and any amendments, whichever is later.

1.6. The Contractor and its sub-Contractors shall permit the State, Federal government, the Bureau of State Audits, the Department of Housing and Community Development, the City of Ukiah and/or their representatives, upon reasonable notice, the right to interview employees and unrestricted access to any or all books, records, accounts, documentation, and all other materials relevant to the agreement, for the purpose of monitoring, auditing, or otherwise examining said materials.

2. Conflict of Interest Provisions

2.1. Pursuant to 24 CFR 570.611, no member, officer, or employee of the Grantee, or its designees or agents, no member of the governing body of the locality in which the program is situated, an no other public official of such locality or localities who exercise or have exercised any functions or responsibilities with respect to CDBG activities assisted under this part, or who are in a position to participate in a decision-making process or gain inside information with regard to such activities, may obtain a financial interest or benefit from a CDBG-assisted activity, or have a financial interest in any contract, subcontract or agreement with respect to a CDBG-assisted activity or its proceeds, either for themselves or those with whom they have business or immediate family ties, during their tenure or for one (1) year thereafter.

3. Nondiscrimination

3.1. During the performance of this contract, Contractor and its subcontractors shall not unlawfully discriminate, harass, or allow harassment against any employee or applicant for employment because of the following: race, religion, color, national origin, ancestry, disability, medical condition, marital status, age (over 40) or sex. Contractors and subcontractors shall insure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination and harassment. Contractors and subcontractors shall comply with the provisions of the Fair Employment and Housing Act (Government Code, Section 12900 et seq.) and the applicable regulations promulgated there under (California Code of Regulations, Title 2, Section 7258.0 et seq.), the applicable regulations of the Fair Employment and Housing Commission implementing Government Code, Section 12990 (a-f), set forth in Chapter 5 of Division 4 of Title 2 of the California Code of Regulations are incorporated into this contract by reference and made a part hereof as if set forth in full, Contractor and its subcontractors shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

3.2. This Contractor shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform work under the contract.

4. Maintenance of Workers' Compensation Insurance

The Contractor and its sub-Contractors shall maintain at least the minimum State-required Worker's Compensation Insurance for those employees who will perform the contract activity(ies) or any part of it.

5. Maintenance of Unemployment, Disability, and Liability Insurance

The Contractor and its sub-Contractors shall maintain, if so required by law, unemployment insurance, disability insurance and liability insurance in an amount to be determined by the State which is reasonable to compensate any person, firm, or corporation who may be injured or damaged by the Contractor or any sub-Contractor in performing the project or any part of it.

6. Equal Opportunity

6.1. The Civil Rights, Housing and Community Development, and Age Discrimination Acts Assurances:

During the performance of this Agreement, the Contractor assures that no otherwise qualified person shall be excluded from participation or employment, denied program benefits, or be subjected to discrimination based on race, color, national origin, sex, age, handicap, religion, familial status, or religious belief, under any program or activity funded by this contract, as required by Title VI of the Civil Rights Act of 1964, Title I of the Housing and Community Development Act of 1974, as amended, the Age Discrimination Act of 1975, and the Fair Housing Amendment Act (42 USC 3601-20) and all implementing regulations.

7. Energy Efficiency

The Contractor or subcontractor shall certify if its business or company will purchase ENERGY STAR qualified products, where applicable, in implementing the services outlined in the scope of work. Examples of ENERGY STAR qualified products can include, but will not be limited to the following: CFLs, sealants and insulation, high efficiency furnaces and air conditioning units, windows, doors, etc.

8. Anti-Lobbying

The Contractor shall complete and certify as to **Contractor's/Sub-Contractor's Certification Concerning Anti-Lobbying** form provided below, and the Contractor shall require that the language included in the **Contractor's/Sub-Contractor's Certification Concerning Anti-Lobbying** form provided below shall be included in all subcontracts entered into in connection with this activity and that Contractor and all subContractors shall certify and disclose per the requirements of that form.

CITY OF UKIAH
300 Seminary Ave., Ukiah, CA 95482

CONTRACTOR'S/SUB-CONTRACTOR'S CERTIFICATION
CONCERNING ANTI-LOBBYING

The Contractor shall require that the language of this certification be included in all contracts or subcontracts entered into in connection with this grant activity(ies) and that all subrecipients shall certify and disclose accordingly. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by 31 U.S.C. 1352. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and no more than $100,000 for such failure.

"The undersigned certifies, to the best of his or her knowledge or belief, that:

A. No Federal appropriated funds have been paid or will be paid, by or on behalf of it, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement;

B. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, it will complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions."

INSTRUCTIONS FOR COMPLETION OF SF-LLL, DISCLOSURE OF LOBBYING ACTIVITIES

This disclosure form shall be completed by the reporting entity, whether subawardee or prime Federal recipient, at the initiation or receipt of a covered Federal action, or a material change to a previous filing, pursuant to title 31 U.S.C. section 1352. The filing of a form is required for each payment or agreement to make payment to any

lobbying entity for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with a covered Federal action. Complete all items that apply for both the initial filing and material change report. Refer to the implementing guidance published by the Office of Management and Budget for additional information.

1. Identify the type of covered Federal action for which lobbying activity is and/or has been secured to influence the outcome of a covered Federal action.

2. Identify the status of the covered Federal action.

3. Identify the appropriate classification of this report. If this is a followup report caused by a material change to the information previously reported, enter the year and quarter in which the change occurred. Enter the date of the last previously submitted report by this reporting entity for this covered Federal action.

4. Enter the full name, address, city, State and zip code of the reporting entity. Include Congressional District, if known. Check the appropriate classification of the reporting entity that designates if it is, or expects to be, a prime or subaward recipient. Identify the tier of the subawardee, e.g., the first subawardee of the prime is the 1st tier. Subawards include but are not limited to subcontracts, subgrants and contract awards under grants.

5. If the organization filing the report in item 4 checks "Subawardee," then enter the full name, address, city, State and zip code of the prime Federal recipient. Include Congressional District, if known.

6. Enter the name of the federal agency making the award or loan commitment. Include at least one organizational level below agency name, if known. For example, Department of Transportation, United States Coast Guard.

7. Enter the Federal program name or description for the covered Federal action (item 1). If known, enter the full Catalog of Federal Domestic Assistance (CFDA) number for grants, cooperative agreements, loans, and loan commitments.

8. Enter the most appropriate Federal identifying number available for the Federal action identified in item 1 (e.g., Request for Proposal (RFP) number; Invitations for Bid (IFB) number; grant announcement number; the contract, grant, or loan award number; the application/proposal control number assigned by the Federal agency). Included prefixes, e.g., "RFP-DE-90-001."

9. For a covered Federal action where there has been an award or loan commitment by the Federal agency, enter the Federal amount of the award/loan commitment for the prime entity identified in item 4 or 5.

10. (a) Enter the full name, address, city, State and zip code of the lobbying registrant under the Lobbying Disclosure Act of 1995 engaged by the reporting entity identified in item 4 to influence the covered Federal action.

    (b) Enter the full names of the individual(s) performing services, and include full address if different from 10(a). Enter Last Name, First Name, and Middle Initial (MI).

11. The certifying official shall sign and date the form, print his/her name, title, and telephone number.

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB control Number. The valid OMB control number for this information collection is OMB No. 0348-0046. Public reporting burden for this collection of information is estimated to average 10 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0046), Washington, DC 20503

Mary Horger
Financial Services Manager
300 Seminary Avenue, Ukiah
California 95482

Dear Ms. Horger,

Please accept this introductory letter for Chico State Enterprises – the Center for Economic Development (CED). The Center for Economic Development in partnership with Morrison and the Economic Development and Financing Corporation is proposing to provide microenterprise technical assistance through the City of Ukiah's Community Development Block Grant (CDBG) program (TA Program). The TA Program is designed to stimulate economic growth and create businesses and jobs that will improve the living conditions of the residents of Ukiah. The TA Program provides technical assistance services to eligible businesses and persons for business start-up or expansion activities.

Technical Assistance activities can include, but are not limited to, the following:

- Business plan development or updating
- Market analysis and marketing plan development
- Managing employees and payroll services
- Choosing a legal structure for a business
- Financial management tools and cash flow projections
- Controlling inventory and operating expenses
- Collection of accounts payable
- Use of internet and other electronic resources for sales and efficiencies
- Access to capital for growing the business

The following is the project director's contact information:

Chico State Enterprises
Center for Economic Development
35 Main Street, Suite 132
Chico, CA 95928
Jason Schwenkler, Executive Director

530 680-3653 mobile
530 898-6317 fax

The CED appreciates the opportunity to support the City of Ukiah in its activities to stimulate the economy for small business and entrepreneurial success.

Thank you in advance for your time and consideration.

Sincerely,

Mary Sidney

Mary Sidney
Chief Executive Officer Chico State Enterprises

Section I. – Introduction to the Team

The Center for Economic Development, Morrison and the Economic Development and Financing Corporation are partnering to provide technical assistance to microenterprise businesses located within the City of Ukiah. Each partner brings experience and expertise with identifying and working with low- to moderately-low income, microenterprise businesses and start-ups utilizing programs such as the Community Development Block Grant Technical (CDBG) Assistance.

Center for Economic Development

The Center for Economic Development (CED - est. 1986) is a department of the North State Planning and Development Collective at Chico State Enterprises. The CED (in tandem with its counterpart agency the Geographical Information Center (GIC – est. 1988) provides services and resources to the region's businesses, governments, and residents by pairing GIS mapping services and broadband infrastructure support with economic development research, surveying, analysis, planning and implementation throughout the state of California.

The Center for Economic Development was founded with the understanding of the need for targeted technical assistance, data collection and analysis, strategic planning and convening and facilitation of various partners and communities. This theme has continued and improved over the CED's 34 years. The CED team has the skillsets and experience to implement data collection, surveying, analysis and mapping while understanding trends, patterns and predictors of the predictors for the region's economy.

The CED supports small to medium-sized businesses and entrepreneurs throughout the North State by providing customized technical assistance to enhance their ability for growth and sustainability. Small businesses are the backbone of the North State economy. Providing technical assistance for businesses identified through the CDBG TA program is critical especially given the additional challenges of natural disasters and now COVID-19. These challenges are in addition to the obstacles many low- to moderately-low income small business owners face. Many owners struggle with limited time or expertise or simply do not know how to access resources that are available. This is why assistance like the TA program is so important.

The Center for Economic Development (CED is housed under Chico State Enterprises (formerly the CSU, Chico Research Foundation). Chico State Enterprises (CSE) was incorporated in 1997 following a reorganization of the responsibilities of the University Foundation. Chico State Enterprises was incorporated in 1940 as an auxiliary organization authorized by the Education Code of the State of California and currently is responsible for fundraising and philanthropic endeavors on behalf of the University. Chico State Enterprises has assumed responsibility for grants and contracts administration for the campus along with entrepreneurial activities. It is governed by a 12-member Board of Directors consisting of campus administration, faculty, a student, and members of the community. Chico State Enterprises Executive Director is

responsible to the Board of Directors for the administration of Foundation activities and to the University administration for adherence to campus policy.

As a public non-profit corporation, Chico State Enterprises is self-financed and receives no state appropriations. Chico State Enterprises must conform to non-profit corporation laws as well as the regulations and directives issued by the Trustees of the California State University. The purpose of Chico State Enterprises is to help develop and administer those activities that aid and supplement the educational mission of CSU, Chico. As an auxiliary organization of CSU, Chico, Chico State Enterprises provides service functions. As a non-profit corporation, it facilitates the work of campus units and provides alternatives to state procedures. Chico State Enterprises administers hundreds of projects annually with annual revenues of about $34 million. Chico State Enterprises employs more than 2,000 employees over the course of the year, in the form of 170 regular employees with full-benefits status, and 45-600 other temporary, part-time, and student employees during any particular pay period throughout the course of the year.

Chico State Enterprises provides fiscal management of its grants through the Office of Research and Sponsored Programs. Each contract is assigned to one analyst, who administers the grants in accordance with the Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards (Uniform Guidance, 2 CFR 200). Each award is assigned a unique project number, and all expenditures are tracked with that project number and object codes identifying the type of expense. Each expenditure is reviewed for allowability and allocability. Chico State Enterprises maintain policies to ensure compliance with federal guidance, including personnel time reporting, travel, purchase procedures, and cost share. Chico State Enterprises conducts an annual audit in conformance with the Uniform Guidance.

The Center for Economic Development receives no funding from Chico State Enterprises or California State University, Chico, rather the agency applies for public and private grants and provides services through contract agreements. All grants and contracts are acquired and managed by the CED team. The CED works with CSE for all financial and programmatic reports.

The CED has current and past successful grants/contracts from the following agencies (this is not an exhaustive list):

- United States Department of Agriculture (USDA)
- Economic Development Administration (EDA)
- California Manufacturing Technology Consultants (CMTC) (funding through US Department of Commerce)
- US Forest Service
- Facebook
- Public agency contracts
- California Public Utilities Commission (CPUC)

The Center for Economic Development will serve as the program operator and contact for the City of Ukiah. The CED is prepared to oversee and manage the designated tasks outlined in the Scope of Work.

Morrison
Morrison was founded in 2002 to provide specialized business consulting services. They have had the pleasure of serving government entities, economic development corporations, industry associations, food companies, farms and ranches, start-up businesses, institutions of higher education, and others across the nation.

From their beginnings providing primarily management and accounting assistance, they have grown to three major service lines led by three Principals (owners): Business & Accounting Advisory Services, led by Founder and Principal Brent Morrison; People Solutions (Human Resources and executive recruiting) led by Principal Shawn Miller; and, Grants led by Managing Principal Toni Scott. Ms. Scott also leads Morrison's market and economic research projects.

From Day 1, Morrison's focus has on been recognizing, respecting, and meeting the needs of their clients. With an understanding of both top-notch service organizations and real-world client needs (and how they can connect – or collide if not managed appropriately), their mission is to be a trusted advisor.

Economic Development Finance Corporation
The Economic Development Finance Corporation (EDFC) is a non-profit organization that makes loans to businesses in Mendocino and Lake Counties to create jobs and grow the local economy. In addition to its financing programs, EDFC provides a critical link between the public and private sectors acting not just as a lender but also as an economic development organization. EDFC works with a multitude of partners to develop plans and implement projects that support economic growth.

Section II. – Relevant Experience with Similar Projects

Center for Economic Development
The Center for Economic Development daily provides one-on-one mentoring, technical assistance and business services to clients throughout the North State. The CED specializes in data analysis and market research to assist businesses with understanding their market and customer bases, expand their reach, shift their business models, assess and set their price points and other activities that support their expansion. The CED also has the capacity to provide broadband assessments for businesses to identify and understand the business's needs to successfully operate online. The CED also provides workshops and trainings across all industry sectors.

The following are examples of the marketing support provided by the CED team:

- **Basic Wix website creation with account transfer to client – 10 to 20 hours**
    - Includes an About page, Product page (if information is provided) Contact/Location page, and links to social media accounts
    - Required: business name, address, phone number, email and social media account handles (if applicable)
    - Recommended: client provide paragraph about business history/background, provide photos and product descriptions if a product page is desired, client provide label and/or photos/videos -- for a more custom/unique website, it is suggested client provides as much content as possible. Alternative Option: If the client is unable to provide content, the CED team will work with the business to develop the content through interviews, meetings, photography, etc.
    - Expanded features and services are at expense of client (domain name, shopping cart/e-commerce).
- **Social media sample packet – 8 to 10 hours**
    - Includes 5 sample posts and suggested posting schedule
        - Choose from: Facebook, Instagram or Twitter sample posts (mix/match available)
    - Recommended: client provide 8 – 10 photos, 1 video
        - If photos/video are not provided by client – industry stock photos will be used or team can assist with acquiring photos of the business
- **Social media sample packet – 10 to 12 hours**
    - Includes 8 sample posts and suggested posting schedule
        - Choose from: Facebook, Instagram or Twitter sample posts (mix/match available)
    - Recommended: client provide 8 – 10 photos, 1 video
        - If photos/video are not provided by client – industry stock photos will be used or team can assist with acquiring photos of the business
- **ESRI Business Analyst Market Region Profiles – 4 hours each**
    - Business Market variable assessment – consumer spending (filtered by demographics – spending patterns, age, location), product pricing and income distribution
    - Competitive analysis – assessing similar businesses within a determined geography
    - Demographic profile – includes population, median age, number of households, median disposable income, educational attainment, unemployment rate, median household income, per capita income, median net worth, and household income.
    - Employment Overview – includes population, median age, number of households, median disposable income, educational attainment, unemployment rate, median household income, per capita income, median net worth, total businesses, total employees, and commuter data.
    - Key Facts – includes population, median age, average household size, median household income, educational attainment, total businesses, total employees, unemployment rate, per capita income, median net worth, and households by income.

    - Population Trends – includes total population, number of households, average household size, median age, median household income, median home value, wealth index, housing affordability, diversity index, population by age, mortgage indicators, historical population trends, home values, housing year built, and population by generation.
    - Coronavirus (COVID-19) Impact Planning Report – includes population, average household size, number of households, median age, median household income, median home value, housing affordability, percent with internet at home, daytime population, total businesses, total employees, households below the poverty level, household receiving Food Stamps/SNAP, households with disability, population 65+, households without a vehicle, population without health insurance by age, and population with health insurance coverage.
- **Policy and Regulatory research – 4 hours**
    - Provide information regarding policy and regulation for businesses to operate legally and within specific parameters for industry sectors. Research may include food regulations, manufacturing requirements, labeling and packaging specifications, etc.

The following are businesses the CED has provided services over the past year:

Winery/Vineyard - Durham, Ca (microenterprise)

- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Provide research on effective social media outreach strategies
- Provide examples of social media posts
    - Social media post templates – Facebook, Instagram, Twitter
    - Suggested social media posting schedule
- COVID-19 business resource information
    - SBA Relief Program Information
    - Tax Breaks and Incentives
    - Ideas for continuing operations post shelter-in-place order

Cidery/Tasting Room – Chico, Ca (microenterprise)

- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Provide research on effective social media outreach strategies
- Provide examples of social media posts
    - Social media post templates – Facebook, Instagram, Twitter
    - Suggested social media posting schedule
- Assist with development of basic business website
- COVID-19 business resource information
    - SBA Relief Program Information
    - Tax Breaks and Incentives
    - Ideas for continuing operations post shelter-in-place order

Brewery/Tap House – Chico, Ca

- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Provide research on effective social media outreach strategies
- Provide examples of social media posts
    - Social media post templates – Facebook, Instagram, Twitter
    - Suggested social media posting schedule
- COVID-19 business resource information
    - SBA Relief Program Information
    - Tax Breaks and Incentives
    - Ideas for continuing operations post shelter-in-place order

Brewery - Princeton, Ca (microenterprise)

- Regional competitive cost analysis on beer
    - Gathered pricing data on 64 comparable 6-packs at 7 different retailers within the client's distribution area
    - Provided statistics (average, median, min and max) on prices of comparable beers for 3 of Farmer's Brewing beers
- Provided client with map and directory of local restaurants that are able to sell to-go alcohol with food purchase, as a business adaptation to the COVID-19 response

Kombucha Crafting - Redding, Ca (microenterprise)

- Research on FDA label requirements and regulations for Kombucha products
- Assistance with calculating calories and DV% for 1 Mama Shari's Kombucha recipe
- Provide examples of social media posts
    - Social media post templates – Facebook, Instagram, Twitter
    - Suggested social media posting schedule

Custom Furniture – Orland, Ca (microenterprise)

- Researched market expansion potential and options for client
- Assessment of best practices for E-commerce among comparable businesses
- Identification of potential suppliers and distributors within the client's market region
- Competitive analysis of comparable businesses

Salad Mixes/Farmstand – Corning, Ca (microenterprise)

- Research and provide information for client on difference between LLC and Partnership
- Researched market expansion potential and options for client
- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Provide research on effective social media outreach strategies
- Provide examples of social media posts
    - Social media post templates – Facebook, Instagram, Twitter
    - Suggested social media posting schedule

Herbs and Microgreens – Redding, Ca (microenterprise)

- Researched market expansion potential and options for client
- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Provide research on effective social media outreach strategies
- Provide examples of social media posts
    - Social media post templates – Facebook, Instagram, Twitter
    - Suggested social media posting schedule
- Assist with development of basic business website

Fruit and Vegetable Packaging – Finley, Ca

- Research and assessment of alternative packaging materials that are more sustainable based on researching comparable businesses

Auxiliary Fuel Tank Manufacturing – Chico, Ca

- Assisted with targeted marketing research to assess demand for a new product concept

Specialty Boysenberry Products – Orland, Ca (microenterprise)

- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Identification of potential sales locations
- Market analysis of potential sales region
- Research and suggestions on how/where to gain product exposure

Bakery – Redding, Ca (microenterprise)

- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)
- Identification of potential sales locations
- Market analysis of potential sales region

Fermented and Pickled Products – Dunsmuir, Ca (microenterprise)

- Provided client with list of potential distributors within their target region

Cidery/Tap Room – Eureka, Ca

- Market analysis and consumer spending research for client's current sales region, and of three potential expanded sales regions

Heirloom Garlic Farm/Pickled Garlic – Anderson, Ca (microenterprise)

- Research and assistance with business start-up information
- Research on general requirements for manufacturing pickled garlic products
- Market research on client's potential sales region
- Identification of potential sales/distribution locations

Gluten-Free Bakery – Redding, Ca (microenterprise)

- Market research focused on the client's target market region and demographic (spending patterns, median household income levels, age distribution, etc.)

- Research and data on consumer spending on products labeled as gluten-free with client's target market region
- Identification of potential sales/distribution locations

Morrison

Morrison daily provides clients with direct one-on-one mentoring in all aspects of business management. Since their founding, Morrison has provided analyses of the financial feasibility and management of start-ups, well-established organizations, and expansions. Additionally, with a talented team of several Certified Public Accountants (CPAs), they have extensive experience in financial modeling, cash flow analysis, and projections to help organizations achieve fiscal sustainability. These CPAs have served in both industry and consulting capacities as financial executives.

Morrison has also engaged with organizations to provide workshops, classes, and direct one-on-one consulting to their members and clients, with attention to financial management, helping businesses reach new growth and stability, and through this work, has cooperatively worked with other contractors and agencies to deliver services. Their clients have included:

3CORE
Blue Diamond Growers
California Association of Winegrape Growers
California Center for Cooperative Development
California Olive Ranch
California State University, Chico
California Sustainable Winegrowing Alliance
ChicoBag
Chico Health Imaging
Challenge Dairy Products
City of Crescent City
City of Willows
Glenn County
Girls With Guns
Lundberg Family Farms
National Cooperative Business Association
National Farmers Organization
Northern California Regional Land Trust
Michigan Blueberry Growers
Napa Valley Grapegrowers
Reclamation District 108
Sheraton Real Estate
Sohnrey Family Foods
Sonoma County Winegrowers
Sunsweet Growers
Tehama County
Top O' the Morn Farms
University of California, Davis
University of Florida
Wine Institute
Work Truck Solution
Yuba-Sutter Economic Development Corporation

Morrison's most relevant firm experience includes having served as the Program Operator for the **City of Crescent City's Community Development Block Grant (CDBG) Microenterprise Assistance Program**. The goal of the program was to provide technical assistance to microenterprise businesses conducting business within the city limits. To qualify for the technical assistance program, a business had to operate within the city limits, have five or fewer employees, and the owner had to earn less than 80 percent of the County median income as adjusted for household size.

Crescent City CDBG Contact:
Bridget Lacey
Accountant
City of Crescent City
377 J Street
Crescent City, CA 95531
T: (707) 458-4814
F: (707) 465-1719
E: blacey@crescentcity.org

The Microenterprise Assistance Program provided the opportunity for qualifying businesses to receive up to 40 hours of direct technical assistance from a certified public accountant and up to 10 hours of direct communication and counseling with a business advisor for up to a total of 50 hours of business guidance. This technical assistance and guidance was tailored to the direct expressed needs of the business. The program provided support on financial issues microenterprise businesses owners requested to learn about and/or direct technical assistance on the challenges they were facing as business owners. Through the program, microenterprise business owners requested to receive assistance on best practices for small business record keeping, planning, tracking expenses, categorizing expenses, documenting income; preparation and analysis of financial statements; preparation and analysis of cash flow projections; identification of business needs; matching of potential lending/financial partners; and, other issues facing their businesses.

Morrison performed the following financial analysis for the program participants:

- A restaurant building owner – The key goal of Morrison's technical assistance was to assist in the development of financial projections to help determine the viability of a potential restaurant business and the working capital needs to operate the business. The final deliverable was an extensive analysis that included: the venture description, the history of existing financing relationships, Morrison's approach, relevant market data from a market research company engaged by the participant, Morrison's market research, a Representation Letter signed by the participant, Financial Projections, a Projection Sensitivity Analysis, the related Assumptions, an Appendix with all of the market research by Morrison, as well as the documentation provided by the participant that informed the projections and research.
- A farmers market business owner – The key goals of Morrison's technical assistance were to: provide a cash flow forecasting model so that the participant could better anticipate his revenue and expenses throughout the year in order to plan accordingly; and to help him select an accounting system and get trained on the use of the system to help them simplify his financial processes, streamline his financial information, and to help him better prepare for tax season. The final deliverables included the development of a three year cash flow plan Excel template (so he could adjust numbers as needed) and the related assumptions, a recommendation of an electronic accounting system and introductory training on that system.

- A coffee roasting business owner – The key goals of Morrison's technical assistance were to: provide the participant with a tool to facilitate a deeper understanding of the financial implications of purchasing and operating a coffee bike which would in turn provide greater insight on a decision to pursue financing for this business pursuit; and, to increase his understanding of market demand for his coffee in order to grow his business strategically. The final deliverables included a financial analysis of the coffee bike project, the assumptions, and the results of a market survey.
- A mobile safe company owner – The key goal of Morrison's technical assistance was to develop an invoicing system and provide related QuickBooks instructions to help the participant to have additional tools to keep his business finances organized and accounted for. In addition to developing the invoicing system and providing the related QuickBooks instructions, Morrison discussed developing a written system for when bills are due to help manage cash flow. Morrison also provided resources for QuickBooks training that were tailored to the business needs as well as resources for inexpensive online search engine optimization and digital marketing design. The final deliverables included invoicing instructions and related detailed QuickBooks instructions as well as a list of QuickBooks training links and other resources.
- A sandwich business owner – The key goals of Morrison's technical assistance were to: facilitate a better understanding of how current costs related to product pricing so that the participant could revise his prices as needed based on costs; help him implement a standardized invoicing system; increase his understanding of options for low cost advertising; and, to provide the information/training needed to select and implement an electronic accounting system for his business to enable him to keep track of income and expenses in preparation for the growth of his business. The final deliverables included the development of an Excel template for the participant to utilize as an electronic check register, recommendations of an electronic accounting system once his business grows bigger, as well as the development of a "sandwich calculator" in Excel enabling him to calculate ingredient costs for each type of sandwich.

In addition to running the Microenterprise Technical Assistance Program for the City of Crescent City, Morrison team members have served in CEO, CFO controller, and other positions, filling interim and outsource roles for companies from less than $2 million in revenues to hundreds of millions. They also have conducted dozens of feasibility studies and business plans throughout their 18-year history. These have included analyses of markets, proposed ventures, start-ups, well-established organizations, and expansions. Additionally, Morrison has extensive experience in financial modeling, cash flow analysis, and projections to help organizations achieve fiscal sustainability. Their feasibility studies and business plans have also been used to guide more than 50 United States Department of Agriculture supported projects.

Relevant interim engagements and feasibility studies and business plans have included:

- Serving as Outsource CFO for a processing, distribution, and consumer products food company (the largest US company in its industry) for over a year.
- Restructuring finance operations (staffing, procedures, ERP) during a period of rapid growth.
- Serving as Interim President & CEO for a northern California agribusiness firm while Morrison performed a search for a permanent replacement.
- Serving as Outsource controller for a large family-owned company that had struggled to retain professional-level accounting and finance staff or outsource assistance.
- Providing assistance and direction in meeting year-end closing needs, bank and other reporting requirements, and other deadline or project driven goals for several companies. This has included hands-on performance of tasks and oversight of client personnel if needed.
- Feasibility assessment to determine the general viability of a cold storage facility venture for a government entity which included a regional market overview, qualitative market research, secondary market research and volume estimates, an operational analysis, a management analysis, assessment of capital needs, a risk assessment, and pro forma financial projections.
- Feasibility assessment to determine the general viability of a community kitchen incubator venture at the Red Bluff Community Center for Tehama County. The feasibility assessment included a regional market overview, qualitative market research, secondary market research and volume estimates, an operational analysis, a management analysis, assessment of capital needs, a risk assessment, and pro forma financial projections.
- Feasibility assessment of the establishment of a regional community food hub to connect local growers to consumers and other markets, including evaluations of supply and buyer interest to determine a market analysis. Assessment included stakeholder interviews and financial projections under two separate operating models.
- Financial assessment and feasibility study of the Colusa, Glenn, and Trinity Community Action Partnership to identify program funding adequateness and options for organizational structure.

Section II. – Roles and Responsibilities

Center for Economic Development

The Center for Economic Development will serve as the program operator and contact for the City of Ukiah. The CED is prepared to oversee and manage the designated tasks outlined in the Scope of Work. The CED will be responsible for marketing the TA program in collaboration with EDFC, screening the businesses for eligibility of number of employees and the low- to moderately-low income requirements as outlined by Housing and Community Development's CDBG guidelines, ascertain needs and readiness of each business, and determine which member of the Team can best provide services to each business.

The CED will also be responsible for identifying any class/workshop topics identified as useful to a group of businesses with similar needs as appropriate.

Key Personnel

Courtney Farrell – Project Manager

Courtney has over 20 years' experience in economic and community development, business development, project management and funding development. She has coordinated development efforts and strategic planning sessions between cities, counties, government agencies, private companies and nonprofits. Her expertise is in strategic planning, relationship building, facilitation, conference and event planning, grant writing, donor cultivation and stewardship, and fundraising.

From 2012 to 2015, Courtney managed Butte County's CDBG Business Incubation Program (BiP). During that time, she was responsible for marketing the program, identifying and screening potential businesses based on the CDBG eligibility requirements, assessed business needs, created development plans, coordinated TA activities, developed workshops, completed grant reports and participated in monitoring activities. From 2015-2017, Courtney managed a Business Vitality Seed Fund in partnership with the City of Chico's CDBG program. This fund provided grants up to $5,000 per eligible business.

She is a founding member of Team Chico an economic development collaborative for the City of Chico and the City of Corning's Economic Development Action Committee. Courtney has a Master's Degree from CSU, Chico and successfully completed the School of Executive Leadership training, University of Michigan, Ross School of Business and the University of Arizona's Economic Development Course.

Hayley Stone – Senior Project Analyst

Hayley holds a BA in Geography and Planning, a Certificate in Rural and Town Planning, a minor in Diversity Studies and a Master's Degree in Public Administration from CSU, Chico. She has over 6 years of professional experience performing GIS data development and maintenance, as well as data analysis at the Geographical Information Center. Since March of 2018, Hayley has been responsible for managing several statewide, regional and local level GIS contracts and timelines.

In addition to her GIS background, Hayley works with the Center for Economic Development to design and implement research projects that are intended to fill data gaps on workforce, training, and industry needs. At the Center for Economic Development, Hayley manages a strategic partnership with California Manufacturing and Technology Consultants to provide technical assistance to manufacturing businesses within the North State region. Through this partnership, Hayley outreaches and connects with potential businesses, and together they establish a technical assistance plan that is geared to the specific goals and needs of each business.

Additionally, at both the Geographical Information Center and the Center for Economic Development, Hayley leads project teams of full-time staff and student research assistants, provides professional mentorship to interns, and assists with new project development and the development of resources for the North State.

Morrison
Morrison will provide direct technical assistance to identified, eligible businesses for the TA program.

Key Personnel
Toni Scott – Managing Principal
Toni Scott is responsible for Morrison's overall management and operations. She also leads and directs Morrison's grant services, working with clients in government, food, agribusiness, manufacturing, production agriculture, processing, and marketing to plan, prepare for, and secure competitive state and federal grant funding. She also oversees grant administration of client projects and contributes to business plan and feasibility study projects and conducts strategic planning and facilitation. Toni directs Morrison's external communications and industry outreach.

Shawn Miller – Principal, People Solution Services
Shawn Miller joined Morrison in 2016 and leads the People Solutions Services practice area, serving clients in industries including agribusiness, manufacturing and processing, distribution, health care, and non-profit, focusing on executive recruiting, organizational development, outsourced and interim human resources management, and human resources advisement and compliance.

Geoff Chinnock – Consultant, Business and Accounting Advisory Services
Geoff Chinnock joined Morrison in 2007 and serves as an advisor to clients in processing, agribusiness, distribution, manufacturing, marketing, and production agriculture. His service areas include virtually every aspect of Morrison's Business & Accounting Advisory Services, with a focus on strategy and overall business management.

Economic Development Finance Corporation
For the purposes of this program, EDFC will provide outreach activities throughout the City of Ukiah to promote the TA program by utilizing their mail chimp newsletter, Facebook, Twitter and referrals. CED will work with EDFC to create marketing material, social media posts, and press releases for promotion activities and to develop the program web site. Additionally, EDFC will provide in-person meeting space for the team to meet with businesses as needed.

At this time, due to COVID-19, the team has the capabilities to meet remotely with business owners. During the initial screening of each business for eligibility, the team will discuss the best approach for communication with the business to best accommodate the interaction and process of the development plan and implementation of the work.

The Team will make referrals to the EDFC as finance needs arise.

Key Personnel

Diann Simmons – Operations Manager

Diann brings a diverse background to EDFC. She grew up in the Midwest and spent almost two decades living the back-to-the-land life in northern Wisconsin and raising three children. She moved to Sonoma County from the Southwest in the late 90's and initiated nearly a decade of work as a project manager in affordable housing development. She has lived in Mendocino County since 2002 and worked in the county since 2004. In 2008 she turned her attention to her rural community in Round Valley and transferred her grant writing capacity from affordable housing, to funding and coordinating community wellness and youth programs for the Round Valley Indian Health Center and the Round Valley Unified School District. She was a co-leader in a volunteer group that imagined, funded and created the Round Valley Library Commons. When she and her husband moved to the eastern Ukiah hills, she brought her focus on community well-being to her work with EDFC.

Section III. – Budget and Schedule

Task A: Marketing and Outreach

Deliverables:

1. Development of marketing materials (flyers, social media, web site, press releases) – September 1 – September 30, 2020
2. Marketing and Outreach – September 1, 2020 – August 31, 2021

Task B: Business Eligibility Screening – (October 1, 2020 – August 31, 2021)

Deliverables:

1. Review businesses on a first-come basis
2. Assess income and microenterprise eligibility including completion of required forms
3. Evaluate business readiness

Task C: Identify Business Needs– (October 1, 2020 – August 31, 2021)

Deliverables:

1. Create business development plan with schedule and activities
2. Determine team member to implement development plan and timeline
3. Determine indicators for tracking
4. Work with business to accomplish deliverables

Task D: Business Technical Assistance – (October 1, 2020 – August 31, 2021)

Deliverables:

1. Implement development plan
2. Assess progress and effectiveness of technical assistance

3. Evaluate outcomes – job creation and number of businesses formed for grant reporting and program monitoring

Task E: Identify Workshop Demand – (October 1, 2020 – August 31, 2021)
Deliverables:

1. Determine similar needs shared by multiple businesses for coordination of workshops
2. Develop workshop content

Task F: Program Administration – (October 1, 2020 – August 31, 2021)
Deliverables:

1. Provide required data and information for grant reporting and program monitoring to City staff in a timely manner
2. Coordinate with City staff to ensure timely submittal of all data, reports and cash requests associated with the program
3. Assist with close out of program and any program monitoring upon completion

The Center for Economic Development proposes between 20 and 40 hours to be spent with each business client depending on the services needed. This would be a cost of approximately $2,500 to $5,000 per participant.

Morrison proposes to provide each participant that needs financial and accounting direct technical assistance up to 40 hours of direct technical assistance. This would be at a cost of $9,000 per participant.

The Team anticipates serving up to 20 clients in this program but could be adjusted as the budget allows.

AGENDA SUMMARY REPORT

SUBJECT: Approval of Notice of Completion for Golf Course Storm Drain Project, Specification 19-07, Change Orders and Budget Amendment in the Amount of $35,955.26.

DEPARTMENT: Public Works **PREPARED BY:** Jason Benson, Senior Civil Engineer
PRESENTER:

ATTACHMENTS:

1. Contract Change Order #1-4
2. Notice of Completion-Spec 19-07
3. Invoices- Valley Paving, Tayman Park Golf Group
4. Contract_1920255

Summary: Council will Consider 1. Accepting the work as complete. 2. Directing the City Clerk to file the Notice of Completion with the County Recorder for Golf Course Storm Drain Replacement, Specification No.19-07. 3. Approval of Change Orders. 4. Approval of Budget Amendment in the Amount of $35,955.26

Background: The City Council awarded a contract on May 20, 2020, to T&T Paving Inc., dba Valley Paving of Redwood Valley, CA in the amount of $114,671, inclusive of quantities to be billed at actual amounts. The project involved the removal and replacement of the existing storm drains damaged as a result of the February storms in 2019. The project is FEMA-approved in the amount of $162,477. The total project costs will be reimbursed by FEMA at 75%, by Cal OES 18.75%, and the City will be responsible for the remaining 6.25%. With completion of the project, invoices will be submitted for reimbursable funds to be released.

Discussion: The work of the contract was completed by the contractor in substantial conformance with the approved plans and specification on July 10, 2020. The City Engineer approved four contract change orders (Attachment 1) totaling $31,270.50 for installation of storm drain pipe, drain inlets, replacement of existing sidewalk, and the inlet and outflow of the storm drain system.

Approved change orders consisted of the following:

Change Order 1 - A 4” water main for the golf course irrigation system near an existing storm drain being replaced is in the location of the new storm drain pipeline.

Change Order 2 – Conflict with a 4” water main for the golf course irrigation system near the storm drain and drain inlet replacement. Additional excavation and backfill required to revise the existing terrain slope, with additional adjustments to drain inlets.

Change Order 3 - Pave (4) areas of the golf course cart path outside of the construction zone damaged by construction equipment and materials traffic. These areas shall include approximately 2,000 SF.

Change Order 4 – Bid item deduct for item #2 installation of 44 LF of storm drain and item #15 turf replacement, and bid item add for item #3 installation of 44 LF of storm drain.

Based on actual quantities constructed and the authorized contract change orders, the final Valley Paving contract cost was $162,093.36. Final payment of the retention will be made to the contractor after 35 days from the date the Notice of Completion (Attachment 2) is filed with the County Recorder.

In addition to Change Order 4 for Valley Paving that had a deduction of $15,000 for turf replacement, the Golf Course Management Team (Tayman Park Golf Group) agreed upon the replacement of turf at or below the same cost. This work included materials: compost, grass seed, and fertilizer and labor time associated. The invoice for this work (Attachment 3) also includes the Time and Material associated with irrigation timer repairs that were damaged during excavation.

The total cost of the project is $162,093.36 and is below the FEMA approved amount of $162,477.00.

Staff is requesting approval of: Notice of Completion with the County Recorder for Golf Course Storm Drain Replacement, Specification No.19-07. 2. Approval of Change Orders. 3. Approval of Budget Amendment in the Amount of $35,955.26

The original contract has been attached for reference as Attachment 4.

CITY OF UKIAH
Mendocino County, California

AGREEMENT

FOR
UKIAH VALLEY GOLF COURSE - STORM DRAIN REPLACEMENT PROJECT
SPECIFICATION NO. 19-07

THIS AGREEMENT, made this 21st day of May 21, 20 20, by and between the City of Ukiah, Mendocino County, California, hereinafter called the City and T&T Paving, Inc. dba Valley Paving hereinafter called the Contractor,

WITNESSETH:

WHEREAS, the City has caused to be prepared in accordance with law, specifications, drawings and other contract documents for the work herein described and shown and has approved and adopted these contract documents, specifications and drawings and has caused to be published in the manner and for the time required by law a notice to bidders inviting sealed proposals for doing the work in accordance with the terms of this contract and

WHEREAS, the Contractor, in response to the notice to bidders, has submitted to the City a sealed proposal accompanied by a proposal guaranty in an amount of not less than 10 percent of the bid price for the construction of the proposed work in accordance with the terms of this contract and

WHEREAS, the City, in the manner prescribed by law, has publicly opened, examined and canvassed the proposals submitted and as a result has determined and declared the Contractor to be the lowest and best regular responsible bidder for the work and for the sums named in the proposal,

NOW, THEREFORE, THIS AGREEMENT WITNESSETH:

Article 1. Work to be Done and Contract Days Allowed.

That the Contractor shall provide all necessary machinery, tools, apparatus and other means of construction; shall furnish all materials, superintendence, overhead, expenses, all labor and expenses of whatever nature necessary for completion of the work in conformity with the Special Provisions and other contract documents hereto attached and according to such instructions as may be given by the Engineer. The Contractor shall complete the work within 20 (twenty) working days. Contract days shall be counted starting with the 10th day following receipt of notice that the contract has been executed by the City. Contractor, at his or her option, may begin work prior to start of counting contract days, however, in no event shall the Contractor start work without giving notification to the Engineer at least 72 hours prior to the start of work, without obtaining an encroachment permit from the City, or without having submitted certificates of insurance that have been accepted and approved by the Engineer

Article II. Contract Prices.

That the City shall pay the Contractor the prices stated in the proposal submitted by the Contractor, for complete performance of the contract by the Contractor. The Contractor hereby agrees to accept the prices as full compensation for all material and appliances necessary to the work, for all labor and use of tools and other implements necessary to execute the work contemplated in this contract; for all loss or damage arising out of the nature of the work or from the action of the elements, or from any unforeseen obstructions or difficulties which may be encountered in the prosecution of the work; for all risks of every description connected therewith; for all expenses of the work, as herein specified; for all liability and other insurance, for all overhead and other expenses incident to the work; all according to the Contract Drawings, the Special Provisions, the Details, the instructions and the requirements of the City.

Article III. Labor Discrimination.

Attention is directed to Section 1735 of the Labor Code, which reads as follows:

> "No discrimination shall be made in the employment of persons upon public works because of the race, color, national origin or ancestry, or religion of such persons and every contractor for public works violating this section is subject to all the penalties imposed for a violation of this chapter."

In connection with the performance of work under this contract, the Contractor agrees as follows:

(a) The Contractor will not willfully discriminate against any employee or an applicant for employment because of race, color, religion, ancestry, or national origin. The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, ancestry, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the awarding authority setting forth the provisions of this Fair Employment Practice section.

(b) The Contractor will send to each labor union or representative of workers with which he or she has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the awarding authority, advising the said labor union or worker's representative of the Contractor's commitments under this section, to employees and applicants for employment.

(c) The Contractor will permit access to his or her records of employment, employment advertisements, application forms and other pertinent data and records by the Fair Employment Practices Commission, City of Ukiah or any other appropriate agency of the State of California designated by the awarding authority, for the purposes of investigation to ascertain compliance with the Fair Employment Practices section of this contract.

(d) A finding of willful violation of the Fair Employment Practices section of this Contract or of the Fair Employment Practices Act shall be regarded by the awarding authority as a basis for determining the Contractor to be not a "responsible bidder" as to future contracts for which such Contractor may submit bids, for revoking the Contractor's pre-qualification rating, if any and for refusing to establish, reestablish or renew a pre-qualification rating for the Contractor.

The City of Ukiah shall deem a finding of willful receipt of written notice from the Fair Employment Practices Act to have occurred upon that it has investigated and determined that the Contractor has violated the Fair Employment Practices Act and has issued an order under Labor Code Section 1426 or obtained an injunction under Labor Code Section 1429.

Upon receipt of such written notice from the Fair Employment Practices Commission, the City shall notify the Contractor that unless he or she demonstrates to the satisfaction of the awarding authority within a stated period that the violation has been corrected, his or her pre-qualification rating will be revoked at the expiration of such period.

(e) The Contractor agrees that should the City determine that the Contractor has not complied with the Fair Employment Practices section of this Contract, then pursuant to Labor Code Section 1735 and 1775 the Contractor shall, as a penalty to the City, forfeit for each calendar day or portion thereof, for each person who was denied employment as a result of such non-compliance, the penalties provided in the Labor Code for violation of prevailing wage rates. Such monies may be recovered from the Contractor. The City may deduct any such damages from any monies due the Contractor.

(f) Nothing contained in this Fair Employment Practices section shall be construed in any manner of fashion so as to prevent the City or the State of California from pursuing any other remedies that may be available at law.

(g) Prior to awarding the Contract, the Contractor shall certify to the awarding authority that he or she has or will meet the following standards for affirmative compliance, which shall be evaluated in each case by the awarding authority:

(1) The Contractor shall provide evidence, as required by the City that he or she has notified all supervisors, foremen and other personnel officers in writing of the content of the anti-discrimination clause and their responsibilities under it.

(2) The Contractor shall provide evidence, as required by the City, that he or she has notified all sources of employees' referrals (including unions, employment agencies, advertisements, Department of Employment) of the content of the anti-discrimination clause.

(3) The Contractor shall file a basic compliance report, as required by the City. Willfully false statements made in such reports shall be punishable as provided by law. The compliance report shall also spell out the sources of the work force and who has the responsibility for determining whom to hire, or whether or not to hire.

(4) Personally, or through his or her representatives, the Contractor shall, through negotiations with the unions with whom he or she has agreements, attempt to develop an agreement which will:

a. Spell out responsibilities for nondiscrimination in hiring, referral, upgrading and training.

b. Otherwise implement an affirmative anti-discrimination program in terms of the unions' specific areas of skill and geography to the end that qualified minority workers will be available and given and equal opportunity for employment.

(5) The Contractor shall notify the City of opposition to the anti-discrimination clause by individuals, firms or organizations during the period of its pre-qualification.

(h) The Contractor will include the provisions of the foregoing paragraphs 1 through 5 in every first tier subcontract so that such provisions will be binding upon each such subcontractor.

(i) The "Fair Employment Practices Certification" must be completed and signed prior to the time of submitting the bid.

Article IV. Parts of the Contract.

That the complete contract consists of the following documents, all of which shall be considered a part of this agreement.

1. Notice to Bidders
2. Wage Rates
3. General Conditions
4. Technical Specifications
5. Proposal
6. Fair Employment Practices Certification
7. Agreement
8. Contract Bonds
9. Contract Drawings and Construction Details

INDEMNIFICATION AGREEMENT

This Indemnification Agreement is made and entered in Ukiah, California, on May 21, 20 20, by and between the City of Ukiah (Ukiah) and T&T Paving Inc., dba Valley Paving (Contractor).

Contractor is

performing work per plans and specifications for Spec. 19-07 - Storm Drain Replacement Project for Ukiah.

As a condition of issuing the work order, attached hereto, Ukiah requires assurance that Contractor will protect Ukiah from damage or damage claims which arise from its performance of the work.

Accordingly, Contractor agrees as follows:

1. **Indemnification**. Contractor shall indemnify and hold harmless Ukiah and its officers, agents, and employees from and against any claim, loss, or damage, including the legal and other costs of defending against any claim of damage or loss which arises out of the Contractor's negligent or wrongful performance under the work order attached hereto, except for claims, losses, or damages resulting from the sole and exclusive negligence or other wrongful conduct of Ukiah or its officers, agents and employees.

CONTRACTOR - T&T Paving Inc. dba Valley Paving

BY: Kathy Ault

TITLE: Corp. Secty.

CITY OF UKIAH

AGREEMENT

FOR
UKIAH VALLEY GOLF COURSE - STORM DRAIN REPLACEMENT PROJECT
SPECIFICATION NO. 19-07

THIS AGREEMENT, made this 21st day of May 21, 20 20, by and between the City of Ukiah, Mendocino County, California, hereinafter called the City and T&T Paving, Inc. dba Valley Paving hereinafter called the Contractor,

WITNESSETH:

WHEREAS, the City has caused to be prepared in accordance with law, specifications, drawings and other contract documents for the work herein described and shown and has approved and adopted these contract documents, specifications and drawings and has caused to be published in the manner and for the time required by law a notice to bidders inviting sealed proposals for doing the work in accordance with the terms of this contract and

WHEREAS, the Contractor, in response to the notice to bidders, has submitted to the City a sealed proposal accompanied by a proposal guaranty in an amount of not less than 10 percent of the bid price for the construction of the proposed work in accordance with the terms of this contract and

WHEREAS, the City, in the manner prescribed by law, has publicly opened, examined and canvassed the proposals submitted and as a result has determined and declared the Contractor to be the lowest and best regular responsible bidder for the work and for the sums named in the proposal,

NOW, THEREFORE, THIS AGREEMENT WITNESSETH:

Article 1. Work to be Done and Contract Days Allowed.

That the Contractor shall provide all necessary machinery, tools, apparatus and other means of construction; shall furnish all materials, superintendence, overhead, expenses, all labor and expenses of whatever nature necessary for completion of the work in conformity with the Special Provisions and other contract documents hereto attached and according to such instructions as may be given by the Engineer. The Contractor shall complete the work within 20 (twenty) working days. Contract days shall be counted starting with the 10th day following receipt of notice that the contract has been executed by the City. Contractor, at his or her option, may begin work prior to start of counting contract days, however, in no event shall the Contractor start work without giving notification to the Engineer at least 72 hours prior to the start of work, without obtaining an encroachment permit from the City, or without having submitted certificates of insurance that have been accepted and approved by the Engineer

Article II. Contract Prices.

That the City shall pay the Contractor the prices stated in the proposal submitted by the Contractor, for complete performance of the contract by the Contractor. The Contractor hereby agrees to accept the prices as full compensation for all material and appliances necessary to the work, for all labor and use of tools and other implements necessary to execute the work contemplated in this contract; for all loss or damage arising out of the nature of the work or from the action of the elements, or from any unforeseen obstructions or difficulties which may be encountered in the prosecution of the work; for all risks of every description connected therewith; for all expenses of the work, as herein specified; for all liability and other insurance, for all overhead and other expenses incident to the work; all according to the Contract Drawings, the Special Provisions, the Details, the instructions and the requirements of the City.

Article III. Labor Discrimination.

Attention is directed to Section 1735 of the Labor Code, which reads as follows:

> "No discrimination shall be made in the employment of persons upon public works because of the race, color, national origin or ancestry, or religion of such persons and every contractor for public works violating this section is subject to all the penalties imposed for a violation of this chapter."

In connection with the performance of work under this contract, the Contractor agrees as follows:

(a) The Contractor will not willfully discriminate against any employee or an applicant for employment because of race, color, religion, ancestry, or national origin. The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, ancestry, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the awarding authority setting forth the provisions of this Fair Employment Practice section.

(b) The Contractor will send to each labor union or representative of workers with which he or she has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the awarding authority, advising the said labor union or worker's representative of the Contractor's commitments under this section, to employees and applicants for employment.

(c) The Contractor will permit access to his or her records of employment, employment advertisements, application forms and other pertinent data and records by the Fair Employment Practices Commission, City of Ukiah or any other appropriate agency of the State of California designated by the awarding authority, for the purposes of investigation to ascertain compliance with the Fair Employment Practices section of this contract.

(d) A finding of willful violation of the Fair Employment Practices section of this Contract or of the Fair Employment Practices Act shall be regarded by the awarding authority as a basis for determining the Contractor to be not a "responsible bidder" as to future contracts for which such Contractor may submit bids, for revoking the Contractor's pre-qualification rating, if any and for refusing to establish, reestablish or renew a pre-qualification rating for the Contractor.

The City of Ukiah shall deem a finding of willful receipt of written notice from the Fair Employment Practices Act to have occurred upon that it has investigated and determined that the Contractor has violated the Fair Employment Practices Act and has issued an order under Labor Code Section 1426 or obtained an injunction under Labor Code Section 1429.

Upon receipt of such written notice from the Fair Employment Practices Commission, the City shall notify the Contractor that unless he or she demonstrates to the satisfaction of the awarding authority within a stated period that the violation has been corrected, his or her pre-qualification rating will be revoked at the expiration of such period.

(e) The Contractor agrees that should the City determine that the Contractor has not complied with the Fair Employment Practices section of this Contract, then pursuant to Labor Code Section 1735 and 1775 the Contractor shall, as a penalty to the City, forfeit for each calendar day or portion thereof, for each person who was denied employment as a result of such non-compliance, the penalties provided in the Labor Code for violation of prevailing wage rates. Such monies may be recovered from the Contractor. The City may deduct any such damages from any monies due the Contractor.

(f) Nothing contained in this Fair Employment Practices section shall be construed in any manner of fashion so as to prevent the City or the State of California from pursuing any other remedies that may be available at law.

(g) Prior to awarding the Contract, the Contractor shall certify to the awarding authority that he or she has or will meet the following standards for affirmative compliance, which shall be evaluated in each case by the awarding authority:

(1) The Contractor shall provide evidence, as required by the City that he or she has notified all supervisors, foremen and other personnel officers in writing of the content of the anti-discrimination clause and their responsibilities under it.

(2) The Contractor shall provide evidence, as required by the City, that he or she has notified all sources of employees' referrals (including unions, employment agencies, advertisements, Department of Employment) of the content of the anti-discrimination clause.

(3) The Contractor shall file a basic compliance report, as required by the City. Willfully false statements made in such reports shall be punishable as provided by law. The compliance report shall also spell out the sources of the work force and who has the responsibility for determining whom to hire, or whether or not to hire.

(4) Personally, or through his or her representatives, the Contractor shall, through negotiations with the unions with whom he or she has agreements, attempt to develop an agreement which will:

a. Spell out responsibilities for nondiscrimination in hiring, referral, upgrading and training.

b. Otherwise implement an affirmative anti-discrimination program in terms of the unions' specific areas of skill and geography to the end that qualified minority workers will be available and given and equal opportunity for employment.

(5) The Contractor shall notify the City of opposition to the anti-discrimination clause by individuals, firms or organizations during the period of its pre-qualification.

(h) The Contractor will include the provisions of the foregoing paragraphs 1 through 5 in every first tier subcontract so that such provisions will be binding upon each such subcontractor.

(i) The "Fair Employment Practices Certification" must be completed and signed prior to the time of submitting the bid.

Article IV. Parts of the Contract.

That the complete contract consists of the following documents, all of which shall be considered a part of this agreement.

1. Notice to Bidders
2. Wage Rates
3. General Conditions
4. Technical Specifications
5. Proposal
6. Fair Employment Practices Certification
7. Agreement
8. Contract Bonds
9. Contract Drawings and Construction Details
10. Standard Drawings
11. Indemnification Agreement

CITY ATTORNEY, CITY OF UKIAH

INDEMNIFICATION AGREEMENT

This Indemnification Agreement is made and entered in Ukiah, California, on May 21, 20 20, by and between the City of Ukiah (Ukiah) and T&T Paving Inc., dba Valley Paving (Contractor).

Contractor is
performing work per plans and specifications for Spec. 19-07 - Storm Drain Replacement Project
for Ukiah.

As a condition of issuing the work order, attached hereto, Ukiah requires assurance that Contractor will protect Ukiah from damage or damage claims which arise from its performance of the work.

Accordingly, Contractor agrees as follows:

1. **Indemnification**. Contractor shall indemnify and hold harmless Ukiah and its officers, agents, and employees from and against any claim, loss, or damage, including the legal and other costs of defending against any claim of damage or loss which arises out of the Contractor's negligent or wrongful performance under the work order attached hereto, except for claims, losses, or damages resulting from the sole and exclusive negligence or other wrongful conduct of Ukiah or its officers, agents and employees.

AGENDA SUMMARY REPORT

SUBJECT: Approval of Contract with Stone Creek Environmental Consulting in the Amount of $39,600 for Engineering Services Related to the Municipal Separate Storm Sewer Systems Permit Issued by the North Coast Regional Water Quality Control Board.

DEPARTMENT: Public Works **PREPARED BY:** Jarod Thiele, Public Works Management Analyst
PRESENTER: Tim Eriksen, Director of Public Works/City Engineer

ATTACHMENTS:
1. 200715 Ukiah Storm Water Support LP

Summary: Council will consider approval of a Contract with Stone Creek Environmental Consulting in the amount of $39,600 for Engineering Services related to the Municipal Separate Storm Sewer Systems Permit issued by the North Coast Regional Water Quality Control Board.

Background: Discharges of storm water and non-storm water from a Municipal Separate Storm Sewer System (MS4), particularly in an urbanized area, have a high potential to convey pollutants to receiving waters. The higher percentage of impervious area in urbanized areas correlates to a greater pollutant loading, resulting in turbid water discharges, nutrient enrichment, bacterial contamination, and toxic compounds. Pollutants of concern in these discharges in the Russian River Watershed include: heavy metals, indicator bacteria, nutrients (e.g., phosphorus and nitrogen), pesticides, petroleum hydrocarbons, and trash.

Discussion: The City is designated as a Phase 1 Co-Permittee with other agencies regulated by the North Coast Regional Water Quality Control Board (Board). These agencies operate under a MS4 issued by the Board which requires specific Monitoring and Reporting Requirement as well as the development of Special Studies in order to maintain compliance with the permit.

This permit has a five-year term in which these requirements must be met and submitted to the Board. The main requirements are as follows:

1) Critical Source Program
2) Development of Facility Prevention Plans
3) Municipal Staff Training
4) Development of a Sediment Reduction Plan
5) Annual Reporting Requirements to the Board

In order to maintain compliance with the permit, staff requested a proposal (Attachment 1) from Stone Creek Environmental Consulting for Engineering Services for assistance in maintaining compliance with the permit. This firm specializes in direct regulatory compliance and training for multiple agencies in the North Coast and has direct experience in these activities as a former staff member of the Board.

Staff is requesting approval of a contract in the amount of $39,600 for these services.

Recommended Action: Approve contract with Stone Creek Environmental Consulting in the amount of $39,600 for Engineering Services related to the City's Stormwater Permit.

BUDGET AMENDMENT REQUIRED: Approve transfer from 50024214.52100 to 10024224.52100- $9,600

CURRENT BUDGET AMOUNT: $9,600- 50024224.52100; 10024224.52100- $10,000; 10024620.52100- $5,000; 10024620.54121- $10,000; 10024210.52100- $5,000

PROPOSED BUDGET AMOUNT: 10024224.52100- $39,600

FINANCING SOURCE:

PREVIOUS CONTRACT/PURCHASE ORDER NO.: N/A

Attachment 1

July 15, 2020

Mr. Tim Eriksen
City of Ukiah
300 Seminary Avenue
Ukiah, CA 95482

Subject: Proposal for Stormwater Support Services

Dear Mr. Eriksen:

Stone Creek Environmental Consulting (Stone Creek) is pleased to present this letter proposal and fee estimate to provide stormwater support services to the City of Ukiah (City). Colleen Hunt, owner and professional technical consultant is a Certified Professional in Municipal Stormwater Management and brings direct regulatory compliance experience with municipal stormwater permit requirements. I have worked directly with dozens of municipal stormwater Permittees during my time with the Regional Water Board and for the past two years as a consultant.

The City if subject to requirements of the Regional Water Board Waste Discharge Requirements Order No. R1-2015-0030, National Pollutant Discharge Elimination System (NPDES) Permit No. CA0025054 for Discharges from the Municipal Separate Storm Sewer System (MS4) (Permit). The Permit has been effective since January 6, 2016 and has a five-year term, expiring on January 5, 2021. The Permit includes compliance time frames for development and implementation of various program elements. Based on recent conversations with the City, assistance is needed with meeting the following Permit requirements:

- Critical Source Program
- Facility Pollution Prevention Plans
- Municipal Staff Training
- Sediment Reduction Plan
- Annual Reporting

In addition to the Permit, the City is also subject to the *Trash Provision of the Water Quality Control Plan for Inland Surface Waters, enclosed Bays and Estuaries of California* (Trash Amendment). The City has elected to comply with the Trash Amendment with the selection of Track 2. The City has requested this proposal include assistance with completing a Trash Implementation Plan.

Scope of Work

The Scope of Work outlines tasks to assist the City with Permit requirements in a timely manner and within budget. The Scope of Work provides tasks associated with priority deliverables, focusing on requirements that are past due. A detailed approach is outlined below.

STONE CREEK environmental consulting

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

Task 1. Critical Source Program

Permit Section C.2.d. requires the City to inspect all restaurants, automotive service facilities, auto-dismantlers, retail gasoline service stations, and nurseries and landscape material retailers, identified in the Permit as critical source facilities. Inspections are required twice during the five-year term of the Permit. However, the Permit allows the City to leverage inspection efforts of other agencies as to not duplicate similar efforts, as long as other agencies' inspections include a stormwater component. Table 1 indicates the agencies that have responsibilities to inspect critical source facilities within the City:

Table 1. Critical Source Facilities Inspection

Facility Type	Responsible Agency
Restaurants	County of Mendocino Public Health Department
Automotive Service Facilities	County of Mendocino Environmental Health (CUPA)
Retail Gasoline Service Stations	County of Mendocino Environmental Health (CUPA)
Auto-Dismantlers	County of Mendocino Environmental Health (CUPA)
Nurseries and Landscape Material Retailers	None

I am familiar with the inspection process for each of the agencies listed in Table 1. Both agencies include a stormwater component as part of their inspection protocols for the critical source facilities. Therefore, I recommend that the City use the existing inspection programs as part of the strategy for complying with this Permit requirement. However, the City will need to collaborate with the agencies to appropriately document that the inspections have taken place and that they meet the requirements of the Permit.

Task 1.1 Local Agency Record Review

To effectively demonstrate compliance with Permit Section C.2.d., I will coordinate with each agency identified in Table 1 to gather inspection records. I will provide each agency with the critical source inventory and the cross-reference records needed to query inspection records, primarily dates of inspections. This task is based on the assumption that each agency will be able to query records and provide inspection dates. The task will need to be revised if inspection records can only be obtained by conducting a file review of each individual facility.

Documented dates of inspections and the agency that completed the inspection gathered from the records review will be added to the City's existing critical source inventory. A Technical Memorandum (TM) will be developed to demonstrate that the inspections are meeting the requirements of the Permit. This task is developed with the assumption that local agency inspections and inspection frequencies will meet compliance with the Permit and no additional inspections will need to be conducted by the City. In the

STONE CREEK environmental consulting

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

event it is determined that the local agency inspections are not meeting the requirements of the Permit, this Scope of Work will need to be revised to incorporate additional inspection assistance to the City.

Task 1.2 Nursery and Landscape Material Retailer Inspections

There is no local agency responsible for inspecting nurseries and landscape material yards for stormwater quality compliance. Therefore, to comply with this requirement of the Permit, the City must conduct the inspections directly. Under this task, I will assist the City with conducting inspections of all nurseries and landscape material retailers in the City to meet Permit Section C.2.d. as follows:

- Inspections will include confirmation that the operator is implementing source control Best Management Practices (BMPs) in compliance with municipal ordinances and the Permit;
- Require implementation of additional BMPs and controls as needed to reduce pollutants in stormwater runoff that may be causing or contributing to an exceedance of water quality standards; and
- For BMPs that are not adequate to achieve water quality standards, the operator will be required to implement additional site-specific controls.

Each inspection will include appropriate documentation, a brief summary of findings, and recommended follow-up actions.

Task 1 Deliverables: TM of local agency inspection record review and a nursery/landscape material retailer inspection summary report.

Task 2. Facility Pollution Prevention Plans

Permit Section G.4. requires the City to develop and implement a Facility Pollution Prevention Plan (FPPP) for each public facility (or group of facilities) where potential pollutant generating activities are conducted at City owned or operated facilities. Facilities with potential pollutant generating activities include:

- Airports;
- Animal control facilities;
- Chemical storage facilities;
- Composting facilities;
- Equipment storage and maintenance facilities;
- Fairgrounds; • Fueling or fuel storage facilities;
- Hazardous waste disposal facilities;
- Incinerators;
- Material storage yards; •
- Pesticide storage facilities;
- Fire stations;

STONE CREEK environmental consulting

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

- Public parking lots;
- Public golf courses;
- Public swimming pools;
- Public parks;
- Public works yards;
- Public marinas;
- Recycling facilities; and
- Solid waste management facilities.

The first part of the task will be to identify all public facilities subject to these requirements. Once all facilities are identified, I propose to prepare a single FPPP that includes stormwater management practices for the facilities identified as having potential sources of stormwater pollution. As required by the Permit, the FPPP will include the following elements:

- Facility information, including the name of the facility, address, and supervisor contact information;
- Types of stormwater pollutant generating activities, including non-stormwater discharges;
- A site map showing the location of each pollutant generating activity and pollutant source areas;
- Staff roles and responsibilities related to stormwater pollution prevention and water quality protection;
- BMPs to address each type of pollutant generating activity and source areas;
- Spill prevention and response; and
- An inspection checklist.

The facility and pollutant generating activities information will be collected and identified in the FPPP. BMPs will be identified and developed according to section G.3. of the Permit, which requires the City to implement specific BMPs based on pollutants generating activities (Table 9 of the Permit: BMPs for Public Agency Facility and Activity Management). Based on the identified pollutant generating activities at each public facility, the FPPP will identify the associated BMPs needed for implementation. All other elements of the FPPP will be developed accordingly and will include a map of each facility. The Scope of Work assumes a site visit of each facility will be needed in order to identify specific pollutant generating activities. The FPPP does not need to be submitted to the Regional Water Board, but should remain on record to demonstrate compliance with the requirements.

Task 2 Deliverable: City-Wide Facility Pollution Prevention Plan.

Task 3 Municipal Staff Training

Permit Section G.12. requires the City to annually train staff whose interactions, job, and activities may affect stormwater quality. As part of this task I will provide one, two-hour training covering topics such as

STONE CREEK environmental consulting

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

general permit overview, storm drain maintenance, operation and maintenance BMPs, Integrated Pest Management, illicit discharge, non-stormwater discharges, spill response, and reporting. The final training topic selection will be at the discretion of the City. Training is required on an annual basis and will be completed during the current fiscal year as directed by the City.

Task 3 Deliverable: Stormwater training, including preparation of a PowerPoint presentation, training materials, and training documentation records.

Task 4 Sediment Reduction Plan Development and Implementation

Section I.3. requires the City to develop and implement a sediment reduction workplan to address sediment in storm water. The workplan is required to include the following components:

- An inventory of sediment sources;
- Proposed BMPs to reduce the levels of sediment in the discharge to surface water;
- A proposal to conduct field monitoring, investigation, or research to confirm the source(s) identified as significantly impacting water quality;
- A monitoring proposal to verify BMP effectiveness; and
- A proposed implementation schedule.

Over the course of the Permit, the Co-Permittees have had several discussions with the Regional Water Board on the feasibility of developing the full scope of work under a single workplan. The Regional Water Board has agreed that the work can be proposed in phases, with each phase informing the scope for the subsequent phase. There are four phases total. The first two phases will be conducted during the current fiscal year. This proposal includes assisting the City with developing the workplan and implementing the first two phases of implementation.

Task 4.1 Develop a Sediment Reduction Workplan

It is my understanding the City has a draft workplan that was submitted to the Regional Water Board. The Regional Water Board provided comments on the draft. The City needs to address the Regional Water Boards comments and resubmit the draft workplan. Under this task, I will assist the City with incorporating the Regional Water Board's comments and submit the revised plan to the Regional Water Board.

Task 4.1 Deliverable: Draft Workplan.

Task 4.2 Phase I Source Investigation Research

Upon concurrence with the Regional Water Board on the workplan, the first phase of work is researching sediment sources. The first goal in meeting the workplan objectives is to develop a list of sediment sources that are potentially contributing to the discharge of sediment in the City's storm water runoff. To develop this list, I will assist the City with conducting in-office investigations including reviewing current storm water documents, gathering institutional

STONE CREEK environmental consulting

colleen@consultingstonecreek.com

knowledge, land use map review and other available resources. Upon completion of the research, I will compose a summary of findings, including a list of potential sources.

Upon completion of the Phase I investigation, a proposed Phase II Sediment Source Field Investigation Plan will be prepared for the City's review and submitted to the Regional Water Board. This plan will include a proposal for conducting baseline water quality monitoring. In order to develop the monitoring program, this task will also include monitoring reconnaissance to appropriately and effectively develop a feasible monitoring plan.

Task 4.2 Deliverables: Summary of potential sediment sources. Workplan for Phase II.

Task 4.3 Phase II Sediment Source Field Investigation

The Phase II Scope of Work will be dependent on the findings of Phase I. However, this Scope of Work has a general approach based on the anticipated components of Phase II. Once the Phase I investigation has identified the likely sources of sedimentation, sources will be prioritized and further investigated. The Scope of Work will include field reconnaissance of source areas to verify sources. Field reconnaissance will also take place at select receiving water locations to investigate evidence of storm drain related sediment discharges.

Phase II will also consist of baseline water quality monitoring, focusing on a turbidity assessment. The specific scope will be developed as part of Phase I, but we anticipate sampling up to four locations during one storm event. The focus will be to sample the discharge of storm water at various sediment sources. The sampling plan will also include surface water sampling to gain a baseline of the level of sediment in receiving water.

Upon completion of the Phase II investigation, a summary report will be developed which will include the findings of the investigation, a summary of monitoring data and inform next steps. the next scope of work. A proposed Sediment Source BMP Plan will be prepared for the City's review and submitted to the Regional Water Board at the conclusion of Phase II. This plan will include a proposal for effectiveness monitoring.

Task 4.3 Deliverables: Phase II Summary Report. Workplan for Phase III.

Task 5 Annual Reporting

The Annual Report for the 2019/2020 reporting period is due October 15, 2020. At the beginning of the new Permit term, the Regional Water Board developed an annual report template for Permittee use. The template provides a streamlined method for annual reporting. I will assist the City with populating the template and gathering information needed for reporting. The City will be responsible for completing the report with information not readily available and submitting the final report to the Regional Water Board.

Task 5. Deliverable: Draft Annual Report

Task 6 Trash Implementation Plan

Task 6.1. Conduct Two On-land Visual Trash Assessment

I recommend conducting two On-land Visual Trash Assessments (OVTA) as the first step in developing the Trash Implementation Plan (TIP). Although the OVTA is not specifically required under the City's 13383 Order, it is a critical step in demonstrating long-term compliance with the Trash Amendments. Compliance with the Trash Amendments is measured by demonstrating an average trash load reduction of 10 percent per year, over 10 years. Baseline conditions must be known in order to demonstrate the load reduction requirements. The OVTAs will document the baseline conditions to inform future compliance measures.

Additionally, the OVTA is also critical for informing the City's approach to developing the TIP. One main goal of the stormwater trash control program is to maintain a low trash generation in all priority land uses (PLUs). Low trash generation is considered equivalent to the performance of a FCS. There is tremendous benefit in documenting low trash generating areas early in the process, as these areas will not require any additional trash control measures to comply with the Trash Amendments. These results will significantly inform the approach to developing the TIP and potentially provide a significant long-term cost savings to the City.

I will conduct two OVTAs by using the State Water Board's *Trash Assessment Minimum Level of Effort (TAMLE) for Establishing Baseline Trash Generation Levels* (Attachment A). The State Water Board has published this as a recommended and supported approach to establishing baseline trash generation levels.

The first step for this task is establishing a representative assessment area. Assessments will be conducting in all PLUs, as defined by the Trash Amendment including:

- High-density residential
- Industrial
- Commercial
- Mixed urban
- Public transportation stations

The Scope of Work will include the development of proposed assessment locations based on the San Francisco Bay Area's accepted approach to designing an OVTA area. The assessment area will be developed to conduct OVTA at randomly selected locations covering at least 10 percent of the PLU street miles. Assessments will be conducted at 1000-foot increments. Proposed assessment locations will be illustrated on a map. The assessment area will not include any Caltrans rights-of-way.

The TAMLE recommends that each permittee conduct two assessments: one in the wet season (October–March) and one in the dry season (April–September). I will conduct one assessment during each season to adequately assess trash conditions. The assessments will be conducted by walking the proposed assessment area on the sidewalk, observing the levels of trash present on the street, sidewalk and adjacent land areas that could be transported to the MS4. In areas where no sidewalk is present, the assessments may be conducted from the car, if safe to do so. The assessments will take place directly before street sweeping events, to the extent feasible.

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

A trash generation rate will be assigned to the area being assessed using the following scale:

Low Trash: 0-5 gallons/acre/year. Effectively no trash can be observed on a city block or the equivalent. There may be some small pieces in the area, but they are not obvious at first glance and one individual could quickly pick them up. A low trash generation level is the goal of a stormwater trash control program and is considered equivalent to the performance of a full trash capture system.

Moderate: 5-10 gallons/acre/year. Predominantly free of trash except for a few pieces that are easily observed along a city block or the equivalent. The trash could be collected by one or two individuals in a short period of time.

High: 10-50 gallons/acre/year. Trash is widely/evenly distributed and/or small accumulations are visible on the street, sidewalks, or inlets. It would take a more organized effort to remove the litter.

Very High: 50-150 gallons/acre/year. Trash is continuously seen throughout the area, with large piles and a strong impression of lack of concern for litter in that area. There is often significant litter even along gutters that are swept.

The appropriate trash generation level will be recorded in a field book and a picture will be taken of each city block within the assessment area to document the condition at the time of the assessment.

Task 6.2 Prepare Baseline Trash Generation Map

Upon completion of two OVTAs, a Baseline Trash Generation Map will be prepared illustrating the findings of both assessments. Maps will be color-coded based on the trash levels observed: Green=Low, Yellow=Moderate, Red=High, and Purple=Very High. Upon completion of the map, I will meet with the City to discuss the findings and provide recommendations for the next steps.

Task 6.2 Deliverables: Trash loading rates by PLU. Baseline Trash Generation Map illustrating the findings of the OVTAs.

Task 6.3 Develop Track 2 Compliance Approach

The Trash Amendments define full capture system equivalency (FCSE) as the trash load that would be reduced if FCS were installed, operated, and maintained for all storm drains that capture runoff from PLUs. Track 2 compliance is achieved with the implementation of any combination of FCS installations, multi-benefit projects, other treatment controls, and institutional controls.

In planning for Track 2 compliance with FCSE, I will evaluate the City's current institutional controls and practices. Institutional controls are non-structural BMPs that may include street sweeping, sidewalk trash bins, collection of trash, anti-litter educational and outreach programs, producer take-back programs for packaging, product bans, and ordinances. Current trash control BMPs will be included in the TIP as part of the methodology for achieving FCSE.

STONE CREEK environmental consulting

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

For areas identified in the OVTA not meeting low trash generation, additional trash control measures are needed to reduce the trash generation rate to comply with the Trash Amendments. I will evaluate enhancement to current trash control BMPs. This may include a recommendation to adapt current practices to be more effective, such as increased street sweeping frequency or additional trash can receptacles. will also I evaluate and provide recommendations for additional trash control BMPs for the City to consider implementing in PLUs that are not designated as low trash generation.

Task 6.4 Finalize Jurisdictional Map

The 13383 Order requires the City to develop and submit a jurisdictional map, which includes the following information:

- All PLUs areas discharging to the MS4 system(s);
- The corresponding MS4 network, including the location of all storm drain inlets and collection areas that receive stormwater discharges from the identified PLU areas;
- Proposed locations of all certified FCS and, for Track 2, where any combination of controls will be implemented to achieve FCSE; and
- Proposed equivalent alternative land uses for PLUs, a justification demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the PLUs for which they are being substituted.

A jurisdictional map will be prepared to be consistent with the 13383 Order requirements and include the map in the TIP.

Task 6.4 Deliverables: Updated Jurisdictional Map(s) illustrating PLUs, trash generation rates, proposed locations of FCS, locations of current trash control BMPs meeting FCSE, and proposed location of enhanced BMPs to meet FCSE.

Task 6.5. Develop Trash Implementation Plan

The 13383 Order requires the City to submit a TIP that includes the following information:

- The combination of FCS, Multi-Benefit Projects, other treatment controls, and/or institutional controls selected by the permittee and the rationale for the selection;
- How the combination of controls is designed to achieve FCSE;
- How FCSE will be demonstrated; and
- If proposing to substitute equivalent alternative land uses for PLUs, a justification demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the PLUs for which they are being substituted.

The information collected under Tasks 6.1, 6.2, and 6.3 will be complied to develop the TIP to be consistent with the requirements of the 13383 Order. This will include the findings of the OVTA, proposed combination of institutional controls to select to meet FCSE and an approach to demonstrating compliance with meeting FCSE. This scope does not include assessing feasibility of FCS.

STONE CREEK environmental consulting

Colleen Hunt, CPMSM
Professional Consultant
P.O. Box 1231
Windsor, CA 95492
707-318-9415
colleen@consultingstonecreek.com

As part of the TIP, an implementation schedule will be developed that will lead to the completion of the plan within ten years. The schedule will be consistent with the requirement to reduce the trash loading rate of 10 percent per year, over a 10-year time frame.

The TIP will also include the jurisdictional map, as described in Task 6.4.

Task 6.5 Deliverable: Trash Implementation Plan.

Task 7 Program Management

This task will include general project management tasks needed to properly and effectively manage the contract. Tasks will include a project schedule, managing budget, monthly invoicing and routine communications with SSU, including in person meetings to report progress and discuss key recommendations and decisions.

Fee Estimate and Level of Effort

The Scope of Work will be conducted as described above for an estimated not-to-exceed budget of $39,600. The estimated fee and associated level of effort are summarized below.

Task	Level of Effort, hours	Estimated Fee, $
Task 1. Critical Source Program	18	3,000
Task 2. Facility Pollution Prevention Plan	36	5,550
Task 3. Municipal Staff Training	10	1,650
Task 4. Sediment Reduction Plan	72	12,000
Task 5. Annual Report	10	1,650
Task 6. Trash Implementation Plan	84	13,500
Task 7. Project Management	14	2,250
Total	**244**	**39,600**

Billing rates for the estimate are provide below. Rates will be valid for the duration of the contract:

Technical Professional Services	$165 per hour
GIS/Mapping	$175 per hour
Administrative Assistance/Travel	$75 per hour
Quality Assurance Review	$185 per hour
Mileage	Standard Federal Rate

Any services not included in this Scope of Work will be performed only after receiving written authorization and a corresponding budget augmentation from the City.

AGENDA SUMMARY REPORT

SUBJECT: Approval of Plans and Specifications for the Museum Roof Replacement Project, Specification No. 20-10, and Authorize Staff to Issue the Request for Bid.

DEPARTMENT: Finance **PREPARED BY:** Mary Horger, Financial Services Manager
PRESENTER: Consent Calendar

ATTACHMENTS:

1. Spec 20-10 Museum Roof Replacement

Summary: Council will consider approving plans and specifications for the Museum Roof Replacement Project, Specification No. 20-10, and authorize staff to issue the Request for Bid.

Background: Beginning in 2016, it has been acknowledged by both City Staff and City Council that the roof at the Grace Hudson Museum is failing and in need of replacement. Since that time, two separate bid attempts were made without receiving bids.

In May of 2016, Specification 16-03 was released without receiving any bids. As per the California Uniform Cost Accounting Act, when not receiving bids using the formal or informal bidding process, you are allowed to proceed with negotiated contract, which Staff did at that time. The proposals received came in much higher than was thought reasonable. Participating contractors had some suggested revisions to the specifications to save costs. It was decided to revise the specifications and rebid. At the time, patchwork repairs were adequate to get the Museum safely through the following winter.

In April of 2017, Staff released Specification 17-05. No bids were received. Staff again attempted to proceed with a negotiated contract, resulting in proposals even higher than before making the project unaffordable.

In the meantime, the roof continues to deteriorate, and patchwork repairs are no longer adequate, as was experienced this past winter when significant leaking occurred. Additionally, the leaking roof is also affecting the integrity of the glulam beams that provide the support to the roof. Temporary shoring and repair of the beams took place earlier this year, but it is imperative that the roof is replaced sooner than later, as it has been determined a major contributing factor in their continuing deterioration.

Discussion: Architect Thomas Hise was hired as a consultant to the City to inspect and prepare repair recommendations for the Museum's glulam beams, as their deterioration was becoming a growing safety concern. Once a temporary solution was identified, it led to revisiting the roof replacement issue.

City Staff requested that Mr. Hise evaluate alternate cost-effective roof replacement solutions, including the option of utilizing the existing metal roof panels, in addition to evaluating composition shingle versus metal roofing material. The following is a summary of his findings:

1. Using the existing metal roof panels: Budgetary estimate of $242,000. No warranty available.

2. Composite shingle roof: Budgetary estimate of $203,000. Standard manufacturer's warranty for

composition shingles is for material replacement only, no workmanship covered, and materials pro-rated after ten (10) years. One manufacturer was found to provide a "platinum protection" option including materials and installation only for fifty (50) years, and coverage reduced as pro-rated after twenty-five (25) years. No coverage other than their product.

3. Standing seam metal roof: Budgetary estimate of $390,000. A 30-year "No-Dollar-Limit" warranty will cover all authorized costs of repairs to the roofing system necessary to stop any leaks caused by defective materials or workmanship.

Final recommendation from Mr. Hise was that, given the priceless contents of the Grace Hudson Museum, and the warranty available, that the standing seam metal roof would provide the most protection against the potential ravages of weather and fire. The second option would be the composite roof material.

Staff has carefully reviewed the result of this study, discussed with key stakeholders, including the Museum Endowment Board, and as a result, agree with Mr. Hise's recommendation of using standing seam metal roof material for the roof replacement. Considering warranty options, as well as durability, this direction would present the best value for the City. Furthermore, after consultation with Mr. Hise, it was determined that the temporary repairs to the glulam beams are holding well and no further work is necessary as long as the beams are protected by the new roofing.

Consequently, Staff is presenting the plans and specifications for the Museum Roof Replacement Project, Specification 20-10 (Attachment 1) for your review and approval, that call-out for the standing seam metal roof. The Architect is still researching the option of insulated roof panels versus insulation installation in the attic. If the result of that assessment is to use insulated roof panels, the specifications will need to be modified by addendum after its release, as we don't anticipate the report being completed in time. If the recommendation is insulation installed in the attic, that work would be performed under a separate contract.

If approved as Staff recommends, the bid documents will be immediately released for bidding, with an anticipated Council contract award at the beginning of September.

The adopted budget for the 20/21 fiscal year was $350,000 for this project. This included a corresponding budgeted off-set revenue source representing that the project is to be financed. The financing facility will be subject to Council approval at a later date with the final amount to correspond with the awarded bid. Additionally, the Grace Hudson Museum Endowment has committed $60,000 to the project and supports the immediate replacement.

Recommended Action: Approve the plans and specifications for the Museum Roof Replacement Project, Specification No. 20-10, and authorize staff to issue the Request for Bid.

BUDGET AMENDMENT REQUIRED: Not at this time.

CITY OF UKIAH, MENDOCINO COUNTY, CALIFORNIA
NOTICE TO BIDDERS FOR THE ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM
SPECIFICATION NO. 20-10

NOTICE IS HEREBY GIVEN that sealed standard proposals for the ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM will be received at the Office of the City Clerk, Ukiah Civic Center **Annex** – located at **411 West Clay Street**, Ukiah, California until 2:00 p.m. on _____, ____, 20___. Bids shall be addressed to the City Clerk and shall be endorsed ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM. **DUE TO THE CITY'S CURRENT CLOSURE TO THE PUBLIC BECAUSE OF THE COVID-19 EPIDEMIC**, bids that are HAND DELIVERED must be placed in the Night Drop Box located to the right of the front doors of the Ukiah Civic Center Annex, at the address listed above. As soon thereafter as possible, the bids will be publicly opened via live streaming at http://www.cityofukiah.com/meetings/ and read. Bids are required for the entire work described herein. No fax bids will be accepted.

The work consists of all labor, equipment and materials to replacing the existing roof with a standing seam metal roof at the Grace Hudson Museum, located at 431 South Main Street in Ukiah, California.

A NON-MANDATORY PRE-BID MEETING will be held at _____ on _____, meeting outside the Grace Hudson Museum at 431 South Main Street, Ukiah, California 95482. *Social distancing will be mandatory, and maintained through the course of the meeting.*

Plans and Special Provisions may be inspected and/or copies obtained from the City's website at www.cityofukiah.com/purchasing. No bid will be considered unless it is made on the forms furnished by the City and is made in accordance with the details of the Special Provisions. Each bidder must be licensed as required by law. Further information regarding the work or these specifications can be obtained by calling Mary Horger, Procurement Manager at (707) 463-6233 or by email at mhorger@cityofukiah.com.

The City Council reserves the right to reject any or all bids and to determine which proposal is, in its opinion, the lowest responsive bid by a responsible bidder and which it deems in the best interest of the City to accept. The City Council also reserves the right, but not the obligation, to waive any irregularity or failure to strictly comply with the bidding requirements, that the City determines in the reasonable exercise of its discretion does not provide the bidder with a competitive advantage over other bidders.

No contractor or subcontractor may be listed on a bid proposal for a public works unless registered with the Department of Industrial Relations ("DIR") pursuant to Labor Code section 1725.5 except as allowed. under Labor Code section 1771.1(aThe prime contractor shall be responsible for posting job site notices as prescribed by regulation. This project is subject to compliance monitoring and enforcement by the DIR.

Pursuant to provisions of Section 1770, including amendments thereof, of the Labor Code of the State of California, the DIR Director has ascertained the general prevailing rate of wages for straight time, overtime, Saturdays, Sundays and Holidays including employer payment for health and welfare, vacation, pension and similar purposes for the City of Ukiah. Copies of his General Prevailing Wage Determination are available on the Internet at web address: http://www.dir.ca.gov/DLSR/PWD/ The prime contractor for the work herein shall possess a current, valid State of California, **Class C39 Roofing** Contractor's License. Pursuant to California Public Contract Code §22300, this contract includes provisions that allow substitutions of certain types of securities in lieu of the City withholding a portion of the partial payments due the Contractor to insure performance under this contract.

By order of the City Council, City of Ukiah, County of Mendocino, State of California.

Dated:_____ _____
Kristine Lawler, City Clerk, City of Ukiah, California

PUBLISH TWO TIMES:

DRAFT

INSTRUCTIONS TO BIDDERS

The ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM shall be performed in accordance with the Plans and Special Provisions therefor adopted, to which special reference is hereby made.

Each bidder must supply all the information required by the bid documents and Special Provisions.

Minority business enterprises will be afforded full opportunity to submit bids in response to this invitation and will not be discriminated against on the grounds of race, color or national origin in consideration for an award of any contract entered into pursuant to this advertisement. Women will be afforded equal opportunity in all areas of employment. However, the employment of women shall not diminish the standards or requirements for the employment of minorities.

All proposals or bids shall be accompanied by a cashier's check or certified check payable to the order of the City of Ukiah amounting to 10 percent of the bid, or by a bond in said amount and signed by the bidder and a corporate surety, payable to said City. Said check shall be forfeited, or said bond shall become payable to said City in case the bidder depositing the same does not, within fifteen (15) days after written notice that the contract has been awarded to him: (a) enter into a contract with the City and (b) furnish certificates of insurance and endorsements, a bond of faithful performance and a payment bond as described in the Special Provisions.

No bidder shall withdraw his or her bid for a period of thirty (30) calendar days after the date set by the City for the opening thereof.

The Contractor and any subcontractors shall each possess a valid City of Ukiah Business License prior to the start of any work.

The Contractor shall furnish a project schedule to the Engineer prior to the start of any work and start work as scheduled.

The work is to be completed within ninety (90) calendar days. The Contractor will pay to the City the sum of five hundred ($500.00) dollars per day for each and every calendar day's delay beyond the time prescribed.

The staff shall notify a bidder by telephone, email or fax, if it intends to recommend the rejection of the bidder's bid. Any bid protest must be filed with the City Clerk not more than five calendar days following the bid opening, or 2 calendar days following notice that staff is recommending the rejection of a bid. If any such timely written protest is filed, all bidders shall be provided a copy of the protest within 2 calendar days of its receipt, which may be delivered to the bidders as an email attachment or by fax. All such bidders may file with the City Manager a written objection or other response to the protest.

All objections or responses filed not more than 5 days after receipt of the written protest will be presented to the City Council at its next regular meeting occurring not less than 12 calendar days following the bid opening. The City Council will resolve the bid protest at that meeting based on the written protest, any staff recommendation and all timely written objections and responses. In accordance with the Brown Act, any person may address the City Council on this item during the meeting. The City Council action on the protest shall represent a final decision by the City on the protest.

Examination of Site, Drawings, Etc.

A non-mandatory pre-bid conference will be held at _____, meeting outside the Grace Hudson Museum, located at 431 South Main Street, Ukiah, California 95482, to fully acquaint interested Contractors with local conditions, construction and labor required so that he or she may fully understand the facilities, difficulties and restrictions attending the execution of the work under the Contract. *Social distancing will be mandatory, and maintained through the course of the meeting.* Failure to attend the mandatory bid conference will be just cause for the bid to be rejected as non-responsive. Bidders shall thoroughly examine and be familiar with the Plans and Special Provisions.

Oral statements or instructions made during this visit will not constitute an amendment to this solicitation. The City will determine the appropriate action necessary, if any, and may issue a written amendment to the bid request.

Each bidder shall visit the site of the proposed work and fully acquaint himself with local conditions, construction and labor required so that he or she may fully understand the facilities, difficulties and restrictions attending the execution of the work under the Contract. Bidders shall thoroughly examine and be familiar with the Plans and Special Provisions. The failure of any bidder to receive or examine any form, instrument, addendum, or other document, or to visit the site and acquaint himself with conditions there existing, shall in no way relieve the bidder from any obligation with respect to his or her proposal or to the contract. The drawings for the work show conditions as they are supposed or believed by the Engineer to exist; but, it is neither intended nor shall it be inferred that the conditions as shown thereon constitute a representation by the Engineer, the City or its officers that such conditions are actually existent, nor shall the City, the Engineer or any of their officers or representatives be liable for any loss sustained by the Contractor as a result of a variance between the conditions shown on the drawings and the conditions actually revealed during the progress of the work or otherwise.

The bidder's attention is directed to the possible existence of obstructions and public improvements within the limits of the work or adjacent thereto, which may or may not be shown on the Drawings. Any bid shall take into consideration that conditions may exist underground or otherwise that are not known to the City or easily detected during a site inspection that could impact the time or cost of completing the project. The City expects the bids to anticipate such conditions so that it can know for budgeting and other purposes the total cost to complete the project before accepting a bid and undertaking the legal obligation to construct the project. In awarding the contract the City relies on the contractor’s representation that its bid anticipates differing site conditions and the additional time or cost that such conditions may necessitate.

The bidder shall investigate to his or her satisfaction the conditions to be encountered, the character, quality and quantities of work to be performed and materials to be furnished and the requirements of the Plans, Special Provisions, Standard Specifications, Standard Plans, and Contract Documents. The submission of a proposal shall be considered conclusive evidence that the bidder has made such examination and has accepted the project workplace as a safe workplace to perform the work of the Contract.

Bidder Inquiries and Questions

Inquiries and questions must be submitted in writing via fax or email to the following designated contact person:

Mary Horger, Financial Services Manager
Fax: (707) 313-3621
Email: mhorger@cityofukiah.com

The City reserves the right to not respond to inquiries or questions submitted within 3 business days of the bid opening.

Location of the Work

All of the work to be performed is within the City of Ukiah. Project is located at the Grace Hudson Museum, 431 South State Street, Ukiah, California.

DRAFT

GENERAL CONDITIONS

SECTION 1. PROPOSAL REQUIREMENTS AND GENERAL CONDITIONS

1-01. Definitions. Whenever any word or expression defined in this section, or pronoun used in its stead, occurs in these contract documents, it shall have and is mutually understood to have the meaning given:

a. "City of Ukiah" or "City" shall mean the City of Ukiah, Mendocino County, California, acting through its City Council or any other board, body, official or officials to which or to whom the power belonging to the Council shall by virtue of any act or acts, hereafter pass or be held to appertain.

b. "Engineer" shall mean the Engineer or Architect duly and officially appointed by the City to observe the work of construction under this contract, acting personally or through agents or assistants duly authorized by him, such agents or assistants acting within the scope of the particular duties entrusted to them.

c. "Inspector" shall mean the engineering or technical inspector or inspectors duly authorized or appointed by the Engineer, limited to the particular duties entrusted to him or her or them.

d. "Contractor" shall mean the party entering into contract with the City of Ukiah for the performance of work covered by this contract and his or her authorized agents or legal representatives.

e. "Date of signing of contract" or words equivalent thereto, shall mean the date upon which this contract, with the signature of the Contractor affixed, together with the prescribed bonds, shall be or shall have been delivered to the City or its duly authorized representatives.

f. "Day" or "days", unless herein otherwise expressly defined, shall mean a calendar day or days of twenty-four hours each.

g. "The work" shall mean and include all the work specified, indicated, shown or contemplated in the contract to construct the improvement, including all alterations, amendments or extensions thereto made by contract change order or other written orders of the Engineer.

h. "Contract drawings", "drawings", "plans" shall mean and include 1) all drawings or plans which may have been prepared by or on behalf of the City, as a basis for proposals, when duly signed and made a part of this contract by incorporation or reference, 2) all drawings submitted in pursuance of the terms of this contract by the successful bidder with his or her proposal and by the Contractor to the City if and when approved by the Engineer and 3) all drawings submitted by the Engineer to the Contractor during the progress of the work as provided for herein.

i. Where "as shown", "as indicated", "as detailed" or words of similar import are used, it shall be understood that reference to the drawings accompanying these Special Provisions is made unless stated otherwise.

Where "as directed", "as permitted", "approved" or words of similar import are used, it shall be understood that the direction, requirements, permission, approval or acceptance of the Engineer is intended unless stated otherwise.

As used herein, "provide" or "install" shall be understood to mean "provide or install complete in place", that is, "furnish and install". "Shall" is mandatory; "may" is permissive.

1-02. Examination of Plans, Special Provisions and Site of Work. The bidder shall examine carefully the Proposal, Plans, Special Provisions, Contract forms and the site of the work contemplated therefor. It will be assumed that the bidder has investigated to his or her satisfaction the conditions to be encountered and the character, quality and requirements of all Plans, Special Provisions, Standard Specifications, and Standard Plans involved.

1-03. Proposal. Bids shall be made on the blank forms prepared by the City. All bids shall give the prices bid, both in writing and in figures and shall be signed by the bidder or his or her authorized representative, with his or her address. If the bid is made by an individual or partner, his or her name and the post office address of his or her

business or partnership, along with his or her signature or the signature of one or more partners must be shown; if made by a corporation, the bid shall show the name of the state under the laws of which the corporation is chartered, the name of the corporation and the title of the person who signs on behalf of the corporation.

Each proposal shall be enclosed in a sealed envelope, endorsed as specified in the notice to bidders. Bidders are warned against making erasures or alterations of any kind and proposals which contain omissions, erasures, conditions, alterations, additions not called for, additional proposals or irregularities of any kind may be rejected.

1-04. Withdrawal of Bids. Any bid may be withdrawn at any time prior to the hour fixed in the notice to bidders for the openings of bids, provided that a request in writing, executed by the bidder or his or her duly authorized representative, for the withdrawal of such bid is filed with the City. The withdrawal of a bid will not prejudice the right of a bidder to file a new bid.

1-05. Public Opening of Bids. Bids will be opened and read publicly at the time and place indicated in the notice to bidders. Bidders or their agents are invited to be present.

1-06. Bid Guaranty. Each bid must be accompanied by a certified check, cashier's check or bidder's bond executed by an admitted surety insurer, payable to the order of the City of Ukiah in an amount not less than 10 percent of the bid as a guarantee that the bidder will enter into a contract, if awarded the work.

1-07. Qualification of Bidders. No contractor or subcontractor may be listed on a bid proposal for a public works project (submitted on or after March 1, 2015) unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5 [with limited exceptions from this requirement for bid purposes only under Labor Code section 1771.1(a)]. No contractor or subcontractor may be awarded a contract for public work on a public works project (awarded on or after April 1, 2015) unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. The prime contractor shall be responsible for posting job site notices as prescribed by regulation. This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

Each bidder shall be licensed under the provisions of Chapter 9, Division 3 of the Business and Professions Code and shall be skilled and regularly engaged in the general class or type of work called for under this contract. A statement setting forth this experience and business standing shall be submitted by each bidder on the form provided herewith. It is the intention of the City to award a contract only to a bidder who furnishes satisfactory evidence that he or she has the requisite experience and ability and that he or she has sufficient capital, facilities and equipment to enable him or her to prosecute the work successfully and promptly within the time and in the manner agreed.

In determining the degree of responsibility to be credited to a bidder, the City may weigh evidence that the bidder or his or her personnel charged with the responsibility in the work, has performed satisfactorily other contracts of like nature and magnitude or comparable difficulty at similar rates of progress.

1-08. Disqualification of Bidders. More than one bid from an individual business, partnership, corporation or association, under the same or different names, will not be considered. Reasonable grounds for believing that any bidder is financially interested in more than one bid for the work will cause the rejection of all bids in which he or she is so interested. If there is reason to believe that collusion exists among the bidders, none of the participants in such collusion will be considered. Bids in which the prices obviously are unbalanced may be rejected.

1-09. Identification of Subcontractors. All bids shall comply with the Subletting and Subcontracting Fair Practices Act (Public Contract Code Section 4100 and following) and shall set forth:

(a) The name and the location of the place of business of each subcontractor who will perform work or labor, or render service to the prime contractor in or about the construction of the work, or to a subcontractor licensed by the State of California who, under subcontract to the prime contractor, specially fabricates and installs a portion of the work according to detailed drawings contained in the plans and Special Provisions, in an amount in excess of one-half of 1 percent of the prime contractor's total bid.

(b) The portion of the work which will be done by each such subcontractor. The prime contractor shall list only one subcontractor for each such portion defined by the prime contractor in his or her bid.

1-10. General Provisions of the Standard Specifications. All provisions of the General Provisions, Sections 1 through 11, of the Standard Specifications, shall be applicable to the contract except as modified by these Special Provisions. The Standard Specifications are set forth in Section 12-06 of these Special Provisions.

1-11. Addenda. If it becomes necessary to revise any part of these plans and specifications after they have been released, the City will issue an addendum containing the revision. All addenda will be posted on the City's website at www.cityofukiah.com/purchasing with the rest of the bid documents. Anyone who intends to submit a bid in response to this Request for Bid must check the website frequently for any posted addenda. Anyone submitting a bid will be deemed to have seen and agreed to be bound by the posted addenda.

SECTION 2. AWARD AND EXECUTION OF CONTRACT

2-01. Award of Contract. Award of the contract, if it be awarded, will be to the lowest responsible bidder whose bid complies with all the specified requirements. The award, if made, will be made within thirty (30) days after opening of the bids. The City reserves the right to reject any and all bids and to waive any irregularity in the proposal not pertaining to cost.

2-02. Return of Proposal Guaranties. All bid guaranties will be held until the contract has been fully executed, after which they will be returned upon request to the respective bidders whose bids they accompany.

2-03. Execution of Contract. The contract agreement shall be executed in duplicate by the successful bidder and returned, together with the contract bonds, insurance certificates and endorsements, within fifteen (15) days after written notice of the award of the contract. After execution by the City; one copy shall be filed with the City and one copy shall be returned to the Contractor. If the bidder fails or refuses to enter into the contract agreement within the required time, then the bid guaranty accompanying the bid shall be forfeited to the City.

SECTION 3. SCOPE AND INTENT OF CONTRACT

3-01. Effect of Inspection and Payments. Neither the inspection by the Engineer or an inspector, nor any order, measurement or approved modification, nor certificate or payment of money, nor acceptance of any part or whole of the work, nor any extension of time, nor any possession by the City or its agents, shall operate as a waiver of any provision of this contract or of any power reserved therein to the City, or of any right to damages thereunder; nor shall any breach of this contract be held to be a waiver of any subsequent breach. All remedies shall be construed as cumulative.

3-02. Effect of Extension of Time. The granting of any extension of time on account of delays which, in the judgement of the City, are avoidable delays shall in no way operate as a waiver on the part of the City of its rights under this contract.

3-03. Extra Work. If extra work orders are given in accordance with provisions of this contract, such work shall be considered a part hereof and shall be subject to each and all of its terms and requirements.

3-04. Assignment of Contract. The contract may be assigned or sublet in whole or in part only upon the written consent of the City acting through its authorized agents. Consent will not be given to any proposed assignment which would relieve the original contractor or its surety of their responsibilities under the contract nor will the Engineer consent to any assignment of a part of the work under the contract.

3-05. Subcontractors. The Contractor shall be as fully responsible for the acts and omissions of his or her subcontractors and of persons either directly or indirectly employed by them, as he or she is for the acts and omissions of persons directly employed by him.

The Contractor shall cause appropriate provisions to be inserted in all subcontracts relative to the work to bind subcontractors to the terms of this Contract which are applicable to the work of subcontractors.

Nothing contained in this contract shall be construed to create or shall be relied upon to create any contractual relationship between any subcontractor and the City and no action may be brought by any subcontractor against the City based on this contract.

3-06. Interpretation of Special Provisions and Drawings. The Special Provisions and the Contract Drawings are intended to be explanatory of each other. Any work indicated in the Contract Drawings and not in the Special Provisions, or vice versa, is to be executed as if indicated in both. In case of a discrepancy or conflict between the Technical Specifications and Contract Plans, the Technical Specifications shall govern. All work shown on the Contract Drawings, the dimensions of which are not figured, shall be accurately followed to the scale to which the drawings are made, but figured dimensions are in all cases to be followed, where given, though they differ from scaled measurements. Large scale drawings shall be followed in preference to small scale drawings. Should it appear that the work to be done, or any of the matters relative thereto, are not sufficiently detailed or explained in these contract documents, including the contract drawings, the Contractor shall apply to the Engineer for such further explanations as may be necessary and shall conform thereto as part of this contract, so far as may be consistent with the terms of this contract. In the event of any doubt or questions arising respecting the true meaning of the Special Provisions, reference shall be made to the Engineer and his or her decision thereon shall be final. If the Contractor believes that a clarification or interpretation justifies an increase in the contract price or contract time, the Contractor must comply with the written notice provisions of Sections 9-05 and 10-07 of these Special Provisions. Contractor's attention is directed to Section 12-06 of the Technical Specifications regarding the Standard Specifications and Standard Plans.

3-07. Addenda. If it becomes necessary to revise any part of these plans and specifications after they have been released, the City will issue an addendum containing the revision. All addenda will be posted on the City's website at www.cityofukiah.com/purchasing with the rest of the bid documents. Anyone who intends to submit a bid in response to this Request for Bid must check the website frequently for any posted addenda. Anyone submitting a bid will be deemed to have seen and agreed to be bound by the posted addenda.

3-08. Liability of City Officials. No city official, nor the Engineer, nor any authorized assistant of any of them, shall be personally responsible for any liability arising under this contract.

3-09. Dispute Resolution. Claims of $375,000 or less by the Contractor that arise under this Contract are subject to the mandatory dispute resolutions provisions in Public Contract Code Sections 20104-20104.6.

SECTION 4. BONDS

4-01. Faithful Performance Bond. As a part of the execution of this contract, the Contractor shall furnish a bond of a surety company or other securities providing equivalent protection such as cash, letter of credit, or certificates of deposit, acceptable to the City, conditioned upon the faithful performance of all covenants and stipulations under this contract. The amount of the bond shall be 100 percent of the total contract price, as this sum is set forth in the agreement.

4-02. Material and Labor Bond. As a part of the execution of this contract, the Contractor shall furnish a bond of a surety company or other securities providing equivalent protection such as cash, letter of credit or certificates of deposit acceptable to the City in a sum not less than 50 percent of the total contract price, as this sum is set forth in the agreement for the payment in full of all persons, companies or corporations who perform labor upon or furnish materials to be used in the work under this contract, in accordance with the provisions of Sections 3247 through 3252 inclusive of the Civil Code of the State of California and any acts amendatory thereof.

4-03. Defective Material and Workmanship Bond. As a condition precedent to the completion of this contract, the Contractor shall furnish a bond of a surety company acceptable to the City in an amount not less than 5 percent (5%) of the final contract price, to hold good for a period of one (1) year after the completion and acceptance of the work, to protect the City against the results of defective materials, workmanship and equipment during that time. This bond shall be delivered to the City before the final payment under this contract will be made.

4-04. Notification of Surety Companies. The surety companies shall familiarize themselves with all of the conditions and provisions of this contract and they waive the right of special notification of any change or modification of this contract or of extension of time, or decreased or increased work, or of the cancellation of the contract, or of any other act or acts by the City or its authorized agents, under the terms of this contract; and failure to so notify the aforesaid surety companies of changes shall in no way relieve the surety companies of their obligation under this contract.

SECTION 5. INSURANCE REQUIREMENTS FOR CONTRACTORS (WITH CONSTRUCTION RISKS)

Contractor shall procure and maintain for the duration of the contract insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the work hereunder by the Contractor, his or her agents, representatives, employees or subcontractors.

5-01. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office Commercial Liability Coverage (occurrence form CG 0001).
2. Insurance Services Office form number CA 0001 (Ed. 1/87) covering Automobile Liability, code 1 (any auto).
3. Worker's Compensation insurance as required by the State of California and Employer's Liability Insurance.
4. Course of Construction insurance covering for “all risks” of loss.

5-02. Minimum Limits of Insurance

Contractor shall maintain limits no less than:

1. General Liability: $2,000,000 per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, either the general aggregate limit shall apply separately to this project/location or the general aggregate limit shall be twice the required occurrence limit.

2. Automobile Liability: $2,000,000 per accident for bodily injury and property damage.

3. Employer's Liability: $1,000,000 per accident for bodily injury and property damage.

4. Course of Construction: Completed value of the project with no co-insurance penalty provisions.

5-03. Deductibles and Self-insured Retentions. Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either: the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects the City, its officers, officials, employees and volunteers; or the Contractor shall provide a financial guarantee satisfactory to the City guaranteeing payment of losses and related investigations, claim administration and defense expenses.

5-04. Other Insurance Provisions

The general liability and automobile liability policies are to contain, or be endorsed to contain, the following provisions:

1. The City, its officers, officials, employees and volunteers are to be covered as Additional Insured with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. General liability coverage can be provided in the form of an endorsement to the Contractor's insurance, or as a separate owner's policy.

2. The workers’ compensation policy is to be endorsed with a waiver of subrogation. The insurance company, in its endorsement, agrees to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses paid under the terms of this policy which arises from the work performed by the named insured for the City.

3. For any claims related to this project, the Contractor's insurance coverage shall be primary insurance as respects the City, its officers, officials, employees or volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be excess of the Contractor's insurance and shall not contribute with it.

4. Each insurance policy required by this clause shall be endorsed to state that coverage shall not be canceled by either party, except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to the City.

5. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under Subdivision (b) of Section 2782 of Civil Code.

6. Course of Construction policies shall contain the following provisions:
   a.) The City shall be named as loss payee.
   b.) The insurer shall waive all rights of subrogation against the City.

5-05. Acceptability of Insurers

Insurance is to be placed with insurers with a current A.M. Best's rating of no less than the following:

A++ VII	A- VIII
A+ VII	B++ X
A VII	B+ X

5-06. Verification of Coverage. Contractor shall furnish the City with original certificates and amendatory endorsements effecting coverage required by this clause. The endorsements shall be on forms provided by the City or on other than the City's forms, provided those endorsements or policies conform to the requirements. All certificates and endorsements are to be received within 15 days from written notice of contract award, and the work shall not commence until the certificates and endorsements have been approved by the City. The City reserves the right to require complete certified copies of all required insurance policies, including endorsements affecting the coverage required by these Special Provisions at any time.

5-07. Subcontractors. Contractor shall include all subcontractors as insureds under its policies or shall furnish separate certificates and endorsements for each subcontractor. All coverages for subcontractors shall be subject to all of the requirements stated herein.

SECTION 6. RESPONSIBILITIES AND RIGHTS OF CONTRACTOR

6-01. Legal Address of Contractor. Both the address given in the proposal and the Contractor's office in the vicinity of the work are hereby designated as places to either of which drawings, samples, notices, letters or other articles or communications to the Contractor may be mailed or delivered. The delivery at either of these places of any such thing from the City or its agents to the Contractor shall be deemed sufficient service thereof upon the Contractor and the date of such service shall be the date of such delivery. The address named in the proposal may be changed at any time by notice in writing from the Contractor to the City. Nothing herein contained shall be deemed to preclude or render inoperative the service of any drawing, sample, notice, letter or other article or communication to or upon the Contractor personally.

6-02. Office of Contractor at Site. During the performance of this contract, the Contractor shall maintain a suitable office at the site of the work which shall be the headquarters of a representative authorized to receive drawings and any such thing given to the said representatives or delivered at the Contractor's office at the site of work in his or her absence shall be deemed to have been given to the Contractor.

6-03. Attention to Work. The Contractor shall give his or her personal attention to and shall supervise the work to the end that it shall be prosecuted faithfully and when he or she is not personally present on the work, he or she shall at all reasonable times be represented by a competent superintendent or foreman who shall receive and obey all instructions or orders given under this contract and who shall have full authority to execute the same and to supply materials, tools and labor without delay and who shall be the legal representative of the Contractor. The

Contractor shall be liable for the faithful observance of any instructions delivered to him or her or to his or her authorized representative.

6-04. Liability of Contractor. The Contractor shall do all of the work and furnish all labor, materials, tools and appliances, except as otherwise herein expressly stipulated, necessary or proper for performing and completing the work herein required in the manner and within the time herein specified. The mention of any specific duty or liability imposed upon the Contractor shall not be construed as a limitation or restriction of any general liability or duty imposed upon the Contractor by this contract, said reference to any specific duty or liability being made herein merely for the purpose of explanation.

The right of general supervision by the City shall not make the Contractor an agent of the City and the liability of the Contractor for all damages to persons or to public or private property, arising from the Contractor's execution of the work, shall not be lessened because of such general supervision.

Until the completion and final acceptance by the City of all the work under and implied by this contract, the work shall be under the Contractor's responsible care and charge. The Contractor shall rebuild, repair, restore and make good all injuries, damages, re-erections and repairs, occasioned or rendered necessary by causes of any nature whatsoever, excepting only acts of God and none other, to all or any portions of the work, except as otherwise stipulated.

To the fullest extent permitted by law, Contractor shall indemnify and hold harmless the City and its officers, directors, agents and employees from and against all claims, damages, losses and expenses including but not limited to attorneys' fees, costs of suit, expert witness fees and expenses and fees and costs of any necessary private investigators arising out of or resulting from the performance of the work, provided that any such claim, damage, loss or expense (1) is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property, other than the work itself, including the loss of use resulting therefrom and (2) is caused in whole or in part by any act or omission of the Contractor, any subcontractor, or anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, regardless of whether or not it is caused in part by a party indemnified hereunder, or by the negligence or omission of a party indemnified herein.

In any and all claims against the City or any of its agents or employees by any employee of the Contractor, any subcontractor, anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, the indemnification obligation shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the Contractor or any subcontractor under workers' or workmen's compensation acts, disability benefit acts, or other employee benefit acts. The obligation to indemnify shall extend to and include acts of the indemnified party which may be negligent or omissions which may cause negligence.

The City shall have the right to estimate the amount of such damage and to cause the City to pay the same and the amount so paid for such damage shall be deducted from the money due the Contractor under this contract; or the whole or so much of the money due or to become due the Contractor under this contract as may be considered necessary by the City, shall be retained by the City until such suits or claims for damages shall have been settled or otherwise disposed of and satisfactory evidence to that effect furnished to the City.

6-05. Protection of Persons and Property. The Contractor shall furnish such watchman, guards, fences, warning signs, walks and lights as shall be necessary and shall take all other necessary precautions to prevent damage or injury to persons or property.

All property line fences and improvements in the vicinity of the work shall be protected by the Contractor and, if they are injured or destroyed, they and any other property injured by the Contractor, his or her employees or agents, shall be restored to a condition as good as when he or she entered upon the work.

6-06. Protection of City Against Patent Claims. All fees, royalties or claims for any patented invention, article or method that may be used upon or in any manner connected with the work under this contract shall be included in the price bid for the work and the Contractor and his or her sureties shall protect and hold the City, together with all of its officers, agents, servants and employees, harmless against any and all demands made for such fees or claims brought or made on account of this contract. The Contractor shall, if requested by the Engineer, furnish acceptable proof of a proper release from all such fees or classes.

Should the Contractor, his or her agents, servants or employees, or any of them be enjoined from furnishing or using any invention, article, material or appliance supplied or required to be supplied or used under this contract, the Contractor shall promptly substitute other articles, materials or appliance, in lieu thereof, of equal efficiency, quality, finish, suitability and market value and satisfactory in all respects to the Engineer. Or, in the event that the Engineer elects, in lieu of such substitution, to have supplied and to retain and use, any such invention, article, material or appliance, as may by this contract be required to be supplied, in that event the Contractor shall pay such royalties and secure such valid licenses as may be requisite and necessary for the City, its officers, agents, servants and employees, or any of them, to use such invention, article, material or appliance without being disturbed or in any way interfered with by any proceeding in law or equity on account thereof. Should the Contractor neglect or refuse to make the substitution promptly, or to pay such royalties and secure such licenses as may be necessary, then in that event the Engineer shall have the right to make such substitution, or the City may pay such royalties and secure such licenses and charge the cost thereof against any money due to the Contractor from the City or recover the amount thereof from him or her and his or her sureties notwithstanding final payment under this contract may have been made.

6-07. Protection of Contractor's Work Property. The Contractor shall protect his or her work, supplies and materials from damage due to the nature of the work, the action of the elements, trespassers, or any cause whatsoever under his or her control, until the completion and acceptance of the work. Neither the City nor any of its agents assumes any responsibility for collecting indemnity from any person or persons causing damage to the work of the Contractor.

6-08. Regulations and Permits. The Contractor shall secure and pay for all permits, give all notices and comply with all laws, ordinances, rules and regulations bearing on the conduct of the work as drawn and specified. If the Contractor observes that the Plans and Special Provisions are at variance therewith, he or she shall promptly notify the Engineer in writing and any necessary changes shall be adjusted as provided in the contract for changes in the work. The contractor and any subcontractors shall each secure and maintain a valid City of Ukiah Business License. The City of Ukiah will issue a no fee encroachment permit to the Contractor allowing him or her to perform work within City right of way or within City property after the Contract Documents have been executed and insurance certificates and endorsements have been approved by the City.

6-09. Construction Utilities. The Contractor shall be responsible for providing for and in behalf of his or her work under this contract, all necessary utilities, such as special connection to water supply, telephones, power lines, fences, roads, watchmen, suitable storage places, etc.

6-10. Approval of Contractor's Plans. The approval by the Engineer of any drawing or any method of work proposed by the Contractor in accordance with paragraph 8-06 shall not relieve the Contractor of any of his or her responsibility for his or her errors therein and shall not be regarded as any assumption of risk or liability by the City or any officer or employee thereof and the Contractor shall have no claim under this contract on account of the failure or partial failure or inefficiency of any plan or method so approved. Such approval shall be considered to mean merely that the Engineer has no objection to the Contractor's using, upon his or her own full responsibility the plan or method approved.

6-11. Suggestions to the Contractor. Any plan or method of work suggested by the Engineer to the Contractor, but not specified or required, if adopted or followed by the Contractor in whole or in part, shall be used at the risk and responsibility of the Contractor; and the Engineer and the City shall assume no responsibility thereof.

6-12. Termination of Unsatisfactory Subcontracts. Should any subcontractor fail to perform in a satisfactory manner the work undertaken by him, such subcontract shall be terminated immediately by the Contractor upon notice from the Engineer.

6-13. Preservation of Stakes and Marks. The Contractor shall preserve carefully bench marks, reference points and stakes and in case of destruction he or she shall replace his or her stakes, reference points and bench marks and shall be responsible for any mistakes that may be caused by their unnecessary loss or disturbance. Contractor’s attention is directed to Section 7-03 of these Special Provisions.

6-14. Assistance to Engineer. At the request of the Engineer the Contractor shall provide men from his or her force and tools, stakes and other materials to assist the Engineer temporarily in making measurements and surveys and in establishing temporary or permanent reference marks. Payment for such materials and assistance

will be made as provided for under the caption "Extra Work," provided, however, that the cost of setting stakes and marks carelessly lost or destroyed by the Contractor's employees will be assessed to the Contractor.

6-15. Removal of Condemned Materials and Structures. The Contractor shall remove from the site of the work, without delay, all rejected and condemned materials or structures of any kind brought to or incorporated in the work and upon his or her failure to do so, or to make satisfactory progress in so doing, within forty-eight (48) hours after the service of a written notice from the Engineer, the condemned material or work may be removed by the City and the cost of such removal shall be taken out of the money that may be due or may become due the Contractor on account of or by virtue of this contract. No such rejected or condemned material shall again be offered for use by the Contractor under this Contract.

6-16. Proof of Compliance with Contract. In order that the Engineer may determine whether the Contractor has complied with the requirements of this contract, not readily enforceable through inspection and tests of the work and materials, the Contractor shall, at any time when requested, submit to the Engineer properly authenticated documents or other satisfactory proofs as to his or her compliance with such requirements.

6-17. Errors and Omissions. If the Contractor, in the course of the work, finds any errors or omissions in plans or in the layout as given by survey points and instruction, or if he or she finds any discrepancy between the plans and the physical conditions of the locality, he or she shall immediately inform the Engineer, in writing and the Engineer shall promptly verify the same. Any work done after such discovery, until authorized, will be done at the Contractor's risk.

6-18. Cooperation. The Contractor shall cooperate with all other contractors who may be performing work in behalf of the City and workmen who may be employed by the City on any work in the vicinity of the work to be done under this contract with the work of such contractors or workmen. he or she shall make good promptly, at his or her own expense, any injury or damage that may be sustained by other contractors or employees of the City at his or her hands.

Any difference or conflict which may arise between the Contractor and other contractors, or between the contractor and workmen of the City in regard to their work shall be adjusted and determined by the Engineer. If the work of the Contractor is delayed because of any acts or omissions of any other contractor or of the City, the Contractor shall on that account have no claim against the City other than for an extension of time.

6-19. Right of Contractor to Stop Work. Under the following conditions the Contractor shall have the right, if he or she so desires, to stop the work and terminate the contract upon ten (10) days written notice to the Engineer and recover from the City payment for all work actually performed and for all satisfactory materials actually delivered to the site of the work for permanent incorporation therein, all as may be shown by the estimate of the Engineer.

(1) If the work is stopped under an order of any court or other competent public authority for a period of time of three (3) months through no act or fault of the Contractor or of anyone employed by him.

(2) If the Engineer fails to issue the monthly certificate for payment in accordance with the terms of this contract.

(3) If the City fails to pay the Contractor within sixty (60) days after it shall have become due, as provided by the terms of this contract, any sum certified by the Engineer or awarded by the City.

All provided that if such action to terminate the contract be not instituted by the Contractor within ten (10) days after the alleged existence of such condition and if written notice of such action be not at that time delivered to the City and the Engineer, then such right shall lapse until another occasion arises according to this section.

6-20. Hiring and Dismissal of Employees. The Contractor shall employ only such foremen, mechanics and laborers as are competent and skilled in their respective lines of work and whenever the Engineer shall notify the Contractor that any person on the work is, in his or her opinion, incompetent, unfaithful, intemperate or disorderly, or refuses to carry out the provisions of this contract, or uses threatening or abusive language to any person on the work representing the City, or is otherwise unsatisfactory, such person shall be discharged immediately from the work and shall not be re-employed upon it except with the consent of the Engineer.

6-21. Wage Rates.

1. Contractor shall pay all mechanics and laborers employed or working upon the site of the work unconditionally and without subsequent deductions or rebate on any account the full amounts due at the time of payment at wage rates not less than those contained in the applicable prevailing wage determination, regardless of any contractual relationship which may be alleged to exist between the Contractor and subcontractors and such laborers and mechanics.

2. Contractor shall comply with the California Labor Code Section 1775. In accordance with said Section 1775, Contractor shall forfeit as a penalty to the Owner, $50.00 (or the higher minimum penalty as provided in Section 1775(B)(ii) – (iii)) for each calendar day or portion thereof, for each workman paid less than the stipulated prevailing rates for such work or craft in which such workman is employed for any work done under the Contract by him or her or by any subcontractor under him or her in violation of the provisions of the Labor Code and in particular, Labor Code Sections 1770 to 1780, inclusive. In addition to said penalty and pursuant to Section 1775, the difference between such stipulated prevailing wage rates and the amount paid to each workman for each calendar day or portion thereof for which each workman was paid less than the stipulated prevailing wage rate shall be paid to each workman by the Contractor.

3. Pursuant to the provision of Section 1770 of the Labor Code of the State of California, Owner has ascertained the general prevailing rate of wages (which rate includes employer payments for health and welfare, vacation, pension and similar purposes) applicable to the work to be done, for straight time work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of workmen concerned. Copies of the General Prevailing Wage Determination are available on the Internet at web address: http://www.dir.ca.gov/DLSR/PWD The Contractor shall post the wage determination at the site of work in a prominent place where it can easily be seen by the workers.

4. City will not recognize any claim for additional compensation because the Contractor has paid any rate in excess of the prevailing wage rate obtained by the Contractor. The possibility of wage increases is one of the elements to be considered by the Contractor in determining his or her bid and will not in any circumstances be considered as the basis for a claim against the City.

5. The Labor Commissioner through the Division of Labor Standards Enforcement (DLSE) may at any time require contractors and subcontractors to furnish electronic certified payroll records directly to DLSE. Commencing with contracts awarded or after April 1, 2015, all contractors and subcontractors must furnish electronic certified payroll records directly to the DLSE.

6. Travel and Subsistence Payments.

   Contractor shall make travel and subsistence payments to each workman needed to execute the work in accordance with the requirements in Section 1773.8 of the Labor Code (Chapter 880, Statutes of 1968).

7. Apprentices.

   Attention is directed to the provisions in Sections 1777.5 (Chapter 1411, Statutes of 1968) and 1777.6 of the California Labor Code concerning the employment of apprentices by the Contractor or any subcontractor under him. Contractor and any subcontractor under him or her shall comply with the requirements of said sections in the employment of apprentices.

   Information relative to apprenticeship standards, wage schedules and other requirements may be obtained from the Director of Industrial Relations, ex officio the Administrator of Apprenticeship, San Francisco, California, or from the Division of Apprenticeship Standards and its branch offices.

6-22. Cleaning Up. The Contractor shall not allow the site of the work to become littered with trash and waste material, but shall maintain the same in a neat and orderly condition throughout the construction period. The Engineer shall have the right to determine what is or is not waste material or rubbish and the place and manner of disposal.

On or before the completion of the work, the Contractor shall without charge therefore carefully clean out all pits, pipes, chambers or conduits and shall tear down and remove all temporary structures built by him or her and shall

remove rubbish of all kind from any of the grounds which he or she has occupied and leave them in first class condition.

6-23. Guaranty. All work shall be guaranteed for a period of one year from the date of acceptance by the City. The Contractor shall promptly make all needed repairs arising out of defective materials, workmanship and equipment.

The City is hereby authorized to make such repairs if within ten days after the mailing of a notice in writing to the Contractor or his or her agent, the Contractor shall neglect to make or undertake with due diligence the aforesaid repairs, provided, however, that in case of an emergency where, in the opinion of the City delay would cause serious loss or damage, repairs may be made without notice being sent to the Contractor and the Contractor shall pay the costs thereof.

Pursuant to the provisions of Section 4-03 of these Special Provisions, the Contractor shall furnish a Defective Material and Workmanship Bond in an amount not less than 5 percent of the final contract price, which shall be effective for a period of one (1) year after the completion and acceptance of the work.

SECTION 7. RESPONSIBILITIES AND RIGHTS OF CITY

7-01. Authority of the Engineer. All work done under this contract shall be done in a workmanlike manner and shall be performed to the reasonable satisfaction of the Engineer, who shall have general observation of all work included hereunder. To prevent disputes and litigation, the Engineer (1) shall in all cases determine the amount, quality, acceptability and fitness of the several kinds of work and materials which are to be paid for under this contract, (2) shall decide all questions relative to the true construction, meaning and intent of the Special Provisions and Drawings, (3) shall decide all questions which may arise relative to the classifications and measurements of quantities and materials and the fulfillment of this contract and (4) shall have the power to reject or condemn all work or material which does not conform to the terms of this contract. his or her estimate and decision in all matters shall be a condition precedent to an appeal for arbitration, or the right of the Contractor to receive, demand, or claim any money or other compensation under this agreement and a condition precedent to any liability on the part of the City to the Contractor on account of this contract. Whenever the Engineer shall be unable to act, in consequence of absence or other cause, then such engineer as the Engineer or the City shall designate, shall perform any and all of the duties and be vested with any or all of the powers herein given to the Engineer.

7-02. Inspection. The City will provide engineering personnel for the inspection of the work.

The Engineer and his or her representatives shall at all times have access to the work whenever it is in preparation or progress and the Contractor shall provide proper facilities for such access and inspection.

If the Special Provisions, the Engineer's instruction, laws, ordinances, or any public authority require any work to be specially tested or approved, the Contractor shall give the Engineer timely notice of its readiness for inspection and, if the inspection is by an authority other than the Engineer, of the date fixed for such inspection. Inspections by the Engineer shall be promptly made at the source of supply where practicable. If any work shall be covered up without approval or consent of the Engineer, it must, if required by the Engineer, be uncovered for examination and properly restored at the Contractor's expense.

Re-examination of any work may be ordered by the Engineer and, if so ordered, the work must be uncovered by the Contractor. If such work is found to be in accordance with the contract documents, the City shall pay the cost of re-examination and replacement. If such work is not in accordance with the contract documents, the Contractor shall pay such cost.

Properly authorized and accredited inspectors shall be considered to be the representatives of the City limited to the duties and powers entrusted to them. It will be their duty to inspect materials and workmanship of those portions of the work to which they are assigned, either individually or collectively, under instructions of the Engineer and to report any and all deviations from the Drawings, Special Provisions and other contract provisions which may come to their notice. Any inspector may be considered to have the right to order the work entrusted to his or her supervision stopped, if in his or her opinion such action becomes necessary, until the Engineer is notified and has determined and ordered that the work may proceed in due fulfillment of all contract requirements.

7-03. Surveys. Contractor shall furnish all land surveys, establish all base lines and bench marks and make sufficient detailed surveys needed for working points, lines and elevations. The Contractor shall develop all slope

stakes and batter boards. Contractor shall also develop all additional working points, lines and elevations as he or she may desire to facilitate his or her methods and sequence of construction.

7-04. Rights-of-Way. The City will provide all necessary rights-of-way and easements in or beneath which work will be performed by the Contractor under this contract.

7-05. Retention of Imperfect Work. If any portion of the work done or material furnished under this contract shall prove defective and not in accordance with the Plans and Special Provisions, and if the imperfection in the same shall not be of sufficient magnitude or importance to make the work dangerous or undesirable, the Engineer shall have the right and authority to retain such work instead of requiring the imperfect work to be removed and reconstructed, but he or she shall make such deductions therefor in the payments due or to become due the Contractor as may be just and reasonable.

7-06. Changes in the Work. The Engineer shall have the right, in writing, to order additions to, omissions from, or corrections, alterations and modifications in the line, grade, form, dimensions, plan, or kind or amount of work or materials herein contemplated, or any part thereof, either before or after the beginning of construction. However, the arithmetical sum of the cost to the City of additions and subtractions from the work under this contract shall not exceed 10 percent of original contract amount or $5,000, whichever is the greater, unless based upon a supplementary agreement to be made therefore.

The order of such additions, omissions, corrections, alterations and modifications shall be in writing and signed by the Engineer and, in order, shall then be binding upon the Contractor. The Contractor shall proceed with the work as changed and the value of such change shall be determined as provided for in section 10-07 of these Special Provisions.

Such alterations shall in no way affect, vitiate, or make void this contract or any part thereof, except that which is necessarily affected by such alterations and is clearly the evident intention of the parties to this contract.

7-07. Additional Drawings by City. The drawings made a part of this contract at the time of its execution are intended to be fairly comprehensive and to indicate in more or less detail the scope of the work. In addition to these drawings, however, the Engineer shall furnish such additional drawings from time to time during the progress of the work as are necessary to make clear or to define in greater detail the intent of the Special Provisions and the contract drawings and the Contractor shall make his or her work conform to all such drawings.

7-08. Additional and Emergency Protection. Whenever, in the opinion of the Engineer, the Contractor has not taken sufficient precautions for the safety of the public or the protection of the works to be constructed under this contract, or of adjacent structures or property which may be injured by the processes of construction on account of such neglect and whenever, in the opinion of the Engineer, an emergency shall arise and immediate action shall be considered necessary in order to protect public or private, personal or property interest, then and in that event, the Engineer, with or without notice to the Contractor may provide suitable protection to the said interests by causing such work to be done and such material to be furnished as shall provide such protection as the Engineer may consider necessary and adequate.

The cost and expense of such work and material so furnished shall be borne by the Contractor and, if the same shall not be paid on presentation of the bills therefor, then such costs shall be deducted from any amounts due or to become due the Contractor.

The performance of such emergency work under the direction of the Engineer shall in no way relieve the Contractor from any damages which may occur during or after such precaution has been taken by the Engineer.

7-09. Suspension of Work. The City may at any time suspend the work or any part thereof by giving five (5) days written notice to the Contractor. The work shall be resumed by the Contractor within ten (10) days after the date fixed in the written notice from the City to the Contractor so to do. The City shall reimburse the Contractor for expense incurred by the Contractor in connection with the work under this contract as a result of such suspension.

If the work, or any part thereof, shall be stopped by the notice in writing aforesaid and if the City does not give notice in writing to the Contractor to resume work at a date within ten (10) days of the date fixed in the written notice to suspend, then the Contractor may abandon that portion of the work so suspended and he or she will be entitled to the estimates and payments for all work done on the portions so abandoned, if any, plus 5 percent of the value of the work so abandoned, to compensate for loss of overhead, plant expense and anticipated profit.

7-10. Right of City to Terminate Contract. If the Contractor should be adjudged a bankrupt, or if he or she should make a general assignment for the benefit of his or her creditors, or if a receiver should be appointed on account of his or her insolvency, or if he or she should persistently or repeatedly refuse or should fail, except in cases for which extension of time is provided, to supply sufficient properly skilled workmen or proper materials, or if he or she should fail to make prompt payments to subcontractors or for material or labor, or persistently disregard laws, ordinances or the instructions of the Engineer, or otherwise be guilty of a substantial violation of any provision of the contract, then the City, upon the certificate of the Engineer that sufficient cause exists to justify such action, may, without prejudice to any other right or remedy and after giving the Contractor seven days written notice, terminate the employment of the Contractor and take possession of the premises and of all materials, tools and appliances and finish the work by whatever method the City may deem expedient. In such case, the Contractor shall not be entitled to receive any further payment until the work is finished. If the unpaid balance of the contract price shall exceed the expense of finishing the work, including compensation for additional managerial and administrative services, such excess shall be paid to the Contractor. If such expense shall exceed such unpaid balance, the Contractor shall pay the difference to the City. The expense incurred by the City as herein provided and the damage incurred through the Contractor's default, shall be certified by the Engineer.

7-11. Use of Completed Portions. The City shall have the right to take possession of and use any completed or partially completed portions of the work, notwithstanding the time for completing the entire work or such portions which may not have expired; but such taking possession and using shall not be deemed an acceptance of any work not completed in accordance with the contract documents. If such prior use increases the cost of or delays the work, the Contractor shall be entitled to such extra compensation, or extension of time or both, as the Engineer may determine.

SECTION 8. WORKMANSHIP, MATERIALS and EQUIPMENT

8-01. General Quality. Materials and equipment shall be new and of a quality equal to that specified or approved. Work shall be done and completed in a thorough and workmanlike manner.

8-02. Quality in Absence of Detailed Specifications. Whenever under this contract it is provided that the Contractor shall furnish materials or manufactured articles or shall do work for which no detailed specifications are set forth, the materials or manufactured articles shall be of the best grade in quality and workmanship obtainable in the market from firms of established good reputation, or, if not ordinarily carried in stock, shall conform to the usual standards for first-class materials or articles of the kind required, with due consideration of the use to which they are to be put. In general, the work performed shall be in full conformity and harmony with the intent to secure the best standard of construction and equipment of the work as a whole or in part.

8-03. Materials and Equipment Specified by Name. Whenever any material or equipment is indicated or specified by patent or proprietary name or by the name of the manufacturer, such specification shall be considered as used for the purpose of describing the material or equipment desired and shall be considered as followed by the words "or approved equal". The Contractor may offer any material or equipment which shall be equal in every respect to that specified, provided that written approval first is obtained from the Engineer.

8-04. Source of Materials. Price, fitness and quality being equal, preference shall be given by the Contractor for supplies grown, manufactured or produced in the State of California and, next, for such products partially produced in this State in accordance with Government Code Section 4332.

8-05. Storage of Materials. Materials shall be so stored to ensure the preservation of their quality and fitness for the work. They shall be so located and disposed that prompt and proper inspection thereof may be made.

8-06. Drawings, Samples and Tests. As soon as possible after execution of the contract, the Contractor shall submit to the Engineer, in quintuplicate, sufficient information including, if necessary, assembly and detail drawings to demonstrate fully that the equipment and materials to be furnished comply with the provisions and intent of these Special Provisions and Drawings. If the information thus submitted indicates the equipment or materials is acceptable, the Engineer will return one copy stamped with his or her approval; otherwise, one copy will be returned with an explanation of why the equipment or material is unsatisfactory. The Contractor shall have no claims for damages or for extension of time on account of any delay due to the revision of drawings or rejection of material. Fabrication or other work performed in advance of approval shall be done entirely at the Contractor's risk. After

approval of equipment or material, the Contractor shall not deviate in any way from the design and specifications given without the written consent of the Engineer.

When requested by the Engineer, a sample or test specimens of the materials to be used or offered for use in connection with the work shall be prepared at the expense of the Contractor and furnished by him or her in such quantities and sizes as may be required for proper examination and tests, with all freight charges prepaid and with information as to their sources.

All samples shall be submitted before shipment and in ample time to permit the making of proper tests, analyses, or examination before the time at which it is desired to incorporate the material into the work. All tests of materials furnished by the Contractor shall be made by the Engineer. Samples shall be secured and tested whenever necessary to determine the quality of the material.

SECTION 9. PROSECUTION OF WORK

9-01. Equipment and Methods. The work under this contract shall be prosecuted with all materials, tools, machinery, apparatus and labor and by such methods as are necessary to the complete execution of everything described, shown, or reasonably implied. If at any time before the beginning or during the progress of the work, any part of the Contractor's plant or equipment, or any of his or her methods of execution of the work, appear to the Engineer to be unsafe, inefficient, or inadequate to insure the required quality or the rate of progress of the work, he or she may order the Contractor to increase or improve his or her facilities or methods and the Contractor shall comply promptly with such orders; but, neither compliance with such orders nor failure of the Engineer to issue such orders shall relieve the Contractor from his or her obligation to secure the degree of safety, the quality of the work and the rate of progress required of the Contractor. The Contractor alone shall be responsible for the safety, adequacy and efficiency of his or her plant, equipment and methods.

9-02. Time of Completion. The Contractor shall promptly begin the work under this contract and shall complete and make ready for full use all portions of the project made the subject of this contract within the time set forth in the agreement bound herewith.

9-03. Avoidable Delays. Avoidable delays in the prosecution or completion of the work shall include all delays which might have been avoided by the exercise of care, prudence, foresight and diligence on the part of the Contractor. The City will consider as avoidable delays within the meaning of this contract (1) delays in the prosecution of parts of the work, which may in themselves be unavoidable, but do not necessarily prevent or delay the prosecution of other parts of the work nor the completion of the whole work within the time herein specified, (2) reasonable loss of time resulting from the necessity of submitting plans to the Engineer for approval and from the making of surveys, measurements, inspections, and testing and (3) such interruptions as may occur in the prosecution of the work on account of the reasonable interference of other contractors employed by the City which do not necessarily prevent the completion of the whole work within the time herein specified.

9-04. Unavoidable Delays. Unavoidable delays in the prosecution or completion of the work under this contract shall include all delays which may result, through cause beyond the control of the Contractor and which he or she could not have provided against by the exercise of care, prudence, foresight and diligence. Orders issued by the City changing the amount of work to be done, the quantity of material to be furnished or the manner in which the work is to be prosecuted and unforeseen delays in the completion of the work of other contractors under contract with the City will be considered unavoidable delays, so far as they necessarily interfere with the Contractor's completion of the whole of the work. Delays due to normally adverse weather conditions will not be regarded as unavoidable delays. However, truly abnormal amounts of rainfall, temperatures or other weather conditions for the location of the work and time of year may be considered as unavoidable delays if those conditions necessarily cause a delay in the completion of the work.

9-05. Notice of Delays. Whenever the Contractor foresees any delay in the prosecution of the work and, in any event, immediately upon the occurrence of any delay which the contractor regards as an unavoidable delay, he or she shall notify the Engineer in writing of the probability of the occurrence of such delay and its cause, in order that the Engineer may take immediate steps to prevent, if possible, the occurrence or continuance of the delay, or, if this cannot be done, may determine whether the delay is to be considered avoidable or unavoidable, how long it continues and to what extent the prosecution and completion of the work are to be delayed thereby.

9-06. Extension of Time. Should any delays occur which the Engineer may consider unavoidable, as herein defined, the Contractor shall, pursuant to his or her application, be allowed an extension of time proportional to said delay or delays, beyond the time herein set forth, in which to complete this contract; and liquidated damages for delay shall not be charged against the Contractor by the City during an extension of time granted because of unavoidable delay or delays.

Any claim by Contractor for a time extension based on unavoidable delays shall be based on written notice delivered to the Engineer within 15 days of the occurrence of the event giving rise to the claim. Failure to file said written notice within the time specified shall constitute a waiver of said claim. Notice of the full extent of the claim and all supporting data must be delivered to the Engineer within 45 days of the occurrence unless the Engineer specifies in writing a longer period. All claims for a time extension must be approved by the Engineer and incorporated into a written change order.

9-07. Unfavorable Weather and Other Conditions. During unfavorable weather and other conditions, the Contractor shall pursue only such portions of the work as shall not be damaged thereby. No portions of the work whose satisfactory quality or efficiency will be affected by any unfavorable conditions shall be constructed while these conditions remain, unless, by special means or precautions approved by the Engineer, the Contractor shall be able to overcome them.

The Contractor shall be granted a time extension of one day for each unfavorable weather day which prevents him or her from placing concrete forms or placing and finishing concrete or asphalt concrete. Such unfavorable weather day is defined as a rain day where precipitation prevents the contractor from performing the work more than four (4) continuous hours within the authorized work period or a temperature day where the ambient temperature is below that specified for the placement of materials associated with the controlling work item for more than four (4) continuous work hours of the authorized work period.

9-08. Saturday, Sunday, Holiday and Night Work. No work shall be done between the hours of 6 p.m. and 7 a.m., nor on Saturdays, Sundays or legal holidays except such work as is necessary for the proper care and protection of work already performed, or except in cases of absolute necessity and in any case only with the permission of the Engineer.

It is understood, however, that night work may be established as a regular procedure by the Contractor if he or she first obtains the written permission of the Engineer and that such permission may be revoked at any time by the Engineer if the Contractor fails to maintain at night adequate force and equipment for reasonable prosecution and to justify inspection of the work.

9-09. Hours of Labor. Eight (8) hours of labor shall constitute a legal day's work and the Contractor or any subcontractor shall not require or permit more than eight hours of labor in a day from any person employed by him or her in the performance of the work under this contract, unless paying compensation for all hours worked in excess of eight (8) hours per day at not less than 1½ times the basic rate of pay. The Contractor shall forfeit to the City, as a penalty, the sum of twenty-five dollars ($25.00) for each workman employed in the execution of the contract by him or her or by any subcontractor, for each calendar day during which such laborer, workman, or mechanic is required or permitted to labor more than eight hours in violation of the provisions of Section 1810 to 1816, inclusive, (Article 3, Chapter 1, Part 7, Division 2) of the Labor Code of the State of California and any acts amendatory thereof.

SECTION 10. PAYMENT

10-01. Certification by Engineer. All payments under this contract shall be made upon the presentation of certificates in writing from the Engineer and shall show that the work covered by the payments has been done and the payments thereof are due in accordance with this contract.

10-02. Progress Estimates and Payment. The Engineer shall, within the first seven (7) days of each month, make an estimate of the value of the work performed in accordance with this contract during the previous calendar month.

The first estimate shall be of the value of the work satisfactorily completed in place and meeting the requirements of the contract. And every subsequent estimate, except the final estimate, shall be of the value of the work satisfactorily completed in place since the last preceding estimate was made; provided, however, that should the Contractor fail to adhere to the program of completion fixed in this contract, the Engineer shall deduct from the next

and all subsequent estimates the full calculated accruing amount of the liquidated damages to the date of said estimate, until such time as the compliance with the program has been restored.

The estimate shall be signed by the Engineer and, after approval, the City shall pay or cause to be paid to the Contractor in the manner provided by law, an amount equal to 95 percent of the estimated value of the work satisfactorily performed and complete in place.

10-03. Substitution of Securities.

1. At such times that Pubic Contract Code Section 22300 is in effect Contractor may propose the substitution of securities of at least equal market value for any moneys to be withheld to ensure performance under the Contract. Market value shall be determined as of the day prior to the date such substitution is to take place. Such substitution shall be made at the request and expense of the Contractor. The securities shall be one or more of the following types:

(a) Bonds or interest-bearing notes or obligations of the United States, or those for which the faith and credit of the United States are pledged for the payment of principal and interest.

(b) Bonds or interest-bearing notes on obligations that are guaranteed as to principal and interest by a federal agency of the United States.

(c) Bonds of the State of California, or those for which the faith and credit of the State of California are pledged for the payment of principal and interest.

(d) Bonds or warrants, including, but not limited to, revenue warrants, of any county, city, metropolitan water district, California water district, California water storage district, irrigation district in the State of California, municipal utility district, or school district of the State of California, which are rated by Moody's or Standard and Poor as A or better.

(e) Bonds, consolidated bonds, collateral trust debentures, consolidated debentures, or other obligations issued by federal land banks or federal intermediate credit banks established under the Federal Farm Loan Act, as amended; debentures and consolidated debentures issued by the Central Bank for Cooperatives and banks for cooperatives established under the Farm Credit Act of 1933, as amended; bonds, or debentures of the Federal Home Loan Bank Board established under the Federal Home Loan Bank Act; and stock, bonds, debentures and other obligations of the Federal National Mortgage Association established under the National Housing Act as amended and bonds of any Federal Home Loan Mortgage Corporation.

(f) Commercial paper of "prime" quality as defined by a nationally recognized organization which rates such securities. Eligible paper is further limited to issuing corporations: (1) organized and operating within the United States; (2) having total assets in excess of five hundred million dollars ($500,000,000); and (3) approved by the Pooled Money Investment Board of the State of California. Purchases of eligible commercial paper may not exceed 180 days' maturity, nor represent more than 10 percent of the outstanding paper of an issuing corporation.

(g) Bills of exchange or time drafts on and accepted by a commercial bank, otherwise known as bankers acceptances, which are eligible for purchase by the Federal Reserve System.

(h) Certificates of deposits issued by a nationally or state-chartered bank or savings and loan association.

(i) The portion of bank loans and obligations guaranteed by the United States Small Business Administration or the United States Farmers Home Administration.

(j) Student loan notes insured under the Guaranteed Student Loan Program established pursuant to the Higher Education Act of 1965, as amended (20 U.S.C. 1001, et seq.) and eligible for resale to the Student Loan Marketing Association established pursuant to Section 133 of the Education Amendments of 1972, as amended (20 U.S.C. 1087-2).

(k) Obligations issued, assumed or guaranteed by International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, or the Government Development Bank of Puerto Rico.

(l) Bonds, debentures and notes issued by corporations organized and operating within the United States. Such securities eligible for substitution shall be within the top three ratings of a nationally recognized rating service.

2. The securities shall be deposited with City or with any commercial bank as escrow agent, who shall arrange for transfer of such securities to the Contractor upon satisfactory completion of the contract. Any interest accrued or paid on such securities shall belong to the Contractor and shall be paid upon satisfactory completion of the contract.

The market value of the securities deposited shall at all times be maintained in an amount at least equal, in the sole judgment of City, to the moneys to be withheld pursuant to the Contract Documents to ensure performance of the Contract. In order to comply with this condition, Contractor shall deposit additional securities as necessary upon request by City or the escrow agent.

3. Upon acceptance of any Proposal that includes substituting securities for amounts withheld to ensure performance, a separate escrow agreement satisfactory in form and substance to City shall be prepared and executed by City, the Contractor and the escrow agent, which may be City. The escrow agreement shall specify, among other matters, value of securities to be deposited; procedures for valuing the securities and for adding or withdrawing securities to maintain the market value of the deposited securities at least equal to the amount of moneys which would otherwise be withheld; the terms and conditions of conversion to cash in case of the default by the Contractor; and terms, conditions and procedure for termination of the escrow. City shall have no obligation to enter any such Agreement that does not provide the City with the unilateral right to convert securities to cash and to gain immediate possession of the cash.

10-04. Acceptance. The work must be accepted by vote of the City Council of the City of Ukiah when the whole shall have been completed satisfactorily. The Contractor shall notify the Engineer, in writing, of the completion of the work, whereupon the Engineer shall promptly, by personal inspection, satisfy himself as to the actual completion of the work in accordance with the terms of the contract and shall thereupon recommend acceptance by the City Council.

10-05. Final Estimate and Payment. The Engineer shall, as soon as practicable after the final acceptance of the work done under this contract, make a final estimate of the amount of work done thereunder and the value thereof.

Such final estimate shall be signed by the Engineer, and after approval, the City shall pay or cause to be paid to the Contractor, in the manner provided by law, the entire sum so found to be due hereunder, after deducting therefrom all previous payments and such other lawful amounts as the terms of this contract prescribe.

In no case will final payment be made in less than thirty-five (35) days after the filing of the notice of completion with the County Recorder.

10-06. Delay Payments. Should any payment due the Contractor or any estimate be delayed, through fault of the City beyond the time stipulated, such delay shall not constitute a breach of contract or be the basis for a claim for damages, but the City shall pay the Contractor interest on the amount of the payment at the rate of 6 percent per annum for the period of such delay. The terms for which interest will be paid shall be reckoned, in the case of any monthly or progress payment, from the twentieth day of the month next succeeding the month in which the work was performed to the date of payment of the estimate; and in the case of the final estimate, from the forty-fifth day after acceptance to the date of payment of the final estimate.

The date of payment of any estimate shall be considered the day on which the payment is offered or mailed as evidenced by the records of the Treasurer of the City. If interest shall become due on any delayed payment, the amount thereof, as determined by the City, shall be added to a succeeding payment. If the interest shall become due on the final payment, it shall be paid on a supplementary voucher to interest or any sum or sums which, by the terms of this contract, the City is authorized to reserve or retain.

10-07. Extra Work and Work Omitted. Whenever corrections, alterations, or modifications of the work under this contract ordered by the Engineer and approved by the City increase the amount of work to be done, such added

work shall be known as "extra work"; and when such corrections, alterations, or modifications decrease the amount of work to be done, such subtracted work shall be known as "work omitted".

When the Contractor considers that any changes ordered involve extra work, he or she shall immediately notify the Engineer in writing and subsequently keep him or her informed as to when and where extra work is to be performed and shall make claim for compensation therefor each month not later than the first day of the month following that in which the work claimed to be extra work was performed and he or she shall submit a daily complete statement of materials and labor used and expenses incurred on account of extra work performed, showing allocation of all materials, labor and expenses.

All such claims shall state the date of the Engineer's written order and the date of approval by the City authorizing the work on account of which claim is made. Unless such notification is made in writing within the time specified and unless complete statements of materials used and expenses incurred on account of such extra work are furnished as above required, the Contractor shall not be entitled to payment on account of extra work and Contractor shall be deemed to have waived the right to make any future claims for compensation for such extra work.

When changes decrease the amount of work to be done, they shall not constitute a claim for damages on account of anticipated profits on the work that may be omitted.

10-08. Compensation for Extra Work or Work Omitted. Whenever corrections, additions, or modifications in the work under this contract change the amount of work to be done or the amount of compensation due the Contractor, excepting increases or decreases in contract items having unit contract prices for each measurable quantity installed in place, and such changes have been ordered in writing by the Engineer and approved by the City prior to the Contractor performing the extra work, then a price may be agreed upon. Failing such an agreement in price, the Contractor shall be compensated for performing extra work pursuant to the provisions of Section 4-1.03 D, "Extra Work", and Section 9-1.03,"Force Account Payment" of the Standard Specifications.

This method of determining the price of work shall not apply to the performance of any work which is required or reasonably implied to be performed or furnished under this contract.

10-09. Compensation to the City for Extension of Time. In case the work called for under this contract is not completed within the time limit stipulated herein, the City shall have the right as provided hereinabove, to extend the time of completion thereof. If the time limit be so extended, the City shall have the right to charge to the Contractor and to deduct from the final payment for the work the actual cost to the City of engineering, inspection, superintendence and other overhead expenses which are directly chargeable to the contract and which accrue during the period of such extension, except that the cost of final unavoidable delays shall not be included in such charges.

10-10. Liquidated Damages for Delay. It is agreed by the parties to the contract that time is of the essence and that, in case all the work is not completed before or upon the expiration of the time limit as set forth, damage, other than those cost items identified in section 10-09, will be sustained by the City and that it is and will be impracticable to determine the actual amount of damage by reason of such delay; and it is therefore agreed that the Contractor will pay to the City the sum of five hundred dollars ($500.00) per day for each and every calendar day's delay beyond the time prescribed.

SECTION 11. MISCELLANEOUS

11-01. Notice. Whenever any provision of the contract documents requires the giving of written notice, it shall be deemed to have been validly given if delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended, or if delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice. If mailed, the notice shall be deemed received on the date of delivery stated in the return receipt.

11-02. Computation of Time. When any period of time is referred to in the Contract Documents by days, it shall be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day shall be omitted from the computation.

11-03. Claims Procedure Required by Public Contract Code Section 9204. This section shall apply to any claim by the Contractor arising in connection with this project in accordance with Public Contract Code Section 9204.

a, For purposes of this section "Claim" means a separate demand by the Contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following:

(A) A time extension, including, without limitation, for relief from damages or penalties for delay assessed by the City under this contract.

(B) Payment by the City of money or damages arising from work done by, or on behalf of, the Contractor pursuant to this contract and payment for which is not otherwise expressly provided or to which the Contractor is not otherwise entitled.

(C) Payment of an amount that is disputed by the City.

b.

(1)

(A) Upon receipt of a claim pursuant to this section, the City shall conduct a reasonable review of the claim and, within a period not to exceed 45 days, shall provide the Contractor a written statement identifying what portion of the claim is disputed and what portion is undisputed. Upon receipt of a claim, a public entity and the contractor may, by mutual agreement, extend the time period provided in this subdivision.

(B) The Contractor shall furnish reasonable documentation to support the claim.

(C) If the City needs approval from its governing body to provide the Contractor a written statement identifying the disputed portion and the undisputed portion of the claim, and the governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of a claim sent by registered mail or certified mail, return receipt requested, the City shall have up to three days following the next duly publicly noticed meeting of the governing body after the 45-day period, or extension, expires to provide the claimant a written statement identifying the disputed portion and the undisputed portion.

(D) Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the City issues its written statement. If the City fails to issue a written statement, paragraph (3) shall apply.

(2)

(A) If the Contractor disputes the City's written response, or if the City fails to respond to a claim issued pursuant to this section within the time prescribed, the Contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the City shall schedule a meet and confer conference within 30 days for settlement of the dispute.

(B) Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the City shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with the City and the Contractor sharing the associated costs equally. The City and Contractor shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to applicable procedures outside this section.

(C) For purposes of this section, mediation includes any nonbinding process, including, but not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the

parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

(D) Unless otherwise agreed to in writing by the City and the Contractor, the mediation conducted pursuant to this section shall excuse any further obligation under Public Contract Code Section 20104.4 to mediate after litigation has been commenced.

(3) Failure by the City to respond to a claim from the Contractor within the time periods described in this subdivision or to otherwise meet the time requirements of this section shall result in the claim being deemed rejected in its entirety. A claim that is denied by reason of the public entity's failure to have responded to a claim, or its failure to otherwise meet the time requirements of this section, shall not constitute an adverse finding with regard to the merits of the claim or the responsibility or qualifications of the Contractor.

(4) Amounts not paid in a timely manner as required by this section shall bear interest at 7 percent per annum.

(5) If a subcontractor or a lower tier subcontractor lacks legal standing to assert a claim against a public entity because privity of contract does not exist, the Contractor may present to the public entity a claim on behalf of a subcontractor or lower tier subcontractor. A subcontractor may request in writing, either on his or her own behalf or on behalf of a lower tier subcontractor, that the Contractor present a claim for work which was performed by the subcontractor or by a lower tier subcontractor on behalf of the subcontractor. The subcontractor requesting that the claim be presented to the public entity shall furnish reasonable documentation to support the claim. Within 45 days of receipt of this written request, the Contractor shall notify the subcontractor in writing as to whether the Contractor presented the claim to the public entity and, if the original contractor did not present the claim, provide the subcontractor with a statement of the reasons for not having done so.

c. A waiver of the rights granted by this section is void and contrary to public policy, provided, however, that (1) upon receipt of a claim, the parties may mutually agree to waive, in writing, mediation and proceed directly to the commencement of a civil action or binding arbitration, as applicable; and (2) the City may prescribe reasonable change order, claim, and dispute resolution procedures and requirements in addition to the provisions of this section, so long as the contractual provisions do not conflict with or otherwise impair the timeframes and procedures set forth in this section.

11-04. Litigation and Forum Selection. Contractor and City stipulate and agree that any litigation relating to the enforcement or interpretation of this contract, arising out of Contractor's performance or relating in any way to the work shall be brought in Mendocino County and that venue will lie in Mendocino County.

Except as otherwise expressly provided by law, the parties waive any objections they might otherwise have to the propriety of jurisdiction or venue in the state courts in Mendocino County and agree that California law shall govern any such litigation.

The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto and, in particular but without limitation, the warranties, guaranties and obligations imposed upon the Contractor and all of the rights and remedies available to the City thereunder, shall be in addition to and shall not be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by law or contract, by special warranty or guaranty, or by other provisions of the contract documents and the provisions of this paragraph shall be as effective as if repeated specifically in the contract documents in connection with each particular duty, obligation, right and remedy to which they apply. All warranties and guaranties made in the contract document shall survive final payment and termination or completion of this contract. The City disclaims an express or implied warranty that the plans and specifications identify all site conditions that could affect the time or cost to complete the Work.

11-05. Waiver. The Contractor shall strictly comply with all notices and other contract requirements. Waiver by the City of any failure of the Contractor to comply with any term of the contract, including the notice provisions, shall not be deemed a waiver of a subsequent breach.

TECHNICAL SPECIFICATIONS

SECTION 12. GENERAL INFORMATION

12-01. Location and Scope of Work. All of the work to be performed is within the City of Ukiah and consists of of all labor, equipment and materials to replacing the existing roof with a standing seam metal roof at the Grace Hudson Museum, located at 431 South Main Street in Ukiah, California.

The Contractor should familiarize himself with the local conditions of the project sites. Failure to do so will in no way relieve him of the responsibility for performing any of the work or operations required as a part of this contract. Further information regarding the work or these specifications can be obtained from Mary Horger at (707) 463-6233.

12-02. Arrangement of Technical Specifications. The Technical Specifications are arranged in sections covering the various phases of work as follows:

Section No.	Title
12	General Information
13	Construction Details
14	Exclusions from General Conditions
15	Amendments to General Conditions

12-03. Arrangement of Plans. General locations and linear quantities of the work are shown in Appendix "A". A map will be provided to the successful bidder showing the exact locations of the work to be done.

12-04. Business Licenses. The Contractor and any subcontractors shall each secure and maintain a valid City of Ukiah Business License prior to the start of any portion of the work.

12-05. Permits. The Contractor shall provide, procure, and pay for all permits required to complete this work.

12-06. Standard Specifications and Standard Plans. The Standard Specifications and Standard Plans of the California State Department of Transportation, 2015, are hereby made a part of these Special Provisions and are hereinafter referred to as "California Standard Specifications" and "California Standard Plans."

Whenever in the California Standard Specifications and the California Standard Plans the following terms are used, they shall be understood to mean and refer to the following:

Department of Transportation - The City Council.

Director of Public Works - The City of Ukiah Director of Public Works.

Engineer - The Engineer designated by the City Council, acting either directly or through properly authorized agents, such agents acting within the scope of the particular duties entrusted to them.

Laboratory - The designated laboratory authorized by the City of Ukiah to test materials and work involved in the contract.

State - The City of Ukiah

Other terms appearing in the California Standard Specifications and the California Standard Plans shall have the intent and meaning specified in Section I, Definition of Terms of the California Standard Specifications.

In case of discrepancy between the contract documents, the order of precedence from the highest to lowest is as follows:
1. (City) Special Provisions
2. (City) Project Plans
3. City Standard Plans and Details
4. California Standard Plans

5. California Standard Specifications

12-07. Temporary Facilities. All temporary facilities are the responsibility of the Contractor. The removal of said facilities shall be the responsibility of the Contractor. The Contractor shall be responsible for any and all damages to existing facilities which are a result of the work.

12-08. Public Convenience and Safety. The Contractor shall conduct operations so as to cause the least possible obstruction and inconvenience to public traffic. The Contractor shall, at his or her expense, furnish such flag persons and furnish, erect, construct and maintain such fences, barriers, lights, signs, detours, pedestrian walkways, driveway ramps and bridging as may be necessary to give adequate warning to the public that work is in progress and that dangerous conditions exist, to provide access to abutting properties and to permit the flow of pedestrian and vehicular traffic to safely and expeditiously pass the work.

12-09. Maintaining Traffic. Attention is directed to Section 7-1.08, "Public Convenience," 7-1.09, "Public Safety," 7-1.092, "Lane Closure," and 7-1.095, "Flagging Costs," of the California Standard Specifications.

Streets shall be open to through vehicular traffic during non-working hours. All public traffic shall be permitted to pass through the work with as little inconvenience and delay as possible.

Full costs for "Maintaining Traffic", including "Flagging Costs", shall be considered as included in the various items of work and no additional compensation will be made.

12.10. Stream Pollution. The Contractor shall exercise every reasonable precaution to prevent muddying or silting of live streams, and the Contractor's attention is called to the fact that the terms of this contract do not relieve him or her of responsibility for compliance with Sections 5650 and 12015 of the Fish and Game Code or other applicable statutes relating to pollution prevention or abatement.

12-11. Warranties. Unless otherwise indicated, the Contractor shall warrant all materials provided and work performed under this contract for a period of one year from the date of final acceptance. He shall replace promptly and at his own expense any materials and/or workmanship which fail during this warranty period.

12-12. Utilities. No water, sewer or electrical services will be provided by the owner. It is the Contractor's sole responsibility to arrange such services as necessary.

12-13. Preconstruction Conference. A preconstruction conference will be held before any work will be allowed to commence. This meeting will cover inspection, schedule for work, and among other items, the responsibilities and procedures of each of the interested parties to assure that the project will be completed in accordance with the contract documents.

12-14. Safety Requirements. The Contractor shall comply with all pertinent provisions of the Department of Labor "Safety and Health Regulations for Construction (29 FCS Part 1518, 36 CFR 7340)", with additions or modifications thereto, in effect during construction of this project.

SECTION 13 - CONSTRUCTION DETAILS

13-01. Technical Specifications and Project Drawings. Please refer to Appendix A and B.

SECTION 14. EXCLUSIONS FROM GENERAL CONDITIONS

14-01. Provisions to be Excluded from General Conditions. The following designated provisions of the General Conditions are hereby determined to be inapplicable to the proposed work and, therefore, are hereby excluded from the terms of the Notice to Bidders, Proposal, Agreement and other contract documents as though entirely omitted from said General Conditions:

(1) Section 6-02. Office at the Site
(2) Section 7-03. Surveys

No other exclusions.

SECTION 15. AMENDMENTS TO GENERAL CONDITIONS

15-01. Sections of General Conditions to be Amended.

The following designated sections of the Special Provisions are hereby amended to read as follows:

Add the following to Section 1. Proposal Requirements and General Conditions:

No amendments.

BID SUBMITTAL CHECKLIST

The following is a checklist to assist you in your submission of your bid documents. Please make sure you include the following when submitting your bid documents to reduce the risk of having your bid rejected:

Did you include?...

- **Proposal** (Page ___)
  - Unit prices filled out clearly.
  - Extended prices filled out clearly and calculated correctly
  - Total bid amount filled out clearly and calculated correctly
  - Sign the proposal, and provide complete information
  - CLSB No. and expiration date
  - Department of Industrial Relations Public Works Contractor Registration Number

- **Fair Employment Practices Certification** (Page ___)
  - Filled out completely per instruction

- **Worker's Compensation Certificate** (Page ____)
  - Filled out completely per instruction

- **Certification of Non-Discrimination in Employment** (Page ___)
  - Filled out completely per instruction

- **List of Proposed Subcontractors** (Page _____)
  - Filled out completely per instruction

- **Statement of Experience** (Page ____)

- **Signature of Bidder** (Page _____)
  - Filled out completely per instruction
  - Authorized signature provided

- **Bidder's Bond** (Page _____)
  - Filled out completely per instruction

- **Non-Collusion Affidavit** (Page _____)
  - Filled out completely per instruction
  - Notarized

- **Addenda Issued**
  - Check the City website for any addenda issued: www.cityofukiah.com/purchasing.

- **Additional Documentation to be Submitted with Bid:**
  - Standing Seam Metal Roof Manufacturer Material Cut Sheets for roofing material being proposed.
  - Standing Seam Metal Roof Manufacturer Warranty
  - Manufacturer's Statement regarding Roofer Certification

CITY OF UKIAH
MENDOCINO COUNTY, CALIFORNIA

PROPOSAL

FOR
ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM

Specification No. 20-10

The undersigned, as bidder,
declares that he or she has examined thoroughly all of the contract documents herein contained, that this proposal is made without collusion with any other person, firm or corporation and that all laws and ordinances relating to the interest of public officers in this contract have been complied with in every respect.

AND he or she proposes and agrees, if this proposal is accepted,

1) that he or she will contract with the City of Ukiah, Mendocino County, California, in the form of the copy of the agreement herein contained

    a) to provide all necessary machinery, tools, apparatus and other means of construction;

    b) to furnish all materials;

    c) to provide all superintendence, overhead expenses and all labor and expenses of whatever nature necessary to complete the job in conformity with the specifications and drawings and other contract provisions herein or reasonably implied hereby or as necessary to complete the work in the manner and within the time named herein and according to the requirements and to the reasonable satisfaction of the City Engineer;

    d) to pay all charges of freight transportation and hauling;

2) that he or she indemnifies the City against any loss or damage arising from any act of the undersigned as Contractor; and

3) that he or she will accept as full payment therefor the following sums:

BIDDING SCHEDULE

In the case of any discrepancy between the unit price and the total set forth for the item, the unit price shall prevail; provided, however, that if the amount set forth as a unit price is ambiguous, unintelligible or uncertain for any reason, or is omitted, or in the case of lump sum items, is not the same amount as the entry in the "Total" column, then the amount set forth in the "Total" column for the item shall prevail in accordance with the following:

1. As to lump sum items, the amount set forth in the "Total" column shall be the unit price;
2. As to unit basis items, the amount set forth in the "Total" column shall be divided by the estimated quantity for the item and the price thus obtained shall be the unit price.

The Total Base Bid shall be the sum of the items in the "Total" column. In case of discrepancy between the sum of the items in the "Total" column and the amount entered as Total Base Bid, the sum of the "Total" column items shall prevail. The bid comparison will be based on the sum of the items in the "total" column for each bidder.

The Unit prices for the various Construction Items below include all costs associated with the General Conditions, Special Provisions, Requirements of the Construction Contract, and represent the total, complete, in-place cost for each specific Construction Item in accordance with the Construction Documents, including all elements, work components, accessories, and connections, shown in applicable details or required to yield a complete, sound and functional component or system appropriate for its intended function, whether or not such is specifically described or listed in any description of measurement or payment. The total amount of the Construction items below shall represent the total and complete cost of the fully functional Project. All work not specifically listed below be required to complete the work of the various construction items and the cost of such shall be considered as included throughout the various unit prices indicated.

Lowest bid will be based on the lowest Base Bid.

BIDDER'S BOND

KNOW ALL MEN BY THESE PRESENTS,

That we, _____

_____, as PRINCIPAL and

_____

_____, as SURETY,

are held and firmly bound unto the City of Ukiah in the penal sum of 10 PERCENT OF THE TOTAL AMOUNT OF THE BID of the Principal above named, submitted by said Principal to the City of Ukiah, as the case may be, for the work described below, for the payment of which sum in lawful money of the United States, well and truly to be made, to the City Clerk to which said bid was submitted, we bind ourselves, our heirs, executors, administrators and successors jointly and severally, firmly by these presents. In no case shall the liability of the surety hereunder exceed the sum of $_____

THE CONDITION OF THIS OBLIGATION IS SUCH,

That whereas the Principal has submitted the above mentioned bid to the City of Ukiah, as aforesaid, for certain construction specifically described as follows, for which bids are to be opened at the Office of the City Clerk, Ukiah Civic Center, Ukiah, California, on <<DATE OF BID OPENING>> for ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM.

NOW, THEREFORE, If the aforesaid Principal is awarded the contract and, within the time and manner required under the specifications, after the prescribed forms are presented to him or her for signatures, enters into a written contract, in the prescribed form, in accordance with the bid and files two bonds with the City of Ukiah, one to guarantee faithful performance and the other to guarantee payment for labor and materials, as required by law, then this obligation shall be null and void; otherwise, it shall be and remain in full force and virtue.

IN WITNESS WHEREOF, we have hereunto set our hands and seals on this _____ day of _____, A.D. 20_____.

CITY OF UKIAH
Mendocino County, California

AGREEMENT

FOR

ROOF REPLACEMENT AT THE GRACE HUDSON MUSEUM

Specification No. 20-10

THIS AGREEMENT, made this _____ day of _____, 20____, by and between the City of Ukiah, Mendocino County, California, hereinafter called the City and _____ hereinafter called the Contractor,

WITNESSETH:

WHEREAS, the City has caused to be prepared in accordance with law, specifications, drawings and other contract documents for the work herein described and shown and has approved and adopted these contract documents, specifications and drawings and has caused to be published in the manner and for the time required by law a notice to bidders inviting sealed proposals for doing the work in accordance with the terms of this contract and

WHEREAS, the Contractor, in response to the notice to bidders, has submitted to the City a sealed proposal accompanied by a proposal guaranty in an amount of not less than 10 percent of the bid price for the construction of the proposed work in accordance with the terms of this contract and

WHEREAS, the City, in the manner prescribed by law, has publicly opened, examined and canvassed the proposals submitted and as a result has determined and declared the Contractor to be the lowest and best regular responsible bidder for the work and for the sums named in the proposal,

NOW, THEREFORE, THIS AGREEMENT WITNESSETH:

Article 1. Work to be Done and Contract Days Allowed.

That the Contractor shall provide all necessary machinery, tools, apparatus and other means of construction; shall furnish all materials, superintendence, overhead, expenses, all labor and expenses of whatever nature necessary for completion of the work in conformity with the Special Provisions and other contract documents hereto attached and according to such instructions as may be given by the Engineer. The Contractor shall complete the work within ninety (90) calendar days. Contract days shall be counted starting with the 10th day following receipt of notice that the contract has been executed by the City. Contractor, at his or her option, may begin work prior to start of counting contract days, however, in no event shall the Contractor start work without giving notification to the Engineer at least 72 hours prior to the start of work, without obtaining an encroachment permit from the City, or without having submitted certificates of insurance that have been accepted and approved by the Engineer

Article II. Contract Prices.

That the City shall pay the Contractor the prices stated in the proposal submitted by the Contractor, for complete performance of the contract by the Contractor. The Contractor hereby agrees to accept the prices as full compensation for all material and appliances necessary to the work, for all labor and use of tools and other implements necessary to execute the work contemplated in this contract; for all loss or damage arising out of the nature of the work or from the action of the elements, or from any unforeseen obstructions or difficulties which may be encountered in the prosecution of the work; for all risks of every description connected therewith; for all expenses of the work, as herein specified; for all liability and other insurance, for all overhead and other expenses incident to the work; all according to the Contract Drawings, the Special Provisions, the Details, the instructions and the requirements of the City.

Article III. Labor Discrimination.

Attention is directed to Section 1735 of the Labor Code, which reads as follows:

> "No discrimination shall be made in the employment of persons upon public works because of the race, color, national origin or ancestry, or religion of such persons and every contractor for public works violating this section is subject to all the penalties imposed for a violation of this chapter."

In connection with the performance of work under this contract, the Contractor agrees as follows:

(a) The Contractor will not willfully discriminate against any employee or an applicant for employment because of race, color, religion, ancestry, or national origin. The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, ancestry, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the awarding authority setting forth the provisions of this Fair Employment Practice section.

(b) The Contractor will send to each labor union or representative of workers with which he or she has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the awarding authority, advising the said labor union or worker's representative of the Contractor's commitments under this section, to employees and applicants for employment.

(c) The Contractor will permit access to his or her records of employment, employment advertisements, application forms and other pertinent data and records by the Fair Employment Practices Commission, City of Ukiah or any other appropriate agency of the State of California designated by the awarding authority, for the purposes of investigation to ascertain compliance with the Fair Employment Practices section of this contract.

(d) A finding of willful violation of the Fair Employment Practices section of this Contract or of the Fair Employment Practices Act shall be regarded by the awarding authority as a basis for determining the Contractor to be not a "responsible bidder" as to future contracts for which such Contractor may submit bids, for revoking the Contractor's pre-qualification rating, if any and for refusing to establish, reestablish or renew a pre-qualification rating for the Contractor.

The City of Ukiah shall deem a finding of willful receipt of written notice from the Fair Employment Practices Act to have occurred upon that it has investigated and determined that the Contractor has violated the Fair Employment Practices Act and has issued an order under Labor Code Section 1426 or obtained an injunction under Labor Code Section 1429.

Upon receipt of such written notice from the Fair Employment Practices Commission, the City shall notify the Contractor that unless he or she demonstrates to the satisfaction of the awarding authority within a stated period that the violation has been corrected, his or her pre-qualification rating will be revoked at the expiration of such period.

(e) The Contractor agrees that should the City determine that the Contractor has not complied with the Fair Employment Practices section of this Contract, then pursuant to Labor Code Section 1735 and 1775 the Contractor shall, as a penalty to the City, forfeit for each calendar day or portion thereof, for each person who was denied employment as a result of such non-compliance, the penalties provided in the Labor Code for violation of prevailing wage rates. Such monies may be recovered from the Contractor. The City may deduct any such damages from any monies due the Contractor.

(f) Nothing contained in this Fair Employment Practices section shall be construed in any manner of fashion so as to prevent the City or the State of California from pursuing any other remedies that may be available at law.

(g) Prior to awarding the Contract, the Contractor shall certify to the awarding authority that he or she has or will meet the following standards for affirmative compliance, which shall be evaluated in each case by the awarding authority:

(1) The Contractor shall provide evidence, as required by the City that he or she has notified all supervisors, foremen and other personnel officers in writing of the content of the anti-discrimination clause and their responsibilities under it.

(2) The Contractor shall provide evidence, as required by the City, that he or she has notified all sources of employees' referrals (including unions, employment agencies, advertisements, Department of Employment) of the content of the anti-discrimination clause.

(3) The Contractor shall file a basic compliance report, as required by the City. Willfully false statements made in such reports shall be punishable as provided by law. The compliance report shall also spell out the sources of the work force and who has the responsibility for determining whom to hire, or whether or not to hire.

(4) Personally, or through his or her representatives, the Contractor shall, through negotiations with the unions with whom he or she has agreements, attempt to develop an agreement which will:

a. Spell out responsibilities for nondiscrimination in hiring, referral, upgrading and training.

b. Otherwise implement an affirmative anti-discrimination program in terms of the unions' specific areas of skill and geography to the end that qualified minority workers will be available and given and equal opportunity for employment.

(5) The Contractor shall notify the City of opposition to the anti-discrimination clause by individuals, firms or organizations during the period of its pre-qualification.

(h) The Contractor will include the provisions of the foregoing paragraphs 1 through 5 in every first tier subcontract so that such provisions will be binding upon each such subcontractor.

(i) The "Fair Employment Practices Certification" must be completed and signed prior to the time of submitting the bid.

Article IV. Parts of the Contract.

That the complete contract consists of the following documents, all of which shall be considered a part of this agreement.

1. Notice to Bidders
2. Wage Rates
3. General Conditions
4. Technical Specifications
5. Proposal
6. Fair Employment Practices Certification
7. Agreement
8. Contract Bonds
9. Contract Drawings and Construction Details
10. Standard Drawings
11. Indemnification Agreement

INDEMNIFICATION AGREEMENT

This Indemnification Agreement is made and entered in Ukiah, California, on _____, 20____, by and between the City of Ukiah (Ukiah) and _____ (Contractor).

Contractor is

_____

_____ for Ukiah.

As a condition of issuing the work order, attached hereto, Ukiah requires assurance that Contractor will protect Ukiah from damage or damage claims which arise from its performance of the work.

Accordingly, Contractor agrees as follows:

1. **Indemnification**. Contractor shall indemnify and hold harmless Ukiah and its officers, agents, and employees from and against any claim, loss, or damage, including the legal and other costs of defending against any claim of damage or loss which arises out of the Contractor's negligent or wrongful performance under the work order attached hereto, except for claims, losses, or damages resulting from the sole and exclusive negligence or other wrongful conduct of Ukiah or its officers, agents and employees.

CITY OF UKIAH
Mendocino County, California

FAITHFUL PERFORMANCE BOND

KNOW ALL MEN BY THESE PRESENTS,

That we the undersigned, _____

_____,
AS PRINCIPAL, and

_____,
AS SURETY,

are held firmly bound unto **THE CITY OF UKIAH**, hereinafter called the "City", in the penal sum of

_____dollars ($_____)
for the payment of which sum we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally.

WHEREAS, the Principal has entered into a certain Contract with the City, dated _____, 20_____, a copy of which is hereto attached and made a part hereof,

NOW, THEREFORE, the condition of this obligation is such that if the Principal shall in all respects fully perform the Contract and all duly authorized modifications thereof, during its original term and any extensions thereof that may be granted and during any guaranty period for which the Contract provides, and if the Principal shall fully satisfy all claims, arising out of the prosecution of the work under the Contract and shall fully indemnify the City for all expenses which it may incur by reason of such claims, including its attorney's fees and court costs, and if the Principal shall make full payment to all persons supplying labor, services, materials, or equipment in the prosecution of the work under the Contract, in default of which such persons shall have a direct right of action hereupon; and if the Principal shall pay or cause to be paid all sales and use taxes payable as a result of the performance of the Contract as well as payment of gasoline and special motor fuels taxes in the performance of the Contract and all motor vehicle fees required for commercial motor vehicles used in connection with the performance of the Contract, then this obligation shall be void; otherwise, it shall remain in full force and effect. No modification of the Contract or extension of the term thereof, nor any forbearance on the part of the City shall in any way release the Principal or the Surety from liability hereunder. Notice to the Surety of any such modification, extension, or forbearance is hereby waived.

IN WITNESS WHEREOF, the aforesaid Principal and Surety have executed this instrument and affixed their seals hereto, this _____ day of _____,20_____.

DIRECTIONS FOR PREPARATION OF PERFORMANCE AND MATERIAL AND LABOR BOND

1. Individual sureties, partnerships, or corporations not in the surety business will not be acceptable.

2. The name of the Principal shall be shown exactly as it appears in the Contract.

3. The penal sum shall not be less than required by the Specifications.

4. If the Principals are partners or joint venturers, each member shall execute the bond as an individual and state his place of residence.

5. If the Principal is a corporation, the bond shall be executed under its corporate seal.
If the corporation has no corporate seal, it shall so state and affix a scroll or adhesive seal following the corporate name.

6. The official character and authority of the person(s) executing the bond for the Principal, if a corporation, shall be certified by the Secretary or Assistant Secretary thereof under the corporate seal, or copies attached to such records of the corporation as will evidence the official character and authority of the officer signing, duly certified by the Secretary or Assistant Secretary, under the corporate seal, to be true copies.

7. The current power-of-attorney of the person signing for the surety company must be attached to the bond.

8. The date of the bond must not be prior to the date of the Contract.

9. The following information must be placed on the bond by the surety company:

   a. The rate of premium in dollars per thousand; and

   b. The total dollar amount of premium charged.

10. The signature of a witness shall appear in the appropriate place attending to the signature of each party of the bond.

11. Type or print the name underneath each signature appearing on the bond.

12. An executed copy of the bond must be attached to each copy of the Contract (original counterpart) intended for signing.

DIVISION 6 - WOOD & PLASTICS

O6100 Miscellaneous Carpentry

DIVISION 7 - THERMAL & MOISTURE PROTECTION

07410 Roofing – Metal Roof Panels
07510 Roofing – Built-Up
07620 Flashing & Sheet Metal

SECTION 02070 - SELECTIVE DEMOLITION

PART 1 – GENERAL

1.01 CONDITIONS AND REQUIREMENTS
- A. Refer to Division 1 - General Requirements.

1.02 DESCRIPTION
- A. This Section describes the requirements for Selective Demolition and removal of portions of the existing building to accommodate new Work under other Sections, including, but not limited to eaves, fascias, overhangs, and soffits (as needed), and to any existing non-functioning and/or abandoned roof equipment and penetrations.
- B. Removal of the existing Cor-Ten "Bermuda Style" metal panel roofing, patching and repair of all fungus or water damaged wood structure, and all unforeseen related demolition and repairs work (as needed).
- C. Related Work
  1. Metal Roofing Panels: Section 07410
  2. Miscellaneous Carpentry: Section 06100
  3. Flashing and Sheet Metal: Section 07620

1.03 QUALITY ASSURANCE
- A. Except for items or materials indicated to be reused, salvaged, reinstalled, or otherwise indicated to remain, demolished materials shall become the Contractor's property, and shall be removed from Project Site.

1.03 PROJECT CONDITIONS
- A. The City of Ukiah will not be occupying the Museum building or the immediate area of this Work. However, the Contractor shall provide not less than seventy-two (72) hours written notice to the Architect and the City of Ukiah's Project Manager, activities that will impact the security of the Museum or it's contents, beyond the Contractor's normal working hour.
- B. Access: The Contractor shall maintain access to the unaffected areas of the site, and other adjacent facilities.
  1. The Contractor shall not close or obstruct, unoccupied facilities without written permission from the City of Ukiah.
  2. Utility Service: The Contractor shall maintain existing utilities and protect them against damage during Selective Demolition operations, especially fire suppression and security systems, including fences and gates currently securing the property.

PART 2 - PRODUCTS

2.01 REPAIR MATERIALS
- A. Use repair materials identical to existing materials.
  1. If identical materials are unavailable or cannot be used for repair of exposed surfaces, use materials that visually match existing adjacent surfaces, to the fullest extent possible.
  2. Use materials whose installed performance equals or surpasses that of existing materials.

PART 3 – EXECUTION

3.01 EXAMINATION OF EXISTING CONDITIONS

A. The Contractor shall survey the existing conditions of the site, and correlate with requirements indicated in the Construction Documents,to determine extent of Selective Demolition required.

B. Where unanticipated mechanical, electrical, or structural elements conflict with intended function or design are encountered, investigate and document the nature and extent of conflict, and promptly submit a written report to the Architect for clarification on how to proceed with the Work.

C. Perform surveys as the Work progresses to detect possible hazards resulting from Selective Demolition activities, and report to the Architect for clarification on how to proceed with the Work.

3.02 PREPARATION

A. Site Access and Temporary Controls: Conduct Selective Demolition and debris-removal operations to ensure minimum interference with other areas of the site, including, streets, walks, walkways, and other adjacent occupied facilities, or the occupants of neighboring properties.

B. Protect existing site improvements, appurtenances, and landscaping, not part of this Work, and scheduled to remain.

C. Provide protection to ensure the safe passage of people around Selective Demolition activities, and to other areas of the Project site.

3.03 SELECTIVE DEMOLITION

A. General: Remove existing metal roofing panels and any damaged existing construction, only to the extent required to accommodate new Work, and as indicated in the Construction Documents. Use methods required to complete the Work, within limitations as follows:

1. *Remove and palletize existing metal roofing panels and all related trim and attachments, and secure in the Parking Area as agreed upon by the Architect and the City of Ukiah.*
2. *Remove decayed, vermin or fungus-infested, or otherwise dangerous or unsuitable materials, and promptly dispose of off-site.*
3. *Remove all such materials, and lower to ground by methods suitable to avoid free fall, and to prevent ground impact or dust generation.*
4. *Dispose of demolished items and materials promptly.*
5. *Return elements of construction and surfaces that are to remain, to their condition existing prior to any Selective Demolition operations.*

B. For all removed and reinstalled items, the Contractor shall comply with the following:

1. *Clean and repair items to functional condition and adequate for the intended re-use. Paint equipment to match new equipment.*
2. *Protect items from damage during transport and storage.*
3. *Reinstall items in locations indicated on the Construction Documents, and comply with the installation requirements for new materials and equipment.*
4. *Provide connections, supports, and miscellaneous materials necessary to make re-use items functional for the use indicated in the Construction Documents, or that can reasonably be inferred.*

C. Existing Items to Remain: Protect construction indicated to remain, against damage and soiling during Selective Demolition activities. When permitted by the Architect, items may be moved to a suitable, protected storage location, during Selective Demolition, until reinstalled in their original locations after Selective Demolition operations are complete.

D. Cleaning: Clean adjacent structures and improvements of dust, dirt, and debris, caused by Selective Demolition operations. Return adjacent areas to condition existing prior to Selective Demolition operations.

3.04 PATCHING AND REPAIRS

A. General: Promptly repair all damage to adjacent construction caused by Selective Demolition operations.

B. Repairs: Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.

C. Finishes: Restore exposed finishes of patched areas or areas damaged by construction, and extend restoration into adjoining construction in a manner that eliminates evidence of patching and refinishing.

3.05 DISPOSAL OF DEMOLISHED MATERIALS

A. General: Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.

B. Disposal: Transport demolished materials off the City of Ukiah's property and legally dispose of them.

END OF SECTION

SECTION 06100 – MISCELLANEOUS CARPENTRY

PART 1 - GENERAL

1.01 CONDITIONS AND REQUIREMENTS

A. Refer to Division 1 - General Requirements.

1.02 DESCRIPTION

A. This Section includes all Miscellaneous Carpentry required to complete this Work as required and specified in the Construction Documents.

B. Carpentry includes, but is not limited to selective demolition and rebuilding of the existing roof eaves, soffits, and fascia, as needed to accommodate new Work. Also, for tear-off and replacement of plywood and other roof and decking material as needed. This Work will be completed at a fixed material and/or hourly rate as agreed to as part of this contract.

C. Related Work:

1. Selective Demolition: Section 02070
2. Roofing: Section 07410
3. Flashing and Sheet Metal: Section 07620

1.03 REFERENCE DOCUMENTS

A. Governing Documents, include:

1. American Society of Testing and Materials (ASTM) "ASTM Standards in Building Codes."
2. West Coast Lumber Inspection Bureau's (WCLIB) "Standard Grading Rules"

B. Guideline Standards for Quality of Work:

1. "National Design Specification for Wood Construction (NDS)
2. American National Standard Institute (ANSI)

PART 2 – PRODUCTS

2.01 MATERIALS

A. Wood: The following shall apply:

1. Framing Lumber: (S4S) Douglas Fir, No. (2) & Better grade, (19%) moisture content maximum.
2. Fascia & Soffit Trim Boards: Redwood, kiln dried, clear heart or better. Match existing sizes and profiles.

B. Fasteners: The following shall apply:

1. Vinyl coated nails shall be used for weather protected framing conditions.
2. Hot dipped galvanized or stainless nails shall be used for all exterior weather exposed locations.
3. Construction Adhesive: Dap Latex Construction and Sub-Floor Adhesive, or owner approved equal.

PART 3 EXECUTION

3.01 CARPENTRY GENERAL

A. Carpentry shall be done by competent workmen, experienced in Work of the types specified herein, and in accordance with the best standards of carpentry practice.

B. Workmanship: Fit members closely, set accurately to required lines and levels, and secure rigidly in place. Set horizontal and inclined members with crown edge up. Bolt, nail, and spike thoroughly with not less than sizes and quantities

required to conform to Chapter 23 of the California Building Code (CBC), and provide full contact at all bearing surfaces for structural members.

C. Verify all conditions at the Project site, effecting the Work. Coordinate carpentry with rough-ins and installations under other sections Work applying to this Project.

3.02 FINISH CARPENTRY GENERAL

A. Completed exposed Work shall be free of dents and tool marks, un-sanded or rough faces (unless scheduled to be so), or other detracting appearance defects and issues.

B. Care should be taken to match existing finish appearance, with tight mitre and butt joints.

C. Set and putty all nail heads, and prep for painting or specified finishes, unless scheduled to be natural finish.

END OF SECTION

SECTION 07410 – METAL ROOFING PANELS: STANDING SEAM

PART 1 GENERAL

1.01 CONDITIONS AND REQUIREMENTS

A. Refer to Division 1 - General Requirements.

1.02 DESCRIPTION

A. This Section describes the requirements for installing Standing Seam Metal Roofing Panels as required by the Construction Documents for Work of this Contract.

B. Furnish and install all Metal Roofing Panels and accessories as required and specified for a complete and weatherproof installation

C. Related Work

1. Selective Demolition: Section 02070
2. Miscellaneous Carpentry: Section 06100
3. Flashing and Sheet Metal: Section 07620

1.03 QUALITY ASSURANCE

A. Metal Roofing Panels shall carry Underwriter's Laboratory (UL) Labels.

1. UL 790, Class A Fire Resistance.
2. UL 997, Wind Resistance.

B. Install to meet requirements of Manufacturer's published specifications & instructions. Do not install underlayment or roofing on wet surfaces.

1.04 PRODUCT WARRENTY

A. Product Minimum Warranty:

1. The Roof Panel Manufacturer further warrants that the roof system will not leak due to manufacturing defects or defective workmanship by the installation contractor.
2. The Roof Panel Manufacturer will pay all authorized costs of repairs to the roofing system necessary to stop any leaks caused by defective materials or workmanship that occur with thirty (30) years from the final completion date, with no dollar cost limit to the Owner.
3. The Roof Panel Manufacturer further warrants that the panel materials and coatings will not rupture, perforate, or fail structurally under normal atmospheric conditions and that the fluorocarbon finish will not peel or blister.

1.05 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in sealed packages, with Manufacturer's labels intact and legible.

2 Store materials in accordance with the Manufacturer's directions and under cover to prevent damage and contamination.

1.05 SUBMITTALS

A. Product Data: Submit product data, test reports, and certifications, in accordance with quality assurance and performance requirements specified herein.

B. Design Load Evaluation: Submit Manufacturer's design load calculations in according to ASCE-7, Method-2, for components and cladding. In no case shall the design loads be less than specified herein.

C. *Dead Load Evaluation: Provide documentation from a licensed Structural Engineer of a structural evaluation for the roof structure and it's suitability for the new imposed roof loads per CBC.*
D. *Shop Drawings: Prepare shop drawings specifically for this Project, showing dimensions of Metal Roofing Panels and accessories, fastening details, and connections with other products.*
E. *Selection Samples: Submit samples for each finish product specified, with actual color and textures, and a min/max of (6") square.*
F. *Manufacturer's Certificates: Certify that products meet or exceed specified requirements.*
G. *Closeout Submittals:*
   1. *Provide Manufacturer's maintenance of installed system.*
   2. *Provide executed copy of Manufacturer's warranty .*

PART 2 PRODUCTS

2.01 MATERIALS

A. *Metal Standing Seam Roof Panels: R-Mer by the Garland Company Inc. or Architect and City of Ukiah approved equal. Garland Company Inc. Contact Info: 3800 E 91 Street, Cleveland OH 44105 Phone 800-321-9336*
   1. *Dimensions: (1") T-seam & (18") wide panels.*
   2. *(2-3/8") high mechanically seamed with factory installed hot melt sealant in-seam cap, with (4) layers of metal surrounding anchor clips.*
   3. *Panel Profile: Flat panel between standing seams typical.*
   4. *Panel Material: Aluminum (3105-H14) alloy, smooth per ASTM B-209, & (.040") thickness,*
   5. *Flashing & Flat Stock: Material to be fabricated in profiles as indicated in the Shop Drawings, and of the same material and thickness as the roof system.*
   6. *Accessory Components:*
      a. *Anchor Clips: Concealed (16) gauge Stainless steel (316L)*
      b. *Gable Anchor Clips: (same)*
      c. *Concealed Fasteners: Corrosion resistant steel (zinc plated or stainless steel), designed to meet or exceed design loads.*
      d. *Exposed Fasteners: Stainless steel (410) series and shall be factory painted to match panel color.*
      e. *Closures: Factory pre-cut closed cell foam meeting ASTM D-1056 or 3575, enclosed in metal channels matching panel.*
      f. *Misc Fasteners: Provide as needed to complete installation.*

B. *Accessories*
   1. *Underlayment: R-Mer Seal 40 mil high temp self adhesive membrane, installed per Manufacturer's recommendations.*
   2. *Barrier Boards: Gypsum wallboard (1/2") protective barrier with Class-A fire rating over deck surfaces.*
   3. *Bearing Plates: Galvanized steel (3" x 5" x 16 ga), pre-punched with a hole pattern matching panel anchors clips. Slotted holes acceptable.*
   4. *Sealant-Concealed: Use non-curing Butyl Sealant Schnee-Morehead Inc SM5430 Acryl-R or approved equal.*
   5. *Sealant-Exposed: Use UV resistant Tripolymer-Geocel Corp 2300 or equal.*

C. *Edge Treatment:*
   1. *R-Mer Edge Coping.*
   2. *R-Mer Snap-On Fascia.*

D. *Design Standards:*
   4. *Capable of withstanding expansion and contraction by temperature without buckling or producing or producing excess stress on the structure, fasteners, or reducing performance.*

5. *Design Temperature differential shall not be less than (200) degrees fahrenheit.*
6. *Panel clips shall provide for unlimited thermal movement in the longitudinal direction.*
7. *Panels rigid connections shall be at the roof ridge unless otherwise approved in advance by the Architect.*
8. *Design Wind Load Capacity: Per calculations provided by the Architect and his Structural Engineer at time of Bidding.*

E. *Color: To be selected by the Architect and City of Ukiah, from R-Mer Standard Color Collection*
F. *Venting: Use R-Mer vent components at the ridge and eaves.*

2.02 QUALITY ASSURANCE

A. *Roofing Manufacturer shall have in place, a documented standardized quality control program such as ISO-9001 approval.*
B. *Installer shall be certified and approved by the Roofing Manufacturer.*
C. *Mock-Up: Contractor shall provide a mock-up for evaluation of surface preparation techniques and application workmanship. Contractor shall not proceed without the Architect's approval of workmanship, color, and sheen.*

A. PRE-INSTALLATION CONFERENCE

A. *The Contractor shall convene a pre-installation conference at least two (2) weeks prior to intended installation date.*
B. *The Roofing and Sub-Strate Installer and a representative of the Manufacturer's technical team shall be in attendance, as well as the Architect and City of Ukiah representative.*

B. PROJECT CONDITIONS

A. *Environmental Controls: The Contractor shall maintain environmental conditions for temperature, humidity, and ventilation, within the Manufacturer's recommendations for optimum results, and no installation shall proceed when conditions are outside the Manufacturer's absolute limits.*

PART 3 EXECUTION

3.01 EXAMINATIONS

A. *Examine surfaces to receive metal roofing, and notify the Architect in writing of any defective conditions encountered. Starting of Work shall constitute acceptance of such conditions.*

3.02 INSTALLATION

A. *Install in conformance with the NRCA Roofing and Waterproofing Manual and Manufacturer's requirements.*

END OF SECTION

SECTION 07620 - FLASHING & SHEET METAL

PART 1 GENERAL

1.01 CONDITIONS AND REQUIREMENTS
A. Refer to Division 1 General Requirements.

1.02 DESCRIPTION
A. Provide all flashing and sheet metal as required and specified.
B. Related Work
   1. Selective Demolition: Section 02070
   2. Miscellaneous Carpentry: Section 06100
   3. Standing Seam Metal Roof Panels: Section 07410

1.03 QUALITY ASSURANCE
A. Comply with latest edition of "Architectural Sheet Metal Manual" of the Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
B. Work includes approved anchorage devices, and methods.

PART 2 PRODUCTS

2.01 SUBMITTALS
A. Shop drawings of all beam end flashing profiles.

2.02 MATERIALS
A. Great care should be taken to isolate dissimilar metals in the new work.
B. Flashing: To be (22) gauge galvanized steel typical, ASTM A526, G90, commercial quality.
C. Fasteners: Size all fasteners to be appropriate for use including penetration into framing members. Non-corrosive coating at exterior. Fasteners include but are not limited to the following:
   1. Screws: Sheet-metal or self-tapping type.
   2. Nails: Appropriate to Work, compatible with metal being fastened.
D. Asphalt Plastic Cement: Fibrated asphalt cement, ASTM D2822, for trowel application.

PART 3 EXECUTION

INSTALLATION
A. Inspect and clean all surfaces to receive flashing prior to installation. Commencement is indication of acceptance of condition.
B. Coordinate with affected trades work to be installed under their supervision.
C. Fabrication
   1. All sheet metal shall be fabricated to comply with profiles and sizes as required and in accordance with standard details shown in “Architectural Sheet Metal Manual” by SMACNA.
   2. Finished work shall be strong and rigid, neat in appearance, and free from defects.
   3. Surfaces shall be smooth and free from warping or buckling.
   4. Work exposed to moisture and weather shall be thoroughly watertight, with provisions for free expansion without leaks of deforming.

5. *Provide for thermal expansion and contraction and building movement in completed work, without overstressing, breaking, or producing wrinkles and distortion. Provide slotted holes with neoprene washers.*
6. *Make seam in direction of flow.*
7. *Place expansion joints at a maximum or (10'-0"). With no joints within (24") of corners or intersections.*
8. *Repair and replace damaged Work, or Work of poor or unacceptable workmanship, as determined by the industry standards cited, or as determined by the Architect.*

END OF SECTION

SECTION 07510 – BUILT-UP BITUMINOUS ROOFING

PART 1 – GENERAL

1.01 CONDITIONS AND REQUIREMENTS

A. Refer to Division 1 General Requirements.

1.02 DESCRIPTION

A. Furnish and install all Built-up Roofing and related components as required, shown, and specified.
B. Provide supervision of sheet metal work in connection with roofing work.
C. Related Work:
   1. Selective Demolition: Section 02070
A. Miscellaneous Carpentry: Section 06100
B. Standing Seam Metal Roof Panels: Section 07410
C. Sheet Metal: Section 06420

1.03 SYSTEM DESCRIPTION

A. GS Roofing Products Roofing Specifications No. A-4-M-4 Ply Mineral Surface Roofing System.
B. Product Ratings:
   1. Underwriters Laboratory: Class A built-up roofing assembly with Class (60) wind-uplift resistance.
   2. Factory Mutual: Class 1 or Noncombustible built-up roofing assembly and zoned wind resistance.
C. Include aggregate surfacing for over-runs of asphalt and where standing or ponding water may occur.

1.04 REFERENCE DOCUMENTS

A. Governing Documents, including:
   1. American Society of Testing and Materials (ASTM) "Standards in Building Codes."
   2. California Building Code (CBC), latest edition, Chapter 15, "Roofing and Roof Structures."
B. Guideline Standards for Quality of Work
   1. National Roofing Contractor's Association (NRCA) "Roofing and Waterproofing Manual."
   2. Schuller Roofing Systems "Commercial and Industrial Roofing Systems Manual," latest edition.

1.05 QUALITY ASSURANCE

A. Installer's Qualifications; Specializing in applying bituminous roofing with minimum (5) years verifiable experience, approved by manufacturer to issue a warranty as specified.
B. Owner to provide full-time roofing inspection.

1.06 MANUFACTURER'S GUARANTEE

A. In addition to contractor's normal warranty for all items in Division 7, Roofing Installer to provide an additional written ten (10) year warranty for the Built-up Membrane Roof system and all incorporated components.

PART 2 - PRODUCTS

2.01 SHEET PRODUCTS

A. Base sheet: (1) layer asphalt coated fiber glass base sheet per ASTM D 4601, Type II - GS GlasBase.

B. Glass fiber felts: (2) layers asphalt coated fiber glass ply sheet per ASTM D 2178, Type IV - GS Flintglass.

C. Mineral surfaces felts: (1) layer white colored mineral-surfaced, asphalt coated fiber glass cap sheet per ASTM D 3909 - GS Flintglass.

2.02 VISCOUS SURFACE PRODUCTS

A. Asphalt Bitumen: per ASTM D 312 Type III, 190 degrees F. equiviscous temperature (EVT) for slopes up to (3) inches per foot, to be applied at 25 lb. per ply per (100) sq. ft – (75) lbs. total per square.

B. Asphalt Emulsion: per ASTM D 1227, Type I.

2.03 FLASHING PRODUCTS

A. Provide all crickets, cant strips, flashing, cement coatings, and primers required by manufacturer for a complete watertight system.

2.04 ACCESSORIES

A. Roofing nails: Nonferrous ring-shank with (1) inch diameter head, by Simplex Nail & Mfg. Co., or equal.

B. Mineral aggregate: per ASTM D1863, to match color of roofing cap sheet.

C. See Roof Specialties Division 7-07210.

PART 3 - EXECUTION

3.01 PREPARATION

A. Install complete system on any (1) roof section all in one day. Do not apply during inclement weather.

B. Verify that roof deck is smooth, free of depressions, gaps, waves or projections, structurally sound, and sloped to drains.

C. Sweep roof surface broom clean, fill knot holes with latex filler.

D. Confirm dry deck by moisture meter with (12) percent moisture maximum.

E. Verify that curbs, pipes, sleeves, and vents through roof are solidly set, and cant strips and reglets are in place.

F. Do not proceed until unsatisfactory conditions are corrected.

3.02 INSTALLATION

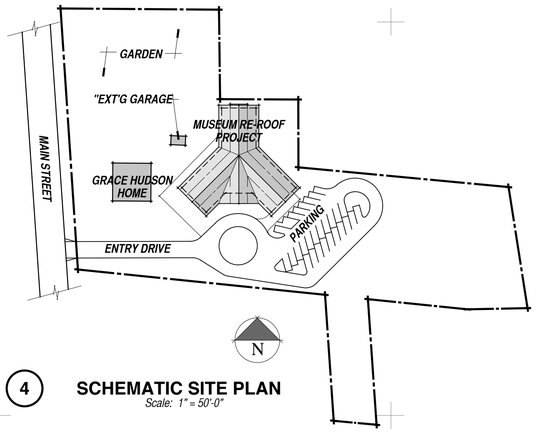
A. Install built-up roofing according to GS A-4-M-3 specification.

B. Coordinate Built-up Bituminous Roofing installation with Owner's special inspector (to be selected), with at least (72) hours notice. Miss-scheduling or re-inspections will be at the Contractor's expense.

3.03 CLEANING

A. Remove bituminous markings from finished surfaces.

B. Leave roof and surrounding area clean and free of roofing waste materials, especially nails.



3.04 ADDITIONAL REQUIREMENTS

A. See Construction Documents

END OF SECTION

8 VICINITY MAP

4 SCHEMATIC SITE PLAN

Scale: 1" = 50'-0"

The "Work" of this Project is summarized as follows:

The Museum has a "Cor-Ten" Burmuda style metal roof system that is now (35) years old, and has started to leak. The decision has been made to remove that roof, and replace it with a traditional standing seam metal roof, which includes a proven compliment of reliable and time-tested attachment and trim components.

The Museum's was built on the grounds of Grace Hudson's residence, and houses a priceless and irreplaceable collection of her art and artifacts of the Pomo people who made this land their home. The City of Ukiah is expecting the highest level of craftsmanship and expertise, and who can bring both to bear on this project. Also, if possible, to execute the work early this Fall.

1. *Remove the existing roofing, palatize and secure the Cor-Ten panel components and make ready for the re-use by others. The actual short term storage will be the Museum parking area, and will be coordinated between the Contractro and the Architect in consultation with the Museum staff. The Museum is currently not open to the public, and staff are working from home.*
2. *Recon and repair any fungus rot or water damaged to the building as needed. This work will be on a time and materials basis, and is further described in the Bidding Docs. Also, the Contractor will make all other repairs and additions to accomodate the new roofing system, including fascia and related building trim and flashings.*
3. *Prep the roof deck and install the weather barrier.*
4. *The Contractor will also coordinate with other Owner contracted trades, including insulation, and and attic ventilation.*
5. *The Contractor will need to supply support items to accomodate workmen, such as restrooms, as maintaining the Museum security is of upmost concern.*
6. *The Contractor is contractually bound to make available all workman and materials, and proceed to completion except during rain days.*
7. *The Bid Docs will specify the schedule for pre-construction meetins, responding to Contractor's questions, Bids due date, insurance requirements, selection criteria for evaluating Bids and Contractor's, and other Bidding and Contractual requirements.*

ITEM NO: 2020-493

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Approve Amendment to the Original Agreement with Coastland Civil Engineering for Professional Services Related to Clara Avenue Phase 2 Improvement Project to be Competitive for CDBG Funding and Corresponding Budget Transfer.

DEPARTMENT: Public Works **PREPARED BY:** Jason Benson, Senior Civil Engineer

PRESENTER: Tim Eriksen, Public Works Director/City Engineer and Jason Benson, Senior Civic Engineer.

ATTACHMENTS:

1. 1920231_Coastland Contract
2. Clara Ave Phase 2 - Amendment No. 1 Proposal

Summary: City Council will consider an amendment to the original agreement with Coastland Civil Engineering for professional services related to Clara Avenue Phase 2 Improvement Project to be competitive for CDBG funding, and an associated budget transfer.

Background: The City Council awarded a contract on March 4, 2020, to Coastland Civil Engineering of Santa Rosa, CA, in the amount of $25,240 to update the plans, specifications, and engineers estimate (PSE) for Clara Avenue Phase 2 Improvement project. This work was required to have the design complete and the construction of the project to be “shovel ready” to be eligible for CDBG funds. The engineering work was completed in April 2020. The City is applying for CDBG funding is in the approximate amount of three million dollars from the State for the project.

Discussion: Staff contacted Coastland Civil Engineering for the updated engineering design work for Phase 2. During the design process, City and Coastland Staff found a section of the existing water main within the paving reconstruction limits that requires replacement. This pipe is approximately 700 linear feet on the east end of Clara Avenue near the intersection at Orchard. The other existing water mains within the paving reconstruction limits were replaced in 2010 under the Clara Avenue Improvements Phase 1 construction project. The improvements for the water main were not part of Coastland’s original scope of work (SOW), and the additional design efforts were required to finalize bid documents. These efforts include updates to the plans, specifications, and cost estimate. This extra work is the subject of this issue and the costs for this extra work was $4,615.

Coastland performed the design work in April 2020, and staff found the fees to be commensurate with the scope of work. A copy of the agreement for this work is included as Attachment #1 for reference. An agreed upon addendum proposal to the contract for this work is included as Attachment #2. The budget transfer, if approved, will authorize transferring $4,615 from 10024224.52100 into the following accounts: 12024200.80230.18184: $2,307.50 and 84427221.80230.18184: $2,307.50.

Recommended Action: Approve contract amendment to agreement with Coastland Civil Engineering in the

amount not to exceed $4,615 for additional engineering design services for the Clara Avenue Phase 2 Project, and approve corresponding budget transfer.

BUDGET AMENDMENT REQUIRED: YES

CURRENT BUDGET AMOUNT: 10024224.52100: $4,615

PROPOSED BUDGET AMOUNT: 12024200.80230.18184: $2,307.50; 84427221.80230.18184: $2,307.50

FINANCING SOURCE: N/A

PREVIOUS CONTRACT/PURCHASE ORDER NO.: Contract Number 1920-231

COORDINATED WITH: Tim Eriksen, Director of Public Works/City Engineer

Approved: Sage Sangiacomo, City Manager

COU No. 1920-231

AGREEMENT FOR PROFESSIONAL CONSULTING SERVICES [Design Professional]

This Agreement, made and entered into this 5th day of March, 2020 ("Effective Date"), by and between CITY OF UKIAH, CALIFORNIA, hereinafter referred to as "City" and Coastland Civil Engineering, Inc., a California Corporation, organized and in good standing under the laws of the state of California, hereinafter referred to as "Consultant".

RECITALS

This Agreement is predicated on the following facts:

a. City requires consulting services related to engineering design series for the Clara Avenue Phase 2 project.

b. Consultant represents that it has the qualifications, skills, experience and properly licensed to provide these services, and is willing to provide them according to the terms of this Agreement.

c. City and Consultant agree upon the Scope-of-Work and Work Schedule attached hereto as Attachment "A", describing contract provisions for the project and setting forth the completion dates for the various services to be provided pursuant to this Agreement.

TERMS OF AGREEMENT

1.0 DESCRIPTION OF PROJECT

1.1 The Project is described in detail in the attached Scope-of-Work (Attachment "A").

2.0 SCOPE OF SERVICES

2.1 As set forth in Attachment "A".

2.2. Additional Services. Additional services, if any, shall only proceed upon written agreement between City and Consultant. The written Agreement shall be in the form of an Amendment to this Agreement.

3.0 CONDUCT OF WORK

3.1 Time of Completion. Consultant shall commence performance of services as required by the Scope-of-Work upon receipt of a Notice to Proceed from City and shall complete the updated plans and specifications before April 15, 2020, and the balance of the work by June 30, 2020. Consultant shall complete the work to the City's reasonable satisfaction, even if contract disputes arise or Consultant contends it is entitled to further compensation.

4.0 COMPENSATION FOR SERVICES

4.1 Basis for Compensation. For the performance of the professional services of this Agreement, Consultant shall be compensated on a time and expense basis not to exceed a guaranteed maximum dollar amount of $25,240. Labor charges shall be based upon hourly billing rates for the various classifications of personnel employed by Consultant to perform the Scope of Work as set forth in the attached Attachment B, which shall include all indirect costs and

expenses of every kind or nature, except direct expenses. The direct expenses and the fees to be charged for same shall be as set forth in Attachment B. Consultant shall complete the Scope of Work for the not-to-exceed guaranteed maximum, even if actual time and expenses exceed that amount.

4.2 Changes. Should changes in compensation be required because of changes to the Scope-of-Work of this Agreement, the parties shall agree in writing to any changes in compensation. "Changes to the Scope-of-Work" means different activities than those described in Attachment "A" and not additional time to complete those activities than the parties anticipated on the date they entered this Agreement.

4.3 Sub-contractor Payment. The use of sub-consultants or other services to perform a portion of the work of this Agreement shall be approved by City prior to commencement of work. The cost of sub-consultants shall be included within guaranteed not-to-exceed amount set forth in Section 4.1.

4.4 Terms of Payment. Payment to Consultant for services rendered in accordance with this contract shall be based upon submission of monthly invoices for the work satisfactorily performed prior to the date of invoice less any amount already paid to Consultant, which amounts shall be due and payable thirty (30) days after receipt by City. The invoices shall provide a description of each item of work performed, the time expended to perform each task, the fees charged for that task, and the direct expenses incurred and billed for. Invoices shall be accompanied by documentation sufficient to enable City to determine progress made and the expenses claimed.

5.0 ASSURANCES OF CONSULTANT

5.1 Independent Contractor. Consultant is an independent contractor and is solely responsible for its acts or omissions. Consultant (including its agents, servants, and employees) is not City's agent, employee, or representative for any purpose.

It is the express intention of the parties hereto that Consultant is an independent contractor and not an employee, joint venturer, or partner of City for any purpose whatsoever. City shall have no right to, and shall not control the manner or prescribe the method of accomplishing those services contracted to and performed by Consultant under this Agreement, and the general public and all governmental agencies regulating such activity shall be so informed.

Those provisions of this Agreement that reserve ultimate authority in City have been inserted solely to achieve compliance with federal and state laws, rules, regulations, and interpretations thereof. No such provisions and no other provisions of this Agreement shall be interpreted or construed as creating or establishing the relationship of employer and employee between Consultant and City.

Consultant shall pay all estimated and actual federal and state income and self-employment taxes that are due the state and federal government and shall furnish and pay worker's compensation insurance, unemployment insurance and any other benefits required by law for himself and his employees, if any. Consultant agrees to indemnify and hold City and its officers, agents and employees harmless from and against any claims or demands by federal, state or local government agencies for any such taxes or benefits due but not paid by Consultant, including the legal costs associated with defending against any audit, claim, demand or law suit.

Consultant warrants and represents that it is a properly licensed professional or professional organization with a substantial investment in its business and that it maintains its own offices and staff which it will use in performing under this Agreement.

5.2 Conflict of Interest. Consultant understands that its professional responsibility is solely to City. Consultant has no interest and will not acquire any direct or indirect interest that would conflict with its performance of the Agreement. Consultant shall not in the performance of this Agreement employ a person having such an interest. If the City Manager determines that the Consultant has a disclosure obligation under the City's local conflict of interest code, the Consultant shall file the required disclosure form with the City Clerk within 10 days of being notified of the City Manager's determination.

6.0 INDEMNIFICATION

6.1 Insurance Liability. Without limiting Consultant's obligations arising under Paragraph 6.2 Consultant shall not begin work under this Agreement until it procures and maintains for the full period of time allowed by law, surviving the termination of this Agreement insurance against claims for injuries to persons or damages to property, which may arise from or in connection with its performance under this Agreement.

A. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office ("ISO) Commercial General Liability Coverage Form No. CG 20 10 10 01 and Commercial General Liability Coverage – Completed Operations Form No. CG 20 37 10 01.

2. ISO Form No. CA 0001 (Ed. 1/87) covering Automobile Liability, Code 1 "any auto" or Code 8, 9 if no owned autos and endorsement CA 0025.

3. Worker's Compensation Insurance as required by the Labor Code of the State of California and Employers Liability Insurance.

4. Errors and Omissions liability insurance appropriate to the consultant's profession. Architects' and engineers' coverage is to be endorsed to include contractual liability.

B. Minimum Limits of Insurance

Consultant shall maintain limits no less than:

1. General Liability: $1,000,000 combined single limit per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, the general aggregate limit shall apply separately to the work performed under this Agreement, or the aggregate limit shall be twice the prescribed per occurrence limit.

2. Automobile Liability: $1,000,000 combined single limit per accident for bodily injury and property damage.

3. Worker's Compensation and Employers Liability: Worker's compensation limits as required by the Labor Code of the State of California and Employers Liability limits of $1,000,000 per accident.

4. Errors and Omissions liability: $1,000,000 per *claim and annual aggregate.*

C. Deductibles and Self-Insured Retentions

Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects to the City, its officers, officials, employees and volunteers; or the Consultant shall procure a bond guaranteeing payment of losses and related investigations, claim administration and defense expenses.

D. Other Insurance Provisions

The policies are to contain, or be endorsed to contain, the following provisions:

1. General Liability and Automobile Liability Coverages

a. The City, it officers, officials, employees and volunteers are to be covered as additional insureds as respects; liability arising out of activities performed by or on behalf of the Consultant, products and completed operations of the Consultant, premises owned, occupied or used by the Consultant, or automobiles owned, hired or borrowed by the Consultant for the full period of time allowed by law, surviving the termination of this Agreement. The coverage shall contain no special limitations on the scope-of-protection afforded to the City, its officers, officials, employees or volunteers.

b. The Consultant's insurance coverage shall be primary insurance as respects to the City, its officers, officials, employees and volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be in excess of the Consultant's insurance and shall not contribute with it.

c. Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the City, its officers, officials, employees or volunteers.

d. The Consultant's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.

2. Worker's Compensation and Employers Liability Coverage

The insurer shall agree to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses arising from Consultant's performance of the work, pursuant to this Agreement.

3. Professional Liability Coverage

If written on a claims-made basis, the retroactivity date shall be the effective date of this Agreement. The policy period shall extend one year from date of final approved invoice.

4. All Coverages

Each Insurance policy required by this clause shall be endorsed to state that coverage shall not be suspended, voided, canceled by either party, reduced in coverage or in limits except after thirty (30) days prior written notice by certified mail, return receipt requested, has been given to the City.

E. Acceptability of Insurers

Insurance is to be placed with admitted California insurers with an A.M. Best's rating of no less than A- for financial strength, AA for long-term credit rating and AMB-1 for short-term credit rating.

F. Verification of Coverage

Consultant shall furnish the City with Certificates of Insurance and with original Endorsements effecting coverage required by this Agreement. The Certificates and Endorsements for each insurance policy are to be signed by a person authorized by that insurer to bind coverage on its behalf. The Certificates and Endorsements are to be on forms provided or approved by the City. All Certificates and Endorsements are to be received and approved by the City before Consultant begins the work of this Agreement. The City reserves the right to require complete, certified copies of all required insurance policies, at any time. If Consultant fails to provide the coverages required herein, the City shall have the right, but not the obligation, to purchase any or all of them. In that event, after notice to Consultant that City has paid the premium, the cost of insurance may be deducted from the compensation otherwise due the contractor under the terms of this Contract.

G. Subcontractors

Consultant shall include all sub-contractors or sub-consultants as insured under its policies or shall furnish separate certificates and endorsements for each sub-contractor or sub-consultant. All coverage for sub-contractors or sub-consultants shall be subject to all insurance requirements set forth in this Paragraph 6.1.

6.2 Indemnification. Notwithstanding the foregoing insurance requirements, and in addition thereto, Consultant agrees, for the full period of time allowed by law, surviving the termination of this Agreement, to indemnify the City for any claim, cost or liability that arises out of, or pertains to, or relates to any negligent act or omission or the willful misconduct of Consultant and its agents in the performance of services under this contract, but this indemnity does not apply to liability for damages for death or bodily injury to persons, injury to property, or other loss, arising from the sole negligence, willful misconduct or defects in design by the City, or arising from the active negligence of the City.

"Indemnify," as used herein includes the expenses of defending against a claim and the payment of any settlement or judgment arising out of the claim. Defense costs include all

costs associated with defending the claim, including, but not limited to, the fees of attorneys, investigators, consultants, experts and expert witnesses, and litigation expenses.

References in this paragraph to City or Consultant, include their officers, employees, agents, and subcontractors.

7.0 CONTRACT PROVISIONS

7.1 Documents and Ownership of Work. All documents furnished to Consultant by City and all documents or reports and supportive data prepared by Consultant under this Agreement are owned and become the property of the City upon their creation and shall be given to City immediately upon demand and at the completion of Consultant's services at no additional cost to City. Deliverables are identified in the Scope-of-Work, Attachment "A". All documents produced by Consultant shall be furnished to City in digital format and hardcopy. Consultant shall produce the digital format, using software and media approved by City.

7.2 Governing Law. Consultant shall comply with the laws and regulations of the United States, the State of California, and all local governments having jurisdiction over this Agreement. The interpretation and enforcement of this Agreement shall be governed by California law and any action arising under or in connection with this Agreement must be filed in a Court of competent jurisdiction in Mendocino County.

7.3 Entire Agreement. This Agreement plus its Attachment(s) and executed Amendments set forth the entire understanding between the parties.

7.4 Severability. If any term of this Agreement is held invalid by a court of competent jurisdiction, the remainder of this Agreement shall remain in effect.

7.5 Modification. No modification of this Agreement is valid unless made with the agreement of both parties in writing.

7.6 Assignment. Consultant's services are considered unique and personal. Consultant shall not assign, transfer, or sub-contract its interest or obligation under all or any portion of this Agreement without City's prior written consent.

7.7 Waiver. No waiver of a breach of any covenant, term, or condition of this Agreement shall be a waiver of any other or subsequent breach of the same or any other covenant, term or condition or a waiver of the covenant, term or condition itself.

7.8 Termination. This Agreement may only be terminated by either party: 1) for breach of the Agreement; 2) because funds are no longer available to pay Consultant for services provided under this Agreement; or 3) City has abandoned and does not wish to complete the project for which Consultant was retained. A party shall notify the other party of any alleged breach of the Agreement and of the action required to cure the breach. If the breaching party fails to cure the breach within the time specified in the notice, the contract shall be terminated as of that time. If terminated for lack of funds or abandonment of the project, the contract shall terminate on the date notice of termination is given to Consultant. City shall pay the Consultant only for services performed and expenses incurred as of the effective termination date. In such event, as a condition to payment, Consultant shall provide to City all finished or unfinished documents, data, studies, surveys, drawings, maps, models, photographs and reports prepared by the Consultant under this Agreement. Consultant shall be entitled to receive just and equitable compensation for any work satisfactorily completed hereunder,

subject to off-set for any direct or consequential damages City may incur as a result of Consultant's breach of contract.

7.9 Execution of Agreement. This Agreement may be executed in duplicate originals, each bearing the original signature of the parties. Alternatively, this Agreement may be executed and delivered by facsimile or other electronic transmission, and in more than one counterpart, each of which shall be deemed an original, and all of which together shall constitute one and the same instrument. When executed using either alternative, the executed agreement shall be deemed an original admissible as evidence in any administrative or judicial proceeding to prove the terms and content of this Agreement.

8.0 NOTICES

Any notice given under this Agreement shall be in writing and deemed given when personally delivered or deposited in the mail (certified or registered) addressed to the parties as follows:

Subject: Proposal for Engineering Design Services for the Clara Ave Phase 2 Project

Dear Tim,

In follow-up to your request and our phone meeting on February 25, 2020, I am pleased to provide you with this letter proposal for the design of improvements associated with the Clara Avenue Phase 2 project.

Project Understanding

Coastland prepared the 100% complete Clara Avenue Phase 2 improvement plans and engineer's estimate of construction costs in July 2012. At that time the City did not have funds available for the construction improvements and the project was shelved. We now understand the City has CDBG and local funds to cover the construction costs and would like to move forward with refreshing the improvement plans as well as preparation of specification documents and put the project out to bid. The City also wants to add replacement of the sewer main, laterals and manholes along the entire length of Clara Ave. Sewer lateral replacements will include a cleanout placed at the back of sidewalk. Where possible the sewer main will need to be placed horizontally 10 feet from the water main. There may be some areas along Clara where its infeasible to obtain the 10' horizontal separation due to other utilities, and the new sewer main will need to be specified as a higher-pressure class of pipe per State Water Resources Board, Division of Drinking Water requirements. The City would also be required to file a waiver with the State Water Resources Board.

As it has been almost 8 years since the improvement plans were completed, we will need to spend some effort updating the documents to current standards and site conditions. We will conduct a site review of the entire length of the project and assess any changed conditions that need to be reflected on the improvement plans. We understand there have been some improvements at the Mason Street intersection for the NWPR Trail project since the plans were completed in July 2012. We will need to update the plans to reflect these improvements as well as eliminate the bulb outs and adjust the ramp configurations at Mason to conform/connect to the newly constructed trail. The City will be providing survey information for the areas that have changed conditions (Clara and Mason intersection). The City's survey will need to be on the same horizontal and vertical datum as the original survey that Cinquini and Passarino did for the Clara Avenue project in 2009.

The City will provide us with their most current front-end boiler plate specifications as well as any required language/forms that need to be included per CDBG funding requirements. Technical specifications will be prepared in accordance with Caltrans 2018 Standard Specifications.

www.coastlandcivil.com

With respect to environmental clearances for this project, it is our understanding that the City will be obtaining any necessary environmental clearances. Accordingly, environmental clearances are not included in our scope of services.

Based on the above understanding of the project, we have prepared the following scope of work and estimated fee for your consideration:

SCOPE OF WORK

Task 1 – Meetings with City

We will attend one (1) meeting with the City Public Works staff to discuss project details, goals and to coordinate efforts.

Task 2 – Background Information

Coastland will assemble all of the available recent City information pertaining to the project including as-built drawings, GIS files and any additional pertinent information for the project.

We will conduct a field review and take digital photos of the project site. We will also observe existing conditions against the July 2012 improvement plans and note any changed conditions.

Due to the project being on hold for almost 8 years, Coastland will coordinate with outside utility companies to ensure that we have the most current information on existing facilities. This task will include writing letters to PG&E, AT&T and Comcast, informing them of the project and requesting their facility drawings.

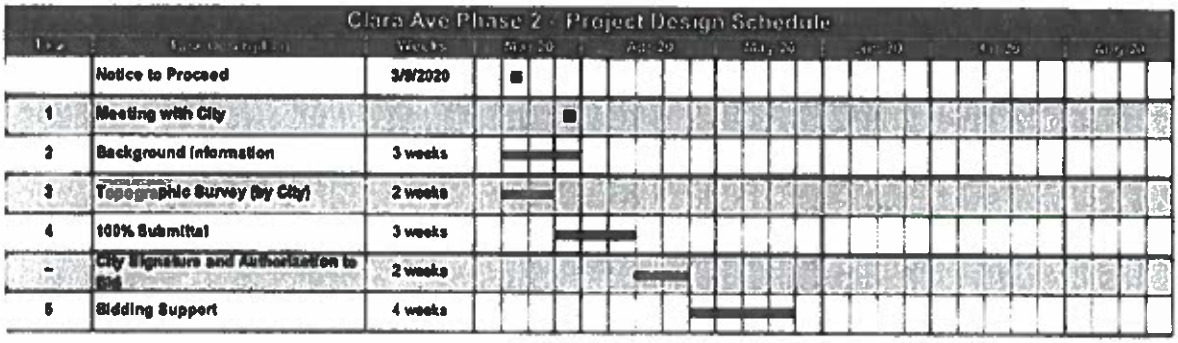
Task 3 – Topographic Survey

The City will survey and provide electronic files of the survey information to Coastland to incorporate into the improvement plans. The City's survey shall be on the same horizontal and vertical datum as the original survey for the project that was done by Cinquini and Passarino.

Task 4 – 100% Submittal

Following our background efforts and receipt of the City's topographic survey, we will prepare the 100% submittal. The 100% improvement plans will show the proposed lines, grades and extent of the proposed curb, gutter, sidewalk, roadway and sewer improvements. If required, we will prepare the waiver forms and submittal to State Water Resources Board for sewer mains with less than 10 feet of horizontal separation from the water main. As part of the submittal, we will prepare front end and technical specifications and an estimate of probable construction costs. This proposal assumes the City will provide the front-end specification boiler plate Word document.

Coastland's Construction Management Department will perform a constructability review of the contract documents. Through this review, we will help minimize change orders and potential claims.



We will provide stamped and signed archival quality mylar drawings, and camera-ready signed and stamped specifications We will also provide the City with electronic copies of the documents (PDF-plans, Word-specifications and Excel-engineer's estimate).

Task 5 – Bidding Support

It is our understanding the City will advertise, reproduce and distribute bid documents. During the bidding process, we will provide bid assistance to the City to answer any questions that may arise. This will include assisting the City with clarifications or preparing an addendum that may be necessary.

Schedule

Coastland is prepared to begin work upon receipt of a Notice to Proceed. We have prepared the following schedule based on the above scope of work. This schedule assumes a notice to proceed by March 9th, 2020.

Exceptions

The following work is not included in our proposal. However, Coastland would be pleased to provide these services if the Town desires:

- Environmental assessments and clearances
- Public participation efforts.
- Meetings beyond those noted above.
- Potholing and associated survey efforts.
- Council presentation or other staff presentations.
- Construction Design Support
- Record Drawings

WORK ESTIMATE

Based on our Scope of Work, we have prepared a detailed budget that identifies staffing rates, total cost per task, and direct expenses (see work estimate on the following page). We are proposing that the design services associated with this project can be completed for a not-to-exceed fee of $25,240. This amount assumes all of the work for this project will fall under the Scope of Work described in our proposal. If additional work is necessary that falls outside of this scope of work, we can either re-negotiate a new scope of work or provide these services on a time and materials basis per our adopted schedule of hourly rates.

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Approve Contract with Coastline Engineering for the Update of the Plans and Specifications for the Reconstruction of Clara Ave.

DEPARTMENT: Public Works **PREPARED BY:** Tim Eriksen, Public Works Director/City Engineer, Mary Horger, Financial Services Manager

PRESENTER:

ATTACHMENTS:

1. Coastland Proposal V1

Summary: City Council will consider awarding a design contract to Coastland Civil Engineering in the $25,240 for the reconstruction of Clara Avenue from State Street to Orchard Avenue.

Background: In 2010 Coastland responded to a Request for Proposal (RFP) for the improvement for Clara Avenue and replacement of the water line in Clara Avenue. This project was driven by a water line issue and the funds available from the general fund were extremely limited for any street repairs. The City Engineer determined that the project should be split into two phases. Phase 1 was to replace the water infrastructure, install a storm drain system and fully reconstruct a one block portions of the entire length of the street. Phase 1 was finished in 2012. The Phase 2 plans were complete by Coastland but funding was not available to accomplish this work. Staff has continued to search for funds to complete this work.

In the last few weeks, staff has identified funds for the completion of the surface portion of this work. These funds are the 2019-2020 State Community Development Block Grant (CDBG) Program.

Discussion: The CDBG funds have several requirements to qualify for the funding. One of the requirements is that the project is "shovel ready". This project is shovel ready, but it is a bit dated, and some design features need to be updated. Staff engaged Coastland and asked for a proposal to update the plans, specifications, and engineers estimate (PSE). These have to be completed by April 15th to meet the internal deadline for the funding. Coastland has the ability to meet this timeline and update the PSE to reflect current conditions. They provided a proposal on Monday to complete this work (Attachment 1).

The funds that are proposed to be used for the update of the (PSE) are Measure Y and the Wastewater Fund. This project will complete a much needed project in the Wagenseller Neighborhood.

Recommended Action: Award a contract to Coastland Civil Engineering in the amount not to exceed $25,240, for Design Services for the Clara Avenue Phase 2 Project.

BUDGET AMENDMENT REQUIRED: Yes

CURRENT BUDGET AMOUNT: 12024200.80230.18184: $13,830.92; 84427221.80230.18184: $0

Ukiah, CA 95482

Subject: Proposal for Professional Engineering Services Relating to the Clara Avenue Phase 2 Improvement Project
Amendment No. 1 Proposal – Additional Engineering Services

Dear Tim,

We are pleased to provide you with this amendment proposal for the additional engineering design services for the Clara Ave Phase 2 Project relating to the water main replacement.

Project Background

During the design process of this project we brought to the City's attention that there was a section of 40+ year old 6" ACP water main within the paving reconstruction limits that they should consider replacing with new PVC pipe. This ACP section of water main is approximately 690 feet in length (1978 vintage) that goes from 160' west of the Sidnie intersection to N. Orchard. All of the other water main within the paving reconstruction limits was replaced with new 6" PVC pipe in 2010 with phase 1 of the Clara Avenue improvements. Due to the age of the existing ACP water main and to prevent the need to do future trenching in the newly placed pavement, the City elected to have this water main replacement added to the project. As these improvements for the water main were not part of the original scope of work, we are asking for an amendment to cover the additional design efforts required to incorporate the water main improvements into the final bid documents. Additional design efforts include plan and profile plans, construction notes, research/coordination with City on the waterline background information and miscellaneous construction details. Other additional efforts include preparation of the water facility specifications and an engineer's estimate of construction cost.

Based on the above understanding of the additional required services, we have prepared the following scope of work and estimated fee for your consideration. For clarity, the tasks below follow the original scope of work.

SCOPE OF SERVICES

Task 1 – Meetings with City Staff

No additional work under this task.

Task 2 – Background Information

Coastland will assemble all of the available City information pertaining to the existing water main including as-built drawings, GIS files and any additional pertinent information.

Task 3 – Topographic Survey

No additional work under this task.

Task 4 – 100% Submittal

Preparation of water main plan and profiles plans, construction notes and miscellaneous details. Preparation of technical specifications for water main and associated appurtenances and an engineer's estimate of construction cost.

Task 5 – Bid Support

No additional work under this task.

ESTIMATED COSTS

Based on our scope of work, we are proposing that the services associated with additional design efforts be completed for a not-to-exceed amount of $4,615. The amount quoted is assuming that all of the work for this project will fall under the scope of work as previously described. If additional work is necessary that falls outside of this scope of work, we can either re-negotiate a new scope of work or provide these services on a time and materials basis per our adopted schedule of hourly rates.

Please let me know if you have any questions.

Sincerely,
COASTLAND

ITEM NO: 2020-494

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Adopt Plans and Specifications for the Electric Service Center Site Improvements (Spec No. 16-07) to Provide Access Modifications, Roof Replacement and Other Site Improvements ($2.7M).

DEPARTMENT: Electric Utility **PREPARED BY:** Mel Grandi, Electric Utility Director
PRESENTER: Consent Calendar

ATTACHMENTS:
1. Spec 16-07 Hastings
2. Hasting Drawings

Summary: Council will consider adopting the Plans and Specifications (Spec No. 16-07) for the Electric Service Center to provide access modification, roof replacement and other site improvements ($2.7M).

Background: The Ukiah City Council approved the purchase of 2.8 acres with a 15,800 sq. ft. building located at 1350 Hasting Rd (The Electric Service Center) to house the Electric Utility Department's operation. The Electric Service Center will centralize electric operations for Engineering, Construction and Technical Services. In addition, the Department intends to use the Electric Service Center for training, material warehousing and construction preparation.

Currently, due to COVID-19, half of the electric workforce are reporting to work at the Electric Service Center.

The Electric Utility Department has secured various professional services that evaluated the site and identified needs and opportunities for improvements. These include Improvements to security, structural systems, electrical, and site grading. The facility will promote energy efficiency, carbon free solar generation and additional service offerings. The warehouse area has been renovated with high-bay LED lighting, material racking systems and other interior improvements.

Discussion: The project plans and specifications (Phase 1 improvements) provided as Attachments 1 and 2, if approved, will enable the Electric Utility Department to fully secure the site and enable the department to manage material storage at the facility. The Phase 1 work scope includes site improvements for access, roof replacement, structural evaluation, electrical, mechanical, lighting, grading and fencing and landscape additions.

Phase 2 will add solar and further modify the interior spaces for maximum efficiency and functionality.

Recommended Action: Adopt Plans and Specifications for the Electric Service Center Site Improvements (Spec No. 16-07) to Provide Access Modifications, Roof Replacement and Other Site Improvements ($2.7M).

BUDGET AMENDMENT REQUIRED: Not at this time.

CURRENT BUDGET AMOUNT: $1,800,000; 801.26100.80220.174023, $1,700,000; 80126100.80220.ECC01

Plans and Special Provisions may be inspected and/or copies obtained from the City's website at www.cityofukiah.com/purchasing. No bid will be considered unless it is made on the forms furnished by the City and is made in accordance with the details of the Special Provisions. Each bidder must be licensed as required by law. Further information regarding the work or these specifications can be obtained by calling Mary Horger, Procurement Manager at (707) 463-6233 or by email at mhorger@cityofukiah.com.

The City Council reserves the right to reject any or all bids and to determine which proposal is, in its opinion, the lowest responsive bid by a responsible bidder and which it deems in the best interest of the City to accept. The City Council also reserves the right, but not the obligation, to waive any irregularity or failure to strictly comply with the bidding requirements, that the City determines in the reasonable exercise of its discretion does not provide the bidder with a competitive advantage over other bidders.

No contractor or subcontractor may be listed on a bid proposal for a public works unless registered with the Department of Industrial Relations ("DIR") pursuant to Labor Code section 1725.5 except as allowed. under Labor Code section 1771.1(a). The prime contractor shall be responsible for posting job site notices as prescribed by regulation. This project is subject to compliance monitoring and enforcement by the DIR.

Pursuant to provisions of Section 1770, including amendments thereof, of the Labor Code of the State of California, the DIR Director has ascertained the general prevailing rate of wages for straight time, overtime, Saturdays, Sundays and Holidays including employer payment for health and welfare, vacation, pension and similar purposes for the City of Ukiah. Copies of his General Prevailing Wage Determination are available on the Internet at web address: http://www.dir.ca.gov/DLSR/PWD/ The prime contractor for the work herein shall possess a current, valid State of California, Class "A" Contractor's License. Pursuant to California Public Contract Code §22300, this contract includes provisions that allow substitutions of certain types of securities in lieu of the City withholding a portion of the partial payments due the Contractor to insure performance under this contract.

By order of the City Council, City of Ukiah, County of Mendocino, State of California.

Dated:_____ _____

Kristine Lawler, City Clerk, City of Ukiah, California

PUBLISH TWO TIMES:

INSTRUCTIONS TO BIDDERS

ELECTRIC UTILITY - FOC shall be performed in accordance with the Plans and Special Provisions therefor adopted, to which special reference is hereby made.

Each bidder must supply all the information required by the bid documents and Special Provisions.

Minority business enterprises will be afforded full opportunity to submit bids in response to this invitation and will not be discriminated against on the grounds of race, color or national origin in consideration for an award of any contract entered into pursuant to this advertisement. Women will be afforded equal opportunity in all areas of employment. However, the employment of women shall not diminish the standards or requirements for the employment of minorities.

All proposals or bids shall be accompanied by a cashier's check or certified check payable to the order of the City of Ukiah amounting to 10 percent of the bid, or by a bond in said amount and signed by the bidder and a corporate surety, payable to said City. Said check shall be forfeited, or said bond shall become payable to said City in case the bidder depositing the same does not, within fifteen (15) days after written notice that the contract has been awarded to him: (a) enter into a contract with the City and (b) furnish certificates of insurance and endorsements, a bond of faithful performance and a payment bond as described in the Special Provisions.

No bidder shall withdraw his or her bid for a period of thirty (30) calendar days after the date set by the City for the opening thereof.

The Contractor and any subcontractors shall each possess a valid City of Ukiah Business License prior to the start of any work.

The Contractor shall furnish a project schedule to the Engineer prior to the start of any work and start work as scheduled.

The work is to be completed within One hundred fifty (150) calendar days. The Contractor will pay to the City the sum of five hundred ($500.00) dollars per day for each and every calendar day's delay beyond the time prescribed.

The staff shall notify a bidder by telephone, email or fax, if it intends to recommend the rejection of the bidder's bid. Any bid protest must be filed with the City Clerk not more than five calendar days following the bid opening, or 2 calendar days following notice that staff is recommending the rejection of a bid. If any such timely written protest is filed, all bidders shall be provided a copy of the protest within 2 calendar days of its receipt, which may be delivered to the bidders as an email attachment or by fax. All such bidders may file with the City Manager a written objection or other response to the protest.

All objections or responses filed not more than 5 days after receipt of the written protest will be presented to the City Council at its next regular meeting occurring not less than 12 calendar days following the bid opening. The City Council will resolve the bid protest at that meeting based on the written protest, any staff recommendation and all timely written objections and responses. In accordance with the Brown Act, any person may address the City Council on this item during the meeting. The City Council action on the protest shall represent a final decision by the City on the protest.

Examination of Construction Documents

Each bidder shall visit the site of the proposed work and fully acquaint himself with local conditions, construction and labor required so that he or she may fully understand the facilities, difficulties and restrictions attending the execution of the work under the Contract. Bidders shall thoroughly examine and be familiar with the Plans and Special Provisions. The failure of any bidder to receive or examine any form, instrument, addendum, or other document, or to visit the site and acquaint himself with conditions there existing, shall in no way relieve the bidder from any obligation with respect to his or her proposal or to the contract. The drawings for the work show conditions as they are supposed or believed by the Engineer to exist; but, it is neither intended nor shall it be inferred that the conditions as shown thereon constitute a representation by the Engineer, the City or its officers that such conditions are actually existent, nor shall the City, the Engineer or any of their officers or representatives be liable for any loss

sustained by the Contractor as a result of a variance between the conditions shown on the drawings and the conditions actually revealed during the progress of the work or otherwise.

The bidder's attention is directed to the possible existence of obstructions and public improvements within the limits of the work or adjacent thereto, which may or may not be shown on the Drawings. Any bid shall take into consideration that conditions may exist underground or otherwise that are not known to the City or easily detected during a site inspection that could impact the time or cost of completing the project. The City expects the bids to anticipate such conditions so that it can know for budgeting and other purposes the total cost to complete the project before accepting a bid and undertaking the legal obligation to construct the project. In awarding the contract the City relies on the contractor's representation that its bid anticipates differing site conditions and the additional time or cost that such conditions may necessitate.

The bidder shall investigate to his or her satisfaction the conditions to be encountered, the character, quality and quantities of work to be performed and materials to be furnished and the requirements of the Plans, Special Provisions, Standard Specifications, Standard Plans, and Contract Documents. The submission of a proposal shall be considered conclusive evidence that the bidder has made such examination and has accepted the project workplace as a safe workplace to perform the work of the Contract.

Bidder Inquiries and Questions

Inquiries and questions must be submitted in writing via fax or email to the following designated contact person:

Mary Horger, Procurement Manager
Fax: (707) 313-3621
Email: mhorger@cityofukiah.com

The City reserves the right to not respond to inquiries or questions submitted within 3 business days of the bid opening.

Location of the Work

All of the work is to be performed is within the City of Ukiah. Project is located at 1350 Hasting Avenue, Ukiah, California.

GENERAL CONDITIONS

SECTION 1. PROPOSAL REQUIREMENTS AND GENERAL CONDITIONS

1-01. Definitions. Whenever any word or expression defined in this section, or pronoun used in its stead, occurs in these contract documents, it shall have and is mutually understood to have the meaning given:

a. "City of Ukiah" or "City" shall mean the City of Ukiah, Mendocino County, California, acting through its City Council or any other board, body, official or officials to which or to whom the power belonging to the Council shall by virtue of any act or acts, hereafter pass or be held to appertain.

b. "Engineer" shall mean the Engineer duly and officially appointed by the City to supervise and direct the work of construction under this contract, acting personally or through agents or assistants duly authorized by him, such agents or assistants acting within the scope of the particular duties entrusted to them.

c. "Inspector" shall mean the engineering or technical inspector or inspectors duly authorized or appointed by the Engineer, limited to the particular duties entrusted to him or her or them.

d. "Contractor" shall mean the party entering into contract with the City of Ukiah for the performance of work covered by this contract and his or her authorized agents or legal representatives.

e. "Date of signing of contract" or words equivalent thereto, shall mean the date upon which this contract, with the signature of the Contractor affixed, together with the prescribed bonds, shall be or shall have been delivered to the City or its duly authorized representatives.

f. "Day" or "days", unless herein otherwise expressly defined, shall mean a calendar day or days of twenty-four hours each.

g. "The work" shall mean and include all the work specified, indicated, shown or contemplated in the contract to construct the improvement, including all alterations, amendments or extensions thereto made by contract change order or other written orders of the Engineer.

h. "Contract drawings", "drawings", "plans" shall mean and include 1) all drawings or plans which may have been prepared by or on behalf of the City, as a basis for proposals, when duly signed and made a part of this contract by incorporation or reference, 2) all drawings submitted in pursuance of the terms of this contract by the successful bidder with his or her proposal and by the Contractor to the City if and when approved by the Engineer and 3) all drawings submitted by the Engineer to the Contractor during the progress of the work as provided for herein.

i. Where "as shown", "as indicated", "as detailed" or words of similar import are used, it shall be understood that reference to the drawings accompanying these Special Provisions is made unless stated otherwise.

Where "as directed", "as permitted", "approved" or words of similar import are used, it shall be understood that the direction, requirements, permission, approval or acceptance of the Engineer is intended unless stated otherwise.

As used herein, "provide" or "install" shall be understood to mean "provide or install complete in place", that is, "furnish and install". "Shall" is mandatory; "may" is permissive.

1-02. Examination of Plans, Special Provisions and Site of Work. The bidder shall examine carefully the Proposal, Plans, Special Provisions, Contract forms and the site of the work contemplated therefor. It will be assumed that the bidder has investigated to his or her satisfaction the conditions to be encountered and the character, quality and requirements of all Plans, Special Provisions, Standard Specifications, and Standard Plans involved.

1-03. Proposal. Bids shall be made on the blank forms prepared by the City. All bids shall give the prices bid, both in writing and in figures and shall be signed by the bidder or his or her authorized representative, with his or her address. If the bid is made by an individual or partner, his or her name and the post office address of his or her business or partnership, along with his or her signature or the signature of one or more partners must be shown; if made by a corporation, the bid shall show the name of the state under the laws of which the corporation is chartered, the name of the corporation and the title of the person who signs on behalf of the corporation.

Each proposal shall be enclosed in a sealed envelope, endorsed as specified in the notice to bidders. Bidders are warned against making erasures or alterations of any kind and proposals which contain omissions, erasures, conditions, alterations, additions not called for, additional proposals or irregularities of any kind may be rejected.

1-04. Withdrawal of Bids. Any bid may be withdrawn at any time prior to the hour fixed in the notice to bidders for the openings of bids, provided that a request in writing, executed by the bidder or his or her duly authorized representative, for the withdrawal of such bid is filed with the City. The withdrawal of a bid will not prejudice the right of a bidder to file a new bid.

1-05. Public Opening of Bids. Bids will be opened and read publicly at the time and place indicated in the notice to bidders. Bidders or their agents are invited to be present.

1-06. Bid Guaranty. Each bid must be accompanied by a certified check, cashier's check or bidder's bond executed by an admitted surety insurer, payable to the order of the City of Ukiah in an amount not less than 10 percent of the bid as a guarantee that the bidder will enter into a contract, if awarded the work.

1-07. Qualification of Bidders. No contractor or subcontractor may be listed on a bid proposal for a public works project (submitted on or after March 1, 2015) unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5 [with limited exceptions from this requirement for bid purposes only under Labor Code section 1771.1(a)]. No contractor or subcontractor may be awarded a contract for public work on a public works project (awarded on or after April 1, 2015) unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. The prime contractor shall be responsible for posting job site notices as prescribed by regulation. This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

Each bidder shall be licensed under the provisions of Chapter 9, Division 3 of the Business and Professions Code and shall be skilled and regularly engaged in the general class or type of work called for under this contract. A statement setting forth this experience and business standing shall be submitted by each bidder on the form provided herewith. It is the intention of the City to award a contract only to a bidder who furnishes satisfactory evidence that he or she has the requisite experience and ability and that he or she has sufficient capital, facilities and equipment to enable him or her to prosecute the work successfully and promptly within the time and in the manner agreed.

In determining the degree of responsibility to be credited to a bidder, the City may weigh evidence that the bidder or his or her personnel charged with the responsibility in the work, has performed satisfactorily other contracts of like nature and magnitude or comparable difficulty at similar rates of progress.

1-08. Disqualification of Bidders. More than one bid from an individual business, partnership, corporation or association, under the same or different names, will not be considered. Reasonable grounds for believing that any bidder is financially interested in more than one bid for the work will cause the rejection of all bids in which he or she is so interested. If there is reason to believe that collusion exists among the bidders, none of the participants in such collusion will be considered. Bids in which the prices obviously are unbalanced may be rejected.

1-09. Identification of Subcontractors. All bids shall comply with the Subletting and Subcontracting Fair Practices Act (Public Contract Code Section 4100 and following) and shall set forth:

> (a) The name and the location of the place of business of each subcontractor who will perform work or labor, or render service to the prime contractor in or about the construction of the work, or to a subcontractor licensed by the State of California who, under subcontract to the prime contractor, specially fabricates and installs a portion of the work according to detailed drawings contained in the plans and Special Provisions, in an amount in excess of one-half of 1 percent of the prime contractor's total bid.

(b) The portion of the work which will be done by each such subcontractor. The prime contractor shall list only one subcontractor for each such portion defined by the prime contractor in his or her bid.

1-10. General Provisions of the Standard Specifications. All provisions of the General Provisions, Sections 1 through 11, of the Standard Specifications, shall be applicable to the contract except as modified by these Special Provisions. The Standard Specifications are set forth in Section 12-06 of these Special Provisions.

1-11. Addenda. If it becomes necessary to revise any part of these plans and specifications after they have been released, the City will issue an addendum containing the revision. All addenda will be posted on the City's website at www.cityofukiah.com/purchasing with the rest of the bid documents. Anyone who intends to submit a bid in response to this Request for Bid must check the website frequently for any posted addenda. Anyone submitting a bid will be deemed to have seen and agreed to be bound by the posted addenda.

SECTION 2. AWARD AND EXECUTION OF CONTRACT

2-01. Award of Contract. Award of the contract, if it be awarded, will be to the lowest responsible bidder whose bid complies with all the specified requirements. The award, if made, will be made within thirty (30) days after opening of the bids. The City reserves the right to reject any and all bids and to waive any irregularity in the proposal not pertaining to cost.

2-02. Return of Proposal Guaranties. All bid guaranties will be held until the contract has been fully executed, after which they will be returned upon request to the respective bidders whose bids they accompany.

2-03. Execution of Contract. The contract agreement shall be executed in duplicate by the successful bidder and returned, together with the contract bonds, insurance certificates and endorsements, within fifteen (15) days after written notice of the award of the contract. After execution by the City; one copy shall be filed with the City and one copy shall be returned to the Contractor. If the bidder fails or refuses to enter into the contract agreement within the required time, then the bid guaranty accompanying the bid shall be forfeited to the City.

SECTION 3. SCOPE AND INTENT OF CONTRACT

3-01. Effect of Inspection and Payments. Neither the inspection by the Engineer or an inspector, nor any order, measurement or approved modification, nor certificate or payment of money, nor acceptance of any part or whole of the work, nor any extension of time, nor any possession by the City or its agents, shall operate as a waiver of any provision of this contract or of any power reserved therein to the City, or of any right to damages thereunder; nor shall any breach of this contract be held to be a waiver of any subsequent breach. All remedies shall be construed as cumulative.

3-02. Effect of Extension of Time. The granting of any extension of time on account of delays which, in the judgement of the City, are avoidable delays shall in no way operate as a waiver on the part of the City of its rights under this contract.

3-03. Extra Work. If extra work orders are given in accordance with provisions of this contract, such work shall be considered a part hereof and shall be subject to each and all of its terms and requirements.

3-04. Assignment of Contract. The contract may be assigned or sublet in whole or in part only upon the written consent of the City acting through its authorized agents. Consent will not be given to any proposed assignment which would relieve the original contractor or its surety of their responsibilities under the contract nor will the Engineer consent to any assignment of a part of the work under the contract.

3-05. Subcontractors. The Contractor shall be as fully responsible for the acts and omissions of his or her subcontractors and of persons either directly or indirectly employed by them, as he or she is for the acts and omissions of persons directly employed by him.

The Contractor shall cause appropriate provisions to be inserted in all subcontracts relative to the work to bind subcontractors to the terms of this Contract which are applicable to the work of subcontractors.

Nothing contained in this contract shall be construed to create or shall be relied upon to create any contractual relationship between any subcontractor and the City and no action may be brought by any subcontractor against the City based on this contract.

3-06. Interpretation of Special Provisions and Drawings. The Special Provisions and the Contract Drawings are intended to be explanatory of each other. Any work indicated in the Contract Drawings and not in the Special Provisions, or vice versa, is to be executed as if indicated in both. In case of a discrepancy or conflict between the Technical Specifications and Contract Plans, the Technical Specifications shall govern. All work shown on the Contract Drawings, the dimensions of which are not figured, shall be accurately followed to the scale to which the drawings are made, but figured dimensions are in all cases to be followed, where given, though they differ from scaled measurements. Large scale drawings shall be followed in preference to small scale drawings. Should it appear that the work to be done, or any of the matters relative thereto, are not sufficiently detailed or explained in these contract documents, including the contract drawings, the Contractor shall apply to the Engineer for such further explanations as may be necessary and shall conform thereto as part of this contract, so far as may be consistent with the terms of this contract. In the event of any doubt or questions arising respecting the true meaning of the Special Provisions, reference shall be made to the Engineer and his or her decision thereon shall be final. If the Contractor believes that a clarification or interpretation justifies an increase in the contract price or contract time, the Contractor must comply with the written notice provisions of Sections 9-05 and 10-07 of these Special Provisions. Contractor's attention is directed to Section 12-06 of the Technical Specifications regarding the Standard Specifications and Standard Plans.

3-07. Addenda. If it becomes necessary to revise any part of these plans and specifications after they have been released, the City will issue an addendum containing the revision. All addenda will be posted on the City's website at www.cityofukiah.com/purchasing with the rest of the bid documents. Anyone who intends to submit a bid in response to this Request for Bid must check the website frequently for any posted addenda. Anyone submitting a bid will be deemed to have seen and agreed to be bound by the posted addenda.

3-08. Liability of City Officials. No city official, nor the Engineer, nor any authorized assistant of any of them, shall be personally responsible for any liability arising under this contract.

3-09. Dispute Resolution. Claims of $375,000 or less by the Contractor that arise under this Contract are subject to the mandatory dispute resolutions provisions in Public Contract Code Sections 20104-20104.6.

SECTION 4. BONDS

4-01. Faithful Performance Bond. As a part of the execution of this contract, the Contractor shall furnish a bond of a surety company or other securities providing equivalent protection such as cash, letter of credit, or certificates of deposit, acceptable to the City, conditioned upon the faithful performance of all covenants and stipulations under this contract. The amount of the bond shall be 100 percent of the total contract price, as this sum is set forth in the agreement.

4-02. Material and Labor Bond. As a part of the execution of this contract, the Contractor shall furnish a bond of a surety company or other securities providing equivalent protection such as cash, letter of credit or certificates of deposit acceptable to the City in a sum not less than 50 percent of the total contract price, as this sum is set forth in the agreement for the payment in full of all persons, companies or corporations who perform labor upon or furnish materials to be used in the work under this contract, in accordance with the provisions of Sections 3247 through 3252 inclusive of the Civil Code of the State of California and any acts amendatory thereof.

4-03. Defective Material and Workmanship Bond. As a condition precedent to the completion of this contract, the Contractor shall furnish a bond of a surety company acceptable to the City in an amount not less than 5 percent (5%) of the final contract price, to hold good for a period of one (1) year after the completion and acceptance of the work, to protect the City against the results of defective materials, workmanship and equipment during that time. This bond shall be delivered to the City before the final payment under this contract will be made.

4-04. Notification of Surety Companies. The surety companies shall familiarize themselves with all of the conditions and provisions of this contract and they waive the right of special notification of any change or modification of this contract or of extension of time, or decreased or increased work, or of the cancellation of the

contract, or of any other act or acts by the City or its authorized agents, under the terms of this contract; and failure to so notify the aforesaid surety companies of changes shall in no way relieve the surety companies of their obligation under this contract.

SECTION 5. INSURANCE REQUIREMENTS FOR CONTRACTORS (WITH CONSTRUCTION RISKS)

Contractor shall procure and maintain for the duration of the contract insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the work hereunder by the Contractor, his or her agents, representatives, employees or subcontractors.

5-01. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office Commercial Liability Coverage (occurrence form CG 0001).
2. Insurance Services Office form number CA 0001 (Ed. 1/87) covering Automobile Liability, code 1 (any auto).
3. Worker's Compensation insurance as required by the State of California and Employer's Liability Insurance.
4. Course of Construction insurance covering for “all risks” of loss.

5-02. Minimum Limits of Insurance

Contractor shall maintain limits no less than:

1. General Liability: $1,000,000 per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, either the general aggregate limit shall apply separately to this project/location or the general aggregate limit shall be twice the required occurrence limit.

2. Automobile Liability: $1,000,000 per accident for bodily injury and property damage.

3. Employer's Liability: $1,000,000 per accident for bodily injury and property damage.

4. Course of Construction: Completed value of the project with no co-insurance penalty provisions.

5-03. Deductibles and Self-insured Retentions. Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either: the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects the City, its officers, officials, employees and volunteers; or the Contractor shall provide a financial guarantee satisfactory to the City guaranteeing payment of losses and related investigations, claim administration and defense expenses.

5-04. Other Insurance Provisions

The general liability and automobile liability policies are to contain, or be endorsed to contain, the following provisions:

1. The City, its officers, officials, employees and volunteers are to be covered as Additional Insured with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations.

General liability coverage can be provided in the form of an endorsement to the Contractor's insurance, or as a separate owner's policy.

2. The workers' compensation policy is to be endorsed with a waiver of subrogation. The insurance company, in its endorsement, agrees to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses paid under the terms of this policy which arises from the work performed by the named insured for the City.

3. For any claims related to this project, the Contractor's insurance coverage shall be primary insurance as respects the City, its officers, officials, employees or volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be excess of the Contractor's insurance and shall not contribute with it.

4. Each insurance policy required by this clause shall be endorsed to state that coverage shall not be canceled by either party, except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to the City.

5. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under Subdivision (b) of Section 2782 of Civil Code.

6. Course of Construction policies shall contain the following provisions:
   a.) The City shall be named as loss payee.
   b.) The insurer shall waive all rights of subrogation against the City.

5-05. Acceptability of Insurers

Insurance is to be placed with insurers with a current A.M. Best's rating of no less than the following:

A++ VII	A- VIII
A+ VII	B++ X
A VII	B+ X

5-06. Verification of Coverage. Contractor shall furnish the City with original certificates and amendatory endorsements effecting coverage required by this clause. The endorsements shall be on forms provided by the City or on other than the City's forms, provided those endorsements or policies conform to the requirements. All certificates and endorsements are to be received within 15 days from written notice of contract award, and the work shall not commence until the certificates and endorsements have been approved by the City. The City reserves the right to require complete certified copies of all required insurance policies, including endorsements affecting the coverage required by these Special Provisions at any time.

5-07. Subcontractors. Contractor shall include all subcontractors as insureds under its policies or shall furnish separate certificates and endorsements for each subcontractor. All coverages for subcontractors shall be subject to all of the requirements stated herein.

SECTION 6. RESPONSIBILITIES AND RIGHTS OF CONTRACTOR

6-01. Legal Address of Contractor. Both the address given in the proposal and the Contractor's office in the vicinity of the work are hereby designated as places to either of which drawings, samples, notices, letters or other articles or communications to the Contractor may be mailed or delivered. The delivery at either of these places of any such thing from the City or its agents to the Contractor shall be deemed sufficient service thereof upon the Contractor and the date of such service shall be the date of such delivery. The address named in the proposal may be changed at any time by notice in writing from the Contractor to the City. Nothing herein contained shall be deemed to preclude or render inoperative the service of any drawing, sample, notice, letter or other article or communication to or upon the Contractor personally.

6-02. Office of Contractor at Site. During the performance of this contract, the Contractor shall maintain a suitable office at the site of the work which shall be the headquarters of a representative authorized to receive drawings and any such thing given to the said representatives or delivered at the Contractor's office at the site of work in his or her absence shall be deemed to have been given to the Contractor.

6-03. Attention to Work. The Contractor shall give his or her personal attention to and shall supervise the work to the end that it shall be prosecuted faithfully and when he or she is not personally present on the work, he or she shall at all reasonable times be represented by a competent superintendent or foreman who shall receive and obey all instructions or orders given under this contract and who shall have full authority to execute the same and to supply materials, tools and labor without delay and who shall be the legal representative of the Contractor. The Contractor shall be liable for the faithful observance of any instructions delivered to him or her or to his or her authorized representative.

6-04. Liability of Contractor. The Contractor shall do all of the work and furnish all labor, materials, tools and appliances, except as otherwise herein expressly stipulated, necessary or proper for performing and completing the work herein required in the manner and within the time herein specified. The mention of any specific duty or liability imposed upon the Contractor shall not be construed as a limitation or restriction of any general liability or duty imposed upon the Contractor by this contract, said reference to any specific duty or liability being made herein merely for the purpose of explanation.

The right of general supervision by the City shall not make the Contractor an agent of the City and the liability of the Contractor for all damages to persons or to public or private property, arising from the Contractor's execution of the work, shall not be lessened because of such general supervision.

Until the completion and final acceptance by the City of all the work under and implied by this contract, the work shall be under the Contractor's responsible care and charge. The Contractor shall rebuild, repair, restore and make good all injuries, damages, re-erections and repairs, occasioned or rendered necessary by causes of any nature whatsoever, excepting only acts of God and none other, to all or any portions of the work, except as otherwise stipulated.

To the fullest extent permitted by law, Contractor shall indemnify and hold harmless the City and its officers, directors, agents and employees from and against all claims, damages, losses and expenses including but not limited to attorneys' fees, costs of suit, expert witness fees and expenses and fees and costs of any necessary private investigators arising out of or resulting from the performance of the work, provided that any such claim, damage, loss or expense (1) is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property, other than the work itself, including the loss of use resulting therefrom and (2) is caused in whole or in part by any act or omission of the Contractor, any subcontractor, or anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, regardless of whether or not it is caused in part by a party indemnified hereunder, or by the negligence or omission of a party indemnified herein.

In any and all claims against the City or any of its agents or employees by any employee of the Contractor, any subcontractor, anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, the indemnification obligation shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the Contractor or any subcontractor under workers' or workmen's compensation acts, disability benefit acts, or other employee benefit acts. The obligation to indemnify shall extend to and include acts of the indemnified party which may be negligent or omissions which may cause negligence.

The City shall have the right to estimate the amount of such damage and to cause the City to pay the same and the amount so paid for such damage shall be deducted from the money due the Contractor under this contract; or the whole or so much of the money due or to become due the Contractor under this contract as may be considered necessary by the City, shall be retained by the City until such suits or claims for damages shall have been settled or otherwise disposed of and satisfactory evidence to that effect furnished to the City.

6-05. Protection of Persons and Property. The Contractor shall furnish such watchman, guards, fences, warning signs, walks and lights as shall be necessary and shall take all other necessary precautions to prevent damage or injury to persons or property.

All property line fences and improvements in the vicinity of the work shall be protected by the Contractor and, if they are injured or destroyed, they and any other property injured by the Contractor, his or her employees or agents, shall be restored to a condition as good as when he or she entered upon the work.

6-06. Protection of City Against Patent Claims. All fees, royalties or claims for any patented invention, article or method that may be used upon or in any manner connected with the work under this contract shall be included in the price bid for the work and the Contractor and his or her sureties shall protect and hold the City, together with all of its officers, agents, servants and employees, harmless against any and all demands made for such fees or claims brought or made on account of this contract. The Contractor shall, if requested by the Engineer, furnish acceptable proof of a proper release from all such fees or classes.

Should the Contractor, his or her agents, servants or employees, or any of them be enjoined from furnishing or using any invention, article, material or appliance supplied or required to be supplied or used under this contract, the Contractor shall promptly substitute other articles, materials or appliance, in lieu thereof, of equal efficiency, quality, finish, suitability and market value and satisfactory in all respects to the Engineer. Or, in the event that the Engineer elects, in lieu of such substitution, to have supplied and to retain and use, any such invention, article, material or appliance, as may by this contract be required to be supplied, in that event the Contractor shall pay such royalties and secure such valid licenses as may be requisite and necessary for the City, its officers, agents, servants and employees, or any of them, to use such invention, article, material or appliance without being disturbed or in any way interfered with by any proceeding in law or equity on account thereof. Should the Contractor neglect or refuse to make the substitution promptly, or to pay such royalties and secure such licenses as may be necessary, then in that event the Engineer shall have the right to make such substitution, or the City may pay such royalties and secure such licenses and charge the cost thereof against any money due to the Contractor from the City or recover the amount thereof from him or her and his or her sureties notwithstanding final payment under this contract may have been made.

6-07. Protection of Contractor's Work Property. The Contractor shall protect his or her work, supplies and materials from damage due to the nature of the work, the action of the elements, trespassers, or any cause whatsoever under his or her control, until the completion and acceptance of the work. Neither the City nor any of its agents assumes any responsibility for collecting indemnity from any person or persons causing damage to the work of the Contractor.

6-08. Regulations and Permits. The Contractor shall secure and pay for all permits, give all notices and comply with all laws, ordinances, rules and regulations bearing on the conduct of the work as drawn and specified. If the Contractor observes that the Plans and Special Provisions are at variance therewith, he or she shall promptly notify the Engineer in writing and any necessary changes shall be adjusted as provided in the contract for changes in the work. The contractor and any subcontractors shall each secure and maintain a valid City of Ukiah Business License. The City of Ukiah will issue a no fee encroachment permit to the Contractor allowing him or her to perform work within City right of way or within City property after the Contract Documents have been executed and insurance certificates and endorsements have been approved by the City.

6-09. Construction Utilities. The Contractor shall be responsible for providing for and in behalf of his or her work under this contract, all necessary utilities, such as special connection to water supply, telephones, power lines, fences, roads, watchmen, suitable storage places, etc.

6-10. Approval of Contractor's Plans. The approval by the Engineer of any drawing or any method of work proposed by the Contractor in accordance with paragraph 8-06 shall not relieve the Contractor of any of his or her responsibility for his or her errors therein and shall not be regarded as any assumption of risk or liability by the City or any officer or employee thereof and the Contractor shall have no claim under this contract on account of the failure or partial failure or inefficiency of any plan or method so approved. Such approval shall be considered to mean merely that the Engineer has no objection to the Contractor's using, upon his or her own full responsibility the plan or method approved.

6-11. Suggestions to the Contractor. Any plan or method of work suggested by the Engineer to the Contractor, but not specified or required, if adopted or followed by the Contractor in whole or in part, shall be used at the risk and responsibility of the Contractor; and the Engineer and the City shall assume no responsibility thereof.

6-12. Termination of Unsatisfactory Subcontracts. Should any subcontractor fail to perform in a satisfactory manner the work undertaken by him, such subcontract shall be terminated immediately by the Contractor upon notice from the Engineer.

6-13. Preservation of Stakes and Marks. The Contractor shall preserve carefully bench marks, reference points and stakes and in case of destruction he or she shall replace his or her stakes, reference points and bench marks and shall be responsible for any mistakes that may be caused by their unnecessary loss or disturbance. Contractor's attention is directed to Section 7-03 of these Special Provisions.

6-14. Assistance to Engineer. At the request of the Engineer the Contractor shall provide men from his or her force and tools, stakes and other materials to assist the Engineer temporarily in making measurements and surveys and in establishing temporary or permanent reference marks. Payment for such materials and assistance will be made as provided for under the caption "Extra Work," provided, however, that the cost of setting stakes and marks carelessly lost or destroyed by the Contractor's employees will be assessed to the Contractor.

6-15. Removal of Condemned Materials and Structures. The Contractor shall remove from the site of the work, without delay, all rejected and condemned materials or structures of any kind brought to or incorporated in the work and upon his or her failure to do so, or to make satisfactory progress in so doing, within forty-eight (48) hours after the service of a written notice from the Engineer, the condemned material or work may be removed by the City and the cost of such removal shall be taken out of the money that may be due or may become due the Contractor on account of or by virtue of this contract. No such rejected or condemned material shall again be offered for use by the Contractor under this Contract.

6-16. Proof of Compliance with Contract. In order that the Engineer may determine whether the Contractor has complied with the requirements of this contract, not readily enforceable through inspection and tests of the work and materials, the Contractor shall, at any time when requested, submit to the Engineer properly authenticated documents or other satisfactory proofs as to his or her compliance with such requirements.

6-17. Errors and Omissions. If the Contractor, in the course of the work, finds any errors or omissions in plans or in the layout as given by survey points and instruction, or if he or she finds any discrepancy between the plans and the physical conditions of the locality, he or she shall immediately inform the Engineer, in writing and the Engineer shall promptly verify the same. Any work done after such discovery, until authorized, will be done at the Contractor's risk.

6-18. Cooperation. The Contractor shall cooperate with all other contractors who may be performing work in behalf of the City and workmen who may be employed by the City on any work in the vicinity of the work to be done under this contract with the work of such contractors or workmen. he or she shall make good promptly, at his or her own expense, any injury or damage that may be sustained by other contractors or employees of the City at his or her hands.

Any difference or conflict which may arise between the Contractor and other contractors, or between the contractor and workmen of the City in regard to their work shall be adjusted and determined by the Engineer. If the work of the Contractor is delayed because of any acts or omissions of any other contractor or of the City, the Contractor shall on that account have no claim against the City other than for an extension of time.

6-19. Right of Contractor to Stop Work. Under the following conditions the Contractor shall have the right, if he or she so desires, to stop the work and terminate the contract upon ten (10) days written notice to the Engineer and recover from the City payment for all work actually performed and for all satisfactory materials actually delivered to the site of the work for permanent incorporation therein, all as may be shown by the estimate of the Engineer.

(1) If the work is stopped under an order of any court or other competent public authority for a period of time of three (3) months through no act or fault of the Contractor or of anyone employed by him.

(2) If the Engineer fails to issue the monthly certificate for payment in accordance with the terms of this contract.

(3) If the City fails to pay the Contractor within sixty (60) days after it shall have become due, as provided by the terms of this contract, any sum certified by the Engineer or awarded by the City.

All provided that if such action to terminate the contract be not instituted by the Contractor within ten (10) days after the alleged existence of such condition and if written notice of such action be not at that time delivered to the City and the Engineer, then such right shall lapse until another occasion arises according to this section.

6-20. Hiring and Dismissal of Employees. The Contractor shall employ only such foremen, mechanics and laborers as are competent and skilled in their respective lines of work and whenever the Engineer shall notify the Contractor that any person on the work is, in his or her opinion, incompetent, unfaithful, intemperate or disorderly, or refuses to carry out the provisions of this contract, or uses threatening or abusive language to any person on the work representing the City, or is otherwise unsatisfactory, such person shall be discharged immediately from the work and shall not be re-employed upon it except with the consent of the Engineer.

6-21. Wage Rates.

1. Contractor shall pay all mechanics and laborers employed or working upon the site of the work unconditionally and without subsequent deductions or rebate on any account the full amounts due at the time of payment at wage rates not less than those contained in the applicable prevailing wage determination, regardless of any contractual relationship which may be alleged to exist between the Contractor and subcontractors and such laborers and mechanics.

2. Contractor shall comply with the California Labor Code Section 1775. In accordance with said Section 1775, Contractor shall forfeit as a penalty to the Owner, $50.00 (or the higher minimum penalty as provided in Section 1775(B)(ii) – (iii)) for each calendar day or portion thereof, for each workman paid less than the stipulated prevailing rates for such work or craft in which such workman is employed for any work done under the Contract by him or her or by any subcontractor under him or her in violation of the provisions of the Labor Code and in particular, Labor Code Sections 1770 to 1780, inclusive. In addition to said penalty and pursuant to Section 1775, the difference between such stipulated prevailing wage rates and the amount paid to each workman for each calendar day or portion thereof for which each workman was paid less than the stipulated prevailing wage rate shall be paid to each workman by the Contractor.

3. Pursuant to the provision of Section 1770 of the Labor Code of the State of California, Owner has ascertained the general prevailing rate of wages (which rate includes employer payments for health and welfare, vacation, pension and similar purposes) applicable to the work to be done, for straight time work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of workmen concerned. Copies of the General Prevailing Wage Determination are available on the Internet at web address: http://www.dir.ca.gov/DLSR/PWD The Contractor shall post the wage determination at the site of work in a prominent place where it can easily be seen by the workers.

4. City will not recognize any claim for additional compensation because the Contractor has paid any rate in excess of the prevailing wage rate obtained by the Contractor. The possibility of wage increases is one of the elements to be considered by the Contractor in determining his or her bid and will not in any circumstances be considered as the basis for a claim against the City.

5. The Labor Commissioner through the Division of Labor Standards Enforcement (DLSE) may at any time require contractors and subcontractors to furnish electronic certified payroll records directly to DLSE. Commencing with contracts awarded or after April 1, 2015, all contractors and subcontractors must furnish electronic certified payroll records directly to the DLSE.

6. Travel and Subsistence Payments.

   Contractor shall make travel and subsistence payments to each workman needed to execute the work in accordance with the requirements in Section 1773.8 of the Labor Code (Chapter 880, Statutes of 1968).

7. Apprentices.

Attention is directed to the provisions in Sections 1777.5 (Chapter 1411, Statutes of 1968) and 1777.6 of the California Labor Code concerning the employment of apprentices by the Contractor or any subcontractor under him. Contractor and any subcontractor under him or her shall comply with the requirements of said sections in the employment of apprentices.

Information relative to apprenticeship standards, wage schedules and other requirements may be obtained from the Director of Industrial Relations, ex officio the Administrator of Apprenticeship, San Francisco, California, or from the Division of Apprenticeship Standards and its branch offices.

6-22. Cleaning Up. The Contractor shall not allow the site of the work to become littered with trash and waste material, but shall maintain the same in a neat and orderly condition throughout the construction period. The Engineer shall have the right to determine what is or is not waste material or rubbish and the place and manner of disposal.

On or before the completion of the work, the Contractor shall without charge therefore carefully clean out all pits, pipes, chambers or conduits and shall tear down and remove all temporary structures built by him or her and shall remove rubbish of all kind from any of the grounds which he or she has occupied and leave them in first class condition.

6-23. Guaranty. All work shall be guaranteed for a period of one year from the date of acceptance by the City. The Contractor shall promptly make all needed repairs arising out of defective materials, workmanship and equipment.

The City is hereby authorized to make such repairs if within ten days after the mailing of a notice in writing to the Contractor or his or her agent, the Contractor shall neglect to make or undertake with due diligence the aforesaid repairs, provided, however, that in case of an emergency where, in the opinion of the City delay would cause serious loss or damage, repairs may be made without notice being sent to the Contractor and the Contractor shall pay the costs thereof.

Pursuant to the provisions of Section 4-03 of these Special Provisions, the Contractor shall furnish a Defective Material and Workmanship Bond in an amount not less than 5 percent of the final contract price, which shall be effective for a period of one (1) year after the completion and acceptance of the work.

SECTION 7. RESPONSIBILITIES AND RIGHTS OF CITY

7-01. Authority of the Engineer. All work done under this contract shall be done in a workmanlike manner and shall be performed to the reasonable satisfaction of the Engineer, who shall have general supervision of all work included hereunder. To prevent disputes and litigation, the Engineer (1) shall in all cases determine the amount, quality, acceptability and fitness of the several kinds of work and materials which are to be paid for under this contract, (2) shall decide all questions relative to the true construction, meaning and intent of the Special Provisions and Drawings, (3) shall decide all questions which may arise relative to the classifications and measurements of quantities and materials and the fulfillment of this contract and (4) shall have the power to reject or condemn all work or material which does not conform to the terms of this contract. his or her estimate and decision in all matters shall be a condition precedent to an appeal for arbitration, or the right of the Contractor to receive, demand, or claim any money or other compensation under this agreement and a condition precedent to any liability on the part of the City to the Contractor on account of this contract. Whenever the Engineer shall be unable to act, in consequence of absence or other cause, then such engineer as the Engineer or the City shall designate, shall perform any and all of the duties and be vested with any or all of the powers herein given to the Engineer.

7-02. Inspection. The City will provide engineering personnel for the inspection of the work.

The Engineer and his or her representatives shall at all times have access to the work whenever it is in preparation or progress and the Contractor shall provide proper facilities for such access and inspection.

If the Special Provisions, the Engineer's instruction, laws, ordinances, or any public authority require any work to be specially tested or approved, the Contractor shall give the Engineer timely notice of its readiness for inspection and, if the inspection is by an authority other than the Engineer, of the date fixed for such inspection. Inspections by the Engineer shall be promptly made at the source of supply where practicable. If any work shall be covered up without

approval or consent of the Engineer, it must, if required by the Engineer, be uncovered for examination and properly restored at the Contractor's expense.

Re-examination of any work may be ordered by the Engineer and, if so ordered, the work must be uncovered by the Contractor. If such work is found to be in accordance with the contract documents, the City shall pay the cost of re-examination and replacement. If such work is not in accordance with the contract documents, the Contractor shall pay such cost.

Properly authorized and accredited inspectors shall be considered to be the representatives of the City limited to the duties and powers entrusted to them. It will be their duty to inspect materials and workmanship of those portions of the work to which they are assigned, either individually or collectively, under instructions of the Engineer and to report any and all deviations from the Drawings, Special Provisions and other contract provisions which may come to their notice. Any inspector may be considered to have the right to order the work entrusted to his or her supervision stopped, if in his or her opinion such action becomes necessary, until the Engineer is notified and has determined and ordered that the work may proceed in due fulfillment of all contract requirements.

7-03. Surveys. Contractor shall furnish all land surveys, establish all base lines and bench marks and make sufficient detailed surveys needed for working points, lines and elevations. The Contractor shall develop all slope stakes and batter boards. Contractor shall also develop all additional working points, lines and elevations as he or she may desire to facilitate his or her methods and sequence of construction.

7-04. Rights-of-Way. The City will provide all necessary rights-of-way and easements in or beneath which work will be performed by the Contractor under this contract.

7-05. Retention of Imperfect Work. If any portion of the work done or material furnished under this contract shall prove defective and not in accordance with the Plans and Special Provisions, and if the imperfection in the same shall not be of sufficient magnitude or importance to make the work dangerous or undesirable, the Engineer shall have the right and authority to retain such work instead of requiring the imperfect work to be removed and reconstructed, but he or she shall make such deductions therefor in the payments due or to become due the Contractor as may be just and reasonable.

7-06. Changes in the Work. The Engineer shall have the right, in writing, to order additions to, omissions from, or corrections, alterations and modifications in the line, grade, form, dimensions, plan, or kind or amount of work or materials herein contemplated, or any part thereof, either before or after the beginning of construction. However, the arithmetical sum of the cost to the City of additions and subtractions from the work under this contract shall not exceed 10 percent of original contract amount or $5,000, whichever is the greater, unless based upon a supplementary agreement to be made therefore.

The order of such additions, omissions, corrections, alterations and modifications shall be in writing and signed by the Engineer and, in order, shall then be binding upon the Contractor. The Contractor shall proceed with the work as changed and the value of such change shall be determined as provided for in section 10-07 of these Special Provisions.

Such alterations shall in no way affect, vitiate, or make void this contract or any part thereof, except that which is necessarily affected by such alterations and is clearly the evident intention of the parties to this contract.

7-07. Additional Drawings by City. The drawings made a part of this contract at the time of its execution are intended to be fairly comprehensive and to indicate in more or less detail the scope of the work. In addition to these drawings, however, the Engineer shall furnish such additional drawings from time to time during the progress of the work as are necessary to make clear or to define in greater detail the intent of the Special Provisions and the contract drawings and the Contractor shall make his or her work conform to all such drawings.

7-08. Additional and Emergency Protection. Whenever, in the opinion of the Engineer, the Contractor has not taken sufficient precautions for the safety of the public or the protection of the works to be constructed under this contract, or of adjacent structures or property which may be injured by the processes of construction on account of such neglect and whenever, in the opinion of the Engineer, an emergency shall arise and immediate action shall be considered necessary in order to protect public or private, personal or property interest, then and in that event, the Engineer, with or without notice to the Contractor may provide suitable protection to the said interests by causing

such work to be done and such material to be furnished as shall provide such protection as the Engineer may consider necessary and adequate.

The cost and expense of such work and material so furnished shall be borne by the Contractor and, if the same shall not be paid on presentation of the bills therefor, then such costs shall be deducted from any amounts due or to become due the Contractor.

The performance of such emergency work under the direction of the Engineer shall in no way relieve the Contractor from any damages which may occur during or after such precaution has been taken by the Engineer.

7-09. Suspension of Work. The City may at any time suspend the work or any part thereof by giving five (5) days written notice to the Contractor. The work shall be resumed by the Contractor within ten (10) days after the date fixed in the written notice from the City to the Contractor so to do. The City shall reimburse the Contractor for expense incurred by the Contractor in connection with the work under this contract as a result of such suspension.

If the work, or any part thereof, shall be stopped by the notice in writing aforesaid and if the City does not give notice in writing to the Contractor to resume work at a date within ten (10) days of the date fixed in the written notice to suspend, then the Contractor may abandon that portion of the work so suspended and he or she will be entitled to the estimates and payments for all work done on the portions so abandoned, if any, plus 5 percent of the value of the work so abandoned, to compensate for loss of overhead, plant expense and anticipated profit.

7-10. Right of City to Terminate Contract. If the Contractor should be adjudged a bankrupt, or if he or she should make a general assignment for the benefit of his or her creditors, or if a receiver should be appointed on account of his or her insolvency, or if he or she should persistently or repeatedly refuse or should fail, except in cases for which extension of time is provided, to supply sufficient properly skilled workmen or proper materials, or if he or she should fail to make prompt payments to subcontractors or for material or labor, or persistently disregard laws, ordinances or the instructions of the Engineer, or otherwise be guilty of a substantial violation of any provision of the contract, then the City, upon the certificate of the Engineer that sufficient cause exists to justify such action, may, without prejudice to any other right or remedy and after giving the Contractor seven days written notice, terminate the employment of the Contractor and take possession of the premises and of all materials, tools and appliances and finish the work by whatever method the City may deem expedient. In such case, the Contractor shall not be entitled to receive any further payment until the work is finished. If the unpaid balance of the contract price shall exceed the expense of finishing the work, including compensation for additional managerial and administrative services, such excess shall be paid to the Contractor. If such expense shall exceed such unpaid balance, the Contractor shall pay the difference to the City. The expense incurred by the City as herein provided and the damage incurred through the Contractor's default, shall be certified by the Engineer.

7-11. Use of Completed Portions. The City shall have the right to take possession of and use any completed or partially completed portions of the work, notwithstanding the time for completing the entire work or such portions which may not have expired; but such taking possession and using shall not be deemed an acceptance of any work not completed in accordance with the contract documents. If such prior use increases the cost of or delays the work, the Contractor shall be entitled to such extra compensation, or extension of time or both, as the Engineer may determine.

SECTION 8. WORKMANSHIP, MATERIALS and EQUIPMENT

8-01. General Quality. Materials and equipment shall be new and of a quality equal to that specified or approved. Work shall be done and completed in a thorough and workmanlike manner.

8-02. Quality in Absence of Detailed Specifications. Whenever under this contract it is provided that the Contractor shall furnish materials or manufactured articles or shall do work for which no detailed specifications are set forth, the materials or manufactured articles shall be of the best grade in quality and workmanship obtainable in the market from firms of established good reputation, or, if not ordinarily carried in stock, shall conform to the usual standards for first-class materials or articles of the kind required, with due consideration of the use to which they are to be put. In general, the work performed shall be in full conformity and harmony with the intent to secure the best standard of construction and equipment of the work as a whole or in part.

8-03. Materials and Equipment Specified by Name. Whenever any material or equipment is indicated or specified by patent or proprietary name or by the name of the manufacturer, such specification shall be considered as used for the purpose of describing the material or equipment desired and shall be considered as followed by the words "or approved equal". The Contractor may offer any material or equipment which shall be equal in every respect to that specified, provided that written approval first is obtained from the Engineer.

8-04. Source of Materials. Price, fitness and quality being equal, preference shall be given by the Contractor for supplies grown, manufactured or produced in the State of California and, next, for such products partially produced in this State in accordance with Government Code Section 4332.

8-05. Storage of Materials. Materials shall be so stored to ensure the preservation of their quality and fitness for the work. They shall be so located and disposed that prompt and proper inspection thereof may be made.

8-06. Drawings, Samples and Tests. As soon as possible after execution of the contract, the Contractor shall submit to the Engineer, in quintuplicate, sufficient information including, if necessary, assembly and detail drawings to demonstrate fully that the equipment and materials to be furnished comply with the provisions and intent of these Special Provisions and Drawings. If the information thus submitted indicates the equipment or materials is acceptable, the Engineer will return one copy stamped with his or her approval; otherwise, one copy will be returned with an explanation of why the equipment or material is unsatisfactory. The Contractor shall have no claims for damages or for extension of time on account of any delay due to the revision of drawings or rejection of material. Fabrication or other work performed in advance of approval shall be done entirely at the Contractor's risk. After approval of equipment or material, the Contractor shall not deviate in any way from the design and specifications given without the written consent of the Engineer.

When requested by the Engineer, a sample or test specimens of the materials to be used or offered for use in connection with the work shall be prepared at the expense of the Contractor and furnished by him or her in such quantities and sizes as may be required for proper examination and tests, with all freight charges prepaid and with information as to their sources.

All samples shall be submitted before shipment and in ample time to permit the making of proper tests, analyses, or examination before the time at which it is desired to incorporate the material into the work. All tests of materials furnished by the Contractor shall be made by the Engineer. Samples shall be secured and tested whenever necessary to determine the quality of the material.

SECTION 9. PROSECUTION OF WORK

9-01. Equipment and Methods. The work under this contract shall be prosecuted with all materials, tools, machinery, apparatus and labor and by such methods as are necessary to the complete execution of everything described, shown, or reasonably implied. If at any time before the beginning or during the progress of the work, any part of the Contractor's plant or equipment, or any of his or her methods of execution of the work, appear to the Engineer to be unsafe, inefficient, or inadequate to insure the required quality or the rate of progress of the work, he or she may order the Contractor to increase or improve his or her facilities or methods and the Contractor shall comply promptly with such orders; but, neither compliance with such orders nor failure of the Engineer to issue such orders shall relieve the Contractor from his or her obligation to secure the degree of safety, the quality of the work and the rate of progress required of the Contractor. The Contractor alone shall be responsible for the safety, adequacy and efficiency of his or her plant, equipment and methods.

9-02. Time of Completion. The Contractor shall promptly begin the work under this contract and shall complete and make ready for full use all portions of the project made the subject of this contract within the time set forth in the agreement bound herewith.

9-03. Avoidable Delays. Avoidable delays in the prosecution or completion of the work shall include all delays which might have been avoided by the exercise of care, prudence, foresight and diligence on the part of the Contractor. The City will consider as avoidable delays within the meaning of this contract (1) delays in the prosecution of parts of the work, which may in themselves be unavoidable, but do not necessarily prevent or delay the prosecution of other parts of the work nor the completion of the whole work within the time herein specified, (2) reasonable loss of time resulting from the necessity of submitting plans to the Engineer for approval and from the making of surveys, measurements, inspections, and testing and (3) such interruptions as may occur in the prosecution of the work on account of the reasonable interference of other contractors employed by the City which do not necessarily prevent the completion of the whole work within the time herein specified.

9-04. Unavoidable Delays. Unavoidable delays in the prosecution or completion of the work under this contract shall include all delays which may result, through cause beyond the control of the Contractor and which he or she could not have provided against by the exercise of care, prudence, foresight and diligence. Orders issued by the City changing the amount of work to be done, the quantity of material to be furnished or the manner in which the work is to be prosecuted and unforeseen delays in the completion of the work of other contractors under contract with the City will be considered unavoidable delays, so far as they necessarily interfere with the Contractor's completion of the whole of the work. Delays due to normally adverse weather conditions will not be regarded as unavoidable delays. However, truly abnormal amounts of rainfall, temperatures or other weather conditions for the location of the work and time of year may be considered as unavoidable delays if those conditions necessarily cause a delay in the completion of the work.

9-05. Notice of Delays. Whenever the Contractor foresees any delay in the prosecution of the work and, in any event, immediately upon the occurrence of any delay which the contractor regards as an unavoidable delay, he or she shall notify the Engineer in writing of the probability of the occurrence of such delay and its cause, in order that the Engineer may take immediate steps to prevent, if possible, the occurrence or continuance of the delay, or, if this cannot be done, may determine whether the delay is to be considered avoidable or unavoidable, how long it continues and to what extent the prosecution and completion of the work are to be delayed thereby.

9-06. Extension of Time. Should any delays occur which the Engineer may consider unavoidable, as herein defined, the Contractor shall, pursuant to his or her application, be allowed an extension of time proportional to said delay or delays, beyond the time herein set forth, in which to complete this contract; and liquidated damages for delay shall not be charged against the Contractor by the City during an extension of time granted because of unavoidable delay or delays.

Any claim by Contractor for a time extension based on unavoidable delays shall be based on written notice delivered to the Engineer within 15 days of the occurrence of the event giving rise to the claim. Failure to file said written notice within the time specified shall constitute a waiver of said claim. Notice of the full extent of the claim and all supporting data must be delivered to the Engineer within 45 days of the occurrence unless the Engineer specifies in writing a longer period. All claims for a time extension must be approved by the Engineer and incorporated into a written change order.

9-07. Unfavorable Weather and Other Conditions. During unfavorable weather and other conditions, the Contractor shall pursue only such portions of the work as shall not be damaged thereby. No portions of the work whose satisfactory quality or efficiency will be affected by any unfavorable conditions shall be constructed while these conditions remain, unless, by special means or precautions approved by the Engineer, the Contractor shall be able to overcome them.

The Contractor shall be granted a time extension of one day for each unfavorable weather day which prevents him or her from placing concrete forms or placing and finishing concrete or asphalt concrete. Such unfavorable weather day is defined as a rain day where precipitation prevents the contractor from performing the work more than four (4) continuous hours within the authorized work period or a temperature day where the ambient temperature is below that specified for the placement of materials associated with the controlling work item for more than four (4) continuous work hours of the authorized work period.

9-08. Saturday, Sunday, Holiday and Night Work. No work shall be done between the hours of 6 p.m. and 7 a.m., nor on Saturdays, Sundays or legal holidays except such work as is necessary for the proper care and protection of work already performed, or except in cases of absolute necessity and in any case only with the permission of the Engineer.

It is understood, however, that night work may be established as a regular procedure by the Contractor if he or she first obtains the written permission of the Engineer and that such permission may be revoked at any time by the Engineer if the Contractor fails to maintain at night adequate force and equipment for reasonable prosecution and to justify inspection of the work.

9-09. Hours of Labor. Eight (8) hours of labor shall constitute a legal day's work and the Contractor or any subcontractor shall not require or permit more than eight hours of labor in a day from any person employed by him or her in the performance of the work under this contract, unless paying compensation for all hours worked in excess of eight (8) hours per day at not less than 1½ times the basic rate of pay. The Contractor shall forfeit to the City, as a penalty, the sum of twenty-five dollars ($25.00) for each workman employed in the execution of the contract by him or her or by any subcontractor, for each calendar day during which such laborer, workman, or mechanic is required or permitted to labor more than eight hours in violation of the provisions of Section 1810 to 1816, inclusive, (Article 3, Chapter 1, Part 7, Division 2) of the Labor Code of the State of California and any acts amendatory thereof.

SECTION 10. PAYMENT

10-01. Certification by Engineer. All payments under this contract shall be made upon the presentation of certificates in writing from the Engineer and shall show that the work covered by the payments has been done and the payments thereof are due in accordance with this contract.

10-02. Progress Estimates and Payment. The Engineer shall, within the first seven (7) days of each month, make an estimate of the value of the work performed in accordance with this contract during the previous calendar month.

The first estimate shall be of the value of the work satisfactorily completed in place and meeting the requirements of the contract. And every subsequent estimate, except the final estimate, shall be of the value of the work satisfactorily completed in place since the last preceding estimate was made; provided, however, that should the Contractor fail to adhere to the program of completion fixed in this contract, the Engineer shall deduct from the next and all subsequent estimates the full calculated accruing amount of the liquidated damages to the date of said estimate, until such time as the compliance with the program has been restored.

The estimate shall be signed by the Engineer and, after approval, the City shall pay or cause to be paid to the Contractor in the manner provided by law, an amount equal to 95 percent of the estimated value of the work satisfactorily performed and complete in place.

10-03. Substitution of Securities.

1. At such times that Pubic Contract Code Section 22300 is in effect Contractor may propose the substitution of securities of at least equal market value for any moneys to be withheld to ensure performance under the Contract.

Market value shall be determined as of the day prior to the date such substitution is to take place. Such substitution shall be made at the request and expense of the Contractor. The securities shall be one or more of the following types:

(a) Bonds or interest-bearing notes or obligations of the United States, or those for which the faith and credit of the United States are pledged for the payment of principal and interest.

(b) Bonds or interest-bearing notes on obligations that are guaranteed as to principal and interest by a federal agency of the United States.

(c) Bonds of the State of California, or those for which the faith and credit of the State of California are pledged for the payment of principal and interest.

(d) Bonds or warrants, including, but not limited to, revenue warrants, of any county, city, metropolitan water district, California water district, California water storage district, irrigation district in the State of California, municipal utility district, or school district of the State of California, which are rated by Moody's or Standard and Poor as A or better.

(e) Bonds, consolidated bonds, collateral trust debentures, consolidated debentures, or other obligations issued by federal land banks or federal intermediate credit banks established under the Federal Farm Loan Act, as amended; debentures and consolidated debentures issued by the Central Bank for Cooperatives and banks for cooperatives established under the Farm Credit Act of 1933, as amended; bonds, or debentures of the Federal Home Loan Bank Board established under the Federal Home Loan Bank Act; and stock, bonds, debentures and other obligations of the Federal National Mortgage Association established under the National Housing Act as amended and bonds of any Federal Home Loan Mortgage Corporation.

(f) Commercial paper of "prime" quality as defined by a nationally recognized organization which rates such securities. Eligible paper is further limited to issuing corporations: (1) organized and operating within the United States; (2) having total assets in excess of five hundred million dollars ($500,000,000); and (3) approved by the Pooled Money Investment Board of the State of California. Purchases of eligible commercial paper may not exceed 180 days' maturity, nor represent more than 10 percent of the outstanding paper of an issuing corporation.

(g) Bills of exchange or time drafts on and accepted by a commercial bank, otherwise known as bankers' acceptances, which are eligible for purchase by the Federal Reserve System.

(h) Certificates of deposits issued by a nationally or state-chartered bank or savings and loan association.

(i) The portion of bank loans and obligations guaranteed by the United States Small Business Administration or the United States Farmers Home Administration.

(j) Student loan notes insured under the Guaranteed Student Loan Program established pursuant to the Higher Education Act of 1965, as amended (20 U.S.C. 1001, et seq.) and eligible for resale to the Student Loan Marketing Association established pursuant to Section 133 of the Education Amendments of 1972, as amended (20 U.S.C. 1087-2).

(k) Obligations issued, assumed or guaranteed by International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, or the Government Development Bank of Puerto Rico.

(l) Bonds, debentures and notes issued by corporations organized and operating within the United States. Such securities eligible for substitution shall be within the top three ratings of a nationally recognized rating service.

2. The securities shall be deposited with City or with any commercial bank as escrow agent, who shall arrange for transfer of such securities to the Contractor upon satisfactory completion of the contract. Any interest accrued or paid on such securities shall belong to the Contractor and shall be paid upon satisfactory completion of the contract.

The market value of the securities deposited shall at all times be maintained in an amount at least equal, in the sole judgment of City, to the moneys to be withheld pursuant to the Contract Documents to ensure performance of the Contract. In order to comply with this condition, Contractor shall deposit additional securities as necessary upon request by City or the escrow agent.

3. Upon acceptance of any Proposal that includes substituting securities for amounts withheld to ensure performance, a separate escrow agreement satisfactory in form and substance to City shall be prepared and executed by City, the Contractor and the escrow agent, which may be City. The escrow agreement shall specify, among other matters, value of securities to be deposited; procedures for valuing the securities and for adding or withdrawing securities to maintain the market value of the deposited securities at least equal to the amount of moneys which would otherwise be withheld; the terms and conditions of conversion to cash in case of the default by the Contractor; and terms, conditions and procedure for termination of the escrow. City shall have no obligation to enter any such Agreement that does not provide the City with the unilateral right to convert securities to cash and to gain immediate possession of the cash.

10-04. Acceptance. The work must be accepted by vote of the City Council of the City of Ukiah when the whole shall have been completed satisfactorily. The Contractor shall notify the Engineer, in writing, of the completion of the work, whereupon the Engineer shall promptly, by personal inspection, satisfy himself as to the actual completion of the work in accordance with the terms of the contract and shall thereupon recommend acceptance by the City Council.

10-05. Final Estimate and Payment. The Engineer shall, as soon as practicable after the final acceptance of the work done under this contract, make a final estimate of the amount of work done thereunder and the value thereof.

Such final estimate shall be signed by the Engineer, and after approval, the City shall pay or cause to be paid to the Contractor, in the manner provided by law, the entire sum so found to be due hereunder, after deducting therefrom all previous payments and such other lawful amounts as the terms of this contract prescribe.

In no case will final payment be made in less than thirty-five (35) days after the filing of the notice of completion with the County Recorder.

10-06. Delay Payments. Should any payment due the Contractor or any estimate be delayed, through fault of the City beyond the time stipulated, such delay shall not constitute a breach of contract or be the basis for a claim for damages, but the City shall pay the Contractor interest on the amount of the payment at the rate of 6 percent per annum for the period of such delay. The terms for which interest will be paid shall be reckoned, in the case of any monthly or progress payment, from the twentieth day of the month next succeeding the month in which the work was performed to the date of payment of the estimate; and in the case of the final estimate, from the forty-fifth day after acceptance to the date of payment of the final estimate.

The date of payment of any estimate shall be considered the day on which the payment is offered or mailed as evidenced by the records of the Treasurer of the City. If interest shall become due on any delayed payment, the amount thereof, as determined by the City, shall be added to a succeeding payment. If the interest shall become due on the final payment, it shall be paid on a supplementary voucher to interest or any sum or sums which, by the terms of this contract, the City is authorized to reserve or retain.

10-07. Extra Work and Work Omitted. Whenever corrections, alterations, or modifications of the work under this contract ordered by the Engineer and approved by the City increase the amount of work to be done, such added work shall be known as "extra work"; and when such corrections, alterations, or modifications decrease the amount of work to be done, such subtracted work shall be known as "work omitted".

When the Contractor considers that any changes ordered involve extra work, he or she shall immediately notify the Engineer in writing and subsequently keep him or her informed as to when and where extra work is to be performed and shall make claim for compensation therefor each month not later than the first day of the month following that in which the work claimed to be extra work was performed and he or she shall submit a daily complete statement of materials and labor used and expenses incurred on account of extra work performed, showing allocation of all materials, labor and expenses.

All such claims shall state the date of the Engineer's written order and the date of approval by the City authorizing the work on account of which claim is made. Unless such notification is made in writing within the time specified and unless complete statements of materials used and expenses incurred on account of such extra work are furnished as above required, the Contractor shall not be entitled to payment on account of extra work and Contractor shall be deemed to have waived the right to make any future claims for compensation for such extra work.

When changes decrease the amount of work to be done, they shall not constitute a claim for damages on account of anticipated profits on the work that may be omitted.

10-08. Compensation for Extra Work or Work Omitted. Whenever corrections, additions, or modifications in the work under this contract change the amount of work to be done or the amount of compensation due the Contractor, excepting increases or decreases in contract items having unit contract prices for each measurable quantity installed in place, and such changes have been ordered in writing by the Engineer and approved by the City prior to the Contractor performing the extra work, then a price may be agreed upon. Failing such an agreement in price, the Contractor shall be compensated for performing extra work pursuant to the provisions of Section 4-1.03 D, "Extra Work", and Section 9-1.03,"Force Account Payment" of the Standard Specifications.

This method of determining the price of work shall not apply to the performance of any work which is required or reasonably implied to be performed or furnished under this contract.

10-09. Compensation to the City for Extension of Time. In case the work called for under this contract is not completed within the time limit stipulated herein, the City shall have the right as provided hereinabove, to extend the time of completion thereof. If the time limit be so extended, the City shall have the right to charge to the Contractor and to deduct from the final payment for the work the actual cost to the City of engineering, inspection, superintendence and other overhead expenses which are directly chargeable to the contract and which accrue during the period of such extension, except that the cost of final unavoidable delays shall not be included in such charges.

10-10. Liquidated Damages for Delay. It is agreed by the parties to the contract that time is of the essence and that, in case all the work is not completed before or upon the expiration of the time limit as set forth, damage, other than those cost items identified in section 10-09, will be sustained by the City and that it is and will be impracticable to determine the actual amount of damage by reason of such delay; and it is therefore agreed that the Contractor will pay to the City the sum of five hundred dollars ($500.00) per day for each and every calendar day's delay beyond the time prescribed.

SECTION 11. MISCELLANEOUS

11-01. Notice. Whenever any provision of the contract documents requires the giving of written notice, it shall be deemed to have been validly given if delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended, or if delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice. If mailed, the notice shall be deemed received on the date of delivery stated in the return receipt.

11-02. Computation of Time. When any period of time is referred to in the Contract Documents by days, it shall be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day shall be omitted from the computation.

11-03. Claims Procedure Required by Public Contract Code Section 9204. This section shall apply to any claim by the Contractor arising in connection with this project in accordance with Public Contract Code Section 9204.

a, For purposes of this section "Claim" means a separate demand by the Contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following:

(A) A time extension, including, without limitation, for relief from damages or penalties for delay assessed by the City under this contract.

(B) Payment by the City of money or damages arising from work done by, or on behalf of, the Contractor pursuant to this contract and payment for which is not otherwise expressly provided or to which the Contractor is not otherwise entitled.

(C) Payment of an amount that is disputed by the City.

b.

(1)

(A) Upon receipt of a claim pursuant to this section, the City shall conduct a reasonable review of the claim and, within a period not to exceed 45 days, shall provide the Contractor a written statement identifying what portion of the claim is disputed and what portion is undisputed. Upon receipt of a claim, a public entity and the contractor may, by mutual agreement, extend the time period provided in this subdivision.

(B) The Contractor shall furnish reasonable documentation to support the claim.

(C) If the City needs approval from its governing body to provide the Contractor a written statement identifying the disputed portion and the undisputed portion of the claim, and the governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of a claim sent by registered mail or certified mail, return receipt requested, the City shall have up to three days following the next duly publicly noticed meeting of the governing body after the 45-day period, or extension, expires to provide the claimant a written statement identifying the disputed portion and the undisputed portion.

(D) Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the City issues its written statement. If the City fails to issue a written statement, paragraph (3) shall apply.

(2)

(A) If the Contractor disputes the City's written response, or if the City fails to respond to a claim issued pursuant to this section within the time prescribed, the Contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the City shall schedule a meet and confer conference within 30 days for settlement of the dispute.

(B) Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the City shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with the City and the Contractor sharing the associated costs equally. The City and Contractor shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to applicable procedures outside this section.

(C) For purposes of this section, mediation includes any nonbinding process, including, but not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

(D) Unless otherwise agreed to in writing by the City and the Contractor, the mediation conducted pursuant to this section shall excuse any further obligation under Public Contract Code Section 20104.4 to mediate after litigation has been commenced.

(3) Failure by the City to respond to a claim from the Contractor within the time periods described in this subdivision or to otherwise meet the time requirements of this section shall result in the claim being deemed rejected in its entirety. A claim that is denied by reason of the public entity's failure to have responded to a claim, or its failure to otherwise meet the time requirements of this section, shall not constitute an adverse finding with regard to the merits of the claim or the responsibility or qualifications of the Contractor.

(4) Amounts not paid in a timely manner as required by this section shall bear interest at 7 percent per annum.

(5) If a subcontractor or a lower tier subcontractor lacks legal standing to assert a claim against a public entity because privity of contract does not exist, the Contractor may present to the public entity a claim on behalf of a subcontractor or lower tier subcontractor. A subcontractor may request in writing, either on his or her own behalf or on behalf of a lower tier subcontractor, that the Contractor present a claim for work which was performed by the subcontractor or by a lower tier subcontractor on behalf of the subcontractor. The subcontractor requesting that the claim be presented to the public entity shall furnish reasonable documentation to support the claim. Within 45 days of receipt of this written request, the Contractor shall notify the subcontractor in writing as to whether the Contractor presented the claim to the public entity and, if the original contractor did not present the claim, provide the subcontractor with a statement of the reasons for not having done so.

c. A waiver of the rights granted by this section is void and contrary to public policy, provided, however, that (1) upon receipt of a claim, the parties may mutually agree to waive, in writing, mediation and proceed directly to the commencement of a civil action or binding arbitration, as applicable; and (2) the City may prescribe reasonable change order, claim, and dispute resolution procedures and requirements in addition to the provisions of this section, so long as the contractual provisions do not conflict with or otherwise impair the timeframes and procedures set forth in this section.

11-04. Litigation and Forum Selection. Contractor and City stipulate and agree that any litigation relating to the enforcement or interpretation of this contract, arising out of Contractor's performance or relating in any way to the work shall be brought in Mendocino County and that venue will lie in Mendocino County.

Except as otherwise expressly provided by law, the parties waive any objections they might otherwise have to the propriety of jurisdiction or venue in the state courts in Mendocino County and agree that California law shall govern any such litigation.

The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto and, in particular but without limitation, the warranties, guaranties and obligations imposed upon the Contractor and all of the rights and remedies available to the City thereunder, shall be in addition to and shall not be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by law or contract, by special warranty or guaranty, or by other provisions of the contract documents and the provisions of this paragraph shall be as effective as if repeated specifically in the contract documents in connection with each particular duty, obligation, right and remedy to which they apply. All warranties and guaranties made in the contract document shall survive final payment and termination or completion of this contract. The City disclaims an express or implied warranty that the plans and specifications identify all site conditions that could affect the time or cost to complete the Work.

11-05. Waiver. The Contractor shall strictly comply with all notices and other contract requirements. Waiver by the City of any failure of the Contractor to comply with any term of the contract, including the notice provisions, shall not be deemed a waiver of a subsequent breach.

SECTION 12. GENERAL INFORMATION

12-01. Location and Scope of Work. All of the work to be performed is within the City of Ukiah and consists of Earthwork, select utility rough-ins, provision and installation of fencing and gates (both rolling & swinging), re-roofing, and solar system installation (both building mounted and freestanding). General locations of the work is 1350 Hasting Avenue, Ukiah, California.

The Contractor should familiarize himself with the local conditions of the project sites. Failure to do so will in no way relieve him of the responsibility for performing any of the work or operations required as a part of this contract. Further information regarding the work or these specifications can be obtained from Mary Horger at (707) 463-6233.

12-02. List of Construction Documents [Specifications]. The Technical Specifications are arranged in sections covering the various elements of work for this phase as follows:

CONSTRUCTION DOCUMENTS (SPECIFICATIONS)

DIVISION	Section No.	Title	
1	GENERAL REQUIREMENTS		
	01000	GENERAL REQUIREMENTS	3
	01010	SUMMARY OF THE WORK	3
	01060	REGULATORY REQUIREMENTS	3
	01015	CONTRACTOR'S USE OF THE PREMISES	4
	01100	PROJECT MANAGEMENT & COORDINATION	10
	01200	PROJECT MEETINGS	4
	01311	CONSTRUCTION SCHEDULE	6
	01340	SUBMITTALS	7
	01450	STRUCTURAL TESTING & LABORATORY SERVICES	33
	01700	PROJECT CLOSEOUT	7
2	SITE WORK		
	02200	EARTHWORK	4
	02221	TRENCHING, BACKFILLING, & COMPACTION	8
	02710	STEEL FENCING – HIGH SECURITY	4
	02829	ELECTRIC GATE OPERATOR	5
	02833	STEEL ROLLING GATE SYSTEM	2
	02833	STEEL SWING GATE	4
3	CONCRETE		
	03100	CONCRETE FORMWORK	3
	03200	CONCRETE REINFORCEMENT	5
	03300	CAST-IN-PLACE	18
7	THERMAL AND MOISTURE PROTECTION		
	07400	METAL ROOFING PANEL SYSTEM	9
	07600	FLASHING AND SHEET METAL	2

12-03. List of Construction Documents [Plans]. General locations of the work s shown in Appendix "A". A set of construction plans is included in each bid package that will be provided to the bidder showing the exact locations of the work to be done during this phase of the work.

12-04. Business Licenses. The Contractor and any subcontractors shall each secure and maintain a valid City of Ukiah Business License prior to the start of any portion of the work.

12-05. Permits. The Contractor shall provide, procure, and pay for all permits required to complete this work.

12-06. Standard Specifications and Standard Plans. The Standard Specifications and Standard Plans of the California State Department of Transportation, 2015, are hereby made a part of these Special Provisions and are hereinafter referred to as "California Standard Specifications" and "California Standard Plans."

Whenever in the California Standard Specifications and the California Standard Plans the following terms are used, they shall be understood to mean and refer to the following:

Department of Transportation - The City Council.

Director of Public Works - The City of Ukiah Director of Public Works.

Engineer - The Engineer, designated by the City Council, acting either directly or through properly authorized agents, such agents acting within the scope of the particular duties entrusted to them.

Laboratory - The designated laboratory authorized by the City of Ukiah to test materials and work involved in the contract.

State - The City of Ukiah

Other terms appearing in the California Standard Specifications and the California Standard Plans shall have the intent and meaning specified in Section I, Definition of Terms of the California Standard Specifications.

In case of discrepancy between the contract documents, the order of precedence from the highest to lowest is as follows:
1. Special Provisions
2. Project Plans
3. City Standard Plans and Details
4. California Standard Plans
5. California Standard Specifications

12-07. Temporary Facilities. All temporary facilities are the responsibility of the Contractor. The removal of said facilities shall be the responsibility of the Contractor. The Contractor shall be responsible for any and all damages to existing facilities which are a result of the work.

12-08. Public Convenience and Safety. The Contractor shall conduct operations so as to cause the least possible obstruction and inconvenience to public traffic. The Contractor shall, at his or her expense, furnish such flag persons and furnish, erect, construct and maintain such fences, barriers, lights, signs, detours, pedestrian walkways, driveway ramps and bridging as may be necessary to give adequate warning to the public that work is in progress and that dangerous conditions exist, to provide access to abutting properties and to permit the flow of pedestrian and vehicular traffic to safely and expeditiously pass the work.

12-09. Maintaining Traffic. Attention is directed to Section 7-1.08, "Public Convenience," 7-1.09, "Public Safety," 7-1.092, "Lane Closure," and 7-1.095, "Flagging Costs," of the California Standard Specifications.

Streets shall be open to through vehicular traffic during non-working hours. All public traffic shall be permitted to pass through the work with as little inconvenience and delay as possible.

Full costs for "Maintaining Traffic", including "Flagging Costs", shall be considered as included in the various items of work and no additional compensation will be made.

12.10. Stream Pollution. The Contractor shall exercise every reasonable precaution to prevent muddying or silting of live streams, and the Contractor's attention is called to the fact that the terms of this contract do not relieve him or her of responsibility for compliance with Sections 5650 and 12015 of the Fish and Game Code or other applicable statutes relating to pollution prevention or abatement.

12-11. Warranties. Unless otherwise indicated, the Contractor shall warrant all materials provided and work performed under this contract for a period of one year from the date of final acceptance. He shall replace promptly and at his own expense any materials and/or workmanship which fail during this warranty period.

12-12. Utilities. No water, sewer or electrical services will be provided by the owner. It is the Contractor's sole responsibility to arrange such services as necessary.

12-13. Preconstruction Conference. A preconstruction conference will be held before any work will be allowed to commence. This meeting will cover inspection, schedule for work, and among other items, the responsibilities and procedures of each of the interested parties to assure that the project will be completed in accordance with the contract documents.

12-14. Safety Requirements. The Contractor shall comply with all pertinent provisions of the Department of Labor "Safety and Health Regulations for Construction (29 FCS Part 1518, 36 CFR 7340)", with additions or modifications thereto, in effect during construction of this project.

SECTION 13. EXCLUSIONS FROM GENERAL CONDITIONS

13-01. Provisions to be Excluded from General Conditions. The following designated provisions of the General Conditions are hereby determined to be inapplicable to the proposed work and, therefore, are hereby excluded from the terms of the Notice to Bidders, Proposal, Agreement and other contract documents as though entirely omitted from said General Conditions:

(1) Section 6-02. Office at the Site
(2) Section 7-03. Surveys

No other exclusions.

SECTION 14. AMENDMENTS TO GENERAL CONDITIONS

14-01. Sections of General Conditions to be Amended.

The following designated sections of the Special Provisions are hereby amended to read as follows:

No amendments.

BID SUBMITTAL CHECKLIST

The following is a checklist to assist you in your submission of your bid documents. Please make sure you include the following when submitting your bid documents to reduce the risk of having your bid rejected:

Did you include?...

- o **Proposal** (Page ___)
  - ➢ Unit prices filled out clearly.
  - ➢ Extended prices filled out clearly and calculated correctly
  - ➢ Total bid amount filled out clearly and calculated correctly
  - ➢ Sign the proposal, and provide complete information

CITY OF UKIAH
MENDOCINO COUNTY, CALIFORNIA

PROPOSAL

FOR
ELECTRIC UTILITY - FOC

Specification No. 16-7

The undersigned, as bidder,
declares that he or she has examined thoroughly all of the contract documents herein contained, that this proposal is made without collusion with any other person, firm or corporation and that all laws and ordinances relating to the interest of public officers in this contract have been complied with in every respect.

AND he or she proposes and agrees, if this proposal is accepted,

1) that he or she will contract with the City of Ukiah, Mendocino County, California, in the form of the copy of the agreement herein contained

    a) to provide all necessary machinery, tools, apparatus and other means of construction;

    b) to furnish all materials;

    c) to provide all superintendence, overhead expenses and all labor and expenses of whatever nature necessary to complete the job in conformity with the specifications and drawings and other contract provisions herein or reasonably implied hereby or as necessary to complete the work in the manner and within the time named herein and according to the requirements and to the reasonable satisfaction of the City Engineer;

    d) to pay all charges of freight transportation and hauling;

2) that he or she indemnifies the City against any loss or damage arising from any act of the undersigned as Contractor; and

3) that he or she will accept as full payment therefor the following sums:

BIDDING SCHEDULE

In the case of any discrepancy between the unit price and the total set forth for the item, the unit price shall prevail; provided, however, that if the amount set forth as a unit price is ambiguous, unintelligible or uncertain for any reason, or is omitted, or in the case of lump sum items, is not the same amount as the entry in the "Total" column, then the amount set forth in the "Total" column for the item shall prevail in accordance with the following:

1. As to lump sum items, the amount set forth in the "Total" column shall be the unit price;
2. As to unit basis items, the amount set forth in the "Total" column shall be divided by the estimated quantity for the item and the price thus obtained shall be the unit price.

The Total Base Bid shall be the sum of the items in the "Total" column. In case of discrepancy between the sum of the items in the "Total" column and the amount entered as Total Base Bid, the sum of the "Total" column items shall prevail. The bid comparison will be based on the sum of the items in the "total" column for each bidder.

The Unit prices for the various Construction Items below include all costs associated with the General Conditions, Special Provisions, Requirements of the Construction Contract, and represent the total, complete, in-place cost for each specific Construction Item in accordance with the Construction Documents, including all elements, work components, accessories, and connections, shown in applicable details or required to yield a complete, sound and functional component or system appropriate for its intended function, whether or not such is specifically described or listed in any description of measurement or payment. The total amount of the Construction items below shall represent the total and complete cost of the fully functional Project. All work not specifically listed below be required to complete the work of the various construction items and the cost of such shall be considered as included throughout the various unit prices indicated.

Lowest bid will be based on the lowest Base Bid.

BIDDER'S BOND

KNOW ALL MEN BY THESE PRESENTS,

That we, _____

_____, as PRINCIPAL and

_____

_____, as SURETY,

are held and firmly bound unto the City of Ukiah in the penal sum of 10 PERCENT OF THE TOTAL AMOUNT OF THE BID of the Principal above named, submitted by said Principal to the City of Ukiah, as the case may be, for the work described below, for the payment of which sum in lawful money of the United States, well and truly to be made, to the City Clerk to which said bid was submitted, we bind ourselves, our heirs, executors, administrators and successors jointly and severally, firmly by these presents. In no case shall the liability of the surety hereunder exceed the sum of $_____

THE CONDITION OF THIS OBLIGATION IS SUCH,

That whereas the Principal has submitted the above mentioned bid to the City of Ukiah, as aforesaid, for certain construction specifically described as follows, for which bids are to be opened at the Office of the City Clerk, Ukiah Civic Center, Ukiah, California, on <<DATE OF BID OPENING>> for ELECTRIC UTILITY – FOC.

NOW, THEREFORE, If the aforesaid Principal is awarded the contract and, within the time and manner required under the specifications, after the prescribed forms are presented to him or her for signatures, enters into a written contract, in the prescribed form, in accordance with the bid and files two bonds with the City of Ukiah, one to guarantee faithful performance and the other to guarantee payment for labor and materials, as required by law, then this obligation shall be null and void; otherwise, it shall be and remain in full force and virtue.

CITY OF UKIAH
Mendocino County, California

AGREEMENT

FOR

ELECTRIC UTILITY - FOC
Specification No. 16-07

THIS AGREEMENT, made this _____ day of _____, 20____, by and between the City of Ukiah,

Mendocino County, California, hereinafter called the City and _____ hereinafter called the

Contractor,

WITNESSETH:

WHEREAS, the City has caused to be prepared in accordance with law, specifications, drawings and other contract documents for the work herein described and shown and has approved and adopted these contract documents, specifications and drawings and has caused to be published in the manner and for the time required by law a notice to bidders inviting sealed proposals for doing the work in accordance with the terms of this contract and

WHEREAS, the Contractor, in response to the notice to bidders, has submitted to the City a sealed proposal accompanied by a proposal guaranty in an amount of not less than 10 percent of the bid price for the construction of the proposed work in accordance with the terms of this contract and

WHEREAS, the City, in the manner prescribed by law, has publicly opened, examined and canvassed the proposals submitted and as a result has determined and declared the Contractor to be the lowest and best regular responsible bidder for the work and for the sums named in the proposal,

NOW, THEREFORE, THIS AGREEMENT WITNESSETH:

Article 1. Work to be Done and Contract Days Allowed.

That the Contractor shall provide all necessary machinery, tools, apparatus and other means of construction; shall furnish all materials, superintendence, overhead, expenses, all labor and expenses of whatever nature necessary for completion of the work in conformity with the Special Provisions and other contract documents hereto attached and according to such instructions as may be given by the Engineer. The Contractor shall complete the work within One hundred fifty (150) calendar days. Contract days shall be counted starting with the 10th day following receipt of notice that the contract has been executed by the City. Contractor, at his or her option, may begin work prior to start of counting contract days, however, in no event shall the Contractor start work without giving notification to the Engineer at least 72 hours prior to the start of work, without obtaining an encroachment permit from the City, or without having submitted certificates of insurance that have been accepted and approved by the Engineer

Article II. Contract Prices.

That the City shall pay the Contractor the prices stated in the proposal submitted by the Contractor, for complete performance of the contract by the Contractor. The Contractor hereby agrees to accept the prices as full compensation for all material and appliances necessary to the work, for all labor and use of tools and other implements necessary to execute the work contemplated in this contract; for all loss or damage arising out of the nature of the work or from the action of the elements, or from any unforeseen obstructions or difficulties which may be encountered in the prosecution of the work; for all risks of every description connected therewith; for all expenses of the work, as herein specified; for all liability and other insurance, for all overhead and other expenses incident to the work; all according to the Contract Drawings, the Special Provisions, the Details, the instructions and the requirements of the City.

Article III. Labor Discrimination.

Attention is directed to Section 1735 of the Labor Code, which reads as follows:

> "No discrimination shall be made in the employment of persons upon public works because of the race, color, national origin or ancestry, or religion of such persons and every contractor for public works violating this section is subject to all the penalties imposed for a violation of this chapter."

In connection with the performance of work under this contract, the Contractor agrees as follows:

(a) The Contractor will not willfully discriminate against any employee or an applicant for employment because of race, color, religion, ancestry, or national origin. The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, ancestry, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the awarding authority setting forth the provisions of this Fair Employment Practice section.

(b) The Contractor will send to each labor union or representative of workers with which he or she has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the awarding authority, advising the said labor union or worker's representative of the Contractor's commitments under this section, to employees and applicants for employment.

(c) The Contractor will permit access to his or her records of employment, employment advertisements, application forms and other pertinent data and records by the Fair Employment Practices Commission, City of Ukiah or any other appropriate agency of the State of California designated by the awarding authority, for the purposes of investigation to ascertain compliance with the Fair Employment Practices section of this contract.

(d) A finding of willful violation of the Fair Employment Practices section of this Contract or of the Fair Employment Practices Act shall be regarded by the awarding authority as a basis for determining the Contractor to be not a "responsible bidder" as to future contracts for which such Contractor may submit bids, for revoking the Contractor's pre-qualification rating, if any and for refusing to establish, reestablish or renew a pre-qualification rating for the Contractor.

The City of Ukiah shall deem a finding of willful receipt of written notice from the Fair Employment Practices Act to have occurred upon that it has investigated and determined that the Contractor has

violated the Fair Employment Practices Act and has issued an order under Labor Code Section 1426 or obtained an injunction under Labor Code Section 1429.

Upon receipt of such written notice from the Fair Employment Practices Commission, the City shall notify the Contractor that unless he or she demonstrates to the satisfaction of the awarding authority within a stated period that the violation has been corrected, his or her pre-qualification rating will be revoked at the expiration of such period.

(e) The Contractor agrees that should the City determine that the Contractor has not complied with the Fair Employment Practices section of this Contract, then pursuant to Labor Code Section 1735 and 1775 the Contractor shall, as a penalty to the City, forfeit for each calendar day or portion thereof, for each person who was denied employment as a result of such non-compliance, the penalties provided in the Labor Code for violation of prevailing wage rates. Such monies may be recovered from the Contractor. The City may deduct any such damages from any monies due the Contractor.

(f) Nothing contained in this Fair Employment Practices section shall be construed in any manner of fashion so as to prevent the City or the State of California from pursuing any other remedies that may be available at law.

(g) Prior to awarding the Contract, the Contractor shall certify to the awarding authority that he or she has or will meet the following standards for affirmative compliance, which shall be evaluated in each case by the awarding authority:

(1) The Contractor shall provide evidence, as required by the City that he or she has notified all supervisors, foremen and other personnel officers in writing of the content of the anti-discrimination clause and their responsibilities under it.

(2) The Contractor shall provide evidence, as required by the City, that he or she has notified all sources of employees' referrals (including unions, employment agencies, advertisements, Department of Employment) of the content of the anti-discrimination clause.

(3) The Contractor shall file a basic compliance report, as required by the City. Willfully false statements made in such reports shall be punishable as provided by law. The compliance report shall also spell out the sources of the work force and who has the responsibility for determining whom to hire, or whether or not to hire.

(4) Personally, or through his or her representatives, the Contractor shall, through negotiations with the unions with whom he or she has agreements, attempt to develop an agreement which will:

a. Spell out responsibilities for nondiscrimination in hiring, referral, upgrading and training.

b. Otherwise implement an affirmative anti-discrimination program in terms of the unions' specific areas of skill and geography to the end that qualified minority workers will be available and given and equal opportunity for employment.

(5) The Contractor shall notify the City of opposition to the anti-discrimination clause by individuals, firms or organizations during the period of its pre-qualification.

(h) The Contractor will include the provisions of the foregoing paragraphs 1 through 5 in every first tier subcontract so that such provisions will be binding upon each such subcontractor.

(i) The "Fair Employment Practices Certification" must be completed and signed prior to the time of submitting the bid.

Article IV. Parts of the Contract.

That the complete contract consists of the following documents, all of which shall be considered a part of this agreement.

1. Notice to Bidders
2. Wage Rates
3. General Conditions
4. Technical Specifications
5. Proposal
6. Fair Employment Practices Certification
7. Agreement
8. Contract Bonds
9. Contract Drawings and Construction Details
10. Standard Drawings
11. Indemnification Agreement

INDEMNIFICATION AGREEMENT

This Indemnification Agreement is made and entered in Ukiah, California, on _____, 20____, by and between the City of Ukiah (Ukiah) and _____ (Contractor).

Contractor is

_____

_____ for Ukiah.

As a condition of issuing the work order, attached hereto, Ukiah requires assurance that Contractor will protect Ukiah from damage or damage claims which arise from its performance of the work.

Accordingly, Contractor agrees as follows:

1. **Indemnification**. Contractor shall indemnify and hold harmless Ukiah and its officers, agents, and employees from and against any claim, loss, or damage, including the legal and other costs of defending against any claim of damage or loss which arises out of the Contractor's negligent or wrongful performance under the work order attached hereto, except for claims, losses, or damages resulting from the sole and exclusive negligence or other wrongful conduct of Ukiah or its officers, agents and employees.

The rate of premium on this bond is $_____ per thousand.

The total amount of premium charges is $_____..

(The above is to be filled in by Surety Company). (Power of Attorney of person signing for Surety Company must be attached).

(CERTIFICATE AS TO CORPORATE PRINCIPAL)

I,_____, certify that I am the _____ Secretary of the corporation named as Principal in the foregoing bond; that _____, who signed the said bond on behalf of the Principal, was then _____ of said corporation; that I know his signature, and that his signature thereto is genuine; and that said bond was duly signed, sealed, and attested to for and in behalf of said corporation by authority of its governing body.

_____ Affix Corporate Seal

DIRECTIONS FOR PREPARATION OF PERFORMANCE AND MATERIAL AND LABOR BOND

1. Individual sureties, partnerships, or corporations not in the surety business will not be acceptable.

2. The name of the Principal shall be shown exactly as it appears in the Contract.

3. The penal sum shall not be less than required by the Specifications.

4. If the Principals are partners or joint venturers, each member shall execute the bond as an individual and state his place of residence.

5. If the Principal is a corporation, the bond shall be executed under its corporate seal.
If the corporation has no corporate seal, it shall so state and affix a scroll or adhesive seal following the corporate name.

6. The official character and authority of the person(s) executing the bond for the Principal, if a corporation, shall be certified by the Secretary or Assistant Secretary thereof under the corporate seal, or copies attached to such records of the corporation as will evidence the official character and authority of the officer signing, duly certified by the Secretary or Assistant Secretary, under the corporate seal, to be true copies.

7. The current power-of-attorney of the person signing for the surety company must be attached to the bond.

8. The date of the bond must not be prior to the date of the Contract.

9. The following information must be placed on the bond by the surety company:

    a. The rate of premium in dollars per thousand; and

    b. The total dollar amount of premium charged.

10. The signature of a witness shall appear in the appropriate place attending to the signature of each party of the bond.

11. Type or print the name underneath each signature appearing on the bond.

12. An executed copy of the bond must be attached to each copy of the Contract (original counterpart) intended for signing.

1.2 DETAILED REQUIREMENTS

A. Non-Interference With Others: Contractor's operations shall be confined to the job-site understood to be the work areas indicated on the Contract Drawings.

B. Site Regulations: Fully cooperate with all authorities on the job-site and other Contractors who might be at the job-site and comply with all regulations presently enforce at the job-site.

C. Job Safety: Observe all safety rules and regulations of the California Building Code with and CAL/OSHA as applicable to the safety of the Contractor, Contractor's personnel and City employees during work operations of this Contract especially during asbestos removal operations.

D. Storage of Materials and Equipment: To be located on the job site where space permits.
All vehicle and equipment sheds shall be kept in a safe condition and locked at all times while located on the premises.

E. Site Survey:

1. Before submitting proposals for this work, Bidder shall become familiar with plans and specifications and shall have examined the premises and understood the conditions under which Contractor will be obliged to operate in performing this Contract.

2. No allowance will be made subsequently in this connection, on behalf of the Contractor, for any error through negligence on his part.

1.3 SECURITY

A. The Contractor shall be responsible for the security of the construction site on a 24-hour basis as necessary to curb vandalism and theft, including but not limited to all fencing and barriers.

-- End of Section --

DIVISION 1 GENERAL REQUIREMENTS
SECTION 01010 - SUMMARY OF THE WORK

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply shall be a part of this specification.

PART 1 GENERAL

1.1 SUMMARY

A. The work to be done under this Contract includes the furnishing of Contractor Administration, labor, materials, tools and equipment for the construction of the various site improvements including shaping, grading, and paving all in accordance with the Contract Documents, including the GENERAL CONDITIONS, Supplementary Conditions and other Sections of Division 01 GENERAL REQUIREMENTS of the Specification.

B. Related Work:

1. Documents affecting work of this Contract include, but are not necessarily limited to the GENERAL CONDITIONS, Supplementary Conditions and Sections in Division 01of this Specification.

2. The work of other Contracts is described in the various Contract Documents prepared therefor, some of which are in the possession of the City and are available for inspection by interested parties.

1.2 PROJECT IDENTIFICATION

A. General:

1. The project Name is: SITE WORK, RE-ROOF, AND SOLAR
For: CITY OF UKIAH, CALIFORNIA.

2. Contract Documents have been prepared by:
L.S. MITCHELL ARCHITECT, INC.
1400 MADRONE DRIVE
UKIAH, CA 95482
Phone: 707-489-3337

B. The Work: The extent of Contracted Work is indicated on the contract Drawings and in the Project Specification.

1.3 CITY OCCUPATION OF THE PREMISES

A. The Contractor shall limit his use of the premises to the work areas that will be dedicated to his use as directed by the City Project Manager to allow limited City occupancy and use.

1. Use of the Site: Confine operations at the site to the areas permitted under the Contract. Portions of the site beyond areas on which work is to be performed are not to be disturbed. Conform to site rules and regulations affecting the work while engaged in project construction.

1.4 SUMMARY OF REFERENCES

A. Contracted Work can be summarized by references to the Contract General Conditions, Project Specifications Technical Sections of the Project Specifications, Contract Drawings, Addenda, Notice to Bidders and Modifications to the Contract Documents.

B. It is recognized that the Contracted Work is also unavoidably affected or influenced by governing Codes and Regulations, natural phenomena, including weather conditions and other forces outside the Contract Documents.

1.5 SUPPLEMENTAL INFORMATION:

A. Emergency Information: The name, addresses and telephone numbers of the Contractor, Subcontractors or their representatives shall be filed with the City Project Manager prior start of Contracted Work.

1.6 PERMITS

A. Contractor shall obtain and pay for all permits, licenses and fees required by the City of Ukiah, County of Mendocino, and the State of California Laws except the building permit as defined in the City Municipal Code which will be furnished by the City Project Manager or defined in the Technical specifications "Sections."

B. The Contractor shall obtain and pay for all permits, including the following:

1. Electrical Permit

2. Fire Protection Permit. (IF ANY)

3. Encroachment Permits, both City of Ukiah and County of Mendocino, Department of Transportation.

4. Storm Water Management Permit(s) (IF ANY)

5. Grading Permit.

6. Building Permit.

7. Construction waste management plan and supporting documentation.

C. After the award of the contract, the Contractor shall be required to provide Contractor information, such as Worker's Compensation Insurance to the City.

D. If the Contractor is delayed during the inspections by local authorized agencies or work by utility companies, not the fault of the Contractor and a critical path is impacted; Contractor shall be entitled to time extension and shall have no claim for any other compensation for such delay.

1.7 ADMINISTRATION OF CONSTRUCTION

A. All work of this Contract will be administered by the City Project Manager.

-- End of Section --

DIVISION 1 GENERAL REQUIREMENTS
SECTION 01015 - CONTRACTOR'S USE OF THE PREMISES

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be part of this Specification.

PART 1 GENERAL

1.1 SUMMARY

A. This Section applies to all situations in which the Contractor or his representatives including, but not necessarily limited to, suppliers, subcontractors, employees, and field engineers, who enter upon the City's property.

B. Contractor shall commence the contract work and provide security and protection to existing facility and job site within 15 days from the issuance of Notice-To-Proceed.

C. Related Work:

1. Documents affecting work of this Contract include, but are not necessarily limited to the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and Sections in Division 01 of these Specifications.

2. Section 01450 – Testing.

3. Project Manual

1.2 SUBMITTALS

A. Refer to Section 01340 - SUBMITTALS in Division 1.

B. Maintain an accurate record of the names and identification of all persons entering upon the City's property in connection with the Work of this Contract, including times of entering and times of leaving, and submit a copy of the record to the City daily.

1.3 QUALITY ASSURANCE

A. Promptly upon award of the Contract, notify all pertinent personnel regarding requirements of this Section.

B. Require that all personnel who will enter upon the City's property certify their awareness of and familiarity with the requirements of this Section.

1.4 SITE INVESTIGATION

A. Contractor shall investigate the job site to ascertain all conditions affecting necessary procedures and sequencing of the work operations in the execution of the Contracted Work.

1. Contractor shall report to the City Project Manager any adverse condition(s) which would affect the proper execution of the Contracted Work and shall not proceed until instructed by the City Project Manager.

2. Start of Contracted Work at the jobsite shall imply Contractor's acceptance of job conditions.

B. Work Determination: Contractor shall satisfy himself regarding job conditions, the nature and types of work to be performed and shall be responsible for the determination of all classes of work to be accomplished at the “job-site” or at the manufacturer's plant.

C. Allotted Working Space: Contractor shall limit work operations to the "working site" or "job-site" and areas immediately adjacent thereto as specified or authorized by the City Project Manager.

1.5 ACCESS TO THE JOB-SITE

A. As instructed by the City Project Manager, Contractor shall restrict Contractor's employees to the immediate work areas on the jobsite and in no way go beyond the work limits noted on the Contract Drawings or as otherwise directed by the City Project Manager.

B. Contractor shall in no way block such entrance(s) to the jobsite or the frontage roads, public or private.

C. Use of such accesses to the jobsite will only be for the purpose of parking, delivery and/or removal of materials equipment, tools, vehicles and removal of rubbish and debris, and shall be kept free of obstructions and in a safe condition at all times during extent of Contracted Work.

1.6 SECURITY

A. Restrict the access of all persons entering upon the City's property in connection with the work to the Access Route and to the actual site of the work.

B. All employees of the Contractor who will be engaged in the construction of this project will be screened by the City for proper identification and good behavior. Candidates of good standing will be issued a temporary pass. Contractor shall furnish the City, a list of employees for approval prior to start of this project.

C. Contractor shall furnish and maintain approved type site security protection between the work areas and other areas, as directed by the City Project Manager or other authorities having jurisdiction. All such site security protections shall remain for the duration of this Contract or as otherwise directed by the City Project Manager.

1.7 REPAIR OF DAMAGES

A. Methods: Repair or replace damaged work with new materials as necessary to restore the damaged areas or surfaces to a condition equal to and matching such conditions existing prior to damage or start of work of this Contract, to the full satisfaction of the City Project Manager, at no cost to the City.

B. Matching or Existing Work:

1. Finish of all existing wood, plaster, masonry and concrete work to be altered, repaired or patched to match and be flush with adjoining surfaces, subject to the approval of the City Project Manager.

2. Finish of all new masonry and/or concrete work (to adjoin remaining work) to match and be flush with adjoining surfaces, unless otherwise noted on the Drawings, subject to the approval of the City Project Manager.

1.8 INTERRUPTION OF SERVICES

A. Contractor shall make all provisions to accomplish Contracted Work without undue interference with the daily operations of the existing facilities in the vicinity of the jobsite.

1.9 NON-INTERFERENCE WITH OTHERS

A. Contractor shall confine Contracted Work operations to the immediate boundaries of the jobsite and shall execute work operations in a manner to minimize interference with City operations and/or work operations of other Contractor working on the premises; as directed by the City Project Manager.

B. Contractor shall obtain approval of City Project Manager and local authorities having jurisdiction such as Public Works Departments, both County and City, Police and Sheriff's Departments, etc. prior to any street closure.

1.10 UNDERGROUND SERVICE ALERT

A. Before commencing any excavation, the Contractor shall obtain an underground service alert inquiry I.D. Number by calling 1 (800) 422-4133. Two working days shall be allowed

after the I.D. Number is obtained and before the excavation work is started so that utility owners can be notified.

1.11 JOB SAFETY

A. Contractor shall observe all safety rules and regulations of the most current City of Ukiah and CAL/OSHA as applicable to the safety of the Contractor, Contractor's personnel and City employees during Contracted Work operations especially during hazardous removal operations.

1.12 JOB CONDITIONS

A. Graffiti Control: During the Contracted Work period up to the final acceptance of the Project by the City, the Contractor shall maintain the job-site perimeter construction fencing and temporary construction sheds free of graffiti. All graffiti and handbills (posters, etc.) shall be promptly removed within 24-hours after discovery at no added cost to the City. Conform to applicable provisions of the GENERAL CONDITIONS.

1.13 HAZARDOUS WORK CONDITIONS

A. Contractor shall provide adequate fire extinguishers on the premises during the Contract period. Type and sizes as recommended by the National Board of Fire Underwriters as necessary to control a particular kind of fire and instruct his employees as to the use of such fire extinguishers.

B. Place all such fire extinguishers ready for use in the immediate area where the hazardous work operations will occur.

C. Contractor shall take special precautions in the use of acetylene torches, welding equipment, tar pots and kettles when working in a hazardous area.

-- End of Section --

DIVISION 1 – GENERAL REQUIREMENTS
SECTION 01060 - REGLATORY REQUIREMENTS

PART 1 – GENERAL

1.1 WORK OF THIS SECTION

A. The CONTRACTOR is responsible to obtain all local, state and federal permits and licenses required to perform the work. Payment for obtaining and complying with permits and licenses including, but not limited to, general construction permits, building permits, encroachment permits, haul route permits, excavation permits, drilling permits, water discharge permits, temporary easements, licenses, inspection fees, and Federal, State and local taxes shall be borne by the CONTRACTOR and shall be included in prices bid for work for which such costs are appurtenant.

B. The CONTRACTOR shall provide a copy of the permit or license to the AGENCY prior to performing the work requiring the permit or license.

1.2 RELATED WORK SPECIFIED ELSEWHERE

A. Section 01300 – Record Drawings and Submittals

B. Section 02270 – Temporary Soil Erosion and Sediment Control

1.3 GENERAL

A. The CONTRACTOR shall obtain, pay for, and comply with required permits, licenses, work permits, and authorizations from appropriate agencies, including the following:

1. Licenses
   a. Before submitting for permits, CONTRACTORs shall be licensed in accordance with provisions of Chapter 9, Division 3, of the Business and Professions Code of the State of California.
   b. City of Oceanside Business License.
2. State and Federal permits
   a. Excavation and Dirt Moving Permit from Cal OSHA
   b. Safety permit from California Division of Industrial Safety
   c. NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (LUP Type 2)
   d. NPDES Permit for discharge of hydrostatic test water and potable water
3. Other permits
   a. City Haul Route Permit
   b. Traffic Control Plan Permit
   c. City Encroachment Permit
   d. Written authorization from private property owners for property utilized for staging
   e. Air Pollution Control Permit

B. CONTRACTOR shall pay for all fees applicable to CONTRACTOR's operations

1.4 HAUL ROUTE PERMIT

A. The CONTRACTOR shall prepare a project specific haul route plan, as required by the City of Oceanside Development Services Department, detailing the streets intended for use in delivery of materials and import and export of soil. CONTRACTOR will be limited to the routes approved by the City of Oceanside Development Services Department according to the approved haul route plan contained in the permit.

1.5 TRAFFIC CONTROL PLANS

A. The CONTRACTOR shall prepare project specific traffic control plans and haul route plan as required by the City of Oceanside Development Services Department.

1.6 STORM WATER POLLUTION PREVENTION PLAN (SWPPP) / CONSTRUCTION GENERAL PERMIT

A. The CONTRACTOR shall develop a site-specific Storm Water Pollution Prevention Plan (SWPPP), as required the City of Oceanside Development Services Department. The SWPPP shall be written, amended, and certified by a Qualified SWPPP Developer (QSD) in accordance with the General Permit. Within seven (7) calendar days of project completion, the project specific SWPPP shall be relinquished to the City of Oceanside Development Services Department. In addition, the CONTRACTOR shall submit the Notice of Termination (NOT) to the SWRCB. The NOT shall be submitted to the City of Oceanside Development Services Department at the same time it is submitted to the SWRCB. The CONTRACTOR shall only submit the NOT once the project has been accepted by the City of Oceanside Development Services Department. If the CONTRACTOR fails to submit the NOT to the SWRCB, the CONTRACTOR shall continue to be responsible for paying the annual fee associated with the “General Permit” until the NOT is submitted and accepted by the SWRCB.

PART 2 – MATERIALS (NOT USED)

PART 3 – EXECUTION

3.1 STORM WATER POLLUTION PREVENTION PLAN (SWPPP) / CONSTRUCTION GENERAL PERMIT

A. The CONTRACTOR shall ensure all storm water and erosion control measures required by the General Permit and the SWPPP are implemented by a Qualified SWPPP Practitioner (QSP) in accordance with the General Permit.

****END OF SECTION****

DIVISIONT 1 - GENERAL REQUIREMENTS
SECTION 01100 - PROJECT MANAGEMENT AND COORDINATION

GENERAL CONDITIONS

The forgoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this specification.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. The Contractor's attention is specifically directed, but not limited, to the following documents for additional requirements:
   1. The *General Conditions for Construction Contracts* -
   2. The *Supplemental General Conditions and Special Conditions for Construction.*

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

   1. General coordination procedures.
   2. Coordination drawings.
   3. Requests for Information (RFIs).
   4. Project meetings.

B. Related Requirements:
   1. Section 01110 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
   2. Section 01700 "Closeout Procedures" for coordinating closeout of the Contract.
   ~~3. Section 01650 "General Commissioning Requirements" for coordinating the Work with Owner's Commissioning Authority.~~

1.3 DEFINITIONS

A. RFI: Request from Owner, Architect, or Contractor seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

   1. Name, address, and telephone number of entity performing subcontract or supplying products.
   2. Number and title of related Specification Section(s) covered by subcontract.

3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, and by each temporary telephone. Keep list current at all times.

1.5 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

1.6 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.

b. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
c. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
d. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
e. Indicate required installation sequences.
f. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
2. Plenum Space: Indicate sub-framing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling plenum to accommodate layout of light fixtures indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Mechanical and Plumbing Work: Show the following:

    a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
    b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
    c. Fire-rated enclosures around ductwork.

7. Electrical Work: Show the following:

    a. Runs of vertical and horizontal conduit 1-1/4 inches (31.5 mm) in diameter and larger.
    b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
    c. Panel board, switch board, switchgear, transformer, busway, generator, and motor control center locations.
    d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:

   a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

9. Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make changes as directed and resubmit.

C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:

1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
2. File Submittal Format: Submit or post coordination drawing files using Portable Data File (PDF) format.
3. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.

   a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.

4. Architect will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.

   a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
   b. Contractor shall execute a data licensing agreement in the form of AIA Document C106.

1.7 REQUESTS FOR INFORMATION (RFIs)

A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.

1. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
3. Submit RFI electronically using the Project Web Site.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.

2. Project number.
3. Date.
4. Name of Contractor.
5. Name of Architect.
6. RFI number, numbered sequentially.
7. RFI subject.
8. Specification Section number and title and related paragraphs, as appropriate.
9. Drawing number and detail references, as appropriate.
10. Field dimensions and conditions, as appropriate.
11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
12. Contractor's signature.
13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to Architect.

1. Attachments shall be electronic files in Adobe Acrobat PDF format.

D. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow seven working days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.

1. The following Contractor-generated RFIs will be returned without action:

    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for approval of Contractor's means and methods.
    d. Requests for coordination information already indicated in the Contract Documents.
    e. Requests for adjustments in the Contract Time or the Contract Sum.
    f. Requests for interpretation of Architect's actions on submittals.
    g. Incomplete RFIs or inaccurately prepared RFIs.

2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 01 26 00 "Contract Modification Procedures."

    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response.

E. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Use software log that is part of Project Web site.

F. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.

1. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.

1.8 PROJECT WEB SITE

A. Provide, administer, and use Project Web site for purposes of hosting and managing project communication and documentation until Final Completion. Project Web site shall include the following functions:

1. Project directory.
2. Project correspondence.
3. Meeting minutes.
4. Contract modifications forms and logs.
5. RFI forms and logs.
6. Task and issue management.
7. Photo documentation.
8. Schedule and calendar management.
9. Submittals forms and logs.
10. Payment application forms.
11. Drawing and specification document hosting, viewing, and updating.
12. Reminder and tracking functions.
13. Archiving functions.

B. Provide up to seven Project Web site user licenses for use of the Owner, Owner's Commissioning Authority, Architect, and Architect's consultants. Provide eight hours of software training at Architect's office for Project Web site users.

C. On completion of Project, provide one complete archive copy(ies) of Project Web site files to Owner and to Architect in a digital storage format acceptable to Architect.

D. Contractor, subcontractors, and other parties granted access by Contractor to Project Web site shall execute a data licensing agreement in the form of Agreement acceptable to Owner and Architect.

1.9 PROJECT MEETINGS

A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.

2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within three days of the meeting.

B. Preconstruction Conference: Schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 days after execution of the Agreement.

1. Conduct the conference to review responsibilities and personnel assignments.
2. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect progress, including the following:

    a. Tentative construction schedule.
    b. Phasing.
    c. Critical work sequencing and long-lead items.
    d. Designation of key personnel and their duties.
    e. Lines of communications.
    f. Procedures for processing field decisions and Change Orders.
    g. Procedures for RFIs.
    h. Procedures for testing and inspecting.
    i. Procedures for processing Applications for Payment.
    j. Distribution of the Contract Documents.
    k. Submittal procedures.
    l. Sustainable design requirements.
    m. Preparation of record documents.
    n. Use of the premises.
    o. Work restrictions.
    p. Working hours.
    q. Owner's occupancy requirements.
    r. Responsibility for temporary facilities and controls.
    s. Procedures for moisture and mold control.
    t. Procedures for disruptions and shutdowns.
    u. Construction waste management and recycling.
    v. Parking availability.
    w. Office, work, and storage areas.
    x. Equipment deliveries and priorities.
    y. First aid.
    z. Security.
    aa. Progress cleaning.

4. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.

C. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity that requires coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect , and Owner's Commissioning Authority of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. Contract Documents.
    b. Options.
    c. Related RFIs.
    d. Related Change Orders.
    e. Purchases.
    f. Deliveries.
    g. Submittals.
    h. Sustainable design requirements.
    i. Review of mockups.
    j. Possible conflicts.
    k. Compatibility requirements.
    l. Time schedules.
    m. Weather limitations.
    n. Manufacturer's written instructions.
    o. Warranty requirements.
    p. Compatibility of materials.
    q. Acceptability of substrates.
    r. Temporary facilities and controls.
    s. Space and access limitations.
    t. Regulations of authorities having jurisdiction.
    u. Testing and inspecting requirements.
    v. Installation procedures.
    w. Coordination with other work.
    x. Required performance results.
    y. Protection of adjacent work.
    z. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Progress Meetings: Conduct progress meetings at regular intervals.
1. Coordinate dates of meetings with preparation of payment requests.

2. Attendees: In addition to representatives of Owner, Owner's Commissioning Authority and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

        1) Review schedule for next period.

    b. Review present and future needs of each entity present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Resolution of component conflicts.
        4) Status of submittals.
        5) Status of sustainable design documentation.
        6) Deliveries.
        7) Off-site fabrication.
        8) Access.
        9) Site utilization.
        10) Temporary facilities and controls.
        11) Progress cleaning.
        12) Quality and work standards.
        13) Status of correction of deficient items.
        14) Field observations.
        15) Status of RFIs.
        16) Status of proposal requests.
        17) Pending changes.
        18) Status of Change Orders.
        19) Pending claims and disputes.
        20) Documentation of information for payment requests.

4. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.

    a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

DIVISION 1 GENERAL REQUIREMENTS
SECTION 01200 - PROJECT MEETINGS

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

PART 1 GENERAL

1.1 DESCRIPTION

A. Work Included: As required to enable orderly review during progress of Contracted Work, and to provide for systematic discussion of problems, the Contractor and City Project Manager will conduct project meetings throughout the construction period.

B. Related Work:

1. Documents affecting work of this Section include, but are not necessarily limited to, GENERAL CONDITIONS, and Sections in DIVISIONS of the Specification.

2. The Contractor's relations with his Subcontractors and materials suppliers, and discussions relative thereto, are the Contractor's responsibility and normally are not part of project meetings content.

1.2 SUBMITTALS

A. Agenda Items: To the maximum extent practicable, advise the City Project Manager at least 24 hours in advance of project meetings regarding items to be added to the agenda.

B. Minutes:

1. The City Project Manager will compile minutes of each project meeting and will furnish one copy to the Contractor and required copies to the City.

2. Recipients of copies may make and distribute such other copies as they wish.

1.3 QUALITY ASSURANCE

A. For those persons designated by the Contractor to attend and participate in project meetings, provide required authority to commit the Contractor to solutions agreed upon in the project meetings.

PART 2 PRODUCTS (NOT APPLICABLE)

PART 3 EXECUTION

3.1 MEETING SCHEDULE

A. Except as noted below for Preconstruction Meeting, project meetings will be held weekly or as otherwise directed by the City Project Manager or called by the Contractor(s).

B. Coordinate as necessary to establish mutually acceptable schedule for meetings.

3.2 MEETING LOCATION

A. The City Project Manager will establish meeting location. To the maximum extent practicable, meetings will be held at the jobsite in the construction field office.

3.3 PRECONSTRUCTION MEETING

A. Preconstruction Meeting will be scheduled to be held within 15 working days after the City has issued the "Notice to Proceed".

1. Provide attendance by authorized representatives of the Contractor and major subcontractors.

2. The City Project Manager will advise other interested parties, including the City and request their attendance.

B. Minimum Agenda: Data will be distributed and discussed on at least the following items.

1. Organizational arrangement of Contractor's forces and personnel, and those of subcontractors, materials suppliers, and City Project Manager.

2. Channels and procedures for communication.

3. Construction schedule, including sequence of critical work.

4. Contract Documents, including distribution of required copies of original Documents and revisions.

5. Processing of Shop Drawings and other data submitted to the Consultant for review.

6. Processing of Bulletins, Requests for Information (RFI), field decisions, and Change Orders.

7. Rules and regulations governing performance of the Work.

8. Procedures for safety and first aid, security, quality control, housekeeping, and related matters.

9. Review and update "Record Drawings."

3.4 PROJECT MEETINGS

A. Attendance:

1. The Contractor's major Project Manager, and Superintendent shall be present, and they shall represent the major subcontractors at the meetings throughout the progress of the Work.

2. Materials suppliers, and others may be invited to attend those Project Meetings in which their aspect of the Work is involved.

3. Contractor may not cancel or be absent from any meeting without advanced approval from the City Project Manager. The Contractor must submit a written request with reason to the City Project Manager 24-hours before the scheduled meeting. If approved, the Contractor shall notify all parties of the cancellation.

B. Minimum Agenda:

1. Review, revise as necessary, and approve minutes of previous meeting.

2. Review progress of the Work since last meeting. Review actual starts and finish dates of activities.

3. Review status (total complete and outstanding) of submittal for approval, Request-for-Information and Change Orders.

4. Identify old and new problems, which impede planned progress, identify responsible party for the follow-up actions. Mutually agree to a common solution and date of correction.

5. Develop corrective measures and procedures to regain lost time on the planned schedule.

6. Review Weekly Progress Reports including the forecasts indicated in the Construction Schedule.

7. Status of Record drawings and the Record Specification.

8. Job Site Walk-Through. Record all discussion and follow-up actions.

9. Any job site health and/or accident or safety issues.

B. Revisions to Minutes:

1. Unless published minutes are challenged in writing prior to the next regularly scheduled progress meeting, they will be accepted as properly stating the activities and decisions of the meeting.

2. Persons challenging published minutes shall reproduce and distribute copies of the challenge to all indicated recipients of the particular set of minutes.

3. Challenge to minutes shall be settled as priority portion of "old business" at the next regularly scheduled meeting.

3.5 SITE MEETINGS

A. Required when necessary to enable orderly review and discussion of site conditions and problems requiring solution during the progress of the contracted work. Notify the City Project Manager the need for additional site meetings as early as possible to resolve the problem without any adverse impact to the Project Schedule.

B. Provide necessary labor, tools, and equipment such as shoring, scaffolding, ladder, etc. to gain access to the site.

-- End of Section --

DIVISION 1 GENERAL REQUIREMENTS

SECTION 01340 - SUBMITTAL PROCEDURES

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this specification.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. The Contractor's attention is specifically directed, but not limited, to the following documents for additional requirements:
   1. The *General Conditions for Construction Contracts*.
   2. The *Supplemental General Conditions and Special Conditions for Construction.*

1.2 SUMMARY

A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

B. Related Requirements:

   1. Section 01290 "Payment Procedures" for submitting Applications for Payment and the schedule of values.
   2. Section 01780 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
   3. Section 01790 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

C. File Transfer Protocol (FTP): Communications protocol that enables transfer of files to and from another computer over a network and that serves as the basis for standard Internet protocols. An FTP site is a portion of a network located outside of network firewalls within which internal and external users are able to access files.

used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.4 ACTION SUBMITTALS

A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.

    a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.

4. Format: Arrange the following information in a tabular format:

    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Architect's final release or approval.
    g. Scheduled date of fabrication.

1.5 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Architect's Digital Data Files: Electronic digital data files of the Contract Drawings will be provided by Architect for Contractor's use in preparing submittals.

1. Architect will furnish Contractor one set of digital data drawing files of the Contract Drawings for use in preparing Shop Drawings and Project record drawings.

    a. Architect makes no representations as to the accuracy or completeness of digital data drawing files as they relate to the Contract Drawings.
    b. Digital Drawing Software Program: The Contract Drawings are available in .DWG format. Other BIM formats may be made available on request if BIM has been utilized in the preparation of the Contract Documents.
    c. Contractor shall execute a data licensing agreement in the form of AIA Document C106, Digital Data Licensing Agreement.
    d. The following digital data files will be furnished for each appropriate discipline:

1) Floor plans.
2) Reflected ceiling plans.
3) BIM model, if available.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

    a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow 10 days for review of each resubmittal.
4. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 10 days for review of each submittal. Submittal will be returned to Architect before being returned to Contractor.

D. Paper Submittals: Place a permanent label or title block on each submittal item for identification.

1. Indicate name of firm or entity that prepared each submittal on label or title block.
2. Provide a space approximately 6 by 8 inches (150 by 200 mm) on label or beside title block to record Contractor's review and approval markings and action taken by Architect.
3. Include the following information for processing and recording action taken:

    a. Project name.
    b. Date.
    c. Name of Architect.

d. Name of Construction Manager.
e. Name of Contractor.
f. Name of subcontractor.
g. Name of supplier.
h. Name of manufacturer.
i. Submittal number or other unique identifier, including revision identifier.

1) Submittal number shall use Specification Section number followed by a decimal point and then a sequential number (e.g., 061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., 061000.01.A).

j. Number and title of appropriate Specification Section.
k. Drawing number and detail references, as appropriate.
l. Location(s) where product is to be installed, as appropriate.
m. Other necessary identification.

4. Additional Paper Copies: Unless additional copies are required for final submittal, and unless Architect observes noncompliance with provisions in the Contract Documents, initial submittal may serve as final submittal.

a. Submit one copy of submittal to concurrent reviewer in addition to specified number of copies to Architect.

5. Transmittal for Paper Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. Architect will discard submittals received from sources other than Contractor.

a. Transmittal Form for Paper Submittals: Provide locations on form for the following information:

1) Project name.
2) Date.
3) Destination (To:).
4) Source (From:).
5) Name and address of Architect.
6) Name of Construction Manager.
7) Name of Contractor.
8) Name of firm or entity that prepared submittal.
9) Names of subcontractor, manufacturer, and supplier.
10) Category and type of submittal.
11) Submittal purpose and description.
12) Specification Section number and title.
13) Specification paragraph number or drawing designation and generic name for each of multiple items.
14) Drawing number and detail references, as appropriate.
15) Indication of full or partial submittal.
16) Transmittal number.
17) Submittal and transmittal distribution record.
18) Remarks.

19) Signature of transmitter.

E. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:

1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.

    a. File name shall use project identifier and Specification Section number followed by a decimal point and then a sequential number (e.g., LNHS-061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., LNHS-061000.01.A).

3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Architect.
4. Transmittal Form for Electronic Submittals: Use software-generated form from electronic project management software acceptable to Owner**,** containing the following information:

    a. Project name.
    b. Date.
    c. Name and address of Architect.
    d. Name of Construction Manager.
    e. Name of Contractor.
    f. Name of firm or entity that prepared submittal.
    g. Names of subcontractor.
    h. Category and type of submittal.
    i. Submittal purpose and description.
    j. Specification Section number and title.
    k. Specification paragraph number or drawing designation and generic name for each of multiple items.
    l. Drawing number and detail references, as appropriate.
    m. Location(s) where product is to be installed, as appropriate.
    n. Related physical samples submitted directly.
    o. Indication of full or partial submittal.
    p. Transmittal number.
    q. Submittal and transmittal distribution record.
    r. Other necessary identification.
    s. Remarks.

F. Options: Identify options requiring selection by Architect.

G. Deviations and Additional Information: On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.

H. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.

I. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

J. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Post electronic submittals as PDF electronic files directly to Project Web site specifically established for Project.

    a. Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
2. Action Submittals: Submit three paper copies of each submittal unless otherwise indicated. Architect will return one copy.
3. Informational Submittals: Submit two paper copies of each submittal unless otherwise indicated. Architect will not return copies.
4. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:

    a. Manufacturer's catalog cuts.
    b. Manufacturer's product specifications.
    c. Standard color charts.
    d. Statement of compliance with specified referenced standards.
    e. Testing by recognized testing agency.

f. Application of testing agency labels and seals.
g. Notation of coordination requirements.
h. Availability and delivery time information.

4. For equipment, include the following in addition to the above, as applicable:

a. Wiring diagrams showing factory-installed wiring.
b. Printed performance curves.
c. Operational range diagrams.
d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.

5. Submit Product Data before or concurrent with Samples.

6. Submit Product Data in the following format:

a. PDF electronic file.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data, unless submittal based on Architect's digital data drawing files is otherwise permitted.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

a. Identification of products.
b. Schedules.
c. Compliance with specified standards.
d. Notation of coordination requirements.
e. Notation of dimensions established by field measurement.
f. Relationship and attachment to adjoining construction clearly indicated.
g. Seal and signature of professional engineer if specified.

2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 36 by 24 inches.
3. Submit Shop Drawings in the following format:

a. PDF electronic file.
1) If it is impracticable to submit a Shop Drawing in PDF format, paper format will be allowed. Submit three opaque copies of each submittal. Architect will retain two copies; remainder will be returned.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.

1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2. Identification: Attach label on unexposed side of Samples that includes the following:

a. Generic description of Sample.
b. Product name and name of manufacturer.
c. Sample source.
d. Number and title of applicable Specification Section.
e. Specification paragraph number and generic name of each item.

3. Provide corresponding electronic submittal of Sample transmittal on the Project Web Site, digital image file illustrating Sample characteristics, and identification information for record.

4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

   a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
   b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.

   a. Number of Samples: Submit one full set of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.

6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

   a. Number of Samples: Submit three sets of Samples. Architect will retain one Sample set; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.

      1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
      2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.
5. Submit product schedule in the following format:

    a. PDF electronic file.

F. Coordination Drawing Submittals: Comply with requirements specified in Section 01 31 00 "Project Management and Coordination."

G. Application for Payment and Schedule of Values: Comply with requirements specified in Section 01290 "Payment Procedures."

H. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Section 01450 "Quality Requirements."

I. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Section 01700 "Closeout Procedures."

J. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

K. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

L. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

M. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

N. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

O. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

P. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

Q. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on

evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

R. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

1. Name of evaluation organization.
2. Date of evaluation.
3. Time period when report is in effect.
4. Product and manufacturers' names.
5. Description of product.
6. Test procedures and results.
7. Limitations of use.

S. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

T. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

U. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

V. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file or one paper copy of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the

Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.

B. Project Closeout and Maintenance Material Submittals: See requirements in Section 01 77 00 "Closeout Procedures."

C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT'S ACTION

A. Action Submittals: Architect will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action, or the action may be recorded in a separate transmittal or equivalent function of the Project Web Site.

B. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

E. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION 01340

DIVISION 1 – GENERAL REQUIREMENTS
SECTION 01450 - STRUCTURAL TESTING LABORATORY SERVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-01 Specification Sections apply to work specified in this Section.

1.2 SCOPE OF WORK

A. The City's Testing Laboratory: An independent testing laboratory will sample and test materials as they are being installed for compliance with acceptance criteria as specified and report and interpret the results. The laboratory shall monitor and report on the installation of constructed work and shall perform tests on the completed construction as required to indicate Contractor's compliance with the various material specifications governing this work. The City shall be responsible for paying the testing laboratory for these services.

B. The Contractor shall not engage the same testing laboratory for construction services as the City has for quality assurance testing, unless agreed to by the City.

1.3 SPECIAL INSPECTIONS

A. The City's Testing Laboratory or a separate agency shall serve as a Special Inspector to provide Special Inspection services for the items listed below. The scope of such services for each item shall be as defined in the California Building Code or as defined in the local building code of the jurisdiction wherein the project is located. These inspections are mandatory for conformance to the legal requirements of the building code and shall be in addition to the inspections and tests otherwise defined in this specification.

1. Reinforcing Steel Placement

2. Concrete Work

3. Bolts to be Installed in Concrete and Their Installation to allow for higher allowable tension values

4. Inspection of Structural Steel, Bolting, and Welding Material

5. Welding of Structural Steel

6. High-Strength Bolting

7. Compacted Earth Fill

8. Pier Foundations

9. Masonry Work

B. Qualifications of Special Inspector: The special inspector shall be a qualified person who shall demonstrate competence, to the satisfaction of the Building Official, for inspection of the particular type of construction or operation being inspected. The Special Inspector shall meet the legal qualifications of the building code having jurisdiction.

C. Duties and Responsibilities of the Special Inspector:

1. The special inspector shall observe the work assigned to ascertain that, to the best of his/her knowledge, it is in conformance with the approved design drawings and specifications.

2. The special inspector shall furnish inspection reports to the Building Official, the Architect/Engineer, and the City. All discrepancies shall be brought to the immediate attention of the Architect/Engineer, Contractor, and City. A report that the corrected work has been inspected shall be sent to the Building Official, the Architect/Engineer, and the City.

3. The special inspector shall submit a final signed report stating whether the work requiring special inspection was, to the best of the inspector's knowledge, in conformance to the approved plans and specifications and the applicable workmanship provisions of the building code.

1.4 QUALIFICATIONS OF TESTING LABORATORY

A. The Testing Laboratory shall meet the basic requirements of ASTM E329 and shall submit to the City, Architect, and Engineer evidence of current accreditation from the American Association for Laboratory Accreditation, the AASHTO Accreditation Program or the "NIST" National Voluntary Laboratory Accreditation Program.

B. The Testing Laboratory shall be an Approved Agency by the Building Official of the city wherein the project is located to perform Special Inspections and other tests and inspections as outlined in the applicable building code.

C. Tests and inspections shall be conducted in accordance with specified requirements, and if not specified, in accordance with the applicable standards of the American Society for Testing and Materials or other recognized and accepted authorities in the field.

D. Qualifications of Welding Inspectors

1. Inspectors performing visual weld inspection shall meet the requirements of AWS D1.1 Section 6.1.4. Welding inspection shall be supervised and the inspection reports signed by an inspector with current certification as an AWS Certified Welding Inspector (CWI)

2. Inspectors performing nondestructive examinations of welds other than visual inspection (MT, PT, UT, RT) shall meet the requirements of AWS D1.1, Section 6.14.6.

E. Qualifications for Post-Tensioning Inspector - The technician for the City's Testing Laboratory performing the field inspections required for post-tensioned concrete shall possess a currently valid Level 2 Post-Tensioning Inspector Certification issued by the Post-Tensioning Institute. A copy of such certification for each such technician shall be submitted for Engineer review and approval.

1.5 AUTHORITIES AND DUTIES OF THE LABORATORY

A. Attending Preconstruction Conferences: The CITY's Testing Laboratory shall receive from the CITY and review the project plans and specifications with the Architect and Engineer immediately upon receipt and prior to the start of construction. The Laboratory shall attend preconstruction conferences with the Architect, Engineer, Project Manager, General Contractor, and Material Suppliers as required to coordinate materials inspection and testing requirements with the planned construction schedule and shall participate in such conferences throughout the course of the project.

B. Cost Proposal: The Testing Laboratory's proposal to the CITY shall contain unit price stipulations for specified tests and inspections and on an hourly basis for personnel. A total estimated price shall also be submitted.

C. Cooperation with Design Team: The Laboratory shall cooperate with the Architect, Engineer, and Contractor and provide qualified personnel promptly on notice.

D. The Laboratory shall perform the required inspections, sampling, and testing of materials as specified under each section and observe methods of construction for compliance with the requirements of the Contract Documents and the applicable building code.

E. Inspections Required by Government Agencies: The Testing Laboratory shall perform inspections and submit reports and certifications as required by government agencies having jurisdiction over the aspects of the project covered by this specification.

F. Notification of Deficiencies in the Work: The Laboratory shall notify the Architect, Engineer, and Contractor within 24 hours of discovery by telephone or e-mail, and then in writing of observed irregularities and deficiencies of the work and other conditions not in compliance with the requirements of the Contract Documents.

G. Reports:

1. Information on Reports: The Laboratory shall submit copies of reports of inspections and tests promptly and directly to the parties named below. The reports shall contain at least the following information:

a. Project Name
b. Date report issued
c. Testing Laboratory name and address
d. Name and signature of inspector
e. Date of inspection and sampling
f. Date of test
g. Identification of product and Specification section
h. Location in the project
i. Identification of inspection or test

j. Record of weather conditions and temperature (if applicable)
k. Results of test regarding compliance with Contract Documents

2. Copies: The Laboratory shall send signed copies of test and inspection reports to the following parties:

a. 2 copies to the CITY or its representative
b. 2 copies to the General Contractor
c. 1 copy to the Architect
d. 1 copy to the Engineer of responsibility

3. Certification: Upon completion of the job, the Laboratory shall furnish to the City, Architect, and Engineer of Record, a statement signed by a licensed professional engineer that, to the best of their knowledge, required tests and inspections were made in accordance with the requirements of the Contract Documents.

H. Accounting: The Testing Laboratory shall be responsible for separating and billing costs attributed to the City and costs attributed to the Contractor.

I. Monitoring Product and Material Certifications: The Testing Laboratory shall be responsible for monitoring the submittals of product and material certifications from manufacturers and suppliers as specified in the Specifications and shall report to the City, Architect, and Engineer when those submittals are not made in a timely manner.

J. Limitations of Authority: The Testing Laboratory is not authorized to revoke, alter, relax, enlarge upon, or release any requirements of the Specifications or to approve or accept any portion of the work or to perform any duties of the General Contractor and his Subcontractors.

1.6 CONTRACTOR'S RESPONSIBILITY

A. Cooperation with Design Team: The Contractor shall cooperate with laboratory personnel, provide access to the work, and to manufacturer's operations.

B. Furnishing Samples and Certificates: The Contractor shall provide to the laboratory certificates and representative samples of materials proposed for use in the work in quantities sufficient for accurate testing as specified.

C. Furnishing Casual Labor, Equipment and Facilities: The Contractor shall furnish casual labor, equipment, and facilities as required for sampling and testing by the laboratory and otherwise facilitate the required inspections and tests.

D. Advance Notice: The Contractor shall be responsible for notifying the Testing Laboratory sufficiently in advance of operations to allow for assignment of personnel and scheduling of tests. Failure to sufficiently notify may result in additional costs incurred by the Testing Laboratory that may be back-charged to the Contractor by the City.

E. Payment for Substitution Testing: The Contractor shall arrange for and pay for any additional samples and tests above those required by the Contract Documents as requested by the Contractor for his convenience in performing the work.

F. Payment for Retesting: The Contractor shall be liable to the City for the cost for any additional inspections, sampling, testing, and retesting done by the City's Testing

Laboratory as required when initial tests indicate work does not comply with the requirements of the Contract Documents.

G. Payment by Contractor: The Contractor shall furnish and pay for the following items if required:

1. Soil survey of the location of borrow soil materials, samples of existing soil materials, and delivery to the Contractor's Testing Laboratory.

2. Samples of concrete aggregates and delivery to the Contractor's Testing Laboratory.

3. Concrete mix designs as prepared by his concrete supplier.

4. Site-situated storage boxes for concrete cylinders

5. Concrete coring, tests of below strength concrete, and load tests, if ordered by the City, Architect, or Engineer.

6. Certification of reinforcing steel and prestressing steel mill order.

7. Certification of structural steel mill order.

8. Certification of portland cement, lime, fly ash.

9. Certification of welders and preparation of Welding Procedure Specifications.

10. Tests, samples, and mock-ups of substitute material where the substitution is requested by the Contractor and the tests are necessary in the opinion of the City, Architect or Engineer to establish equality with specified items.

11. The making and testing of concrete cylinders for the purpose of evaluating strength at time of form stripping or for post-tensioning or the time spent evaluating the in situ strength of concrete using the Maturity Method.

12. Any other tests when such costs are required by the Contract Documents to be paid by the Contractor.

H. Notification of Source Change: The Contractor shall be responsible for notifying the City, Architect, Engineer, and City's Testing Laboratory when the source of any material is changed after the original tests or inspections have been made.

I. Tests for Suspected Deficient Work: If in the opinion of the City, Architect, or Engineer any of the work of the Contractor is not satisfactory, the Contractor shall furnish and pay for all tests that the City, Architect, or Engineer deem advisable to determine its proper construction. The City shall pay all costs if the tests prove the questioned work to be satisfactory.

1.7 PAYMENT OF TESTING LABORATORY

A. The City will pay for the initial Laboratory services for testing of materials for compliance with the requirements of the Contract Documents. The Contractor will be liable to the City for the cost for testing and retesting of materials that do not comply with the requirements of the Contract Documents and shall furnish and pay for the testing and inspection of other items as specified in these Specifications.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCOPE OF WORK

A. The work to be performed by the Testing Laboratory shall be as specified in this Section of the Specification and as determined in meetings with the City, Architect, and Engineer.

3.2 EARTHWORK

A. Compacted Fill Inspection and Testing:

1. Inspection of Subgrade Below Compacted Fill: The City's Testing Laboratory shall observe and verify that the subgrade below compacted fill has been properly prepared before compact fill construction begins.

2. Verification of Fill Material: Perform classification and testing to verify that the fill material to be used complies with the project specifications.

3. During placement and compaction of fill, determine that the material being used and the maximum lift thickness comply with the specifications.

4. Field Density Testing: Perform field density testing as described below

a. Paved Areas and Building Slab Subgrade:
(1) Make at least one field density test of the natural subgrade for every 2500 square feet of paved area or building slab but in no case less than three tests.
(2) In each compacted fill layer or lift, make one field density test for every 2500 square feet of building slab or paved area but in no case less than three tests.

b. Foundation Wall Backfill: Make at least one field density test for each 200 lineal feet of wall with a minimum of 4 tests for the basement walls around the perimeter of each building and a minimum of one test for every other type of foundation wall on the site. Tests shall be performed in random lifts along each wall.

c. Compacted Fill Beneath Column and Wall Footings and Mat Foundations: Make at least one field density test in each compacted fill layer or lift for each column footing, one for each twenty-five lineal feet of wall and one for each 2500 sq. ft of mat foundation area or fraction thereof.

5. Field Density Tests: Field Density Tests shall be run according to ASTM D2937, or ASTM D2922 as applicable.

6. Acceptance Criteria: The results of field density tests by the Laboratory will be considered satisfactory if the average of any three consecutive tests has a value not less than the required density with no single test falling more than 2 percent below the required density and the moisture content conforms to the requirements of the specification.

7. Report Copies: Moisture-density curves and results of field density tests shall be submitted to the parties specified earlier in this section.

8. Additional Testing: If reports by the Laboratory indicate field densities lower than specified, additional tests will be run by the Laboratory with at least the frequencies scheduled above on recompacted fill and/or natural subgrade. The Testing Laboratory shall notify the Contractor on a timely basis for any required retesting so as not to delay the work. The costs of such tests shall be liable to the City for repayment by the Contractor.

B. Foundation Inspection by the Testing Laboratory:

1. Material Testing: The City's Testing Laboratory shall provide testing and inspection of materials used in foundation elements as described below.

2. Drilled Piers and Underreamed Footings (Cast-in-place Drilled Holes (CIDH)):

   a. Concrete Cylinders: Make and test concrete cylinders as specified for Cast-in-Place Concrete.
   b. Reinforcing Steel: Inspect reinforcing steel for proper number and size of bars and confirm dowel or anchor bolt placement into top of pier.

3. Spread (Excavated) Footings

   a. Concrete Cylinders: Make and test concrete cylinders as specified for Poured-in-Place Concrete.
   b. Reinforcing Steel: Inspect reinforcing steel size, number of bars, and placement and confirm dowel or anchor bolt placement into footing.

4. Mat Footings

   a. Concrete Cylinders: Make and test concrete cylinders as specified for Poured-in-Place Concrete.
   b. Reinforcing Steel: Inspect reinforcing steel size, number of bars, and placement and confirm dowel or anchor bolt placement into footing.
   c. Temperature Monitoring: Monitor the temperature of the concrete in the mat at different levels as it cures.

Record shall provide inspection service for the following items before and during foundation installation as appropriate for the foundation type. The Geotechnical Engineer shall submit written field inspection reports promptly after inspection to the parties listed above and report his findings after each inspection by telephone or e-mail to the Engineer.

1. Spread (Excavated) Footing:

    a. Subgrade: Verify that foundation bearing conditions are consistent with soil report tests and that the footing is being installed in the proper soil strata at the proper elevation. Make recommendations regarding adjustment to subgrade or bearing elevation if subgrade is not adequate to support footing.

2. Mat Footing:

    a. Subgrade: Verify that foundation bearing conditions are consistent with soil report tests and that the footing is being installed in the proper soil strata at the proper elevation. Make recommendations regarding adjustment to subgrade or bearing elevation if subgrade is not adequate to support footing.

3. Drilled Piers and Underreamed Footings:

    a. Bearing Elevation: Observe that piers are founded in proper bearing strata as defined in the Geotechnical Report and that bottom of hole is clean and properly formed. Recommend appropriate action if specified bearing elevation does not provide proper strength.
    b. Bell and Shaft Sizes: Verify that the shaft and bell diameters are within specified tolerances.
    c. Shaft Stability: Observe the shaft sides as drilling proceeds and recommend appropriate action if sloughing becomes excessive.
    d. Concrete Quantities: Record quantity of concrete placed in each pier and compare against theoretical quantity required. Report discrepancies to Engineer.
    e. Placement Method: Observe that piers are placed by approved methods as defined in the Geotechnical Report and in the specifications. Confirm that casings are being used as recommended in the Geotechnical Report. Confirm that concrete is not being contaminated by soil encroachment into pier.
    f. Report: For each drilled shaft installed, prepare and submit a report indicating the following information: pier number and location, pier shaft diameter, pier underream diameter (if applicable), bottom elevation, top elevation, pier length, theoretical volume of concrete in pier, estimate of actual volume of concrete placed, reinforcing steel size and depth actually placed, drilling start and finish time, concreting start and finish time, variation from specified tolerances including surveyed location and plumbness, construction method (dry method, casing method, or slurry displacement method), groundwater conditions (rate of water infiltration and depth of water in hole prior to concreting for dry piers; water elevation in hole for wet piers), elevation of top and bottom of any casing left in place, description of temporary or permanent casing (including purpose, diameter, wall thickness and length), description and elevation of any obstructions encountered and whether removal was obtained, description of pier bottom including amount and extent of loose material, method of concrete placement, any difficulties encountered in drilling or concreting operations, and any deviations from specifications. The report shall include the name of the project, the name of the drilling

contractor and the name of the field superintendent. The report shall be signed by a licensed engineer in the state where the project is located.

D. Pile Load Test: The Geotechnical Engineer shall supervise a pile load test(s) as specified on the drawings according to ASTM D1143-74. He shall submit a written report of his findings to the parties listed above and report by telephone or e-mail to the Engineer, the results of the pile load tests. Refer to the Pile Specification for additional requirements of the test.

3.3 REINFORCING STEEL

A. Mechanical Tension Splices: The City's Testing Laboratory shall provide 100% visual inspection of mechanical tension splices on the project. Inspection shall verify compliance with specifications and conformance with the manufacturer's recommendations for installation after consulting with the manufacturer, who is to be present for the first installation of the splice on the project. The Laboratory shall additionally conduct monotonic tension tests in accordance with ASTM A1034 of mechanical tension splices of the type as specified on the structural drawings. It is not necessary that the specimens to be tested are production splices, however, the specimens to be tested shall have been made by the Contractor's personnel under field conditions. The rate of testing shall be as follows:

1. Two specimens for the first 50 splices (or fraction thereof for small jobs) at the beginning of the job. Splices not meeting tension requirements shall be retested at Contractor's expense until all splices meet the tension requirements.

2. One specimen for every 100 (or fraction thereof) additional splices occurring on the job. Any splices not meeting tension requirements shall be retested at Contractors expense until all splices have passed the test.

3. A minimum of one test specimen shall also be selected from transition splices (splices of one bar size to another bar size), if any.

B. Compression Butt Splices: The City's Testing Laboratory shall provide 100% visual inspection of compression butt splices on the job. Inspection shall verify splice conformance with the requirements for end bearing splices as set forth in ACI 318 Building Code Requirements for Reinforced Concrete as well as the manufacturer's instructions.

C. Reinforcing Steel Field Inspection: The City's Testing Laboratory or designated Special Inspector shall inspect 100 % of reinforcement before each concrete pour to verify the information noted below. Inspection reports shall be prepared and distributed in accordance with the local building code and as specified in this specification.

1. Primary and secondary, longitudinal reinforcement has correct size and number in proper layers.

2. Longitudinal reinforcement has correct length and lap.

3. Ties and stirrups are of correct size, spacing, and number and have the proper termination-hook geometry.

4. Unscheduled face reinforcement in beams are provided and are of correct size, number and spacing and have the proper end terminations.

5. Proper hooks are provided at bar ends as detailed.

6. Reinforcement is properly supported and braced to formwork to prevent movement during concreting operation.

7. Reinforcement has proper cover.

8. Sufficient spacing between reinforcement for concrete placement.

9. Dowel reinforcement is of proper size, at proper spacing, and has proper lap length and embedment length.

10. Welded wire reinforcement is composed of flat sheets, has proper wire gage and spacing, is properly supported, and is properly lapped with a length of one square plus two inches.

11. Proper Construction/Control/Expansion joint spacing and reinforcement.

12. Reinforcement around embedded items is erected according to details.

13. Welded reinforcement has been done according to AWS requirements. Review the Welding Procedure Specification (WPS) submitted by the contractor for any reinforcing steel other than ASTM A 706 that is proposed to be welded for consistency with acceptable welding practices and the AWS.

14. Proper installation of flat-slab shear-head reinforcement

3.4 CONCRETE MATERIALS AND POURED IN PLACE CONCRETE

A. Concrete Mix Designs: The City's Testing Laboratory shall review the submitted mix designs for conformance to the specifications and for suitability for use in the project. The Testing Laboratory shall attend the Mix Design Conference and the Pre-Concrete Conference as noted in the Cast-in-Place Concrete Specification.

B. Concrete Batch Plant Inspection: An initial batch plant inspection shall be made by the City's Testing Laboratory prior to the start of concrete work. The scope of batch plant inspection shall include the following:

1. Inspection of Batch Plant Facilities: The Laboratory shall inspect batch plant facilities proposed for use in the work and report in writing inspection results to the Architect, Engineer, and City for approval. The inspection shall confirm the batch plant conforms to the standards set forth in ASTM C94 and can show proof of certification by the National Concrete Ready Mix Association. Inspection shall include:

a. Batch Plant operations and equipment
b. Truck mixers
c. Scales
d. Stockpile placement
e. Material storage
f. Admixture dispensers

2. Multiple Batch Plants: The Contractor shall reimburse the City for the costs accrued to the City's Testing Laboratory for visits to more than 1 batch plant.

C. Job Site Inspection: The scope of the work to be performed by the inspector on the jobsite shall be as follows:

1. Prior to Concrete Placing

a. Spread Footings
(1) Verify footing dimension.
(2) Verify top of footing elevation.
(3) Verify that forms are plumb and straight, braced against movement, and lubricated for removal.
(4) Inspect reinforcement per REINFORCING STEEL section.
c. Slab-on-Grade
(1) Verify that moisture retarder is provided, is lapped properly, and is not torn or punctured.
(2) Verify formwork at turndowns and slab edges is plumb and straight, braced against movement and lubricated for removal.
(3) Inspect reinforcement per REINFORCING STEEL section.
(4) Verify there is no standing water or debris in pour area.

2. On-Site Concrete Material Testing and Inspection

a. Verify that the Contractor is following appropriate concreting practices consistent with any extreme environmental conditions at the point of placement in the structure as defined below.
b. Inspect concrete upon arrival to verify that the proper concrete mix number, type of concrete, concrete strength, and that it is meeting job specifications, is being placed at the proper location. Report concrete not meeting the specified requirements and immediately notify the Contractor, Batch Plant Inspector, Architect, Engineer, and City.
c. Inspect plastic concrete upon arrival at the jobsite to verify proper batching. Observe mix consistency and adding of water as required to achieve target slumps in mix designs. Record the amount of water added and note if it exceeds that allowed in the mix design. The responsibility for adding water to trucks at the job site shall rest only with the Contractor's designated representative. The Contractor is responsible that all concrete placed in the field is in conformance to the Contract Documents.
d. Obtain concrete test cylinders as specified below.
e. Perform tests to determine slump, concrete temperature, unit weight, and air entrainment as specified below. The slump tests shall be made on concrete taken from the same location from which the concrete for the test cylinders is obtained.
f. Record information for concrete test reports as specified below.
g. Pick up and transport to Laboratory, cylinders cast the previous day.

3. During concrete placing, provide continuous monitoring to:

a. Verify that the concrete is not over 90 minutes old at the time of placement.
b. Verify that Hot-Weather or Cold-Weather techniques are being applied as required.
c. Verify that concrete deposited is uniform and that vertical drop does not exceed six feet and is not permitted to drop freely over reinforcement causing segregation.

d. Verify that there are no cold joints.
e. Verify that the concrete is properly vibrated.
f. Verify that the finishing of the concrete surface is done according to specifications.
g. Verify that sawcut control joints on slab-on-grades are cut within 12 hours of placement.
h. Verify that the formwork has remained stable during the concreting operation.
i. Inspect bolts embedded in concrete prior to and during concrete placement for proper grade, size and length and verification they have been properly installed to the specified embedment.

4. The job site inspector shall report any irregularities that occur in the concrete at the job site or test results to the Contractor, Architect, City, and Engineer.

D. Concrete Test Cylinders: The City's Testing Laboratory shall mold and test concrete test cylinders as described below.

1. Cylinder Molding and Testing: Cylinders for strength tests shall be molded and Laboratory cured in accordance with ASTM C31 and tested in accordance with ASTM C39. Cylinders may be either 6" in diameter by 12" or 4" in diameter by 8", however, the diameter of the cylinder shall be at least three times the nominal maximum size of the coarse aggregate in the mix tested. All of the cylinders for each class of concrete shall be of the same dimension for all sets of that class.

2. Field Samples: Field samples for strength tests shall be taken in accordance with ASTM C172.

3. Frequency of Testing: Each set of test cylinders shall consist of a minimum of four standard test cylinders. A set of test cylinders shall be made according to the following minimum frequency guidelines:

a. One set for each class of concrete taken not less than once a day.
b. Mat Foundation: One set for each 250 cubic yards or fraction thereof.
c. Piers, Piles, Underreamed Footings: One set for each 50 cubic yards or fraction thereof.
d. Pressure-injected Footings: One set for each 50 cubic yards or fraction thereof.
e. Spread Footings: One set for each 50 cubic yards or fraction thereof
f. Floors: One set for each 150 cubic yards or fraction thereof but not less than one set for each 5000 square foot of floor area.
n. If the total volume of concrete is such that the frequency of testing as specified above would provide less than five strength tests for a given class of concrete, tests shall be made from at least five randomly selected batches or from each batch if fewer than five batches are used.
o. The above frequencies assume that one batch plant will be used for each pour. If more than one batch plant is used, the frequencies cited above shall apply for each plant used.

4. The cylinders shall be numbered, dated, and the point of concrete placement in the building recorded.

5. For concrete specified on the drawings to reach the required strength at 28 days, break one cylinder of the set at seven days, two 6" by 12" cylinders or three 4" by 8" cylinders at 28 days, and one kept in reserve for testing at the Engineers direction.

6. For concrete specified on the drawings to reach the required strength at 56 days, break one cylinder of the set at seven days, one cylinder at 28 days, two 6" by 12" cylinders or three 4" by 8" cylinders at 56 days, and one kept in reserve for testing at the Engineers direction.

7. For concrete specified on the drawings to reach the required strength at 90 days, break one cylinder of the set at seven days, one cylinder at 28 days, one cylinder at 56 days, two 6" by 12" cylinders or three 4" by 8" cylinders at 90 days, and one kept in reserve for testing at the Engineers direction.

8. Cylinder Storage Box: The Contractor shall be responsible for providing a protected concrete cylinder wooden storage box at a point on the job site mutually agreeable with the Testing Laboratory for the purpose of storing concrete cylinders until they are transported to the Laboratory. The box shall be constructed and equipped to maintain the environment specified for initial curing in ASTM C31.

9. Transporting Cylinders: The City's Testing Laboratory shall be responsible for transporting the cylinders to the Laboratory in a protected environment such that no damage or ill effect will occur to the concrete cylinders including loss of moisture, freezing temperatures or jarring.

10. Information on Concrete Test Reports: The City's Testing Laboratory shall make and distribute concrete test reports after each job cylinder is broken. Such reports shall contain the following information:
    a. Truck number and ticket number
    b. Concrete Batch Plant
    c. Mix design number
    d. Accurate location of pour in the structure
    e. Strength requirement
    f. Date cylinders made and broken
    g. Technician making cylinders
    h. Concrete temperature at placing
    i. Air temperature at point of placement in the structure
    j. Amount of water added to the truck at the batch plant and at the site and whether or not it exceeds the amount allowed by the mix design
    k. Slump
    l. Unit weight
    m. Air content
    n. Cylinder compressive strengths with type of failure if concrete does not meet Specification requirements. Seven day breaks are to be flagged if they are less than 60% of the required 28 day strength. 28 day breaks are to be flagged if either cylinder fails to meet Specification requirements.

11. Standards for Tests of Concrete :

    a. Slump Tests: Slump Tests (ASTM C143) shall be made at the beginning of concrete placement for each batch plant and for each set of test cylinders made. The slump test shall be made from concrete taken from the end of the concrete truck chute. The concrete shall be considered acceptable if the slump is within plus or minus 1 inch of the slump noted on the mix design submittal form for that class of concrete.
    b. Air Entrainment: Air entrainment tests (ASTM C231 or C173, C173 only for lightweight concrete) shall be made at the same time slump tests are made as cited above.
    c. Concrete Temperature: Concrete temperature at placement shall be measured (ASTM C1064) at the same time slump tests are made as

cited above.

d. Unit Weight Test: ASTM C138

12. Evaluation and Acceptance of Concrete:

a. Strength Test: A strength test shall be defined as the average strength of two cylinder breaks from each set of cylinders tested at the time indicated above.

b. Quality Control Charts and Logs: The City's Testing Laboratory shall keep the following quality control logs and charts for each class of concrete containing more than 2,000 cubic yards. The records shall be kept for each batch plant and submitted on a weekly basis with cylinder test reports:

(1) Number of strength tests made to date.

(2) Strength test results containing the average of all strength tests to date, the high test result, the low test result, the standard deviation, and the coefficient of variation.

(3) Number of tests under specified strength.

(4) A histogram plotting the number of strength test cylinders versus compressive strength.

(5) Quality control chart plotting compressive strength test results for each test.
results.

(7) Quality control chart plotting moving average for range where each point plotted is the average of 10 previous ranges.

c. Acceptance Criteria: The strength level of an individual class of concrete shall be considered satisfactory if both of the following requirements are met:

(1) The average of all sets of three consecutive strength tests equal or exceed the required f'c.

(2) No individual strength test falls below the required f'c by more than the greater of 10% of f'c or 500 PSI.

d. If either of the above requirements is not met, the Testing Laboratory shall immediately notify the Engineer by telephone. Steps shall immediately be taken to increase the average of subsequent strength tests.

E. Investigation of Low Strength Concrete Test Results:

1. Cost of Investigations for Low Strength Concrete: The Contractor shall reimburse the City for the costs of investigations of low strength concrete, as defined above.

2. Scope of Investigations: See Specification Section 03300, Cast-In-Place Concrete, for the investigations that may be required by the Engineer. The City's Testing Laboratory will conduct these investigations.

F. Causes for Rejection of Concrete: The Contractor shall reject concrete delivered to the site for any of the following reasons:

1. Wrong class of concrete (incorrect mix design number).

2. Environmental Conditions: Environmental condition limits shall be as follows unless appropriate provisions in concreting practices have been made for cold or hot weather:

a. Cold Weather: Air temperature must be 40°F and rising or the average daily temperature cannot have been lower than 40°F for 3 consecutive days unless the temperature rose above 50°F for at least one-half of any of those 24 hour periods.

b. Hot Weather: Environmental conditions must be such that cause an evaporation rate from the concrete surface of 0.2 lb./sq. ft./hr. or less as determined by Figure 2.1.5 in ACI 305R-91.

Concrete may be placed at other environmental condition ranges only with approval of the job inspector for the City's Testing Laboratory or other duly appointed representative.

3. Concrete with temperatures exceeding 95°F shall not be placed in the structure.

4. Air contents outside the limits specified in the mix designs.

5. Slumps outside the limits specified.
the Laboratory job inspector or other duly appointed representative.

G. Concrete Batch Trip Tickets: Concrete batch trip tickets shall be collected and retained by the Contractor. Compressive strength, slump, air, and temperature tests shall be identified by reference to a particular trip ticket. Tickets shall contain the information specified in ASTM C94. Each ticket shall also show the amount of water that may be added in the field for the entire batch that will not exceed the specified water cement ratio for the design mix. The Contractor and City's Testing Laboratory shall immediately notify the Architect/Engineer and each other of tickets not meeting the criteria specified.

3.9 STRUCTURAL STEEL

A. Contract Obligations:

1. City Responsibility: The City shall pay for initial shop and field inspections and tests as required during the fabrication and erection of the structural steel. Laboratory of the Fabricator's work shall be in sequence, timely, and performed in such a manner so that corrections can be made without delaying the progress of the work. Inspections shall be performed by qualified technicians with a minimum of two years experience in structural steel testing and inspection. See "Qualifications of Testing Laboratory" section for special requirements for welding inspectors. The Testing Laboratory shall provide test reports of inspections. All test reports shall indicate types and locations of defects found during inspection, the measures required and performed to correct such defects, statements of final approval of welding and bolting of shop and field connections, and other fabrication and erection data pertinent to the safe and proper welding and bolting of shop and field connections. In addition to the parties listed in this Specification the Fabricator and Erector shall receive copies of the test reports.

2. Rejection of Material or Workmanship: The City, Architect, Engineer, and Testing Laboratory reserve the right to reject any material or workmanship not in conformance with the Contract Documents at any time during the progress of the work. However, this provision does not allow waiving the obligation for timely, in sequence inspections.

B. Shop Inspection and Testing: The City's Testing Laboratory shall provide the following inspections at the designated fabrication shops:

1. Shop Inspection Waiver: The requirement to perform fabricating shop inspection may be waived if the Fabricator produces evidence from the Building Official of being a registered, approved fabricating shop and if allowed by the Engineer.

2. An initial shop inspection prior to the start of any fabricating work shall be made to accomplish the following:

   a. Verify the fabrication shop's certification from AISC.
   b. Verify that the fabricator's fabrication and quality control procedures provide a sound basis for inspection control of workmanship and of the ability to conform to construction documents and industry standards. Review the procedures for completeness and adequacy relative to code requirements for the fabricator's finished product.
   c. Perform steps 1, 2 and 3 of welding inspection duties described below in "Weld Inspection and Process Monitoring" when shop welding is to be performed.
   d. Perform step 1 of bolt inspection duties described below in "High-Strength Bolting Inspection and Testing" when shop bolting involves joints that are designated on the plans as "Pretensioned" or "Slip-Critical".

3. Process Monitoring:

   a. Provide continuous monitoring of welding for all CJP,PJP, Multipass fillet welds and Single-pass fillet welds greater than 5/16 inch as described below in the Weld Inspection and Testing section.
   b. Periodically monitor welding of single-pass fillet welds that are less than or equal to 5/16 inch.
   c. Provide continuous monitoring of high-strength bolt installation in pre-tensioned or slip-critical joints using turn-of-the-nut without matchmarking or calibrated wrench method of bolt installation.
   d. Provide periodic verification of specified camber of steel beams.

G. Field Inspection: The City's Testing Laboratory shall provide the following inspections in the field:

1. Obtain the planned erection procedure, and review with the Erectors supervisory personnel.

2. Check the installation of base plates for proper leveling, grout type, and grout application.

3. Check structural steel and cold-formed steel deck as received in the field for possible shipping damage, workmanship, and identification marking to conform to AISC 360 for structural steel and as specified ASTM standards for other steel and steel deck.

4. Verify that surveys are occurring as specified to check plumbness and frame alignment as erection progresses. Review the submitted survey report.

5. Periodically inspect the steel frame for such items as bracing and stiffening details, member locations, and joint details at each connection for compliance with approved construction documents.

6. Inspect 100% of the column compression and base joints for verification that gaps in contact bearing do not exceed 1/16 inch. Gaps greater than 1/16 inch but less than 1/4 inch shall be reported to the City and Engineer for assessment. All gaps greater than 1/4 inch shall be shimmed with non-tapered mild steel shims.

7. Endeavor to guard the City against the Contractor cutting, grinding, reaming, or making any other field modification to structural steel without the prior approval of the Engineer. Report any noted unauthorized modifications to the City and Engineer.

D. Weld Inspection and Process Monitoring: The City's Testing Laboratory shall make the following inspections of the welds and welding processes. Welds performed in the fabricating shop may be inspected in the field unless continuous monitoring of the welding process is herein specified or if access in the field due to other work or shop finishes makes field inspection impractical:

1. Approve Welding Procedure Specifications submitted by the Contractor. Approve any changes submitted by the Contractor to any WPS that has already been approved. Obtain the Welding Procedure Qualification Record (WPQR) for each successful WPS qualification.

3. Verify welder qualifications either by certification and/or by retesting. Obtain welder certificates.

4. Verify welding electrodes to be used and other welding consumables as the job progresses.

5. Periodically observe joint preparation, assembly practice, welding techniques including preheating and sequence, and the performance of welders with sufficient frequency to assure compliance with code and contract document requirements. Check preheating to assure conformance with AWS D1.1, Section 5.6. Verify procedure for control of distortion and shrinkage stresses.
moment connections and column splices.

6. Periodically provide visual inspection of the root pass of partial and complete joint penetration welds.

7. Visually inspect 100 % of welds for proper size, length, location, and weld quality in accordance with AWS D1.1 requirements. Unless specifically noted otherwise, all welding shall be considered statically loaded nontubular connections

8. Visually inspect 100% of the welding or other attachment method of steel deck to the structure and at sidelaps.

9. Visually inspect 100% of completed shear connectors in each beam and perform bend tests as required according to inspection procedures outlined in AWS D1.1. In addition, perform field bend tests on an additional 2% of completed shear connectors in each beam but not less than one connector per beam

10. Visually inspect 100% of the welds of anchors to embedded plates that are to be cast into concrete elements.

11. In addition to the inspections above, perform the following:

    a. Continuously monitor and observe joint preparation, assembly practice, welding techniques including preheating and sequence, and the performance of welders for 100% of complete and partial joint penetration welds, multipass fillet welds, and single-pass fillet welds greater than 5/16 inch. Check preheating to assure conformance with AWS D1.1, Section 5.6. Verify procedure for control of distortion and shrinkage stresses.
    b. Periodically monitor welding of single-pass fillet welds that are less than or equal to 5/16 inch.

c. Periodically monitor the method of attaching the steel floor and roof decking to the structural frame.
d. Periodically monitor the welding of headed studs to floor beams.

12. Weld Verification Testing Scope:

a. Perform nondestructive examination services using a qualified technician with the necessary equipment to perform the following:
   (1) Nondestructive examination conducted in accordance with the specific requirements for the item being examined including radiographic (RT), ultrasonic (UT), magnetic particle (MT), or dye-penetrant inspection (PT). Nondestructive inspection procedures shall conform to AWS D1.1.
   (2) Interpret, record, and report results of the nondestructive tests.
   (3) Mark for repair, any area not meeting Specification requirements. Correction of rejected welds shall be made in accordance with AWS D1.1.
   (4) Re-examine repair areas and interpret, record, and report the results of examinations of repair welds.
   (5) Verify that quality of welds meet the requirements of AWS D1.1..
b. Fillet welds. provide the following:
   (1) MT test a minimum of 10% of the length of each fillet weld exceeding 5/16". but need not exceed 10% of all such welds, except as provided in (3) below.
   (3) Increase MT testing rate for welders having a high rejection rate as required to ensure acceptable welds.
c. Partial joint penetration welds, including flare-bevel groove welds. provide the following:
   (1) MT test a minimum of 25% of the length of each PJP weld exceeding 5/16" effective throat.
   (2) Periodic MT testing of representative PJP welds 5/16” and less but need not exceed 10% of all such welds, except as provided in (3) below.
   (3) Increase MT testing rate for welders having a high rejection rate as required to ensure acceptable welds.
d. Complete joint penetration welds. provide the following:
   (1) All CJP welds exceeding 5/16" thickness shall be 100% UT tested per AWS D1.1 Chapter 6 Part F. The testing laboratory shall review the CJP joints to determine where geometry or accessibility precludes the use of standard scanning patterns per AWS D1.1 Chapter 6 Part F. At these locations the testing laboratory shall develop and submit for approval a written testing procedure in accordance with AWS D1.1 Annex K.
   (2) Periodic MT testing of representative CJP welds 5/16” and less not to exceed 10% of all such welds, except as provided in (3) below.
   (3) Increase MT testing rate for welders having a high rejection rate as required to ensure acceptable welds.
e. Acceptance Criteria
   (1) Visual, MT, PT shall be per AWS D1.1 Table 6.1.
   (2) UT testing shall be per AWS D1.1 6.13.1 and Table 6.2.
f. Base metal thicker than 1.5 inches, where subjected to through-thickness weld shrinkage strains, shall be UT tested for discontinuities behind and adjacent to such welds. UT testing shall occur no sooner than 24 hours after the weld has cooled to ambient temperatures. Any material discontinuities shall be recorded on the basis of ASTM A435 or ASTM A898 (Level 1 criteria) and reported for Engineer disposition.
g. Welds of Anchors to Embedded Plates:

(1) Headed Studs: Perform field bend tests according to AWS D1.1 on 2% of the studs welded to plates, but not less than one stud per plate.

(2) Deformed Bar Anchors: Perform MT testing on 10% of deformed bar anchors larger than #5 bar.

h. The costs of repairing defective welds and the costs of retesting by the Testing Laboratory providing services for the City shall be borne by the Contractor. If removal of a backing strip is required by the Testing Laboratory to investigate a suspected weld defect, such cost shall be borne by the Contractor.

E. High-Strength Bolting Inspection and Testing: The City's Testing Laboratory shall perform the following inspections and test for connections joined with high-strength bolting. Bolting performed in the shop may be inspected in the field unless continuous monitoring of the bolting operation is herein specified:

1. Observe preinstallation verification testing of the pretensioning method to be used in accordance with the requirements of the "Specification for Structural Joints Using ASTM A325 and A490 Bolts".

3. Inspect bolt installation for 100% of high strength bolted connections according to inspection procedures outlined in the "Specification for Structural Joints Using ASTM A325 or A490 Bolts".

4. Perform Arbitration Testing and Inspection according to procedures outlined in the "Specification for Structural Joints using ASTM A325 or A490 Bolts" when a disagreement exists between the Testing Laboratory and the Fabricator as to the minimum tension of installed bolts that have been inspected according to paragraph above.

5. Monitoring of Bolting Installation:

a. Continuous Monitoring: The City's Testing Laboratory shall be continuously present and monitor the bolting installation for compliance with the selected procedure for installation as specified in the "Specification for Structural Joints Using ASTM A325 and A490 Bolts" for joints using high-strength bolts that are designated on the plans as Pretensioned (PT) or Slip-Critical (SC) type joints and that are being installed using the calibrated wrench method or the turn-of-nut without matchmarking method of installation.

b. Periodic Monitoring: All other joint types and bolt installation methods may be monitored on a periodic basis.

3.12 MASONRY

A. Verification Testing Frequency: Verification of masonry strength (f'_m) will be performed at the beginning of masonry construction and during construction for each 5000 square feet of wall area or portion thereof.

B. Concrete Masonry Unit: For each type of concrete masonry unit indicated, verify compliance with ASTM C90 and the strength required by design. Verification may be by reviewing certification from unit producer showing compliance.

C. Mortar:

1. Throughout construction, verify the proportions of the site-prepared mortar mix comply with the requirements of ASTM C270 for the type specified.

2. Verify the proportions of materials in premixed or preblended mortar comply with

the requirements of ASTM C270 for the type specified as delivered to the site.

D. Grout:

1. Prior to grouting, verify the proportions of site-prepared grout mix comply with the requirements of ASTM C476 for each type of grout used.

2. Verify the proportions of materials in premixed or preblended grout comply with the requirements of ASTM C476 as delivered to the site.

E. Prism Test Method:

1. Compression Test: For each type of wall construction indicated for testing, test representative masonry prisms by methods of sampling and testing of ASTM C1314, and as follows:

   a. Prepare one set of prisms for testing at 7 days and one set for testing at 28 days.
   b. For concrete masonry prisms adhere to requirements as specified under preconstruction testing. Build prisms on job using same materials and methods as for wall construction. Store prisms in air at temperature not less than 65°F in a facility supplied by the contractor where they will be undisturbed for seven (7) days. After seven (7) days, transport to laboratory in a manner which will not disturb mortar bond.
   c. Cap each prism with suitable material to provide bearing surfaces on each end.
      (1) Plane within 0.003 inch
      (2) Approximately perpendicular to the axis of the prism.
   d. The preparation of prisms shall be observed by the testing agency that will test the prisms.

2. Report test results in writing and in form specified under each test method, to Architect and Contractor, on same day tests are made.

3. Retests: Where prism tests indicate non-compliance with specified requirements, additional testing shall be performed at the frequency of two additional tests for each unsatisfactory test. The cost of such additional testing shall be the responsibility of the Contractor. Where retesting fails to indicate conformance with specified requirements, any masonry construction represented by unsatisfactory tests shall be removed and replaced with acceptable masonry construction.

F. Mortar Joints: Throughout construction, verify that mortar joints are being prepared in accordance with these specifications and ACI 530.1/ASCE 6/TMS 602.

G. Reinforcement and Connectors: Prior to grouting, verify the size, grade, type and placement of reinforcement and connectors is in compliance with specified requirements.

H. Grouting: Prior to any grouting procedure, the grout space shall be inspected to verify that it is clean and that cleanouts, if required, are in place and conform to requirements. Verify through continuous inspection that the placement of grout is in compliance with the requirements of the contract specifications and ACI 530.1/ASCE 6/TMS 602.

I. Anchors: Continuously inspect the installation of anchors including anchors of masonry to other structural members, frames, or construction verifying their type, size, location, and installation.

J. Anchors: Periodically verify the type, size and location of anchors including anchors of masonry to other structural members, frames, or construction is in compliance with specified requirements.

K. Welding of Reinforcing Bars: Continuously observe the welding of reinforcing bars.

L. Installed items: Verify that installed flashing, weep holes, construction joints, control joints and wall vents are installed in accordance with specifications.

M. Prestressed Unit Masonry: The following inspections and test shall be made for unit masonry that is shown on the drawings to be prestressed:

1. Reinforcment: Prior to grouting, verify the grade, size, and location of prestressing tendons.

2. Prestressing: Continuously observe the application of prestressing force and verify the proper force was applied to tendons.

3. Grout for Bonded Tendons: Prior to grouting, verify the proportion of site-prepared prestressing grout is in compliance.

4. Grouting: Through continuous observation, verify that the grouting of bonded tendons complies with the requirements of ACI 530.1/ASCE 6/TMS 602.

END OF SECTION 01450

DIVISION 1 GENERAL REQUIREMENTS

SECTION 01700 - PROJECT CLOSEOUT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including GENERAL and SUPPLEMENTARY CONDITIONS and other DIVISION 01Specification Sections, apply to this Section.

1. Cleaning in Section 01710.
2. Submittals in Section 01340.
3. Contractor's Use of the Premises in Section 01015.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for project closeout, including but not limited to:

1. Inspection procedures.
2. Project record document submittals.
3. Operating and Maintenance Manual submittal.
4. Submittal of warranties.
5. Final cleaning.

B. Closeout requirements for specific construction activities are included in the appropriate Technical Sections in Divisions 2 through 16.

1.3 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for certification of Substantial Completion, complete the following. List exceptions in the request.

1. In the "Request for Payment" that coincides with, or first follows, the date Substantial Completion is claimed, show 100 percent completion for the portion of the Contracted Work claimed as substantially complete. Include supporting documentation for completion as indicated in these Contract Documents and a statement showing an accounting of changes to the Contract Sum.

a. If 100 percent completion cannot be shown, include a list of incomplete items, the value of incomplete construction, and reasons the Work is not complete.

b. Include a list of incomplete or outstanding works established during a Pre-final walk-thru as required in Section 32 - INSPECTION AND FINAL

INSPECTION of the General Conditions, and all supporting evidence or documentation for completion.

2. Advise City of pending insurance change-over requirements.

3. Submit specific warranties, workmanship bonds, maintenance agreements, final certifications and similar documents. Obtain all Building and Safety's sign-offs and submit duplicate copy of the Building and Safety's Inspection Record to the City.

4. Obtain and submit releases from local authorized agencies enabling the City unrestricted use of the Work and access to services and utilities; include the certificate of occupancy, permits or operating certificates and similar releases. Return all Building and Safety's sign-off sheet and Inspection Records to the City.

5. Submit Record Drawings and Record Specification, maintenance manuals, final project photographs, damage or settlement survey, property survey, and similar final record information.

6. Deliver tools, spare parts, extra stock, and similar items.

7. Make final change-over of permanent locks and transmit keys to the City. Advise the City's personnel of change-over in security provisions.

8. Complete start-up testing of systems, and instruction of the City's operating and maintenance personnel. Discontinue or change over and remove temporary facilities from the job-site, along with construction tools, mock-ups, and similar elements.

9. Complete final clean-up requirements, including touch-up painting. Touch-up and otherwise repair and restore marred exposed finishes.

10. Complete all required testing including balancing test, bacteriological analysis, etc. Submit all test reports.

11. Return all original permits and manifests to the City Project Manager.

12. Advise the City of pending changeover of the utility services upon start-up testing of the systems and completion of final inspection, if required.

13. Complete final clean up requirements, including touch-up painting. Touch-up and otherwise repair and restore marred exposed finishes.

14. Make ready to proceed with landscape establishment period Submit the maintenance schedules and logs.

B. Inspection Procedures: The Inspector, with cooperation from the City Project Manager will prepare a Final Inspection Correction list to that effect following inspection, or advise the Contractor of construction that must be completed or corrected before the construction work can be considered complete. The Contract time shall continue to be assessed.

1. The Inspector, and City Project Manager will repeat the inspection when requested and assured that the Contracted Work has been satisfactorily completed.

2. Results of the completed inspection will form the basis of requirements for final acceptance. The Contract time shall stop when all corrections are considered complete by the City.

1.4 FINAL ACCEPTANCE

A. Preliminary Procedures: Before requesting final inspection for certification of final acceptance and final payment, complete the following. List exceptions in the request.

1. Submit the final payment request with releases and supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations where required.

2. Submit an updated final statement, accounting for final additional changes to the Contract Sum.

3. Submit a certified copy of the Inspector's (combined with City Project Manager's) final inspection list of items to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, and the list has been endorsed and dated by the Inspector, the City Project Manager.

4. Submit final meter readings for utilities, a measured record of stored fuel, and similar data as of the date of Substantial Completion, or when the City took possession of and responsibility for corresponding elements of the Work.

5. Submit consent of surety to final payment.

6. Submit a final liquidated damages settlement statement.

7. Submit evidence of final, continuing insurance coverage complying with insurance requirements.

8. Return all original permits documents to the City.

9. Submit all required certified weekly payroll records, ethnic composition of work force reports.

B. Reinspection Procedure: The Inspector and City Project Manager will re-inspect the Contracted Work upon receipt of notice that the Work, including inspection list items from earlier inspections, has been completed, except items whose completion has been delayed because of circumstances acceptable to the City Project Manager.

1. Upon completion of reinspection, the Project Manager will prepare a "Certificate of Final Acceptance", or advise the Contractor of Contracted Work that is incomplete or of obligations that have not been fulfilled but are required for final acceptance.

2. If necessary, reinspection will be repeated.

1.5 RECORD DOCUMENTS SUBMITTALS

A. General: Do not use record documents for construction purposes; protect from deterioration and loss in a secure, fire-resistive location; provide access to record documents for the City Project Manager's reference during normal working hours. All record documents shall be maintained with current status during construction and submitted monthly for City Project Manager's approval as required in the Contract Documents. All new information shall be recorded as soon as they are made or approved by the City regardless that the work is completed or not. Any change to this information shall be again recorded at no cost to the City.

B. Record Drawings: Maintain a clean, undamaged set of blue or black line white-prints of Contract Drawings and Shop Drawings. Mark the set to show the actual installation where the installation varies substantially from the Contracted Work as originally shown. Mark whichever drawing is most capable of showing conditions fully and accurately; where Shop Drawings are used, record a cross-reference at the corresponding location on the Contract Drawings. Give particular attention to concealed elements that would be difficult to measure and record at a later date. Upon completion of the work, submit record drawings, and record Specification to the City Project Manager for review and for the City’s records.

1. Record drawings shall be updated and submitted prior to each monthly request for payment and if not so submitted the payment will be denied.

2. Mark record sets with red erasable pencil; use other colors to distinguish between variations in separate categories of the Work.

3. Mark new information that is important to the City, including detail from "Request-for-Information" but was not shown on Contract Drawings or Shop Drawings as soon as it is made available. Any subsequent revision or changes, to the details from an earlier "Request-for-Information", shall also be marked immediately on the Record Drawings.

4. Note related finalized or pending "Change Order" numbers where applicable.

5. Organize record drawing sheets into manageable sets, bind with durable paper cover sheets, and print suitable titles, dates and other identification on the cover of each set.

6. Update drawing index to reflect any additional drawings or shop drawings added to the record drawing package.

7. Note all addenda, drawing modification, etc. on record drawings.

8. Where Shop Drawings are used for actual performance of the contract work and are most capable of showing actual details, conditions, and dimensions fully and accurately, record all the Shop Drawings and place them in good order with the record drawings. Properly identified and bound of field, and ready for continued use and reference.

9. After all correction works are completed and inspected, City Project Manager shall establish the construction completion date.

10. As a condition precedent to the City's release of retained funds, final record drawings shall be submitted in complete and comprehensive form satisfactory to the City.

C. Record Specifications: Maintain one complete copy of the Specification, including addenda, and one copy of other written construction documents such as "Change Orders" and modifications issued in printed form during construction. Mark these documents to show substantial variations in actual Contracted Work performed in comparison with the text of the Specifications and modifications. Give particular attention to substitutions, selection of options and similar information on elements that are concealed or cannot otherwise be readily discerned later by direct observation. Note related Record Drawing information and Product Data.

1. Upon completion of the Work, submit record Specifications to the City Project Manager for the City's records.

D. Record Product Data: Maintain one copy of each Product Data submittal. Mark these documents to show significant variations

in actual Work performed in comparison with information submitted. Include variations in products delivered to the site, and from the manufacturer's installation instructions and recommendations. Give particular attention to concealed products and portions of the Work, which cannot otherwise be readily discerned later by direct observation. Note related Change Orders and mark-up of Record Drawings and Specifications.

1. Upon completion of mark-up, submit complete set of Record Product Data to the City Project Manager for the City's records.

E. Record Sample Submitted: Immediately prior to the date or dates of Substantial Completion, the Contractor will meet at the job-site with the City Project Manager and the City's personnel to determine which of the submitted Samples that have been maintained during progress of the Work are to be transmitted to the City for record purposes. Comply with delivery to the City's Sample storage area.

F. Miscellaneous Record Submittals: Refer to other Specification Sections for requirements of miscellaneous record-keeping and submittals in connection with actual performance of the Contract Work. Immediately, prior to the date or dates of Substantial Completion, complete miscellaneous records and place in good order, properly identified and bound of filed, ready for continued use and reference. Submit to the City Project Manager for the City's records.

G. Maintenance Manuals: Organize operating and maintenance data into suitable sets of manageable size. Provide a Table of Contents with page numbers for each manuals. Bind properly indexed data in individual heavy-duty 2-inch, 3-ring vinyl-covered binders, with pocket folders for folded sheet information. Drawings will not be accepted unless they are folded and placed in the pocket. Mark appropriate identification on front and spine of each binder (such as Field Operations Center Contact Number, Name of Product/ item, Volume Number, etc.). Include the following types of information:

1. Emergency instructions.
2. Spare parts list.
3. Copies of warranties and permit.
4. Wiring diagrams.
5. Recommended "turn around" cycles.
6. Inspection procedures.
7. Shop Drawings and Product Data.
8. Fixture lamping schedule.
9. Small scale of As-Built drawing of such operating equipment.

H. Record Schedule: Provide one copy, of a computer diskette, of the Construction Schedule. Record this document to show

the actual schedules and sequences the actual works were performed in comparison with Baseline Construction Schedule approval in accordance with Section 01311- PROGRESS SCHEDULE AND REPORTS.

PART 2 PRODUCTS (Not Applicable)

PART 3 EXECUTION

3.1 CLOSEOUT PROCEDURES

A. Operating and Maintenance Instructions: Arrange for each installer of equipment that requires regular maintenance to meet with the City's personnel to provide instruction in proper operation and maintenance. If installers are not experienced in procedures, provide instruction by manufacturer's representatives. Include a detailed review of the following items:

1. Maintenance Manuals.
2. Serial Numbers
3. Record Documents.
4. Spare parts and materials.
5. Tools.
6. Lubricants.
7. Fuels.
8. Identification systems.
9. Control sequences.
10. Hazards.
11. Cleaning.
12. Warranties and bonds.
13. Maintenance agreements and similar continuing commitments.
14. Permit and Record Documents.

B. As Part of Instruction for Operating Equipment, Demonstrate the Following Procedures:

1. Start-up.
2. Shutdown.
3. Emergency operations.
4. Noise and vibration adjustments.
5. Safety procedures.
6. Economy and efficiency adjustments.
7. Effective energy utilization.

3.2 FINAL CLEANING

A. General: General cleaning during construction is required by the General Conditions and included in Section, "Contractor's Use of the Premises".

-- End of Section --

DIVISION 1 – GENERAL REQUIREMENTS
SECTION 01710 - CLEANING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section, with special attention to the following:

1. Summary of Work: Section 01010.

1.02 RELATED WORK

A. Each Specification Section: Cleaning for specific equipment, products, or elements of the work.

1.03 WORK DESCRIPTION

A. Execute cleaning, during the course of the Work, and at completion of the Work, as required by General Conditions, and as described in Part 3 of this Section.

B. Nothing in this Section or elsewhere in the Contract Documents shall be construed as relieving the Subcontractors of their individual responsibility to perform periodic clean-up of their portion of the Work. Subcontractors shall cooperate with the Contractor to assist in both periodic and final clean up. The Contractor shall enforce this requirement and shall notify each subcontractor of his responsibility for any damage caused by his operations during such cleanups.

C. If the Contractor fails to clean up, the Owner may do so and the cost there of shall be deducted from the Contract Sum.

1.04 DISPOSAL REQUIREMENTS

A. Conduct cleaning and disposal operations to comply with codes, ordinances, regulations, and anti-pollution laws.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Use only those cleaning materials that will not create hazards to health or property and which will not damage surfaces.

B. Use only those cleaning materials and methods recommended by manufacturer of the surface.

C. Use cleaning materials only on surfaces recommended by cleaning material manufacturer.

PART 3 – EXECUTION

3.01 CLEANING DURING CONSTRUCTION

A. Execute daily cleaning to keep the Work, the site and adjacent properties free from accumulations of waste materials, rubbish and windblown debris, resulting from construction operations.

B. Provide on-site containers for the collection of waste materials, debris and rubbish. Remove containers from the site at project completion.

C. Remove waste materials, debris and rubbish from the site as necessary and dispose of at legal disposal areas away from the site.

D. Where work is performed adjacent to occupied areas, contractor shall utilize HEPA vacuums to minimize and control dust levels. Use of other types of vacuums shall not be acceptable.

E. During the course of construction, the building and premises shall present a neat, orderly and workmanlike appearance.

3.02 DUST CONTROL

A. Clean interior spaces prior to the start of finish painting and continue cleaning on an as-need basis until painting is finished.

B. Schedule operations so that dust and other contaminants resulting from cleaning process will not fall on wet or newly coated surfaces.

3.03 FINAL CLEANING

A. Employ skilled workmen for final cleaning.

B. Besides the general broom cleaning and refuse removal, the Contractor shall do the following special cleaning for all trades before the final completion and acceptance of the work.

1. Remove putty stains, soil and paint from all glass and wash and polish same.

2. Clean and polish all finishing hardware.

3. Remove all spots, soil and paint from all ceramic tile work, glazing and mirrors.

4. Clean all plumbing fixtures, accessories and equipment, including all mechanical equipment.

5. Clean all tile, terrazzo, wood, and other finished floors.

6. Clean and vacuum all carpet.

7. Clean premises of all debris and dirt.

8. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels and other foreign materials from sight-exposed interior and exterior surfaces.

9. Polish glossy surfaces to a clear shine.

10. Clean window frames, entrance frames, hollow metal work and all ornamental iron work.

C. Ventilating Systems:

1. Clean permanent filters and replace disposable filters if units were operated during construction.

2. Clean ducts, blower, and coils if units were operated without filters during construction.

D. Broom clean exterior paved surfaces; rake clean other surfaces of the grounds.

E. Prior to final completion, or Owner occupancy, Contractor shall conduct an inspection of sight-exposed interior and exterior surfaces, and all work areas, to verify that the entire Work is clean.

- END OF SECTION -

DIVISION 1 – GENERAL REQUIREMENTS
SECTION 01710 - CLEANING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section, with special attention to the following:

1. Summary of Work: Section 01010.

1.02 RELATED WORK

A. Each Specification Section: Cleaning for specific equipment, products, or elements of the work.

1.03 WORK DESCRIPTION

A. Execute cleaning, during the course of the Work, and at completion of the Work, as required by General Conditions, and as described in Part 3 of this Section.

B. Nothing in this Section or elsewhere in the Contract Documents shall be construed as relieving the Subcontractors of their individual responsibility to perform periodic clean-up of their portion of the Work. Subcontractors shall cooperate with the Contractor to assist in both periodic and final clean up. The Contractor shall enforce this requirement and shall notify each subcontractor of his responsibility for any damage caused by his operations during such cleanups.

C. If the Contractor fails to clean up, the Owner may do so and the cost there of shall be deducted from the Contract Sum.

1.04 DISPOSAL REQUIREMENTS

A. Conduct cleaning and disposal operations to comply with codes, ordinances, regulations, and anti-pollution laws.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Use only those cleaning materials that will not create hazards to health or property and which will not damage surfaces.

B. Use only those cleaning materials and methods recommended by manufacturer of the surface.

C. Use cleaning materials only on surfaces recommended by cleaning material manufacturer.

PART 3 – EXECUTION

3.01 CLEANING DURING CONSTRUCTION

A. Execute daily cleaning to keep the Work, the site and adjacent properties free from accumulations of waste materials, rubbish and windblown debris, resulting from construction operations.

B. Provide on-site containers for the collection of waste materials, debris and rubbish. Remove containers from the site at project completion.

C. Remove waste materials, debris and rubbish from the site as necessary and dispose of at legal disposal areas away from the site.

D. Where work is performed adjacent to occupied areas, contractor shall utilize HEPA vacuums to minimize and control dust levels. Use of other types of vacuums shall not be acceptable.

E. During the course of construction, the building and premises shall present a neat, orderly and workmanlike appearance.

3.02 DUST CONTROL

A. Clean interior spaces prior to the start of finish painting and continue cleaning on an as-need basis until painting is finished.

B. Schedule operations so that dust and other contaminants resulting from cleaning process will not fall on wet or newly coated surfaces.

3.03 FINAL CLEANING

A. Employ skilled workmen for final cleaning.

B. Besides the general broom cleaning and refuse removal, the Contractor shall do the following special cleaning for all trades before the final completion and acceptance of the work.

1. Remove putty stains, soil and paint from all glass and wash and polish same.

2. Clean and polish all finishing hardware.

3. Remove all spots, soil and paint from all ceramic tile work, glazing and mirrors.

4. Clean all plumbing fixtures, accessories and equipment, including all mechanical equipment.

5. Clean all tile, terrazzo, wood, and other finished floors.

6. Clean and vacuum all carpet.

7. Clean premises of all debris and dirt.

8. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels and other foreign materials from sight-exposed interior and exterior surfaces.

9. Polish glossy surfaces to a clear shine.

10. Clean window frames, entrance frames, hollow metal work and all ornamental iron work.

C. Ventilating Systems:

1. Clean permanent filters and replace disposable filters if units were operated during construction.

2. Clean ducts, blower, and coils if units were operated without filters during construction.

D. Broom clean exterior paved surfaces; rake clean other surfaces of the grounds.

E. Prior to final completion, or Owner occupancy, Contractor shall conduct an inspection of sight-exposed interior and exterior surfaces, and all work areas, to verify that the entire Work is clean.

- END OF SECTION -

SECTION 01731 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes procedural requirements for cutting and patching.

B. Related Sections include the following:

1. Division 01, Section 01732 "Selective Demolition" for demolition of selected portions of the site and built improvements.
2. Divisions 02 through 16 Sections for specific requirements and limitations applicable to cutting and patching individual parts of the Work.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of other Work.

B. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work.

1.4 SUBMITTALS

A. Cutting and Patching Proposal: Submit a proposal describing procedures at least **10** days before the time cutting and patching will be performed, requesting approval to proceed. Include the following information:

1. Extent: Describe cutting and patching, show how they will be performed, and indicate why they cannot be avoided.
2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building's appearance and other significant visual elements.
3. Products: List products to be used and firms or entities that will perform the Work.
4. Dates: Indicate when cutting and patching will be performed.
5. Utility Services and Mechanical/Electrical Systems: List services/systems that cutting and patching procedures will disturb or affect. List services/systems that will be relocated and those that will be temporarily out of service. Indicate how long services/systems will be disrupted.

6. Structural Elements: Where cutting and patching involve adding reinforcement to structural elements, submit details and engineering calculations showing integration of reinforcement with original structure.
7. Architect's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.

1.5 QUALITY ASSURANCE

A. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.

1. <**Insert list of elements that might otherwise be overlooked as structural elements and that require Architect's or Construction Manager's approval of a cutting and patching proposal.**>

B. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.[**Operating elements include the following:**]

1. Primary operational systems and equipment.
2. Air or smoke barriers.
3. Fire-suppression systems.
4. Mechanical systems piping and ducts.
5. Control systems.
6. Communication systems.
7. Conveying systems.
8. Electrical wiring systems.
9. Operating systems of special construction in Division 13 Sections.
10. <**Insert operating system.**>

C. Miscellaneous Elements: Do not cut and patch miscellaneous elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.[**Miscellaneous elements include the following:**]

1. Water, moisture, or vapor barriers.
2. Membranes and flashings.
3. Exterior curtain-wall construction.
4. Equipment supports.
5. Piping, ductwork, vessels, and equipment.
6. Noise- and vibration-control elements and systems.
7. <**Insert miscellaneous element.**>

D. Visual Requirements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction exposed on the exterior or in occupied spaces in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

E. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

1.6 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections.

B. In-Place Materials: Use materials identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will match the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed.

1. Compatibility: Before patching, verify compatibility with and suitability of substrates, including compatibility with in-place finishes or primers.
2. Proceed with installation only after unsafe or unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

C. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

D. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to [**minimize**] [**prevent**] interruption to occupied areas.

3.3 PERFORMANCE

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots as small as possible, neatly to size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Division 2 Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

C. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

a. Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

b. At penetrations of fire rated walls, partitions, ceilings or floor construction, completely seal void with fire rated materials to full thickness of the penetrated element.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.

D. Cleaning: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

END OF SECTION

DIVISION 1 – GENERAL REQUIREMENTS

SECTION 01732 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary General Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Demolition and removal of selected portions of building or structure.
2. Demolition and removal of selected site elements.
3. Salvage of existing items to be reused or recycled.

B. Related Sections include the following:

1. Division 01 Section "Summary" for use of premises and Owner- occupancy requirements.
2. Division 01 Section "Temporary Facilities and Controls" for temporary construction and environmental-protection measures for selective demolition operations.
3. Division 01 Section "Construction Waste Management" for disposal of demolished materials.
4. Division 02 Section "Site Clearing" for site clearing and removal of above- and below-grade improvements.
5. Division 02 Section for demolishing, cutting, patching, or relocating mechanical and electrical items.
6. Division 02 Section "Cutting and Patching" for cutting and patching procedures.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and legally dispose of them off-site, unless indicated to be removed and salvaged or removed and reinstalled.

B. Remove and Salvage: Detach items from existing construction and deliver them to Owner ready for reuse.

C. Remove and Reinstall: Detach items from existing construction, prepare them for reuse, and reinstall them where indicated.

D. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

1.4 MATERIALS OWNERSHIP

A. Historic items, relics, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, antiques, and other items of interest or value to Owner that may be encountered during selective demolition remain Owner's property. Carefully remove and salvage each item or object in a manner to prevent damage and deliver promptly to Owner.

1. Coordinate with Owner's architect, who will establish special procedures for removal and salvage.

1.5 SUBMITTALS

A. Qualification Data: For demolition firm; professional engineer if required.

B. Schedule of Selective Demolition Activities: Indicate the following:

1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's on-site operations are uninterrupted. Note site is currently vacant and no on-site operations are planned.
2. Interruption of utility services. Indicate how long utility services will be interrupted.
3. Coordination for shutoff, capping, and continuation of utility services.
4. Use of stairs.
5. Locations of proposed dust- and noise-control temporary partitions and means of egress.
6. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.
7. Means of protection for items to remain and items in path of waste removal from building.

C. Inventory: After selective demolition is complete, submit a list of items that have been removed and salvaged.

1.6 QUALITY ASSURANCE

A. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.

B. Regulatory Requirements: Comply with governing EPA and MCAQMD notification regulations before beginning selective demolition if so required. Comply with hauling and disposal regulations of authorities having jurisdiction.

C. Standards: Comply with ANSI A10.6 and NFPA 241.

D. Pre-demolition Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to selective demolition including, but not limited to, the following:

1. Inspect and discuss condition of construction to be selectively demolished.
2. Review structural load limitations of existing structure.

3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
5. Review areas where existing construction is to remain and requires protection.

1.7 PROJECT CONDITIONS

A. Owner will not occupy building or site. Conduct selective demolition so neighboring business operations will not be disrupted.

1. Comply with requirements specified in Division 1 Section "Summary."
2. Provide not less than 72 hours notice to Owner of activities that will affect Owner operations.

B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

1. Before selective demolition, Owner will remove the following items:

a. T-rails driveway barriers.

C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.

D. Hazardous Materials: It is not expected that hazardous materials will not be encountered in the Work.

1. Contaminated soil materials will be moved by contractor under the supervision of the Owner's Environmental consultant and deposited in an approved manner and location.
2. If other materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Owner will advise contractor on what how to hazardous materials under a separate contract.

E. Hazardous Materials: It is unknown whether hazardous materials will be encountered in the Work.

1. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Owner will remove hazardous materials under a separate contract.

F. Storage or sale of removed items or materials on-site is not permitted.

G. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

1.8 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped.

B. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.

C. Inventory and record the condition of items to be removed and reinstalled and items to be removed and salvaged.

D. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to Architect.

E. Engage a professional engineer to survey condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective demolition operations.

F. Survey of Existing Conditions: Record existing conditions by use of measured drawings.

1. Comply with requirements specified in Division 01 Section "Photographic Documentation."
2. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

G. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

3.2 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Services/Systems: Maintain services/systems indicated to remain and protect them against damage during selective demolition operations.

1. Comply with requirements for existing services/systems interruptions specified in Division 01 Section "Summary."

B. Service/System Requirements: Locate, identify, disconnect, and seal or cap off indicated utility services and mechanical/electrical systems serving areas to be selectively demolished.

1. Owner will arrange to shut off indicated services/systems when requested by Contractor.
2. Arrange to shut off indicated utilities with utility companies.
3. If services/systems are required to be removed, relocated, or abandoned, before proceeding with selective demolition provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
4. Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing.

    a. Where entire wall is to be removed, existing services/systems may be removed with removal of the wall.

3.3 PREPARATION

A. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Comply with requirements for access and protection specified in Division 1 Section "Temporary Facilities and Controls."

B. Temporary Facilities: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.

1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
4. Cover and protect furniture, furnishings, and equipment that have not been removed.
5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Division 1 Section "Temporary Facilities and Controls."

C. Temporary Shoring: Provide and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of selective demolition.

3.4 SELECTIVE DEMOLITION, GENERAL

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.

2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.
3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain[**fire watch and**] portable fire-suppression devices during flame-cutting operations.
5. Maintain adequate ventilation when using cutting torches.
6. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
7. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
8. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
9. Dispose of demolished items and materials promptly. Comply with requirements in Division 01 Section "Construction Waste Management."

B. Reuse of Building Elements: Project has been designed to result in end-of-Project rates for reuse of building elements as follows. Do not demolish building elements beyond what is indicated on Drawings without Architect's approval.

1. Building Structure and Shell: 15 percent [Existing metal roofing].
2. Non-shell Elements: 85 percent .

C. Removed and Salvaged Items:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until delivery to Owner.
4. Transport items to Owner's storage area designated by Owner.
5. Protect items from damage during transport and storage.

D. Removed and Reinstalled Items:

1. Clean and repair items to functional condition adequate for intended reuse. Paint equipment to match new equipment.
2. Pack or crate items after cleaning and repairing. Identify contents of containers.
3. Protect items from damage during transport and storage.
4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.

E. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.5 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

A. Concrete: Demolish existing concrete curb.

B. Concrete Slabs-on-Grade: Concrete sidewalk.

C. Air-Conditioning Equipment: Do-not remove equipment without releasing refrigerants.

3.6 DISPOSAL OF DEMOLISHED MATERIALS

A. General: Except for items or materials indicated to be recycled**,** reused, salvaged, reinstalled, or otherwise indicated to remain Owner's property, remove demolished materials from Project site and legally dispose of them in an EPA-approved landfill.

1. Do not allow demolished materials to accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
4. Comply with requirements specified in Division 01 Section "Construction Waste Management."

B. Burning: Do not burn demolished materials.

C. Disposal: Transport demolished materials off Owner's property and legally dispose of them.

3.7 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

B. Existing Items to Be Removed and Reinstalled: <**Insert description of items to be removed and reinstalled.**>

C. Existing Items to Remain: <**Insert description of items to remain.**>

END OF SECTION 01732

DIVISION 1 – GENERAL REQUIREMENTS
SECTION 01742 - CONSTRUCTION WASTE MANAGEMENT

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Special requirements for waste management during deconstruction construction operations.
      a. Protect the environment, both on-site and off-site, during deconstruction and construction operations.
      b. Prevent environmental pollution and damage.
      c. Maximize source reduction, reuse and recycling of solid waste.

B. Related Sections:
   1. 01300 - Administrative Requirements: Environmental Manager and Contractor training requirements.
   2. 01400 – Quality Requirements: Meetings and project coordination.
   3. 02220 – Selective Site Demolition

1.2 DEFINITIONS

A. Definitions pertaining to sustainable development: As defined in ASTM E2114.

B. Deconstruction: Disassembly of buildings for the purpose of recovering materials.

1.3 QUALITY ASSURANCE

A. Maximize use of source reduction and recycling procedures.
B. Diversion Goals: A minimum 50 percent by weight of total project solid waste to be diverted from landfill.

1.4 PRECONSTRUCTION MEETING

A. After award of Contract and prior to the commencement of the Work, schedule and conduct meeting with Owner and Architect to discuss the proposed Waste Management Plan and to develop mutual understanding relative to details of environmental protection.
   1. Coordinate deconstruction with work of Section 02220.

1.5 SUBMITTALS

A. Progress Documentation: Document solid waste disposal and diversion. Include the quantity by weight of waste generated; waste diverted through sale, reuse, or recycling; and waste disposed by landfill or incineration. Identify landfills, recycling centers, waste processors, and other organizations that process or receive the solid waste.
   1. Document on form in Appendix A of this Section, or similar form as approved by Owner.
   2. With each Application for Payment, submit updated Documentation for solid waste disposal and diversion.
   3. With each Application for Payment, submit manifests, weight tickets, receipts, and invoices specifically identifying the Project and waste material.

B. Record Submittals: With Record Submittals as specified in Section 01780, submit the following:
   1. Summary of solid waste disposal and diversion. Submit on forms in Appendix A Worksheet & B Acknowledgement of this Section, or similar form as approved by Owner and the City of Willows.

PART 2 - PRODUCTS

PART 3 EXECUTION

3.1 SOLID WASTE MANAGEMENT

A. Develop and implement a waste management program in accordance with ASTM E1609 and as specified herein.

B. Collection: Implement a recycling/reuse program that includes separate collection of waste materials of the following types as appropriate to the project waste and to the available recycling and reuse programs in the project area:
   1. Land clearing debris.
   2. Asphalt.
   3. Concrete and Masonry.
   4. Metal.
      a. Ferrous.
      b. Non-ferrous.
   5. Wood, nails and staples allowed.
   6. Debris.
   7. Glass.
   8. Paper.
      a. Bond.
      b. Newsprint.
      c. Cardboard and paper packaging materials.
   9. Plastic.
      a. Type 1: Polyethylene Terephthalate (PET, PETE).
      b. Type 2: High Density Polyethylene (HDPE).
      c. Type 3: Vinyl (Polyvinyl Chloride or PVC).
      d. Type 4: Low Density Polyethylene (LDPE).
      e. Type 5: Polypropylene (PP).
      f. Type 6: Polystyrene (PS).
      g. Type 7: Other. Use of this code indicates that the package in question is made with a resin other than the six listed above, or is made of more than one resin listed above, and used in a multi-layer combination.
   10. Gypsum.
   11. Non-hazardous paint and paint cans.
   12. Carpet.
   13. Insulation.
   14. Others as appropriate.

C. Recycling/Reuse: Maximize recycling and reuse of materials.
   1. Recycling/Reuse on project site: Coordinate with Architect.
   2. Recycling/Reuse off project site: The following is a partial list for Contractor's information only. For more information, contact the State Department of Environmental Quality and the local Integrated Solid Waste Management Office.
      a. Habitat for Humanity, a non-profit housing organization that rehabilitates and builds housing for low-income families. Sites requiring donated materials vary. Contact the national hotline (800) HABITAT.
      b. Materials For The Arts (MFA) sponsored by the Department of Cultural Affairs. MFA is a materials exchange that accepts waste and excess materials from private donors and distributes them to various non-profit art organizations throughout the City. Contact: See Green Page 11 in Glenn & Tehama Counties telephone directory.
      c. California Materials Exchange (CAL-MAX) Program sponsored by the California Integrated Waste Management Board; (916) 255-2369.

D. Handling:
   1. Clean materials that are contaminated prior to placing in collection containers. Deliver materials in accordance with recycling or reuse facility requirements (e.g., free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to recycling process).
   2. Arrange for collection by or delivery to the appropriate recycling or reuse facility.
   3. Hazardous Waste and Hazardous Materials: Handle in accordance with applicable regulations. Coordinate with Section 01411.

E. Composting: In accordance with State Extension Service recommendations and as follows:
   1. Moisture content: Maintain between 35 percent and 60 percent.
   2. Carbon to nitrogen (C/N) ratio: Maintain at approximately 30 to 1 by weight.
   3. Do not compost meat or dairy products on site.
   4. Where the proposed Waste Management Plan incorporates composting of plastics, assess the potential effect of each type of plastic to be included on the composting process in accordance with ASTM D6002.

END OF SECTION

Reuse, Recycling or Disposal Processes To Be Used

Describe the types of recycling processes or disposal activities that will be used for material generated in the project. Indicate the type of process or activity by number, types of materials, and estimated quantities that will be recycled or disposed in the sections below:

01 - Reuse of building materials or salvage items on site (i.e. crushed base or red clay brick)
02 - Salvaging building materials or salvage items at an off site salvage or re-use center (i.e. lighting, fixtures)
03 - Recycling source separated materials on site (i.e. crushing asphalt/concrete for reuse or grinding for mulch)
04 - Recycling source separated materials at an off site recycling center (i.e. scrap metal or green matls)
05 - Recycling commingled loads of C&D matls at an off site mixed debris recycling center or transfer station
06 - Recycling material as Alternative Daily Cover at landfills
07 - Delivery of soils or mixed inerts to an inert landfill for disposal (inert fill).
08 - Disposal at a landfill or transfer station.
09 - Other (please describe) _____

Types of Material To Be Generated

Use these codes to indicate the types of material that will be generated on the project

A = Asphalt	C = Concrete	M = Metals	I = Mixed Inert	G = Green Matls
D = Drywall	P/C=Paper/Cardboard	W/C = Wire/Cable	S= Soils (Non Hazardous)	
M/C = Miscellaneous Construction Debris		R = Reuse/Salvage	W = Wood	O = Other (describe)

Facilities Used: Provide Name of Facility and Location (City)

Total Truck Loads: Provide Number of Trucks Hauled from Site During Reporting Period

Total Quantities: If scales are available at sites, report in tons. If not, quantify by cubic yards. For salvage/reuse items, quantify by estimated weight (or units).

SECTION I - RE-USED/RECYCLED MATERIALS

Include all recycling activities for source separated or mixed material recycling centers where recycling will occur.

Type of Material	Type of Activity	Facility to be Used/Location	Total Truck Loads	Total Quantities Tons	Cubic YD	Other Wt.
(ex.) M	04	ABC Metals, Los Angeles	24	355		
a. Total Diversion			0	0	0	0

SECTION 01742A

CONTRACTOR'S CONSTRUCTION WASTE AND RECYCLING PLAN

Continued

SECTION II - DISPOSED MATERIALS								
Include all disposal activities for landfills, transfer stations, or inert landfills where no recycling will occur.								
Type of Material	Type of Activity	Facility to be Used/Location			Total Truck Loads	Total Quantities		
						Tons	Cubic YD	Other Wt.
(ex.) D	08	DEF Landfill, Los Angeles			2	35		
b. Total Disposal						0	0	0

SECTION III - TOTAL MATERIALS GENERATED						
This section calculates the total materials to be generated during the project period (Reuse/Recycle + Disposal = Generation						
				Tons	Cubic YD	Other Wt.
a. Total Reused/Recycled				0	0	0
b. Total Disposed				0	0	0
c. Total Generated				0	0	0

SECTION IV - CONTRACTOR'S LANDFILL DIVERSION RATE CALCULATION					
Add totals from Section I + Section II					
	Tons	Cubic Yards	Other Wt.		
a. Materials Re-Used and Recycled	0				
b. Materials Disposed	0				
c. Total Materials Generated (a. + b. = c.)	0	0	0		
d. Landfill Diversion Rate (Tons Only)*	#DIV/0!				

** Use tons only to calculate recycling percentages: Tons Reused/Recycled/Tons Generated = % Recycled*

Contractor's Comments (Provide any additional information pertinent to planned reuse, recycling, or disposal activities):

Notes:

1. Section 01151A is a Division 01 General Requirement under CSI MasterFormat 1998 Edition.
   For CSI MasterFormat 2004 Edition, this Section may be renumbered as follows:
   Under Division 00, Procurement and Contracting Requirements, Project Forms 00 60 00
   Use: Section 00 62 22 Construction Waste Diversion Plan

2. Suggested Conversion Factors: From Cubic Yards to Tons (Use when scales are not available)
   Asphalt: .61 (ex. 1000 CY Asphalt = 610 tons. Applies to broken chunks of asphalt)
   Concrete: .93 (ex. 1000 CY Concrete = 930 tons. Applies to broken chunks of concrete)
   Ferrous Metals: .22 (ex. 1000 CY Ferrous Metal = 220 tons)
   Non-Ferrous Metals: .10 (ex. 1000 CY Non-Ferrous Metals = 100 tons)
   Drywall Scrap: .20
   Wood Scrap: .16

Reuse, Recycling or Disposal Processes Used

Describe the types of recycling processes or disposal activities used for material generated in the project. Indicate the type of process or activity by number, types of materials, and quantities that were recycled or disposed in the sections below:

01 - Reuse of building materials or salvage items on site (i.e. crushed base or red clay brick)

02 - Salvaging building materials or salvage items at an off site salvage or re-use center (i.e. lighting, fixtures)

03 - Recycling source separated materials on site (i.e. crushing asphalt/concrete for reuse or grinding for mulch)

04 - Recycling source separated materials at an off site recycling center (i.e. scrap metal or green matls)

05 - Recycling commingled loads of C&D matls at an off site mixed debris recycling center or transfer station

06 - Recycling material as Alternative Daily Cover at landfills

07 - Delivery of soils or mixed inerts to an inert landfill for disposal (inert fill).

08 - Disposal at a landfill or transfer station.

09 - Other (please describe) _____

Types of Material Generated

Use these codes to indicate the types of material that were generated on the project

A = Asphalt	C = Concrete	M = Metals	I = Mixed Inert	G = Green Matls
D = Drywall	P/C=Paper/Cardboard	W/C = Wire/Cable	S= Soils (Non Hazardous)	
M/C = Miscellaneous Construction Debris		R = Reuse/Salvage	W = Wood	O = Other (describe)

Facilities Used: Provide Name of Facility and Location (City)

Total Truck Loads: Provide Number of Trucks Hauled from Site During Reporting Period

Total Quantities: If scales are available at sites, report in tons. If not, quantify by cubic yards. For salvage/reuse items, quantify by estimated weight (or units).

SECTION I - RE-USED/RECYCLED MATERIALS

Include all recycling activities for source separated or mixed material recycling centers where recycling occurred.

Type of Material	Type of Activity	Facilities Used/Location			Total Truck Loads	Total Quantities Tons	Cubic YD	Other Wt.
(ex.) M	04	ABC Metals, Los Angeles			24	355		
a. Total Diversion					0	0	0	0

SECTION 01742B

CONTRACTOR'S REUSE, RECYCLING, AND DISPOSAL REPORT

Continued

SECTION II - DISPOSED MATERIALS								
Include all disposal activities for landfills, transfer stations, or inert landfills where no recycling occurred.								
Type of Material	Type of Activity	Facilities Used/Location			Total Truck Loads	Total Quantities Tons	Cubic YD	Other Wt.
(ex.) D	08	DEF Landfill, Los Angeles			2	35		
b. Total Disposal						0	0	0

SECTION III - TOTAL MATERIALS GENERATED						
This section calculates the total materials generated during the project period (Reuse/Recycle + Disposal = Generation						
				Tons	Cubic YD	Other Wt.
a. Total Reused/Recycled				0	0	0
b. Total Disposed				0	0	0
c. Total Generated				0	0	0

SECTION IV - CONTRACTOR'S LANDFILL DIVERSION RATE CALCULATION					
Add totals from Section I + Section II					
	Tons	Cubic Yards	Other Wt.		
a. Materials Re-Used and Recycled	0				
b. Materials Disposed	0				
c. Total Materials Generated (a. + b. = c.)	0	0	0		
d. Landfill Diversion Rate (Tons Only)*	#DIV/0!				

** Use tons only to calculate recycling percentages: Tons Reused/Recycled/Tons Generated = % Recycled*

Contractor's Comments (*Provide any additional information pertinent to planned reuse, recycling, or disposal activities*):

Notes:

1. Section 01151A is a Division 01 General Requirement under CSI MasterFormat 1998 Edition.
   For CSI MasterFormat 2004 Edition, this Section may be renumbered as follows:
   Under Division 00, Procurement and Contracting Requirements, Project Forms 00 60 00
   Use: Section 00 62 22 Construction Waste Diversion Plan

2. Suggested Conversion Factors: From Cubic Yards to Tons (Use when scales are not available)
   Asphalt: .61 (ex. 1000 CY Asphalt = 610 tons. Applies to broken chunks of asphalt)
   Concrete: .93 (ex. 1000 CY Concrete = 930 tons. Applies to broken chunks of concrete)
   Ferrous Metals: .22 (ex. 1000 CY Ferrous Metal = 220 tons)
   Non-Ferrous Metals: .10 (ex. 1000 CY Non-Ferrous Metals = 100 tons)
   Drywall Scrap: .20
   Wood Scrap: .16

DIVISION 2 SITE WORK

SECTION 02200 EARTHWORK

1. GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

2. SCOPE

The work done under these Specifications shall include stripping, over-excavation, preparation of natural soils and placement and compaction of on-site and imported fill material.

3. GEOTECHNICAL ENGINEER

The work covered by these Specifications shall be performed under the observation of the Geotechnical Engineer – LACO & Associates, Inc. – 311 S. Main Street, Ukiah, CA, 707-462-0222, who shall be retained and paid by the Owner. The cost of the Geotechnical Engineers services for testing and observation shall be deducted from the contract price in accordance with the Article "Laboratory Tests and Inspections" in the Supplementary General Conditions. Bidders may contact LACO and Associates, Inc., to obtain cost of their services. The Geotechnical Engineer will be present at the site to observe the work and perform field and laboratory tests to evaluate material quality and compaction. The Contractor shall cooperate with the Geotechnical Engineer in performing the observations and tests. At the completion of his services, the Geotechnical Engineer shall submit a report to the Owner, including a tabulation of all tests performed. **The Geotechnical Engineer's costs for observing and testing the repair of unsatisfactory work performed by the Contractor shall be billed to the Owner. The Owner shall pay them and then shall deduct the amount from monies due to the Contractor.**

4. DEFINITIONS

a. Standard Specifications: Where referred to in these Specifications, "Standard Specifications" shall mean the California CalTrans Standard Specifications, dated January 1981. All work shall be carried out in conformance with the Standard Specifications unless otherwise specified herein.

b. Percent Compaction: As referred to in these Specifications, percent compaction or relative compaction is the required in-place, dry density of fill expressed as a percentage of the maximum dry density of the same material determined by the Geotechnical Engineer in accordance with the ASTM Test Method #D1557-02. Optimum moisture content is the moisture content corresponding to the maximum dry density determined by the ASTM Test Method #D1557-02.

c. Select Fill Areas: Where used in these Specifications, select fill areas shall mean within building and adjacent exterior slab areas and for a distance of 5' beyond perimeter footing lines or 3' beyond the edges of exterior slabs, which ever is greater.

5. SPILLAGE, DUST & EROSION CONTROL

Prevent spillage when hauling on or adjacent to any public street or highway. In the event that such occurs, remove all spillage and sweep, wash or otherwise clean such streets or highways as required by local City and County authorities and/or the State of California.

Take all precautions needed to prevent a dust nuisance to adjacent private properties and to prevent erosion and transportation of soil to downstream properties due to work under this Contract. Any damage so caused shall be corrected or repaired by the Contractor at no cost to the Owner.

5. SPILLAGE, DUST & EROSION CONTROL (continued)

In the event the Contractor fails to take such precautions or make such corrections or repairs promptly, the Owner may take such steps as they may deem necessary and deduct the cost of the same from the monies due to the Contractor. Any such action or lack of action on the part of the Owner in no way alters or relieves the Contractor for the proper protection of the work.

6. SITE PREPARATION

a. Location Service Survey: As appropriate, notify Underground Service Alert (1-800-642-2444) prior to commencing site work, and use this location service and other methods to avoid injury or risk to life from underground and overhead utilities, and to avoid damaging them.

b. Stripping: Remove existing surface soils contain grass, roots and other vegetation, existing utilities, septic system components, structures including foundations, trees and associated root systems, rubble, rubbish and any loose and/or saturated materials. Site stripping should extend to a minimum depth of 6", or until all organics in excess of 3 percent by volume are removed. Deeper stripping may be required in localized areas. These materials **will not** be suitable for use as select fill. Stockpile these materials on-site in a location approved by the Owner for later use in landscaped areas as topsoil, as needed. Stripping activities shall extend 3' outside of area designated to receive structural fill or improvements.

b. Excavation: Within select fill areas defined above, excavate as required to accommodate design grades and planned minimum fill or pavement section thicknesses and excavate to a minimum of 18" below base of floor slab and for 12" beyond the slab perimeter. The 18" stripping depth provides for 12" of compacted gravelly fill, a 0" capillary break layer, and a 0" sand layer beneath the slab.

Also, over-excavate beneath isolated (column) and continuous foundation locations such that a minimum of 12" of compacted gravelly fill can be constructed immediately beneath these paved surfaces.

Where existing gravelly, sandy fill is removed, it can be separated for re-use as fill provided it remains relatively free of cohesive silty and clayey soils. If stripping to 6" below the base of the planned paving section(s) exposes a competent, gravelly, sub-grade surface comprised of existing fill, this surface may be approved, without further removal and replacement, following a review by the Geotechnical engineer.

The resulting stripped subgrade surface is anticipated to consist of stiff to hard, undisturbed clayey soils, or competent, gravelly soils. The Geotechnical engineer shall, immediately, upon completion of the stripping operation conduct a review of the exposed sub-grade surfaces, assist in the identification of unsuitable soils (overly weak, compressible, or disturbed soils), and recommend additional unsuitable soils to be stripped.

Do not allow the clayey subgrade to dry out and crack prior to placing fill, either beneath the paving, slab or beneath foundations. Maintain it in a moist (not wet or dry) condition until the paving, slab or foundations are poured.

6. SITE PREPARATION (continued)

Following the acceptance of the sub-grade as suitable by the Geotechnical Engineer the exposed surface the upper 6" shall be scarified, moisture conditioned and compacted prior to receiving structural fills. Alternatively, the sub-grade surface may be proof-rolled using a 10 wheel, 10 cubic yard dump truck loaded with gravel, or equivalent. The proof-rolling shall be accomplished under the observation of the Geotechnical Engineer with the soil damp or moist (not wet or dry), and a firm, non-yielding surface should be evident during the proof-rolling. If a yielding surface is observed (pumping, weaving under wheel loads), additionally excavated the yielding area, and replace the over-excavated material with CalTrans specification Class 2 base rock, in a manner that will result in a stable sub-grade surface under the proof-rolling, following the over-excavation and replacement.

c. Moisture Conditioning & Re-Compacting: Where dry or cracked soils are exposed by excavation, they shall be moisture conditioned to near optimum moisture content; exposed soils shall then be scarified to a depth of at least 6" and re-compacted to at least 90 percent relative compaction. If excavation and re-compaction operations encounter isolated zones of very weak or saturated soils, they shall be removed by deeper excavation to expose firmer natural soils; as determined in the field by the Geotechnical engineer.

d. Approval: After moisture conditioning and compaction and before placing fill, the Geotechnical engineer shall evaluate the site preparation in each area.

7. FILL MATERIAL

a. General: All fill material shall be free of perishable matter, clay or silt, and shall not contain rocks or lumps larger than 4" in greatest dimension. All fill shall be approved by the Geotechnical Engineer prior to use. The Contractor shall give at least 5 work days notice prior to using any imported material to enable the Geotechnical Engineer time to evaluated the proposed material by sampling and testing.

The preferred materials specified for select fill are suitable for most applications with the exception of exposure to erosion. Project site winterization and protection of exposed soils during the site preparation phase shall be the sole responsibility of the Site Work Contractor.

b. Imported Granular Fill: A 12" layer of structural fill, from 10.8" (in planned parking areas) to 15.6" (in planned isles & driveways) beneath areas to be paved and planned new building slabs, and from 0" to 12" beneath foundations (described above), should consist of approved soil (a durable, well graded, sand and gravel mixture, containing no clay, silt, or organic material or debris, and no individual particles over 4" across, such as river-run gravel or base rock). All imported material shall be evaluated and approved by the Architect and the Geotechnical Engineer prior to use.

c. Select Fill Material: Only select fill material shall be used in select fill areas. Select fill material shall have a low expansion potential and shall conform, in general, to the following requirements:

Sieve Size	Percent Passing (by dry weight)
6"	100
#200	15-60

Liquid Limit:	40 Maximum
Plasticity Index:	15 Maximum
UBC Expansion Index:	15 Maximum

Material not conforming to these requirements may be suitable for use as select fill; however, it shall be the Contractor's responsibility to demonstrate that the proposed material will perform in an equivalent manner.

8. COMPACTED FILL

a. Placement & Compaction: Fill material shall be placed in layers 6" to 8" or less in loose thickness, moisture conditioned to near optimum moisture content and compacted with sheep's-foot roller or other approved equipment to achieve at least 90 percent of maximum dry density as determined by ASTM Test Method D1557. Additional lifts shall not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable in the opinion of the Geotechnical Engineer.

Any buried structures encountered during construction shall be properly removed and backfilled. In general, any septic tanks, debris pits, cesspools or similar structures should be entirely removed. Concrete footings should be removed to an equivalent depth of a least 3' below proposed footing elevations or as recommended by the Geotechnical Engineer. Any other buried structures should be removed in accordance with the recommendations of the Geotechnical Engineer. Resulting excavations should be backfilled with Select Fill or Granular Imported Fill.

The Geotechnical Engineer or his appointed representative shall be present during all site clearing and grading operations to test and observe earthwork construction. The Geotechnical Engineer may reject any material that does not meet compaction and stability requirements of the Geotechnical Exploration Report.

Where the field density tests indicate that the required compaction has not been attained, the fill shall be re-conditioned as necessary and re-compacted to the required density prior to placing additional material. The Site Work Contractor shall be responsible for placement; moisture conditioning, and compacting approved material in accordance with these Specifications. Should the Site Work Contractor fail to meet these requirements, he shall reduce his rate of haul or furnish additional spreading, moisture conditioning and/or compaction equipment or make any other adjustments required until a satisfactory fill is obtained.

b. Fill Slopes: Fill slopes shall be compacted by overfilling and trimming back to plan grade to expose a smooth, compacted and unyielding surface. Any depression shall be filled and compacted and all loose material shall be removed.

c. Finish: The completed fill shall be finished true to line and grade and present a smooth, compacted and unyielding surface. Any depression shall be filled and compacted and all loose material shall be removed.

d. Stockpiled Residual: Any stripped material not used during the pad construction for this project shall be graded and spread uniformly about the site as directed by the Architect at the completion of the work.

END OF SECTION

DIVISION 2 SITE WORK

SECTION 02221 TRENCHING, BACKFILLING AND COMPACTION

1. GENERAL

1.1.
Scope. Work to be performed under this section shall include all labor, materials, equipment, tools and accessories required to perform all excavation, backfilling and compaction of underground pipelines, conduits, cables and appurtenances shown on the Drawings and specified herein.

1.2.
Related Work Specified Elsewhere:

Section 01000 – General Requirements
Section 01010 Summary of the Work
Section 01060 – Regulatory Requirements
Section 01015 – Contractor's Use of the Premises
Section 01200 – Project Meetings
Section 01311 – Construction Schedule
Section 01340 – Submittals
Section 01700 – Project Closeout
Section 02200 – Earthwork

1.3.
Field Conditions.

1.3.1.
Existing Utilities. Underground utilities, except service lines, known to the Engineer have been shown on the Drawings. Locations are approximate only and may prove to be inaccurate. The Contractor is responsible for verification of the existence, location, and protection of all utilities within the construction area.

1.3.1.1.
Before commencing with work, the Contractor shall notify all public and private companies who may have utilities within the project limits. The Contractor shall coordinate with these entities all excavation performed. The Contractor shall obtain all permits required by utility owners.

1.3.1.2.
In the event of damage to any existing utility, the Contractor shall be solely responsible for the repair and payment for repair of all such damage.

1.3.1.3.
The Contractor shall make arrangements for and pay all costs for relocation of utilities requiring relocation as indicated on the Drawings unless noted. Should utility obstructions, not shown on the Drawings, be encountered and require relocation, the Contractor shall notify the Owner and the Architect and shall make arrangements necessary for such relocation. The Owner shall pay the costs for such relocation.

1.3.2.
Existing Improvements. The Contractor shall restore or protect from damage all existing improvements encountered in performance of the work. Improvements damaged as a result of this work shall be restored to original condition or better, as determined by the Architect.

1.3.2.1.
Adjacent property shall be protected by the Contractor from any damage. The Contractor shall be held solely liable for any damage to adjacent property and shall be responsible for all costs resulting from repair of such damage.

1.3.3.
Soil Conditions. It shall be the responsibility of the Contractor to examine soil conditions and characteristics, including the presence of groundwater that will be encountered within the limits of construction.

1.4.
Protection of Work
1.4.1.
Safety. All excavation shall be protected by barricades, lights, signs, etc., as required by governing federal, state, and local safety codes and regulations.
1.4.2.
Sheeting, Shoring and Bracing. Where trench walls are not excavated at a stable slope, the Contractor shall provide and maintain support sufficient to prevent caving, sliding or failure and property or bodily damage. Any damage due to inadequate support shall be repaired at the sole expense of the Contractor.
1.4.3.
Under normal construction conditions, support shall be removed as work progresses. Support shall remain installed if directed by the Engineer or if pipe does not have sufficient strength to support backfill based on trench width as defined by the sheeting. Sheeting shall not be removed after the start of backfilling.
1.4.4.
Use of a movable trench shield or coffin box will not be allowed where pipe strength is insufficient to support backfill as defined by the trench width after the trench shield is removed.
1.4.5.
The Contractor shall be held solely responsible for any violation of applicable safety standards. Particular attention is called to minimum requirements of OSHA.
1.4.6.
Site Drainage. Excavation to be protected from any source of surface water and storm water runoff at all times. At no time shall excavated area be allowed to fill with storm water runoff. Contractor shall provide proper, Temporary drainage structures at their cost to detour runoff from excavated areas.
1.6.
Construction in Streets: When construction operations are located within streets make provisions at cross streets and walks for free passage of vehicles and pedestrians. Do not block streets or walks without prior approval.
1.7.
Submittals.

1.7.1.	Bedding Material
1.7.1.1.	Submit sieve analysis
1.7.2.	Select Fill
1.7.2.1.	Submit sieve analysis

2.
MATERIALS
2.1.
Embedment Material Pipe line embedment material shall comply with the appropriate classes as listed below and as illustrated in the Construction Drawings:
2.1.1.
Class A - Use where improper trenching or unexpected trench conditions require its use as determined by the Engineer.
2.1.1.1.
Characteristics - Concrete cradle foundation with densely compacted Class 6 aggregate base backfill to 12 inches above top of pipe, or densely compacted Class 6 aggregate granular foundation with concrete arch cover to 6 inches above top of pipe.
2.1.2.
Class B - Use for all PVC, DIP, CMP and concrete pipe under normal construction conditions.
2.1.2.1.
Characteristics - Densely compacted Class 6 aggregate granular foundation of depth shown on Typical Details with densely compacted Class 6 aggregate 12 inches above top of pipe. 3/4" screened rock shall not be used unless approved by the Engineer.

2.2.
Select Material. Subject to approval by the Engineer, select material shall be allowed in place of the aggregate backfill for Class B when excavation and soil conditions allow, but only if approved by Engineer. Contractors shall bid project based upon Class B. If Class A or select material is used, price adjustments shall be made.
2.2.1.
Characteristics - Soil materials free from rocks, clods, and organic material.
2.3.
Concrete for Embedment. Shall be 2000-psi concrete (28- day compressive strength).
2.4.
Backfill Material
2.4.1.
Characteristics - Native materials free from debris, organic matter, and frozen material. Uniformly graded sufficient to allow proper compaction.
2.4.2.
Gradation - No boulders greater than 4 inch diameter in top or bottom 12 inches of backfill.
2.4.3.
Generally no boulders greater than 12-inch diameter in remainder of trench. Limited number of boulders not exceeding 24-inch diameter to be allowed at discretion of Engineer provided boulders can be uniformly dispersed and will not interfere in compaction effort.
3.
METHODS AND PROCEDURES
3.1.
Site Preparation
3.1.1.
Clearing: Remove all vegetation, stumps, roots, organic matter, debris and other miscellaneous structures and materials from project site. Dispose of off site.
3.1.2.
Topsoil Removal**:** Strip existing topsoil from all areas to be disturbed by construction. Topsoil to be stockpiled separately from excavated materials.
3.1.3.
Pavement Removal: See Section 02101 - Removal of Structures and Obstructions.
3.2.
Trench Excavation
3.2.1.
Limits of Excavation. Trenches to be excavated along lines and grades shown on the Drawings, or as modified in the field by the Engineer. Trench widths for pipe loading to be measured 12 inches above top of pipe.
3.2.1.1.
Minimum trench width to be the outside diameter of the pipe or conduit plus 16 inches.
3.2.1.2.
Maximum trench width to be the outside diameter of the pipe or conduit plus 24 inches for all pipes or conduits with outside diameter of 24 inches or less, and plus 30 inches for all pipes or conduits with outside diameters greater than 24 inches.
3.2.1.3.
If maximum trench width is exceeded, Contractor will provide at his expense, higher strength pipe, or special bedding including concrete at the direction of the Engineer.
3.2.1.4.
Trench excavation not to be completed more than 100 feet in advance of pipe installation. Backfill to be completed within 100 feet of pipe installation.
3.2.2.
Asphalt/Concrete removal: Cuts in asphalt or concrete pavement or sidewalks shall be not larger than necessary to provide adequate working space for proper installation of pipe and appurtenances. Cutting shall be started with a

concrete saw in a manner which will provide a clean groove at least 1½ inches deep along each side of the trench and along the perimeter of cuts for structures. Pavement over trenches excavated for pipelines shall be removed so that a shoulder not less than 12 inches in width at any point is left between the cut edge of the pavement and the top edge of the trench. Where necessary, trench banks may be sloped back as needed, and the width of pavement removed shall be adjusted accordingly. Trench width at the bottom shall not be greater than at the top and no undercutting will be permitted. Pavement cuts shall be made to and between straight and accurately marked curbed lines which, unless otherwise required, shall be parallel to the centerline of the trench. Temporary pavement patches shall contain a minim of 3 inches of cold mix as noted in the standard details-typical pavement section.

3.2.3.

Groundwater Control: Contractor to maintain facilities on-site to remove all groundwater from trench and keep water at least 12 inches below the trench bottom to a point such that a firm base for pipe or conduit installation exists. Facilities shall be maintained until all concrete is cured and backfilling is in place at least 24 inches above anticipated water levels before water removal is discontinued; all water removal shall be subject to approval by the Engineer.

3.2.4.

Stockpile Excavated Material: Excavated material to be stockpiled so as not to endanger the work or public safety. Maintain existing vehicular and pedestrian traffic with minimum disruption. Maintain emergency access and access to existing fire hydrants and water valves. Maintain natural drainage courses and street gutters.

3.2.4.1.

Backfill material to be segregated from stockpiled topsoil and unusable backfill materials.

3.2.5.

Excavation for Appurtenances: Excavation to be done in accordance with these Specifications and as shown on the Drawings. Adequate working clearances to be maintained around appurtenances. Provisions for base and bottom preparations shall apply to all appurtenances.

3.2.5.1.

Precautions to be taken to maintain trench widths in the vicinity of adjacent pipelines and conduits.

3.3.

Creek, stream, river crossings: At each crossing where indicated on plans a one foot high and four foot wide berm shall be constructed adjacent and parallel to the top of each bank, so runoff will flow along the berm and be deflected to undisturbed vegetated area before entering the water way.

3.3.1.

Vegetation removal: To prevent erosion of waterway banks at points were the excavation crosses, the removal of trees and vegetation along the banks shall be minimized. A tree removal plan shall be approved by the Engineer prior to any trees being removed.

3.3.2.

Crossing restoration: Restoration of waterway crossings shall begin within a minimum of three (3) days after back fill of trench is complete. Exposed disturbed areas in the waterway crossing shall not remain unprotected for more than seven (7) days.

3.4.

Bottom Preparation:

3.4.1.

Undisturbed Foundation: Where soils are suitable and have adequate strength, bottom to be graded and hand-shaped such that pipe barrel rests uniformly on undisturbed soil. All rocks or stones which may result in a point bearing on the pipe shall be removed.

3.4.1.1.

Undisturbed grades shall be within 0.1 feet ± tolerance. Soils for final pipe grade placed within these limits shall be fine granular (100% passing No. 4 sieve) or may be native materials, hand compacted to 95% maximum density.

3.4.2.
Bell Holes: Material to be removed to allow installation of all fitting and joint projections without affecting placement of pipe.
3.4.3.
Over excavation: Whenever trench is over excavated to eliminate point bearing by rocks or stones or when undisturbed grade tolerances of 0.1 feet are exceeded, the Contractor is to re-establish grade using Class 6 aggregate bedding material. Compaction shall be 95% maximum density. All work to re-establish grade shall be at the Contractor's expense.
3.4.4.
Unstable Materials: Materials which are not capable of supporting superimposed loadings are defined as unstable materials. Should unstable materials be encountered during excavation, immediately notify Engineer. If, in the opinion of the Engineer, unstable soil excavation is required and the Contractor could not have reasonably been expected to discover the existence of such materials during his site investigation, then a contract price for Unstable Soil Excavation shall be negotiated between Owner and Contractor. No payment shall be made for materials excavated prior to notification of the Engineer and negotiation of payment for extra work.
3.4.4.1.
Inclusion of a bid item for unstable soil excavation indicates such excavation is anticipated. The Contractor is to notify the Engineer prior to any unstable soil excavation; no payment shall be made for excavation prior to authorization of Engineer.
3.4.5.
Rock Excavation: Rock excavation shall be defined as removal of boulders in excess of three (3) cubic yards of solid or fractured rock, which makes hand shaping of the bottom impossible and which requires techniques, such as blasting or jacking for removal, other than those which are being employed by the Contractor or are normally used in trench excavation, such as use of backhoes, trenchers, draglines, etc. Should unanticipated rock conditions be encountered, immediately notify the Engineer. If in the opinion of the Engineer, rock excavation is required and the Contractor has in fact made a diligent and determined effort to remove the material using normal excavation procedures as stated above, and the Contractor could not have reasonably been expected to determine the existence of such material during his site investigation, then a contract price for rock excavation shall be negotiated between the Contractor and the Owner. No payment shall be made for excavation performed prior to determination of a negotiated price.
3.4.5.1.
Rock shall be removed to a 4 inch depth below grade. Additionally, all rock loosened during jacking, blasting, etc., shall be removed from the trench. For payment purposes, maximum trench width to be paid for shall be as defined in Subsection 3.2.1. Maximum depth to be paid for shall be 12 inches below required grade. All over excavation shall be replaced as specified in Subsection 3.3.3.
3.4.5.2.
Inclusion of a bid item for rock excavation indicates such excavation is anticipated.and the Contractor is to notify Engineer prior to any rock excavating; no payment shall be made for excavation prior to notification.
3.5.
Backfilling:
3.5.1.
Tamping Equipment: Except immediately next to the pipe, mechanical or air operated tamping equipment is to be used. Hand equipment such as a T-bar is to be used next to the pipe if necessary. Care to be taken when compacting under, along side, and immediately above pipe to prevent crushing, fracturing or shifting of the pipe. The Contractor is to note densities required for materials being backfilled and shall use appropriate approved equipment to obtain those densities.
3.5.1.1.
Wheel rolling is not considered to be an adequate compaction technique to meet these Specifications and will not be allowed. Where 85% compaction is required, wheel rolling may be considered. Before acceptance, the Contractor shall backfill a portion of the trench and pays for density testing to verify adequacy of the proposed backfill techniques.

3.5.1.2.
A hydro hammer may be allowed to obtain the specified density up to 4 feet in depth. The Contractor will be required to re-excavate those areas that have been tamped so that density tests can be taken to insure that the specified density is being obtained full depth.
3.5.2.
Moisture Control: Generally maintain moisture of backfill material with ± 2% of optimum moisture content as determined by ASTM D698. Maintain closer tolerances as needed to obtain densities required.
3.5.3.
Compaction: Maximum density (100%) based on ASTM D698 or AASHTO T99.
3.5.3.1.
Bedding Material: including material used for over-excavation of any kind: 95%
3.5.3.2.
Select Material: 95%
3.5.3.3.
Backfill beneath existing or proposed pavement, roadways, sidewalks, curbs, utility lines and other improvements or within 5 feet horizontally of such improvements, or within a 1:1 prism from such improvements: 95%
3.5.3.4.
Backfill within public or designated right-of-way: 90% or as shown on the Drawings.
3.5.3.5.
Backfill within undeveloped, green or undesignated area: 85%
3.5.3.6.
Backfill for any fill over over-cut grading in areas of lot/home construction: 95%.
3.5.4.
Placing Backfill: The maximum loose lifts of backfill material to be as follows: use smaller lifts where necessary to obtain required densities:
3.5.4.1.
Bedding and select material: 6 inches (or see Section 3.3.1).
3.5.4.2.
Backfill Material: 12 inches where 95% compaction required. 24 inches where less than 95% compaction required.
3.5.5.
Backfilling Appurtenances: Backfilling to be done generally at the same time as adjacent pipelines. Backfilling procedure to conform to this section. Use special techniques or materials as shown on drawings.
3.5.6.
Disposal of Excess Excavation: Contractor to dispose of excess excavation off-site. The Owner shall have the right to elect to have the excess excavation disposed of at a designated site within the project limits. Excavation may be wasted on-site only if approved by the Engineer. Disposal in any case shall be the sole responsibility of the Contractor.
3.5.7.
Jetting: Jetting and water inundation are generally not permitted methods of compaction. The Engineer may allow jetting under certain field conditions. Techniques including depth of lifts, amount of water to be used, penetration of hose jet, etc., shall be at the direction of the Engineer. No jetting will be allowed on materials with a 200 minus gradation of greater than 15%. Contractor shall pay cost of all water used, soil classification testing and a retesting or recompaction required. No jetting shall be done prior to written approval and direction of the Engineer.

3.5.8.
Maintenance of Backfill: Contractor to maintain all backfill in a satisfactory condition during the extent of the contract and warranty period. All surface deterioration determined to be the responsibility of the Contractor and all settlement shall be repaired at once by the Contractor upon notice by the Owner. All costs for repair and all liability as a result of surface deterioration or settlement shall be the responsibility of the Contractor.

3.5.9.
Clay Barrier Water Stops: Because of the presence of ground water, a clay barrier may be required to be installed full depth in trench in place of all bedding material and backfill. This barrier shall be full depth and two feet thick and installed every 500 lineal feet of trench. Clay barrier installation shall be considered incidental to the pipe installation and not paid for separately.

3.6.
Surface Restoration. All existing surface improvements and site conditions disturbed or damaged during construction to be restored to a condition equal to pre-construction condition. All restoration costs are considered incidental to excavation and backfill. The Contractor shall provide sufficient labor forces and equipment to maintain cleanup operations closely behind pipe laying operations. Every advantage shall be taken of periods of good weather for general cleanup, grading, top-soiling, seeding, sodding etc. Items of work such as manhole construction, road cuts, pavement replacement, and all other restoration work shall not be allowed to lag behind the pipe installation. Special attention shall be given to maintaining road crossings.

3.6.1.
Temporary pavement patches: Patches must be kept flush with adjacent paved surfaces between asphalt paving seasons. Ruts and other depressions caused by settling, vehicular traffic etc. shall be continuously filled and graded for maintenance of smooth traveled surface and minimum inconvenience to the public.

3.6.2.
Improvements: Replace, repair, or reconstruct all improvements as required. Work will not be accepted until restoration is accepted by Engineer and all affected property owners. Improvements include, by example, other utilities, culverts, structures, curb and gutter, mailboxes, signs, sprinkler systems, etc.

3.6.3.
Final Grading: The Contractor is to re-establish existing final grade or finish final grades as modified and shown on the Drawings. The Contractor is to backfill to proper sub grade elevation with backfill material to allow placement of surface improvements or materials.

3.6.4.1.
Minimum base course material on gravel roadways or minimum depth gravel on hard surface roadways to be 8 inches, unless shown otherwise on Drawings.

3.6.4.2.
Minimum bituminous surfacing to be 3 inches unless shown otherwise on Drawings.

3.6.4.3.
Minimum concrete pavement surfacing to be 6 inches, unless shown otherwise on Drawings.

3.6.5.
Restoration Monitoring: If in the opinion of the Engineer, cleanup and miscellaneous items of work and construction are lagging, the Contractor will be required to stop pipe installation until such work is caught up. A percentage of the unit and lump sum prices will be withheld from payments for pipe installation, manhole construction etc. in areas where cleanup and restoration have not been completed. This percentage will be in excess of the specified 10% retainage for completed work.

4. QUALITY CONTROL - FIELD

4.1.
Compaction. It should be fully understood that it will be the sole responsibility of the Contractor to achieve the specified densities for all embedment and backfill material placed. The Contractor will be responsible for ensuring that correct methods are being used for the placement and compaction of said materials. Correct backfill methods include, but are not limited to:

4.1.1.
Use of proper equipment for existing soil condition encountered.

4.1.2.
Moisture content of existing soils; determination if water should be added or if soil should be air dried to reduce moisture content.

4.1.3.
Thickness of backfill lift.
4.1.4.
Contractor may, at his own expense, have an approved geotechnical engineer monitor the methods of backfill and compaction used to ensure that the desired densities are being obtained.
4.1.5.
Inspection and testing will be performed as directed by the Engineer. Testing will be conducted as a quality assurance check to verify the Contractor's compliance with the standards indicated in the Specifications.
4.2.
Inspection and Testing. Inspection and testing to be performed at the direction of the Engineer. The Contractor shall cooperate fully with all persons engaged in testing. The Contractor shall excavate as required allowing testing. The Contractor shall backfill all test excavations in accordance with these Specifications. Any areas which require a specified density, including fill, backfill, trenches, embankments, road base, hot bituminous pavement, backfill for structures, shall be tested.
4.3.
Density Testing and Control:
4.3.1.
Reference Standards: Density/moisture relationships to be developed for all soil types encountered according to ASTM D698 or AASHTO T99.
4.3.2.
Field Testing: Testing for density during compaction operations to be done in accordance with ASTM D2922 using nuclear density methods.
4.3.3.
Frequency of Testing: Minimum of one (1) test every 250 feet of trench per lift or as directed by Engineer. The Contractor to excavate to depths required by Engineer for testing and backfill test holes to density specified. Testing to be paid for by Owner.
4.3.4.
Retesting: In the event of failure to meet compaction criteria, the Contractor shall re-excavate and re-backfill at direction of Engineer. All retesting to be paid for by Contractor and to be performed by soils testing firm approved by the Engineer.
4.4.
Payment for Testing: Owner responsible for all costs of initial testing of backfill. Contractor to pay all costs of any retesting required.
5.
MEASUREMENT AND BASIS OF PAYMENT
5.1.
Measurement: Separate measurement for payment will not be made for trenching, backfilling, and compaction specified in this Section.
5.2.
Payment: Separate payment will not be made for trenching, backfilling, and compaction in this Section. All costs for such work will be considered to be included in the prices quoted for the applicable related items of work.

END OF SECTION

SECTION 02829

ELECTRIC GATE OPERATORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Electric Gate Operators:
   1. Commercial High Traffic DC Slide Gate Operator (LiftMaster Model CSL24UL).

B. Monitored Photo Eyes
   1. Monitored Retro-Reflective Photo Eyes (LiftMaster Model LMRRUL)
   2. Monitored Through-Beam Photo Eyes (LiftMaster Model LMTBUL)

1.2 RELATED SECTIONS

A. Section 02820 - Fences and Gates: Adjoining fences and gates.

B. Section 03300 - Cast-in-Place Concrete: Concrete mounting pads.

C. Section 11150 - Parking control equipment.

D. Division 16 - Requirements for electrical connections.

1.3 REFERENCES

A. National Electrical Manufacturers Association (NEMA): NEMA ICS 6 - Industrial Control and Systems: Enclosures.

B. Underwriters Laboratories (UL): UL 325 - Standard for Safety for Door, Drapery, Gate, Louver, and Window Operators and Systems.

C. Underwriters Laboratories (UL): UL 991 - Standard for Tests for Safety-Related Controls Employing Solid-State Devices.

D. International Organization for Standardization: ISO 9001 - Quality Management Systems.

1.4 SUBMITTALS

A. Submit under provisions of Section 01300.

B. Product Data: Equipment list, system description, electrical wiring diagrams for installation, and manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including anchorage, edge conditions, and accessories.
   1. Operation, installation, and maintenance manuals including wiring diagrams.
   2. Risers, layouts, and special wiring diagrams showing any changes to standard drawings.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle materials and products in strict compliance with manufacturer's instructions and industry standards.

B. Store products indoors in manufacturer's original containers and packaging, with labels clearly identifying product name and manufacturer. Protect from damage.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: ISO 9001 Certified Manufacturer.

B. Installer Qualifications: Installation performed by factory authorized contractor specifically trained in gate operation systems of the type found within this section.
   1. Provide documentation of maintenance and repair service availability for emergency conditions.
   2. Provide quarterly maintenance for one year following Substantial Completion of the Project.

1.7 WARRANTY

A. Manufacturer's Standard Limited Warranty:
   1. Warranty Period: 5 years for commercial applications, 7 years for residential applications.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: LiftMaster; 300 Windsor Drive; Oak Brook, IL 60523. ASD. Toll-Free: 800.282.6225. Email: specs@LiftMaster.com. Web: LiftMaster.com.

B. Substitutions: Not permitted.

C. Requests for substitutions will be considered in accordance with provisions of Section 01600.

2.2 GATE OPERATORS

A. Gate Operators: LiftMaster CSL24UL Commercial High Traffic DC Slide Gate Operator.
   1. LiftMaster CSL24UL Slide Gate Operator.
   2. Compliance: UL Listed. Compliant to the UL 325, UL 991 and CSA C22.2 No. 247 standards.
      a. This model is intended for use in Class I, II, III and IV vehicular slide gate applications.
   3. Monitored Safety Inputs: 3 inputs per board (main board and expansion board) totaling 6 inputs with any combination of up to:
      a. Main Board:
         1) 1 Monitored Close Photo Eye input
         2) 1 Monitored Open Photo Eye input
         3) 1 Monitored Open Safety Edge or Open Photo Eye input
      b. Expansion Board
         1) 2 Monitored Safety Edge or Photo Eye inputs (selectable for Open or Close).
         2) 1 Monitored Photo Eye input (selectable for Open or Close).

c. 8 Monitored edges available when Transceiver is added.

4. Electrical Power Requirements:
   a. 115V AC, single phase
   b. 230V AC, single phase.
5. Motor: 24V DC, with soft start/stop operation.
   a. Duty cycle: Continuous duty.
6. Capacity: 50-foot (15200 mm) gate at 1,500 pounds (680 kg).
7. Recommended Cycles per Day: Continuous duty.
8. Gate Travel Speed: 12 inches (304 mm) per second.
9. Warranty: 5 years for commercial applications, 7 years for single-home applications.
10. Wormgear Reduction: Commercial oil bath gearbox with 10:1 wormgear reduction running in synthetic oil bath.
11. Battery Backup: Power Management system draws 14.8 mA when gate is idle with remote controls programmed. Provides 208 cycles on Battery Backup with two 7 Ah batteries or 1179 cycles with two 33 Ah batteries.
12. Standby Time: Provides up to 24 days of standby power in the event of a power loss with two 7 Ah batteries or 105 days with two 33 Ah batteries (excluding accessories).
13. Solar Capable: See daily solar cycle chart.
14. Accessory Electrical Power Requirements: 24V DC 500 mA output, switched and unswitched power.
15. Chassis: Constructed with 1/4 inch (6mm) gold zinc-plated steel for rust prevention.
16. Cover: High-density, UV-resistant polycarbonate two-piece cover.
17. Internet Connectivity: MyQ Technology
    a. 902 to 928 MHz
    b. 50-channel FHSS (Frequency Hopping Spread Spectrum).
    c. LiftMaster 828LM Internet Gateway enables monitoring and control of gate operators via internet-enabled smartphone, tablet or computer.
    d. Provides two-way communication between gate operator and MyQ accessories to enable remote open, close and monitoring of gate.
18. Receiver:
    a. Security+ 2.0 3-channel on-board receiver, holds up to 50 remote controls (unlimited with use of 811LM/813LM), HomeLink compatible
    b. Transmits 310 MHz, 315 MHz, 390 MHz.
19. Inherent Reversing Sensor: Detects obstructions or increased loads. Reverses gate when closing or stops/reverses the gate when opening.
20. Electronic Limits: Maintains accurate limit position throughout travel, even after using the manual disconnect.
21. Dual-gate operation capabilities to allow 2 separate gate operators to operate in unison at a single entrance.
22. Wireless Dual-Gate Operation:
    a. Built-in wireless communication will operate primary and secondary operator without having to run a communication wire.
    b. Support for Through-beam photo eye in the wireless dual-gate setup. Can attach emitter and receiver to each operator, eliminating the communication wire between them.
23. PosiLock: Automatically powers the operator and returns a gate to the closed position when gate is pushed off of its closed limits.
24. Bi-Part Delay: Selectable feature for dual-gate applications. Firmware monitors speed and position of each gate and adjusts speed as necessary to ensure both the gates close at the same time.
25. Synchronized Close: Selectable feature for dual-gate applications. Monitors the speed and position of each gate and adjusts speed as necessary to ensure both the gates close at the same time.

26. LED Diagnostic Display: Simplifies installation and troubleshooting.
27. Colored Terminal Blocks: Provides easy identification of safety and fire department inputs.
28. Programmable Auxiliary Relays: 2 programmable relays with 6 settings each
    a. Pre-warning or gate-in-motion sounder.
    b. Switch on/off devices at open or Close Limits or while gate is in motion..
    c. Tamper detection if gate is pushed off Close Limit.
    d. Cycle quantity feedback.
    e. Red/Green light to control gate traffic.
29. Quick Close, Anti-Tailgate: Quickly secures property, preventing unauthorized access.
30. Sequenced Access Management: Capable of sequentially controlling the operator in tandem with barrier gate.
31. Plug-in Loop Detector Inputs: Programmed inputs for shadow, interrupt and exit.
32. Alarm Reset Button: Instantly resets the built-in safety alarm siren.
33. Fire Department Compliant: Selectable settings allow gate to auto open on power failure or battery depletion.
34. Surge Suppression: Industrial strength on high and low voltage outputs. Protects against lightning strikes at a 50-foot (15240 mm) radius.
35. Keyed Manual Disconnect: Simple-to-use disconnect allows gate to be operated manually and maintain limit position once re-engaged.
36. Operating Temperature Range:
    a. Without Heater: -4 degrees F (-20 degrees C) to 140 degrees F (60 degrees C)
    b. With Optional Heater: -40 degrees F (-40 degrees C) to 140 degrees F (60 degrees C)
37. MyQ enabled Accessories:
    a. LiftMaster 828LM Internet Gateway: Allows remote monitoring from internet-enabled computer or smartphone.
    b. LiftMaster 829LM Garage and Gate Monitor: Allows remote monitoring and operation.
    c. LiftMaster 823LM Remote Light Switch: Controls light remotely.
    d. LiftMaster 825LM Remote Light Control: Allows remote monitoring and operation.
38. Accessories: Safety Monitoring Devices:
    a. Monitored Photo Eyes and Wireless Edge Kits.
        1) LiftMaster LMRRUL Reflective Photo Eyes.
        2) LiftMaster LMTBUL Thru-Beam Photo Eyes.
        3) LiftMaster LMWEKITU Wireless Edge Kith with Transmitter and Receiver.
        4) LiftMaster LMWETXU Wireless Edge Transceiver
    b. Wired Monitored Edges (all require use of LMWEKITU)
        1) LiftMaster S50 Small Profile Monitored Edge
        2) LiftMaster L50 Large Profile Monitored Edge
        3) LiftMaster WS4 Wrap-Around 4 foot (1219 mm) square monitored edge
        4) LiftMaster WS5 Wrap-Around 5 foot (1524 mm) square monitored edge
        5) LiftMaster WS6 Wrap-Around 6 foot (1829 mm) square monitored edge
        6) LiftMaster WR4 Wrap-Around 4 foot (1219 mm) square monitored edge
        7) LiftMaster WR5 Wrap-Around 5 foot (1524 mm) square monitored edge
        8) LiftMaster WR6 Wrap-Around 6 foot (1829 mm) square monitored edge
39. Accessories: Provide the optional accessories listed below.
    a. LiftMaster LOOPDETLM Plug-in Loop Detector
    b. LiftMaster KPW250 – Wireless Commercial Keypad
    c. LiftMaster 892LT 2-Button Security+ 2.0 Learning Remote Control
    d. LiftMaster 894LT 4-Button Security+ 2.0 Learning Remote Control
    e. LiftMaster 811LM 1-Button Encrypted DIP Remote Control
    f. LiftMaster 813LM 3-Button Encrypted DIP Remote Control

g. LiftMaster IPAC – Internet Protocol Access Control Entry System
h. LiftMaster EL2000SS Stainless Steel Commercial and Gated Community Telephone Entry System.
i. LiftMaster Star1000 Commercial Access Control Receiver
j. LiftMaster PPWR Passport Receiver with Security+ 2.0 Technology
k. LiftMaster PPV1 Passport 1-Button Remote
l. LiftMaster PPK1 Passport 1-Button Mini Remote
m. LiftMaster KPR2000 Single Access Remote Control Keypad and Proximity Reader
n. LiftMaster MG1300 Maglock. 1,300 pound (590 kg) holding force
o. LiftMaster MPEL: Mounting plate for post mount
p. LiftMaster HTR Heater Kit

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

A. Inspect and prepare substrates using the methods recommended by the manufacturer for achieving best result for the substrates under project conditions.

B. Do not proceed with installation until substrates have been prepared using the methods recommended by the manufacturer and deviations from manufacturer's recommended tolerances are corrected. Commencement of installation constitutes acceptance of conditions.

C. If preparation is the responsibility of another installer, notify Architect in writing of deviations from manufacturer's recommended installation tolerances and conditions.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions. Test for proper operation and adjust until satisfactory results are obtained.

3.3 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

DIVISION 3 CONCRETE

SECTION 03150 CONCRETE FORMWORK

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

PART 1 - GENERAL

1.1 SCOPE

A. Work Specified

1. Furnish all labor, materials and equipment and perform all operations required to complete all formwork as indicated on the drawings and specified herein.

1.2 DESCRIPTION

A. Work Included: Forms, shores, bracing, removal and other operations as necessary for all cast in place concrete placed.

1. Setting and securing into forms anchor bolts and other metal items embedded in concrete, using materials and layouts furnished and delivered to jobsite as specified under other sections.

B. Related Work Specified Elsewhere

1. Section 03200: Concrete Reinforcement

2. Section 03300: Cast-in-Place Concrete

1.3 QUALITY ASSURANCE

A. Reference Standards

1. ACI 347 "Recommended Practice for Concrete Formwork."

2. American Plywood Association (APA).

3. West Coast Lumberman's Association (WCLA).

4. California Building Code, 2007 edition, Chapter 19.

B. Submittals: Form interface to concrete elevations, see Section 3.01.A.6, prior to placement of concrete and see 3.03D after removal of forms

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: All form materials shall be new at start of job. Intent is to produce high quality concrete construction with minimum defects due to joints, deflection of forms, roughness of forms, or other concrete or poor form materials or workmanship.

B. Reuse of Forms: Plywood forms may be reused, provided they are thoroughly cleaned of all dirt, mortar, and foreign materials, and are undamaged at edges and contact face. Reuse in all cases shall be subject to permission from the Architect. Reuse of any panel, which will produce a blemish on exposed concrete, will not be permitted.

2.1 MATERIALS (continued)

C. Form Materials:

1. Non-Exposed Surface Formwork Facing:

a. Forms for concrete which is not exposed to view, may be of plywood as specified for exposed surfaces, or square edge 1" x nominal Douglas Fir, Construction Grade, S4S.

2. Exposed Surface Formwork Facing:

a. Forms for all exterior and interior concrete flat surfaces unless otherwise specified as board formed shall be new Douglas Fir Plywood (APA)5-ply, ⅝″, B-B Plyform, Class 1, Exterior Type, oiled and edged and edge-sealed conforming to U.S. Product Standard PS 1-83 in large sheet sizes to achieve joint patterns shown.

b. All exposed concrete edges shall be chamfered ½" minimum or as noted on the drawings.

D. Earth Forms: Earth trench forms will be allowed if soil will stand in excavations and not ravel or cave.

E. Form Coating:

1. Form Sealer: "Nox-crete Form Coating", or an approved equal for wood forms only.

2. Spray-on compounds shall not affect color, bond or subsequent treatment of concrete surfaces.

PART 3 - EXECUTION

3.1 CONSTRUCTION OF FORMS

A. General:

1. All concrete work shall be formed to the shapes, sizes, lines and dimensions shown on the plans. Cambers specified in concrete members and slabs shall be provided in the formwork

2. The design and engineering of the formwork, as well as its construction, shall be the responsibility of the Contractor.

3. Schedule the work and notify other trades in ample time so that provisions for their work in the formwork can be made without delaying progress of the project. Verify that all sleeves, pipes, etc. for electrical, plumbing, heating and ventilation, or other work, are installed; and secure information about and provide for all openings, offsets, recessed nailing blocks, channel chases, anchors, ties, inserts, etc. in the formwork before concrete is poured.

4. The Architect/Engineer shall be notified for and conduct a review of the formwork prior to placing reinforcing steel.

5. Excessive deflection of forms after concrete is poured shall be sufficient cause for rejection of that portion of concrete and formwork. Excessive deflection will be considered to be that which will produce visible and noticeable waves in the finished concrete.

3.1 CONSTRUCTION OF FORMS (continued)

B. Arrangements of formwork shall be uniform and workmanlike. Forms shall be substantial and sufficiently tight to prevent leakage of mortar. They shall be properly tied, braced, shored, and supported to insure stability against pressures from any source, without failure of any component part and without excessive deflection.

C. Proper provisions shall be made for all openings, offsets, inserts, anchorages, blocking, and other features of the work as shown or required.

D. Warped, checked or scuffed forms shall be rejected.

E. Membranes, reinforcing and other work shall be protected with plywood runway boards, etc. as necessary.

3.2 SURFACE TREATMENT OF FORMS

A. Contact surface of all plywood and board forms shall be treated with a form sealer. Treatment shall be in strict conformance with the manufacturer's specifications. The sealer to be used shall leave no residue or stain upon the face of the concrete, nor have the effect in any way of preventing bonding of subsequent paint or plaster coats.

3.3 FORM REMOVAL

A. Forms shall not be loosened or removed before minimum curing period has elapsed without appropriate, approved, alternate curing methods being employed.

B. Forms shall be removed without damage to the concrete and in such a manner that will insure complete safety of the structure and without damaging exposed beam, column, and wall edges and chamfers and inserts. In no case shall they be removed until the concrete has hardened sufficiently to permit their removal with safety, and the members have attained sufficient strength to safely support the imposed loads. The minimum time for removal of forms after concrete has been poured shall be as follows:

1. Columns and Walls: 7 days, provided members are not subjected to overhead loads.

2. Footings: Side forms may be removed 24-hours after concrete is poured, if backfilled immediately, otherwise 7 days minimum.

C. The times listed above are minimum. These time periods may be extended if deemed necessary by the Architect/Engineer.

D. Provide measured elevations in writing at the same locations as provided for formwork within 7 days of removing forms.

E. Concrete shall not be subjected to superimposed loads (structure or construction) until it has attained its full design strength and not for a period of at least 14 days after placing. Concrete systems shall not be subjected to construction loads in excess of design loads.

END OF SECTION

DIVISION 3 CONCRETE

SECTION 03200 CONCRETE REINFORCEMENT

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

PART 1 - GENERAL

1.1 SCOPE

A. Work Specified

1. Furnish all labor, materials and equipment and perform all operations required to complete all reinforcing steel work as indicated on the drawings and specified herein.

1.2 DESCRIPTION

A. Complete steel reinforcing for all concrete and masonry work shown or specified to be reinforced, as indicated on the drawings, as described. Coordinate this work with the other work affected by these operations, such as forms, electrical work, mechanical work, structural steel, and concrete.

B. Related Work Specified Elsewhere

1. Section 03150: Concrete Formwork
2. Section 03300: Cast-In-Place Concrete

1.3 QUALITY ASSURANCE

A. Reference Standards: Unless otherwise noted, the latest adopted edition of the following standards shall govern the work.

1. California Building Code, 2016 edition, Chapter 19.
2. CRSI - Manual of Standard Practice and Recommended Practice for Placing Reinforcing Bars. MSP, latest edition.
3. ACI 315 - Manual of Standard Practice for Detailing Reinforced Concrete.
4. AWS - American Welding Society
5. ASTM - American Society for Testing and Materials

B. Submittals: Contractor Supplied Identification and Verification of Materials and Uses:

1. Provide to the Owner's Testing Laboratory all material identification/test information as required below.

a. The Fabricator shall provide manufacturer's mill test reports for the materials to be used on the job. These reports are to include chemical and physical properties of the reinforcing for each heat number manufactured. All fabricated materials to be tagged with heat number.

b. Fabricator shall provide a letter of certification stating that materials supplied are from heat numbers covered by supplied mill certificates. Include in this letter of certification the physical location of each grade of reinforcing and/or heat number in the project (i.e. foundations, walls, etc.).

1.3 QUALITY ASSURANCE (continued)

c. Material Tests: Where identification of materials by heat number to mill tests cannot be made, the Contractor shall have the materials tested at his expense, make one series of tension and bend tests for each 10tons or fraction thereof each size and type of reinforcing steel. Tests shall be performed by a qualified Testing Laboratory.

2. Provide to the Architect/Engineer:

a. Shop drawings showing complete fabrication and placing details of all reinforcing steel for review prior to start of fabrication. Drawings shall also show bar sizes and layout and shall refer to design drawings and details. The Architect/Engineer's review is of a general nature only. An effort will be made to discover any errors but all responsibility or conformance with the drawings and specifications shall remain with the Contractor. The General Contractor shall review and approve shop drawings prior to submittal to the Architect.

b. Samples or vendor data on reinforcement supports and locations.

1.4 TESTING & INSPECTION BY THE OWNER'S TESTING LABORATORY

A. Review all Contractor submittals for material identification of materials. Verify adequacy at fabricator shop and on site where testing of materials has been done by the Contractor's testing laboratory. Review for adequacy.

B. For all structural classes of concrete with specified strengths of 2500 psi or more, inspect reinforcement size, placement, clearances, etc. All inspections to be done 48 hours prior to placement of concrete and shall be done using contractor documents, not shop drawings. Report any discrepancies to Architect/Engineer immediately so that corrective measures may be taken by the Contractor.

C. Continuous inspection of all welding of reinforcement and pre-heat operations.

D. Provide reports to the Architect/Engineer on above items.

1.5 PRODUCT DELIVERY, STORAGE & HANDLING

A. Reinforcing steel shall be delivered to job site in bundles, tagged identifying location on the job. Store reinforcement above the ground on platforms or skids to prevent damage or accumulation of dirt or rust.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Reinforcing Steel: The reinforcing bars shall conform to ASTM A706; or to ASTM 615, Grade 60, except (1) the maximum yield strength shall be 78,000 psi, and (2) the tensile strength shall not be less than 1.25 times the actual yield strength. Bars used as column ties, stirrups, and field bent dowels shall be Grade 40 minimum, unless otherwise noted on the drawings.
All reinforcement to be welded shall be or shall meet the requirements for ASTM A706 reinforcement.

B. Welded Wire Fabric: ASTM A-185

C. Tie Wire: No. 16 AWG or heavier, black annealed.

2.1 MATERIALS (continued)

D. Supports for Reinforcing Bars:

1. Supports for reinforcing on ground shall be blocks of concrete of sufficient strength and size to support the bars in proper locations.

2. Supports for reinforcing over formwork, concrete, or metal shall be plastic or galvanized steel chairs of type reviewed by the Architect/Engineer and of sufficient strength and spacing to support the bars and any construction loads imposed on them. Metal bar supports shall conform to current ACI and CRSI Standards. Metal bar supports shall have plastic tips where exposed to weather and/or to view after removal of forms.

PART 3 - EXECUTION

3.1 FABRICATION

A. All steel bars, wire and fabric shall be of size, gauge and length indicated, accurately bent or formed to shapes detailed or scheduled by experienced shops using methods that will not injure the materials. Bending and placing of bars shall be in accordance with the Manual of Standard Practice and Recommended Practice for Placing Reinforcing Bars (CRSI MSP-Latest Edition) unless otherwise shown, noted or specified. Unless otherwise allowed, all reinforcing bars shall be shop fabricated to lengths and bends shown on drawings.

B. Steel reinforcing shall not be bent in a manner that will injure the material or the embedding concrete. Bars with kinks or bends not shown on the plans shall not be used. Heating of reinforcement for bending will not be permitted. Bars shall be bent once only (no re-bending or straightening allowed) unless shown as such on the drawings.

C. All details of reinforcement not shown or indicated on the drawings or specifically called for in the specifications shall conform to ACI 315.

D. Reinforcement shall be tagged with suitable identification to facilitate sorting and placing.

3.2 PLACING

A. General

1. Reinforcing bars shall be of size shown on the drawings, schedules and details; accurately placed as to spacing and clearance; and securely tied at all intersections and supports with wire in such manner as will preclude displacement during placement of concrete.

2. Place and secure reinforcement to maintain the proper distance and clearance between parallel bars and from the forms or ground. Provide additional steel as metal spreaders and separators to maintain steel properly positioned in forms. Support additional reinforcement upon concrete pads, bars, or form hangers. All clearance requirements shall be met.

3. Supports for reinforcing in walls, columns and slabs shall be the correct size and at the proper spacing to adequately position and support the reinforcing until concrete has been placed.

4. Before placing, clean bars free from rust, scale, dirt, grease, dried coatings of concrete or other foreign substances, which are, in the Architect/Engineer's opinion, detrimental to the bond. After placing, maintain bars in a clean condition until completely embedded in concrete.

3.2 PLACING (continued)

5. All reinforcing shall be kept separate from soil, pipe, conduit, ducts, etc. by non-metallic separators that have been accepted for use.

B. Reinforcing Spacing and Coverage:

1. Bars shall not be spaced closer than four (4) diameters of the largest of two adjacent bars, except at bar laps, which shall be placed such that a minimum of 2 bar diameters is clear between bars. Where reinforcing in members is placed in two layers, the distance between layers shall not be less than four bar diameters of the largest bar and the bars in the upper layers shall be placed directly above those in the bottom layer, unless otherwise detailed or dimensioned.

2. Coverage of bars (including stirrups and columns ties) shall, unless otherwise shown, be as follows:

Footings & Mat Foundation: ..... 3" any soil face, 2" top

Slabs (on grade): ..... 2" grade face, 1½" top face

Slabs (elevated): ..... 1½" top and bottom

Beam & Column: ..... 1½"

Walls: ..... 1½" clear to form

C. Obstructions:

1. Where obstructions (block outs, pipes, conduit, ducts, etc.) prevent the intended placement of reinforcing, provide additional reinforcing, as directed by the details for such obstructions and as directed by the Engineer, around the obstruction to match that reinforcing interrupted.

2. Provide additional stirrups, ties, trim bars, etc. as directed around all openings, sleeves, pipes, and conduit, which pass through structural elements.

3. Provide for clearances and block-outs as required in other sections.

D. Welded Wire Fabric: Welded wire fabric reinforcement shall be rolled out, straightened, cut to required size, and laid out flat in place. Securely wire to fabric and other reinforcement at frequent intervals. Extend fabric over supporting beams and walls. At edges of slabs, construction joints, and expansion joints, extend fabric to within 1” of pour. As concrete for slabs is placed, lift fabric reinforcement at intervals to insure proper embedment. Support fabric in mid-depth of slab. Slabs shall be reinforced with 6"x 6"-W1.4 x W1.4 welded wire fabric reinforcing, unless otherwise noted on drawings.

3.3 DOWELS, SPLICES, OFFSETS & BENDS

A. Lap all bars at splices, corners, and intersections as shown on structural drawings. Laps of welded wire fabric shall be at least two times the spacing of the members in the direction lapped but not less than twelve inches.

B. Splices of reinforcement shall not be made at points of maximum stress. Splice lengths are as noted on the structural drawings and shall provide sufficient lap to transfer the stress between bars by bond and shear.

3.3 DOWELS, SPLICES, OFFSETS & BENDS (continued)

Bars shall be spaced the minimum distance specified and all lapped bars shall be 2 bar diameter (minimum) clear of the next bar. Stagger splices of adjacent bars where possible and where required to maintain bar clearance. Beam or slab top bars shall be spliced mid-span of column support and bottom bars spliced at column supports. All splices not shown on the drawings shall be reviewed by Architect/Engineer prior to placement. All splices and laps at corners and intersections shall be tied with wire at each end.

C. Bends: Reinforcing bars are not to be re-bent on the job. All job site bending to be in accordance with section 3.01

D. Bar lock couplers by MBT coupler systems, 1-800-755-4888,(ICBO 5069, Nov, 1994) are to be used where shown on the drawings and may be used as an alternate to lap splices in general. Installation to be in accordance with manufacturer's recommendations.

3.4 WELDING

A. Reinforcing bars shall not have welded joints unless indicated on the drawings or unless prior approval has been given by the Architect/Engineer. Welding shall conform to the requirements of the American Welding Society Structural Welding Code for reinforcing steel D1.4. Field welding shall be performed by AWS certified welders. All reinforcement requires preheat prior to welding. Preheat operations must be inspected and certified by the Testing Laboratory. Preheat operations and welding must be inspected by a Testing Laboratory. If A706 reinforcement is not used and if mill test reports are not available, chemical analysis shall be made of bars representative of the bars to be welded. Bars with a carbon equivalent (CE) above 0.75 shall not be used for welded connections.

3.5 MISPLACED REINFORCING

A. If any reinforcing bars are found to be misplaced after concrete has been placed, the Architect/Engineer shall be notified immediately and no correction or cutting shall be made without his direction. Misplaced bars shall not be bent or kinked. Any redesign and/or reinforcing required because of misplaced bars shall be at the Contractor's expense.

3.6 SEPARATION

A. All reinforcing shall be kept separate from soil, pipe, conduit ducts, etc. by approved non-metallic separators. Steel stakes or reinforcement used as stakes shall not be used to support reinforcement.

3.7 CLEANING

A. The sub-contractor shall be responsible for removing excess material and debris associated with his work from the job site.

END OF SECTION

DIVISION 3 CONCRETE

SECTION 03300 CAST-IN-PLACE CONCRETE

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions, and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

PART 1 - GENERAL

1.01 SCOPE

A. Work Specified

1. Provide all labor, materials, equipment and services to complete all concrete work required.

1.02 DESCRIPTION

A. The work shall include, but not necessarily be limited to, the following:

1. Foundations, slabs, walls, and retaining walls.
2. Installation of all bolts, inserts, sleeves, connections, etc. in the concrete.
3. Coordination with other trades:
   a. Make all preparations and do all work necessary to receive or adjoin the other work. Except where otherwise specified, the various trades will furnish bolts, anchors, etc. required for anchoring their work to the concrete. Installation of the bolts and anchors into the forms and the furnishing and installation of necessary blocking shall be done as a part of this work.
   b. The Contractor shall be responsible for the installation of all accessories embedded in the concrete and for the provision of holes, etc. necessary for the execution of the work of other trades. Any patching or cutting made necessary by failure or delay in complying with this requirement shall be at the Contractor's expense.
   c. Other trades shall be responsible for the accurate location of their accessories. Any cutting and patching which may be necessary because of inaccurate location shall be at their expense.

B. Related Work Specified Elsewhere

1. Section 03150: Concrete Formwork
2. Section 03200: Concrete Reinforcement

1.03 QUALITY ASSURANCE

A. Reference Standards: Unless otherwise noted, the following standards shall govern the work:

1. American Society for Testing and Materials (ASTM), latest revision.
2. California Building Code, Chapter 19 - Concrete and CBC Standards, latest adopted edition.

3. ACI 302 - Guide for Concrete Floor and Slab Construction.
4. ACI 301, ACI 304 - Recommended Practice for measuring, mixing and placing concrete.
5. ACI 305 - Recommended Practice for hot weather concreting.
6. ACI 306 - Recommended Practice for cold weather concreting.
7. ACI 211.1 - Standard practices for selecting proportions for normal, heavyweight and mass concrete.

B. Contractor submittals to the Architect/Engineer and the Owner's Testing Laboratory (unless noted otherwise).

1. Concrete Mix Designs:

   a. The mix design(s) for all structural classes of concrete is to be prepared by a qualified source, such as a testing laboratory. Contractor to allow for time required to do trial batch testing when required.
   b. The preparer shall submit with the mix design, a certification, in writing, that the mix design meets the requirements of the specifications; that the mix design meets the requirements of the California Building Code and these specifications for concrete durability and quality including a historical background as a pre-qualified mix; that the mix is over designed if the mix is not pre-qualified, or that trial batches will be made and tested (at the expense of the supplier).
   c. For concrete classes that indicate a minimum modulus of rupture (MOR),"beam" test results performed in accordance with ASTM C-78 shall be submitted as a part of pre-qualification requirements.
   d. Concrete mix designs with specified maximum WCR shall be designed to allow water added on site, or shall have clearly identified, on the mix design, that no water to be added on site.
   e. If a deviation of these specifications is desired, the preparer shall submit those deviations, along with a written explanation indicating the submitted mix design(s) will provide an equivalent or better concrete product than as specified.

2. Manufacturer's instructions and specifications for other concrete related materials such as: bond breakers, cure/sealer, admixtures, etc. (Architect/Engineer only).

3. Adjustments to reviewed mix designs to account for weather conditions, etc.

4. Proposed location of construction and cold joints when different or in addition to those shown on the drawings (Architect/Engineer only).

5. Batch plant certificates shall be provided upon delivery of each load of concrete. Certificates shall be provided to the owner's testing laboratory and the Architect/Engineer. Failure of the supplier to provide a batch plant certificate with each truckload of concrete is cause for rejection of the load. Certificates to include information per C4 below.

6. Engineering analysis prepared by a California licensed Civil or Structural Engineer to justify construction imposed loads on slabs, beams, and walls, when those loads are in excess of those required by the CBC for the specified use.

C. Testing and Inspection by the Owners Testing Laboratory (includes "Special" Inspections):

1. Review mix designs and certifications. Provide letter authored by a civil engineer licensed in California that recommends acceptance or rejection based upon conformance to specifications, and suitability of mix design for proposed use. Submit to engineer for review and final distribution.

2. Review of: Contractor submittals, batch plant certificates; admixtures, etc.

3. Batch plant inspection: At automated plants to occur at commencement of concrete work each day (first truck). Batch plant inspection at non-automated plants and when accuracy is questionable shall be continuous. Additionally, water cement ratio (WCR) is to be verified where a WCR is specified herein. The computed WCR is to be written on the batch plant certificate to be taken to the job site prior to the truck leaving the plant.

4. Batch plant certificates: Obtain a batch plant weigh master's certificate at the site. If no batch plant certificate is provided, recommend to the General Contractor that the truckload of concrete be rejected. So note in daily log, along with the location of the load of concrete in the structure if the load is not rejected.

   a. To verify mix design quantities and condition upon delivery to the site, the laboratory's inspector shall obtain for each transit mixer Batch Plant Certificates. Certificates to include: Date, time, ingredient quantities, water added at plant and on job, total mixer revolutions at time of placement, and time of departure. For concrete with specified water cement ratio, no water is to be added on site unless batch records show additional water may be added.

5. Construction Testing and Inspection: Provide continuous inspection during placement of structural class concrete with design strength of more than 2500 psi. Structural and non-structural class concrete with a design strength of 2500 psi or less to have periodic inspection on a 100 cubic yard basis as required to assure conformance. See 2.02 for concrete classifications.

   a. Flooring areas will be tested for water vapor transmission prior to installation of flooring systems. Refer to flooring specifications for conditions and timing for testing.

   b. Review and/or propose adjustments to reviewed mix designs to account for site, weather conditions, etc.

   c. Structural Concrete: Provide Engineer, Architect, Contractor and Building Official with written reports for Testing and Inspection of the following items:

      1) Concrete Cylinder Tests: Take a set of four specimens at the job of each class of concrete for each 100 cubic yards or fraction thereof placed each day for standard 6" x 12" cylinder tests in accordance with ASTM C-31. A record of the location in the building of each concrete batch will be kept and noted on the specimen. Standard compression test of cylinders will be made, one at 7 days and two at 28 days in accordance with ASTM C-39. The fourth cylinder is to be held until the specified concrete strengths have been attained.

2) For concrete classes with a specified minimum modulus for rupture (MOR) sample concrete and conduct "beam" tests per Section ASTM C-78 for each 1000 cubic yards of concrete per concrete supplier to be placed.

3) Slump test and air tests will be made at the time of taking test cylinders, and/or at one-hour intervals during placing concrete in accordance with ASTM-D-143.

4) Measure and record concrete temperature upon arrival of transit mixers and when taking specimens note weather conditions and temperature.

6. Rejection of Concrete Materials: The laboratory's inspector will report to the contractor when batch plant certificates are not provided and when material does not meet the requirements of these specifications. The contractor shall disallow use of such material unless prior approval for use is given by the engineer.

D. Should the concrete fail tests indicating conformance to the specifications, the Contractor shall bear the entire cost of remedial work or removal, redesign and replacing of defective concrete.

1.04 PRODUCT DELIVERY, STORAGE & HANDLING

A. Cement: Store in weather tight enclosures and protect against dampness, contamination, and warehouse set. All cement to be from the same source.

B. Aggregates:

1. Stock pile to prevent excessive segregation, or contamination with other materials or other sizes of aggregates.

2. Use only one supply source for each aggregate stock pile.

C. Admixtures:

1. Store to prevent contamination, evaporation, or damage.

2. Protect liquid admixtures from freezing and extreme temperature ranges.

3. Agitate emulsions prior to use.

1.05 COLD & HOT WEATHER REQUIREMENTS

A. Allowable Concrete Temperatures:

1. Cold Weather: When depositing concrete at freezing or near freezing temperatures, the concrete shall have a temperature of at least fifty (50) degrees F but not more than ninety (90) degrees F. The concrete shall be protected from freezing and maintained at a temperature of at least fifty (50) degrees F for not less than seven days after placing. When necessary, concrete materials shall be heated before mixing. Special precautions shall be taken for the protection of transit-mixed concrete. The use of salts or chemicals either as protection or as an admixture will not be permitted unless approved by the Architect/Engineer in writing. During near freezing weather an air temperature log shall be kept by the contractor for the first 7 days after placement. Intervals shall not exceed 8 hours. Do not place concrete during sub or near freezing weather, snow, rain or sleet unless protection from moisture and/or cold is provided.

1.05 COLD & HOT WEATER REQUIREMENTS (continued)

2. Hot Weather: Concrete shall be below 85 degrees F. when placed (add ice, cool aggregates as necessary). Do not place concrete in hot/windy weather without review of procedures by the Engineer. Generally, erect sunshades and/or wind breakers to protect flat work during finishing and immediate curing operations. Do not place concrete for flatwork when the air temperature exceeds 90 degrees F. Retarders shall be added to improve initial set times and evaporative retardants utilized during hot/windy weather. Modified mix designs to be reviewed by Owner's Testing Laboratory prior to use.

B. Do not place concrete during sub or near freezing weather, snow, rain or sleet unless protection from moisture and/or cold is provided.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Materials shall be new and best of their class or kind. The materials if found defective, unsuitable, or not as specified, will be condemned and must be promptly removed from the premises. Materials specified by brand name shall be delivered in unbroken packages bearing manufacturer's label and shall be brand specified or an approved equal. Other materials shall conform to the applicable sections of the current editions of the various standard specifications quoted herein. Materials must be properly protected from the weather or other damage, and shall be sorted to prevent inclusion of foreign materials.

B. Cementious Materials:

1. Portland Cement: ASTM 150, Type II, low alkali conforming to CBC 1903 A.2.

2. Fly Ash (Pozzolan): ASTM 618 Class F:

a. Fly Ash is a cementious material (Pozzolan) and is not Portland cement. Fly Ash may not be substituted for Portland cement on an equivalent weight basis without being required as part of the mix design, or when not specified as a part of the mix design, without written request by the preparer of the mix design indicating the purpose of the substitution. As a substitution, this request may be denied by the Engineer.

C. Concrete Aggregates:

1. ASTM C-33, stone aggregate and sand. Specific source aggregate and/or sand or shrinkage characteristics as required by classes of concrete.

2. ASTM C-330 and C-332, lightweight aggregate

3. Source shall remain constant throughout the duration of the job. The exact portions of the fine aggregates and coarse aggregates to be used in the mix shall be determined by the mix design.

D. Water: Potable, clean and from domestic source.

E. Admixtures: All admixtures shall be used in strict accordance with the manufacturer's recommendations. Admixtures containing calcium chlorides or other accelerators shall not be used without the approval of the Architect/Engineer and the Owner's Testing Laboratory.

1. Mid Range Water Reducing Admixtures: ASTM C-494, Type A, Polyheed 997 by Master Builders, WRDA 79 by W.R. Grace or acceptable equivalent.
2. High range water-reducing admixtures: (Super Plasticizer) Rheobuild 1000 by Master Builders or acceptable equivalent. The use of high range water reducing admixtures in large quantity requires water reduction in accordance with the manufacturer's recommendations.
3. Water Reducing Admixture and Retarder: ASTM C-494, Type D, "Pozzolith 300R", Master Builders; "Plastiflow-R" by Nox-crete; or acceptable equivalent.
4. Air Entrainment - MBAE - 10 (Master Builders Air Entrainment).
5. The use of water reducing admixtures to increase slump required reduction of total water content per manufacturer's recommendations.

F. Slurry

1. Slurry shall consist of the same proportions of cement to fine aggregates used in the regular concrete mix (coarse aggregate only omitted) and shall be well mixed with such amount of water as will produce a thick consistency.

G. Grout

1. Grout for Base Plates: Non-shrink, high-strength grout shall be used for all grouting; conform to ASTM C-1107. Acceptable manufacturers include The Burke Company, Master Builders, and W.R. Meadows, Inc. Grout shall attain 7500 psi in 28 days minimum when placed in a "fluid" state. Grout brands to meet or exceed the properties of Master Flow at 928 at fluid consistency.

H. Dry Pack: Dry pack for cosmetic concrete repairs only shall consist of one part cement to 2½ parts fine aggregate (screen out all materials retained on No.4 sieve), mixed with a minimum amount of water, in small amounts. The consistency shall be such that when a ball of the mixture is compressed in the hand it will maintain its shape, showing finger marks, but without showing any surface water.

I. Concrete Joint Material: Expansion joints shall be formed by premolded bituminous joint material, non-extruding, ⅜" thick, conforming to ASTM D-1751, as manufactured by "Servicised Products", W.R. Meadows, Inc., or "National Expansion Joint Company", or "Celotex Corporation" or acceptable equivalent.

J. Slab Curing Paper: Fortifiber Corporation's "Orange Label Sisalkraft" reinforced waterproof building paper, "Pabcotite" paper, acceptable equivalent, conforming to ASTM C-171, Type I.

K. Curing Compounds: ASTM C-309, Type I, Class B 20% min. solids, water base acrylic cure/sealer which will not discolor concrete or affect bonding of other finishes. Products may be "Vocomp 25" or "Vocomp 30" by W.R. Meadows Co., or acceptable equivalent. See "Curing and Protection" Section 3.06.

L. Water Stop: Seal tight PVC Water Stop by W. R. Meadows Co.

M. Chemical Floor Hardener: "Techkote #1080" by National Expansion Joint Co., "Pena-lith" by W.R. Meadows Co. or approved equivalent.

N. Evaporation Retardant: "Con-film", by Master Builders.

O. Concrete Bonding Agent: "Concresive" Liquid LPL, Masters Builders Inc. or equal; "Top Bond #40", Nox-Chem, "Rezi-Weld 1000" by W.R. Meadows or acceptable equivalent.

P. Under Slab Water Vapor Barrier:

2.01 MATERIALS (continued)

1. Vapor barrier sheet be either “a.” or “b.”. See 3.4 B for additional requirements.

   a. Rounded Free Draining Compacted Rock Slab Base: ASTM E 1745, performance classification A, B and C; 10 mil, single ply extruded polyolefin; 0.036 U.S. perm water vapor permeance per ASTM E154 or E96 procedure B; tensile strength 52.0 lb/in.; minimum puncture resistance 2600 grams per ASTM D1709, Method B.

      1) Raven Industries, Inc. Sioux Falls SD, www.ravenind.com, 605-335-0174; Product: "Vapor Block 10."
      2) Stego Industries, LLC, San Juan Capistrano, CA www.stegoindustries.com, 1-877-GO-4-STEGO; Product: “Stego Wrap Class A Vapor Retarder (10 mil).”
      3) Approved equal.

   b. Compacted Crushed Rock Slab Base: ASTM E 1745, performance classification A, B and C; 15 mil, single ply extruded polyolefin; .025 U. S. perm water vapor permeance per ASTM E154 or E96 procedure B; Tensile strength 77 lb/in/; minimum puncture resistance 4000 grams per ASTM D1709, Method B.

      1) Raven Industries, Inc. Sioux Falls SD, www.ravenind.com, 605-335-0174; Product: “Vapor Block 15”.
      2) Stego Industries, LLC, San Juan Capistrano, CA - www.stegoindustries.com, 1-877-GO-4-STEGO; Product: “Stego Wrap Class A Vapor Retarder (15mil).”
      3) Approved Equal.

Q. Slab Joint Sealant: Gardox Horizontal Joint Sealant by Seal Tight or equal, to conform with CRD 525 and 526, Type H.

R. Permeability Reducing Admixture: Xypex Admix C-2000, or Xypex C-2000 NF, both manufactured by Xypex Chemical Corporation or proven equivalent with a gas permeability reduction of 50% or more.

S. Surface-Applied Permeability reducer: Xypex Concentrate C-2000 by Xypex Chemical Corporation or proven equivalent with a gas permeability reduction of 50% or more.

2.02 CONCRETE MIXES

A. General

1. Contractor submittals shall be supplied to the Architect and the Owner’s Testing Laboratory at least 15 days before placing concrete. Prior to submittal of mix designs the contractor shall review them, for compatibility with his placing requirements to insure that the concrete as designed can be placed in accordance with the drawings and specifications.

2. The proportions of the concrete mixes shall be such as to produce concrete of required average strength (as defined by California Building Code Section 1905), slumps, aggregate sizes, shrinkage, and of a consistency that will allow thorough compaction without excessive puddling, spading, or vibration, and without permitting the materials to segregate, or free water to collect on the surface. The size and type of aggregates shall be such that it will produce low to moderate shrinkage, dense

and uniform concrete free from rock pockets, honeycomb and other irregularities. All concrete mixes shall have entrained air for workability (4% maximum). Mix designs may include adequate water reducing and retarding admixtures to meet or exceed minimum set times (time required to place and finish) and to minimize water cement ratios. Minimum and maximum criteria presented herein is a guideline and does not represent a specific mix design. Minimum cement content indicates minimum sacks of cement, not cementious material. An acceptable equivalent weight of cementious material ("Fly Ash") to cement is 1.1 lbs. of cementious material for 1.0 lbs of cement. Increasing cement content to increase early strengths or to achieve specified WCR while maintaining water content is discouraged in order to minimize effects of shrinkage.

Concrete for floor slabs on grade with floor coverings over are to be proportioned to meet the requirements noted in item #6 below.

3. Concrete may, at the Contractor's option, be designed for either pump or conventional placement with aggregate size, slumps, etc. to be maintained as specified herein.

4. Variations in mix design including changing type and or quantity of admixtures are to be re-submitted to the Owner's testing laboratory and the Architect/Engineer for review prior to use.

5. Mix designs with a specified maximum water cement ratio may be designed with a lower WCR than specified in order to allow addition of water at the site.

6. Mix designs for interior concrete floor slabs on grade with floor coverings over. Concrete mixes shall be proportioned per this specification, ACI 211.1, and the requirements below:

   a. Minimum strength at 28 days to be 3000 psi; minimum strength at 56 days to be 4000 psi.
   b. Fly Ash Type F shall be substituted for cement on a 1 lb. per 1 lb. basis, with a minimum replacement of 25% and a maximum of 35%.
   c. Total cementious materials to exceed 6.1 sacks of cementious material per 27 cubic feet (1 cubic yard).
   d. Maximum on site water cement ratio (WCR) to be .45.
   e. Coarse aggregates to be 1" x #4, per ACI 211.1, with the addition of 200 lbs. of ⅜(-) aggregate which shall be added to reduce total sand.
   f. Total sand and blend sand to be reduced as much as practical. Blend sand limited to 100 lb. maximum.
   g. All mixes shall have entrapped and/or entrained air (4% maximum).
   h. Water reducing and high slump water reducing, admixtures are to be based on cement content only, not total cementious materials. Dosage may be increased for workability as long as set times are not excessive for placement and finishing.
   i. Trial batch testing may be required per Section 1.3 B.

B. Classes of Concrete: for Minimum Requirements

2.02 CONCRETE MIXES (continued)

Class	Coarse Aggregate Size (Inches) & Fine Aggregate***	Minimum WCR & Maximum Nominal Slump & Tolerance (Inches)*, **	Minimum 28-Day Design Strength ****	Minimum Cement Sacks/C.Y ***
NON-STRUCTURAL				
1) Lean Concrete for Backfill	1" x #4	---	---	3.0
2) Slab on Grade Exterior (Walks & Patios)	1" x #4	4" ± 1"	2,000	4.5
STRUCTURAL				
3) Interior Slab on Grade w/floor coverings*****	1" x #4	WCR = .45	3,000 (design based on 2,500)	
4) Interior Slab on Grade w/o floor coverings	1" x #4	3" ± 1/2"	2,500	5.0
5) Foundation	1" x #4	3½" ± ½"	3,000	5.00

* The tolerance is the maximum deviation allowable without rejection. The mix design shall be based on the nominal value specified and is without water reducing mixtures. Slump to be measured at the end of the hose.

** The maximum water cement ratio (WCR) is limited at time of placement as noted. No water is to be added on site such that the specified WCR or maximum slump is exceeded without approval of the testing laboratory and the Architect/Engineer. Workability is to be achieved utilizing an acceptable mid range to high range water reducing admixture.

*** Gradation of aggregate is per California Building Code (CBC), Chapter 19 Section 1903.3 ASTM C33.

**** Minimum cement content is based on a pre-qualified mix design as defined by California Building Code (CBC) Section 1905.

***** Slabs on grade with floor covering to be proportioned in accordance with Section 2.2 item 6.

PART 3 - EXECUTION

3.01 MIXING CONCRETE

A. Final proportions shall be in accordance with approved mix designs. Adjustments to approved proportions, for whatever reason, shall be reviewed by the Engineer prior to use.

B. Batch and mix concrete per ASTM C-94 at an established plant.

C. Batch and transit equipment shall be adequate for the work and operated as necessary to provide concrete complying with specified requirements.

D. Mixed concrete shall be placed in the forms within 1½ hours from the time of introduction of cement and water into mixer. Use of or re-mixing and tempering mixed concrete older than 1 hour will not be permitted.

E. Concrete mixes with a maximum WCR specified shall not have water added at the site unless the water content at batch time provides for a WCR less than specified.

3.02 PLACING CONCRETE

A. Inspection and Testing:

1. Review by Architect/Engineer: Notice shall be given 48-hours (2 working days) before each concrete placement in order that review of reinforcing, forms, etc. can be made prior to placing concrete.
2. Owner's Testing Laboratory: Contractor shall notify 24 hours before each pour date.

B. Records: The contractor shall keep a record of the time, temperature and date of placing the concrete in each portion of the structure. Such reports shall be kept until the completion of the structure and shall be available for review by the Owner's Testing Laboratory/Architect/Engineer.

C. Preparation:

1. Remove loose dirt, mud, standing water, and foreign matter from excavations or from cavities.
2. For concrete on metal decking, thoroughly clean decking. Do not wet deck surface just prior to placement of concrete.
3. For concrete slabs on base rock, dampen rock.
4. For concrete slabs on vapor barrier, do not wet vapor barrier.
5. Thoroughly clean reinforcement and other embedded items free from loose rust and other matter. Assure reinforcing is held securely in place. Do not place any concrete on hot reinforcing.
6. Thoroughly wet wood forms (except coated plywood), bottom and sides of trenches, base under slab, adjacent concrete or masonry and reinforcement at least 1-hour in advance of placing concrete; securely close cleanout and inspection ports; repeat wetting as necessary to keep forms damp.
7. Equipment shall be maintained clean and of sufficient quantity and capacity to efficiently execute the work required.
8. Check all embedded items for location, position and inclusion.
9. Care shall be taken to prepare for the prevention of penetration of vapor barrier and/or waterproofing membranes.
10. Dampen materials on which concrete is to be placed. Do not saturate. Do not place concrete on saturated material. Do not wet vapor barrier, or membranes.

D. Transporting:

1. Concrete shall be handled from the mixer to the place of final deposit as rapidly as practicable by methods, which shall prevent the separation or loss of the ingredients.
2. Prevent penetration of vapor barriers and/or waterproofing membranes.

E. Placing:

1. Concreting, once started, shall be carried on as a continuous operation until the section of approved size and shape is completed. Construction joints must be as detailed on the drawings or as otherwise approved.
2. When structural concrete is to be placed on elevated structural systems, such as structural steel beams and metal decking, that are not to be shored, screed lines shall be located on primary structural members such that deflections of intermediate structural members and decking is compensated for by placement of additional

concrete. The Contractor shall provide for up to 1" of adjustment in electric trench duct and other surface flush items. The Contractor shall review proposed screed line locations and expected structural deflections with the Architect/Engineer prior to placement of concrete. Screed lines shall be placed to match any camber of primary girders that are other than concrete shall be placed such that at least the minimum thickness of concrete specified is provided at all locations.

3. Concrete shall be so deposited as to maintain, until the completion of the unit, a plastic surface approximately horizontal. It shall be deposited as neatly as practicable in its final position to avoid re-handling or flowing. No concrete shall be deposited that has started to set or stiffen. The remixing of concrete or grout that has begun to set will not be permitted. No water shall be added on site to concrete, which has a specified water cement ratio (WCR).

4. Concrete, when placed in columns and walls, shall not be placed in layers exceeding ten feet in depth. Schedule of pouring shall be such that no concrete shall take initial set before next layer is poured. No horizontal cold joints will be allowed in columns or walls. Concrete in walls shall be placed in 32" horizontal lifts, minimum.

5. Concrete shall not be dropped freely where reinforcing bars will cause segregation, nor shall it be dropped more than 4'. Spouts, elephant trunks or other approved means shall be used to prevent segregation as necessary.

6. Any concrete spilled on forms or reinforcing steel, in portions of structure not immediately concreted, shall be completely removed before concrete sets.

7. Any interruption in placing of more than 60-minutes will be cause for shutting down the work and the wasting of any remaining mixed concrete and concrete in hoppers or mixers. In case such interruption occurs, the Contractor shall provide construction joints where and as directed, and cut concrete back to such line, cleaning forms and reinforcing as herein specified.

F. Consolidation:

1. Concrete shall be thoroughly compacted by puddling with suitable tools during placing, and thoroughly worked around the reinforcement, around embedded fixtures, and into corners of the forms. In addition to manual spading and tamping, all concrete shall be internally vibrated with high-speed mechanical vibrators.

   a. Vibrators shall have sufficient amplitude for adequate consolidation.

   b. Vibrators shall be used at each point of concrete placement. Spare vibrators, not in use, shall be kept at the site for standby service.

2. Consolidate each layer of concrete as placed. Insert vibrators vertically at points 18" to 30" apart; work into top area of previously placed layer to reconsolidate, slowly withdraw vibrator to surface. Keep vibrator heads free from form surfaces.

3. Systematically double back to consolidate concrete to maximum density and reconsolidate wherever possible.

4. Vibration shall be sufficient to minimize honeycombs and accomplish compaction of concrete.

3.03 CONCRETE JOINTS

A. Structural Joints (Construction/Cold Joints)

1. Joint locations shall be where shown or approved. Joints not indicated on the plans shall be made and located so as not to impair the strength of the structure, shall be located to meet the minimum requirements below, and shall be submitted to Architect/Engineer for review, prior to placement of concrete.

2. All surfaces of previously placed concrete at construction joints shall be cleaned, washed, and roughened by sandblasting. Horizontal construction joints at the bottom of walls shall have a 2" slurry (specified concrete mix less course aggregate) placed at beginning of pour unless it can be demonstrated with a “test” section that segregation of aggregate will not occur.

3. Length of continuous placement for slabs on grade shall not exceed a length (feet) equal to three times the slab thickness (inches) unless reviewed by the Architect/Engineer. Pour sections shall be alternated or staggered. Submit proposed location of construction/cold/expansion joints for review prior to placing concrete. Length of continuous placement of beams, elevated slabs, joists, and foundations shall not exceed 200’ increments. Shut off locations shall be “keyed” with form boards and reinforcing extended through one lap length or more.

4. All reinforcement shall be continuous through unless lap splices are provided each side of joint.

5. Construction joints in elevated slab and slabs on metal decking shall not be located within 24” of the face of columns or beams. Other locations may be shown on the plans

B. Expansion/Construction Joints (Dowel Joints and Control Joints)

1. Exterior walkways, patios and other non-structural concrete flatwork at grade shall have expansion/ construction joints formed by a 2" deep trowelled groove or by asphalt impregnated joint material embedded 50% of the slab depth at 12' on center maximum. No section shall be placed with a length larger than two times its width. Additionally, place joints at all inside corners and intersections with other work.

2. Interior and Exterior Floor/work Area Slabs at Grade.

a. Provide dowel joints or control joints at a maximum dimension (in feet) of three times the slab thickness (in inches) in each direction unless noted otherwise. Install joints to match slab level and in straight lines.

C. Joint Types:

1. Dowel Joint: A keyed joint with smooth dowels passing through to allow unrestricted movement due to contraction and expansion. Joints are as shown on the drawings. Joint shall have a ⅜" wide by ¾" deep void at top for flexible sealant.

2. Control Joint(s): Shrinkage crack control joints may be of the following types when shown on the drawings. Joints to be installed in a straight line between end points and joint edges to be finished appropriate to type. Joints are as shown on the drawings are filled with sealant or as required by other finishes.

a. 2” deep x ¼” wide trowelled joint.

b. A pre-manufactured plastic joint such as "Zip Strip” may be provided where covered by other finishes.

c. ⅛" x 2" masonite strip where covered by other finishes.

d. ⅛" x 2" deep saw cut installed within eight hours of completion of finishing. Saw cuts shall not be made if aggregate separates from cement paste during the saw cut operation. Equipment shall be maintained such that surface finish is not marred. Saw cut joints not covered by other finishes shall be filled with flexible sealant.

3.04 FLATWORK (All Concrete Formed & Finished Flat)

A. General:

1. Edge forms and screeds: Edge forms and intermediate screed strips shall be set accurately to produce the design elevations and contours in the finished surface, and shall be sufficiently strong to support the type of screed to be used.

2. Jointing: Joints shall be located and detailed as indicated on the project drawings and specifications. Flatwork on ground may be cast in checkerboard patterns or in strips.

3. Consolidation: Concrete in slabs shall be thoroughly consolidated.

4. Evaporation retardant shall be placed on tamped and/or floated surface as necessary to retain surface moisture for finishing and to avoid plastic shrinkage cracking.

B. Flatwork on Ground:

1. Sub-base for concrete slabs on grade without floor covering shall consist of 6" minimum thickness of clean free-draining crushed thoroughly compacted base rock.

2. Sub-base for interior floor slabs on grade with floor coverings shall consist of 6" minimum thickness of compacted, clean, free draining, rounded base rock.

3. The mix design for interior floor slabs on grade with floor coverings over shall meet the requirements of Section 2.2, including item 6.

4. Place concrete flatwork directly over base rock material unless noted otherwise herein, on the drawings, or in Architectural specification sections. When so specified then install vapor barrier in widest practicable widths over base rock material. All joints shall be lapped not less than 12" with the top lap in the direction of the pour and sealed with an approved cold plastic cement. Approved tape may be substituted for cement. Patch holes in vapor barrier similar to laps.

C. Finishes

1. Flatwork: All flatwork finishing must be performed by experienced operators. Flatwork shall be brought to grade for sloped slabs or to level grades as shown on drawings, care shall be taken to insure full thickness in all cases. All floor surfaces shall be finished monolithically. Surfaces shall be uniform and level or sloped evenly to drains as they occur. Do not use liquid curing compounds or other coatings that may prevent bonding of tile setting materials to slabs.

a. Flatwork which receives a surface applied membrane, or ceramic tile, or wood frame for raised floors for finish, shall be wood floated.

b. Flatwork requiring a smooth finish surface, are to be steel trowel finished (trowel twice minimum).
c. Broom Texture Finish:

1) For exterior surfaces where shown or not otherwise specified.
2) Finish as for steel trowel finish, except immediately following first trowelling, (depending on conditions of concrete and nature of finish required) texture surfaces to a uniform condition using a medium or coarse fiber broom as directed by the Architect.

2. Lines and Levels:

a. Exterior surfaces not otherwise shown or required shall be transversely sloped to drain ⅛" minimum per foot. Exterior surfaces not required to be sloped shall be level within ¾" overall, tolerance (+⅜", - ⅜").
b. Interior surfaces:

1) Interior flatwork shall be level throughout within ½", tolerance (+¼", - ¼"), as defined by the form work. Optionally, levelness shall meet or exceed the requirements of ACI 302 with F_L greater or equal to 20, unless otherwise noted.

c. Maximum Allowable Deviations in trueness of surfaces. Deviation in elevation of surfaces shall be as shown or approved and deviations shall not exceed the following tolerances.

1) Deviation in trueness of surfaces may be measured using a 10' straight edge and shall not exceed the following tolerances, plus or minus, unless otherwise noted:
¼" for wood float finishes and exterior surfaces.
⅛" for steel trowelled and other interior finishes.

2) Optionally, deviations in trueness shall meet or exceed minimum limits set by ACI 302 with F_F greater or equal to 30, unless otherwise noted.

3. Defective Finishes: For defects in concrete finishes see Section 3.7 Defective Concrete.

3.05 FORMED SURFACES

A. Lines and Levels:

1. General: All concrete members shall be formed level and/or plumb. Maximum deviation is ¼" end to end of any one member, otherwise per ACI 301 Chapter 4 tolerances. All concrete shall be finished to match forms. Cambers specified shall be provided in the forms. All screeds shall be set such that specified cambers are reflected by finished concrete.

B. Finishes:

1. Intermediate joint and score marks and edges shall be tooled smooth where indicated or as directed by the Architect.

3.05 FORMED SURFACES (continued)

2. Use steel radius tools of standard patterns or as required to achieve details shown or specified. All exposed corners not specified to be chamfered shall have radiused edges.

3. All finishes to be as required to achieve appearance specified on structural and architectural drawings and specifications.

C. Permanently Exposed Joints and Surfaces:

1. After removal of forms inspect all exposed surfaces for defects and repair of defective concrete per paragraph 3.7.

2. Maximum differential height within two feet of, and across construction joints is 1/16 inch.

3. For curled edges at cracks and joints see Section 3.7 Defective Concrete.

3.06 CURING & PROTECTION

A. General

1. Curing is intended to maintain water content for proper hydration and minimize temperature ranges. Procedures shall be consistent therewith as far as practical and within scope of work specified.
2. Wheeling, working and walking on concrete shall be avoided for at least 24-hours after placement. Protect concrete from sun and rain.
3. All concrete shall be kept at or above 50 degrees F. during and for the first seven (7) days after placement. See paragraph 1.5 Cold and Hot Weather Requirements.
4. Concrete shall not be subjected to any design loads until concrete is completely cured, and until concrete has attained its 28-day strength (21-days minimum).
5. Protect concrete during and after curing from damage during subsequent building construction operations. The General Contractor is responsible for the protection of the finished slab from damage due to construction loads. Submit engineering analysis for point or wheel loads in excess of 10,000 lbs for slabs on grade and 5,000 lbs for slabs above grade, and 2,000 lbs for slabs above grade on metal deck.
6. Keep finished areas free from all traffic 4 days minimum or as necessary until surfaces have set sufficiently to prevent damage, or cover traffic areas with plywood sheets or other protective devices; maintain paper and plywood in place and in good repair for as long as necessary to protect against damage by any or all other construction operations.

B. Curing: Curing shall immediately follow finishing.

1. Flatwork on Grade: Cure by one of the following methods:

a. Waterproof curing paper: While in thoroughly damp condition, cover with curing paper; lap seams 6" minimum and extend beyond slab or paving perimeters 6" minimum; seal all laps and edges with continuous reinforcing plastic tape.

Do not remove for 14 days minimum.

b. Cure/Sealer: Immediately upon completion of finishing, apply an approved cure/sealer to flatwork. Additionally, during hot and/or windy weather, flatwork shall be kept wet by a continuous fog spray, or wetted and covered with Polyethylene similar to B.1.a, for a minimum of forty-eight (48) hours after application of cure/sealer. Curing shall continue beyond the minimum for forty-eight (48) hours as necessary to insure proper curing. This method may be employed only when other concrete treatment or finish will not be affected by the cure/sealer applied, unless product is removed prior to installation of other finishes. Cure shall be applied at the maximum recommended application rate.

c. Water Curing: Flatwork may be continuously water cured with a fog spray or flooded, for a period of seven (7) days minimum (including holidays and weekends). Alternatively cover with non-staining water retaining materials and keep saturated for same period.

2. Elevated Flatwork

a. Waterproof curing paper per (1a) above or water cure per (1c) above for (14) days period minimum.

b. Apply cure sealer per (1b) above after initial curing period.

3. Flatwork on metal decking cure per (1b) above.

4. Formed Concrete Members

a. Beams, walls, columns etc. shall be adequately protected from cold and hot weather.

b. Forms shall be kept tight for a minimum of 7 days unless exposed surfaces are kept continuously damp utilizing cloth materials as a complete cover.

c. Shoring to remain in place per Section 03150 “Formwork”.

5. Foundations

a. Wet trenches prior to placing concrete. Apply approved cure/sealer immediately after floating.

C. Hardener: Apply hardener to all floor slabs not receiving other finishes after 30 days minimum curing. Apply to clean, residue free (cleaned of non-compatible cure/sealers or other foreign material(s)) surface in strict accordance with the manufacturer's directions.

3.07 DEFECTIVE CONCRETE & DEFECTIVE FINISHES

A. Defective materials and execution of construction:

1. Concrete that does not meet specifications may be required to be removed and replaced by the Owner.

a. Low strength concrete: Test remaining cylinder(s), with less than 25% Fly Ash as cementious material at 56 days. Concrete with 25% or more Fly Ash, test remaining cylinder(s) at 70 days. If strength requirements are met, concrete strength is acceptable.

b. Excessive shrinkage, cracking, crazing or curling: Removal and replacement may be required by the Owner if repairs acceptable to the Owner can not be made.

B. Defective concrete shall be repaired or replaced as directed by the Architect/Engineer, at no added expense to the Owner. Repair materials shall include all reinforcement grouts, dry pack, admixtures, epoxy and aggregates as may be necessary.

1. In general, with the permission of the Architect, minor defective work may be repaired by use of dry pack and surface grinding of high spots. If defective work is serious or affects the strength of the structure or the appearance, the Architect may require the removal and replacement of that portion of the concrete.
2. Immediately after removing forms, all concrete surfaces shall be inspected and any pour joints, voids, rock pockets, tie holes, except as specified, etc. shall be patched after review by the Architect/Engineer. Submit patching mixture and method proposed for use, to Engineer for approval prior to commencing work.
3. Slabs-on-grade and on metal deck shall be reviewed by Contractor for "curled" slab edges at joints and at shrinkage cracks just prior to installation of other floor finishes. Curled edges shall be ground flush and cracks of $\frac{1}{16}$" and more filled with cementious grout.
4. High spots or protrusions caused by formwork, etc. shall be ground flush with surrounding concrete.
5. Slab sections not meeting trueness/flatness or lines/levels/levelness shall be removed and replaced unless otherwise directed by the Architect/Engineer. The minimum section for removal is a 15' square area unless directed otherwise by the Architect/Engineer.

3.08 GROUTING & DRY PACK

A. Provide for setting steel plates on concrete or masonry. Prepare using approved non-shrink grout aggregate to produce mortar 5,000 psi minimum at 28-days. Use non-ferrous grout materials where exposed to view; completely fill all voids and thoroughly compact in place.

B. Bolts or inserts which have been dry packed or grouted in place, shall not be tensioned sooner than 7 days after packing.

3.09 CONDUIT & PIPES IN CONCRETE

A. Slabs on grade: No conduit shall be embedded within the depth of the slab. No pipe, etc. exceeding 1" o.d. shall be embedded within the slab. All pipe within slab shall be laid on grade. Do not stack, separate pipe lines 6" minimum. If it is required to embed larger pipe, thicken slab to meet that requirement.

B. All individual pipes through concrete shall be sleeved with 1" minimum clear all around from sleeve to reinforcing. Wrapped pipes shall have 1½" clear to reinforcing all around. Pipe wrap shall be from ⅛" ± sheet foam with three wraps minimum.

C. Groups of pipes and conduits shall be spaced at least 3 sleeve diameters apart such that concrete and reinforcement as specified is uninterrupted. When grouping of pipe and conduit is such that spacing is not possible, block outs in the foundation or other structural member shall be installed. The reinforcement specified shall be provided both top and bottom of the block out. Foundation

depth each side of block out shall match the specified footing depth, unless otherwise noted on the structural drawings. Other structural members affected by block outs shall be sized and reinforced as directed by the Architect/Engineer. Pipes and conduits embedded in foundations, beams, columns, elevated slabs, and walls shall be centered through the depth and/or thickness. Maximum size to be imbedded shall not exceed the least dimension divided by 3. No conduit or pipes shall be imbedded in slab on metal deck.

D. Where plumbing passes directly beneath foundations, thicken foundation as shown on the drawings and meet requirements of "B" above.

E. When pipe/conduit is specified to be embedded in a concrete beam, wall or column, the following is required:

1. Place as near as possible to center of member with reinforcing as specified on each side.

2. Where reinforcing is located near or at center of member, place ¾" clear from reinforcing and provide #3 at 12" o.c. perpendicular to the pipe/conduit. Reinforcing to extend 1'-0" minimum past pipe/conduit e.s.

3. Maintain ¾" clear minimum from added reinforcing face of concrete where not exposed to weather and 1½" clear where exposed to weather.

4. Where groups of pipe/conduit and associated "boxes" occur, space pipe/conduit as required (2½ x max aggregate size and 3x pipe/conduit outside diameter minimum).

5. Where groups of pipe/conduit occur, provide reinforcing in walls, beams, columns, as required for openings in walls. At a minimum, provide replacement reinforcement of same size and number for interrupted or ineffective reinforcement for the full height, length, width of the wall, beam, column on each side of the "effective opening."

3.10 PROTECTION OF DRAINAGE SYSTEMS

A. Care shall be taken not to introduce any foreign material into any specified drainage, piping or duct systems. Cost of work required to repair or clean the drainage system as a result of failure to comply with this requirement will be back charged to the Contractor.

3.11 CLEANING

A. Contractor shall keep the buildings as free of debris and rubbish as possible at all times. At the completion of his work, he shall remove all materials and apparatus from the premises and streets, scrape up all drippings, and leave the entire work clean and free of debris.

END OF SECTION

DIVISION 4 - MASONRY

SECTION 04200 – CONCRETE MASONRY UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. The Contractor's attention is specifically directed, but not limited, to the following documents for additional requirements:
   1. 2016 CALIFORNIA BUILDING CODE, CHAPTER 21 SPECIFICALLY AND OTHER SECTIONS IN THE SERIES AS THEY MAY RELATE.

1.2 SUMMARY

A. Section Includes:

   1. Concrete masonry units.
   2. Stone trim units.
   3. Mortar and grout.
   4. Steel reinforcing bars.
   5. Masonry joint reinforcement.
   6. Ties and anchors.
   7. Miscellaneous masonry accessories.

B. Related Sections:

   1. Section 03300 "Cast-in-Place Concrete" for installing dovetail slots for masonry anchors.
   2. Section 04720 "Cast Stone Masonry" for furnishing cast stone trim.
   3. Section 05500 "Metal Fabrications" for furnishing steel lintels, opening surrounds, and shelf angles for unit masonry.
   4. Section 07620 "Flashing and Sheet Metal" for exposed sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 PERFORMANCE REQUIREMENTS

A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.

1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Owner will engage a qualified independent testing agency to perform preconstruction testing indicated below. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

1. Clay Masonry Unit Test: For each type of unit required, according to ASTM C 67 for compressive strength.
2. Concrete Masonry Unit Test: For each type of unit required, according to ASTM C 140 for compressive strength.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Stone Trim Units: Show sizes, profiles, and locations of each stone trim unit required.
3. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement."
4. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

C. Samples for Verification: For each type and color of the following:

1. Exposed Decorative CMUs.
2. Pre-faced CMUs.
3. Face brick, in the form of straps of five or more bricks.
4. Special brick shapes.
5. Stone trim.
6. Pigmented and colored-aggregate mortar. Make Samples using same sand and mortar ingredients to be used on Project.
7. Weep holes and vents.
8. Accessories embedded in masonry.

1.7 INFORMATIONAL SUBMITTALS

A. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.

1. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents unless such

deviations are specifically brought to the attention of Architect and approved in writing.

B. Qualification Data: For testing agency.

C. Material Certificates: For each type and size of the following:

1. Masonry units.

a. Include data on material properties.
b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
c. For exposed brick, include test report for efflorescence according to ASTM C 67.
d. For surface-coated brick, include test report for durability of surface appearance after 50 cycles of freezing and thawing per ASTM C 67.
e. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.

2. Cementitious materials. Include brand, type, and name of manufacturer.
3. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
4. Grout mixes. Include description of type and proportions of ingredients.
5. Reinforcing bars.
6. Joint reinforcement.
7. Anchors, ties, and metal accessories.

D. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

E. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.

F. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.

B. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

C. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

D. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Section 01310 "Project Management and Coordination."

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.

C. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.10 PROJECT CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.

3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

A. Regional Materials: CMUs shall be manufactured within 500 miles of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

B. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide bullnose units for outside corners and edges unless otherwise indicated.
3. Size: Standard units with nominal face dimensions of 16 x 8 inches (400 x 200 mm) and nominal depths as indicated on the drawings for specific locations.
4. Provide CMUs for elevator shafts, mechanical, pump rooms, and service dock locations.
5. Load-Bearing Units: ASTM C 90, normal weight.
    a. Hollow block, as indicated.
    b. Exposed faces: Manufacturer's standard color and texture where indicated.

6. Non-Loadbearing Units: ASTM C 129.
   a. Hollow block, as indicated.
   b. Lightweight.

C. Integral Water Repellent: Provide units made with integral water repellent for exposed units.

1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514 as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.

   a. Products: Subject to compliance with requirements, provide one of the following:

      1) ACM Chemistries, www.acmchem.com; RainBloc.
      2) BASF Aktiengesellschaft, *https://www.**master-builders**-solutions.**basf**.us/* RheopelPlus
      3) Grace Construction Products, W. R. Grace & Co. - Conn., www.na.graceconstruction.com; Dry-Block.

D. CMUs: ASTM C 90.
1. Density Classification: Normal weight unless otherwise indicated.
2. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
3. Size (Width): Manufactured to the following dimensions:

   a. 16 x 8 inches (400 x 200 mm) and nominal depths as indicated on the drawings for specific locations

4. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.

E. Concrete Building Brick: ASTM C 55.
1. Density Classification: Normal weight.

2.3 CONCRETE AND MASONRY LINTELS

A. General: Provide one of the following:

B. Concrete Lintels: ASTM C 1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. Provide lintels with net-area compressive strength not less than CMUs.

C. Concrete Lintels: Precast or formed-in-place concrete lintels complying with requirements in Section 03300 "Cast-in-Place Concrete," and with reinforcing bars indicated.

D. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.4 STONE TRIM UNITS

A. Limestone: ASTM C 568

a. Variety and Sources: Grade and Color: Cordova Cream Texas Limestone, according to grade and color classification established by ILI.

B. Provide stone units accurately shaped, with exposed faces dressed true, and with beds and joints at right angles to faces.

1. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."

2.5 MORTAR AND GROUT MATERIALS

A. Regional Materials: Aggregate for mortar and grout, cement, and lime shall be extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

B. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

C. Hydrated Lime: ASTM C 207, Type S.

D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

E. Mortar Pigments: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.

1. Products: Subject to compliance with requirements, provide one of the following :

a. Davis Colors, www.daviscolors.com; True Tone Mortar Colors.
b. Lanxess Corporation, www.bayferrox.com; Bayferrox Iron Oxide Pigments.
c. Solomon Colors, Inc., www.solomoncolors.com; SGS Mortar Colors.
d. Substitutions: See Section 01 25 00 – Substitution Procedures.

F. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
3. White-Mortar Aggregates: Natural white sand or crushed white stone.
4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

G. Aggregate for Grout: ASTM C 404.

H. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent by same manufacturer.

1. Products: Subject to compliance with requirements, provide one of the following :

   a. ACM Chemistries, www.acmchem.com; RainBloc for Mortar.
   b. BASF Aktiengesellschaft, *https://www.**master-builders**-solutions.**basf**.us/*; Hohmann & BarnardGrace Construction Products, W. R. Grace & Co. - Conn., www.na.graceconstruction.com; Dry-Block Mortar Admixture.
   c. Substitutions: See Section 01 25 00 – Substitution Procedures.

I. Water: Potable and clean.

2.6 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.

B. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.

1. Interior Walls: Mill- galvanized, carbon steel.
2. Exterior Walls: Hot-dip galvanized, carbon steel.
3. Wire Size for Side Rods: 0.148-inch diameter.
4. Wire Size for Cross Rods: 0.148-inch diameter.
5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
6. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.

D. Masonry Joint Reinforcement for Multiwythe Masonry:

1. Ladder type with 1 side rod at each face shell of hollow masonry units more than 4 inches wide, plus 1 side rod at each wythe of masonry 4 inches wide or less.
2. Tab type, either ladder or truss design, with 1 side rod at each face shell of backing wythe and with rectangular tabs sized to extend at least halfway through facing wythe but with at least 5/8-inch cover on outside face.
3. Adjustable (two-piece) type, either ladder or truss design, with one side rod at each face shell of backing wythe and with separate adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches. Size ties to extend at least halfway through facing wythe but with at least 5/8-inch cover on outside face. Ties have hooks or clips to engage a continuous horizontal wire in the facing wythe.

E. Masonry Joint Reinforcement for Veneers Anchored with Seismic Masonry-Veneer Anchors: Single 0.187-inch- diameter, hot-dip galvanized, carbon -steel continuous wire.

2.7 TIES AND ANCHORS

A. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.
   1. Stainless-Steel Sheet: ASTM A 666, Type 304 .
   2. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
   3. Stainless-Steel Bars: ASTM A 276 or ASTM a 666, Type 304.

B. Corrugated Metal Ties: Metal strips not less than 7/8 inch wide with corrugations having a wavelength of and an amplitude of 0.06 to 0.10 inch made from 0.030-inch- thick, steel sheet, galvanized after fabrication .

C. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8-inch cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches parallel to face of veneer.

D. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches wide.

1. Z-shaped ties with ends bent 90 degrees to provide hooks not less than 2 inches long may be used for masonry constructed from solid units.
2. Where wythes do not align , use adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches.
3. Wire: Fabricate from 3/16-inch- diameter, hot-dip galvanized steel wire. Mill-galvanized wire ties may be used in interior walls unless wall is located in an area that exceeds 75 percent humidity.

E. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch- diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.
2. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.187-inch- diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless wall is located in an area that exceeds 75 percent humidity.

F. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 0.060-inch- thick, steel sheet, galvanized after fabrication .

    a. 0.064-inch- thick, galvanized sheet may be used at interior walls unless wall is located in an area that exceeds 75 percent humidity.

2. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.187-inch- diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless wall is located in an area that exceeds 75 percent humidity.
3. Corrugated Metal Ties: Metal strips not less than 7/8 inch wide with corrugations having a wavelength of 0.3 to 0.5 inch and an amplitude of 0.06 to 0.10 inch made from 0.060-inch- thick, steel sheet, galvanized after fabrication with dovetail tabs for

inserting into dovetail slots in concrete and sized to extend to within 1 inch of masonry face.

a. 0.064-inch- thick, galvanized sheet may be used at interior walls unless otherwise indicated.

G. Partition Top anchors: 0.105-inch- thick metal plate with 3/8-inch- diameter metal rod 6 inches long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.

H. Rigid Anchors: Fabricate from steel bars 1-1/2 inches wide by 1/4 inch thick by 24 inches long, with ends turned up 2 inches or with cross pins unless otherwise indicated .

1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153/A 153M Epoxy coating 0.020 inch thick .

I. Adjustable Masonry-Veneer Anchors:

1. General: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to wood or metal studs, and as follows:

a. Structural Performance Characteristics: Capable of withstanding a 100-lbf load in both tension and compression without deforming or developing play in excess of 0.05 inch.

2. Contractor's Option: Unless otherwise indicated, provide any of the following types of anchors:
3. Screw-Attached, Masonry-Veneer Anchors: Units consisting of a wire tie and a metal anchor section.

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1) Dayton Superior Corporation, Hohmann & Barnard ; D/A 210 with D/A 700-708.
2) Heckmann Building Products Inc.; 315-D with 316 .
3) Hohmann & Barnard, Inc.; DW-10 DW-10HS .
4) Wire-Bond; 1004, Type III .
5) Substitutions: See Section 01 25 00 – Substitution Procedures.

b. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, 2-3/4 inches wide by 3 inches high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit anchor section.
c. Anchor Section: Sheet metal plate, 1-1/4 inches wide by 6 inches long, with screw holes top and bottom and with raised rib-stiffened strap, 5/8 inch wide by 3-5/8 inches long, stamped into center to provide a slot between strap and plate for inserting wire tie.

d. Anchor Section: Gasketed sheet metal plate, 1-1/4 inches wide by 6 inches long, with screw holes top and bottom; top and bottom ends bent to form pronged legs of length to match thickness of insulation or sheathing; and raised rib-stiffened strap, 5/8 inch wide by 6 inches long, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.

e. Fabricate sheet metal anchor sections and other sheet metal parts from 0.075-inch- thick, steel sheet, galvanized after fabrication .

f. Wire Ties: Triangular-, rectangular-, or T-shaped wire ties fabricated from 0.187-inch- diameter, hot-dip galvanized steel wire.

4. Slip-in, Masonry-Veneer Anchors: Units consisting of a wire tie section and an anchor section designed to interlock with metal studs and be slipped into place as sheathing is installed.

a. Products: Subject to compliance with requirements, provide the following :

1) Hohmann & Barnard, Inc.; AA308.
2) Substitutions: See Section 01 25 00 – Substitution Procedures.

b. Wire-Type Anchor: Bent wire anchor section with an eye to receive the wire tie. Wire tie has a vertical leg that slips into the eye of anchor section and allows vertical adjustment. Both sections are made from 3/16-inch, hot-dip galvanized wire.

c. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
1) Dayton Superior Corporation, Hohmann & Barnard; D/A 213S.
2) Hohmann & Barnard, Inc.; DW-10-X-Seismiclip.
3) Wire-Bond; RJ-711 with Wire-Bond clip.
4) Substitutions: See Section 01 25 00 – Substitution Procedures.

d. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, 2-3/4 inches wide by 3 inches high; with projecting tabs having slotted holes for inserting vertical leg of connector section.

e. Connector Section: Rib-stiffened, sheet metal bent plate with down-turned leg designed to fit in anchor section slot and with integral tabs designed to engage continuous wire. Size connector to extend at least halfway through veneer but with at least 5/8-inch cover on outside face.

f. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, 2-3/4 inches wide by 3 inches high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit anchor section. Size wire tie to extend at least 1-1/2 inches into veneer but with at least 5/8-inch cover on outside face.

g. Connector Section: Sheet metal clip welded to wire tie with integral tabs designed to engage continuous wire.

h. Anchor Section: Gasketed sheet metal plate, 1-1/4 inches wide by 6 inches long, with screw holes top and bottom; top and bottom ends bent to form pronged legs to bridge insulation or sheathing and contact studs; and raised rib-stiffened strap, 5/8 inch wide by 6 inches long, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.

i. Connector Section: Triangular wire tie and rigid PVC extrusion with snap-in grooves for inserting continuous wire. Size wire tie to extend at least halfway through veneer but with at least 5/8-inch cover on outside face.

j. Fabricate sheet metal anchor sections and other sheet metal parts from 0.075-inch- thick, steel sheet, galvanized after fabrication 1.05-inch- thick, steel sheet, galvanized after fabrication 0.078-inch- thick, stainless-steel sheet 0.109-inch-thick, stainless-steel sheet.

k. Fabricate wire connector sections from [**0.187-inch-**] [**0.25-inch-**] diameter, hot-dip galvanized, carbon -steel wire.

5. Polymer-Coated, Steel Drill Screws for Steel Studs: ASTM C 954 except manufactured with hex washer head and neoprene or EPDM washer, No. 10 diameter by length required to penetrate steel stud flange with not less than three exposed threads, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1) Dayton Superior Corporation, Hohmann & Barnard; Stainless Steel SX Fastener.
2) ITW Buildex; Scots long life Teks.
3) Substitutions: See Section 01 25 00 – Substitution Procedures.

2.8 MISCELLANEOUS ANCHORS

A. Unit Type Inserts in Concrete: Cast-iron or malleable-iron wedge-type inserts.

B. Dovetail Slots in Concrete: Furnish dovetail slots with filler strips, of slot size indicated, fabricated from 0.034-inch, galvanized steel sheet.

C. Anchor Bolts: Headed or L-shaped steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 Group 2 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.9 EMBEDDED FLASHING MATERIALS

A. Metal Flashing: Provide metal flashing complying with SMACNA's "Architectural Sheet Metal Manual" Section 07 62 00 "Sheet Metal Flashing and Trim" and as follows:

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1) Cheney Flashing Company; Cheney Flashing (Dovetail) or Cheney 3-Way Flashing (Sawtooth).
2) Keystone Flashing Company, Inc.; Keystone 3-Way Interlocking Thruwall Flashing.
3) Sandell Manufacturing Co., Inc.; Mechanically Keyed Flashing.
4) Substitutions: See Section 01 25 00 – Substitution Procedures.

2. Fabricate through-wall flashing with drip edge where indicated. Fabricate by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.
3. Fabricate through-wall flashing with sealant stop where indicated. Fabricate by bending metal back on itself 3/4 inch at exterior face of wall and down into joint 1/4 inch to form a stop for retaining sealant backer rod.
4. Metal Drip Edge: Fabricate from stainless steel. Extend at least 3 inches into wall and 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.
5. Metal Sealant Stop: Fabricate from stainless steel. Extend at least 3 inches into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch (19 mm) and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.
6. Metal Expansion-Joint Strips: Fabricate from copper to shapes indicated.
7. Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.030 inch (0.76 mm).

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1) Advanced Building Products Inc.; Peel-N-Seal.
2) Carlisle Coatings & Waterproofing; CCW-705-TWF Thru-Wall Flashing.
3) Dayton Superior Corporation, Hohmann & Barnard; Dur-O-Barrier Thru-Wall Flashing.
4) Fiberweb, Clark Hammerbeam Corp.; Aquaflash 500.
5) Grace Construction Products, W. R. Grace & Co. - Conn.; Perm-A-Barrier Wall Flashing.
6) Heckmann Building Products Inc.; No. 82 Rubberized-Asphalt Thru-Wall Flashing.
7) Hohmann & Barnard, Inc.; Textroflash.
8) W. R. Meadows, Inc.; Air-Shield Thru-Wall Flashing.
9) Polyguard Products, Inc.; Polyguard 300 Polyguard 400.
10) Sandell Manufacturing Co., Inc.; Sando-Seal.
11) Williams Products, Inc.; Everlastic MF-40.

12) Substitutions: See Section 01 25 00 – Substitution Procedures.

b. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.

B. Application: Unless otherwise indicated, use the following:

1. Where flashing is indicated to receive counterflashing, use metal flashing.
2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing with a drip edge or flexible flashing with a metal drip edge .
4. Where flashing is fully concealed, use metal flashing or flexible flashing.

C. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from high-density polyethylene incorporating chemical stabilizers that prevent UV degradation. Cell flashing pans have integral weep spouts that are designed to be built into mortar bed joints and weep collected moisture to the exterior of CMU walls and that extend into the cell to prevent clogging with mortar.

1. Products: Subject to compliance with requirements, provide the following :

a. Mortar Net USA, Ltd.; Blok-Flash.
b. Substitutions: See Section 01 25 00 – Substitution Procedures.

D. Solder and Sealants for Sheet Metal Flashings: As specified in Section 07 62 00 "Sheet Metal Flashing and Trim."

1. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
2. Elastomeric Sealant: ASTM C 920, chemically curing silicone sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

E. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.10 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene .

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

D. Weep/Vent Products: Use one of the following unless otherwise indicated:

1. Wicking Material: Absorbent rope, made from cotton or UV-resistant synthetic fiber, 1/4 to 3/8 inch in diameter, in length required to produce 2-inch exposure on exterior and 18 inches in cavity. Use only for weeps.
2. Round Plastic Weep/Vent Tubing: Medium-density polyethylene, 3/8-inch OD by 4 inches long.
3. Rectangular Plastic Weep/Vent Tubing: Clear butyrate, 3/8 by 1-1/2 by 3-1/2 inches long.
4. Cellular Plastic Weep/Vent: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch less than depth of outer wythe, in color selected from manufacturer's standard.

    a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

        1) Advanced Building Products Inc.; Mortar Maze weep vent.
        2) Blok-Lok Limited; Cell-Vent.
        3) Dayton Superior Corporation, Hohmann & Barnard; Cell Vents.
        4) Heckmann Building Products Inc.; No. 85 Cell Vent.
        5) Hohmann & Barnard, Inc.; Quadro-Vent.
        6) Wire-Bond; Cell Vent.
        7) Substitutions: See Section 01 25 00 – Substitution Procedures.

5. Vinyl Weep Hole/Vent: One-piece, offset, T-shaped units made from flexible PVC, designed to fit into a head joint and consisting of a louvered vertical leg, flexible wings to seal against ends of masonry units, and a top flap to keep mortar out of the head joint; in color selected by Architect.

    a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

        1) Hohmann & Barnard, Inc.; #343 Louvered Weep Hole.
        2) Williams Products, Inc.; Williams-Goodco Brick Vent.
        3) Wire-Bond; Louvered Weepholes.
        4) .

E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. Advanced Building Products Inc.; Mortar Break Mortar Break II.
    b. Archovations, Inc.; CavClear Masonry Mat.
    c. Dayton Superior Corporation, Hohmann & Barnard; Polytite MortarStop.
    d. Mortar Net USA, Ltd.; Mortar Net.
    e. Substitutions: See Section 01 25 00 – Substitution Procedures.

2. Provide one of the following configurations:

a. Strips, full-depth of cavity and 10 inches high, with dovetail shaped notches 7 inches deep that prevent clogging with mortar droppings.
b. Strips, not less than 3/4 inch thick and 10 inches high, with dimpled surface designed to catch mortar droppings and prevent weep holes from clogging with mortar.
c. Sheets or strips full depth of cavity and installed to full height of cavity.
d. Sheets or strips not less than 3/4 inch thick and installed to full height of cavity with additional strips 4 inches high at weep holes and thick enough to fill entire depth of cavity and prevent weep holes from clogging with mortar.

F. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Dayton Superior Corporation, Hohmann & Barnard; D/A 810, D/A 812 or D/A 817.
b. Heckmann Building Products Inc.; No. 376 Rebar Positioner.
c. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
d. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.
e. Substitutions: See Section 01 25 00 – Substitution Procedures.

2.11 MASONRY-CELL INSULATION

A. Loose-Granular Fill Insulation: Perlite complying with ASTM C 549, Type II (surface treated for water repellency and limited moisture absorption) or Type IV (surface treated for water repellency and to limit dust generation).

B. Molded-Polystyrene Insulation Units: Rigid, cellular thermal insulation formed by the expansion of polystyrene-resin beads or granules in a closed mold to comply with ASTM C 578, Type I. Provide specially shaped units designed for installing in cores of masonry units.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Concrete Block Insulating Systems; Korfil.
b. Shelter Enterprises Inc.; Omni Core.
c. Substitutions: See Section 01 25 00 – Substitution Procedures.

2.12 MASONRY CLEANERS

A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    a. Diedrich Technologies, Inc.
    b. EaCo Chem, Inc.
    c. ProSoCo, Inc.
    d. Substitutions: See Section 01 25 00 – Substitution Procedures.

2.13 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.
2. Use portland cement-lime masonry cement or mortar cement mortar unless otherwise indicated.
3. For exterior masonry, use portland cement-lime masonry cement or mortar cement mortar.
4. For reinforced masonry, use portland cement-lime masonry cement or mortar cement mortar.
5. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For masonry below grade or in contact with earth, use Type S.
2. For reinforced masonry, use Type N.
3. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.
4. For interior non-load-bearing partitions, Type O may be used instead of Type N.

D. Pigmented Mortar: Use colored cement product or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.

1. Pigments shall not exceed 10 percent of portland cement by weight. If pigments containing carbon black are used, carbon black must be limited to 2 percent of portland cement by weight.
2. Pigments shall not exceed 5 percent of masonry cement or mortar cement by weight. If pigments containing carbon black are used, carbon black must be limited to 1 percent of masonry or mortar cement by weight.

3. Mix to match Architect's sample.
4. Application: Use pigmented mortar for exposed mortar joints with the following units:

    a. Decorative CMUs.
    b. Pre-faced CMUs.
    c. Face brick.
    d. Stone trim units.

E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.

1. Mix to match Architect's sample.
2. Application: Use colored aggregate mortar for exposed mortar joints with the following units:

    a. Decorative CMUs.
    b. Pre-faced CMUs.
    c. Face brick.
    d. Stone trim units.

F. Grout for Unit Masonry: Comply with ASTM C 476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height.
2. Proportion grout in accordance with ASTM C 476, Table 1 .
3. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C 143/C 143M.

G. Epoxy Pointing Mortar: Mix epoxy pointing mortar to comply with mortar manufacturer's written instructions.

1. Application: Use epoxy pointing mortar for exposed mortar joints with the following units:

    a. Pre-faced CMUs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
2. Verify that foundations are within tolerances specified.
3. Verify that reinforcing dowels are properly placed.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.

B. Build chases and recesses to accommodate items specified in this and other Sections.

C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.

D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.

1. Mix units from several pallets or cubes as they are placed.

F. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.

G. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch or minus 1/4 inch.
2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch.
3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.

4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond ; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 2 inches . Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.

H. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

I. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

1. Install compressible filler in joint between top of partition and underside of structure above.
2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors 48 inches o.c. unless otherwise indicated.
3. Wedge non-load-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 07 84 46 "Fire-Resistive Joint Systems."

3.5 MORTAR BEDDING AND JOINTING

A. Lay hollow CMUs as follows:

1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set stone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.

1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
2. Allow cleaned surfaces to dry before setting.
3. Wet joint surfaces thoroughly before applying mortar.

D. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

1. For glazed masonry units, use a nonmetallic jointer 3/4 inch or more in width.

E. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 COMPOSITE MASONRY

A. Bond wythes of composite masonry together using one of the following methods:

1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for [**4.5 sq. ft.**] [**2.67 sq. ft.**] [**1.77 sq. ft.**] of wall area spaced not to exceed [**36 inches**] [**24 inches**] [**16 inches**] o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.

a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.

2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.

a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes .
b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.

3. Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not over 8 inches clear horizontally and 16 inches clear vertically.

B. Bond wythes of composite masonry together using bonding system indicated on Drawings.

C. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.

D. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.

1. Provide continuity with masonry joint reinforcement at corners by using prefabricated L-shaped units as well as masonry bonding.

E. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:

1. Provide individual metal ties not more than 8 inches o.c.
2. Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.
3. Provide rigid metal anchors not more than 24 inches o.c. If used with hollow masonry units, embed ends in mortar-filled cores.

3.7 CAVITY WALLS

A. Bond wythes of cavity walls together using one of the following methods:

1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 4.5 sq. ft. of wall area spaced not to exceed 36 inches o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.

    a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.
    b. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type ties to allow for differential movement regardless of whether bed joints align.

2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.

    a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes .
    b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.
    c. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties to allow for differential movement regardless of whether bed joints align.

3. Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not over 8 inches clear horizontally and 16 inches clear vertically.
4. Masonry Veneer Anchors: Comply with requirements for anchoring masonry veneers.

B. Bond wythes of cavity walls together using bonding system indicated on Drawings.

C. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.

D. Parge cavity face of backup wythe in a single coat approximately 3/8 inch thick. Trowel face of parge coat smooth.

E. Apply air barrier to face of backup wythe to comply with Section 07 27 13 "Modified Bituminous Sheet Air Barriers."and Section 07 27 26 "Fluid-Applied Membrane Air Barriers."

F. Installing Cavity-Wall Insulation: Place small dabs of adhesive, spaced approximately 12 inches o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as shown.

1. Fill cracks and open gaps in insulation with crack sealer compatible with insulation and masonry.

3.8 MASONRY-CELL INSULATION

A. Pour granular insulation into cavities to fill void spaces. Maintain inspection ports to show presence of insulation at extremities of each pour area. Close the ports after filling has been confirmed. Limit the fall of insulation to 1 story high, but not more than 20 feet.

B. Install molded-polystyrene insulation units into masonry unit cells before laying units.

3.9 MASONRY JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.

1. Space reinforcement not more than 16 inches o.c.
2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

E. Cut and bend reinforcing units as directed by manufacturer for continuity at corners, returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.10 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:

1. Provide an open space not less than 1/2 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.11 ANCHORING MASONRY VENEERS

A. Anchor masonry veneers to wall framing and concrete and masonry backup with masonry-veneer anchors to comply with the following requirements:

1. Fasten screw-attached anchors through sheathing to wall framing and to concrete and masonry backup with metal fasteners of type indicated. Use two fasteners unless anchor design only uses one fastener.
2. Insert slip-in anchors in metal studs as sheathing is installed. Provide one anchor at each stud in each horizontal joint between sheathing boards.
3. Embed connector sections and continuous wire in masonry joints. Provide not less than 2 inches of air space between back of masonry veneer and face of sheathing.
4. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
5. Space anchors as indicated, but not more than 18 inches o.c. vertically and 24 inches o.c. horizontally, with not less than 1 anchor for each 2 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches, around perimeter.

3.12 CONTROL AND EXPANSION JOINTS

A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:

1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
2. Install preformed control-joint gaskets designed to fit standard sash block.
3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.

C. Form expansion joints in brick as follows:

1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
2. Build flanges of factory-fabricated, expansion-joint units into masonry.
3. Build in compressible joint fillers where indicated.
4. Form open joint full depth of brick wythe and of width indicated, but not less than 3/8 inch for installation of sealant and backer rod specified in Section 07 92 00 "Joint Sealants."

D. Provide horizontal, pressure-relieving joints by either leaving an air space or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 07 92 00 "Joint Sealants," but not less than 3/8 inch .

1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.13 LINTELS

A. Install steel lintels where indicated.

B. Provide concrete or masonry lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.

C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.14 FLASHING, WEEP HOLES, CAVITY DRAINAGE, AND VENTS

A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.

B. Install flashing as follows unless otherwise indicated:

1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
2. As indicated on Drawings.

C. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.

D. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.

E. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:

1. Use specified weep/vent products or open head joints to form weep holes.
2. Use wicking material to form weep holes above flashing under brick sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
3. Space weep holes 24 inches o.c. unless otherwise indicated.
4. Space weep holes formed from plastic tubing or wicking material 16 inches o.c.
5. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.
6. Trim wicking material flush with outside face of wall after mortar has set.

F. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.

3.15 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.

1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in ACI 530.1/ASCE 6/TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than 60 inches .

3.16 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.

C. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

D. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.

E. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

3.17 PARGING

A. Parge exterior faces of below-grade masonry walls, where indicated, in 2 uniform coats to a total thickness of 3/4 inch. Dampen wall before applying first coat and scarify first coat to ensure full bond to subsequent coat.

B. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of 1/8 inch per foot. Form a wash at top of parging and a cove at bottom.

C. Damp-cure parging for at least 24 hours and protect parging until cured.

3.18 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
4. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
5. Clean stone trim to comply with stone supplier's written instructions.
6. Clean limestone units to comply with recommendations in ILI's "Indiana Limestone Handbook."

3.19 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Excess Masonry Waste: Remove excess clean masonry waste and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04200

DIVISION 4 - MASONRY
SECTION 04220 – CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Related Documents:
   1. Drawings and general provisions of the Subcontract apply to this Section.
   2. Review these documents for coordination with additional requirements and information that apply to work under this Section.

B. Section Includes:
   1. Concrete units.
   2. Reinforcement, anchorages, embedment's and accessories.

C. Related Sections:
   1. Division 01 Section "General Requirements."
   2. Division 01 Section "Special Procedures."
   3. Division 04 Section "Masonry Mortar".

1.2 REFERENCES

A. General:
   1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.
   2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.
   3. Refer to Division 01 Section "General Requirements" for the list of applicable regulatory requirements.

B. ACI – American Concrete Institute:
   1. ACI 315 Details and Detailing of Concrete Reinforcement

C. ASTM International:
   1. ASTM A615 / A615M Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement
   2. ASTM C 90 Standard Specification for Loadbearing Concrete Masonry Units

D. AWS D12.1 Reinforcing Steel Welding Code

1.3 SUBMITTALS

A. Submit under provisions of Division 01 Section "General Requirements."
B. Submit Shop Drawings for reinforcement, anchorages and embedment's. Indicate bar sizes, spacings, locations, and quantities of reinforcing steel bending and cutting schedules, supporting and spacing.
C. Submit Manufacturer's certified mill test reports on each heat of reinforcing steel to be used in the work before placement.
D. Submit two 12 inch (300 mm) long samples of expansion and control joint materials.
E. Submit manufacturer's certificates.

1.4 ENVIRONMENTAL REQUIREMENTS

A. Maintain materials and surrounding air temperature to at least 50 deg F(10 deg C) prior to, during, and 48 hours after completion of masonry work.

PART 2 - PRODUCTS

2.1 CONCRETE MASONRY UNITS

A. Hollow Load Bearing Units: conforming to **[UBC Standard 21-4, Grade N]**[1]; light weight, plain smooth face in the manufacturer's standard color. Strength of units shall be [as indicated on the Drawings f`m = 1500 psi.
B. Masonry Units: Modular sized to 8x8x16 and 8x12x16 inch as shown on the Drawings; provide special units for 90° corners, open ended, double open ended, bond beams and lintels. The use of LCC blocks is not permitted.

2.2 REINFORCEMENT AND ANCHORAGES

A. Single Wythe Joint Reinforcement: Truss and Seismic Comb type, galvanized steel construction; as manufactured by Dur-o-wall, or equal.
B. Reinforcing Steel: Type specified and grade as specified in Division 03 Section "Concrete Reinforcing".

2.3 ACCESSORIES

A. Control Joints: Preformed neoprene or polyvinyl chloride material.
B. Nailing Strips: Western softwood, preservative treated, sized to masonry joints.

2.4 LINTELS

A. Constructed from concrete masonry lintel blocks.

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify items provided by other sections of work are properly sized and located.
B. Establish lines, levels, and coursing. Protect from disturbance.
C. Provide temporary bracing during erection of masonry work. Maintain in place until building structure provides permanent bracing.

3.2 COURSING

A. Place masonry to lines and levels indicated.
B. Maintain masonry courses to uniform width. Vertical and horizontal mortar joints shall be installed between blocks, shall be equal and of uniform thickness. Exposed joints shall be tooled to a slightly concave profile; unexposed surfaces may be struck smooth. Walls and parapet surfaces which will receive membrane sheet flashing and counter-flashing, and shall be constructed to permit the installation of base flashing materials as specified in Division 07 Section "Thermoplastic Membrane Roofing".
C. Lay concrete masonry units in running bond. Course one block unit and one mortar joint to equal eight (8") inches. Alternate open ended and double open ended blocks in each course. Bond beams shall consist of alternately placed open ended and double open ended bond beam block.

3.3 PLACING AND BONDING

A. Lay masonry in full bed of mortar, properly jointed with other work. Buttering corners of joints, and deep or excessive furrowing of mortar joints are not permitted.
B. Fully bond intersections, and external and internal corners.
C. Do not shift or tap masonry units after mortar has taken initial set. Where adjustment must be made, remove the mortar and replace.
D. Remove excess mortar.
E. Perform jobsite cutting with proper tools to provide straight unchipped edges. Take care to prevent breaking masonry unit corners or edges.

3.4 REINFORCEMENT AND ANCHORAGES

A. Install horizontal joint reinforcement 16 inches on center and seismic comb reinforcement where indicated on the drawings.
B. Place masonry joint reinforcement in first and second horizontal joints above and below openings. Extend at least 16 inches on each side of opening.
C. Place joint reinforcement continuous in first and second joint below top of walls.
D. Lap joint reinforcement ends at least 6 inches (150 mm). Extend at least 16 inches (400 mm) on each side of opening.
E. Reinforce joint corners and intersections with strap anchors 16 inches (400 mm) on center.

3.5 REINFORCING STEEL

A. Place reinforcement in accordance with ACI 315.
B. Locate reinforcing splices at points of minimum stress. Splice locations shall be as shown on the Shop Drawings unless alternative locations of splices are approved by the Engineer-of-Record.
C. Where welding is approved by the University, weld reinforcement in accordance with AWS D12.1.
D. Place reinforcing bars supported and secured against displacement. Maintain position within 1/2-inch (13 mm) of true dimension.
E. Verify that reinforcement is clean, free of scale, dirt, or other foreign coatings that would reduce bond to grout.

3.6 TOLERANCES

A. Alignment of Pilasters: Maximum 1/4-inch (7 mm) from true line.
B. Variation from Unit to Adjacent Unit: 1/32-inch (1 mm) maximum.
C. Variation from Plane of Wall: 1/4-inch (7mm) in 10 feet and 1/2-inch (13 mm) in 20 feet (6 m) or more.
D. Variation from Plumb: 1/4-inch (7mm) per story noncumulative; 1/2-inch (13 mm) in two stories or more.
E. Variation from Level Coursing: 1/8-inch (3 mm)in 3 feet; 1/4-inch (7 mm) in 10 feet (3 m); 1/2-inch (13mm) maximum.
F. Variation of Joint Thickness: 1/8-inch (3 mm) in 3 feet.
G. Maximum Variation from Cross Sectional Thickness of Walls: +/- 1/4-inch (7 mm).

3.7 MASONRY FLASHINGS

A. Lap end joints at least [6 inches (150 mm)] <**Insert option Here**> inches and seal watertight.

3.8 LINTELS

A. Construct lintels using grout fill and reinforcing specified. Place reinforcing bars as shown on the drawings.]

B. Install reinforced unit masonry lintels over openings. Construct lintels using grout fill and reinforcing. Maintain at least 8-inch bearing on each side of opening.
C. Use reinforcing bars of one-piece lengths only.
D. Place and consolidate grout fill without disturbing reinforcing.
E. Allow lintels constructed in place to reach strength before removing temporary supports.

3.9 GROUTED COMPONENTS

A. Reinforce masonry units as shown on the drawings.
B. Lap splices at least 24 bar diameters.
C. Place and consolidate grout fill without disturbing reinforcing.
D. Solid grout concrete masonry units in accordance with California Building Code section 2104A.6.1.2.2.

3.10 CONTROL JOINTS

A. Do not continue horizontal joint reinforcing across control joints.
B. Form control joint by use of sheet building paper bond breaker one side fitted to hollow contour of block unit end. Fill created core with grout fill. Rake joint at exposed faces for rod and sealant.
C. Install resilient control joint in continuous lengths. Heat solvent weld butt and corner joints in accordance with manufacturer's instructions.
D. Size joint in accordance with Division 07 Section "Joint Sealants" for sealant performance.

3.11 BUILT-IN WORK

A. As work progresses, build-in [metal door frames,] [fabricated metal frames,] [window frames,] [wood nailing strips,] [anchor bolts,] [plates,] and other items to be built in the work supplied by other sections.
B. Build-in items plumb and level.
C. C. Bed anchors of metal door [and glazed] frames in mortar joints. Fill frame voids solid with mortar. [Fill masonry cores with grout at least [12 inches (300 mm)] <**Insert option Here**> from framed openings.]
D. Do not build-in organic materials subject to deterioration.

3.12 CUTTING AND FITTING

A. A. Cut and fit for [chases] [pipes] [conduit] [sleeves] [grounds] [and] <**Insert option Here**>. Cooperate with other sections of work to provide correct size, shape, and location.
B. Obtain approval from the University prior to cutting or fitting areas not indicated or where appearance or strength of masonry work may be impaired.

3.13 CLEANING

A. Remove excess mortar and smears.
B. Replace defective mortar. Match adjacent work.
C. Clean soiled surfaces with a nonacidic solution that will not harm masonry or adjacent materials. Consult masonry manufacturer for acceptable cleaners.
D. Use nonmetallic tools in cleaning operations.

3.14 PROTECTION

A. Protect finished installation under provisions of Division 01 Section "General Requirements".
B. Maintain protective boards at exposed external corners which may be damaged by construction activities.
C. Provide protection without damaging completed work.
D. At day's end, cover unfinished walls to prevent moisture infiltration.

END OF SECTION 042200

DIVISION 7 THERMAL & MOISTURE CONTROL

SECTION 07450 - METAL ROOF PANEL SYSTEM

GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, Insofar as they apply, shall be a part of this Specification.

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Snap joint-seamed, standing seam metal roof panels, with related metal trim and accessories.

1.2 RELATED REQUIREMENTS

A. Division 06 Section "Sheathing" for sheathing substrate for metal roof panels.

B. Division 07 Section "Roof Insulation" for thermal insulation installed under existing under plywood roof deck panels.

C. Division 07 Section "Sheet Metal Flashing and Trim" for formed sheet metal copings, flashings, reglets, and roof drainage items in addition to items specified in this Section.

D. Division 07 Section "Manufactured Roof Specialties" for manufactured copings, reglets, and roof drainage items in addition to items specified in this Section.

E. Division 07 Section "Joint Sealants" for field-applied joint sealants.

1. IAS AC 472 - Accreditation Criteria for Inspection Programs for Manufacturers of Metal Building Systems, Part B.

F. Underwriters Laboratories, Inc. (UL): www.ul.com:

1. UL 580 - Tests for Uplift Resistance of Roof Assemblies

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Prior to erection of framing, conduct preinstallation meeting at site attended by Owner, Architect, manufacturer's technical representative, inspection agency and related trade contractors.

1. Coordinate building framing in relation to metal panel system.
2. Coordinate openings and penetrations of metal panel system.
3. Coordinate work of Division 07 Sections "Roof Specialties" and "Roof Accessories" and openings and penetrations and manufacturer's accessories with installation of metal panels.

1.5 QUALITY ASSURANCE

A. Manufacturer/Source: Provide metal roof panel assembly and accessories from a single manufacturer providing fixed-base roll forming, and accredited under IAS AC 472 Part B.

B. Manufacturer Qualifications: Approved manufacturer listed in this Section with minimum five years experience in manufacture of similar products in successful use in similar applications.

C. Installer Qualifications: Experienced Installer certified by metal panel manufacturer with minimum of five years experience with successfully completed projects of a similar nature and scope.

1. Installer's Field Supervisor: Experienced mechanic certified by metal panel manufacturer supervising work on site whenever work is underway.

D. **Buy American Compliance**: Materials provided under work of this Section shall comply with the following requirements:

1. Buy American Act of 1933 BAA-41 U.S.C §§ 10a – 10d.
2. Buy American provisions of Section 1605 of the American Recovery and Reinvestment Act of 2009 (ARRA).

1.6 ACTION SUBMITTALS

A. Product Data: Manufacturer's data sheets for specified products.

B. Shop Drawings: Show layouts of metal panels. Include details of each condition of installation, panel profiles, and attachment to building. Provide details at a minimum scale 1-1/2-inch per foot showing edge conditions, joints, fastener and sealant placement, flashings, openings, penetrations, roof accessories, lightning arresting equipment, and special details. Make distinctions between factory and field assembled work.

1. Indicate points of supporting structure that must coordinate with metal panel system installation.
2. Include data indicating compliance with performance requirements.
3. Include structural data indicating compliance with requirements of authorities having jurisdiction.

C. Samples for Initial Selection: For each exposed product specified including sealants. Provide representative color charts of manufacturer's full range of colors.

D. Samples for Verification: Provide 12-inch- (305 mm-) long section of each metal panel profile. Provide color chip verifying color selection.

1.7 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Indicating compliance of products with requirements, witnessed by a professional engineer.

B. Qualification Information: For Installer firm and Installer's field supervisor.

C. IAS Accreditation Certificate: Indicating that manufacturer is accredited under provisions of IAS AC 472.

D. **Buy American Certification**: Manufacturers' letters of compliance acceptable to authorities having jurisdiction, indicating that products comply with requirements.

E. **Florida State Building Code Certificate**.

F. Manufacturer's Warranty: Sample copy of manufacturer's standard warranty.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance data.

B. Manufacturer's Warranty: Executed copy of manufacturer's standard warranty.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Protect products of metal panel system during shipping, handling, and storage to prevent staining, denting, deterioration of components or other damage. Protect panels and trim bundles during shipping.

1. Deliver, unload, store, and erect metal panel system and accessory items without misshaping panels or exposing panels to surface damage from weather or construction operations.
2. Store in accordance with Manufacturer's written instructions. Provide wood collars for stacking and handling in the field.

1.10 COORDINATION

A. Coordinate sizes, profiles, and locations of roof curbs and other roof-mounted equipment and roof penetrations, based upon sizes of actual selected equipment.

1.11 WARRANTY

A. Special Manufacturer's Warranty: On manufacturer's standard form, in which manufacturer agrees to repair or replace metal panel assemblies that fail in materials and workmanship within one year from date of Substantial Completion.

B. **Special Weathertightness Warranty**: On manufacturer's standard form, in which manufacturer agrees to repair or replace metal panel assemblies that fail to remain weathertight, including leaks, without monetary limitation up to cost limitation up to cost limitation of fourteen dollars ($14.00) per square foot of covered area within 20 years from date of Substantial Completion.

C. Special Panel Finish Warranty: On Manufacturer's standard form, in which Manufacturer agrees to repair or replace metal panels that evidence deterioration of factory-applied finish within 20 years from date of Substantial Completion, including:

1. **Fluoropolymer Two- Coat System**:

a. Color fading in excess of 10 Hunter units per ASTM D 2244.
b. Chalking in excess of No.6 rating per ASTM D 4214.
c. Failure of adhesion, peeling, checking, or cracking.

2. **Modified Silicone-Polyester Two-Coat System**:

a. Color fading in excess of 7 Hunter units per ASTM D 2244, for vertical applications.
b. Color fading in excess of 10 Hunter units per ASTM D 2244, for non-vertical applications.
c. Chalking in excess of No.8 rating per ASTM D 4214, for vertical applications.
d. Chalking in excess of No.6 rating per ASTM D 4214, for non-vertical applications.
e. Failure of adhesion, peeling, checking, or cracking.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis of Design Manufacturer: **MBCI Metal Roof Systems, Division of NCI Group, Inc.**; Houston TX. Tel: (877) 713-6224; Email: info@mbci.com; Web: www.mbci.com.

Basis of Design Manufacturer: AEP SPAN
2141 Milwaukee Way, Tacoma, WA 98421, 800-733-4955
10905 Beech Avenue, Fontana, CA 92337

2.2 PERFORMANCE REQUIREMENTS

A. General: Provide metal roof panel system meeting performance requirements as determined by application of specified tests by a qualified testing facility on manufacturer's standard assemblies.

B. Recycled Content: For Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Radiative Property Performance:
1. **Energy Star Qualified**: Listed on USDoE ENERGY STAR Roof Products Qualified Product List.
2. **Energy Performance**: Listed in CRRC Rated Product Directory, with minimum properties as required by applicable Energy efficiency or High-Performance Green Building standard.

D. Structural Performance: Provide metal panel assemblies capable of withstanding the effects of indicated loads and stresses within limits and under conditions indicated:

1. Wind Loads: Determine loads based on uniform pressure, importance factor, exposure category, and basic wind speed indicated on drawings.

a. Wind Uplift Testing: Certify capacity of metal panels by actual testing of proposed assembly per ASTM E 1592.

2. Snow Loads: As indicated.
3. Deflection Limits: Withstand inward and outward wind-load design pressures in accordance with applicable building code with maximum deflection of 1/240 of the span with no evidence of failure.
4. Seismic Performance: Comply with ASCE 7, Section 9, "Earthquake Loads."

E. Wind Uplift Resistance: Comply with UL 580 for wind-uplift class UL-60.

F. **Florida State Building Code Compliance**: Comply with requirements of Florida State Building Code. www.floridabuilding.org/pr/pr_app_srch.aspx

G. Thermal Movements: Allow for thermal movements from variations in both ambient and internal temperatures. Accommodate movement of support structure caused by thermal expansion and contraction. Allow for deflection and design for thermal stresses caused by temperature differences from one side of the panel to the other.

H. **Self-Adhering, High-Temperature Underlayment**: Cold-applied sheet WIP 300 HT underlayment 40 mils thick, consisting of slip-resistant, high tensile-strength rubberized asphalt underlayment, with release-paper backing. Provide primer when recommended by underlayment manufacturer for substrate.

2.3 METAL ROOF PANELS

A. Mechanically-seamed, Concealed Fastener, Metal Roof Panels: Structural metal roof panel consisting of formed metal sheet with vertical ribs at panel edges, installed by lapping and

mechanically interlocking edges of adjacent panels, and attaching panels to supports using concealed clips and fasteners in a weathertight installation.

1. Basis of Design: **MBCI, LokSeam,** www.mbci.com/lokseam.html.

Second paragraph below describes Galvalume Plus with clear acrylic coating for use as exposed metallic finish.

2. **Aluminum-Zinc Alloy-Coated Steel Sheet**: ASTM A 792/A 792M, structural quality, Grade 340, Coating Class AZM150, pre-painted by the coil-coating process per ASTM A 755/A 755M.

   a. Nominal Coated Thickness: 22 gage.
   b. Panel Surface: Smooth with striations in pan.
   c. Exterior Finish: Fluoropolymer two-coat system selected by Architect from manufacturer's standard colors.

3. Panel Width: 16 inches (406 mm).
4. Panel Seam Height: 1.75 inch (44.4 mm).
5. Joint Type: Snap joint-seamed.

2.4 METAL ROOF PANEL ACCESSORIES

A. General: Provide complete metal roof panel assembly incorporating trim, copings, fasciae, gutters and downspouts, and miscellaneous flashings, in manufacturer's standard profiles. Provide required fasteners, closure strips, thermal spacers, splice plates, support plates, and sealants as indicated in manufacturer's written instructions.

B. Flashing and Trim: Match material, thickness, and finish of metal panel face sheet.

C. Panel Clips: ASTM C 645, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating, configured for concealment in panel joints, and identical to clips utilized in tests demonstrating compliance with performance requirements.

D. Panel Fasteners: Self-tapping screws and other acceptable corrosion-resistant fasteners recommended by roof panel manufacturer. Where exposed fasteners cannot be avoided, supply fasteners with EPDM or neoprene gaskets, with heads matching color of metal panels by means of factory-applied coating.

E. Joint Sealers: Manufacturer's standard or recommended liquid and preformed sealers and tapes, and as follows:

   1. Factory-Applied Seam Sealant: Manufacturer's standard hot-melt type.
   2. Tape Sealers: Manufacturer's standard non-curing butyl tape, AAMA 809.2.
   3. Concealed Joint Sealant: Non-curing butyl, AAMA 809.2.

F. **Roof Accessories**: Approved by metal roof panel manufacturer. "Roof Accessories" for requirements for curbs, equipment supports, roof hatches, heat and smoke vents, ventilators, and preformed flashing sleeves.

2.5 FABRICATION

A. General: Provide factory fabricated and finished metal panels and accessories meeting performance requirements, indicated profiles, and structural requirements.

B. Fabricate metal panel joints configured to accept factory-applied sealant providing weathertight seal and preventing metal-to-metal contact and minimizing noise resulting from thermal movement.

C. Form panels in continuous lengths for full length of detailed runs, except where otherwise indicated on approved shop drawings.

D. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's written instructions, approved shop drawings, and project drawings. Form from materials matching metal panel substrate and finish.

2.6 FINISHES

A. Finishes, General: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

B. **Modified Silicone-Polyester Two-Coat System**: 0.20 – 0.25 mil primer with 0.7 – 0.8 mil color coat, meeting solar reflectance index requirements.

1. Basis of Design: **MBCI, Signature 200**.

A. **Fluoropolymer Two-Coat System**: 0.2 – 0.3 mil primer with 0.7 - 0.8 mil 70 percent PVDF fluoropolymer color coat, AAMA 621, meeting solar reflectance index requirements.

1. Basis of Design: **MBCI, Signature 300**.

B. **Fluoropolymer Two-Coat Metallic System**: 0.2 – 0.3 mil primer with 0.7 - 0.8 mil 70 percent PVDF metallic fluoropolymer color coat, AAMA 621, meeting solar reflectance index requirements.

1. Basis of Design: **MBCI, Signature 300 Metallic**.

C. Interior Finish: 0.5 mil total dry film thickness consisting of primer coat and wash coat of manufacturer's standard light-colored acrylic or polyester backer finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine metal panel system substrate and supports with Installer present. Inspect for erection tolerances and other conditions that would adversely affect installation of metal panel installation.

1. Inspect metal panel support substrate to determine if support components are installed as indicated on approved shop drawings. Confirm presence of acceptable supports at recommended spacing to match installation requirements of metal panels.
2. Panel Support Tolerances: Confirm that panel supports are within tolerances acceptable to metal panel system manufacturer but not greater than the following:

a. 1/4 inch (6 mm) in 20 foot (6.1 m) in any direction.
b. 3/8 inch (9 mm) over any single roof plane.

B. Correct out-of-tolerance work and other deficient conditions prior to proceeding with insulated metal roof panel system installation.

3.2 PREPARATION

A. **Miscellaneous Supports**: Install subframing, girts, furring, and other miscellaneous panel support members according to ASTM C 754 and manufacturer's written instructions.

B. **Self-Adhering Sheet Underlayment**: Apply in accordance with underlayment manufacturer's written instructions; apply primer if required. Apply at locations indicated below. Roll laps with roller.

1. Apply over the entire roof surface.
2. Apply on area of roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering sheet underlayment not less than 6 inches (150 mm).

C. Flashings: Provide flashings as required to complete metal roof panel system. Install in accordance with Section 07600 "Flashing and Sheet Metal" and approved shop drawings.

3.3 METAL PANEL INSTALLATION

A. Snap-Joint-Seamed, Standing Seam Metal Roof Panels: Install weathertight metal panel system in accordance with manufacturer's written instructions, approved shop drawings, and project drawings. Install metal roof panels in orientation, sizes, and locations indicated, free of waves, warps, buckles, fastening stresses, and distortions. Anchor panels and other components securely in place. Provide for thermal and structural movement.

B. Attach panels to supports using clips, screws, fasteners, and sealants recommended by manufacturer and indicated on approved shop drawings.

1. Fasten metal panels to supports with concealed clips at each location indicated on approved shop drawings, with spacing and fasteners recommended by manufacturer.
2. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
3. Provide weatherproof jacks for pipe and conduit penetrating metal panels of types recommended by manufacturer.
4. Dissimilar Materials: Where elements of metal panel system will come into contact with dissimilar materials, treat faces and edges in contact with dissimilar materials as recommended by manufacturer.

3.4 ACCESSORY INSTALLATION

A. General: Install metal panel trim, flashing, and accessories using recommended fasteners and joint sealers, with positive anchorage to building, and with weather tight mounting. Provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel assembly, including trim, copings, flashings, sealants, closure strips, and similar items.
2. Comply with details of assemblies utilized to establish compliance with performance requirements and manufacturer's written installation instructions.
3. Provide concealed fasteners except where noted on approved shop drawings.
4. Set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently weather resistant.

B. Joint Sealers: Install joint sealers where indicated and where required for weathertight performance of metal panel assemblies, in accordance with manufacturer's written instructions.

1. Prepare joints and apply sealants per requirements of Division 07 Section "Joint Sealants."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: City will engage an independent testing and inspecting agency acceptable to Architect to perform field tests and inspections and to prepare test reports.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective films immediately in accordance with metal roof panel manufacturer's instructions. Clean finished surfaces as recommended by metal roof panel manufacturer.

B. Replace damaged panels and accessories that cannot be repaired to the satisfaction of the Architect.

END OF SECTION

DIVISION 7 - THERMAL & MOISTURE CONTROL

SECTION 07600 - FLASHING & SHEET METAL

1. GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

2. SCOPE

Furnish all labor, materials, equipment, tools and accessories required to provide flashing and sheet metal and accessories for all roof replacement and repair work shown on the Drawings.

3. APPLICABLE STANDARDS

Flashings and sheet metal work shall be fabricated and installed in accordance with the "Architectural Sheet Metal Manual" of the Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA), Fourth edition, 1987.

4. SHOP DRAWINGS

Submit fully detailed shop drawings of all sheet metalwork to the Architect for review. See General Conditions and Supplementary General Conditions, Article C for submittal requirements.

5. SHEET METAL

Sheet metal work shall be galvanized steel sheet, meeting requirements of ASTM A525, with minimum zinc coating of 1.25 oz./square foot and 0.2% copper bearing. Weights of sheet metal (gauges) are indicated on the Drawings. Where sheet metal gauges are not indicated, use 24-gauge. Galvanized sheet metal shall be mill phosphatized to receive paint finish.

6. SHEET LEAD

Standard 0.062” thick lead sheet weighing 4 pounds per square foot, arsenical-antimonial and pig lead alloy conforming to ASTM B29-79 (1984). Use sheet lead for flashing of vent pipes and other penetrations of the roof.

7. SOLDER

Grade “A” conforming to ASTM B32-87, composed of 50% pig lead and 50% block tin, warranted pure. Flux shall be an approved brand of soldering flux or muriatic acid killed with zinc.

8. FASTENERS & ACCESSORIES

Provide all anchors and fasteners, stiffeners, straps, sealants and accessories required for a complete and finished installation. Fasteners and accessories shall be non-ferrous.

9. REGLETS & COUNTER-FLASHINGS

Reglets and counter-flashings shall be galvanized steel as indicated on the Drawings. Reglets and counter-flashings shall be as manufactured by Fry Reglet Corporation, Alhambra, California, or approved equal, and shall be Fry "Springlok" Flashing System Type as indicated on the Drawings. Counter-flashings shall be 26-gauge galvanized steel. Counter-flashings shall be shop or factory-formed so that the counter-flashings shall lock rigidly into reglets.

END OF SECTION

DIVISION 7 - THERMAL & MOISTURE CONTROL

SECTION 07900 - CAULKING & SEALANTS

1. GENERAL CONDITIONS

The foregoing General Conditions, Supplementary General Conditions and Instructions to Bidders, insofar as they apply, shall be a part of this Specification.

2. SCOPE

Furnish all labor, materials, equipment, tools and accessories required to provide caulking and sealant for all work shown on the Drawings.

3. WORK INCLUDED

Provide caulking and sealing of joints as required to seal the perimeters of all openings in walls and as required to weatherproof the buildings. Provide interior building sealing of joints, penetrations and openings, including acoustical and sanitary sealing, as indicated and required.

4. REFERENCE STANDARDS

Sealants and application/ installation of sealants shall meet or exceed the applicable requirements of "Sealants: The Professionals' Guide", a publication of the Sealant and Waterproofers Institute - 1800 Pickwick Ave. - Glenview, IL 60025.

System Description: Joints around openings in exterior walls and joints of abutting materials shall be sealed continuously with sealant. Caulk and seal any other joints indicated or required to weatherproof and complete the buildings, both exterior and interior.

The full extent of exterior and interior caulking and sealing work is not necessarily completely or individually specified. Caulking and sealing shall be provided wherever required to prevent light leakage and noise penetration as well as moisture intrusion.

5. INTERFACE & COORDINATION

Coordinate the Work of this Section with the Work in other Sections specifying materials, systems and assemblies requiring caulking and sealing.

6. MATERIALS

Sealants: Sealants shall be specially designed for adhesion to the surfaces to which they will be applied and shall be non-staining, non-shrinking and non-sagging, meeting the following requirements:

Exterior Sealant: Sealant for exterior locations shall be polyurethane elastomeric sealant which cures at normal temperature to a flexible firm rubber, tack free, in gun grade consistency, such as Vulkem #116 Polyurethane Sealant; Sika #IA Polyurethane Sealant; or approved equal. Sealant shall meet or exceed the minimum requirements of Fed. Spec. TT-S-227 or TT-S-230. Oil-and-resin based compounds and so-called architectural grade compounds will not be accepted.

Interior Sealant: Sealant for general sealing of interior locations shall be a single-component, gun-grade, paintable, water-base acrylic-latex, "Chem-Calk 600" as manufactured by Woodmont Products, Inc., or approved equal.

Acoustical Sealant: Permanently plastic, non-skinning, paintable, synthetic polymer base, "#579.64 Acoustical Sealant" as manufactured by Presstite Products; "USG Acoustical Sealant"; or approved equal.

6. MATERIALS (continued)

Sanitary Sealant: Single-component, primer less, flexible, mildew-resistant, silicone rubber meeting requirements of Fed. Spec. TT-S-001543: "Dow Corning Silicone Rubber Bathtub Caulk"; GE's "Sanitary Sealant"; or approved equal.

Primer: Primer, when required, shall be a quick-drying, colorless, non-staining sealer of type and consistency as recommended by the manufacturer of the sealant for the particular type of surfaces to be sealed.

Packing: Sealant backup or packing (backer rod) shall be a non-absorbent pre-molded or pre-formed non-staining resilient material, such as polyethylene foam rod or neoprene, butyl, polyurethane or other closed cell foams or extruded rod, compatible with the sealant used. Material shall act as a bond breaker and shall be circular in cross section.

7. APPLICATION & INSTALLATION

Cleaning and surface preparation of joints, application of primers, installation of packing and installation of sealant material shall be in accordance with the sealant manufacturers' installation instructions and recommendations.

Thickness of sealant shall be one-half the joint width with a minimum thickness of ¼". Sealant shall bond the two opposing surfaces of the joint.

Finished sealed surfaces shall be uniformly smooth and free from wrinkles.

Clean surfaces adjacent to caulked and sealed joints of any smears of compound or other soiling due to sealing applications, as the Work progresses.

GENERAL NOTES

ELECTRICAL
1. PERMANENTLY MARK & DATE AVAILABLE FAULT CURRENT AND RECALCULATE, MARK AND DATE ANY MODIFICATIONS, EXCEPT FOR DWELLINGS AND INDUSTRIAL INSTALLATIONS.
2. GFIC RECEPTACLES MUST BE READILY ACCESSIBLE.
3. DWELLING CIRCUITS TO BE AFCI PROTECTED AND BE GFIC AT WET LOCATIONS.
4. FOYERS GREATER THAN 60 S.F. SHALL HAVE RECEPTACLES ON WALLS GREATER THAN 3 FEET.
5. SWITCHES CONTROLLING LIGHTING MUST HAVE A NEUTRAL.
6. REPLACEMENT RECEPTACLES ARE TO FOLLOW REQUIREMENTS FOR NEW INSTALLATIONS FOR AFIC, GFIC, TAMPER-RESISTANT AND WEATHER RESISTANT LOCATIONS.
7. TAMPER-RESISTANT RECEPTACLES ARE REQUIRED FOR DWELLINGS, GARAGES AND OUT-BUILDINGS.
8. BATHROOM EXHAUST FANS: ENERGY STAR COMPLIANT & CONTROLLED BY ACCESSIBLE HUMIDISTAT.
9. RECEPTACLES WITH INSULATED GROUNDING TERMINAL ARE NOT ALLOWED IN PATIENT CARE AREAS.

ENVELOPE
1. INSTALLED INSULATION SHALL COMPLY WITH PLANS AND CALIFORNIA QUALITY STANDARDS.
2. CAULK AND/OR SEAL ALL BUILDING MATERIAL JOINTS AND PENETRATIONS AGAINST AIR LEAKAGE.
3. MANUFACTURED DOORS & WINDOWS: HAVE AIR INFILTRATION RATES NOT EXCEEDING CA STANDARDS.
4. WEATHER-STRIP AND GASKET ALL DOORS AND WINDOWS AS REQUIRED TO PREVENT AIR LEAKAGE.
5. RESIDENTIAL BUILDINGS TO HAVE AIR RETARDING WRAP AND WALL & ROOF FOIL RADIANT BARRIERS.

EQUIPMENT
1. ALL KITCHEN APPLIANCES, HEATING/VENTILATING SYSTEMS, SERVICE WATER HEATERS AND AIR CONDITIONING SYSTEMS TO COMPLY W/ CA STANDARDS FOR ENERGY EFFICIENCY AS APPLICABLE.
2. WHERE EQUIPMENT IS SPECIFIED, INSTALL ONLY UNITS THAT MEET OR EXCEED THOSE STANDARDS.

CONSTRUCTION
1. WORK UNDER THE GENERAL CONTRACT SHALL BE COMPLETED IN THE SPECIFIED CONTRACT TIME.
2. OBSERVE ALL PROPERTY LINE SETBACKS AND CLEARANCES FROM ESTABLISHED EASEMENTS, WELLS, UNDERGROUND IMPROVEMENTS AND SEPTIC SYSTEMS.
3. ALL UTILITY SYSTEM MODIFICATIONS, TERMINATIONS, & EXTENSIONS TO SERVE, BOTH UNDERGROUND AND OVERHEAD, SHALL BE PER UTILITY COMPANY REQUIREMENTS AND APPLICABLE CODES. MAINTAIN NEAT & CLEAN, SAFE WORK AREA, AND PROTECT THE PUBLIC DURING THE COURSE OF ON-SITE INSTALLATION. REMOVE ALL DEBRIS FROM SITE DAILY OR STORE IN AN APPROVED LOCATION. ALL CHANGES MADE DURING THE COURSE OF CONSTRUCTION, INCLUDING NEW ROUTINGS AND RE-POSITIONING, SHALL BE NOTED ON AN "AS-BUILT" SET OF CONSTRUCTION DOCUMENTS. NEW RESIDENCES AND ADDITIONS GREATER THAN 1,000 S.F. SHALL PROVIDE WHOLE BUILDING VENTILATION PER ANSI/ASHRAE STANDARD 62.2-2007, SECTION 4.

ALTERATIONS
7. PROTECT ADJACENT FINISHES & ITEMS NOT SCHEDULED FOR WORK AND THOSE ITEMS INTENDED FOR RE-USE FROM DAMAGE DURING THE COURSE OF THE WORK. KEEP THE BUILDING SECURE AND OBSERVE ALL SAFETY PRECAUTIONS DURING THE LIFE OF THE CONSTRUCTION ACTIVITIES.
8. FIXTURES AND OTHER ITEMS SPECIFICALLY SCHEDULED FOR REMOVAL, BUT NOT SCHEDULED FOR REUSE SHALL BECOME THE PROPERTY OF THE GENERAL CONTRACTOR & THE VALUE OF IT (IF ANY) SHALL BE REFLECTED IN THE BID PRICE.
9. REMOVE ALL UNUSED POWER & OTHER UTILITY FEEDS COMPLETELY. NO LIVE POWER CIRCUITS OR GAS OR WATER LINES SHALL BE LEFT CONCEALED IN WALLS OR LEFT DISCONNECTED. ALL SERVICE TERMINATIONS SHALL BE PER CURRENT CODES & UTILITY COMPANY REQUIREMENTS. ANY ABANDONED WATER PIPES IN A WALL SHALL BE CAPPED WITH BOTH A GATE VALVE AND A DEAD-END CAP. THE VALVE SHALL BE ACCESSIBLE & ITS LOCATION SHALL BE SHOWN ON "AS BUILT" RECORD DRAWINGS.
10. RE-USE EXISTING CONDUIT & WIRING WHEREVER POSSIBLE IF IT IS IN USABLE CONDITION, OTHERWISE, REMOVE IT. RE-USE OF EXISTING MATERIAL SHALL BE LIMITED TO THAT WHICH MEETS CURRENT CODES.
11. PATCH & REPAIR ALL STRUCTURE, FLOOR, WALL & CEILING FINISHES INCLUDING BASE & TRIM AS REQUIRED TO MATCH THE ADJACENT "LIKE SURFACES" WHERE REMOVAL OR ALTERATION OCCURS OR WHERE NEW CONSTRUCTION EXISTS, INCLUDING RELOCATION OF HVAC OR ELECTRICAL EQUIPMENT, DUCTING AND/OR PARTITIONS.
12. EXISTING DIMENSIONS AND CONDITIONS SHOWN ARE APPROXIMATE. CONDITIONS NOT SHOWN OR FORESEEN MAY ALTER NEW WORK.

SITE DEVELOPMENT
1. SITE GRADING SHALL BE PERFORMED IN ACCORDANCE WITH THE RECOMMENDATIONS CONTAINED IN THE SOIL REPORT - IF ANY. SHAPE & GRADE SITE TO FORCE DRAINAGE AWAY FROM STRUCTURE.

TELECOMMUNICATIONS
1. PHONE, SIGNAL & DATA LINES SHALL BE INSTALLED IN 3/4" CONDUIT AND UL APPROVED PULL BOXES. CONTRACTOR SHALL PROVIDE CONDUIT TO ATTIC - MIN. 6" ABOVE INSULATION; WIRING SHALL BE FURNISHED & INSTALLED BY OTHERS, U.N.O. ALL COMPONENTS TO MEET C.E.C. & N.E.C..

DEFERRED APPROVALS

ANY ITEM LISTED AS A DEFERRED APPROVAL ITEM SHALL BE THE SUBJECT OF A SUBSEQUENT SUBMITTAL CONTAINING DESIGN DOCUMENTATION CONSISTING OF CALCULATIONS, FLOW CHARTS, DIAGRAMS, PLANS AND/OR DETAILS, AND, IF THE ITEM IS A MANUFACTURED COMPONENT OR SYSTEM, THE MANUFACTURER'S LITERATURE. SAID SUBMITTAL SHALL, IF REQUIRED BY THE ADMINISTRATIVE AUTHORITY HAVING JURISDICTION, BE STAMPED AND SHALL BEAR THE ORIGINAL SIGNATURE OF A CALIFORNIA LICENSED ARCHITECT OR PROFESSIONAL ENGINEER UNDER WHOSE SUPERVISION THE DESIGN WORK WAS ACCOMPLISHED. SAID SUBMITTAL SHALL BE MADE TO AND APPROVED BY THE ADMINISTRATIVE AUTHORITY PRIOR TO COMMENCING WORK ON ANY ASPECT OF THE DEFERRED APPROVAL ITEM, SYSTEM, OR COMPONENT. SAID SUBMITTAL SHALL BE MADE IN SUFFICIENT QUANTITY AND IN A FORM ACCEPTABLE TO THE ADMINISTRATIVE AUTHORITY [USUALLY 5 COPIES].

DEFERRED APPROVAL STATUS IS REQUESTED FOR:

1. CONSTRUCTION WASTE MANAGEMENT PLAN - GENERAL CONTRACTOR TO COMPLY WITH Cal Green SECTIONS 5.408.1 AND 5.408.3.
2. DESIGN & DOCUMENTATION OF MODIFICATIONS TO EXISTING FIRE SPRINKLER SYSTEM.

CHAPTER 3
GREEN BUILDING
SECTION 301 GENERAL

301.1 SCOPE. Buildings shall be designed to include the green building measures specified as mandatory in the application checklists contained in this code. Voluntary green building measures are also included in the application checklists and may be included in the design and construction of structures covered by this code, but are not required unless adopted by a city, county, or city and county as specified in Section 101.7.

301.3 NONRESIDENTIAL ADDITIONS AND ALTERATIONS. [BSC-CG] The provisions of individual sections of Chapter 5 apply to newly constructed buildings, building additions of 1,000 square feet or greater, and/or building alterations with a permit valuation of $200,000 or above (for occupancies within the authority of California Building Standards Commission). Code sections relevant to additions and alterations shall only apply to the portions of the building being added or altered within the scope of the permitted work.

A code section will be designated by a banner to indicate where the code section only applies to newly constructed buildings [N] or to additions and/or alterations [A]. When the code section applies to both, no banner will be used.

301.3.1 Nonresidential additions and alterations that cause updates to plumbing fixtures only:

Note: On and after January 1, 2014, certain commercial real property, as defined in Civil Code Section 1101.3, shall have its noncompliant plumbing fixtures replaced with appropriate water-conserving plumbing fixtures under specific circumstances. See Civil Code Section 1101.1 *et seq.* for definitions, types of commercial real property affected, effective dates, circumstances necessitating replacement of noncompliant plumbing fixtures, and duties and responsibilities for ensuring compliance.

301.3.2 Waste Diversion. The requirements of Section 5.408 shall be required for additions and alterations whenever a permit is required for work.

301.4 PUBLIC SCHOOLS AND COMMUNITY COLLEGES. (see GBSC)
301.5 HEALTH FACILITIES. (see GBSC)

SECTION 302 MIXED OCCUPANCY BUILDINGS

302.1 MIXED OCCUPANCY BUILDINGS. In mixed occupancy buildings, each portion of a building shall comply with the specific green building measures applicable to each specific occupancy.

SECTION 303 PHASED PROJECTS

303.1 PHASED PROJECTS. For shell buildings and others constructed for future tenant improvements, only those code measures relevant to the building components and systems considered to be new construction (or newly constructed) shall apply.

303.1.1 Initial Tenant improvements. The provisions of this code shall apply only to the initial tenant improvements to a project. Subsequent tenant improvements shall comply with the scoping provisions in Section 301.3 non-residential additions and alterations.

ABBREVIATION DEFINITIONS:

HCD	Department of Housing and Community Development
BSC	California Building Standards Commission
DSA-SS	Division of the State Architect, Structural Safety
OSHPD	Office of Statewide Health Planning and Development
LR	Low Rise
HR	High Rise
AA	Additions and Alterations
N	New

CHAPTER 5
NONRESIDENTIAL MANDATORY MEASURES

DIVISION 5.1 PLANNING AND DESIGN

SECTION 5.101 GENERAL
5.101.1 SCOPE
The provisions of this chapter outline planning, design and development methods that include environmentally responsible site selection, building design, building siting and development to protect, restore and enhance the environmental quality of the site and respect the integrity of adjacent properties.

SECTION 5.102 DEFINITIONS
5.102.1 DEFINITIONS
The following terms are defined in Chapter 2 *(and are included here for reference)*

CUTOFF LUMINAIRES. Luminaires whose light distribution is such that the candela per 1000 lamp lumens does not numerically exceed 25 (2.5 percent) at an angle of 90 degrees above nadir, and 100 (10 percent) at a vertical angle of 80 degrees above nadir. This applies to all lateral angles around the luminaire.

LOW-EMITTING AND FUEL EFFICIENT VEHICLES.
Eligible vehicles are limited to the following:

1. Zero emission vehicle (ZEV), including neighborhood electric vehicles (NEV), partial zero emission vehicle (PZEV), advanced technology PZEV (AT ZEV) or CNG fueled (original equipment manufacturer only) regulated under Health and Safety Code section 43800 and CCR, Title 13, Sections 1961 and 1962.
2. High-efficiency vehicles, regulated by U.S. EPA, bearing High-Occupancy Vehicle (HOV) car pool lane stickers issued by the Department of Motor Vehicles.

NEIGHBORHOOD ELECTRIC VEHICLE (NEV). A motor vehicle that meets the definition of "low-speed vehicle" either in Section 385.5 of the Vehicle Code or in 49CFR571.500 (as it existed on July 1, 2000), and is certified to zero-emission vehicle standards.

TENANT-OCCUPANTS. Building occupants who inhabit a building during its normal hours of operation as permanent occupants, such as employees, as distinguished from customers and other transient visitors.

VANPOOL VEHICLE. Eligible vehicles are limited to any motor vehicle, other than a mototruck or truck tractor, designed for carrying more than 10 but not more than 15 persons including the driver, which is maintained and used primarily for the nonprofit work-related transportation of adults for the purpose of ridesharing.

Note: Source: Vehicle Code, Division 1, Section 668

ZEV. Any vehicle certified to zero-emission standards.

SECTION 5.106 SITE DEVELOPMENT
5.106.1 STORM WATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB LESS THAN ONE ACRE OF LAND. Newly constructed projects and additions which disturb less than one acre of land, and are not part of a larger common plan of development or sale, shall prevent the pollution of storm water runoff from the construction activities through one or more of the following measures:

5.106.1.1 Local ordinance. Comply with a lawfully enacted storm water management and/or erosion control ordinance.

5.106.1.2 Best Management Practices (BMPs). Prevent the loss of soil through wind or water erosion by implementing an effective combination of erosion and sediment control and good housekeeping BMPs.

1. Soil loss BMPs that should be considered for implementation as appropriate for each project include, but are not limited to, the following:
   a. Scheduling construction activity during dry weather, when possible.
   b. Preservation of natural features, vegetation, soil, and buffers around surface waters.
   c. Drainage swales or lined ditches to control stormwater flow.
   d. Mulching or hydroseeding to stabilize disturbed soils.
   e. Erosion control to protect slopes.
   f. Protection of storm drain inlets (gravel bags or catch basin inserts).
   g. Perimeter sediment control (perimeter silt fence, fiber rolls).
   h. Sediment trap or sediment basin to retain sediment on site.
   i. Stabilized construction exits.
   j. Wind erosion control.
   k. Other soil loss BMPs acceptable to the enforcing agency.
2. Good housekeeping BMPs to manage construction equipment, materials, non-stormwater discharges and wastes that should be considered for implementation as appropriate for each project include, but are not limited to, the following:
   a. Dewatering activities.
   b. Material handling and waste management.
   c. Building materials stockpile management.
   d. Management of washout areas (concrete, paints, stucco, etc.).
   e. Control of vehicle/equipment fueling to contractor's staging area.
   f. Vehicle and equipment cleaning performed off site.
   g Spill prevention and control.
   h. Other housekeeping BMPs acceptable to the enforcing agency.

5.106.2 STORMWATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB ONE OR MORE ACRES OF LAND. Comply with all lawfully enacted stormwater discharge regulations for projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of a larger common plan of development sale.

Note: Projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of the larger common plan of development or sale must comply with the post-construction requirements detailed in the applicable National Pollutant Discharge Elimination System (NPDES) General permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities issued by the State Water Resources Control Board or the Lahontan Regional Water Quality Control Board (for projects in the Lake Tahoe Hydrologic Unit).

The NPDES permits require postconstruction runoff (post-project hydrology) to match the preconstruction runoff (pre-project hydrology) with the installation of postconstruction stormwater management measures. The NPDES permits emphasize runoff reduction through on-site stormwater use, interception, evapotranspiration, and infiltration through nonstructural controls, such as Low Impact Development (LID) practices, and conversation design measures. Stormwater volume that cannot be addressed using nonstructural practices is required to be captured in structural practices and be approved by the enforcing agency.

Refer to the current applicable permits on the State Water Resources Control Board website at: www.waterboards.ca.gov/constructionstormwater. Consideration to the stormwater runoff management measures should be given during the initial design process for appropriate integration into site development.

5.106.4 BICYCLE PARKING. For buildings within the authority of California Building Standards Commission as specified in Section 103, comply with Section 5.106.4.1. For buildings within the authority of the Division of the State Architect pursuant to Section 105, comply with Section 5.106.4.2

5.106.4.1 Bicycle parking. [BSC-CG] Comply with Sections 5.106.4.1.1 and 5.106.4.1.2; or meet the applicable local ordinance, whichever is stricter.

5.106.4.1.1 Short-term bicycle parking. If the new project or an addition or alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack.
Exception: Additions or alterations which add nine or less visitor vehicular parking spaces.

5.106.4.1.2 Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5 percent of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility.

5.106.4.1.3 For additions or alterations that add 10 or more tenant-occupant vehicular parking spaces, provide secure bicycle parking for 5 percent of the tenant vehicular parking spaces being added, with a minimum of one bicycle parking facility.

5.106.4.1.4 For new shell buildings in phased projects provide secure bicycle parking for 5 percent of the anticipated tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility.

5.106.4.1.5 Acceptable bicycle parking facility for Sections 5.106.4.1.2, 5.106.4.1.3, and 5.106.4.1.4 shall be convenient from the street and shall meet one of the following:

1. Covered, lockable enclosures with permanently anchored racks for bicycles;
2. Lockable bicycle rooms with permanently anchored racks; or
3. Lockable, permanently anchored bicycle lockers.

Note: Additional information on recommended bicycle accommodations may be obtained from Sacramento Area Bicycle Advocates.

5.106.4.2 Bicycle parking. [DSA-SS] For public schools and community colleges, comply with Sections 5.106.4.2.1 and 5.106.4.2.2

5.106.4.2.1 Student bicycle parking. Provide permanently anchored bicycle racks conveniently accessed with a minimum of four two-bike capacity racks per new building.
5.106.4.2.2 Staff bicycle parking. Provide permanent, secure bicycle parking conveniently accessed with a minimum of two staff bicycle parking spaces per new building. Acceptable bicycle parking facilities shall be convenient from the street or staff parking area and shall meet one of the following:

1. Covered, lockable enclosures with permanently anchored racks for bicycles;
2. Lockable bicycle rooms with permanently anchored racks; or
3. Lockable, permanently anchored bicycle lockers.

5.106.5.2 DESIGNATED PARKING FOR CLEAN AIR VEHICLES. In new projects or additions or alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as follows:

TABLE 5.106.5.2 - PARKING

TOTAL NUMBER OF PARKING SPACES	NUMBER OF REQUIRED SPACES
0-9	0
10-25	1
25-50	3
51-75	6
76-100	8
101-150	11
151-200	16
201 AND OVER	AT LEAST 8% OF TOTAL

5.106.5.2.1 - Parking stall marking. Paint, in the paint used for stall striping, the following characters such that the lower edge of the last word aligns with the end of the stall striping and is visible beneath a parked vehicle: CLEAN AIR / VAN POOL / EV

Note: Vehicles bearing Clean Air Vehicle stickers from expired HOV lane programs may be considered eligible for designated parking spaces.

5.106.5.3 Electric vehicle (EV) charging. [N] Construction shall comply with Section 5.106.5.3.1 or Section 5.106.5.3.2 to facilitate future installation of electric vehicle supply equipment (EVSE). When EVSE(s) is/are installed, it shall be in accordance with the *California Building Code,* the *California Electrical Code* and as follows:

5.106.5.3.1 Single charging space requirements. [N] When only a single charging space is required per Table 5.106.5.3.3, a raceway is required to be installed at the time of construction and shall be installed in accordance with the *California Electrical Code.* Construction plans and specifications shall include, but are not limited to, the following:

1. The type and location of the EVSE.
2. A listed raceway capable of accommodating a 208/240 -volt dedicated branch circuit.
3. The raceway shall not be less than trade size 1".
4. The raceway shall originate at a service panel or a subpanel serving the area, and shall terminate in close proximity to the proposed location of the charging equipment and listed suitable cabinet, box, enclosure or equivalent.
5. The service panel or subpanel shall have sufficient capacity to accommodate a minimum 40-ampere dedicated branch circuit for the future installation of the EVSE.

5.106.5.3.2 Multiple charging space requirements. [N] When multiple charging spaces are required per Table 5.106.5.3.3 raceway(s) is/are required to be installed at the time of construction and shall be installed in accordance with the *California Electrical Code.* Construction plans and specifications shall include, but are not limited to, the following:

1. The type and location of the EVSE.
2. The raceway(s) shall originate at a service panel or a subpanel(s) serving the area, and shall terminate in close proximity to the proposed location of the charging equipment and into listed suitable cabinet(s), box(es), enclosure(s) or equivalent.
3. Plan design shall be based upon 40-ampere minimum branch circuits.
4. Electrical calculations shall substantiate the design of the electrical system, to include the rating of equipment and any on-site distribution transformers and have sufficient capacity to simultaneously charge all required EVs at its full rated amperage.
5. The service panel or subpanel(s) shall have sufficient capacity to accommodate the required number of dedicated branch circuit(s) for the future installation of the EVSE.

5.106.5.3.3 EV charging space calculations. [N] Table 5.106.5.3.3 shall be used to determine if single or multiple charging space requirements apply for the future installation of EVSE.

Exceptions: On a case-by-case basis where the local enforcing agency has determined EV charging and infrastructure is not feasible based upon one or more of the following conditions:

1. Where there is insufficient electrical supply.
2. Where there is evidence suitable to the local enforcing agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section 5.106.5.3, may adversely impact the construction cost of the project.

TABLE 5.106.5.3.3

TOTAL NUMBER OF PARKING SPACES	NUMBER OF REQUIRED SPACES
0-9	0
10-25	1
26-50	2
51-75	4
76-100	5
101-150	7
151-200	10
201 AND OVER	6% of total[1]

1. Calculation for spaces shall be rounded up to the nearest whole number.

5.106.5.3.4 [N] Identification. The service panel or subpanel(s) circuit directory shall identify the reserved overcurrent protective device space(s) for future EV charging as "EV CAPABLE". The raceway termination location shall be permanently and visibly marked as "EV CAPABLE".

5.106.5.3.5 [N] Future charging spaces qualify as designated parking as described in Section 5.106.5.2 Designated parking for clean air vehicles.

5.106.8 LIGHT POLLUTION REDUCTION. [N].I Outdoor lighting systems shall be designed and installed to comply with the following:

1. The minimum requirements in the California Energy Code for Lighting Zones 0-4 as defined in Chapter 10, Section 10-114 of the California Administrative Code; and
2. Backlight (B) ratings as defined in IES TM-15-11 (shown in Table A-1 in Chapter 8);
3. Uplight and Glare ratings as defined in California Energy Code (shown in Tables 130.2-A and 130.2-B in Chapter 8) and
4. Allowable BUG ratings not exceeding those shown in Table 5.106.8, [N] or Comply with a local ordinance lawfully enacted pursuant to Section 101.7, whichever is more stringent.

Exceptions: [N]

1. Luminaires that qualify as exceptions in Section 140.7 of the California Energy Code.
2. Emergency lighting.
3. Building facade meeting the requirements in Table 140.7-B of the California Energy Code, Part 6.
4. Custom lighting features as allowed by the local enforcing agency, as permitted by Section 101.8 Alternate materials, designs and methods of construction.

Note: [N]
1. See also California Building Code, Chapter 12, Section 1205.6 for college campus lighting requirements for parking facilities and walkways.
2. Refer to Chapter 8 (Compliance Forms, Worksheets and Reference Material) for IES TM-15-11 Table A-1, California Energy Code Tables 130.2-A and 130.2-B.
3. Refer to the California Building Code for requirements for additions and alterations.

TABLE 5.106.8 [N] MAXIMUM ALLOWABLE BACKLIGHT, UPLIGHT AND GLARE (BUG) RATINGS[1,2]

ALLOWABLE RATING	LIGHTING ZONE LZ0	LIGHTING ZONE LZ1	LIGHTING ZONE LZ2	LIGHTING ZONE LZ3	LIGHTING ZONE LZ4
MAXIMUM ALLOWABLE BACKLIGHT RATING [3]					
Luminaire greater than 2 mounting heights (MH) from property line	N/A	No Limit	No Limit	No Limit	No Limit
Luminaire back hemisphere is 1-2 MH from property line	N/A	B2	B3	B4	B4
Luminaire back hemisphere is 0.5-1 MH from property line	N/A	B1	B2	B3	B3
Luminaire back hemisphere is less than 0.5 MH from property line	N/A	B0	B0	B1	B2
MAXIMUM ALLOWABLE UPLIGHT RATING (U)					
For area lighting [4]	N/A	U0	U0	U0	U0
For all other outdoor lighting,including decorative luminaires	N/A	U1	U2	U3	UR
MAXIMUM ALLOWABLE GLARE RATING [5] **(G)**					
Luminaire greater than 2 MH from property line	N/A	G1	G2	G3	G4
Luminaire front hemisphere is 1-2 MH from property line	N/A	G0	G1	G1	G2
Luminaire front hemisphere is 0.5-1 MH from property line	N/A	G0	G0	G1	G1
Luminaire back hemisphere is less than 0.5 MH from property line	N/A	G0	G0	G0	G1

1. IESNA Lighting Zones 0 and 5 are not applicable; refer to Lighting Zones as defined in the *California Energy Code* and Chapter 10 of the *California Administrative Code.*

2. For property lines that abut public walkways, bikeways, plazas and parking lots, the property line may be considered to be 5 feet beyond the actual property line for purpose of determining compliance with this section. For property lines that abut public roadways and public transit corridors, the property line may be considered to be the centerline of the public roadway or public transit corridor for the purpose of determining compliance with this section.

3. If the nearest property line is less than or equal to two mounting heights from the back hemisphere of the luminaire distribution, the applicable reduced Backlight rating shall be met.

4. General lighting luminaires in areas such as outdoor parking, sales or storage lots shall meet these reduced ratings. Decorative luminaires located in these areas shall meet *U*-value limits for "all other outdoor lighting".

5. If the nearest property line is less than or equal to two mounting heights from the front hemisphere of the luminaire distribution, the applicable reduced Glare rating shall be met.

5.106.10 GRADING AND PAVING. Construction plans shall indicate how site grading or a drainage system will manage all surface water flows to keep water from entering buildings. Examples of methods to manage surface water include, but are not limited to, the following:

1. Swales.
2. Water collection and disposal systems.
3. French drains.
4. Water retention gardens.
5. Other water measures which keep surface water away from buildings and aid in groundwater recharge.

Exception: Additions and alterations not altering the drainage path.

5.106.12 SHADE TREES [DSA-SS]. Shade Trees shall be planted to comply with Sections 5.106.12.1, 5.106.12.2, and 5.106.12.3. Percentages shown shall be measured at noon on the summer solstice. Landscape irrigation necessary to establish and maintain tree health shall comply with Section 5.304.6.

5.106.12.1 Surface parking areas. Shade tree plantings, minimum #10 container size or equal, shall be installed to provide shade over 50 percent of the parking area within 15 years.

Exceptions: The surface parking area covered by solar photovoltaic shade structures, or shade structures, with roofing materials that comply with Table A5.106.11.2.2 in Appendix A5, are not included in the total area calculations.

5.106.12.2 Landscape areas. Shade tress plantings, minimum #10 container size or equal shall be installed to provide shade of 20% of the landscape area within 15 years.

Exceptions: Playfields for organized sport activity are not included in the total area calculation.

5.106.12.3. Hardscape areas. Shade tree plantings, minimum #10 container size or equal shall be installed to provide shade over 20 percent of the hardscape area within 15 years.

Exceptions: Walks, hardscape areas covered by solar photovoltaic shade structures, and hardscape areas covered by shade structures with roofing materials that comply with Table A5.106.11.2.2 in Appendix A5, are not included in the total area calculation.

DIVISION 5.2 ENERGY EFFICIENCY

SECTION 5.201 GENERAL
5.201.1 Scope [BSC-CG]. ***California Energy Code [DSA-SS].*** For the purposes of mandatory energy efficiency standards in this code, the California Energy Commission will continue to adopt mandatory building standards.

DIVISION 5.3 WATER EFFICIENCY AND CONSERVATION

SECTION 5.301 GENERAL
5.301.1 Scope. The provisions of this chapter shall establish the means of conserving water use indoors, outdoors and in wastewater conveyance.

SECTION 5.302 DEFINITIONS
5.302.1 Definitions. The following terms are defined in Chapter 2 *(and are included here for reference)*

EVAPOTRANSPIRATION ADJUSTMENT FACTOR (ETAF) [DSA-SS]. An adjustment factor when applied to reference evapotranspiration that adjusts for plant factors and irrigation efficiency, which ae two major influences on the amount of water that needs to be applied to the landscape.

FOOTPRINT AREA [DSA-SS]. The total area of the furthest exterior wall of the structure projected to natural grade, not including exterior areas such as stairs, covered walkways, patios and decks.

METERING FAUCET. A self-closing faucet that dispenses a specific volume of water for each actuation cycle. The volume or cycle duration can be fixed or adjustable.

GRAYWATER. Pursuant to Health and Safety Code Section 17922.12, "graywater" means untreated wastewater that has not been contaminated by any toilet discharge, has not been affected by infectious, contaminated, or unhealthy bodily wastes, and does not present a threat from contamination by unhealthful processing, manufacturing, or operating wastes. "Graywater" includes, but is not limited to wastewater from bathtubs, showers, bathroom washbasins, clothes washing machines and laundry tubs, but does not include waste water from kitchen sinks or dishwashers.

MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO). The California ordinance regulating landscape design, installation and maintenance practices that will ensure commercial, multifamily and other developer installed landscapes greater than 2500 square feet meet an irrigation water budget developed based on landscaped area and climatological parameters.

MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO), [HCD] The California model ordinance (California Code of Regulations, Title 23, Division 2, Chapter 2.7), regulating landscape design, installation and maintenance practices. Local agencies are required to adopt the updated MWELO, or adopt a local ordinance at least as effective as the MWELO.

POTABLE WATER. Water that is drinkable and meets the U.S. Environmental Protection Agency (EPA) Drinking Water Standards. See definition in the California Plumbing Code, Part 5.

POTABLE WATER. [HCD] Water that is satisfactory for drinking, culinary, and domestic puroses, and meets the U.S. Environmental Protection Agency (EPA) Drinking Water Standards and the requirements of the Health Authority Having Jurisdiction.

RECYCLED WATER. Water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur [Water Code Section 13050 (n)]. Simply put, recycled water is water treated to remove waste matter attaining a quality that is suitable to use the water again.

SUBMETER. A meter installed subordinate to a site meter. Usually used to measure water intended for one purpose, such as landscape irrigation. For the purposes of CALGreen, a dedicated meter may be considered a submeter.

WATER BUDGET. Is the estimated total landscape irrigation water use which shall not exceed the maximum applied water allowance calculated in accordance with the Department of Water Resources Model Efficient Landscape Ordinance (MWELO).

SECTION 5.303 INDOOR WATER USE
5.303.1 METERS. Separate submeters or metering devices shall be installed for the uses described in Sections 503.1.1 and 503.1.2.

5.303.1.1 Buildings in excess of 50,000 square feet. Separate submeters shall be installed as follows:

1. For each individual leased, rented or other tenant space within the building projected to consume more than 100 gal/day (380 L/day), including, but not limited to, spaces used for laundry or cleaners, restaurant or food service, medical or dental office, laboratory, or beauty salon or barber shop.
2. Where separate submeters for individual building tenants are unfeasible, for water supplied to the following subsystems:
   a. Makeup water for cooling towers where flow through is greater than 500 gpm (30 L/s).
   b. Makeup water for evaporative coolers greater than 6 gpm (0.04 L/s).
   c. Steam and hot water boilers with energy input more than 500,000 Btu/h (147 kW).

5.303.1.2 Excess consumption. A separate submeter or metering device shall be provided for any tenant within a new building or within an addition that is projected to consume more than 1,000 gal/day.

5.303.3 WATER CONSERVING PLUMBING FIXTURES AND FITTINGS. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:

5.303.3.1 Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush. Tank-type water closets shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Tank-Type toilets.

Note: The effective flush volume of dual flush toilets is defined as the composite, average flush volume of two reduced flushes and one full flush.

5.303.3.2 Urinals.
5.303.3.2.1 Wall-mounted Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush.

5.303.3.2.2 Floor-mounted Urinals. The effective flush volume of floor-mounted or other urinals shall not exceed 0.5 gallons per flush.

5.303.3.3 Showerheads. [BSC-CG]
5.303.3.3.1 Single showerhead. Showerheads shall have a maximum flow rate of not more than 1.8 gallons per minute at 80 psi. Showerheads shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Showerheads.

5.303.3.3.2 Multiple showerheads serving one shower. When a shower is served by more than one showerhead, the combined flow rate of all the showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi, or the shower shall be designed to allow only one shower outlet to be in operation at a time.
Note: A hand-held shower shall be considered a showerhead.

RESPON. PARTY = RESPONSIBLE PARTY (ie: ARCHITECT, ENGINEER, OWNER, CONTRACTOR, INSPECTOR ETC.)

Y | N/A | RESPON. PARTY

5.303.3.4 Faucets and fountains.

5.303.3.4.1 Nonresidential Lavatory faucets. Lavatory faucets shall have a maximum flow rate of not more than 0.5 gallons per minute at 60 psi.

5.303.3.4.2 Kitchen faucets. Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute at 60 psi. Kitchen faucets may temporarily increase the flow above the maximum rate, but not to exceed 2.2 gallons per minute at 60 psi, and must default to a maximum flow rate of 1.8 gallons per minute at 60 psi.

5.303.3.4.3 Wash fountains. Wash fountains shall have a maximum flow rate of not more than1.8 gallons per minute/20 [rim space (inches) at 60 psi].

5.303.3.4.4 Metering faucets. Metering faucets shall not deliver more than 0.20 gallons per cycle.

5.303.3.4.5 Metering faucets for wash fountains. Metering faucets for wash fountains shall have a maximum flow rate of not more than 0.20 gallons per minute/20 [rim space (inches) at 60 psi].

Note: Where complying faucets are unavailable, aerators or other means may be used to achieve reduction.

5.303.4 COMMERCIAL KITCHEN EQUIPMENT.

5.303.4.1 Food Waste Disposers. Disposers shall either modulate the use of water to no more than 1 gpm when the disposer is not in use (not actively grinding food waste/no-load) or shall automatically shut off after no more than 10 minutes of inactivity. Disposers shall use no more than 8 gpm of water.
Note: This code section does not affect local jurisdiction authority to prohibit or require disposer installation.

5.303.5 AREAS OF ADDITION OR ALTERATION. For those occupancies within the authority of the California Building Standards Commission as specified in Section 103, the provisions of Section 5.303.3 and 5.303.4 shall apply to new fixtures in additions or areas of alteration to the building.

5.303.6 STANDARDS FOR PLUMBING FIXTURES AND FITTINGS. Plumbing fixtures and fittings shall be installed in accordance with the *California Plumbing Code*, and shall meet the applicable standards referenced in Table 1701.1 of the *California Plumbing Code* and in Chapter 6 of this code.

SECTION 5.304 OUTDOOR WATER USE

5.304.1 OUTDOOR POTABLE WATER USE IN LANDSCAPE AREAS. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent.

Notes:
1. The Model Water Efficient Landscape Ordinance (MWELO) is located in the California Code of Regulations, Title 23, Chapter 2.7, Division 2.
2. MWELO and supporting documents, including a water budget calculator, are available at: https://www.water.ca.gov/.

5.304.6 OUTDOOR POTABLE WATER USE IN LANDSCAPE AREAS. For public schools and community colleges, landscape projects as described in Sections 5.304.6.1 and 5.304.6.2 shall comply with the California Department of Water Resources Model Water Efficient Landscape Ordinance (MWELO) commencing with Section 490 of Chapter 2.7, Division 2, Title 23, California Code of Regulations, except that the evapotranspiration adjustment factor (ETAF) shall be 0.65 with an additional water allowance for special landscape areas (SLA) of 0.35.

Exception: Any project with an aggregate landscape area of 2,500 square feet or less may comply with the prescriptive measures contained in Appendix D of the MWELO.

5.304.6.1 Newly constructed landscapes. New construction projects with an aggregate landscape area equal to or greater than 500 square feet.

5.304.6.2 Rehabilitated landscapes. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 1,200 square feet.

DIVISION 5.4 MATERIAL CONSERVATION AND RESOURCE EFFICIENCY

SECTION 5.401 GENERAL

5.401.1 SCOPE. The provisions of this chapter shall outline means of achieving material conservation and resource efficiency through protection of buildings from exterior moisture, construction waste diversion, employment of techniques to reduce pollution through recycling of materials, and building commissioning or testing and adjusting.

SECTION 5.402 DEFINITIONS

5.402.1 DEFINITIONS. The following terms are defined in Chapter 2 *(and are included here for reference)*

ADJUST. To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.

BALANCE. To proportion flows within the distribution system, including sub-mains, branches and terminals, according to design quantities.

BUILDING COMMISSIONING. A systematic quality assurance process that spans the entire design and construction process, including verifying and documenting that building systems and components are planned, designed, installed, tested, operated and maintained to meet the owner's project requirements.

ORGANIC WASTE. Food waste, green waste, landscape and pruning wste, nonhazardous wood waste, and food soiled paper waste that is mixed in with food waste.

TEST. A procedure to determine quantitative performance of a system or equipment

Y | N/A | RESPON. PARTY

SECTION 5.407 WATER RESISTANCE AND MOISTURE MANAGEMENT

5.407.1 WEATHER PROTECTION. Provide a weather-resistant exterior wall and foundation envelope as required by California Building Code Section 1402.2 (Weather Protection), manufacturer's installation instructions or local ordinance, whichever is more stringent.

5.407.2 MOISTURE CONTROL. Employ moisture control measures by the following methods.

5.407.2.1 Sprinklers. Design and maintain landscape irrigation systems to prevent spray on structures.

5.407.2.2 Entries and openings. Design exterior entries and/or openings subject to foot traffic or wind-driven rain to prevent water intrusion into buildings as follows:

5.407.2.2.1 Exterior door protection. Primary exterior entries shall be covered to prevent water intrusion by using nonabsorbent floor and wall finishes within at least 2 feet around and perpendicular to such openings plus at least one of the following:

1. An installed awning at least 4 feet in depth.
2. The door is protected by a roof overhang at least 4 feet in depth.
3. The door is recessed at least 4 feet.
4. Other methods which provide equivalent protection.

5.407.2.2.2 Flashing. Install flashings integrated with a drainage plane.

SECTION 5.408 CONSTRUCTION WASTE REDUCTION, DISPOSAL AND RECYCLING

5.408.1 CONSTRUCTION WASTE MANAGEMENT. Recycle and/or salvage for reuse a minimum of 65% of the non-hazardous construction and demolition waste in accordance with Section 5.408.1.1, 5.408.1.2 or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent.

5.408.1.1 Construction waste management plan. Where a local jurisdiction does not have a construction and demolition waste management ordinance, submit a construction waste management plan that:

1. Identifies the construction and demolition waste materials to be diverted from disposal by efficient usage, recycling, reuse on the project or salvage for future use or sale.
2. Determines if construction and demolition waste materials will be sorted on-site (source-separated) or bulk mixed (single stream).
3. Identifies diversion facilities where construction and demolition waste material collected will be taken.
4. Specifies that the amount of construction and demolition waste materials diverted shall be calculated by weight or volume, but not by both.

5.408.1.2 Waste Management Company. Utilize a waste management company that can provide verifiable documentation that the percentage of construction and demolition waste material diverted from the landfill complies with this section.

Note: The owner or contractor shall make the determination if the construction and demolition waste material will be diverted by a waste management company.

Exceptions to Sections 5.408.1.1 and 5.408.1.2:

1. Excavated soil and land-clearing debris.
2. Alternate waste reduction methods developed by working with local agencies if diversion or recycle facilities capable of compliance with this item do not exist.
3. Demolition waste meeting local ordinance or calculated in consideration of local recycling facilities and markets.

5.408.1.3 Waste stream reduction alternative. The combined weight of new construction disposal that does not exceed two pounds per square foot of building area may be deemed to meet the 65% minimum requirement as approved by the enforcing agency.

5.408.1.4 Documentation. Documentation shall be provided to the enforcing agency which demonstrates compliance with Sections 5.408.1.1, through 5.408.1.3. The waste management plan shall be updated as necessary and shall be accessible during construction for examination by the enforcing agency.

Notes:

1. Sample forms found in "A Guide to the California Green Building Standards Code (Nonresidential)" located at www.bsc.ca.gov/Home/CALGreen.aspx may be used to assist in documenting compliance with the waste management plan.
2. Mixed construction and demolition debris processors can be located at the California Department of Resources Recycling and Recovery (CalRecycle).

5.408.2 UNIVERSAL WASTE. [A] Additions and alterations to a building or tenant space that meet the scoping provisions in Section 301.3 for nonresidential additions and alterations, shall require verification that Universal Waste items such as fluorescent lamps and ballast and mercury containing thermostats as well as other California prohibited Universal Waste materials are disposed of properly and are diverted from landfills. A list of prohibited Universal Waste materials shall be included in the construction documents.

Note: Refer to the Universal Waste Rule link at:
http://www.dtsc.ca.gov/LawsRegsPolicies/Regs/upload/OEAR-A_REGS_UWR_FinalText.pdf

5.408.3 EXCAVATED SOIL AND LAND CLEARING DEBRIS. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phased project, such material may be stockpiled on site until the storage site is developed.

Exception: Reuse, either on or off-site, of vegetation or soil contaminated by disease or pest infestation.

Notes:

1. If contamination by disease or pest infestation is suspected, contact the County Agricultural Commissioner and follow its direction for recycling or disposal of the material.
2. For a map of know pest and/or disease quarantine zones, consult with the California Department of Food and Agriculture. (www.cdfa.ca.gov)

SECTION 5.410 BUILDING MAINTENANCE AND OPERATIONS

5.410.1 RECYCLING BY OCCUPANTS. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive.

Exception: Rural jurisdictions that meet and apply for the exemption in Public Resources Code 42649.82 (a)(2)(A) et seq. shall also be exempt from the organic waste portion of this section.

5.410.1.1 Additions. All additions conducted within a 12-month period under single or multiple permits, resulting in an increase of 30% or more in floor area, shall provide recycling areas on site.

Exception: Additions within a tenant space resulting in less than a 30% increase in the tenant space floor area.

5.410.1.2 Sample ordinance. Space allocation for recycling areas shall comply with Chapter 18, Part 3, Division 30 of the *Public Resources Code*. Chapter 18 is known as the California Solid Waste Reuse and Recycling Access Act of 1991 (Act).

Note: A sample ordinance for use by local agencies may be found in Appendix A of the document at the CalRecycle's web site.

Y | N/A | RESPON. PARTY

5.410.2 COMMISSIONING. [N] New buildings 10,000 square feet and over. For new buildings 10,000 square feet and over, building commissioning shall be included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements. Commissioning shall be performed in accordance with this section by trained personnel with experience on projects of comparable size and complexity. For I-occupancies that are not regulated by OSHPD or for I-occupancies and L-occupancies that are not regulated y the California Energy Code Section 100.0 Scope, all requirements in Sections 5.410.2 through 5.410.2.6 shall apply.

Note: For energy-related systems under the scope (Section 100) of the California Energy Code, including heating, ventilation, air conditioning (HVAC) systems and controls, indoor lighting systems and controls, as well as water heating systems and controls, refer to California Energy Code Section 120.8 for commissioning requirements

Commissioning requirements shall include:

1. Owner's or Owner representative's project requirements.
2. Basis of design.
3. Commissioning measures shown in the construction documents.
4. Commissioning plan.
5. Functional performance testing.
6. Documentation and training.
7. Commissioning report.

Exceptions:

1. Unconditioned warehouses of any size.
2. Areas less than 10,000 square feet used for offices or other conditioned accessory spaces within unconditioned warehouses.
3. Tenant improvements less than 10,000 square feet as described in Section 303.1.1.
4. Open parking garages of any size, or open parking garage areas, of any size, within a structure.

Note: For the purposes of this section, unconditioned shall mean a building, area, or room which does not provide heating and or air conditioning.

Informational Notes:

1. IAS AC 476 is an accreditation criteria for organizations providing training and/or certification of commissioning personnel. AC 476 is available to the Authority Having Jurisdiction as a reference for qualifications of commissioning personnel. AC 476 des not certify individuals to conduct functional performance tests or to adjust and balance systems.
2. Functional performance testing for heating, ventilation, air conditioning systems and lighting controls must be performed in compliance with the *California Energy Code*.

5.410.2.1 Owner's or Owner Representative's Project Requirements (OPR). [N] The expectations and requirements of the building appropriate to its phase shall be documented before the design phase of the project begins. This documentation shall include the following:
1. Environmental and sustainability goals.
2. Building sustainable goals.
3. Indoor environmental quality requirements.
4. Project program, including facility functions and hours of operation, and need for after hours operation.
5. Equipment and systems expectations.
6. Building occupant and operation and maintenance (O&M) personnel expectations.

5.410.2.2 Basis of Design (BOD). [N] A written explanation of how the design of the building systems meets the OPR shall be completed at the design phase of the building project. The Basis of Design document shall cover the following systems:

1. Renewable energy systems.
2. Landscape irrigation systems.
3. Water reuse system.

5.410.2.3 Commissioning plan. [N] Prior to permit issuance a commissioning plan shall be completed to document how the project will be commissioned. The commissioning plan shall include the following:
1. General project information.
2. Commissioning goals.
3. Systems to be commissioned. Plans to test systems and components shall include:
   a. An explanation of the original design intent.
   b. Equipment and systems to be tested, including the extent of tests.
   c. Functions to be tested.
   d. Conditions under which the test shall be performed.
   e. Measurable criteria for acceptable performance.
4. Commissioning team information.
5. Commissioning process activities, schedules and responsibilities. Plans for the completion of commissioning shall be included.

5.410.2.4 Functional performance testing. [N] Functional performance tests shall demonstrate the correct installation and operation of each component, system and system-to-system interface in accordance with the approved plans and specifications. Functional performance testing reports shall contain information addressing each of the building components tested, the testing methods utilized, and include any readings and adjustments made.

5.410.2.5 Documentation and training. [N] A Systems Manual and Systems Operations Training are required, including Occupational Safety and Health Act (OSHA) requirements in *California Code of Regulations* (CCR), Title 8, Section 5142, and other related regulations.

5.410.2.5.1 Systems manual. [N] Documentation of the operational aspects of the building shall be completed within the systems manual and delivered to the building owner or representative. The systems manual shall include the following:
1. Site information, including facility description, history and current requirements.
2. Site contact information.
3. Basic operations and maintenance, including general site operating procedures, basic troubleshooting, recommended maintenance requirements, site events log.
4. Major systems.
5. Site equipment inventory and maintenance notes.
6. A copy of verifications required by the enforcing agency or this code.
7. Other resources and documentation, if applicable.

5.410.2.5.2 Systems operations training. [N] A program for training of the appropriate maintenance staff for each equipment type and/or system shall be developed and documented in the commissioning report and shall include the following:
1. System/equipment overview (what it is, what it does and with what other systems and/or equipment it interfaces).
2. Review and demonstration of servicing/preventive maintenance.
3. Review of the information in the Systems Manual.
4. Review of the record drawings on the system/equipment.

5.410.2.6 Commissioning report. [N] A report of commissioning process activities undertaken through the design and construction phases of the building project shall be completed and provided to the owner or representative.

5.410.4 TESTING AND ADJUSTING. New buildings less than 10,000 square feet. Testing and adjusting of systems shall be required for new buildings less than 10,000 square feet or new systems to serve an addition or alteration subject to Section 303.1.

5.410.4.2 (Reserved)

Note: For energy-related systems under the scope (Section 100) of the California Energy Code, including heating, ventilation, air conditioning (HVAC) systems and controls, indoor lighting system and controls, as well as water heating systems and controls, refer to California Energy Code Section 120.8 for commissioning requirements and Sections 120.5, 120.6, 130.4, and 140.9(b)3 for additional testing requirements of specific systems.

5.410.4.2 Systems. Develop a written plan of procedures for testing and adjusting systems. Systems to be included for testing and adjusting shall include at a minimum, as applicable to the project:

1. Renewable energy systems.
2. Landscape irrigation systems.
3. Water reuse systems.

5.410.4.3 Procedures. Perform testing and adjusting procedures in accordance with manufacturer's specifications and applicable standards on each system.

5.410.4.3.1 HVAC balancing. In addition to testing and adjusting, before a new space-conditioning system serving a building or space is operated for normal use, the system shall be balanced in accordance with the procedures defined by the Testing Adjusting and Balancing Bureau National Standards; the National Environmental Balancing Bureau Procedural Standards; Associated Air Balance Council National Standards or as approved by the enforcing agency.

Y | N/A | RESPON. PARTY

5.410.4.4 Reporting. After completion of testing, adjusting and balancing, provide a final report of testing signed by the individual responsible for performing these services.

5.410.4.5 Operation and maintenance (O & M) manual. Provide the building owner or representative with detailed operating and maintenance instructions and copies of guaranties/warranties for each system. O & M instructions shall be consistent with OSHA requirements in CCR, Title 8, Section 5142, and other related regulations.

5.410.4.5.1 Inspections and reports. Include a copy of all inspection verifications and reports required by the enforcing agency.

DIVISION 5.5 ENVIRONMENTAL QUALITY

SECTION 5.501 GENERAL

5.501.1 SCOPE. The provisions of this chapter shall outline means of reducing the quantity of air contaminants that are odorous, irritating, and/or harmful to the comfort and well-being of a building's installers, occupants and neighbors.

SECTION 5.502 DEFINITIONS

5.502.1 DEFINITIONS. The following terms are defined in Chapter 2 *(and are included here for reference)*

ARTERIAL HIGHWAY. A general term denoting a highway primarily for through traffic usually on a continuous route.

A-WEIGHTED SOUND LEVEL (dBA). The sound pressure level in decibels as measured on a sound level meter using the internationally standardized A-weighting filter or as computed from sound spectral data to which A-weighting adjustments have been made.

1 BTU/HOUR. British thermal units per hour, also referred to as Btu, The amount of heat required to raise one pound of water one degree Fahrenheit per hour, a common measure of heat transfer rate. A ton of refrigeration is 12,000 Btu, the amount of heat required to melt a ton (2,000 pounds) of ice at 32^{0} Fahrenheit.

COMMUNITY NOISE EQUIVALENT LEVEL (CNEL). A metric similar to the day-night average sound level (Ldn), except that a 5 decibel adjustment is added to the equivalent continuous sound exposure level for evening hours (7pm to 10pm) in addition to the 10 dB nighttime adjustment used in the Ldn.

COMPOSITE WOOD PRODUCTS. Composite wood products include hardwood plywood, particleboard and medium density fiberboard. "Composite wood products" does not include hardboard, structural plywood, structural panels, structural composite lumber, oriented strand board, glued laminated timber, timber, prefabricated wood I–joists or finger–jointed lumber, all as specified in California Code of Regulations (CCR), Title 17, Section 93120.1(a).

Note: See CCR, Title 17, Section 93120.1.

DAY-NIGHT AVERAGE SOUND LEVEL (Ldn). The A-weighted equivalent continuous sound exposure level for a 24-hour period with a 10 dB adjustment added to sound levels occurring during nighttime hours (10p.m. to 7 a.m.).

DECIBEL (db). A measure on a logarithmic scale of the magnitude of a particular quantity (such as sound pressure, sound power, sound intensity) with respect to a reference quantity.

ELECTRIC VEHICLE (EV). An automotive-type vehicle for on-road use, such as passenger automobiles, buses, trucks, vans, neighborhood electric vehicles, electric motorcycles, and the like, primarily powered by an electric motor that draws current from a rechargeable storage battery, fuel cell, photovoltaic array, or other source of electric current. Plug-in hybrid electric vehicles (PHEV) are considered electric vehicles. For purposes of the *California Electrical Code*, off-road, self-propelled electric vehicles, such as industrial trucks, hoists, lifts, transports, golf carts, airline ground support equipment, tractors, boats, and the like, are not included.

ELECTRIC VEHICLE CHARGING STATION(S) (EVCS). One or more spaces intended for charging electric vehicles.

ELECTRIC VEHICLE SUPPLY EQUIPMENT (EVSE). The conductors, including the ungrounded, grounded, and equipment grounding conductors and the electric vehicle connectors, attachment plugs, and all other fittings, devices, power outlets, or apparatus installed specifically for the purpose of transferring energy between the premises wiring and the electric vehicle.

ENERGY EQUIVALENT (NOISE) LEVEL (Leq). The level of a steady noise which would have the same energy as the fluctuating noise level integrated over the time of period of interest.

EXPRESSWAY. An arterial highway for through traffic which may have partial control of access, but which may or may not be divided or have grade separations at intersections.

FREEWAY. A divided arterial highway with full control of access and with grade separations at intersections.

GLOBAL WARMING POTENTIAL (GWP). The radiative forcing impact of one mass-based unit of a given greenhouse gas relative to an equivalent unit of carbon dioxide over a given period of time. Carbon dioxide is the reference compound with a GWP of one.

GLOBAL WARMING POTENTIAL VALUE (GWP VALUE). A 100-year GWP value published by the Intergovernmental Panel on Climate Change (IPCC) in either its Second Assessment Report (SAR) (IPCC, 1995); or its Fourth Assessment A-3 Report (AR4) (IPCC, 2007). The SAR GWP values are found in column "SAR (100-yr)" of Table 2.14.; the AR4 GWP values are found in column "100 yr" of Table 2.14.

HIGH-GWP REFRIGERANT. A compound used as a heat transfer fluid or gas that is: (a) a chlorofluorocarbon, a hdrochlorofluorocarbon, a hydrofluorocarbon, a perfluorocarbon, or any compound or blend of compounds, with a GWP value equal to or greater than 150, or (B) any ozone depleting substance as defined in Title 40 of the Code of Federal Regulations, Part 82, sec.82.3 (as amended March 10, 2009).

LONG RADIUS ELBOW. Pipe fitting installed between two lengths of pipe or tubing to allow a change of direction, with a radius 1.5 times the pipe diameter.

LOW-GWP REFRIGERANT. A compound used as a heat transfer fluid or gas that: (A) has a GWP value less than 150, and (B) is not an ozone depleting substance as defined in Title 40 of the Code of Federal Regulations, Part 82, sec.82.3 (as amended March 10, 2009).

MERV. Filter minimum efficiency reporting value, based on ASHRAE 52.2–1999.

MAXIMUM INCREMENTAL REACTIVITY (MIR). The maximum change in weight of ozone formed by adding a compound to the "Base REactive Organic Gas (ROG) Mixture" per weight of compound added, expressed to hundreths of a gram (g O^{3}/g ROC).

PRODUCT-WEIGHTED MIR (PWMIR). The sum of all weighted-MIR for all ingredients in a product subject to this article. The PWMIR is the total product reactivity expressed to hundredths of a gram of ozone formed per gram of product (excluding container and packaging).

PSIG. Pounds per square inch, guage.

REACTIVE ORGANIC COMPOUND (ROC). Any compound that has the potential, once emitted, to contribute to ozone formation in the troposphere.

SCHRADER ACCESS VALVES. Access fittings with a valve core installed.

SHORT RADIUS ELBOW. Pipe fitting installed between two lengths of pipe or tubing to allow a change of direction, with a radius 1.0 times the pipe diameter.

SUPERMARKET. For the purposes of Section 5.508.2, a supermarket is any retail food facility with 8,000 square feet or more conditioned area, and that utilizes either refrigerated display cases, or walk-in coolers or freezers connected to remote compressor units or condensing units.

VOC. A volatile organic compound broadly defined as a chemical compound based on carbon chains or rings with vapor pressures greater than 0.1 millimeters of mercury at room temperature. These compounds typically contain hydrogen and may contain oxygen, nitrogen and other elements. See CCR Title 17, Section 94508(a)

Note: Where specific regulations are cited from different agencies such as SCAQMD, ARB, etc., the VOC definition included in that specific regulation is the one that prevails for the specific measure in question.

SECTION 5.503 FIREPLACES

5.503.1 FIREPLACES. Install only a direct-vent sealed-combustion gas or sealed wood-burning fireplace, or a sealed woodstove or pellet stove, and refer to residential requirements in the California Energy Code, Title 24, Part 6, Subchapter 7, Section 150. Woodstoves, pellet stoves and fireplaces shall comply with applicable local ordinances.

5.503.1.1 Woodstoves. Woodstoves and pellet stoves shall comply with U.S. EPA New Source Performance Standards (NSPS) emission limits as applicable, and shall have a permanent label indicating they are certified to meet the emission limits.

SECTION 5.504 POLLUTANT CONTROL

5.504.1 TEMPORARY VENTILATION. The permanent HVAC system shall only be used during construction if necessary to condition the building or areas of addition or alteration within the required temperature range for material and equipment installation. If the HVAC system is used during construction, use return air filters with a Minimum Efficiency Reporting Value (MERV) of 8, based on ASHRAE 52.2-1999, or an average efficiency of 30% based on ASHRAE 52.1-1992 Replace all filters immediately prior to occupancy, or, if the building is occupied during alteration, at the conclusion of construction.

5.504.3 Covering of duct openings and protection of mechanical equipment during construction. At the time of rough installation and during storage on the construction site until final startup of the heating, cooling and ventilation equipment, all duct and other related air distribution component openings shall be covered with tape, plastic, sheetmetal or other methods acceptable to the enforcing agency to reduce the amount of dust, water and debris which may enter the system.

5.504.4 FINISH MATERIAL POLLUTANT CONTROL. Finish materials shall comply with Sections 5.504.4.1 through 5.504.4.6.

5.504.4.1 Adhesives, sealants and caulks. Adhesives, sealants, and caulks used on the project shall meet the requirements of the following standards:

1. Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride, methylene chloride, perchloroethylene and trichloroethylene), except for aerosol products as specified in subsection 2, below.

2. Aerosol adhesives, and smaller unit sizes of adhesives, and sealant or caulking compounds (in units of product, less packaging, which do not weigh more than one pound and do not consist of more than 16 fluid ounces) shall comply with statewide VOC standards and other requirements, including prohibitions on use of certain toxic compounds, of *California Code of Regulations*, Title 17, commencing with Section 94507.

TABLE 5.504.4.1 - ADHESIVE VOC LIMIT[1,2]

Less Water and Less Exempt Compounds in Grams per Liter

ARCHITECTURAL APPLICATIONS	CURRENT VOC LIMIT
INDOOR CARPET ADHESIVES	50
CARPET PAD ADHESIVES	50
OUTDOOR CARPET ADHESIVES	150
WOOD FLOORING ADHESIVES	100
RUBBER FLOOR ADHESIVES	60
SUBFLOOR ADHESIVES	50
CERAMIC TILE ADHESIVES	65
VCT & ASPHALT TILE ADHESIVES	50
DRYWALL & PANEL ADHESIVES	50
COVE BASE ADHESIVES	50
MULTIPURPOSE CONSTRUCTION ADHESIVES	70
STRUCTURAL GLAZING ADHESIVES	100
SINGLE-PLY ROOF MEMBRANE ADHESIVES	250
OTHER ADHESIVES NOT SPECIFICALLY LISTED	50
SPECIALTY APPLICATIONS	
PVC WELDING	510
CPVC WELDING	490
ABS WELDING	325
PLASTIC CEMENT WELDING	250
ADHESIVE PRIMER FOR PLASTIC	550
CONTACT ADHESIVE	80
SPECIAL PURPOSE CONTACT ADHESIVE	250
STRUCTURAL WOOD MEMBER ADHESIVE	140
TOP & TRIM ADHESIVE	250
SUBSTRATE SPECIFIC APPLICATIONS	
METAL TO METAL	30
PLASTIC FOAMS	50
POROUS MATERIAL (EXCEPT WOOD)	50
WOOD	30
FIBERGLASS	80

1. IF AN ADHESIVE IS USED TO BOND DISSIMILAR SUBSTRATES TOGETHER, THE ADHESIVE WITH THE HIGHEST VOC CONTENT SHALL BE ALLOWED.

2. FOR ADDITIONAL INFORMATION REGARDING METHODS TO MEASURE THE VOC CONTENT SPECIFIED IN THIS TABLE, SEE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT RULE 1168, www.arb.ca.gov/DRDB/SC/CURHTML/R1168.PDF

NOTE: FOR ADDITIONAL INFORMATION REGARDING METHODS TO MEASURE THE VOC CONTENT SPECIFIED IN THESE TABLES, SEE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT RULE 1168.

5.504.4.3 Paints and coatings. Architectural paints and coatings shall comply with VOC limits in Table 1 of the ARB Architectural Coatings Suggested Control Measure, as shown in Table 5.504.4.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Table 5.504.4.3 shall be determined by classifying the coating as a Flat, Nonflat or Nonflat-High Gloss coating, based on its gloss, as defined in Subsections 4.21, 4.36 and 4.37 of the 2007 California Air Resources Board Suggested Control Measure, and the corresponding Flat, Nonflat or Nonflat-High Gloss VOC limit in Table 5.504.4.3 shall apply.

5.504.4.3.1 Aerosol Paints and coatings. Aerosol paints and coatings shall meet the PWMIR Limits for ROC in Section 94522(a)(3) and other requirements, including prohibitions on use of certain toxic compounds and ozone depleting substances, in Sections 94522(c)(2) and (d)(2) of *California Code of Regulations*, Title 17, commencing with Section 94520; and in areas under the jurisdiction of the Bay Area Air Quality Management District additionally comply with the percent VOC by weight of product limits of Regulation 8 Rule 49.

ZINC-RICH PRIMERS	340

1. GRAMS OF VOC PER LITER OF COATING, INCLUDING WATER & EXEMPT COMPOUNDS

2. THE SPECIFIED LIMITS REMAIN IN EFFECT UNLESS REVISED LIMITS ARE LISTED IN SUBSEQUENT COLUMNS IN THE TABLE.

3. VALUES IN THIS TABLE ARE DERIVED FROM THOSE SPECIFIED BY THE CALIFORNIA AIR RESOURCES BOARD, ARCHITECTURAL COATINGS SUGGESTED CONTROL MEASURE, FEB. 1, 2008. MORE INFORMATION IS AVAILABLE FROM THE AIR RESOURCES BOARD.

5.504.4.3.2 Verification. Verification of compliance with this section shall be provided at the request of the enforcing agency. Documentation may include, but is not limited to, the following:

1. Manufacturer's product specification
2. Field verification of on-site product containers

5.504.4.4 Carpet Systems. All carpet installed in the building interior shall meet at least one of the testing and product requirements:

1. Carpet and Rug Institute's Green Label Plus Program.
2. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, Version 1.1, February 2010 (also known as CDPH Standard Method V1.1 or Specification 01350).
3. NSF/ANSI 140 at the Gold level or higher;
4. Scientific Certifications Systems Sustainable Choice; or
5. Compliant with the Collaborative for High Performance Schools California (2014 CA-CHPS) Criteria listed in the CHPS High Performance Product Database.

5.504.4.4.1 Carpet cushion. All carpet cushion installed in the building interior shall meet the requirements of the Carpet and Rug Institute Green Label program.

5.504.4.4.2 Carpet adhesive. All carpet adhesive shall meet the requirements of Table 5.504.4.1.

5.504.4.5 Composite wood products. Hardwood plywood, particleboard and medium density fiberboard composite wood products used on the interior or exterior of the buildings shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.). Those materials not exempted under the ATCM must meet the specified emission limits, as shown in Table 5.504.4.5.

5.504.4.5.3 Documentation. Verification of compliance with this section shall be provided as requested by the enforcing agency. Documentation shall include at least one of the following:

1. Product certifications and specifications.
2. Chain of custody certifications.
3. Product labeled and invoiced as meeting the Composite Wood Products regulation (see CCR, Title 17, Section 93120, et seq.).
4. Exterior grade products marked as meeting the PS-1 or PS-2 standards of the Engineered Wood Association, the Australian AS/NZS 2269 or European 636 3S standards.
5. Other methods acceptable to the enforcing agency.

Y | N/A | RESPON. PARTY

TABLE 5.504.4.5 - FORMALDEHYDE LIMITS[1]

MAXIMUM FORMALDEHYDE EMISSIONS IN PARTS PER MILLION

PRODUCT	CURRENT LIMIT
HARDWOOD PLYWOOD VENEER CORE	0.05
HARDWOOD PLYWOOD COMPOSITE CORE	0.05
PARTICLE BOARD	0.09
MEDIUM DENSITY FIBERBOARD	0.11
THIN MEDIUM DENSITY FIBERBOARD[2]	0.13

1. VALUES IN THIS TABLE ARE DERIVED FROM THOSE SPECIFIED BY THE CALIFORNIA AIR RESOURCES BOARD, AIR TOXICS CONTROL MEASURE FOR COMPOSITE WOOD AS TESTED IN ACCORDANCE WITH ASTM E 1333. FOR ADDITIONAL INFORMATION, SEE CALIFORNIA CODE OF REGULATIONS, TITLE 17, SECTIONS 93120 THROUGH 93120.12.

2. THIN MEDIUM DENSITY FIBERBOARD HAS A MAXIMUM THICKNESS OF 5/16 INCHES (8 MM).

5.504.4.6 Resilient flooring systems. For 80 percent of floor area receiving resilient flooring, installed resilient flooring shall meet at least one of the following:

1. Certified under the Resilient Floor Covering Institute (RFCI) FloorScore program;
2. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health's 2010 Standard Method for the Testing and Evaluation Chambers, Version 1.1, February 2010;
3. Compliant with the Collaborative for High Performance Schools California (2014 CA-CHPS) Criteria and listed in the CHPS High Performance Product Database; or
4. Products certified under UL GREENGUARD Gold (formerly the Greenguard Children's & Schools Program).

5.504.4.6.1 Verification of compliance. Documentation shall be provided verifying that resilient flooring materials meet the pollutant emission limits.

5.504.5.3 Filters. In mechanically ventilated buildings, provide regularly occupied areas of the building with air filtration media for outside and return air that provides at least a Minimum Efficiency Reporting Value (MERV) of 13. MERV 13 filters shall be installed prior to occupancy, and recommendations for maintenance with filters of the same value shall be included in the operation and maintenance manual.

Exceptions: Existing mechanical equipment.

5.504.5.3.1 Labeling. Installed filters shall be clearly labeled by the manufacturer indicating the MERV rating.

5.504.7 ENVIRONMENTAL TOBACCO SMOKE (ETS) CONTROL. Where outdoor areas are provided for smoking, prohibit smoking within 25 feet of building entries, outdoor air intakes and operable windows and within the building as already prohibited by other laws or regulations; or as enforced by ordinances, regulations or policies of any city, county, city and county, California Community College, campus of the California State University, or campus of the University of California, whichever are more stringent. When ordinances, regulations or policies are not in place, post signage to inform building occupants of the prohibitions.

SECTION 5.505 INDOOR MOISTURE CONTROL

5.505.1 INDOOR MOISTURE CONTROL. Buildings shall meet or exceed the provisions of California Building Code, CCR, Title 24, Part 2, Sections 1202 (Ventilation) and Chapter 14 (Exterior Walls). For additional measures, see Section 5.407.2 of this code.

SECTION 5.506 INDOOR AIR QUALITY

5.506.1 OUTSIDE AIR DELIVERY. For mechanically or naturally ventilated spaces in buildings, meet the minimum requirements of Section 120.1 (Requirements For Ventilation) of the *California Energy Code*, or the applicable local code, whichever is more stringent, and Division 1, Chapter 4 of CCR, Title 8.

5.506.2 CARBON DIOXIDE (CO_2) MONITORING. For buildings or additions equipped with demand control ventilation, CO_2 sensors and ventilation controls shall be specified and installed in accordance with the requirements of the California Energy Code, Section 120(c)(4).

SECTION 5.507 ENVIRONMENTAL COMFORT

5.507.4 ACOUSTICAL CONTROL. Employ building assemblies and components with Sound Transmission Class (STC) values determined in accordance with ASTM E 90 and ASTM E 413, or Outdoor-Indoor Sound Transmission Class (OITC) determined in accordance with ASTM E 1332, using either the prescriptive or performance method in Section 5.507.4.1 or 5.507.4.2.

Exception: Buildings with few or no occupants or where occupants are not likely to be affected by exterior noise, as determined by the enforcement authority, such as factories, stadiums, storage, enclosed parking structures and utility buildings.

Exception: [DSA-SS] For public schools and community colleges, the requirements of this section and all subsections apply only to new construction.

5.507.4.1 Exterior noise transmission, prescriptive method. Wall and roof-ceiling assemblies exposed to the noise source making up the building or addition envelope or altered envelope shall meet a composite STC rating of at least 50 or a composite OITC rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30 in the following locations:

1. Within the 65 CNEL noise contour of an airport.

   Exceptions:

   1. L_{dn} or CNEL for military airports shall be determined by the facility Air Installation Compatible Land Use Zone (AICUZ) plan.
   2. L_{dn} or CNEL for other airports and heliports for which a land use plan has not been developed shall be determined by the local general plan noise element.

2. Within the 65 CNEL or L_{dn} noise contour of a freeway or expressway, railroad, industrial source or fixed-guideway source as determined by the Noise Element of the General Plan.

5.507.4.1.1. Noise exposure where noise contours are not readily available. Buildings exposed to a noise level of 65 dB L_{eq} 1-hr during any hour of operation shall have building, addition or alteration exterior wall and roof-ceiling assemblies exposed to the noise source meeting a composite STC rating of at least 45 (or OITC 35), with exterior windows of a minimum STC of 40 (or OITC 30).

5.507.4.2 Performance Method. For buildings located as defined in Section 5.507.4.1 or 5.507.4.1.1, wall and roof-ceiling assemblies exposed to the noise source making up the building or addition envelope or altered envelope shall be constructed to provide an interior noise environment attributable to exterior sources that does not exceed an hourly equivalent noise level (Leq-1Hr) of 50 dBA in occupied areas during any hour of operation.

5.507.4.2.1 Site Features. Exterior features such as sound walls or earth berms may be utilized as appropriate to the building, addition or alteration project to mitigate sound migration to the interior.

5.507.4.2.2 Documentation of Compliance. An acoustical analysis documenting complying interior soundlevels shall be prepared by personnel approved by the architect or engineer of record.

5.507.4.3 Interior sound transmission. Wall and floor-ceiling assemblies separating tenant spaces and tenant spaces and public places shall have an STC of at least 40.

Note: Examples of assemblies and their various STC ratings may be found at the California Office of Noise Control: www.toolbase.org/PDF/CaseStudies/stc_icc_ratings.pdf.

SECTION 5.508 OUTDOOR AIR QUALITY

5.508.1 Ozone depletion and greenhouse gas reductions. Installations of HVAC, refrigeration and fire suppression equipment shall comply with Sections 5.508.1.1 and 5.508.1.2.

5.508.1.1 Chlorofluorocarbons (CFCs). Install HVAC, refrigeration and fire suppression equipment that do not contain CFCs.

5.508.1.2 Halons. Install HVAC, refrigeration and fire suppression equipment that do not contain Halons.

5.508.2 Supermarket refrigerant leak reduction. New commercial refrigeration systems shall comply with the provisions of this section when installed in retail food stores 8,000 square feet or more conditioned area, and that utilize either refrigerated display cases, or walk-in coolers or freezers connected to remote compressor units or condensing units. The leak reduction measures apply to refrigeration systems containing high-global-warming potential (high-GWP) refrigerants with a GWP of 150 or greater. New refrigeration systems include both new facilities and the replacement of existing refrigeration systems in existing facilities.

Exception: Refrigeration systems containing low-global warming potential (low-GWP) refrigerant with a GWP value less than 150 are not subject to this section. Low-GWP refrigerants are nonozone-depleting refrigerants that include ammonia, carbon dioxide (CO_2), and potentially other refrigerants.

Y | N/A | RESPON. PARTY

5.508.2.1 Refrigerant piping. Piping compliant with the California Mechanical Code shall be installed to be accessible for leak protection and repairs. Piping runs using threaded pipe, copper tubing with an outside diameter (OD) less than 1/4 inch, flared tubing connections and short radius elbows shall not be used in refrigerant systems except as noted below.

5.508.2.1.1 Threaded pipe. Threaded connections are permitted at the compressor rack.

5.508.2.1.2 Copper pipe. Copper tubing with an OD less than 1/4 inch may be used in systems with a refrigerant charge of 5 pounds or less.

5.508.2.1.2.1 Anchorage. One-fouth-inch OD tubing shall be securely clamped to a rigid base to keep vibration levels below 8 mils.

5.508.2.1.3 Flared tubing connections. Double-flared tubing connections may be used for pressure controls, valve pilot lines and oil.

Exception: Single-flared tubing connections may be used with a multiring seal coated with industrial sealant suitable for use with refrigerants and tightened in accordance with manufacturer's recommendations.

5.508.2.1.4 Elbows. Short radius elbows are only permitted where space limitations prohibit use of long radius elbows.

5.508.2.2 Valves. Valves Valves and fittings shall comply with the *California Mechanical Code* and as follows.

5.508.2.2.1 Pressure relief valves. For vessels containing high-GWP refrigerant, a rupture disc shall be installed between the outlet of the vessel and the inlet of the pressure relief valve.

5.508.2.2.1.1 Pressure detection. A pressure gauge, pressure transducer or other device shall be installed in the space between the rupture disc and the relief valve inlet to indicate a disc rupture or discharge of the relief valve.

5.508.2.2.2 Access valves. Only Schrader access valves with a brass or steel body are permitted for use.

5.508.2.2.2.1 Valve caps. For systems with a refrigerant charge of 5 pounds or more, valve caps shall be brass or steel and not plastic.

5.508.2.2.2.2 Seal caps. If designed for it, the cap shall have a neoprene O-ring in place.

5.508.2.2.2.2.1 Chain tethers. Chain tethers to fit ovr the stem are required for valves designed to have seal caps.

Exception: Valves with seal caps that are not removed from the valve during stem operation.

5.508.2.3 Refrigerated service cases. Refrigerated service cases holding food products containing vinegar and salt shall have evaporator coils of corrosion-resistant material, such as stainless steel; or be coated to prevent corrosion from these substances.

5.508.2.3.1 Coil coating. Consideration shall be given to the heat transfer efficiency of coil coating to maximize energy efficiency.

5.508.2.4 Refrigerant receivers. Refrigerant receivers with capacities greater than 200 pounds shall be fitted with a device tha indicates the level of refrigerant in the receiver.

5.508.2.5 Pressure testing. The system shall be pressure tested during installation prior to evacuation and charging.

5.508.2.5.1 Minimum pressure. The system shall be charged with regulated dry nitrogen and appropriate tracer gas to bring system pressure up to 300 psig minimum.

5.508.2.5.2 Leaks. Check the system for leaks, repair any leaks, and retest for pressure using the same gauge.

5.508.2.5.3 Allowable pressure change. The system shall stand, unaltered, for 24 hours with no more than a +/- one pound pressure change from 300 psig, measured with the same gauge.

5.508.2.6 Evacuation. The system shall be evacuated after pressure testing and prior to charging.

5.508.2.6.1 First vacuum. Pull a system vacuum down to at least 1000 microns (+/- 50 microns), and hold for 30 minutes.

5.508.2.6.2 Second vacuum. Pull a second system vacuum to a minimum of 500 microns and hold for 30 minutes.

5.508.2.6.3 Third vacuum. Pull a third vacuum down to a minimum of 300 microns, and hold for 24 hours with a maximum drift of 100 microns over a 24-hour period.

CHAPTER 7
INSTALLER & SPECIAL INSPECTOR QUALIFICATIONS

702 QUALIFICATIONS

702.1 INSTALLER TRAINING. HVAC system installers shall be trained and certified in the proper installation of HVAC systems including ducts and equipment by a nationally or regionally recognized training or certification program. Uncertified persons may perform HVAC installations when under the direct supervision and responsibility of a person trained and certified to install HVAC systems or contractor licensed to install HVAC systems. Examples of acceptable HVAC training and certification programs include but are not limited to the following:

1. State certified apprenticeship programs.
2. Public utility training programs.
3. Training programs sponsored by trade, labor or statewide energy consulting or verification organizations.
4. Programs sponsored by manufacturing organizations.
5. Other programs acceptable to the enforcing agency.

702.2 SPECIAL INSPECTION [HCD]. When required by the enforcing agency, the owner or the responsible entity acting as the owner's agent shall employ one or more special inspectors to provide inspection or other duties necessary to substantiate compliance with this code. Special inspectors shall demonstrate competence to the satisfaction of the enforcing agency for the particular type of inspection or task to be performed. In addition to other certifications or qualifications acceptable to the enforcing agency, the following certifications or education may be considered by the enforcing agency when evaluating the qualifications of a special inspector:

1. Certification by a national or regional green building program or standard publisher.
2. Certification by a statewide energy consulting or verification organization, such as HERS raters, building performance contractors, and home energy auditors.
3. Successful completion of a third party apprentice training program in the appropriate trade.
4. Other programs acceptable to the enforcing agency.

Notes:

1. Special inspectors shall be independent entities with no financial interest in the materials or the project they are inspecting for compliance with this code.
2. HERS raters are special inspectors certified by the California Energy Commission (CEC) to rate homes in California according to the Home Energy Rating System (HERS).

[BSC-CG] When required by the enforcing agency, the owner or the responsible entity acting as the owner's agent shall employ one or more special inspectors to provide inspection or other duties necessary to substantiate compliance with this code. Special inspectors shall demonstrate competence to the satisfaction of the enforcing agency for the particular type of inspection or task to be performed. In addition, the special inspector shall have a certification from a recognized state, national or international association, as determined by the local agency. The area of certification shall be closely related to the primary job function, as determined by the local agency.

Note: Special inspectors shall be independent entities with no financial interest in the materials or the project they are inspecting for compliance with this code.

703 VERIFICATIONS

703.1 DOCUMENTATION. Documentation used to show compliance with this code shall include but is not limited to, construction documents, plans, specifications, builder or installer certification, inspection reports, or other methods acceptable to the enforcing agency which demonstrate substantial conformance. When specific documentation or special inspection is necessary to verify compliance, that method of compliance will be specified in the appropriate section or identified applicable checklist.

SCALE: 3/8" = 1'-0"

GENERAL REQUIREMENTS:

1. PROVIDE SITE WITH EXTERIOR ACCESSIBLE ROUTES OF TRAVEL PER CBC 11B-206:
   - 1.1. TO BLDG. ENTRANCES & EXITS
   - 1.2. BETWEEN BLDG'S ON THE SAME SITE
   - 1.3. FROM PUBLIC TRANSPORTATION STOPS, ACCESSIBLE PARKING & LOADING ZONES, PUBLIC STREETS & SIDEWALKS TO THE ACCESSIBLE ENTRANCES THEY SERVE.
   - 1.4. ALL ROUTES OF TRAVEL SHALL BE ACCESSIBLE.
2. EXTERIOR ROUTES OF TRAVEL SHALL HAVE A CLEAR WIDTH OF 36", EXCEPT AT DOORS COMPLYING WITH SEC. 11B-404.2.3 & 11B-404.2.4 OR OBSTRUCTIONS COMPLYING WITH SEC. 11B-307.
3. IF A PERSON IN A WHEEL CHAIR HAS TO TURN AROUND AN OBSTRUCTION THE MINIMUM CLEAR WIDTH OF 32" FOR 24" MAX. TRAVEL DISTANCE - SEE 5/ADA.2.
4. EACH ACCESSIBLE PARKING STALL SHALL CONFORM WITH 11B-502:
   - 4.1. LABLE 1:6 ACCESSIBLE STALLS "VAN ACCESSIBLE" PER CBC 11B-502.2
   - 4.2. LOADING & UNLOADING AISLE SHALL BE MARKED WITH BLUE BORDER & CROSS HATCHED AT 36" O.C. IN WHITE - SEE DETAIL 1/ADA.1
5. PROVIDE SIGNS & SURFACE MARKINGS PER SEC. 11B-502.6 - SEE 1/ADA.1
   - 5.1. SURFACE MARKING SHALL BE PER CBC 11B-502.6.6 - SEE 9/ADA.1

GENERAL REQUIREMENTS - CONTINUED

6. WALKS & SIDEWALKS IN EXTERIOR ROUTES OF TRAVEL SHALL HAVE AN UNINTERRUPTED SURFACE WITHOUT STEPS OR GRADE CHANGES EXCEEDING 1/2" & MEASURE 48" MINIMUM IN WIDTH. THE CROSS-SLOPE SHALL BE 2% MAXIMUM (1/4" IN 12") & SHALL HAVE A SLIP RESISTANT SURFACE.
7. WHERE A WALK CROSSES A VEHICULAR WAY, OR ADJOINS IT WITHOUT INTERVENING CURBS, RAILS, OR OTHER ELEMENTS, PROVIDE DETECTABLE WARNING STRIP 36" WIDE MINIMUM WITH ALL FEATURES DESCRIBED IN CBC 11B-705.1.1. SEE SITE PLAN FOR LOCATION.
8. ALL EXTERIOR ENTRANCES SHALL BE ACCESSIBLE PER CBC 11B-206.4.1.
9. ALL DOORS WITH CLOSERS SHALL BE ADJUSTABLE SO THAT OPENING EFFORT DOES NOT EXCEED 5 LBS., OR 15 LBS. FOR FIRE DOORS.
10. ALL SANITARY FACILITIES SHALL BE ACCESSIBLE & A WILL BE UNISEX.
11. ALL SANITARY FACILITIES SHALL BE ALL-GENDER WITH APPROPRIATE SIGNAGE.
12. ALL FIXTURES SHALL CLEAR USE AREAS APPROPRIATE FOR WHEEL CHAIR USE- SEE 12/ADA.2.
13. CUSTOMER SERVICE COUNTERS SHALL AT A MINIMUM HAVE A 36" WIDE FINISHED SURFACE THAT MEASURES +34" ABOVE FINISHED FLOOR MAXIMUM.
14. -

- The site is currently accessed by two existing driveways along the north property line (east and west), which will be reconfigured to allow public access via the northwest driveway, while the southern driveway and northeast driveway will be utilized for service and delivery vehicles (no public access). The Southern driveway will be constructed to County of Mendocino's Transportation Department standards, as it is located within the County's jurisdiction.
- The existing manmade berm (comprising fill) on the east side will be removed and the site will graded to encourage draining to bioswales and a stormwater retention and rain garden area in the northeast corner of the property.

The following Conditions of Approval shall be made a permanent part of the Major Use Permit/Site Development Permit, shall remain in force regardless of property ownership, and shall be implemented in order for this entitlement to remain valid.

City of Ukiah Standard Conditions

1. This approval is not effective until the 10-day appeal period applicable to this Site Development Permit has expired without the filing of a timely appeal. If a timely appeal is filed, the project is subject to the outcome of the appeal and shall be revised as necessary to comply with any modifications, conditions, or requirements that were imposed as part of the appeal.
2. All Conditions of Approval shall be printed on all sets of building permit project plans pertaining to any site preparation work or construction associated with the development of the project and ancillary site improvements approved by the Site Development Permit.
3. All use, construction and the location thereof, or occupancy, shall conform to the application and to any supporting documents submitted therewith, including any maps, sketches, or plot plans accompanying the application or submitted by applicant in support thereof.
4. Any construction shall comply with the "Standard Specifications" for such type of construction now existing or which may hereafter be promulgated by the Engineering Department of the City of Ukiah, except where higher standards are imposed by law, rule, or regulation or by action of the Planning Commission such standards shall be met.
5. Building permits shall be issued within two years after the effective date of the Site Development Permit or same shall be null and void.
6. In addition to any particular condition which might be imposed, any construction shall comply with all building, fire, electric, plumbing, occupancy, and structural laws, rules, regulations, and ordinances in effect at the time the Building Permit is approved and issued.
7. The Applicant shall obtain all required Sign Permits, in compliance with Division 3, Chapter 7, Signs, of the UCC.
8. The Applicant shall submit a Landscape Plan for approval prior to Building Permit issuance.
9. The Applicant shall submit verification of all applicable permits or approvals in compliance with all local, state and federal laws to the Community Development Department prior to issuance of building permits.

Ukiah Valley Fire Authority Conditions

10. A1 warehouse designated rooms shall have One Class 2-A rated fire extinguisher mounted in close proximity to the main exit / entrance to the warehouse / room. Fire Marshall can assist with

FINAL CONDITIONS OF APPROVAL FOR A MAJOR USE PERMIT/SITE DEVELOPMENT TO ALLOW RENOVATION OF AN 15,600 SF TOTAL (±14,000 SF GROUND FOOTPRINT) STRUCTURE, AS WELL AS GRADING AND SEVERAL SITE IMPROVEMENTS TO HOUSE THE CITY'S ELECTRIC UTILITY DEPARTMENT ADMINISTRATIVE OPERATIONS, ADMINISTRATION, CONSTRUCTION, AND TECHNICAL SERVICES AT 1350 HASTINGS ROAD; APN 180-070-19. FILE NO: 3308-SDP

Approved Project Description. An application was received from architect Lawrence Mitchell on behalf of the City of Ukiah Electric Utility Department for approval of a Major Use Permit/Site Development Permit to allow for the renovation of the property located at 1359 Hastings Road. Electric Utility will relocate its operations, administration, construction, and technical services to this location. The site will support the warehousing and distribution of materials, the servicing of equipment, parking of specialized utility vehicles, and storage of equipment used for construction and maintenance of the utility's distribution system. Offices and conference rooms will house business support services and allow hosting of education training. The project would also comprise the following:

- The building's interior will be remodeled to support the following uses: administrative, engineering, and technical service; staff lockers, lunchroom, restrooms and showers; inventory purchasing, shipping, and receiving; show room, meeting, and training spaces; and, warehousing and storage of materials and equipment.
- The project site will provide parking and storage for at least 40 Electric Utility service vehicles ranging from pickups to service trucks, diggers, bucket trucks, trailers, and a crane.
- Two new open covered parking structures (up to 20 ft high) would be constructed to accommodate service vehicles; one would be 37' x 178' and the other would be 38' x 90'.
- Solar panels will be placed on the roof of the parking structures (see examples in Attachment 3) and also on the existing building's roof.
- Vehicle maintenance will be performed off site at the City Corp Yard on Airport Road.
- Occasionally, equipment deliveries will be received from vans, straight trucks, and semis. The site will also provide area for a weird lot, or open storage, for utility poles, vaults, transformers, miscellaneous hardware, and brass arms.
- Entry to the facility will be controlled by defined path-of-travel and a new covered entryway in the northwest corner of the property.
- For security purposes, an 8-ft tall steel perimeter fence is proposed.
- Security cameras and lighting (down-shielded) will also be installed (see Photometric Plan in Attachment 3).
- The preliminary concept for signage includes a community monument sign for the proposed facility and adjacent neighbors.
- 24 employee parking spaces within a paved area will be provided along the north side of the facility, external to the security fence, including 2 ADA spaces.
- Three customer parking spaces would be provided in the northwest corner of the site, just west of the employee parking area, also outside of the security fence.
- A paved walkway will provide pedestrian access from the parking areas to the facility.
- 22,900 sf of landscaping will be provided along the perimeter of the site and around a proposed fountain and seating area (courtyard) near the entrance of the facility.

I, _____, the Applicant/Owner, acknowledge receipt of the aforementioned attached documents, and have read and do agree to the attached Conditions of Approval.

Name *Date*

5. Sufficient landscaped areas have been reserved for purposes of separating or screening the proposed structure(s) from the street and adjoining building sites, and breaking up and screening large expanses of paved areas.

   The project proposes landscaping on 20% of the lot, in accordance with the Ukiah City Code. Landscaping will be provided along the perimeter of the site, separating the site from the road and other uses.

6. The proposed development will not restrict or cut out light and air on the property, or on the property in the neighborhood; nor will it hinder the development or use of buildings in the neighborhood, or impair the value thereof.

   Security lighting is proposed for the facility and a photometric Plan has been prepared for the project showing that lighting will be down shielded and not substantially spill over onto adjacent properties. The site contains existing development and the project would not cut out light or air on the property or neighborhood, nor would it hinder development or use of buildings within the neighborhood.

7. The improvement of any commercial or industrial structure will not have a substantial detrimental impact on the character or value of an adjacent residential zoning district.

   There are no residentially zoned districts adjacent to the site. In addition, the project was reviewed by the Design Review Board and no design modifications were recommended.

8. The proposed development will not excessively damage or destroy natural features, including trees, shrubs, creeks, and the natural grade of the site.

   The project site consists of a gravel lot with a manmade berm that would be graded to match the natural grade of the site. No significant trees would be removed and the project would not excessively damage natural features.

9. There is sufficient variety, creativity, and articulation to the architecture and design of the structure(s) and grounds to avoid monotony and/or a box-like uninteresting external appearance.

   The project would renovate an existing building and has been designed by a professional architect to add architectural interest and compatibility with the surrounding area. In addition, the project was reviewed by the Design Review Board and no design modifications were recommended.

Based on the above analysis, the findings required for the Major Use Permit/Site Development Permit can be made.

Notice of Public Hearing

Notice of the Public Hearing was provided in the following manner, in accordance with UCC §9202(C):

- Published in the Ukiah Daily Journal on November 17, 2018
- Posted on the Project site on November 16, 2018
- Posted at the Civic Center (glass case) 72 hours prior to the public hearing

b. Portable diesel powered equipment that may be used during the proposed project are required to be registered with the state Portable Equipment Registration Program (PERP) or obtain permits from the District.
c. Projects located adjacent to sensitive receptors (schools, child care facilities, health care facilities, senior facilities, businesses, and residences, etc.) during the construction phase of this project have the potential for exposure to diesel particulate.
d. Heavy duty truck idling and off-road diesel equipment or other diesel engine idling is limited to less than 5 minutes.

37. Grading Projects-During Construction-All grading activities must comply with the following fugitive dust mitigation measures in accordance with District Regulation 1, Rule 1-430:
    a. All visibly dry disturbed soil road surfaces shall be watered to minimize fugitive dust emissions.
    b. All unpaved surfaces, unless otherwise treated with suitable chemicals or oils, shall have a posted speed limit of 10 mph.
    c. Earth or other material that has been transported by trucking or earth moving equipment, erosion by water, or other means onto paved streets shall be promptly removed.
    d. Asphalt, oil, water, or suitable chemicals shall be applied on materials stockpiles, and other surfaces that can give rise airborne dusts.
    e. All earthmoving activities shall cease when sustained winds exceed 15 mph.
    f. The operator shall take reasonable precautions to prevent the entry of unauthorized vehicles onto the site during non-work hours.
    g. The operator shall keep a daily log of activities to control fugitive dust.

38. Property Development-Prior to starting any construction the applicant is required to:
    a. Obtain a Property Development Permit from the District for any open outdoor burning.
    b. Obtain a Large Area Grading Permit, if applicable.
    c. The District recommends that the applicant consider alternate means of disposal other than open burning, such as cutting the majority of the larger material up as firewood, and chipping smaller material, if feasible to mitigate impacts from open outdoor burning.

39. New Commercial Development Mitigation Recommendations:
    a. New Road Construction: The District recommends that all new bare minimum all roads be covered with a sealant or rocked to prevent fugitive dust emissions.
    b. Parking Lot Tree Planting: The District recommends that commercial parking lot tree planting be defined as no less than 1 tree per 4 parking spaces to provide a beneficial reduction in summer heat gain.
    c. Mass Transit: The District recommends that applicant work in conjunction with the local Transit Authority (MTA) to provide a shelter in addition to the concrete pad so that the benefits and incentives to use mass transit would be immediately available.
    d. Electric Vehicle Charging: To further mitigate impacts to local air quality, it is recommended that applicant encourage the use of low emission vehicles by providing a minimum of 2, AC Level 2, electric vehicle charging stations.

ATTACHMENT 1

FINAL FINDINGS TO ADOPT A MAJOR USE PERMIT/SITE DEVELOPMENT TO ALLOW RENOVATION OF AN 15,600 SF TOTAL (±14,000 SF GROUND FOOTPRINT) STRUCTURE, AS WELL AS GRADING AND SEVERAL SITE IMPROVEMENTS TO HOUSE THE CITY'S ELECTRIC UTILITY DEPARTMENT ADMINISTRATIVE OPERATIONS, ADMINISTRATION, CONSTRUCTION, AND TECHNICAL SERVICES AT 1350 HASTINGS ROAD; APN 180-070-19. FILE NO: 3308-SDP

Recommendation for the Approval of the Major Use Permit/Site Development Permit and Findings: The Community Development Department's recommendation for conditional approval of a Major Use Permit/Site Development Permit is based in part on the following findings, in accordance with UCC §9262 and §263.

1. The proposed land use is consistent with the provisions of this Title as well as the goals and policies of the General Plan.

   With approval of the Site Development Permit and Use Permit, the project is consistent with all applicable General Plan and Zoning regulations.

2. The proposed land use is compatible with surrounding land uses and shall not be detrimental to the public's health, safety and general welfare.

   The proposed project is similar to the uses, specifically the industrial/commercial storage yards adjacent to the site. The project would not result in a detrimental effect to the public's health safety and general welfare.

3. The location, size, and intensity of the proposed project will not create a hazardous or inconvenient vehicular or pedestrian traffic pattern.

   The project site is currently served by two driveways located on the north side of the parcel. A driveway on the southern portion of the site driveway will be constructed to County of Mendocino's Department of Transportation requirements, as it is located within the County's jurisdiction. Access through the site for deliveries would be maintained with one-way circulation. The project also proposes pedestrian access from the parking areas to the facility. The project would provide adequate vehicular and pedestrian access that would not create hazardous traffic patterns.

4. The accessibility of off-street parking areas and the relation of parking areas with respect to traffic on adjacent streets will not create a hazardous or inconvenient condition to adjacent or surrounding uses.

   Parking for the proposed project will be located on-site with adequate access to them, in accordance with the Ukiah City Code and Public Works requirements. Parking facilities will not create a hazardous or inconvenient condition to adjacent or surrounding area.

parking areas. If heavy truck traffic is anticipated from the solid waste company, delivery trucks, or other heavy vehicles, the pavement section shall be calculated appropriately to ensure that it can withstand the loading.

24. Applicable Ukiah Valley Sanitation District sewer connection fees shall be paid at the time of building permit issuance.
25. Existing sewer laterals planned to be utilized as part of this project shall be cleaned and tested, and repaired or replaced if required.
26. Capital Improvement fees for water service are based on the water meter size. A fee schedule for water meter sizes is available upon request. Additionally, there is a cost for City crews to construct the water main taps for the proposed water services to serve the project.
27. Irrigation services shall have approved backflow devices.

Building Division Conditions

28. Submit plans and building permit application. Please submit three complete plan sets, two wet stamped and signed.
29. The design and construction of all site alterations shall comply with the 2016 California Building Code, 2016 Plumbing Code, 2016 Electrical Code, 2016 California Mechanical Code, 2016 California Fire Code, 2016 California Energy Code, 2016 Title 24 California Energy Efficiency Standards, 2016 California Green Building Standards Code and City of Ukiah Ordinances and Amendments.
30. Proposed building is in the Zone AE 100-year flood zone, 1612 and appendix G of the 2016 CBC will apply to your project.

Mendocino County Department of Transportation

31. A standard commercial road approach shall be constructed in compliance with County Department of Transportation Standard Nos. A51 B & A51 C, to a minimum width of eighteen (18) feet, with improved approach extending a min num of twenty (20) feet from the edge of the County road, to be paved with asphalt concrete or comparable surfacing to the adjacent road. Concrete driveways shall not be permitted.
32. Sight distance shall be established and maintained in accordance with Mendocino County
33. Department of Transportation Standard No. A53.
34. Any proposed work within County rights-of-way requires obtaining an encroachment permit from the Mendocino County Department of Transportation.

Mendocino County Air Quality Management District Conditions.
The following are standards Best Management Practices and Conditions provided by the Air Quality Management District.

35. The applicant may be required to obtain an Authority to Construct permit from the District prior to beginning construction and demolition.

36. Diesel Engines – Stationary and Portable Equipment and Mobile Vehicles:
    a. Any stationary onsite diesel IC engines 50 horsepower or greater (i.e. large power generators or pumps) or any propane or natural gas engines 250 horsepower or greater may require a permit from the District.

location selection. 6 to 7 extinguishers required for the first floor areas. Can be surface mounted, cabinets are not necessary. T19 567 / 568

11. One additional Class 2-A rated fire extinguisher shall also be located in the 2nd floor office space. T19 567 / 568
12. Suggested Exterior Fire Extinguishers: Four exterior mounted fire extinguishers is recommended. Two on the westerly building and two on the southern building.
13. It appears that there will be security fencing and two gates install ed on the property. A Knox box key box shall be required to be installed on the public side of the main gate to afford for emergency entrance. Key(s) within Knox Box shall be supplied by occupant and shall open all doors. A common Master key is highly recommended. Knox Box application can be attained through the Fire Marshal's office. CFC 506.
14. This building has a fire sprinkler system already installed. It shall be tested by a licensed contractor.
15. Any tenant improvements that require replacement or movement of any sprinkler head locations shall be accomplished by a licensed contractor, to include the submission of sprinkler plans both the correct layout and location and proposed.
16. Exit signs shall be internally or externally illuminated at all times, and connected to an emergency back-up power supply. CFC 1013.3 & 1013.6.3
17. Building address shall be clearly placed on a contrasting background so that it can be easily read from the road or street fronting the building. Placement of the address on a monument sign is acceptable. CFC 505.1
18. Fire alarm systems shall be monitored by an approved supervising station in accordance with this section and NFPA 72. CFC 907.6.5

Department of Public Works Conditions

19. Prior to construction of site improvements, a final grading and drainage plan, and an erosion and sediment control plan, prepared by a Civil Engineer, shall be submitted for review and approval by the Department of Public Works. The plans shall include the detailed design of the proposed storm water best management practices (BMPs). Drainage improvements shall be in compliance with the City of Ukiah's Phase I Storm Water Permit and the Low Impact Development Technical Design Manual (LID Manual). A final Storm Water LID Submittal shall be provided to support the design of the proposed drainage system.
20. The project engineer shall provide direct oversight and inspection during project construction, with special attention to implementation of best management practices for sediment and erosion control, and the proper grading, installation, and landscaping of the stormwater BMPs. Upon completion of the work, a report shall be submitted by the project engineer to the Department of Public Works stating that the improvements have been completed in accordance with the approved plans and conditions of approval, shall function as intended, and all areas have been permanently stabilized to prevent sediment and erosion.
21. Maintenance and inspection of all post-construction best management practices (BMPs) shall be in accordance with the LID Manual.
22. All work within the public right-of-way shall be performed by a licensed and properly insured contractor. The proposed driveway approach on Hastings Road may require encroachment permits from both the City of Ukiah and County of Mendocino.
23. All areas of circulation shall be paved with a minimum of 2" of AC on 6" of Base or other suitable all-weather surface approved by the City Engineer. This includes the proposed driveways and

EMAIL: ukiaharch001@sbcglobal.net

Subject: Approval Letter: Request for review and recommendation for a Major Use Permit/Site Development to allow renovation of an existing 15,600 sf total (±14,000 sf ground footprint) structure, as well as grading and several site improvements to house the City's Electric Utility Department administrative operations, administration, construction, and technical services at 1350 Hastings Road. APN 180-070-19; File No: 3308-SDP.

Dear Mr. Mitchell:

On November 28, 2018, the Planning Commission reviewed your request and recommendation regarding a Major Use Permit/Site Development Permit to allow renovation of an existing 15,600 sf total (±14,000 sf footprint) structure, as well as grading and several site improvements to house the City's Electric Utility Department administrative operations, administration, construction, and technical services at 1350 Hastings Road. At the conclusion of the public hearing, the Planning Commission approved the project subject to the attached Findings and Conditions of Approval.

Please sign and return a copy of this letter (see pg. 4) as acknowledgement of receipt of the attached documents, and as agreement to comply with the Conditions of Approval.

If you have any questions, please feel free to contact me at (707) 463-6207, or mtrace@cityofukiah.com.

Sincerely,

Michelle Trace, Planning Manager

FINE GRADING AND SOIL PREPARATION NOTES

1. Prior to any soil disturbance or grading work in any of the existing planting areas, all planting areas shall be cleaned of weeds and debris, once a week for 3 weeks. Noxious weeds and grasses shall be removed by the roots wherever they are found at any stage of the work. Weeds and debris shall be disposed of off the site.

2. The Landscape Contractor is responsible for fine grading and positive surface drainage in all landscape areas. The Landscape Contractor shall verify all rough grades in the field and bring all discrepancies to the attention of the General Contractor, Landscape Architect and Civil Engineer for a decision before proceeding with the work. Subgrades have been established under other portions of the work by the Civil Engineer. No soil preparation shall be done until rough grades are to within one tenth of an foot of finished grade and rough grades have been approved by the Landscape Architect and Owner. Allow for depth of soil amendments and mulch in determining the difference between finish subgrade in groundcover and shrub beds. Verify that subgrades are not compacted. Do not proceed until condition is corrected.

3. See Civil Engineer's drawings for paving and sidewalk surface elevations, sections, catch basins, and top of curb elevations.

4. Contractors are to exercise extreme care in backfilling and compacting any excavation or trenching in areas previously compacted for other aspects of the work so as to maintain original level of compaction.

5. All debris and unsuitable material generated by construction operations that remain in the landscape areas, along with soil contaminants by cement, paint, plaster, herbicides, or other construction debris shall be removed from the site and replaced with soil at no extra cost to the Owner by the Landscape Contractor . Replacement soil shall be reviewed by the Landscape Architect prior to placement.

6. The Landscape Contractor shall verify that all on-grade areas are marked for planting and are within a tenth of a foot of final grade. The Landscape Contractor shall rip compacted rough graded soil to a depth of 8 inches, then till in the soil amendment program into the upper 6 inch soil layer in both directions. The soil amendment shall be Mango Mulch, Available from Grab n' Grow or equivalent upon written approval of Landscape Architect, applied at a rate of 6 cu. yds. Per 1000 sq. ft.. Contractor is responsible for meeting all exterior finished grades.

7. Review structural soils report for recommendations on soil type, grading procedures, soil compaction, maximum allowable slopes, flatwork base material, etc. Copies of the report are available from the Architect.

8. All planting areas shall provide positive runoff at a minimum 2 percent slope without pockets or low points. Bring any discrepancies to the attention of the Landscape Architect for a decision prior the fine grading.

9. Groundcover areas: Finish grades (top of mulch) shall be 1" below the top of adjacent pavement, curbs, or walls and 2" below headers, unless otherwise specified. Lower headers where required to allow water to flow to drainage structures.

~~10. Turf Areas: Finish grades shall be 1" below the top of adjacent pavement, headers, curbs, or walls, unless otherwise specified. Lower headers where required to allow water to flow to drainage structures.~~

11. Moisture Content: Soil shall not be worked when moisture content is so great that excessive compaction will occur nor when it is so dry that dust will form in air or that clods will not readily break. Water shall be applied, if necessary, to bring soil to an ideal moisture content for tilling and planting.

PLANTING NOTES

1. The description of the planting work includes, but is not limited to the following:

A. Ordering and delivery of the plant materials to site.
B. Soil preparation and conditioning.
C. Fine grading of all landscape areas, including supplying and installing amendments or Imported topsoil as described on the drawing and as recommended by the soils testing report.
D. Coordination of additional drainage work as shown on the drawing.
E. Soil Testing by Landscape Contractor.
F. Installation of plant materials.
G. Ninety (90) day maintenance period.
H. Replacement of all unsatisfactory plant material.
I. Final Approval
J. Warranty

2. The Landscape Contractor shall notify the General Contractor and Landscape Architect of any discrepancy between the Drawings and/or Specifications and actual conditions. No work shall be done in any area where there is such a discrepancy until the discrepancy has been clarified and the Landscape Architect has given a written response.

3. All work shall be preformed by persons familiar with planting work and under supervision of a qualified planting foreman.

4. Within 30 days after award of contract, the Landscape Contractor shall arrange with a nursery to secure all plant materials noted on the plans and have them available for inspection by the Landscape Architect. All plant material selected and subsequently brought onto the site shall meet the State of California, Food and Agricultural Code, DIVISION 4. PLANT QUARANTINE AND PEST CONTROL, PART1.GENERALLY CHAPTER 4.5. INVASIVE PEST PLANNING. Upon approval of the plant material, the contractor shall purchase the material and have it segregated and (if required) grown for the job. The deposit necessary for such contract growing (if required) is to be born by the Landscape Contractor. If travel is required by the L.A. to inspect plant material, cost of travel shall be at the contractor's expense.

5. The Landscape Contractor shall provide for and include in his bid 2 (two) agricultural suitability and soil fertility tests to be performed on the rough graded soil. Test locations are to be determined by the Landscape Architect. The results of these tests shall be reviewed by the Landscape Architect for a decision prior to amending the soil. This analysis shall be conducted and paid for by the Landscape Contractor. Recommendations for amendments contained in this analysis are to be carried out before planting occurs. Such changes are to be accompanied by equitable adjustments in the contract price if/when necessary.

6. All trees are to be staked or guyed as shown in the staking/guying diagrams (see Detail Sheet L102). Landscape Contractor shall establish one installed example of each for approval by the Landscape Architect. Cut stake height as directed by the Landscape Architect. All trees shall be planted and staked per Tree Staking Detail.

7. The Landscape Contractor shall be responsible for providing all plant material indicated on the plans, unless otherwise directed in writing. Landscape Contractor to submit unit quantities and unit costs as a part of his bid. Cost for additional plants requested and approved by Owner and Landscape Architect will be based on this bid unit price.

8. Plant locations are diagrammatic and are to be adjusted in the field as necessary to screen utilities but not impede access.

9. The Landscape Architect reserves the right to make substitutions, additions, and deletions in the planting scheme as the feels necessary while work is in progress. Such changes, with written authorization by Owner, are to be accompanied by equitable adjustments in the contract price if / when necessary.

10. All ground cover planting areas and plant pits shall be top-dressed with 3"-4" layer of wood mulch. Submit samples to Landscape Architect for approval prior to bid and installation.

11. The planting backfill mix shall consist of 50% (by volume) amended native topsoil (with no rocks larger that 2" diameter) mixed with 50% approved soil amendment. Amend only top half of backfill, do not add amendment to the bottom half of plant pits. The bottom half is to match adjacent soil profiles.

12. Materials Delivery and Storage: Manufactured materials shall be delivered in original containers with brand and maker's name marked thereon. Materials in broken containers or showing evidence of damage will be rejected and must be immediately removed from the site. Odorous materials shall not be brought to the site until they are to be used.

13. The Landscape Contractor shall provide dust alleviation and control measures during the course of the work to the Owner's satisfaction at no additional costs to the contract.

14. Plant Material Specifications and Quantities: Plant materials shall be furnished in quantities required to complete the work as indicated on the Drawings and shall be of species, variety, sizes, spacing, etc., specified in the Drawings herein.
A. Plant material shall conform to American Association of Nurseryman Standards, ANSI Z60.I, in all ways.
B. Nomenclatures: Plant Names listed on drawing conform to Standardized Plant Names established by American Joint Committee on Horticultural Nomenclature, except that for names not covered therein the established custom of the nursery trade is followed.
C. Right of inspection for approval or rejection is reserved at the place of growth or on the project site at any time upon delivery or during the work. Plants shall be inspected for size, variety, condition, defects, disease or injury. Notify the Landscape Architect as to place of growth for inspection of plants within one month of award of contract.
D. No plant shall be bound with wire, rope or anything else at any time so as to damage the bark or break branches.
E. Dimensions: If applicable, height and spread of specimen plant materials are specified on the drawings. Measurements shall be made with materials in normal position without support of branches. Plants specified by container size shall be equal in size to similar plants in local retail nurseries. Otherwise, California's Nursery Standards will govern appropriateness of sizing of specimen material.
F. Plants shall not be pruned prior to delivery, except as authorized by the Landscape Architect.

15. Planting Procedures:
A. Do not install plant materials until all exterior construction work has been completed and irrigation systems have been installed and tested. Planting areas shall have been graded and prepared as specified and shall be approved by the Landscape Architect.
B. In areas with compacted foundation and /or lime treatment, a 18" diameter drainage well shall be drilled through the impervious layer(s) prior to placement of the trees.
C. Before excavation, plants in containers shall be placed as indicated on the planting plan bringing any conflict with underground utility lines or other elements to the attention of the Landscape Architect.
D. Excavate square shaped and angled side holes to the sizes and depths indicated on the Detail Drawings. Scarify the sides and bottom of all holes.
E. Remove containers, including boxes, prior to backfilling.
F. Verify that plants are not root bound or girdled, and that the primary leader is not damaged.
G. Backfill the planting holes with the special backfill mix herein specified, see note 11 above.
H. Water-settle backfill thoroughly or compact by other approved method after planting so plants do not settle.
I. Place "Best" products fertilizer tablets or Agriform Plant Tablets in holes, per manufacturer's written recommendations, at the following rates:
1-Gallon Containers: 2 tablets @ 21 grams.
5-Gallon Containers: 4 tablets @ 21 grams.
Larger sized plants per manufacturers recommendations.
J. Trees shall be planted a minimum of 5 ft. from driveways, 30 ft. on either side of street lights, 5 ft. from fire hydrants, and 3 ft. from underground utility lines.
K. All planting located adjacent to signs shall be field adjusted so as not to interfere with visibility of the signs.

16. Establishing Maintenance Period:
A. As soon as all planting is completed, a planting review and preliminary inspection to determine the condition of the plantings will be held by the Landscape Architect upon request of the Landscape Contractor.
B. Upon recommendatioanded witn by the Landscape Architect, in writing, and the approval of the Owner, the 90 day maintenance period will begin at project substantial complection.

IRRIGATION NOTES

1. These irrigation drawings are diagrammatic and indicative of the work to be installed. All piping, valves, etc. Shown within Paved areas is for clarity only and are to be installed within planting areas where possible. Due to the scale of the drawings, it is not possible to indicate all offsets, fittings, sleeves, etc., which may be required. The Landscape Contractor is required to investigate the structural and finished conditions affecting all of the contract work including obstructions, grade differences or area dimensional differences which may not have been considered in the engineering. In the event of field differences, the Landscape Contractor is required to plan the installation work accordingly by notification and approval of the owner's authorized representative and according to the contract specification. The contractor is also required to notify and coordinate irrigation contract work with all applicable contractors for the location and installation of pipe, conduit or sleeves through or under walls, roadways, paving, structure, etc., before construction. In the event these notifications are not performed. The contractor shall assume full responsibility for all required revisions.

2. The intent of this irrigation system is to provide the minimum amount of water required to sustain good plant health.

3. It is the responsibility of the Landscape Contractor and/or Owner to program the irrigation controllers to provide the minimum amount of water needed to sustain good plant health. This includes making adjustments to the program for seasonal weather changes. Plant material, water requirements, mounds and slopes, sun, shade, and wind exposures.

4. 120 volt A.C. (2.5 amp demand per controller) electrical service to irrigation controller location(s) to be provided under electrical contract work. Landscape Contractor to make final connection from electrical stub-out to controller(s) and provide proper grounding per controller manufacturer's instructions.

5. Each irrigation controller to have its own independent 24 volt common ground wire.

6. Install new batteries in irrigation controller(s) to retain program in memory during temporary poser failures. Use quantity, type, and size required as per controller manufacturer's instructions.

7. Irrigation control wires shall be copper with U.L. approval for direct burial in ground, size #14-1. Common ground wire shall have green insulating jacket. Control wire shall have insulating jacket of color other than green. Splice shall be made with 3M-DBY seal packs or equivalent.

8. Install spare control wire of a different color along the entire main line. Loop 36" excess wire into each single valve box and into one valve box in each group of valves. Minimum of one spare wire per controller.

9. Splicing of 24 volt wires is not permitted except in valve boxes. Leave a 36" long, 1" diameter coil of excess wire at each splice and a 36" long expansion loop every 100 feet along wire run. Tape wires together every ten feet. Taping wires is not required inside sleeves.

10. Plastic valve boxes are to be green in color with bolt down, non-hinged cover marked "irrigation". Box body shall have knock outs. Manufacturer shall be Carson Industries or equivalent with approval of Landscape Architect.

11. Install remote control valve boxes 12" from walk, curb, lawn, header board, building or landscape feature. At multiple valve box groups, each box shall be 12" from the walk, curb, lawn, etc., and each box shall be 12" apart.

12. The Landscape Contractor shall flush and adjust all sprinkler heads for optimum performance and to prevent over spray onto walks, roadways, and/or buildings as much as possible. This shall include selecting the best degree of arc to fit the existing site conditions and to throttle the flow control at each valve to obtain the optimum operating pressure for each system.

13. All sprinkler heads shall be set perpendicular to finish grade of the area to be irrigated unless otherwise noted on the drawings.

14. Where it is necessary to excavate adjacent to existing trees, the contractor shall use all possible care to avoid injury to trees and tree roots. Excavation in areas where two (2) inch and larger roots occur shall be done by hand. Trenches adjacent to tree should be closed within twenty-four (24) hours; and where this is not possible, the side of the trench adjacent to the tree shall be kept shaded with burlap or canvas. No roots greater than 1" in diameter shall be cut or damaged without consulting with Landscape Architect.

15. Landscape Contractor to notify Landscape Architect for inspection and testing of installed backflow prevention device. Installation and inspection is to be performed by Plumbing Contractor

16. The irrigation system design is based on the minimum operating pressure shown on the irrigation drawings. The Landscape Contractor shall verify water pressure prior to construction. Report any difference between the water pressure indicated on the drawing and the actual pressure reading at the irrigation point of connection to the owner's authorized representative.

17. Irrigation demand: 15 GPM at a minimum dynamic pressure of 45 PSI at irrigation point of connection.

18. Teflon tape or paste is not to be used. Pipe Thread sealant compound shall be PERMATEX 51, Rector Seal Tru-Blu or Rector Seal T + 2.

MAINTENANCE

1. Maintenance Period: Continuously maintain all planting in areas included in the Contract form the beginning of the Contract work, during the progress of work, and for a period of 90 days after certified completion of all work until final acceptance of all contract work.
2. Scope: Continuous operations of watering, cultivating, weeding, trimming, pruning, adjustment of planting depth, fertilizing, spraying, and debris removal and clean-up, insect, pest, fungus, and rodent control, and any other operations are to be included in this scope of work to assure good, normal growth.
3. Fertilizing: In addition to fertilizing trees, shrubs, and groundcovers specified herein, furnish and apply additional fertilizers necessary to maintain plantings in a healthy, green, vigorous growing condition during the Maintenance Period.
4. Weeding, Cultivating, and Cleanup: Planting areas shall be kept neat and free from debris at all times and shall be cultivated and weeded at not more that 10 day intervals. Said areas shall be weed free at the end of the Maintenance Period. (If pre-emergent weed control is used, verify compatibility of the germicide with the plant material.) Do not use material which inhibits specified plant material's growth.
5. Protection: Work under this Section shall include complete responsibility for maintaining adequate protection for all areas. Any area damage by the maintenance contractor, including paved areas, shall be repaired at no additional expense to the Owner.
6. Replacements: Immediately replace any plant materials that die or are damaged. Replacements shall be made to the same Specifications as required for original plantings.
7. The irrigation system shall be kept in perfect working condition: flushing lines, adjusting watering schedules, adjusting heads, and additional work as required to maintain the system.
8. At the termination of the Maintenance Period, all plant materials shall be alive, healthy, undamaged, free from infestations, and in flourishing condition. All lawn areas shall be completely covered at the time of final acceptance leaving no barren spots. Lawns shall be free of all weeds (broadleaf and grass weeds). Plantings that do not conform to Specifications shall be replaced and brought to a satisfactory condition before final acceptance of the work can be made.
9. The Landscape Contractor shall arrange a meeting with the manufacturer's representative of the irrigation controller to train the maintenance personnel where applicable on the controller's proper use, changing dripper system filters and any other element of the irrigation system that requires periodic maintenance. Controller charts and as-builts of the planting and irrigation plans shall be given to the Owner areas at the end of the maintenance period.
10. All valve boxes are to be branded with the valve numbers as specified in the Irrigation Plans.

11. Final Approval: At the completion of the 90-day Maintenance Period, the Owner, the City and the Landscape Architect will be notified by the Landscape Contractor. A date will be set for a Final Walk Through to accept the installation. A Final Written report will be distributed by the Landscape Architect. Final Acceptance of the installation will be after all items on this list are completed by the Landscape Contractor. A written acceptance will be distributed by the Owner.

12. Warranty: Trees, shrubs, groundcovers and other plant materials shall be warranted to take root, grow and thrive for a period of one year after final acceptance of work. This will be as determined by the Owner and Landscape Architect at the end of the one year period.

13. Post Warranty Owner Responsibility: The intent of the layout design and planting is to establish a high quality landscape installation. Future plant growth requires that the Owner provide for the trimming, thinning and pruning of the plant materials. This may also include the removal of some plant materials if over crowding occurs. The planting installations will require maintenance and management, by knowledgeable and trained personnel, to assure a quality project.

SHEET L104
PLOTTED: 03.15.11

F STRUCTURAL SPECIFICATIONS

CONCRETE CONSTRUCTION

1. CONCRETE SHALL BE HARD ROCK CONCRETE AND MEET THE FOLLOWING REQUIREMENTS:

LOCATION	MIN 28-DAY STRENGTH (PSI)	AGGREGATE SIZE	MAX WATER TO CEMENT RATIO	MIN SACKS CEMENTITIOUS MATERIAL PER CUBIC YARD[4]
STRUCTURAL				
EXTERIOR SLAB ON GRADE[3]	2,500	1"x#4	0.57	5.0
FOUNDATIONS	3,000 (DESIGNED FOR 2,500)	1"x#4	0.53	5.0

2. CONCRETE MIX DESIGN AND TESTING SHALL MEET THE REQUIREMENTS OF CBC SECTIONS 1705 AND 1903, ACI 318 CHAPTER 19 & 26, ACI 301, AND THESE SPECIFICATIONS. CEMENT TO BE IN ACCORDANCE WITH ASTM C150 TYPE II. AGGREGATE TO MEET ASTM C33. FLY ASH TO MEET ASTM C618 CLASS F. SUBMIT MIX DESIGN AND SUPPORTING DOCUMENTATION IN ACCORDANCE WITH ACI 301 AND ACI 318 FOR REVIEW PRIOR TO PLACEMENT.
3. CLASS F FLY ASH MAY BE SUBSTITUTED UP TO 25% FOR CEMENT AT A POUND-FOR-POUND RATE, UNLESS SPECIFIED OTHERWISE. DO NOT USE FLY ASH IN HIGH EARLY STRENGTH CONCRETE.
4. REINFORCING STEEL SHALL CONFORM TO ASTM A615 GRADE 60 OR A706 GRADE 60. BARS #3 AND SMALLER MAY BE ASTM A615 GRADE 40. STEEL SHALL BE KEPT CLEAN AND FREE OF RUST. SECURELY TIE REBAR IN PLACE PRIOR TO CONCRETE PLACEMENT. SUBMIT SHOP DRAWINGS FOR REVIEW PRIOR TO INSTALLATION.
5. SLABS, WALLS AND OTHER CONCRETE SHALL BE KEPT CONTINUOUSLY WET FOR 48 HOURS, AFTER PLACEMENT, AND SHALL BE KEPT DAMP FOR 7 DAYS AFTER PLACEMENT. SLABS SHALL HAVE CURE/SEALER APPLIED IMMEDIATELY AFTER FINISHING IF OTHER FINISHES ARE NOT AFFECTED. WHEN CURE SEALER CAN NOT BE APPLIED, SLAB SHALL BE KEPT CONTINUOUSLY WET OR COVERED WITH CURING PAPER. CURE SHALL BE OF A TYPE THAT WILL NOT BE DETRIMENTAL TO SEALERS TO BE APPLIED LATER.

CONCRETE MASONRY CONSTRUCTION (CMU)

1. CONCRETE MASONRY UNITS SHALL BE MEDIUM- OR LIGHT-WEIGHT CONFORMING TO ASTM C90. UNITS TO BE DOUBLE OPEN END WHERE POSSIBLE AND SINGLE OPEN END OTHERWISE. ALL CELLS TO BE GROUTED SOLID. COMPRESSIVE STRENGTH OF MASONRY AT 28 DAYS, F'_m, SHALL BE 2,000 PSI.
2. GROUT TYPE SHALL BE COURSE CONFORMING TO ASTM C476, HAVING A COMPRESSIVE STRENGTH OF 2,000 PSI MINIMUM AT 28 DAYS AND SHALL HAVE MINIMUM 6 SACKS OF CEMENT PER CUBIC YARD. ADD 1 POUND SIKA GROUT AID PER SACK OF CEMENT UP TO 6 POUNDS MAXIMUM PER CUBIC YARD. MAINTAIN SLUMP BETWEEN 10 AND 11 INCHES.
3. MORTAR SHALL BE 1800 PSI MINIMUM TYPE S OR 2500 PSI MINIMUM TYPE M CONFORMING TO ASTM C270, AND PROPORTIONED TO OR WITH PROPERTY SPECIFICATIONS & TEST RESULTS PER CBC SECTION 2103.2.1.
4. REINFORCING STEEL SHALL BE BENT AND LAPPED AT ALL CORNERS AND INTERSECTIONS. THE MINIMUM LAP SPLICE SHALL BE PER DRAWINGS. ALL STEEL, INCLUDING EMBEDS, SHALL BE POSITIONED AND TIED, PRIOR TO PLACING GROUT.
5. A POUR IS DEFINED AS THE HEIGHT OF GROUT TO BE PLACED IN ONE DAY. THE HEIGHT OF MASONRY UNIT PLACEMENT AT THE TIME OF GROUTING SHALL NOT EXCEED THE POUR HEIGHT. MASONRY SHALL HAVE CURED A MINIMUM OF 4 HOURS BEFORE GROUT PLACEMENT. MAXIMUM POUR HEIGHT IS 24'-0", OR LESS, AS DETERMINED BY THE CONTRACTOR. MAXIMUM INDIVIDUAL LIFT HEIGHT IS 12'-8", OR LESS, AS DETERMINED BY THE CONTRACTOR. ALLOW TIME BETWEEN LIFTS FOR INITIAL WATER LOSS OF GROUT TO OCCUR. DO NOT ALLOW GROUT TO CURE BETWEEN LIFTS. CONTRACTOR IS RESPONSIBLE FOR ADEQUATE CLEANING AND PREVENTION OF BLOWOUTS.
6. TO FACILITATE CLEANOUT WHERE POUR HEIGHT EXCEEDS 5'-4", PROVIDE INVERTED BOND BEAM UNITS AT THE BOTTOM OF EACH POUR AND PROVIDE CLEANOUTS IN THESE COURSES AS NECESSARY, NOT EXCEEDING 32'oc. PROVIDE MECHANICAL CLEANOUT METHODS AS NEEDED.
7. SUBMIT HOT AND/OR COLD WEATHER PROTECTION PROCEDURES WHEN AMBIENT TEMPERATURE IS BELOW 40°F OR ABOVE 90°F. CONFORM WITH TMS 602 AND CBC.
8. SUBMIT REINFORCING SHOP DRAWINGS FOR REVIEW. INCLUDE DETAILS AND LOCATION OF ALL CONTROL JOINTS.

WOOD CONSTRUCTION (CARPENTRY)

1. EACH PIECE OF LUMBER SHALL BEAR THE STAMP OF THE WEST COAST LUMBER INSPECTION BUREAU (WCLIB) OR WESTERN WOOD PRODUCTS ASSOCIATION (WWPA) SHOWING GRADE MARK OR APPROVED EQUAL. BEAMS AND POSTS TO BE FREE OF HEART CENTER (FOHC). OTHER MATERIALS SHALL BE AS SHOWN BELOW:

SAWN LUMBER MEMBER	SPECIES AND MINIMUM GRADE, UNO	F_B (PSI)	F_v (PSI)	E (PSI)
6x POSTS	DOUGLAS FIR - #1	1200	170	$1.6x10^6$
6x BEAMS	DOUGLAS FIR - #1	1350	170	$1.6x10^6$
4x POSTS & BEAMS	DOUGLAS FIR - #1	1000	180	$1.7x10^6$
2x JOISTS, RAFTERS	DOUGLAS FIR - #2	900	180	$1.6x10^6$

2. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO ENSURE THE MAXIMUM MOISTURE CONTENT OF WOOD AT THE TIME OF INSTALLATION SHALL BE NOT MORE THAN 19%.
3. NAILS TO BE OF COMMON WIRE AND OF FULL-ROUND HEADS WHERE NAILING IS SPECIFIED ON THE DRAWINGS. MACHINE-DRIVEN NAILS MEETING SIZE REQUIREMENTS ARE ACCEPTABLE. NAILS MUST NOT BE OVER-DRIVEN. PRE-DRILL NAIL HOLES WHERE WOOD TENDS TO SPLIT. NAILS AS SPECIFIED ON PLANS AND INCLUDING IN PTDF MATERIAL CONTAINING AMMONIA IN EXTERIOR APPLICATIONS SHALL BE TYPE 304 OR 316 STAINLESS STEEL. NAILS USED IN EXTERIOR APPLICATIONS OR IN INTERIOR PTDF SHALL BE HOT-DIPPED GALVANIZED PER ASTM A153.

WIRE NAIL	MINIMUM SHANK DIAMETER	MINIMUM NAIL LENGTH UNO	TYPICAL NAIL APPLICATION, UNO
16d COMMON	0.162"	3½"	FRAMING
16d SINKER	0.148"	3¼"	FRAMING
10d COMMON	0.148"	3"	FRAMING
10d COMMON	0.148"	PER 5/S1.2	SHEATHING
8d COMMON	0.131"	PER 5/S1.2	SHEATHING

4. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO ASSURE THAT THE METAL FRAMING CLIPS, HANGERS, ETC. ARE BY SIMPSON STRONG-TIE. NAILING SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS WITH A NAIL PROVIDED FOR EACH PUNCHED HOLE UNO. CONNECTORS AS SPECIFIED ON PLANS AND THOSE IN CONTACT WITH PTDF MATERIAL CONTAINING AMMONIA IN EXTERIOR APPLICATIONS SHALL BE TYPE 304 OR 316 STAINLESS STEEL. ALL OTHER CONNECTORS USED IN EXTERIOR APPLICATIONS OR INTERIOR PTDF SHALL BE HDG (MINIMUM 2.0 oz/SQ FT) OR ZMAX (MINIMUM 1.85 oz/SQ FT PER ASTM A653). IN APPLICATIONS WHERE NON-AMMONIA TREATED WOOD IS DRY WHEN INSTALLED AND WILL REMAIN DRY IN-SERVICE A COATING THICKNESS OF 0.9 oz/SQ FT MAY BE USED.
5. WOOD SCREWS SHALL CONFORM TO ANSI/ASME B18.6.1. PROVIDE PILOT HOLE 70% OF DIAMETER OF SCREW SHANK WHERE FASTENING HARDWOOD TIMBER SPECIES OR WHERE WOOD TENDS TO SPLIT. MINIMUM PENETRATION IS (10) DIAMETERS, UNO.
6. BOLTS SHALL BE UNFINISHED MACHINE BOLTS PER ASTM A307. NUTS SHALL BE PER ASTM A563 AND OF STANDARD SIZE UNLESS NOTED OTHERWISE. LENGTH OF BOLTS SHALL BE SUCH THAT THE BOLT PROJECTION IS NOT LESS THAN ⅛" NOR MORE THAN ½" PAST END OF NUT. BOLT HOLES IN WOOD SHALL BE 1/32" LARGER THAN BOLT SIZES (UNO). PROVIDE STANDARD CUT WASHERS UNDER HEAD AND NUT WHERE BOLT HEADS WOULD BEAR ON WOOD. USE MALLEABLE IRON WASHERS WHERE EXPOSED TO VIEW OR NOTED. NUTS SHALL BE TIGHTENED WHEN PLACED AND RETIGHTENED BEFORE CLOSING IN OF WALLS OR OTHER CONSTRUCTION. DO NOT CRUSH WOOD WHEN TIGHTENING. BOLTS AS SPECIFIED ON PLANS AND THOSE IN CONTACT WITH PTDF MATERIAL CONTAINING AMMONIA IN EXTERIOR APPLICATIONS SHALL BE TYPE 304 OR 316 STAINLESS STEEL. ALL OTHER BOLTS USED IN EXTERIOR APPLICATIONS SHALL BE HOT-DIPPED GALVANIZED PER ASTM A153.
7. WOOD AGAINST CMU OR CONCRETE SHALL BE PRESSURE TREATED DOUGLAS FIR (PTDF) PER AWPA STANDARD U1. "USE CATEGORY" UC2 AT INTERIOR. "USE CATEGORY" UC3B AT EXTERIOR (NO GROUND CONTACT). CUT FACES SHALL BE BRUSH TREATED WITH EQUIVALENT PRESERVATIVE PRIOR TO INSTALLATION.

PLYWOOD/ORIENTED STRAND BOARD (OSB) SHEATHING

1. STRUCTURAL SHEATHING SHALL CONFORM TO PRODUCT STANDARD PS-1 OR PS-2. ALL PANELS SHALL HAVE AN EXTERIOR EXPOSURE RATING AND BEAR THE TRADEMARK OF THE ENGINEERED WOOD ASSOCIATION (APA) OR OTHER QUALIFIED AGENCY. SHEATHING SHEETS SHALL BE SPLICED ALONG CENTERLINE OF FRAMING MEMBER WITH NAILING SPACED NOT LESS THAN ⅜" FROM EDGE OF SHEETS. MACHINE-PLACED NAILING AND NAILS TO BE APPROVED BY THE ENGINEER PRIOR TO USE. SHEATHING NAILS OF COMMON WIRE WITH FULL ROUND HEADS ARE REQUIRED.
2. OSB WITH EQUIVALENT THICKNESS AND SPAN RATING MAY BE USED IN LIEU OF PLYWOOD CALLED OUT. ALL OSB SHALL CONFORM TO PS-2.

E WOOD FRAMING NOTES

1. HEADERS, BEAMS, POSTS, TOP PLATE SPLICES, AND ETC., ARE PER 1/S1.2 WHERE NOT NOTED ON PLAN AND DETAILS.
2. ALL BEAMS AND JOISTS (EXCLUDING I JOISTS) SHALL BE SEAT CUT FOR FULL UNIFORM BEARING AT SUPPORTS, INCLUDING BEAM SEATS AND COLUMN CAPS.
3. SEE 5/S1.2 FOR SHEATHING NAILING REQUIREMENTS. ALL NAILING NOT NOTED OR DETAILED OTHERWISE SHALL BE PER 4/S1.2 . NAIL LENGTH TO BE SUFFICIENT TO MEET CBC PENETRATION REQUIREMENTS.
4. WOOD POST SIZES ARE TO MATCH BEAM AND STUD WIDTH, UNO.
5. FOR ROOF DRAINAGE, TOP OF FRAMING BETWEEN NOTED POINTS IS A STRAIGHT LINE.
6. JOISTS AND RAFTERS ARE PER PLAN. UNLESS NOTED OTHERWISE, PROVIDE "LU" HANGER AT FLUSH FRAMING AND "HU" HANGER WHERE HANGER IS SHOWN SKEWED PER PLAN AND/OR HANGER SEAT IS INDICATED TO BE SLOPED. HANGER SIZE TO BE CORRECT FULL SIZE FOR JOIST SIZE (I.E. LU210 FOR 2x10). HANGERS FOR PANELIZED ROOF CONSTRUCTION ARE PER PLAN.
7. ROUND HOLES IN STEEL PLATES TO BE ¹⁄₁₆" OVERSIZE. SLOTTED HOLES IN STEEL PLATES SHALL BE ¹⁄₁₆" WIDER THAN THE BOLT DIAMETER AND HAVE A LENGTH OF 2 TIMES THE BOLT DIAMETER. THE DIRECTION OF THE SLOTTED LENGTH IS INDICATED ON THE DETAILS (VSH OR HSH). INSTALL BOLT AT THE CENTER LINE OF THE HOLE. BOLT HOLES IN WOOD SHALL BE ROUND AND ⅛" OVERSIZE. CUT OFF BOLT THREADED END FLUSH WITH NUT WHEN REQUIRED BY FINISHES AND 1" MAXIMUM FROM NUT OTHERWISE. PROVIDE STANDARD CUT WASHERS UNDER HEAD AND NUT WHERE BOLT BEARS ON WOOD. USE PLATE OR MALLEABLE IRON WASHERS AT EXPOSED CONDITIONS OR AS INDICATED.
8. ALL BOLTED OR NAILED STRAP CONNECTIONS SHALL HAVE AN EQUAL NUMBER OF BOLTS OR NAILS EACH SIDE OF THE SPLICE JOINT. THE FIRST BOLT OR NAIL FROM EACH SIDE OF THE SPLICED OR STRAPPED MEMBER SHALL BE EQUIDISTANT FROM THE SPLICE. STRAPS USING 16d NAILS ON 2x MATERIAL TO BE INSTALLED ON THE 1½" EDGE OF THE MEMBER.
9. VENTING IS REQUIRED IN ENCLOSED FRAMING AREAS, SAD. DRILL BLOCKING AND LEDGERS AND PROVIDE SKIP BLOCKING AS DETAILED.
10. ALL SHEATHING SHALL HAVE 1/8" GAP AT ALL EDGES AND JOINTS. TYPICAL SHEATHING:
    A. SLOPING ROOF SHEATHING (SLOPE GREATER THAN 2:12): 15/32 " APA RATED SHEATHING (32/16) EXP 1 WITH 10d @ 6"oc EDGES (PEN) AND 12"oc FIELD UNO ON PLANS. LAY PERPENDICULAR TO FRAMING MEMBERS. PROVIDE SHEATHING CLIPS AT UNSUPPORTED EDGES UNLESS NOTED TO BE BLOCKED ON PLANS. NO PANELS LESS THAN 24" WIDE SHALL BE USED. STAGGER SHEETS.

G EXISTING CONSTRUCTION NOTES

1. ORIGINAL CONSTRUCTION DRAWINGS WERE NOT AVAILABLE FOR REVIEW AT THE TIME THESE DOCUMENTS WERE PREPARED. EXISTING BUILDING CONDITIONS SHOWN ARE ASSUMED BASED ON INFORMATION PROVIDED BY OTHERS AND ASSUMPTIONS BASED ON PROBABLE CONSTRUCTION METHODS. ACTUAL FIELD CONDITIONS MAY VARY. THE CONTRACTOR SHALL VERIFY ALL EXISTING JOB CONDITIONS, REVIEW THE PLANS AND VERIFY ALL DIMENSIONS PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL NOTIFY THE ARCHITECT/ENGINEER OF ALL DISCREPANCIES AND EXCEPTIONS BEFORE PROCEEDING WITH ANY WORK.
2. ALL WORK NOT INDICATED AS EXISTING (E) SHALL BE ASSUMED TO BE NEW (N).
3. ANY REMOVAL, CUTTING, DRILLING, ETC OF EXISTING WORK SHALL BE PERFORMED WITH GREAT CARE. SMALL TOOLS SHALL BE USED IN ORDER NOT TO JEOPARDIZE THE STRUCTURAL INTEGRITY OF THE STRUCTURE. IF STRUCTURAL MEMBERS OR MECHANICAL, ELECTRICAL, OR ARCHITECTURAL ELEMENTS NOT INDICATED FOR REMOVAL INTERFERE WITH THE NEW WORK, THE ARCHITECT/ENGINEER SHALL BE IMMEDIATELY NOTIFIED AND PRIOR APPROVAL SHALL BE OBTAINED BEFORE REMOVAL OF THE MEMBERS.
4. DO NOT OVER CUT EXISTING WOOD, CONCRETE, MASONRY OR OTHER WORK TO REMAIN. CUTS SHALL BE MADE NEATLY TO A CORNER, THEN ALTERNATE MEANS SHALL BE USED TO REMOVE REMAINING MATERIAL. CONTRACTOR IS RESPONSIBLE FOR REPAIR/REPLACEMENT OF OVER CUT MATERIAL AS DIRECTED BY THE ARCHITECT AND/OR ENGINEER.
5. EXISTING DAMAGED STRUCTURAL MEMBERS WHICH ARE UNCOVERED SHALL BE REPORTED TO THE ARCHITECT/ENGINEER FOR REVIEW AND REPAIR.
6. EXISTING CONCRETE SURFACE ABUTTING NEW CONCRETE SHALL BE ROUGHENED TO ¼" AMPLITUDE AND THOROUGHLY CLEANED OF DUST, LOOSE AGGREGATE, LAITANCE, ETC.
7. REMODELING REQUIRES ASSUMPTIONS BE MADE REGARDING EXISTING CONDITIONS WHICH MAY NOT BE VERIFIABLE WITHOUT DESTROYING OTHERWISE ADEQUATE OR SERVICEABLE PORTIONS OF THE STRUCTURE. THIS ANALYSIS DOES NOT MAKE ANY GUARANTEE TO THE ADEQUACY OF THE STRUCTURAL DESIGN OF THE EXISTING BUILDING NOT SPECIFICALLY ADDRESSED IN THE STRUCTURAL CALCULATIONS. ZFA SHALL NOT BE RESPONSIBLE FOR UNSATISFACTORY PERFORMANCE OF EXISTING PORTIONS OF THE STRUCTURE NOT SPECIFICALLY ADDRESSED IN THE CONSTRUCTION DOCUMENTS.
8. DIFFERENTIAL SETTLEMENT BETWEEN NEW AND EXISTING CONSTRUCTION AT REMODEL OR ADDITION FOUNDATION INTERFACES CAN BE EXPECTED. ZFA SHALL NOT BE RESPONSIBLE FOR UNSATISFACTORY PERFORMANCE RESULTING FROM THESE CONDITIONS.

A DESIGN CRITERIA

DESIGN CRITERIA:	2016 CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 2 (CBC)
FLOOR LIVE LOAD:	NA
ROOF LIVE LOAD:	20 PSF (REDUCIBLE)
RISK CATEGORY:	II
WIND DATA:	ULTIMATE WIND SPEED (3 SEC GUST) IN MPH: 110 WIND EXPOSURE: C INTERNAL WIND PRESSURE COEFFICIENT (GCPI) = ±0.18 COMPONENTS AND CLADDING DESIGN PRESSURES FOR SYSTEMS DESIGNED BY OTHERS SHALL COMPLY WITH THE "ASCE 7" DESIGN STANDARD
EARTHQUAKE DATA:	SEISMIC IMPORTANCE FACTOR, I_e: 1.0 MAPPED SPECTRAL RESPONSE ACCELERATIONS: S_s = 2.249; S_1 = 0.924 SITE CLASS: D SPECTRAL RESPONSE COEFFICIENTS: S_{DS} = 1.499; S_{D1} = 0.924 SEISMIC DESIGN CATEGORY: E SEISMIC FORCE RESISTING SYSTEM(S): EXTERIOR NONSTRUCTURAL WALLS RESPONSE MODIFICATION FACTOR(S): R = 2.5 SEISMIC RESPONSE COEFFICIENT(S), C_s = 0.50 (ULTIMATE) ANALYSIS PROCEDURE USED: EQUIVALENT LATERAL FORCE

B GENERAL NOTES

1. REFER TO SHEETS **S1.1**, **S1.2** AND **S1.3** FOR STANDARD DETAILS OF CONSTRUCTION. REFER TO THE PROJECT SPECIFICATIONS FOR MATERIALS AND METHODS.
2. BUILDING DIMENSIONS SHOWN ARE FOR GENERAL REFERENCE ONLY. SEE ARCHITECTURAL DRAWINGS (SAD) FOR ALL ACTUAL BUILDING DIMENSIONS. ANY DISCREPANCIES ARE TO BE BROUGHT TO THE ATTENTION OF THE ARCHITECT/ENGINEER SO CLARIFICATION CAN BE MADE PRIOR TO COMMENCING WORK.
3. STRUCTURAL DRAWINGS SHALL NOT BE SCALED. ALL DIMENSIONS AND FIT SHALL BE DETERMINED AND VERIFIED BY THE CONTRACTOR PRIOR TO COMMENCING WORK.
4. DETAILS NOT FULLY OR SPECIFICALLY SHOWN SHALL BE OF SAME NATURE AS OTHER SIMILAR CONDITIONS.
5. REFER TO ARCHITECTURAL DRAWINGS FOR SIDEWALK SLABS AND DIMENSIONS.
6. COORDINATION OF MECHANICAL, ELECTRICAL, PLUMBING, AND SITE UTILITY SYSTEMS WITH THE STRUCTURAL SYSTEM IS THE RESPONSIBILITY OF THE GENERAL CONTRACTOR. USE DETAILS **2/S1.1** **3/S1.1** **2/S1.2** AND **3/S1.2**. AT CONDITIONS WHERE THESE DETAILS DO NOT APPEAR TO APPLY, NOTIFY THE STRUCTURAL ENGINEER PRIOR TO INSTALLATION. AT CONDITIONS WHERE FIELD MODIFICATIONS OF MECHANICAL, ELECTRICAL, PLUMBING, OR SITE UTILITIES AFFECT STRUCTURAL SYSTEMS, NOTIFY STRUCTURAL ENGINEER PRIOR TO INSTALLATION.
7. SHORING AND BRACING DESIGN, MATERIALS AND INSTALLATION SHALL BE PROVIDED BY THE GENERAL CONTRACTOR, AND SHALL BE ADEQUATE FOR ALL LOADS. LEAVE IN PLACE AS LONG AS MAY BE REQUIRED FOR SAFETY AND UNTIL FINAL STRUCTURAL CONSTRUCTION IS COMPLETED.
8. SPECIAL INSPECTIONS ARE REQUIRED PER **D/S0.1** AND THE TESTING AND INSPECTION FORM.
9. STRUCTURAL OBSERVATION PER CBC SECTION 1704.6 IS NOT REQUIRED. NOTIFY ZFA FOR GENERAL REVIEW OF:
    - MINIMUM FOOTING SIZE AND REINFORCING STEEL.
    - STRUCTURAL WOOD FRAMING

    NOTIFY ZFA FOR REVIEW PRIOR TO COVERING ABOVE LISTED WORK. PROVIDE 2 WORKING DAYS MINIMUM SCHEDULING NOTICE PRIOR TO REVIEW DATE.

C FOUNDATION NOTES

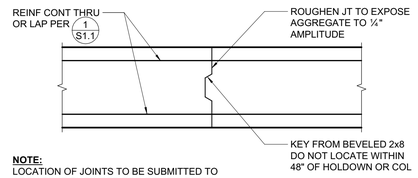
1. FOUNDATION DESIGN PRESSURES ARE PER CBC SECTION 1806.2:
   SHALLOW FOOTINGS:

   DEAD LOAD + LIVE LOAD = 1,500 PSF
   DEAD LOAD + LIVE LOAD + LATERAL = 2,000 PSF
2. ALL SOILS WORK SHALL BE DONE IN ACCORDANCE WITH THE SPECIFICATIONS AND THE REQUIREMENTS OF CHAPTER 18 OF THE CBC. ALL FOUNDATIONS SHALL BEAR ON FIRM, UNDISTURBED, NATIVE SOILS AT OR EXCEEDING DEPTHS SHOWN ON THE DRAWINGS. INCREASE FILL AND OR FOOTING DEPTH AS REQUIRED. ALL FOOTING EXCAVATIONS SHALL BE AS NEAT AS PRACTICABLE. MAXIMUM OVER EXCAVATION IN WIDTH SHALL BE LESS THAN 12 INCHES OR 25% OF FOOTING WIDTH, WHICH EVER IS LESS. 6 INCHES MAXIMUM PER SIDE. LARGER OVER-EXCAVATIONS IN WIDTH SHALL BE FILLED WITH ADDITIONAL REINFORCED CONCRETE AS DIRECTED BY THE ENGINEER, OR FORMWORK SHALL BE PROVIDED. OVER-EXCAVATIONS IN DEPTH MAY BE FILLED WITH LEAN CONCRETE OR COMPACTED APPROVED BACKFILL. ALL LOOSE SOILS SHALL BE REMOVED FROM EXCAVATIONS PRIOR TO PLACEMENT OF REINFORCING OR CONCRETE.
3. WHERE BOTTOM OF ADJACENT FOOTINGS ARE DIFFERENT PROVIDE STEPPED FOOTING PER **5/S1.1**.

D SPECIAL INSPECTION BY OWNERS TESTING AGENCY

SPECIAL INSPECTIONS AND TESTING SHALL BE PERFORMED BY AN APPROVED AGENCY IN ACCORDANCE WITH CBC CHAPTER 17 AND THE STATEMENT OF SPECIAL INSPECTIONS AS REQUIRED BY CBC SECTIONS 1704.2.3 AND 1704.3 FOR BUILDING STRUCTURAL ELEMENTS SUMMARIZED AS FOLLOWS:

1. **CONCRETE CONSTRUCTION** PER CBC SECTIONS 1705.3, AND TABLE 1705.3 INCLUDING FORMWORK, REINFORCING STEEL, CAST-IN-PLACE BOLTS, MIX DESIGNS, CONCRETE SAMPLES, AND PLACEMENT FOR ALL CONCRETE. REINFORCING DOWELS FROM FOOTINGS TO RETAINING WALLS SHALL BE INSPECTED PRIOR TO PLACEMENT OF FOOTING CONCRETE AND WALL GROUT OR CONCRETE. CONTINUOUS OR ISOLATED SPREAD FOOTINGS WITH DESIGN STRENGTH NO GREATER THAN 2500 PSI, NON-STRUCTURAL SLABS ON GRADE, AND EXTERIOR FLATWORK DO NOT REQUIRE SPECIAL INSPECTION PER CBC SECTION 1705.3.
2. **MASONRY CONSTRUCTION** PER CBC SECTION 1705.4 INCLUDING COMPRESSIVE STRENGTH, BLOCK LAYING PROCEDURES, MORTAR PREPARATION, REINFORCEMENT SIZE AND GRADE, REINFORCEMENT PLACEMENT, GROUT PREPARATION AND GROUT PLACEMENT, AND ANCHOR BOLT TYPE, SIZE AND PLACEMENT.
3. **SOILS** PER CBC SECTION 1705.6, TABLE 1705.6, AND THE APPROVED SOILS REPORT INCLUDING SUBGRADE PREPARATION, FOUNDATION BEARING MATERIALS AND DEPTH OF EXCAVATIONS, AND VERIFICATION, PLACEMENT AND TESTING OF CONTROLLED FILL.
4. **SPECIAL CASES** PER CBC SECTION 1705.1.1 AND PRODUCT ICC REPORTS FOR ALL STRUCTURAL MATERIALS AND SYSTEMS REQUIRED TO BE INSTALLED IN ACCORDANCE WITH ADDITIONAL MANUFACTURER'S INSTRUCTIONS THAT PRESCRIBE REQUIREMENTS NOT CONTAINED IN THE CBC OR REFERENCED STANDARDS INCLUDING POST-INSTALLED ANCHOR BOLTS



SCREW ANCHOR IN 2500 PSI MIN CONCRETE							
ANCHOR TYPE	ANCHOR AND PILOT HOLE DIA	MINIMUM EMBEDMENT H_{nom}	MINIMUM EDGE DIST C_{min}	MINIMUM SPCG S_{min}	MINIMUM CONCRETE THICKNESS H_{min}	MIMIMUM INSTALL TORQUE (FT-LB)	MAXIMUM INSTALL TORQUE (FT-LB)

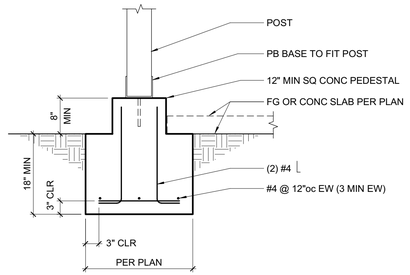
	⅝"	3½"	1¾"	4"	5"	10	85
	¾"	4"	1¾"	4"	6"	20	95

NOTES:



1. INSTALL SCREW ANCHORS PER MANUFACTURER'S INFORMATION AND ICC REPORT INSTRUCTIONS. SPECIAL INSPECTION IS REQUIRED PER SECTION 1705 OF THE CBC AND THE REQUIREMENTS OF THE ICC REPORTS. INSTALLED ANCHORS SHALL BRING CONNECTED PLIES INTO FIRM CONTACT, MEETING THE INSTALL TORQUE BUT NOT EXCEEDING THE MAXIMUM INSTALL TORQUE.
2. CONTRACTOR TO VERIFY MINIMUM EDGE DISTANCES, SPACING AND THICKNESS ARE IN ACCORDANCE W/ SCHEDULE PRIOR TO INSTALLING ANCHOR.
3. HOLES TO BE DRILLED W/ ROTARY DRILL ONLY. WHEN INSTALLING DRILLED-IN ANCHORS IN EXISTING REINFORCED CONCRETE, USE CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE EXISTING REINFORCING BARS. MAINTAIN A REASONABLE CLEARANCE BETWEEN REINFORCEMENT AND THE DRILLED-IN ANCHOR. FILL ABANDONED HOLES W/ HIGH STRENGTH GROUT.
4. THE SPECIAL INSPECTOR MUST BE ON THE JOBSITE PERIODICALLY DURING ANCHOR INSTALLATION TO VERIFY ANCHOR TYPE, ANCHOR DIMENSIONS, HOLE CLEANLINESS, EMBEDMENT DEPTH, CONCRETE TYPE, CONCRETE COMPRESSIVE STRENGTH, DRILL BIT DIAMETER, HOLE DEPTH, EDGE DISTANCE(S), ANCHOR SPACING(S), CONCRETE THICKNESS, AND TIGHTENING TORQUE.

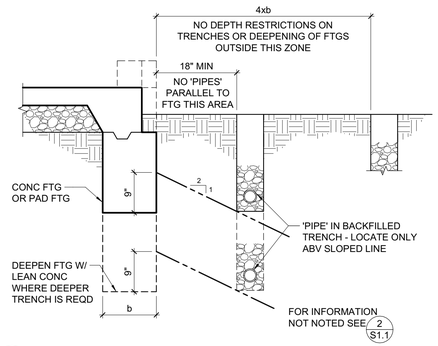
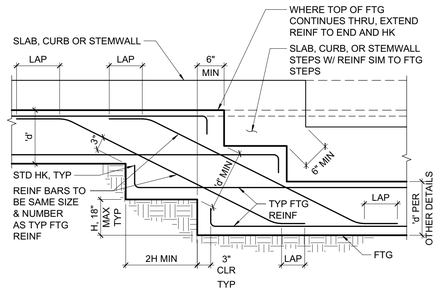
	N/A	#10	1½"ø	10"	1¾"	6¼"	13"

NOTES:

1. INSTALL ADHESIVE ANCHORS PER MANUFACTURER'S INFORMATION AND ICC REPORT.
2. CONTRACTOR TO VERIFY MINIMUM EDGE DISTANCES, SPACING, AND THICKNESS ARE IN ACCORDANCE W/ SCHEDULE PRIOR TO INSTALLING ANCHOR.
3. HOLES TO BE DRILLED W/ ROTARY DRILL ONLY. WHEN DRILLING HOLES IN EXISTING CONCRETE, USE CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE EXISTING REINFORCING BARS. MAINTAIN A REASONABLE CLEARANCE BETWEEN REINFORCEMENT AND THE DRILLED-IN ANCHOR. FILL ABANDONED HOLES W/ HIGH STRENGTH GROUT.
4. SPECIAL INSPECTION IS REQUIRED PER SECTION 1705 AND THE REQUIREMENTS OF THE ICC REPORTS. THE SPECIAL INSPECTOR MUST BE ON THE JOB SITE PERIODICALLY DURING ANCHOR INSTALLATION TO VERIFY ANCHOR TYPE, ANCHOR DIMENSIONS, HOLE CLEANLINESS, EMBEDMENT DEPTH, CONCRETE TYPE, CONCRETE COMPRESSIVE STRENGTH, DRILL BIT DIAMETER, HOLE DEPTH, EDGE DISTANCE(S), ANCHOR SPACING(S), CONCRETE THICKNESS, AND ADHESIVE INJECTION.



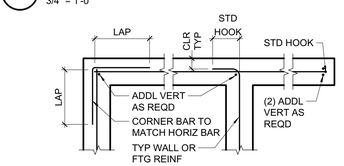
9 ADHESIVE ANCHOR IN CONCRETE
3/4" = 1'-0"



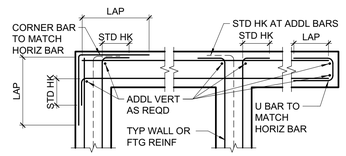
NOTES:

1. DO NOT LOCATE BLOCKOUT WITHIN 48" OF SHEAR WALL HOLD DOWN, IN FRAME FOUNDATIONS OR COLUMN PAD FOOTINGS.
2. MINIMUM DISTANCE BETWEEN BLOCKOUTS OR OTHER PIPES TO BE 48".

3 FOUNDATION BLOCKOUT
3/4" = 1'-0"



4 TRENCHING ADJACENT TO FOOTING
3/4" = 1'-0"



NOTE:
REMOVE ALL EARTH LOOSENED DURING EXCAVATION AND FILL W/ CONCRETE.

5 STEPPED FOOTING
3/4" = 1'-0"

3/4" = 1'-0"

NOTES:

1. 'PIPE' = ANY PENETRATION THRU OR EMBEDDED IN FOUNDATION.
2. ALL PIPES THROUGH FOOTINGS TO BE WRAPPED OR SLEEVED AS FOLLOWS:
   a. SLEEVES: PROVIDE 1" MIN CLEAR ALL AROUND O.D. PIPE TO I.D. SLEEVE, UNO. SEAL SLEEVE ENDS W/ MASTIC OR PLASTIC BITUMINOUS CEMENT.
   b. WRAPPED VERTICAL PIPES: PROVIDE ⅛" NOMINAL SHEET FOAM W/ (3) WRAPS MINIMUM, UNO.
   c. WRAPPED HORIZONTAL PIPES: PROVIDE ¼" NOMINAL SHEET FOAM W/ (8) WRAPS MINIMUM, UNO.
   d. UNDERGROUND FIRE LINES 4" AND LARGER:
      1. SLEEVES: PROVIDE 2" MIN CLEAR ALL AROUND O.D. PIPE TO I.D. SLEEVE. SEAL ENDS PER ABOVE.
      2. WRAPPED: PROVIDE ⅛" NOMINAL SHEET FOAM W/ (16) WRAPS MINIMUM.
3. WRAPPED AND SLEEVED PIPES SHALL HAVE 1½" MIN CLEAR TO REINF STEEL. MINIMUM CONCRETE COVER AT PIPES TO BE 3".
4. CLEARANCE BETWEEN 'PIPES' TO BE 3d MIN TYP W/ A MAXIMUM OF (8) PIPES PER 48". GROUPS OF PIPES MAY BE BUNDLED AS SHOWN, EXCEPT IN PAD FOOTINGS.
5. NO 'PIPE' TO RUN PARALLEL IN FOOTINGS, STEM OR CURB.
6. PVC CONDUIT ('PIPE') EMBEDDED IN CURB/STEM MAY BE WIRE TIED TO HORIZONTAL REINF.
7. NO HORIZONTAL PIPES ALLOWED THROUGH FOOTING WITHIN 2'-0" EACH SIDE OF HOLDOWNS OR STEEL COLUMNS. NO VERTICAL PIPES ALLOWED IN FOOTINGS AT BRACED FRAMES.
8. PROVIDE 18" MIN OF COMPACTED FILL ABOVE PIPES UP TO 12"ø, FOR LARGER PIPES INCREASE COMPACTED FILL DEPTH 1'-0" FOR EACH 6" INCREASE IN PIPE DIAMETER. OTHERWISE DEEPEN FOOTING AS SHOWN.

2 PIPES THRU FOOTING
3/4" = 1'-0"

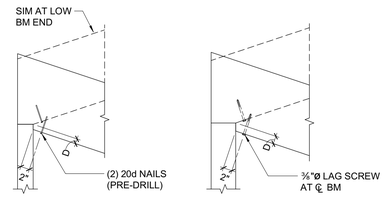
7 FRAMING AT RIDGE BEAM
3/4" = 1'-0"

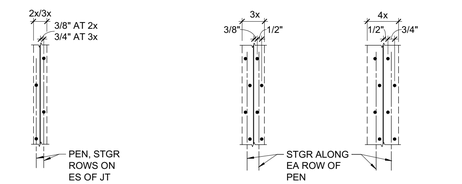


HEADER SCHEDULE

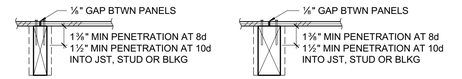
MAX SPAN	NOMINAL HEADER	
	BRG	NON-BRG
6'-0"	4x8 OR 6x6	4x6 OR 6x6
8'-0"	4x10 OR 6x8	4x8 OR 6x6
10'-0"	4x12 OR 6x10	4x10 OR 6x8
12'-0"	6x12	4x10 OR 6x8

1. HEADERS TO MATCH WIDTH OF WALL STUDS.
2. HEADERS TO BE DF #1, MIN UNO.
3. FOR LARGER OPENINGS, SEE PLANS.
4. HEADER MAY BE USED AS LOWER TOP ℄ AS REQD BY OPENING HEIGHT.
5. AT 2x8 WALLS, USE 6x HEADER + 2x + SHIM OR 6⅞" GLB + SHIM.

1 TYPICAL STUD WALL AND OPENING FRAMING
3/8" = 1'-0"



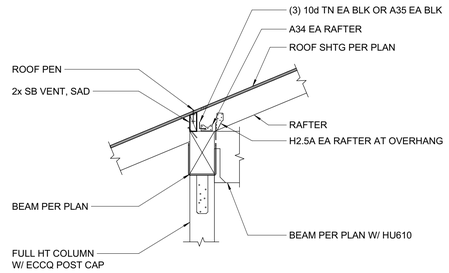
NOTES:



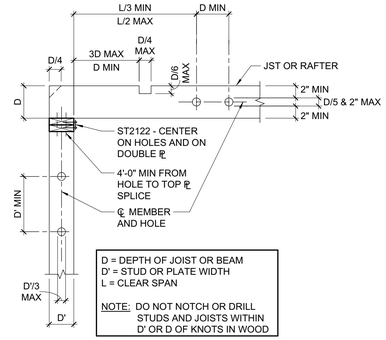
1. DO NOT OVERCUT NOTCHES OR SEAT CUTS.
2. SEE OTHER DETAILS FOR MAXIMUM NOTCH OR SEAT CUT SIZE.

8 BEAM SEAT CUT/NOTCH REINFORCEMENT
3/4" = 1'-0"

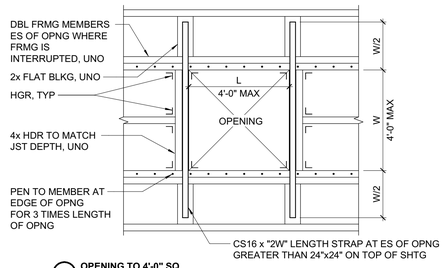
RIM JOIST TO TOP ℄, TOE NAIL	10d @ 6"oc
TRUSSES, JOISTS OR RAFTERS AT ALL BEARING POINTS	
TOE NAILS EACH SIDE	(2) 10d
TRUSSES, JOISTS OR RAFTERS TO SIDE OF STUDS	
EIGHT (8) INCH JOISTS OR LESS	(3) 16d
FOR EACH ADDITIONAL 4 INCHES OF DEPTH OF JOIST	(1) 16d
BLOCKING BETWEEN JOISTS OR RAFTERS:	
TO JOIST OR RAFTERS - TOE NAILS EA SIDE, EA END	(2) 10d
TO JOIST OR RAFTER BEARINGS - TOE NAILS EA SIDE	(2) 10d
BLOCKING BETWEEN STUDS, EACH END TOE NAILS	(2) 10d OR (2) 16d
BRIDGING TO JOIST, TOE NAIL EACH END	(2) 8d
2" SUBFLOOR TO JOIST OR GIRDER, BLIND & FACE NAIL	(2) 16d
SOLE PLATE TO JOIST OR BLOCKING, FACE NAIL	16d @ 16"oc
SOLE PLATE TO JOIST OR BLOCKING AT BRACED WALL PANELS	(3) 16d @ 16"oc
TOP PLATE TO STUD, END NAIL	(2) 16d
STUD TO SOLE PLATE, TOE NAIL	(4) 8d
DOUBLE STUDS AT EXTERIOR WALLS, FACE NAIL	16d @ 12"oc
DOUBLE STUDS, FACE NAIL	16d @ 24"oc
DOUBLE TOP PLATES, FACE NAIL	16d @ 12"oc
TOP PLATES, LAPS & INTERSECTIONS, FACE NAIL	(3) 16d
CONTINUOUS HEADER, TWO PIECES	16d @ 16"oc ALONG EACH EDGE
DOUBLE TOP PLATE LAP AT CORNER	(3) 16d
CONTINUOUS HEADER TO STUD, TOE NAIL	(4) 8d
CEILING JOISTS, LAPS OVER PARTITIONS, FACE NAIL	(3) 16d
CEILING JOISTS TO PARALLEL RAFTERS, FACE NAIL	(3) 16d
BUILT-UP CORNER STUDS	16d @ 12"oc
POST TO SILL/SOLE/TOP PLATE, EACH SIDE TOE NAIL	(4) 10d



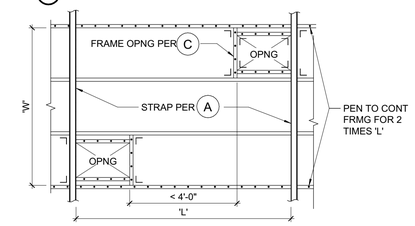
4 NAILING SCHEDULE
3/4" = 1'-0"



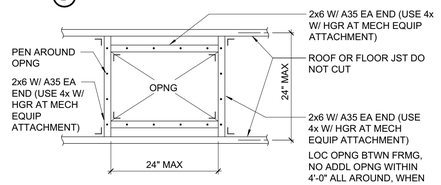
NOTE:
SHEATHING SHEETS ARE TO BE AS LARGE AS POSSIBLE. STAGGER SHEETS. JOINTS ARE TO BE CENTERED OVER BEARING. NAIL HEADS SHALL BE DRIVEN FLUSH W/ SHEATHING. MINIMUM SHEATHING SIZE IS 24" WIDTH x 48" LENGTH AT FLOOR AND ROOF, AND 12"x48" AT WALLS.



5 SHEATHING NAILING
1 1/2" = 1'-0"



6 FRAMING AT POST
3/4" = 1'-0"



2 HOLES AND NOTCHES IN WOOD STUDS, JOISTS, AND PLATES
3/4" = 1'-0"

A **OPENING TO 4'-0" SQ**

B **CLOSELY SPACED OPENINGS BETWEEN FRAMING**

PLAN

C **ISOLATED OPENING BETWEEN FRAMING UP TO 24"**

3 OPENING IN DIAPHRAGM
3/4" = 1'-0"

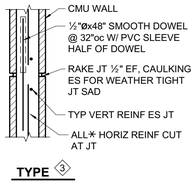
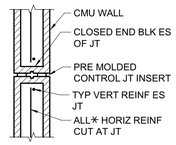
PERMIT SET - NOT FOR CONSTRUCTION



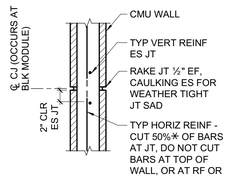
1/15/2020 10:27:35 AM C:\revit_local\17729_Ukiah Electric Utility Building_S19_jpeg.rvt

H CONCRETE MASONRY UNIT NOTES

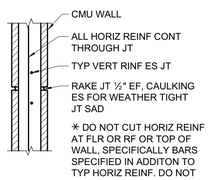


1. CONCRETE MASONRY UNIT CONSTRUCTION SHALL BE PER -/--- UNO. USE DOUBLE OPEN END WHERE POSSIBLE AND SINGLE OPEN END OTHERWISE. ALL CELLS TO BE GROUTED SOLID. ALL CMU TO BE LAID IN RUNNING BOND.
2. PROVIDE INVERTED BOND BEAM UNITS AT FOUNDATION LEVEL. SEE SPECIFICATIONS FOR CLEANOUT AND GROUTING REQUIREMENTS.
3. DOWELS FROM FOUNDATION ARE TO MATCH SIZE AND ALIGNMENT WITH THE WALL VERTICAL REINFORCEMENT. EXTEND DOWELS FROM FOUNDATION INTO WALL TO PROVIDE MINIMUM LAP WITH WALL VERTICAL REINFORCEMENT. INSTALL DOWEL BARS PER PLAN AND 1/S1.3 . ALL DOWELS TO EXTEND TO THE LOWEST FOUNDATION REINFORCEMENT AND END WITH A STANDARD HOOK.
4. WALL REINFORCING SHALL BE PER SCHEDULE BELOW AND -/--- UNO.
5. PROVIDE (2) #5 IN BOND BEAM UNITS AT THE TOPS OF ALL WALLS AND AT EACH FLOOR AND ROOF ELEVATION, UNO.
6. PROVIDE SASH UNITS AT ALL OPENINGS TYPICAL UNO.
7. SET ALL LEDGER AND CONNECTOR BOLTS PER 3/S1.3 . 1" GROUT AROUND BOLT REQUIRED.
8. SAD FOR TYPE OF FINISH, LOCATION, COLOR, ETC. SEE SPECIFICATIONS OTHERWISE.
9. VERTICAL CONTROL JOINTS SHALL BE SPACED NO GREATER THAN 1.5x THE WALL HEIGHT BUT NOT GREATER THAN 25'-0"oc. SEE 6/S1.3 .

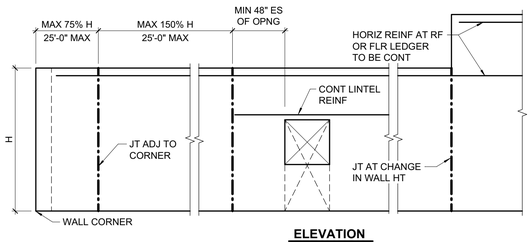
CMU WALL SCHEDULE



WALL TYPE	NOMINAL THICKNESS	HORIZONTAL REINFORCING	VERTICAL REINFORCING	REMARKS
A	12"	#4 @ 24"oc EF	#4 @ 16"oc EF	



TYPE 3



SITE WALL

TYPE 1

FOUNDATION PLAN NOTES:

1. REFER TO SHEETS **S0.1**, **S1.1**, **S1.2** AND **S1.3** FOR GENERAL NOTES AND TYPICAL DETAILS. THE FOLLOWING DETAIL REFERENCES ARE PROVIDED FOR THE CONTRACTOR'S CONVENIENCE ONLY. ALL GENERAL NOTES AND TYPICAL DETAIL SHEETS NOTED ABOVE ARE APPLICABLE AND SHALL BE FOLLOWED.
2. DIMENSIONS ARE TO FACE OF STUD UNLESS NOTED OTHERWISE. COORDINATE ALL DIMENSIONS WITH ARCHITECTURAL DRAWINGS PRIOR TO CONSTRUCTION. NOTIFY ARCHITECT/ENGINEER OF ANY DISCREPANCIES.
3. PLUMBING AND ELECTRICAL CONDUIT AND GROUND STRAP SHALL NOT BE LAID WITHIN FOUNDATIONS. NO UTILITY PIPES OR CONDUITS SHALL BE LOCATED THRU COLUMN FOOTINGS OR FRAME FOOTINGS. NO PIPES OR CONDUITS THRU SILL PLATES SHALL BE WITHIN 12" OF HOLDOWN BOLTS. NO MECHANICAL, ELECTRICAL, OR PLUMBING OPENINGS SHALL BE LOCATED IN SHEAR WALLS UNLESS SHOWN AND DETAILED ON THE STRUCTURAL DRAWINGS. NO VERTICAL OR HORIZONTAL PIPES OR CONDUITS SHALL BE LOCATED THROUGH STEEL FRAMES, STEEL COLUMNS, OR STEEL BASE PLATES. PROVIDE FURRING AND/OR THICKENED CONCRETE WHERE REQUIRED TO CLEAR UTILITY SYSTEMS. NOTIFY STRUCTURAL ENGINEER/ARCHITECT PRIOR TO ANY INSTALLATION NOT CONFORMING TO THESE DETAILS.

   PIPES THROUGH FOOTINGS SHALL BE PER **2/S1.1** AND **3/S1.1** .

   PIPES PARALLEL TO FOOTINGS SHALL BE PER **4/S1.1**.
4. CONTRACTOR SHALL DETERMINE FOUNDATION STEP LOCATIONS BASED ON GEOTECHNICAL REPORT, CIVIL, ARCHITECTURAL AND LANDSCAPE DRAWINGS. STEP FOOTING PER **5/S1.1**.
5. ELEVATION OF THE TOP OF FINISHED SLAB = 0'-0", UNLESS NOTED OTHERWISE.

FRAMING PLAN NOTES:

1. REFER TO SHEETS **S0.1**, **S1.2** AND **S1.3** FOR GENERAL NOTES AND TYPICAL DETAILS. THE FOLLOWING DETAIL REFERENCES ARE PROVIDED FOR THE CONTRACTOR'S CONVENIENCE ONLY. ALL GENERAL NOTES AND TYPICAL DETAIL SHEETS NOTED ABOVE ARE APPLICABLE AND SHALL BE FOLLOWED.
2. DIMENSIONS ARE TO FACE OF STUD UNLESS NOTED OTHERWISE. COORDINATE ALL DIMENSIONS WITH ARCHITECTURAL DRAWINGS PRIOR TO CONSTRUCTION. NOTIFY ARCHITECT/ENGINEER OF ANY DISCREPANCIES.

(Manage -> Project Information)

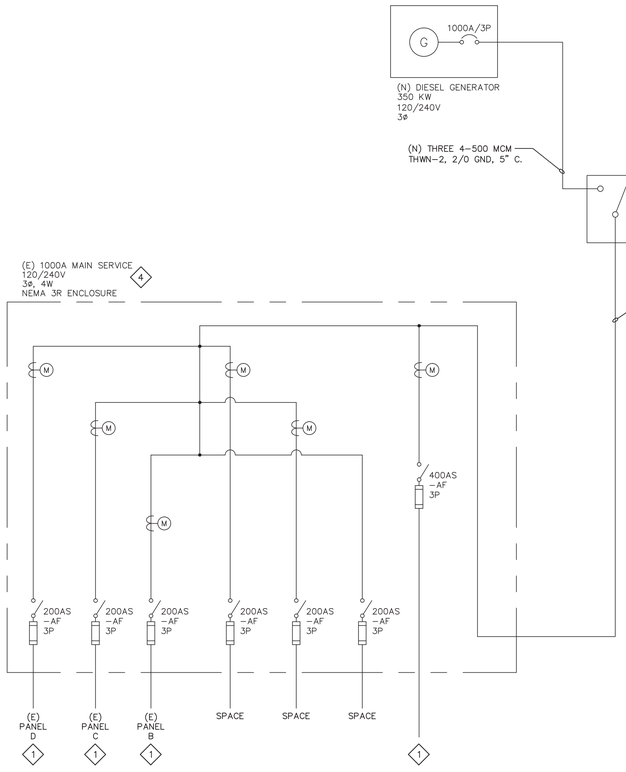
SHEET DESCRIPTION

FOUNDATION AND ENTRYWAY FRAMING PLAN

ENGR: JG	DATE: SEP 6, 2019
PM: DRC	

SHEET

S2.1



PERMIT SET - NOT FOR CONSTRUCTION

GENERAL NOTES

1. ALL PRODUCTS AND EXECUTION OF WORK SHALL BE IN ACCORDANCE WITH THE SPECIFICATIONS AND AS SHOWN ON PLANS.
2. IN THE EVENT OF A DISCREPANCY BETWEEN CONTRACT DRAWINGS AND SPECIFICATIONS, THE MOST STRINGENT SHALL GOVERN.
3. ALL WORK TO BE IN ACCORDANCE WITH REQUIREMENTS OF GOVERNING FIRE, BUILDING MECHANICAL, PLUMBING AND ELECTRICAL CODES.
4. PRIOR TO SUBMISSION OF BID, THIS CONTRACTOR SHALL CONDUCT A THOROUGH SITE SURVEY AND BECOME FAMILIAR WITH ALL FEATURES IN THE DESIGNATED CONSTRUCTION AREA. ANY POSSIBLE CONFLICTS BETWEEN EXISTING SITE CONDITIONS, AND THIS CONTRACTORS ABILITY TO CONSTRUCT IN ACCORDANCE WITH CONTRACT DOCUMENTS, SHALL BE BROUGHT TO THE ATTENTION OF THE ARCHITECT/ENGINEER OF RECORD, FOR DETERMINATION, IN WRITING. NO ADDITIONAL FUNDS SHALL BE PAID TO CONTRACTOR DUE TO FAILURE OF THIS CONTRACTOR TO COMPLETE THIS REQUIREMENT AND INCLUDE ALL COSTS IN HIS BID.
5. IF ANY PART OF THIS CONTRACTOR'S WORK DEPENDS UPON THE WORK OF A SEPARATE CONTRACTOR, THIS CONTRACTOR SHALL INSPECT SUCH OTHER WORK AND PROMPTLY REPORT IN WRITING TO THE OWNER ANY DEFECTS IN SUCH OTHER WORK THAT RENDERS IT UNSUITABLE TO PERFORM THE WORK OF THIS CONTRACTOR. FAILURE OF THIS CONTRACTOR TO SO INSPECT AND REPORT SHALL CONSTITUTE AN ACCEPTANCE OF THE OTHER CONTRACTOR'S WORK, EXCEPT AS TO DEFECTS WHICH MAY DEVELOP IN OTHER CONTRACTOR'S WORK AFTER EXECUTION OF THIS CONTRACTOR'S WORK.
6. CONTRACTOR SHALL REMOVE, RELOCATE, REPLACE WITH NEW AND/OR RECONNECT ALL EXISTING SERVICES AS REQUIRED BY NEW CONSTRUCTION.
7. SCHEDULE ALL WORK WITH THE FACILITY INCLUDING CONSTRUCTION ACCESS AND STORAGE. THE CONSTRUCTION SCHEDULE PROCEDURE SHALL BE APPROVED BY THE FACILITY PRIOR TO THE START OF CONSTRUCTION.
8. ALL UTILITIES REQUIRED FOR THE CONTINUOUS OPERATION OF ALL EXISTING FACILITIES MUST BE MAINTAINED IN SERVICE AT ALL TIMES EXCEPT AS REQUIRED FOR NEW SYSTEMS CONNECTION. COORDINATE SHUTDOWN WITH RESPONSIBLE FACILITY PERSONNEL.
9. CONTRACTOR SHALL PROVIDE DUST CONTROL AS REQUIRED TO CONTAIN DUST AND DEBRIS WITHIN CONSTRUCTION AREA. CLEAN ALL AREAS EACH DAY. KEEP DIRT AND DUST TO A MINIMUM.
10. ALL REMOVED ITEMS DEEMED TO HAVE VALUE BY THE OWNER SHALL BE DELIVERED TO A PLACE OF STORAGE AT THE SITE AS DIRECTED. ALL OTHER ITEMS MUST BE DISPOSED OF OFF-SITE IN A LEGAL MANNER.
11. WHERE EXISTING CONSTRUCTION IS DAMAGED, REPAIR WITH MATERIALS TO MATCH IN KIND, QUALITY AND PERFORMANCE.
12. WORK SHALL BE EXECUTED IN A CAREFUL AND ORDERLY MANNER WITH THE LEAST POSSIBLE DISTURBANCE TO PUBLIC AND OCCUPANTS OF THE FACILITY.
13. CONTRACTOR SHALL ASSUME SOLE RESPONSIBILITY FOR SAFETY OF ALL PERSONS ON OR ABOUT THE CONSTRUCTION SITE, IN ACCORDANCE WITH APPLICABLE LAWS AND CODES. GUARD ALL HAZARDS IN ACCORDANCE WITH THE SAFETY PROVISIONS OF THE LATEST MANUAL OF ACCIDENT PREVENTION PUBLISHED BY THE ASSOCIATED GENERAL CONTRACTORS' OF AMERICA AND OSHA.
14. ALL NEW CONDUCTORS SHALL BE THHN COPPER.
15. ALL WORK SHALL MEET THE REQUIREMENTS OF THE LATEST ELECTRICAL CODE AS ACCEPTED BY THE LOCAL JURISDICTION.

SECTION 16010

GENERAL PROVISIONS

PART 1 – GENERAL

1.1 WORK INCLUDED

A. SCOPE: THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS, TOOLS, EQUIPMENT, SERVICES AND TRANSPORTATION NECESSARY FOR THE CONSTRUCTION OF THE ELECTRICAL WORK AS INDICATED ON THE CONSTRUCTION DRAWINGS, INCLUDING BUT NOT LIMITED TO THE FOLLOWING:

1. WORK DESCRIBED IN ALL SECTIONS OF THIS SPECIFICATION.
2. CUTTING AND PATCHING AS A RESULT OF THIS WORK.
3. HANGERS, ANCHORS, METAL SUPPORTS AND CHANNELS AS REQUIRED FOR WORK INCLUDED IN THIS SPECIFICATION.
4. TESTING, ADJUSTING OF COMPLETED WORK, INSPECTIONS AND INSTRUCTIONS.
5. SHOP DRAWINGS AND SUBMITTALS.
6. PERMIT AND FEES.

1.2 REFERENCES AND STANDARDS

A. THE FOLLOWING REFERENCES AND STANDARDS ARE A PART OF THIS SPECIFICATION AND WORK SHALL CONFORM TO APPLICABLE REQUIREMENTS AS SHOWN ON THE DRAWINGS OR IMPLIED HEREIN.

B. CODES AND STANDARDS: COMPLY WITH PROVISION OF THE FOLLOWING, EXCEPT AS OTHERWISE INDICATED.

1. CALIFORNIA BUILDING CODE AND UNIFORM BUILDING CODE STANDARDS OF THE INTERNATIONAL CONFERENCE OF BUILDING OFFICIALS, 2007.
2. CALIFORNIA ELECTRICAL CODE, 2007.
3. APPLICABLE RULES AND REGULATIONS OF LOCAL AND STATE CODES HAVING JURISDICTION.

C. COMPLY WITH THE LATEST EDITION OF ALL APPLICABLE STANDARDS, INCLUDING ASME, ANSI, ASTM, UL AND OSHA.

D. MINIMUM REQUIREMENTS:

1. THE REQUIREMENTS OF APPLICABLE CODES AND STANDARDS SHALL DICTATE MINIMUM ACCEPTABLE QUALITY OF WORK.

1.3 SUBMITTALS

A. PROCEDURES: SUBMIT IN ACCORDANCE WITH THE GENERAL CONDITIONS OF THE SPECIFICATIONS.

B. SUBMIT PRODUCT DATA AND BROCHURES FOR:

1. CONDUCTORS
2. CONDUIT
3. CIRCUIT BREAKER

1.4 WORK RESPONSIBILITIES

A. SITE CONDITIONS

1. EXAMINE ALL THE DRAWINGS AND THE SPECIFICATIONS, SURVEY THE EXISTING SITE CONDITIONS AND INCLUDE ALL NECESSARY ALLOWANCES IN BID PROPOSAL.
2. RESOLVE ALL CONFLICTS WITH CODE REQUIREMENTS, SITE CONDITIONS, THE WORK OF OTHER TRADES, OR OTHER ELECTRICAL CONTRACTORS.
3. VERIFY THE LOCATION OF ALL EXISTING UTILITIES PRIOR TO CONSTRUCTION AND PROTECT FROM DAMAGE.
4. PAY ALL COSTS INCURRED DUE TO DAMAGE OF EXISTING UTILITIES OR OTHER FACILITIES.

B. LOCATIONS:

1. THE DRAWINGS ARE DIAGRAMMATIC AND SHALL NOT BE SCALED TO DETERMINE EXACT EQUIPMENT LOCATIONS OR RACEWAY DISTANCES. THEY SHALL BE FOLLOWED AS CLOSELY AS ACTUAL CONSTRUCTION AND THE WORK OF OTHER TRADES ON THIS PROJECT IS REQUIRED. AVOID OBSTRUCTIONS, PRESERVE HEADROOM, MAINTAIN REQUIRED ACCESSIBILITY AND SATISFY THE REQUIREMENTS OF THE GOVERNING CODE AND STANDARDS OF GOOD PRACTICE.
2. THE ARCHITECTURAL DRAWINGS AND SPECIFICATIONS TAKE PRECEDENCE OVER THE ELECTRICAL DRAWINGS FOR LOCATION OF CASEWORK, EQUIPMENT, LIGHTS, POWER RECEPTACLES, PHONE AND DATA OUTLETS, ETC. CONTRACTOR SHALL REFER TO THE DRAWINGS, SPECIFICATIONS, AND REVIEW SHOP DRAWINGS FOR ALL WORK, IN ORDER TO COORDINATE HIS ELECTRICAL WORK WITH THE OTHER WORK OF THE PROJECT.
3. BRING DISCREPANCIES BETWEEN DIFFERENT DRAWINGS, BETWEEN DRAWINGS AND ACTUAL FIELD CONDITIONS OR BETWEEN DRAWINGS AND SPECIFICATIONS, PROMPTLY TO THE ATTENTION OF THE ARCHITECT FOR DECISION.

C. RESPONSIBILITY:

1. PROVIDE COMPLETE FUNCTIONING SYSTEMS AND INCLUDE ALL LABOR, MATERIAL AND ASSOCIATED TOOLS AND TRANSPORTATION REQUIRED FOR THE SYSTEM TO OPERATE SAFELY AND SATISFACTORILY.
2. PROVIDE ALL WORK INDICATED ON THE DRAWINGS WHETHER OR NOT SPECIFICALLY MENTIONED IN THE SPECIFICATIONS.
3. COORDINATE THE INSTALLATION OF ELECTRICAL ITEMS WITH THE SCHEDULES FOR WORK OF OTHER TRADES AND OTHER CONTRACTORS TO PREVENT DELAYS IN TOTAL WORK. ASSUME RESPONSIBILITY FOR ANY COOPERATIVE WORK WHICH MUST BE ALTERED DUE TO LACK OF PROPER SUPERVISION OR FAILURE TO MAKE PROPER PROVISIONS IN TIME.
4. OBTAIN AND PAY FOR ALL PERMITS, FEES AND INSPECTIONS.

1.5. SYSTEM ACCEPTANCE:

A. FINAL REVIEW: REQUEST A FINAL REVIEW PRIOR TO SYSTEM ACCEPTANCE AFTER:

1. COMPLETION OF THE INSTALLATION OF ALL SYSTEMS REQUIRED UNDER THE CONTRACT DOCUMENTS.
2. COMPLETION OF CLEANING.
3. SATISFACTORY OPERATION OF ALL SYSTEMS FOR A PERIOD OF ONE WEEK.

B. ACCEPTANCE SHALL BE CONTINGENT ON:

1. COMPLETION OF FINAL REVIEW AND CORRECTION OF ALL DEFICIENCES.
2. SATISFACTORY COMPLETION OF THE ACCEPTANCE TESTS WHICH SHALL DEMONSTRATE COMPLIANCE WITH ALL PERFORMANCE AND TECHNICAL REQUIREMENTS OF THE CONTRACT DOCUMENTS.
3. SUBMISSION OF AS-BUILT DRAWINGS.

**END OF SECTION*

SECTION 16110

CONDUITS AND ELECTRICAL METALLIC TUBING

PART 1 – GENERAL

1.1 WORK INCLUDED:

A. THE CONTRACTOR SHALL FURNISH CONDUITS, ELECTRICAL METALLIC TUBING AND FITTINGS FOR ALL POWER, LIGHTING, MECHANICAL EQUIPMENT AND SIGNAL SYSTEMS SHOWN ON THE DRAWINGS AND AS SPECIFIED HEREIN, UNLESS NOTED ELSEWHERE IN THESE SPECIFICATIONS UNDER "WORK NOT INCLUDED".

PART 2 – PRODUCTS

2.1 CONDUITS AND TUBING

A. RIGID METTALIC CONDUIT (RMC): SHALL BE HOT-DIP GALVANIZED STEEL INCLUDING THREADS AS PER UL 6, FEDERAL SPECIFICATIONS WWC-581-D AND ANSI C80-1.

B. ELECTRICAL METALLIC TUBING (EMT): SHALL BE ELECTROLYTICALLY GALVANIZED STEEL PER UL 797 AND ANSI C33.98.

C. ELECTRICAL METALLIC TUBING FITTINGS: COUPLINGS AND INSULATED THROAT CONNECTORS SHALL BE SET SCREW TYPE.

D. LIQUID TITE FLEXIBLE METAL CONDUIT: SHALL BE ELECTROLYTICALLY GALVANIZED STEEL PER UL 1 AND ANSI C33.92 AND COVERED WITH POLYVINYL CHLORIDE (PVC) TO JIC REQUIREMENTS.

E. FLEXIBLE METAL CONDUIT: SHALL BE ELECTROLYTICALLY GALVANIZED STELL PER UL-1 AND ANSI C33.92.

F. RIGID NONMETALLIC CONDUIT (PVC) SCHEDULE 40: SHALL BE POLYVINYL CHLORIDE (PVC) AS REQUIRED PER UL 651, FEDERAL SPECIFICATIONS WC-1094A AND NEMA STANDARDS PUBLICATION NO. TC2-1978.

PART 3 – EXECUTION

3.1 INSTALLATION OF CONDUIT AND TUBING

A. A MINIMUM OF 6-INCHES CLEARANCE SHALL BE MAINTAINED BETWEEN ALL ELECTRICAL CONDUITS AND ANY PIPING, DUCTS OR OBJECTS OPERATING AT TEMPERATURES OVER 86 DEGREES FAHRENHEIT.

B. INSTALL CONDUIT PER CEC AND CONCEAL WHEREVER POSSIBLE AND/OR PRACTICAL. RIGID METAL CONDUIT AND EMT, INSTALLED EXPOSED SHALL BE MOUNTED ON SUPPORTS SPACED NOT OVER 8 FEET APART UNLESS OTHERWISE NOTED. RUNS SHALL BE PARALLEL OR PERPENDICULAR TO WALLS, CEILINGS, OR STRUCTURAL MEMBERS.

C. EVERY CONDUIT OR TUBING CONTAINING ENERGIZED CONDUCTORS AND INSTALLED AS PART OF THIS WORK SHALL CONTAIN A GREEN INSULATED COPPER EQUIPMENT GROUNDING CONDUCTOR SIZED IN ACCORDANCE WITH CEC. UNDER NO CIRCUMSTANCES SHALL CONDUITS OR TUBING ALONE BE USED AS AN EQUIPMENT GROUND CONDUCTOR. IF LARGE CONDUCTORS ARE USED AS EQUIPMENT GROUNDS AND THEY ARE NOT AVAILABLE WITH GREEN COLORED INSULATION, THEY SHALL BE MARKED WITH GREEN PLASTIC TAPE AT ALL TERMINATIONS AND PULLBOXES TO IDENTIFY THEM AS GROUNDING CONDUCTORS.

D. CONDUIT OR METALLIC TUBING INSTALLED ABOVE SUSPENDED CEILINGS SHALL BE SUPPORTED INDEPENDENTLY FROM THE CEILING SYSTEM IN AN APPROVED MANNER TO THE BUILDING STRUCTURE. SUCH CONDUITS OR TUBING SHALL BE INSTALLED IN A MANNER THAT DOES NOT INTERFERE WITH ACCESS TO THE SPACE. DO NOT ATTACH OR SUPPORT THESE CONDUITS OR TUBING FROM THE CEILING SUPPORT SYSTEM.

E. TYPES OF CONDUITS OR ELECTRICAL METALLIC TUBING TO BE INSTALLED THROUGH FIRE RATED WALLS, FLOORS OR CEILINGS SHALL BE DETERMINED BY THE U.L. SYSTEM NUMBER OF THE FIRE RATED SEALANT SELECTED FOR THE SPACE. THE INSTRUCTIONS FOR A PARTICULAR U.L. SYSTEM NUMBER SHOULD SPECIFY WHAT TYPE OF CONDUIT CAN BE USED WITH THE FIRE SEALANT TO CREATE AN ACCEPTABLE SYSTEM. DO NOT ASSUME THAT SOMETHING WILL BE ACCEPTABLE, CONSULT WITH THE PROJECT INSPECTOR AND THE PRODUCT INSTALLATION INSTRUCTION BEFORE DOING THE WORK. THE HOURLY RATING OF THE SURFACE TO BE PENETRATED SHOULD DETERMINE THE U.L. SYSTEM TO BE USED.

F. STUB-UPS SHALL BE PROTECTED FROM DAMAGE AND CAREFULLY REBENT WHEN NECESSARY. BENDS AND OFFSETS SHALL BE CAREFULLY MADE SO THAT THE INSIDE DIAMETER IS NOT EFFECTIVELY REDUCED. UNLESS OTHERWISE REQUIRED, THE LEGS OF A BEND SHALL BE IN THE SAME PLANE, THE STRAIGHT LEGS OF OFFSETS ARE PARALLEL.

G. ALL EXPOSED CONDUITS FROM THE FINISHED FLOOR OR WORKING SURFACES, UP TO EIGHT FEET, SHALL BE RIGID METAL CONDUIT. ALL CONDUITS SUBJECT TO MECHANICAL DAMAGE SHALL BE RIGID METAL CONDUIT.

H. PROVIDE ANCHORAGE OF ALL CONDUITS, GUIDES AND SUPPORTS IN ACCORDANCE WITH THE SMACNA GUIDELINES.

END OF SECTION

SECTION 16120

CONDUCTORS AND TERMINATIONS

PART 1 – GENERAL

1.1 WORK INCLUDED:

A. THE CONTRACTOR SHALL FURNISH CONDUCTORS PROVIDING POWER FOR FEEDERS AND BRANCH CIRCUITS AT LESS THAN 600 VOLTS, UNLESS NOTED OTHERWISE ON THE DRAWINGS OR IN THE SPECIFICATIONS.

PART 2 – PRODUCTS

2.1 CONDUCTORS (600 VOLTS AND BELOW)

A. WIRE AND CABLE SHALL BE NEW AND SHALL HAVE SIZE, TYPE OF INSULATION, VOLTAGE RATING AND MANUFACTURER'S NAME PERMANENTLY MARKED ON OUTER COVERING AT REGULAR INTERVALS. WIRE AND CABLE SHALL BE FACTORY COLOR-CODED BY INTEGRAL PIGMENTATION.

B. WIRE SHALL CONFORM TO UL 83 AND ANSI C33.8 STANDARDS, FEDERAL SPECIFICATIONS JC 30A. USE THWN TYPE OF INSULATION ON FEEDERS AND BRANCH CIRCUITS, UNLESS A DIFFERENT TYPE OF INSULATION IS REQUIRED BY THE CEC OR AN AGENCY HAVING JURISDICTION OVER THIS WORK.

C. THE COPPER CONDUCTOR SHALL HAVE A 90 PERCENT MINIMUM CONDUCTIVITY AND SHALL BE STRANDED, UNLESS OTHERWISE NOTED. MINIMUM WIRE SIZE SHALL BE NO 12 AWG, UNLESS NOTED OTHERWISE. ALUMINUM WIRE IS NOT ACCEPTABLE FOR THIS WORK.

D. BARE GROUND CONDUCTORS SHALL MEET FEDERAL SPECIFICATION QQ-W-343.

2.2 TERMINATIONS

A. ELECTRICAL SPRING STEEL CONNECTORS WITH UL APPPROVED INSULATING CAPS SHALL BE USED ON #10 AWG AND SMALLER STRANDED OR SOLID COPPER CONDUCTORS WHERE SPLICING IS REQUIRED.

B. RING AND FORK TYPE COPPER TERMINATIONS WITH APPLICATION BY A SPECIAL CRIMPING TOOL SHALL BE USED ON #10 AWG AND SMALLER CONDUCTORS FOR TERMINATING, EXCEPT WHEN TERMINATED INTO CIRCUIT BREAKERS OR WIRING DEVICES WITH BUILT-IN SPRING CLIPS.

C. FOR CONDUCTORS #8 AWG AND LARGER, ALL SPLICES AND/OR TERMINATIONS SHALL BE SOLDERLESS LONG BARREL COLOR KEYED COMPRESSION TYPES FOR APPLICATION WITH A HYDRAULIC TOOL.

D. CONNECTORS SHALL BE CERTIFIED AS MEETING UL 486 CYCLING TEST REQUIREMENTS.

E. INSULATED TAPE SHALL CONFORM TO UL 510 AND ANSI C33.74 STANDARDS.

PART 3 – EXECUTION

3.1 INSTALLATION OF CONDUCTORS

A. CONDUCTORS SHALL NOT BE SUBJECTED TO PULLING TENSIONS IN EXCESS OF MANUFACTURER'S RECOMMENDATIONS.

B. CONDUCTORS SHALL BE CONTINUOUS FROM POINT TO POINT. NO SPLICES SHALL BE PERMITTED, EXCEPT IN SPLICE BOXES OR ENCLOSURES APPROVED FOR THIS PURPOSE.

C. CONDUCTORS SHALL BE TAGGED AT EACH END WITH TUBULAR MARKERS. A SCHEDULE SHALL BE PROVIDED ON THE AS-BUILT DRAWINGS CORRELATING THE WIRE MARKINGS.

D. INSTALLATION OF THE GROUNDED (NEUTRAL) CONDUCTORS SHALL COMPLY WITH ARTICLE 200 AND 210.5 OF THE CEC, EXCEPT THAT INSULATION IS REQUIRED ON THE CONDUCTOR.

E. INSTALLATION AND CONNECTION OF EQUIPMENT GROUNDING CONDUCTORS SHALL BE PER ARTICLE 210.5 AND 250.1 OF THE CEC.

F. 480/277 VOLTS, 3-PHASE, 4-WIRE SYSTEMS SHALL HAVE A COLOR CODE OF BROWN (PHASE A), ORANGE (PHASE B), YELLOW (PHASE C), AND NATURAL GRAY FOR NEUTRAL. 208/120 VOLT, 3-PHASE, 4-WIRE SYSTEMS SHALL HAVE A COLOR CODE OF BLACK (PHASE A), RED (PHASE B), BLUE (PHASE C), AND WHITE FOR NEUTRAL. COLORS SHALL BE MAINTAINED THROUGHOUT THE PROJECT. EQUIPMENT GROUNDING CONDUCTORS SHALL HAVE GREEN INSULATION, UNLESS OTHERWISE NOTED. INTERMIXING OF COLORS WITH DIFFERENT VOLTAGES SHALL NOT BE DONE.

G. NO CONDUCTOR CARRYING 120 VOLTS OR MORE SHALL BE SMALLER THAN #12 AWG.

H. WIRE AND CABLE SHALL BE SUITABLE FOR THE TEMPERATURE, CONDITIONS AND LOCATION WHERE IT IS INSTALLED. ACCESSORY MATERIALS, SUCH AS CONNECTORS, SPLICE AND TAP FITTINGS AND TERMINATIONS SHALL BE OF A TYPE DESIGNED OR INTENDED AND SUITABLE FOR THE USE. THEY SHALL BE COMPATIBLE WITH THE CONDUCTOR MATERIAL.

I. CONDUCTOR SPLICES SHALL BE KEPT TO A MINIMUM. SPLICES AND TAPS SHALL HAVE AT LEAST THE EQUIVALENT MECHANICAL STRENGTH AND INSULATION OF THE CONDUCTORS. SPLICE AND TAP DEVICES SHALL BE OF THE PROPER SIZE AND TYPE FOR THE USE AND COMPATIBLE WITH THE CONDUCTOR MATERIAL.

J. THE LENGTH OF CONDUCTORS WITHIN CABINETS AND CUTOUT BOXES SHALL BE SUFFICIENT TO NEATLY TRAIN THEM TO THEIR TERMINAL POINT WITH NO EXCESS. WHEN THERE ARE MANY CONDUCTORS, THEY SHALL BE CABLED OR BUNDLED.

3.2 TESTING (600 VOLT OR LESS)

A. TESTS SHALL BE CONDUCTED WITH A 500 VOLT MEGGER WITH READINGS RECORDED AFTER CONTINUOUS VOLTAGE APPLICATION OF ONE MINUTE. VALUES SHALL NOT RUN LESS THAN THE FOLLOWING:

1. NO. 14 OR NO 12 AWG – 1 MEGOHM
2. NO. 10 THRU NO. 6 AWG – 1/4 MEGOHM
3. NO. 4 OR NO. 2 AWG – 50 K OHMS
4. NO 1/0 THRU 4/0 AWG – 25 K OHMS
5. 250 MCM THRU 750 MCM – 12 K OHMS

END OF SECTION

SECTION 16130

METALLIC OUTLET BOXES AND PULLBOXES

PART 1 – GENERAL

1.1 WORK INCLUDED:

A. FURNISH OUTLET BOXES FOR WIRING DEVICES, LIGHTING FIXTURES AND OTHER ELECTRICAL EQUIPMENT.

B. FURNISH JUNCTION BOXES AND PULLBOXES AS REQUIRED FOR THE CONSOLIDATION OF CONDUIT RUNS AND TO AID IN PULLING CONDUCTORS.

PART 2 – PRODUCTS

2.1 OUTLET BOXES, JUNCTION BOXES AND PULL BOXES

A. OUTLET BOXES SHALL BE SIZED FOR THE APPLICATION. BOXES SHALL BE EQUIPPED WITH PLASTER RINGS OR COVERS AS REQUIRED. UNITS SHALL BE PRESSED FROM GALVANIZED STEEL. GANGABLE AND THROUGH-WALL TYPES ARE NOT ACCEPTABLE.

B. OUTLET BOXES FOR WET AND EXPOSED LOCATION SHALL BE CAST METAL TYPE FS UNITS WITH GASKETED COVER.

C. JUNCTION AND PULLBOXES SHALL BE FABRICATED FROM 16 GAUGE OR HEAVIER GALVANIZED SHEET STEEL WITH A GREY ENAMEL FINISH, EXCEPT WHERE MOUNTING SURFACES ARE A DIFFERENT COLOR. PAINT TO MATCH IN THOSE CASES. FULL ACCESS FLUSH OR SURFACE SCREW COVERS SHALL BE FURNISHED AS REQUIRED. COVER RETENTION SHALL BE BY CORROSION RESISTANT MACHINE SCREWS. BOX SIZE SHALL BE PER 2004 CEC ARTICLE 314.

PART 3 – EXECUTION

3.1 OUTLET BOXES, JUNCTION BOXES AND PULL BOXES

A. BLANKING COVERS SHALL BE INSTALLED ON UNUSED OPENINGS.

B. BOXES SHALL HAVE SUFFICIENT VOLUME PER 2004 CEC ARTICLE 314 TO ACCOMMODATE CONDUCTORS, AND FITTINGS IF USED.

C. OUTLET BOXES SHALL BE OF A TYPE APPROPRIATE FOR THE USE AND LOCATION. THEY SHALL BE SECURELY AND RIGIDLY ATTACHED OR SUPPORTED PLUMB, LEVEL AND TRUE. OUTLET BOX SUPPORTS, HANGERS OR BRACKETS WHEN USED SHALL BE OF A TYPE DESIGNED OR SUITABLE FOR THE TYPE OF BOX USED AND THE BUILDING STRUCTURAL MEMBER TO WHICH ATTACHED. IN DETERMINING THE TYPE OF SUPPORT OR FASTENER, CONSIDERATION MUST BE GIVEN TO THE LOAD CAUSED BY ANY DEVICE OR EQUIPMENT, SUCH AS LIGHTING FIXTURES, WHICH ARE IN TURN SUPPORTED BY THE OUTLET BOX.

D. OUTLET BOXES FOR SWITCHES SHALL BE MOUNTED WITH THE LONG AXIS VERTICAL. BOXES FOR RECEPTACLES SHALL BE MOUNTED EITHER VERTICALLY OR HORIZONTALLY BUT CONSISTENT EITHER WAY. THREE OR MORE GANG BOXES SHALL BE MOUNTED WITH THE LONG AXIS HORIZONTAL. THE BOXES SHALL BE SO LOCATED THAT THE COVERS OR DEVICE PLATES WILL NOT SPAN DIFFERENT TYPES OF BUILDING FINISHES EITHER VERTICALLY OR HORIZONTALLY. BOXES FOR SWITCHES NEAR DOORS SHALL BE LOCATED ON THE SIDE OPPOSITE THE HINGE AND CLOSE TO THE DOOR TRIM.

E. JUNCTION AND PULL BOXES SHALL BE USED WHERE NECESSARY TO FACILITATE THE INSTALLATION OF RACEWAY AND PULLING OF WIRE OR CABLE. CONSIDERATION SHALL BE GIVEN TO THE SIZE AND NUMBER OF CONDUCTORS, NUMBER OF BENDS IN THE RACEWAY, CHANGE IN DIRECTION OF THE RACEWAY OR CONDUCTORS AND THE NEED FOR SUPPORT OF CONDUCTORS IN VERTICAL RACEWAYS. THEY SHALL BE OF A TYPE INTENDED OR SUITABLE FOR THE USE AND LOCATION. THEY MAY BE CATALOG ITEMS OR CUSTOM DESIGNED AND FABRICATED TO MEET THE PARTICULAR REQUIREMENTS.

F. JUNCTION AND PULL BOXES SHALL BE FIRMLY AND SECURELY FASTENED TO OR SUPPORTED FROM THE BUILDING STRUCTURE OR STRUCTURAL MEMBER. IN DETERMINING THE TYPE OF FASTENER, HANGER OR SUPPORT, CONSIDERATION MUST BE GIVEN TO THE LOAD CAUSED BY ANY CONDUCTORS SUPPORTED BY THE BOX AND ANY LOAD THAT MIGHT BE CAUSED BY EXTERNAL FORCES. KNOCKOUTS FOR RACEWAYS ENCLOSING THE SAME CONDUCTORS SHALL BE ARRANGED TO PROVIDE THE LONGEST SWEEP OR RADIUS FOR THE CONDUCTORS. SEE TABLE FOR RACEWAY SPACINGS.

G. JUNCTION AND PULLBOXES SHALL BE READILY ACCESSIBLE.

H. BOX DIMENSIONS SHALL BE IN ACCORDANCE WITH SIZE AND QUANTITY OF CONDUCTORS AND CONDUITS ENTERING AND LEAVING THE BOX PER 2004 CEC ARTICLE 314 REQUIREMENTS.

END OF SECTION

SECTION 16250

AUTOMATIC TRANSFER

PART 1 – GENERAL

1.01DESCRIPTION

A. Scope:
1. Furnish one complete automatic transfer switch switch in a NEMA 3R
2. Field testing is included.

B. Related Work Described Elsewhere:
1. Raceways and Fittings in Section 16110.
2. Conductors and Terminations in Section 16120..

1.02 QUALITY ASSURANCE

A. Standards:
1. The automatic transfer switches shall conform to applicable requirements of:
a. The Underwriter's Laboratories, Inc. (UL). Particularly UL-1008.
b. Joint Industry Council Standards (JIC).
c. The American Standards Institute (ANSI).
d. The National Electrical Manufacturer's Association (NEMA).
e. Federal Specifications.
B. Codes:
1. See Section 16010.

1.03 PRODUCT HANDLING

A. In the event of raceway damage, the Contractor shall immediately make all necessary repairs and replacements to the approval of the (Architect) (Engineer) and at no additional cost to the Owner.

1.04 INTENT OF DRAWINGS

A. Exact conduit locations are not shown unless specifically dimensioned or noted. One-line and riser diagrams are schematic and do not show physical arrangement of equipment unless specifically noted.

PART 2 – PRODUCTS

2.01 GENERAL

A. The automatic transfer switch (ATS), shall be mounted in a freestanding enclosure, as shown on the plans, and bussed together with copper bus to provide a complete and pretested assembly. Aluminum bus and/or cable interconnections are not acceptable. Construction shall be such that the Contractor need install only the power and control connections. Include a thermostatically controlled strip heater in this section. number.

2.02 AUTOMATIC TRANSFER SWITCH

A. Rating:
1. The automatic transfer switch ratings shall be as shown on the drawings. The complete switch assembly shall be listed under UL-1008 for use on emergency systems.

B. Construction and Performance:
1. The transfer switch shall be double throw, actuated by a single electrical operator, momentarily energized; and connected to the transfer mechanism by a simple over-center-type-linkage with a total transfer time not to exceed 1/2 second. The transfer switch shall be capable of transferring successfully in either direction with 70% of rated voltage applied to the switch terminals.
2. The normal and emergency contacts shall be positively interlocked mechanically and electrically to prevent simultaneous closing. Main contacts shall be mechanically locked in position in both the normal and emergency positions without the use of hooks, latches, magnets or springs and shall be silver-tungsten alloy. Separate arcing contacts, with magnetic blowouts, shall be provided on all transfer switches. Interlocked molded case circuit breakers or contactors are not acceptable. The transfer switch shall be equipped with a permanently attached safe manual operator designed to prevent injury to operating personnel. The manual operator shall provide the same contact-to-contact transfer speed as the electrical operator to prevent a flashover from switching the main contacts slowly.

C. Sequence of Operation:
1. Engine starting contacts shall be provided to start the generating plant should the voltage of the normal source drop below 80% on any phase after an adjustable time delay of 0.5-3 seconds to allow for momentary dips. The transfer switch shall transfer to emergency when 90% of rated voltage and frequency has been reached. After restoration of normal power on all phases to 90% of rated voltage, and adjustable time delay period of zero to 25 minutes shall delay retransfer to allow stabilization of normal power. If the emergency power source should fail during this time delay period, the switch shall automatically return to the normal source. After retransfer to normal, the engine-generator shall be allowed to operate at no load for a period of 5 minutes. A test switch shall be included to simulate normal power failure, and pilot lights shall be mounted on the cabinet door to indicate the switch position. Two auxiliary contacts rated 25 ampere, 120 volts shall be mounted on the main shaft; one closed on normal, the other closed on emergency. In addition, one set of relay contacts shall be provided to open upon loss of the normal power supply. All relays, timers, control wiring and accessories shall be front accessible. All control wire terminations are to be identified by tubular sleeve-type markers.
2. The automatic transfer switch shall include the following accessories:

a. Accessory
b. Number Function
c. 1d Time Delay to override momentary normal source power outages. To delay engine start signal and transfer switch operation. Adjustable 0.5 – 3 seconds, factory set at 3 seconds.
d. 3c Time Delay on retransfer to normal. Motor driven type adjustable 0 – 25 minutes, factory set at 5 minutes with engine overrun to provide fixed 5 minute unloaded engine operation after retransfer to normal.
e. 5a Load Test Switch to simulate normal power failure. (Maintained Type).

2.03 Contact to close on failure of normal source to initiate engine starting or other customer functions.

2.04 Contact to open on failure of normal source to initiate engine starting or other customer functions.

a. 9a Green Pilot Light to indicate switch in normal position.
b. 9b Red Pilot Light to indicate switch in emergency position.
c. 14a Auxiliary Contact closed in normal position.
d. 14b Auxiliary Contact closed in emergency position.

2.05 Adjustable Relay to prevent transfer to emergency until voltage and frequency of generating plant have reached acceptable limits. Factory set at 90% of rated value.

A. Approval:
1. As a precondition for approval, the manufacturer of the automatic transfer switch shall verify that his switch is listed by Underwriter's Laboratories, Inc., Standard UL-1008 with withstand and close-in values at least equal to the interrupting rating of the circuit breaker and/or fuse that is specified to protect the circuit.
2. When coordinated with circuit breakers, the automatic transfer switch shall have the following short circuit withstand capability:

Switch Ampere Rating	ATS Coordinated with Molded Case Circuit Breakers
225 – 800	50,000

3. During the Withstand Tests there shall be no contact welding or damage. The tests shall be performed on identical samples without the use of current limiting fuses. Oscillograph traces across the main contacts shall verify that contact separation has not occurred. Test procedures shall be in accordance with UL-1008 and testing shall be certified by Underwriter's Laboratories or any nationally recognized independent testing laboratory.
4. When conducting temperature rise tests to UL-1008, the manufacturer shall include post-endurance temperature rise tests to verify the ability of the transfer switch to carry full rated current after completing the overload and endurance tests.
5. The automatic transfer switch shall be ASCO 700 Series.

2.06
C. Manufacturer:
1. Combination automatic transfer switch shall be Asco 700 Series..

**END

SECTION 16210 – DIESEL POWERED GENERATOR SETS

PART 1 – GENERAL

1.01DESCRIPTION

A. SCOPE:
1. FURNISH NEW DIESEL POWERED GENERATOR SET.

B. RELATED WORK DESCRIBED ELSEWHERE:
1. CONDUIT AND FITTINGS IN SECTION 16110.
2. CONDUCTORS AND TERMINATIONS IN SECTION 1612

1.02 QUALITY ASSURANCE

A. STANDARDS:
1. IN ADDITION TO COMPLYING WITH PERTINENT STANDARDS, COMPLY WITH PERTINENT RECOMMENDATIONS CONTAINED IN THE FOLLOWING:
a. THE NATIONAL ELECTRICAL MANUFACTURER'S ASSOCIATION (NEMA).
b. THE UNDERWRITER'S LABORATORIES, INC. (UL).

B. CODES:
1. SEE SECTION 16010.
2. NATIONAL FIRE PROTECTION ASSOCIATION PUBLICATION NFPA-110.

PART 2 – PRODUCTS

2.01 DIESEL GENERATOR SET

A. GENERAL REQUIREMENTS:
1. IT IS THE INTENT OF THIS SPECIFICATION TO SECURE AN EMERGENCY GENERATOR SYSTEM THAT HAS BEEN PROTOTYPE TESTED, FACTORY BUILT, PRODUCTION TESTED, SITE TESTED, OF THE LATEST COMMERCIAL DESIGN, TOGETHER WITH ALL ACCESSORIES NECESSARY FOR A COMPLETE INSTALLATION AS SHOWN ON THE PLANS AND DRAWINGS, AND SPECIFIED HEREIN. THE EQUIPMENT SUPPLIED AND INSTALLED SHALL MEET THE REQUIREMENTS OF THE CALIFORNIA ELECTRICAL CODE, ALONG WITH ALL APPLICABLE CODES AND REGULATIONS. EQUIPMENT SHALL BE NEW, OF CURRENT PRODUCTION OF A NATIONAL FIRM WHICH MANUFACTURES THE GENERATOR(S) AND CONTROLS, TRANSFER SWITCH(ES), AND ASSEMBLES THE GENERATOR SET(S) AS MATCHED UNITS, SO THAT THERE IS ONE-SOURCE RESPONSIBILITY FOR WARRANTY, PARTS, AND SERVICE THROUGH A LOCAL REPRESENTATIVE WITH FACTORY-TRAINED SERVICEMEN.

B. SUBMITTAL:
1. SUBMITTAL SHALL INCLUDE PROTOTYPE TEST CERTIFICATION AND SPECIFICATION SHEETS SHOWING ALL STANDARD AND OPTIONAL ACCESSORIES TO BE SUPPLIED, SCHEMATIC WIRING DIAGRAMS, DIMENSION DRAWINGS, AND INTERCONNECTION DIAGRAMS IDENTIFYING BY TERMINAL NUMBER, EACH REQUIRED INTERCONNECTION BETWEEN THE GENERATOR SET AND THE TRANSFER SWITCH.

C. TESTING:
1. TO ASSURE THAT THE EQUIPMENT HAS BEEN DESIGNED AND BUILT TO THE HIGHEST RELIABILITY AND QUALITY STANDARDS, THE MANUFACTURER AND LOCAL REPRESENTATIVE SHALL BE RESPONSIBLE FOR THREE SEPARATE TESTS: DESIGN PROTOTYPE TESTS, FINAL PRODUCTIONS TESTS, AND SITE TESTS.
a. MAXIMUM POWER (KW).
b. MAXIMUM MOTOR SETTING (KVA) AT 30% INSTANTANEOUS VOLTAGE DIP.
c. ALTERNATOR TEMPERATURE RISE BY EMBEDDED THERMO-COUPLE AND BY RESISTANCE METHOD PER NEMA MG1-22.40 AND 16.40.
d. GOVERNOR SPEED REGULATION UNDER STEADY-STATE AND TRANSIENT CONDITIONS.
e. VOLTAGE REGULATION AND GENERATOR TRANSIENT RESPONSE.
f. FUEL CONSUMPTION AT 1/4, 1/2, 3/4, AND FULL LOAD.
g. HARMONIC ANALYSIS, VOLTAGE WAVEFORM DEVIATION, AND TELEPHONE INFLUENCE FACTOR.
h. THREE-PHASE SHORT CIRCUIT TESTS.
i. ALTERNATOR COOLING AIR FLOW.
j. TORSIONAL ANALYSIS TESTING TO VERIFY THAT THE GENERATOR SET IS FREE OF HARMFUL TORSIONAL STRESSES.
k. ENDURANCE TESTING.
l.
d. FINAL PRODUCTION TESTS: THE GENERATOR SET SHALL BE TESTED UNDER VARYING LOADING WITH GUARDS AND EXHAUST SYSTEM IN PLACE. TESTS SHALL INCLUDE:
a. SINGLE-STEP LOAD PICKUP.
b. TRANSIENT AND STEADY-STATE GOVERNING.
c. SAFELY SHUTDOWN DEVICE TESTING.
d. VOLTAGE REGULATION.
e. RATED POWER.
f. MAXIMUM POWER.
g. UPON REQUEST, ARRANGEMENTS TO EITHER WITNESS THIS TEST WILL BE MADE OR CERTIFIED TEST RECORD WILL BE SENT PRIOR TO SHIPMENT.
h.
e. SITE TESTS: AN INSTALLATION CHECK, START-UP, AND BUILDING LOAD TEST SHALL BE PERFORMED BY THE MANUFACTURER'S LOCAL REPRESENTATIVE. THE ENGINEER, REGULAR OPERATORS, AND THE MAINTENANCE STAFF SHALL BE NOTIFIED OF THE TIME AND DATE OF THE SITE TEST. THE TESTS SHALL INCLUDE:
a. FUEL, LUBRICATING OIL AND ANTIFREEZE SHALL BE CHECKED FOR CONFORMITY TO THE MANUFACTURER'S RECOMMENDATIONS, UNDER THE ENVIRONMENTAL CONDITIONS PRESENT AND EXPECTED.
b. ACCESSORIES THAT NORMALLY FUNCTION WHILE THE SET IS STANDING BY SHALL BE CHECKED PRIOR TO CRANKING THE ENGINE. THESE SHALL INCLUDE: BATTERY CHARGER, BLOCK HEATER, GENERATOR STRIP HEATERS, ETC.
c. START-UP UNDER TEST MODE TO CHECK FOR EXHAUST LEAKS, COOLING AIR FLOW, MOVEMENT DURING STARTING AND STOPPING VIBRATION DURING RUNNING, NORMAL AND EMERGENCY LINE-TO

m. ACCESSORIES:
a. THE FOLLOWING ACCESSORIES SHALL BE SHIPPED LOOSE:
a. BATTERY RACK, BATTERY CABLES, 12–VOLT BATTERY, COLD CRANKING PERFORMANCE OF 630 AMPERES SHALL BE SUPPLIED DRY, ALONG WITH SEPARATE ELECTROLYTE WHICH WILL BE ADDED JUST PRIOR TO START–UP. BATTERIES SHALL BE MOUNTED INSIDE GENERATOR SET WEATHERPROOF HOUSING.
b. 10–AMPERE AUTOMATIC FLOAT BATTERY CHARGER WITH CONSTANT VOLTAGE REGULATION, CURRENT LIMITING CAPABILITY, CRANKING DISCONNECT RELAY, TEMPERATURE COMPENSATED FOR AMBIENTS FOR –20DEGREES F, VOLTMETER AND AMMETER. CHARGER SHALL BE MOUNTED INSIDE GENERATOR SET WEATHERPROOF HOUSING.
c. GASPROOF, SEAMLESS, STAINLESS STEEL, FLEXIBLE EXHAUST CONNECTION, AND ENGINE EXHAUST SILENCER RATED FOR CRITICAL APPLICATION. EXHAUST NOISE SHALL BE LIMITED TO 85DBA AS MEASURED AT 10 FEET IN A FREE–FIELD ENVIRONMENT.
d. TWO FLEXIBLE FUEL LINES.
e. 660 GALLON BASE TANK MOUNTED UNDER GENERATOR SET. (TANK SHALL BE FULL OF NO. 2 DIESEL FUEL AFTER FIELD TESTS.)
f. THERMOSTATICALLY CONTROLLED OUTER HEATER FOR ENGINE BLOCK.
g. REMOTE ANNUNCIATION PANEL TO INDICATE THE FOLLOWING:
h. NORMAL POWER ON (GREEN LIGHT).
h. EMERGENCY POWER ON (RED LIGHT).
h. BATTERY CHARGER OFF (AMBER LIGHT).
h. SONALERT TO AUDIBLY INDICATE BATTERY CHARGER OFF.
h. SILENCE SWITCH FOR AUDIBLE SIGNAL.

END OF SECTION 16210

SECTION 16440

DISCONNECT SWITCHES

PART 1 – GENERAL

1.01DESCRIPTION

A. Scope:
1. Furnish new disconnect switches.

B. Related Work Described Elsewhere:
1. Conduit and fittings in Section 16110.
2. Conductors and Terminations in Section 16120.

1.02 QUALITY ASSURANCE

A. Standards:
1. In addition to complying with pertinent standards, comply with pertinent recommendations contained in the following:
a. The National Electrical Manufacturer's Association (NEMA).
b. The Underwriter's Laboratories, Inc. (UL).

B. Codes:
1. See Section 16010.

PART 2 – PRODUCTS

2.01 DISCONNECT SWITCHES

A. General:
1. Switch assemblies shall be heavy duty types complying with UL–98. Standard for safety, enclosed and dead front switches and NEMA publication K51–1983, enclosed switches.
2. Switches shall have a built–in interlock by–pass. Switches shall have a provision to padlock the switch in the "off" position.
3. Highly visible on–off markings shall clearly indicate the position of the switch.
4. Fusible switches shall contain Class R fuse kits to prohibit insertion of all fuse types other than Class R.
5. Switches shall include a field installable grounding kit.
6. Switches shall be rated for the voltage to which they are connected and they shall be horsepower rated.
7. Switches shall have a NEMA rating of 1 (for indoor applications), 3R (for outdoor applications) and NEMA 4X (for corrosive atmospheres).
8. General duty switches are not acceptable.
9. Switches shall be Eaton Type DH(OSP–0012–10).

PART 3 – EXECUTION

3.01 DISCONNECT SWITCHES

A. Install isolation switches within sight of the equipment to be disconnected and preferably at the equipment involved.

B. If fusible switches are called for, make certain the proper size and type of fuse indicated on the Drawings is installed.

END OF SECTION 16440

SECTION 16425

SWITCHBOARD

PART 1 – GENERAL

1.01DESCRIPTION

A. Scope:
1. Furnish new main switchboard.

B. Related Work Described Elsewhere:
1. Conduit and fittings in Section 16110.
2. Conductors and Terminations in Section 16120.

1.02 QUALITY ASSURANCE

A. Standards:
1. In addition to complying with pertinent standards, comply with pertinent recommendations contained in the following:
a. The Western Utilities Electric Service Standardization Committee (WJESSC).
b. The National Electrical Manufacturer's Association (NEMA).
c. The Underwriter's Laboratories, Inc. (UL).

B. Codes:
1. See Section 16010.

PART 2 – PRODUCTS

2.01 MAIN SWITCHBOARD

A. Furnish the switchboard as herein specified and shown on the associated electrical drawings. The switchboard shall meet Underwriters' Laboratories requirements and be furnished with an Underwriters' Laboratories service entrance label.

B. The switchboard shall be totally enclosed, dead front, free standing, front and rear aligned with front accessibility only required. The switchboard shall be NEMA enclosed Type 3R. The framework shall be of UL gauge steel and secured together to support all cover plates, bussing and component devices during shipment and installation. Formed removable closure plates shall be used on the (front), rear and sides. Closure plates are to be single tool, screw removable. Ventilation shall be provided when required. Each section shall include a single–piece removable top plate. Provide a thermostatically controlled strip heater in each section complete with power source to operate it.

C. Painted parts shall be pretreated and provided with a corrosion–resistant, UL Listed acrylic baked paint finish. The paint color shall be #49 medium light gray per ANSI standard Z55.1–1967.

D. The entire switchboard shall be suitable for operation at the specified available fault current. The switchboard shall be labeled to indicate the maximum available fault current rating, taking into account the structure, bussing, switchboard main disconnect, and switchboard branch circuit devices. The short circuit current rating of the switchboard shall not be less than 50,000 RMS symmetrical amperes. The switchboard branch circuit devices short circuit current rating shall be fully rated.

E. The switchboard shall contain ground fault for the main overcurrent device in accordance with CEC 230–95 if the service is a solidly grounded wye rated for 1000 amperes or more at 150 volts or more to ground.
1. If the switchboard serves a health care facility covered by Article 517 of the CEC, two levels of ground fault shall be provided in accordance with Article 517–17 of the CEC.

F. The switchboard through–bus shall be tin plated aluminum. The switchboard bussing shall be of sufficient cross sectional area to meet UL Standard 891 for temperature rise. The through bus shall have a maximum ampacity as noted on plans and shall extend the full length of the switchboard. The through bus shall be 100% rated. Provisions shall be provided for future splicing of additional sections from either end. The neutral bus shall be 100% rated.
1. Each switching and protective device shall be provided with visible means of ON–OFF identification. Terminals shall be of the anti–turn solderless type suitable for UC or AL cable of sizes indicated.
2. A–B–C type bus arrangement, left–to–right, top–to–bottom, and front–to–rear, as viewed from the front, shall be used throughout.
3. Submittal drawings shall be furnished providing the following information: switchboard voltage/current ratings, overall outline dimensions including available conduit space, switching and protective device ampere ratings and positions of same, and one line diagram.
4. The switchboard distribution section bus shall be of the same material as the through bus and shall be rated the same as the through bus. The distribution section neutral plate shall be of copper provided with Cu/Al lugs for the devices installed and future specified devices.
5. A ground bus shall be furnished firmly secured to each vertical section structure and shall extend the entire length of the switchboard. A ground lug shall be furnished attached to the ground bus in a convenient location.
6. Ground rods at the main switchboard shall be copper clad cone pointed steel rods 5/8" diameter by 8 foot long except where noted otherwise. The rod heads shall be chamfered. The copper exterior shall be molten welded to the steel core. Ground rod fittings shall be Thomas and Betts compression fittings applied with a motor driven hydraulic compressing tool.

G. The switchboard utility metering compartment shall be located in the service entrance section of the switchboard and connected for hot sequence metering. The utility metering compartment shall comply with PG&E requirements.

H. The main disconnect device shall be a molded case circuit breaker rated for 80% duty.

I. The switchboard group–mounted circuit breaker branch devices are to be totally front accessible and front connectable. The circuit breaker connections to the distribution panel bussing shall be of a "blow–on" design such that the connections grip the bus bars firmly under high–fault conditions. Circuit breakers shall be rated for (30) KAIC minimum.
1. Small wiring, necessary fuse blocks and terminal blocks within the switchboard shall be furnished when required. All groups of control wires leaving the switchboard shall be provided with terminal blocks with suitable numbering strips. All hardware used on conductors shall have a high tensile strength and an anti–corrosive zinc plating.

J. The switchboard shall be separated into shipping blocks. Each switchboard section shall be capable of being handled individually with the use of removable lifting bars or rollers and be clearly labeled with proper handling procedures.
1. Switchboard sections shall be capable of being joined at the job site with the use of internal splice bars. These splice bars shall be preassembled onto the through bus and not shipped loose in a splice bar kit.
2. The through bus splice bars shall utilize two bolts, one on each side of the shipping split, for each phase. Conical washers shall be used to provide a constant pressure once the proper torque is achieved. The through bus splice connection shall be capable of being maintained by the use of a single tool and shall be from accessible.

K. 1/8" thick Laminated nameplates shall be installed for each circuit breaker. Nameplates shall be fastened to switchboard with rivets, and have a black background with engraved 1/4" high white letters indicating the function of each circuit breaker.

L. Factory Assembly and Tests:
1. The switchboard shall be completely assembled, wired, adjusted and tested at the factory. After assembly, the complete switchboard will be tested for operation under simulated service conditions to assure the accuracy of the wiring and the functioning of all equipment.
2. The main circuits shall be given a dielectric test of 2200 volts for one minute between live parts and ground, and between opposite polarities. The wiring and control circuits shall be given a dielectric test of 1500 volts for one minute between live parts and ground.

M. The switchboard shall be Eaton Pow–R–Line C or equal. It shall be approved by the serving utility company.

PART 3 – EXECUTION

3.01 MAIN SWITCHBOARD

A. Sections of switchboard shall be firmly bolted together.

B. The interiors of all sections shall be clean. Scrap wire, parts and debris shall be removed.

C. Paint scratched exterior surfaces.

D. The entire switchboard line–up shall be installed on a concrete housekeeping pad per the drawings. The width and length of the pad shall exceed the width and length of the switchboard line–up by 6 inches. Fasten switchboard to the pad per the drawings.

Summary: The City Council will conduct a noticed quasi-legislative public hearing to review a proposed Environmental Impact Report ("EIR") for a project at the City of Ukiah's solid waste landfill called a Closure and Post-Closure Maintenance Plan ("the Plan"). The Plan calls for the use of an artificial cover to prevent water intrusion into the formerly active portion of the landfill, among other measures in compliance with state regulatory requirements for the closure of solid waste landfill disposal sites. The City Council is being asked to conduct the hearing and to certify the EIR as adequate and complete in compliance with the California Environmental Quality Act ("CEQA") and to approve the Plan.

Background: The City has not used the Ukiah landfill solid waste disposal site since it began using the Taylor Drive solid waste transfer station in 2001. The 40-acre active landfill site is located within the 283.5 acre parcel located at 3100 Vichy Springs Road and also known as Mendocino County Assessor's Parcel No. 178-130-01.

State regulations require a closed landfill to be covered to prevent water intrusion and to have installed a methane gas collection system to prevent the release of methane, a greenhouse gas, produced by decomposing solid waste. These improvements and post-closure maintenance requirements are contained in the proposed Closure and Post-Closure Maintenance Plan (the "Plan," attached as Attachment 1), which must be approved by CalRecycle and the North Coast Regional Water Quality Control Board ("Regional Board").

The standard cover uses a four-foot deep compacted clay layer overlaid with two feet of soil and grass seeding ("Standard Cover"). Alternatives are permitted if they perform as well as or better than the Standard Cover. The City has proposed, and both CalRecycle and the Regional Board have found that, the use of an

alternative cover for the Ukiah Landfill, consisting of a synthetic tufted geotextile called the ClosureTurf® Final Cover System, manufactured by Watershed Geosynthetics (“ClosureTurf”), satisfies regulatory requirements. ClosureTurf consists of a structured membrane with studs to prevent slippage (referred to as Super Gripnet or SGN), an engineered turf to resemble grass, and sand infill to protect the engineered turf and underlying components. From top to bottom, the system consists of the following components:

- Minimum 5/8-inch-thick sand infill layer.
- Specialized tufted geotextile (Engineered Turf)
- 50 mil linear low-density polyethylene (LLDPE) geomembrane liner (Super Gripnet® with Spike Down)
- Minimum 2-foot-thick soil foundation layer

The City, acting as the Lead Agency under CEQA, arranged for the completion of a draft Environmental Impact Report ("DEIR") for this project (attached as Attachment 2) and closed the 45-day public comment period on January 9, 2020. As required by CEQA, responses to comments on the DEIR received during the 45day public comment period have been prepared and are contained in a proposed Final EIR ("FEIR," attached as Attachment 3). Collectively the DEIR (Attachment 2) and FEIR (Attachment 3) are referred to as the EIR.

During the 45-day DEIR public review period the City received a total of four (4) comment letters on the DEIR. The comment letters consist of a letter from CalRecycle (labelled in the FEIR letter “A”), a letter from the North Coast Regional Water Quality Control Board (labelled letter “B”), and two letters from Vichy Springs Resort (labelled letters “C” and “D”).

The responses to the comment letters are contained in Chapter 3 of the FEIR (pages 3-1 to 3-17). The revisions to the DEIR made in response to the comments are contained in Chapter 4 (pages 4-1 to 4-14). A table found on page 2-1 in Chapter 2 of the FEIR contains the letter designation for each comment letter. Each comment in each letter is assigned a number (e.g., B-1 in the Regional Board letter (B) is the first comment to which the FEIR responds).

A notice of hearing on the EIR for the August 5, 2020, City Council meeting was published in the Ukiah Daily Journal on July 14, 2020, and notice of the hearing was also emailed to all parties who submitted comments on the DEIR to comply with the 10 day notice publication requirement in the City’s locally adopted CEQA Guidelines and with the requirement in the State’s CEQA Guidelines to give notice to those who submitted timely comments on the DEIR.

This hearing was originally noticed for May 20, 2020. On May 15, 2020, lawyers for Vichy Springs Resort, Russian River Keepers and the Mateel Environmental Justice Foundation submitted a 41 page document, not counting attached exhibits, entitled: CEQA Non-Compliance For City of Ukiah’s Environmental Impact Report (“FEIR”) for Landfill Closure Plan (“EIR Objections”). (A copy of the EIR Objections is attached as Attachment 4.) Neither Russian River Keepers nor Mateel Environmental Justice Foundation submitted comments on the DEIR during the public comment period. In addition to reprising objections by Vichy Springs to the DEIR and criticizing the response to comments in the FEIR, the EIR Objections claim for the first time that the use of ClosureTurf poses risks in a wildfire, including the potential release of toxic chemicals, and also adverse water quality impacts that they assert should have been addressed in the DEIR.

Because of the voluminous nature of the materials submitted in the EIR Objections, the City Attorney recommended delaying the hearing scheduled for May 20 which is now rescheduled for August 5. (See May

19, 2020 memorandum from the City Attorney to the City Council, attached as Attachment 5.) In preparation for the August 5 hearing, the City Attorney arranged for an independent environmental consulting firm not involved in the preparation of the DEIR or the FEIR to review and respond to all the issues raised in the EIR Objections.

The consultant, Environmental Science Associates (ESA), was instructed to carefully consider the EIR Objections and the additional materials submitted. ESA has no pride of authorship or reason to defend the DEIR or FEIR. Its sole role was to exercise its professional judgment in evaluating the claimed CEQA violations and the additional materials submitted with the CEQA Objections to determine whether they provide evidence of the claimed additional adverse impacts of ClosureTurf or demonstrate that the EIR findings are not supported by substantial evidence and the requirements of CEQA. The results of that evaluation are set forth in a Memorandum in Response to Comments on the Environmental Impact Report for the City of Ukiah Landfill Closure Plan ("ESA Memo") prepared by Luke Evans, Senior Managing Associate, attached as Attachment 6. Exhibits to the ESA Memo, containing additional evidence considered by Mr. Evans, is contained in the attached Attachment 7.

Discussion: The purpose of the hearing is for the City Council to determine whether to certify the Landfill Closure Plan EIR as adequate and complete and if so, whether to approve the Plan. At the hearing, the City Council should consider a presentation by SMB Environmental addressing the EIR and its analysis of the environmental impacts of the Plan. City staff will provide information and answer City Council questions about the Closure and Post-Closure Maintenance Plan, including how the Plan satisfies regulatory requirements. Before making any decisions, the Council should also consider written comments from members of the public received prior to or during the hearing, testimony or arguments from members of the public during the hearing and the analysis and advice of staff and consultants.

The EIR finds that there are no significant adverse environmental impacts from the Plan that cannot be avoided or substantially reduced to a less than significant impact. It finds that ClosureTurf artificial cover with artificial grass turf has no significant adverse environmental impacts, including to aesthetics or viewsheds, and is superior to a Standard Cover both based on its environmental impacts as compared to the impacts of the Standard Cover and in achieving the project's objectives. It is also substantially less costly than use of the Standard Cover.

The comments from Vichy Springs dispute these findings. The response to those comments are set forth in Chapter 3 of the FEIR at pages 3-5 to 3-14 and 3-14 to 3-17.

The FEIR revises the DEIR to make relatively minor changes shown in redline/strikeout format at pages 4-1 to 4-33 in response to the comments received during the public comment period and in a separate section 4.2.2 at pages 4-24 to 4-30, to compare the use of ClosureTurf with the natural clay cover.

Among the response to comments, the FEIR compared the Standard Cover to the ClosureTurf cover in terms of performance, installation, maintenance and cost. Given that use of ClosureTurf is the primary source of Vichy Springs' opposition to the EIR, that comparison is summarized as follows.

Based on Joint Technical Documents ("JTDs") prepared by EBA Engineers on behalf of the City and submitted to CalRecycle and the Regional Board in 2008, 2013 and 2015, the EIR compared using ClosureTurf rather than the Standard Cover in terms of performance, installation, maintenance and cost. It found as follows:

1. Performance

- ClosureTurf exhibits substantially lower water infiltration rates as compared to clay and offers more

efficient removal of moisture, thereby reducing the amount of potential water infiltration into decomposing landfill material, which is the primary purpose of a final landfill cover.

- The engineered turf component eliminates the potential for soil creep and veneer failures resulting from saturation of the vegetative soil cover that is a required component of the clay cover. This potential for soil creep and veneer failure is exacerbated by the very steep 2:1 slope that exists at the Ukiah Landfill.

- The drainage aspects of the ClosureTurf are designed to allow rainfall to penetrate rapidly through the sand infill layer and into the structured drain liner below which water drains rapidly for subsequent conveyance of the water off of the liner system. The sand infill has been demonstrated to handle over six inches per hour of rainfall intensity without erosion when applied on 3:1 vertical slopes. The Ukiah landfill has a 2:1 slope. Such rainfall energy conditions on a traditional vegetative soil cover would likely result in significant damage from erosion.

- The drainage aspects of the ClosureTurf promote very "clean" and low turbidity stormwater run-off, which represents a beneficial feature since the collected run-off is subsequently discharged to the ephemeral creek that borders the northern boundary of the landfill. Achieving comparable stormwater run-off quality from a traditional vegetative soil cover would be difficult.

- ClosureTurf is designed to provide weathering resistance and geomembrane protection when exposed to extreme heat and ultra-violet exposure. Based on results of independent, real-world weathering tests and data from existing projects, ClosureTurf® can provide decades of reliable performance beyond the standard 30-year post-closure maintenance period.

2. Installation

- EBA concluded that installation of ClosureTurf deployment is very straightforward both from a placement and seaming standpoint. Furthermore, heavy equipment requirements for ClosureTurf deployment are limited primarily to a rubber-tire forklift or equivalent. Conversely, clay cover construction is very labor intensive with substantial reliance on heavy equipment (i.e., scrapers, dozers, compactors, etc.)

- Less construction quality assurance (CQA) is required for ClosureTurf due to the consistency of the materials and manufacturing process. CQA testing for a clay cover, in turn, is more extensive and occurs at a higher frequency to verify the consistency of borrow source materials and the contractor's ability to achieve moisture content, compaction, and hydraulic conductivity during construction.

- Installation of a sealed, double-ring infiltrometer is required to test the field permeability of a clay cover, which is costly and time consuming. Such testing is not required for ClosureTurf.

- In comparison to other geosynthetic liner systems, ClosureTurf is slightly more labor intensive due to the placement of the sand infill layer. However, this increased labor is more than offset by the elimination of the vegetative soil layer used for the Standard Cover. Similar to the construction of the Standard Cover, construction of a vegetative soil layer over a geosynthetic liner is also labor intensive with substantial reliance on heavy equipment. In addition, the methane gas relief layer material and labor requirements required for the installation of the methane gas collection system are significantly greater using the Standard Cover as compared to the use of ClosureTurf. Thus, the ClosureTurf final cover system installation represents the least intensive approach from an installation standpoint.

3. Maintenance

According to the EBA JTD Addendum No. 2 ClosureTurf offers a significant maintenance advantage over the Standard Cover and any other traditional geosynthetic cover systems that require a vegetative soil cover. In essence, vegetative soil covers often require regular maintenance related to the repair of erosion, installation of erosion control measures (i.e., silt fences, hay bales, wattles, etc.), slope repairs, and revegetation. Erosion from the vegetative soil cover also causes siltation of drainage ditches and culverts that require subsequent repair. Such provisions are not required with the ClosureTurf product, thereby providing a significant cost savings over the course of the post-closure maintenance period.

4. Cost

As required by state regulations EBA prepared an economic analysis as part of its JTD that compared the closure construction costs for ClosureTurf versus a clay based final cover system. The comparison revealed that the construction cost for ClosureTurf was approximately $420,000 less than the Standard Cover prescribed by state regulations. In addition, the 30-year post-closure maintenance costs associated with ClosureTurf were estimated to be approximately $277,000 less than any final cover system that requires an erosion-resistant layer comprised of a vegetative soil cover. Thus, the overall cost savings resulting from replacing the previously proposed GCL final cover system with ClosureTurf is approximately $697,000.

As to the new concerns expressed in the EIR Objections concerning the performance of ClosureTurf in a wildfire and its impact on water quality, the ESA Memo found that ClosureTurf is actually more fire resistant than natural grass and would create a fire break that reduces the impact of wildfire in the area as compared to natural grass. It also found that the materials asserting adverse water quality impacts from artificial turf submitted with the EIR Objections do not apply to ClosureTurf and there is no substantial evidence that ClosureTurf could have adverse water quality impacts. (See discussion of CloverTurf performance in a wildfire and its alleged adverse water quality impacts in the ESA Memo, Attachment 6, at I & II, pages (“pp”) 2-5.) In fact, the water quality impacts of ClosureTurf are superior to the water quality impacts of a clay based finalcover.

A resolution in Attachment 9 adopts the Findings of Fact, attached to this ASR as Attachment 8, which contains the findings of fact that support certification of the EIR in accordance with CEQA requirements.

The ESA Memo (Attachment 6) concluded that the EIR Objections do not contain substantial evidence of additional environmental impacts from ClosureTurf not considered by the EIR or demonstrate that the EIR’s factual determinations are not supported by substantial evidence or a proper analysis of the claimed adverse environmental impacts as required by CEQA. The ESA Memo finds that contrary to the claims in the EIR Objections, the EIR did not fail to analyze a reasonable range of project alternatives (Attachment 6, III, pp. 5-7), did provide an accurate and complete project description (Attachment 6, IV, pp. 7-8), did provide an accurate description of baseline conditions (Attachment 6, V, pp. 5-12), recirculation of the DEIR is not warranted based on the purported new information on ClosureTurf’s performance in a wildfire or its alleged adverse water quality impacts or claimed noise impacts (Attachment 6, VI, pp. 12-13), the EIR did not fail to identify or consider feasible mitigation measures to reduce adverse environmental impacts of the project (Attachment 6, VII, pp. 13-14), substantial evidence in the record does support the environmental impact findings presented in the FEIR (Attachment 6, VIII, pp. 14-16), and recirculation of the DEIR is not warranted due to alleged discrepancies described in the EIR Objections. (Attachment 6, IX, pp. 16-17.)

Andrea Matarazzo of the Pioneer Law Group, who specializes in environmental law with an emphasis on CEQA, was retained by the City to review and advise the City Council on the legal arguments contained in the EIR Objections. A letter expressing her opinion is attached as Attachment 10. She concludes:

ESA's detailed evaluation of the attorneys' comments and the evidence in the City's record as a whole demonstrate that the attorneys' comments identify no fundamental defect or inadequacy in the EIR and present no substantial evidence of a new or substantially more severe environmental impact of the project that would require revision and recirculation of the EIR. (CEQA Guidelines, § 15088, 15088.5.)

In addition to Steve Brown of SMB Environmental and Luke Evans from ESA, City consultants at the hearing will include Andrea Matarazzo.

Recommended Action: Take two actions in the following order: (1) adopt the Resolution attached as Attachment 9, adopting the Statement of Facts (Attachment 8), which makes findings of fact and certifies as complete the final EIR for the Closure and Post-Closure Maintenance Plan; and (2) approve the Closure and Post-Closure Maintenance Plan.(Attachment 1).

CITY OF UKIAH LANDFILL
MENDOCINO COUNTY, CALIFORNIA

SECTION 1
INTRODUCTION

EBA Engineering (EBA) has prepared this Final Closure and Postclosure Maintenance Plan (Final CPMP), City of Ukiah Landfill, Mendocino County, California (herein after referred to as the "Landfill"), for the City of Ukiah (City) in accordance with Title 27 of the California Code of Regulations, Division 2, Subdivision 1. The Landfill is a Class III disposal site that occupies approximately 40 acres of the 283.5-acre site. This Final CPMP was developed to address closure and postclosure maintenance for the entire landfill.

In general, the intent of this Final CPMP is to identify and describe the tasks for closing and maintaining the Landfill in a manner that will protect the public health and safety and the environment. Details of the respective programs are presented herein under Section 2 (*Final Closure Plan*) and Section 3 (*Final Postclosure Maintenance Plan*). This plan also serves as the basis for developing a reasonable estimate of maximum expected costs to close the entire landfill and maintain the landfill during the postclosure maintenance period (30 years). The estimated costs for each of the programs are presented in Section 4 (*Closure and Postclosure Maintenance Cost Estimates*). Finally, Section 5 (*Disbursement Schedule for Closure*) presents a preliminary fund disbursement schedule during implementation the final closure construction activities. As an aid to the reader, references to Title 27 of the California Code of Regulations throughout this report are cited as 27CCR followed by the corresponding section number(s).

A copy of this Final CPMP will be maintained at the City's Department of Public Works office (300 Seminary Avenue, Ukiah, California 95482) throughout the closure and postclosure maintenance period.

1.1 LANDFILL HISTORY AND DEVELOPMENT

The Landfill, which is owned and operated by the City, is located at 3100 Vichy Springs Road, approximately three miles east of Ukiah in Mendocino County, California. Waste disposal operations at the Landfill began in 1955 at the eastern end of the waste management unit (WMU) footprint and progressed upslope and westward. During the 1970's, the unnamed ephemeral creek was realigned northward to maximize the available fill area, and a soil berm was constructed along the toe of the WMU to separate the waste from the realigned creek channel. The method of operation during the Landfill's development was a fill and cover approach in a canyon/gully terrain. The Landfill operated as a nonhazardous Class III solid waste disposal site servicing Ukiah and the surrounding area. The Landfill ceased operations in September 2001.

Environmental monitoring at the Landfill was originally regulated under Waste Discharge Requirements (WDR) Order No. 75-43 in conformance with Title 23 of the California Code of Regulations (23CCR). In September 1993, WDR Order No. 75-43 was amended by WDR Order No.93-83 as a mechanism to implement State Water Resources Control Board Resolution No. 93-62 and federal municipal solid waste regulations (i.e., "Subtitle D") per Title 40 of the Code of Federal Regulations (40 CFR), Parts 257 and 258. Concurrent with this amendment was the preparation of a Report of Waste Discharge (RoWD) (EBA, 1993) for the purpose of formally updating the Landfill's WDRs and to address groundwater impacts previously identified at the site. The combination of these two documents was subsequently used by the California Regional Water Quality Control Board, North Coast Region (RWQCB) to issue a new WDR (WDR Order No.94-123) for the site in October 1994. In August 1999, the initial Final CPMP (EBA, 1999) was submitted for the Landfill which resulted in the eventual issuance of interim closure WDRs (WDR Order No. R1-2002-0061) by the RWQCB in June 2002. WDR Order No. R1-2002-0061 represents the current WDR regulating environmental monitoring at the Landfill.

1.2 PURPOSE OF PLAN

The purpose of this Final CPMP is to identify, describe and provide cost estimates for the tasks necessary to close and maintain the Landfill in a manner which will protect the public health and safety and the environment. The Final CPMP for a Class III facility must meet the requirements of 27CCR, Division 2, Subdivision 1, Chapter 4. Accordingly, this Final CPMP provides the various information and describes the tasks that will be employed to comply with the said regulations. The following provides a synopsis of the information included herein as they pertain to the proposed final closure and postclosure maintenance activities:

Final Closure

- Various site maps showing the site location, physical and topographic features, and current monitoring and control systems.
- Proposed postclosure land use and an estimate of the maximum extent requiring closure.
- Details regarding site security and structure removal.
- Final cover design and grading characteristics, including presentation of an engineered alternative final cover system and supporting documentation (i.e., engineered alternative analysis, Technical Specifications and Construction Drawings).
- Final cover survey information.

- A construction quality assurance (CQA) program for the final cover construction project.
- Drainage and erosion control provisions.
- Descriptions of the current environmental monitoring and control systems.
- Closure provisions for a former leachate surface impoundment.
- Sequence of closure stages.
- Closure cost estimate and disbursement schedule.

Final Postclosure Maintenance

- Emergency Response Plan.
- Details of responsible parties and resources during the postclosure maintenance period.
- Presentation of the inspection and maintenance program that will be employed as part of postclosure maintenance, including the final cover and grading, drainage system, various monitoring and control systems, and site security.
- Reporting provisions for the various inspection and monitoring/control systems.
- Postclosure maintenance cost estimate.

Please note that this Final CPMP supersedes all previous closure/postclosure maintenance documents submitted to date. The original Final CPMP was submitted in August 1999 (EBA, 1999) that proposed a prescriptive standard final cover system (i.e., compacted clay liner [CCL] for the low-hydraulic conductivity layer [LHCL]). In March 2003, an engineered alternative analysis (EBA, 2003) was submitted to the RWQCB for approval that incorporated a geosynthetic clay liner (GCL) to replace the CCL as the LHCL due to the significantly higher cost associated with the CCL final cover system. This alternative was proposed again as part of a Joint Technical Document (JTD) dated January 2008 (EBA, 2008) and subsequent addendum dated June 2013 (EBA, 2013a).

In August 2015, a second addendum (Addendum No. 2) to the JTD (EBA, 2015) was submitted for approval that incorporated a new engineered alternative design ("ClosureTurf™") to replace the previously proposed GCL final cover system. The alternative design was pursued due to the significant cost savings over the associated GCL final cover system scenario, as well as an increase in cover system stability. Whereas the California Department of Resources Recycling and Recovery (CalRecycle) and Mendocino County Health & Human Services Agency (i.e., Local Enforcement Agency [LEA]) conditionally approved the proposed alternative design (separate letters dated October 21 and November 9, 2015, respectively), both agencies requested that the design and

associated provisions be summarized in a new stand-alone Final CPMP. A new stand-alone Final CPMP (EBA, 2016a) was subsequently submitted on March 8, 2016. Following its submittal, miscellaneous comments were issued by the respective regulatory agencies. The various issues were addressed in an updated Final CPMP dated May 2016 (EBA, 2016b).

As part of the regulatory review of the May 2016 Final CPMP, several unresolved issues remained pertaining to the final cover design and maintenance provisions. The most prominent of these issues corresponded to the proposed thicknesses of the foundation layer (i.e., one foot versus two feet) and geomembrane thickness (50-mil versus 60-mil). After multiple deliberations, an agreement was reached to adhere to the 2-foot thick foundation layer standard, while the 50-mil geomembrane thickness was conditionally approved with provisions for increased postclosure maintenance funding. These items, along with the other previous regulatory comments, have been incorporated into this latest version of the Final CPMP.

CITY OF UKIAH LANDFILL
MENDOCINO COUNTY, CALIFORNIA

SECTION 2
FINAL CLOSURE PLAN

This Final Closure Plan has been prepared to meet the following primary objectives: develop a detailed plan and schedule for the City to implement upon closure of the WMU; allow for monitoring of closure activities to determine that the requirements of landfill closure have been implemented in accordance with the appropriate plan; provide a basis for the City to establish an accurate detailed estimate of closure costs; and enable CalRecycle and the LEA to assess the reasonableness of the cost estimate for non-water quality aspects of closure. The contents of this Final Closure Plan have developed to comply with the requirements set forth in 27CCR, §21769(c)(2) and §21800.

2.1 SITE MAPS

2.1.1 Location Maps
27CCR, §21790(b)(2)

The Landfill is located at 3100 Vichy Springs Road, approximately three miles east of Ukiah in Mendocino County, California. A site location map showing the location of the Landfill is presented as Figure 1 (Appendix A). The Landfill's WMU occupies approximately 40 acres of permitted landfill area on a 283.5-acre parcel having a maximum width of approximately 1,000 feet in the north-south direction and a maximum length of about 3,500 feet in the east-west direction. A City-owned shooting range is situated on the Landfill property approximately 2,000 feet southeast of the WMU footprint.

Land adjacent to the Landfill property is zoned primarily as rangeland and is used for grazing. Dwellings within 1,000 feet of the landfill property include a group of structures owned by Gilbert and Marjorie Ashjoff that are located within 500 feet of the Landfill's south property line and a single-family residence located approximately 900 feet west of the Landfill's western property boundary. A rural residential development is located approximately ¼-mile west of the Landfill property boundary. A housing development is also located along the south side of Vichy Springs Road and westward of the Vichy Springs Resort. The entire development is approximately 1,000 feet southward of the Landfill property boundary and is separated from the Landfill by an intervening ridge.

It should be noted that the City owns an approximate 97-acre parcel (Assessor's Parcel No. 178-210-01) that adjoins a portion of the Landfill's southern property boundary. This property, which has been previously identified as the "Gun Club Parcel", was purchased as

a buffer zone to limit future development adjacent to the Landfill. The Gun Club Parcel is a separate parcel and is not considered part of the Landfill property.

Site plans showing the general site configuration (i.e., property boundary, limit of waste, entry road, etc.) and existing site features are presented as Figures 2 and 3 (Appendix A). Also shown on Figure 2 are the locations of dwellings and structures located within 1,000 feet of the Landfill property boundary.

2.1.2 Topographic Maps
27CCR, §21769(c)(2)(D)

Existing ground surface elevations at the Landfill range from approximately 710 feet above mean sea level (MSL) near the western footprint, to about 970 feet MSL along the southeast footprint. The WMU has been graded to form a series of terraces stepping down from south to north. Slopes on the WMU range from approximately 2:1 to 3:1 (horizontal to vertical). The final cover system elevations and slope configurations will generally coincide with the existing surfaces described above. Please refer to Sheets 100 and 101 of the Construction Drawings (Appendix J) for maps illustrating the existing and proposed final grades, respectively.

2.1.3 Current Monitoring and Control Systems Maps
27CCR, §21790(b)(4)

Enclosed in Appendix A are a series of site maps illustrating the various current monitoring and control systems at the Landfill. The types of monitoring and control systems include: landfill gas (LFG)(Figure 4); leachate (Figure 5); groundwater (Figure 6); and surface water (Figure 7). The Landfill is also currently equipped with drainage and erosion control features that include benches, ditches and down drains on the slope areas, as well as four sedimentation ponds. Please refer to Sheet 100 of the Construction Drawings (Appendix J) for the locations of these features.

2.2 PROPOSED POSTCLOSURE LAND USES
27CCR, §21769(c)(2)(H) and §21790(b)(5)

Postclosure land use for the Landfill will be non-irrigated open space.

2.3 ESTIMATE OF MAXIMUM EXTENT REQUIRING CLOSURE
27CCR, §21790(b)(6)

The WMU covers approximately 40 acres of the 283.5-acre site. The limits of waste are based on City survey records and historical topographical maps of the site. Exploratory trenching to verify the waste limits will not be necessary as the waste limits are well established. The limit of existing waste is shown on Figures 2 and 3 (Appendix A).

2.4 CLOSURE DATE
27CCR, §21790(b)(7)

The Landfill discontinued waste disposal operations in September 2001. At the time the waste disposal operations ceased, intermediate cover soil had been placed over the entire WMU footprint. In October and November, 2001, a drilling program was implemented by Rau and Associates, Inc. for the City to verify the thickness of the in-place intermediate cover over the entire WMU surface. The survey consisted of a series of shallow borings drilled at a spacing of approximately 50 feet apart on the roads and benches and approximately 100-foot spacing on the slopes. A total of 433 borings were drilled using a hydraulic drill motor (mounted on a backhoe boom) equipped with 4-inch diameter solid-stem augers. A hand-operated post-hole digger was used in areas not accessible by the backhoe-mounted drill. Findings from this investigation revealed that the thickness of the intermediate cover is equal to or greater than 2 feet for approximately 81 percent of the WMU surface, whereas approximately 93 percent of the WMU surface contains at least one foot of intermediate cover. The average thickness of the intermediate cover for the remaining seven percent is approximately 8 inches. These areas are primarily concentrated along the toe near the northern sedimentation pond and within the southern high point of the WMU.

The intermediate cover has been maintained by the City since its placement, pending implementation of the final closure construction project.

2.5 SITE SECURITY AND STRUCTURE REMOVAL
27CCR, §21790(b)(8)(A)

2.5.1 Site Security

Access to the Landfill is via Vichy Springs Road only. Unauthorized access is currently prevented by perimeter barbed-wire fencing and a locked gate located at the site access road. “No Trespassing” signs are also posted at the east and west boundaries of the site. Site security upon closure will be provided by the City and will conform with the requirements of 27CCR, §21135. Site security components will include:

- A lockable gate at the Landfill entrance from the site access road (existing).
- “No Trespassing” signs (existing). “Methane Hazard” signs will also be posted at the site entrance and every 1,000 feet along the perimeter barbed-wire fencing.
- At least one sign posted in a visible location at the site access road indicating where the Final CPMP is located. The sign will also include a telephone number for emergency notification. A sign of this nature will remain posted throughout the postclosure maintenance period.

- Lockable utility boxes, or gates, or both, enclosing the environmental control systems (existing).

- Security fencing and lockable gate around the gas control system's flare station and equipment complex.

- Perimeter barbed-wire fencing (existing).

2.5.2 Structure Removal

As required under 27CCR, §21137, all site structures will be removed as part of the final closure construction project. These structures include the gatehouse and truck scale. The gatehouse debris will be transported and disposed of at a permitted solid waste disposal facility. The truck scale, in turn, will be dismantled and either re-assigned/sold for use at an alternate location or transported and disposed of at a permitted solid waste disposal facility.

2.6 FINAL COVER AND GRADING

2.6.1 Final Cover Requirements
27CCR, §21090(a) and §21800(b)(8)(B)

The following subsections provide the necessary information to address the various final cover requirements stipulated in 27CCR, §21090(a)(1 through 6). Specific topics include: final cover design; discharge of leachate, condensate and/or other liquids to the final cover; and stability of the final cover.

Final Cover Design

The proposed final cover system will consist of a patented geosynthetic product identified as "ClosureTurf™". ClosureTurf™ is a three-component system comprised of a structured geomembrane, a specialized tufted geotextile, and a sand infill layer. The structured geomembrane component serves as the LHCL, whereas the specialized tufted geotextile and sand infill layer represent the erosion-resistant layer as defined in 27CCR. This proposed final cover system represents an engineered alternative design to the prescriptive standard (i.e., CCL) and therefore requires regulatory approval. As such, an engineered alternative analysis was prepared that demonstrated its viability as a final cover alternative. A copy of the engineered alternative analysis, which includes literature for the ClosureTurf™ product, is enclosed in Appendix D. Please note that product literature pertaining to ultra-violet (UV) longevity and supporting infiltration equivalency calculations that were included in EBA's May 26, 2017 Response to Comments (EBA, 2017) to supplement the engineered alternative analysis have been incorporated into Appendix D.

Overall, the proposed final cover system design can be summarized as follows (in ascending order):

- Minimum 2-foot thick soil foundation layer.
- 50 mil linear low-density polyethylene (LLDPE) geomembrane liner (Super Gripnet® with Spike Down).
- Specialized tufted geotextile (Engineered Turf).
- Minimum 5/8-inch thick sand infill layer.

As noted above, the erosion-resistant layer for the proposed final cover system is comprised of the Engineered Turf and sand infill layer. As presented in the engineered alternative analysis (Appendix D), the combination of these components are designed to provide weathering resistance and geomembrane protection when subjected to the most extreme conditions, including rain, wind, heat, and UV exposure. Based on the absence of a traditional erosion-resistant layer constructed of soil, the proposed system is not subject to erosional channeling that can lead to exposure of the geomembrane component. As a result of the aforementioned characteristics, the proposed system meets the performance criteria specified in 27CCR with regard to resisting the foreseeable erosion effects by wind-scour, raindrop impact, and run-off.

In addition to the above features, the final cover system will also be equipped with a gas relief component. This component will consist of a series of 3.5-foot wide collection strips placed parallel to the slopes on the outer edges of the respective benches. The collection strips, which will be constructed of the same Super Gripnet® with Spike Down material described above for the geomembrane liner component, will be connected to the gas control system to prevent the build-up of gas pressures beneath the final cover system. Pressure release valves will also be installed at regular intervals between the collection strips as an additional precautionary measure.

Please refer to the Technical Specifications (Appendix H), Construction Quality Assurance (CQA) Plan (Appendix I), and Construction Drawings (Appendix J) for details regarding material and installation specifications for the respective final cover system components described above.

Discharges of Liquids to Covers (Leachate and Condensate)

The discharge of leachate, LFG condensate or other waste liquids onto the final cover is not proposed at the Landfill. Instead, these liquids will be processed through the facility's existing leachate collection and pumping system as described in Subsection 2.10 (*Leachate Monitoring and Control Systems*) of this Section.

Discharges of Liquids to Covers (Other Liquids)

The discharge of other liquids onto the final cover is also not proposed at the Landfill. Postclosure land use will be non-irrigated open space. As a result, monitoring of potential liquid through flow to the underlying waste will not be necessary.

Please note that the need for dust control provisions (other than during final closure construction) as outlined in CalRecycle citations 27CCR, §20800 and §21600(b)(8)(D) during the postclosure maintenance period is not anticipated since the access areas will be covered with aggregate base rock (perimeter access road) and engineered turf (benches) at the time of closure. In regards to final closure construction, the Technical Specifications (Appendix H) for construction stipulate that dust control provisions must be such as to protect against excess water application that could result in potential through flow into underlying waste or run-off into surface water drainages.

Stability Analysis

In accordance with 27CCR, §21090(a)(6), a stability analysis was performed for the proposed final cover system to demonstrate conformance with 27CCR, §21750(f)(5). In this regard, an infinite-slope stability analysis for the ClosureTurf™ final cover system is presented in Appendix E. This represents the same analysis included in the May 2016 Final CPMP (EBA, 2016b). The analysis also summarizes the results of an earlier stability and seismic hazard analysis performed for the Landfill that is referenced in the Landfill's January 2008 JTD (EBA, 2008). The earlier study includes critical cross sections used in the stability analysis and the results of a two-dimensional limit equilibrium analysis for a sliding block failure through the base of the waste mass. The study also presents the results of a seismic response analysis and seismic displacement analysis using the procedures outlined in Bray et al., 1995; Matasovic, 1995; and Matasovic, 1997.

Findings from the stability analysis are summarized as follows:

- A deterministic seismic hazards assessment performed for the site concluded that the Maacama Fault, with an estimated Maximum Credible Earthquake (MCE) of 7.1Mw is located 0.6 miles (1.0 kilometers) west of the site and is expected to generate the highest average peak bedrock acceleration of 0.66g.

- The static factor of safety of the entire waste mass was modeled by evaluating failure mechanisms passing through refuse and the base of the WMU and indicate a static factor of safety greater than 1.7 for failure through the base of the WMU at critical cross section B.

- The yield acceleration (Ky) of the waste mass under seismic conditions is 0.13g.

- Seismic displacement analyses using the program YSLIP PM (Matasovic, 1997) indicate that permanent seismically induced displacements will be less than 8 inches for failure through the base of the WMU.

As the final waste mass grades have not been increased with the ClosureTurf™ final cover system design, EBA does not believe additional global stability analyses are warranted and the corresponding findings from the previous analysis remain valid for the final closure design presented in this current version of the Final CPMP.

Please note that a probabilistic analysis predicts a peak ground acceleration of 0.52g at the Landfill with a 475-year return period (10 percent exceedance in 50 years) and a shear-wave velocity of 270 meters per second (California Geologic Survey, Probabilistic Seismic Hazards Ground Motion Interpolator). Given the deterministic nature of EBA's evaluation, it is our opinion that the seismic hazard analysis is appropriate for the Landfill final closure design.

2.6.2 Grading Requirements
27CCR, §21090(b) and §21800(b)(8)(B)

Grading plans for the WMU are shown on Sheet 101 and Sheets 300 through 302 of the Construction Drawings (Appendix J). As shown on the grading plans, the final cover slopes on the WMU will range from approximately 2:1 to 3:1 (horizontal to vertical). These slope inclinations are sufficient to prevent ponding on the WMU surface. In addition, as previously outlined in Subsection 2.6.1 (*Final Cover Requirements*), the physical characteristics of the Engineered Turf and sand infill layer (i.e., erosion-resistant layer) meet the performance criteria specified in 27CCR with regard to resisting the foreseeable erosion effects by wind-scour, raindrop impact, and run-off. Finally, the WMU is designed with a perimeter drainage system that will serve to protect against potential run-on from adjoining surfaces.

Grading plan design considerations included provisions to ensure compliance with prescribed clearance specifications beneath a set of high power transmission lines that extend over the WMU (see Sheets 301 and 302 of the Construction Drawings [Appendix J] for location). Pacific Gas and Electric (PG&E) states that the minimum required ground clearance is 28 feet. As a means of integrating this specification into the design, a survey of the transmission lines was performed by PG&E in the Summer of 2018. Results from this survey determined that existing refuse will need to be excavated from beneath portions of the transmission lines in order to attain the prescribed clearance. The excavated refuse will be relocated to other areas within the WMU. Please refer to Sheet 102 of the Construction Drawings (Appendix J) for the corresponding refuse re-location areas.

As part of the final closure construction project, borrow soil material will be required for construction of the foundation layer and placement of engineered fill and trench backfill. The borrow area for this soil will correspond to an on-site area located northeast of the WMU. This area corresponds to the same borrow area used during landfill operations. Excavation within this borrow area will conform to the grading plan shown on Sheet 303 of the Construction Drawings (Appendix J).

27CCR, §21800(b)(8)(B) requires information regarding the types and estimated quantities of materials needed for construction of the final cover system. In this regard, the majority of the final cover system will be comprised of geosynthetic products associated with the ClosureTurf™ system. The estimated quantity of these materials is approximately 1.9 million square feet. As for the soil components, on-site materials will be used for the foundation layer, engineered fill, and trench backfill as outlined in the previous paragraph.

The estimated quantity of borrow soil material for this purpose is approximately 100,000 cubic yards.

2.6.3 Final Cover Surveys
27CCR, §21090(e)

A topographic map of the completed final cover grades will be produced at a minimum scale of 1 inch to 100 feet and accompany the CQA Certification Report. In addition, iso-settlement maps will be produced every five (5) years thereafter to calculate any differential settlement. The iso-settlement maps will be prepared with a maximum contour interval of 2 feet and a scale of 1 inch equals 60 feet. As required by 27CCR, §21090(e)(4), each iso-settlement map will highlight areas of repeated or severe differential settlement. The delineation of such areas will be made by, or under the supervision of, a registered civil engineer or registered geologist.

2.7 CONSTRUCTION QUALITY ASSURANCE (CQA)
27CCR, §21790(b)(8)(C)

A CQA program will be implemented for closure of the WMU to verify that materials, construction methods, and testing procedures are in accordance with the intent and purpose of the Technical Specifications. Implementation of the CQA program will be administered by a registered civil engineer or certified engineering geologist in accordance with 27CCR, §20324(b)(1) and (2). The results of the CQA program will be summarized in a "CQA Certification Report" containing all reports associated with the construction activities. This document will provide evidence that the CQA program was implemented as proposed and that the construction proceeded in accordance with design criteria, plans and specifications.

2.7.1 CQA Plan

A CQA Plan for the Landfill is enclosed in Appendix I. As required by 27CCR, §20324(c), the contents of the CQA Plan include the following:

- A description of the CQA management organization and reporting protocol; and
- A description of CQA testing protocols for preconstruction, construction and post-construction testing including:
    - Procedures and equipment to be utilized for field testing and sampling;
    - Location, method, and frequency of sampling;
    - Laboratory testing procedures to be used during construction;
    - Pass/fail criteria for sampling and testing methods;
    - Frequency of performance audits; and
    - Inspection frequencies.

Closure construction will be administered by a qualified consultant or a City registered civil engineer, acting as the CQA Officer. The CQA Officer will supervise the execution and overall progress of the project. He will be assisted by a CQA Certifying Engineer, CQA Monitors, a CQA Surveyor, independent soil and geosynthetic testing laboratories, and a consulting design and construction management firm, if necessary. The construction work will be done by a licensed construction contractor who will be selected through a public bidding process.

2.7.2 Closure Construction Documentation

The closure operations will be conducted under the supervision of the CQA Officer. Inspection, field and laboratory data sheets, and other relevant closure activity documentation will include the following:

- Daily summary reports;
- Daily field logs (Inspection Data Sheet);
- Construction monitoring forms;
- Laboratory testing reports;
- Non-conformance/corrective action forms;
- Acceptance reports;
- Meeting/discussion summary reports;
- Photograph logs;
- Document control; and
- As-built record drawings.

Please refer to Section 01400 of the Technical Specifications (Appendix H) for further details regarding the nature and content of the respective documentation listed above.

At the completion of the project, a CQA Certification Report prepared and certified by the CQA Officer will be submitted to the RWQCB, CalRecycle, and the LEA. The CQA Certification Report will consist of information and data generated by the CQA program and will document that the final closure construction is in compliance with the design intent of the Construction Drawings and Technical Specifications. At a minimum, the CQA Certification Report will contain the following information:

- Summary of construction methods for each unit of construction completed;

- Summary of the CQA program implemented during construction and specific CQA activities (monitoring and testing) performed for each unit of construction completed;

- Results of conformance testing and construction testing;
- Revisions made to the Construction Drawings and variances from Technical Specifications allowed; and

- Final as-built record documents.

The CQA Certification Report shall be a self-standing document and contain all subordinate reports. The CQA Certification Report will also contain a statement of compliance with the design intent of the Construction Drawings and Technical Specifications, signed and stamped by the CQA Certifying Engineer, a professional engineer or certified engineering geologist registered in the State of California. The certificate of closure will include a statement by the Operator, under penalty of perjury, pursuant to 27CCR, §21880(a), that with the exception of deviations due to reasonably unforeseeable circumstances, the Landfill was closed in accordance with the approved Final Closure Plan.

2.7.3 Documentation Archive Storage

A copy of the CQA Certification Report, as well as all original closure construction documents, will be stored and maintained throughout the postclosure maintenance period in a protected location that is accessible to RWQCB, CalRecycle, and LEA personnel during normal business hours. At the present time, the City offices at 300 Seminary Avenue, Ukiah are proposed as the storage location for the CQA Certification Report.

2.8 DRAINAGE AND EROSION CONTROL *27CCR, §21790(b)(8)(D)*

2.8.1 Drainage System

The proposed drainage system for the WMU and borrow area have been designed to comply with the requirements of 27CCR, §21150. Overall, the proposed drainage facilities consist of a network of benches, channels/swales, and storm drains that collect and convey stormwater run-off to a series of corrugated metal pipe (CMP) discharge culverts. These CMP culverts discharge to the unnamed ephemeral creek channel at various locations along the length of the WMU's northern boundary. In general, the drainage system is designed to intercept run-off at intervals along the inside edges of berms, benches, or access roads. A sedimentation pond is located at the western end of the WMU to control sediment run-off from slope areas along the western and portions of the southern fill boundaries. Two (2) additional sedimentation ponds are located at the northeastern end of the WMU to contain sediment run-off from the eastern portion of the WMU and the soil borrow area. Please refer to the 200 Series and 300 Series sheets of the Construction Drawings (Appendix J) for plan views and details of the various drainage system components. The supporting drainage calculations for sizing the various drainage system components are enclosed in Appendix F. As required by 27CCR, §21150, the drainage system components are designed to accommodate 100-year, 24-hour precipitation conditions.

As noted above, a portion of the stormwater run-off from the WMU is discharged via CMP culverts to the unnamed ephemeral creek channel. While such provisions are currently employed at the Landfill, the design of the new drainage outfalls into the creek have been

modified to reduce the potential for erosion. Since this provision will require accessing the creek to install the new drainage outfalls, a series of permits must be obtained before implementing the improvements. These permits include: *Streambed Alteration Agreement (1602 Permit)* from the California Department of Fish and Game; *Water Quality Certification (401 Permit)* from the RWQCB; and a *Clean Water Action Section 404 Permit (404 Permit)* from the United States Army Corps of Engineers. As outlined later in Subsection 2.14 (*Sequence of Closure Stages*) of this Section, provisions are currently being made to acquire these permits.

2.8.2 Erosion Control

The overall design includes features and provisions to minimize the potential for erosion as required by 27CCR, §21150. The following bullet items provide a summary of the erosion control features and provisions:

- The selected contractor will be required to prepare a construction Storm Water Pollution Prevention Plan (SWPPP) before the commencement of work and to implement the provisions of the SWPPP for the duration of the construction project.

- The geosynthetic final cover system (ClosureTurf™) will essentially eliminate the discharge of sediment from the WMU surface as no soil component will be utilized in the final cover design.

- The final surface of the soil borrow area, as well as other areas disturbed by the construction operations, will be repaired/graded as necessary and then hydroseeded. The aforementioned areas with surface slopes steeper than ten percent will also be covered with 1.5 inches of straw and secured with erosion control netting.

- Drainage channels outside the WMU footprint that will potentially be subjected to high flow velocities will be lined with rock rip-rap to protect against erosion.

- Drainage outfalls will be lined with rock rip-rap.

- Aggregate base placed on perimeter access roads to allow for all-weather access will also serve to reduce the potential for sediment-laden run-off from these areas.

Please refer to Sheet 308 of the Construction Drawings (Appendix J) for additional details regarding straw wattle, drainage inlet, and check dam provisions.

2.9 GAS MONITORING AND CONTROL SYSTEMS *27CCR, §21790(b)(8)(E)*

2.9.1 Gas Monitoring System

The gas monitoring system consists of ten gas monitoring points (GAS-1 through GAS-10) located at various locations along the Landfill property boundary. The locations of the gas monitoring points are shown on Figure 4 (Appendix A). No changes to the monitoring system components are proposed as part of closure. Each of the gas monitoring points are equipped with one to four individual monitoring probes constructed of ¾-inch diameter polyvinyl chloride (PVC) casing and capped with labcock valves. The monitoring probes range in depth from approximately 9 to 250 feet below ground surface (BGS). The number and depth of monitoring probes at each location are based on site lithology (i.e., permeable zones) and the maximum depth of refuse as measured within 1,000 feet of the monitoring point in question.

Table B-1 in Appendix B of this document provides a summary of the gas monitoring point construction characteristics. Copies of exploratory boring logs for the respective gas monitoring points are enclosed in Appendix C.

2.9.2 Gas Control Systems

The Landfill is currently equipped with a partial perimeter gas collection system that was installed between the southwestern edge of the WMU and the property line in 1997 as a mitigation measure against subsurface gas migration. The system consists of 17 vertical extraction wells installed in native geologic materials and completed at depths ranging from 35 to 133 feet BGS. The wells are connected to a 6-inch diameter, high-density polyethylene (HDPE) header pipe that leads to a vacuum blower located at the western end of the WMU. The vacuum blower creates a vacuum in the header pipe that draws the gas from the soil through the extraction wells and subsequently to the blower. Discharge from the system is vented directly to the atmosphere via a 4-foot tall, 4-inch diameter stack. This system continues to operate on an intermittent basis. Please refer to Table B-2 in Appendix B of this document for individual gas extraction well construction characteristics.

A full-scale gas control system for the entire WMU is planned for installation as part of the final closure construction project. This system as currently proposed will consist of 18 extraction wells (EW-1 through EW-18), aboveground conveyance piping, and a flare station that will include a totally-enclosed vertical ground flare (flare) for combustion of the collected gas. Information pertaining to this system, including design criteria/rationale and details for the various system components, are presented in the *Updated Design Plan for Landfill Gas Collection and Control System (Updated Design Plan)* dated April 2019 (EBA, 2019). A copy of the Updated Design Plan is enclosed in Appendix G. The corresponding Technical Specifications and Construction Drawings for the system are enclosed in Appendices H and J, respectively.

It should be noted that once the full-scale gas control system is installed and operational, the need to operate the partial perimeter gas collection system may no longer be

necessary. Under this scenario, the partial perimeter gas collection system will either be abandoned or maintained for emergency use only.

2.10 LEACHATE MONITORING AND CONTROL SYSTEMS *27CCR, §21790(b)(8)(F)*

The WMU is unlined and is not equipped with an engineered or blanket leachate collection and removal system (LCRS). Instead, leachate collection for the WMU currently consists of a series of PVC piping and French drain systems installed to collect leachate from seeps occurring along existing WMU slope faces. Leachate collected by these components is then conveyed by gravity flow to a primary buried pipeline located along the northern toe of the WMU. The buried pipeline, in turn, drains the leachate westward and ultimately discharges to the leachate management facilities located at the western toe of the WMU. A description of the leachate management facilities is as follows:

- Discharge from the primary buried pipeline is diverted to a subsurface concrete sedimentation chamber equipped with a valved sediment drain at its base. The clarified leachate within the chamber is then discharged (by gravity flow) to an adjacent pump station wet well (identified herein as the "leachate wet well") via a 10-inch diameter overflow line.

- Clarified leachate discharged to the leachate wet well is then pumped to a 63,500-gallon leachate aboveground storage tank (AST) for temporary storage. The leachate wet well is equipped with two (2) 25-gallon per minute (gpm), low-head, submersible pumps that are actuated by high/low water level controls. If the clarified leachate discharge rate exceeds the leachate wet well's pumping capacity (50 gpm), the excess leachate is currently diverted to an emergency leachate pond via a 10-inch diameter overflow line.

- As noted above, leachate from the leachate wet well is diverted to the leachate AST. The leachate AST is constructed of AWWA factory epoxy lined and coated bolted steel. As was the case for the leachate wet well, the AST is also equipped with a 10-inch diameter overflow line that diverts leachate to the emergency leachate pond in the case of an emergency.

- Leachate stored in the leachate AST is subsequently pumped to a sewer line connection located on Vichy Springs Road via a force main/gravity drain. The force main/gravity drain is constructed of 4-inch diameter PVC and is approximately 5,200 feet in length. The pump lift station for the leachate AST is equipped with two (2) 45-gpm pumps (one duty, one standby), thereby giving the system a total pumping capacity of 90 gpm.

In addition to the aforementioned features, three leachate level monitoring wells (LW-1, LW-2, and LW-3) have been installed at the Landfill as part of a previous study. However, these leachate wells have not been used historically for monitoring as they are not identified in the Landfill's existing Monitoring and Reporting Program (M&RP). The

locations of these monitoring wells, as well as the other leachate management facilities described above, are shown on Figure 5 (Appendix A). In addition, a summary of the leachate well construction characteristics and copies of exploratory boring logs are presented in Table B-3 (Appendix B) and Appendix C, respectively.

Several upgrades to the leachate control system as described above will be implemented as part of the final closure construction project. These upgrades will include lining the existing leachate wet well and sedimentation chamber to provide a higher degree of containment. In addition, the emergency leachate pond will be backfilled and an underground storage tank (UST) system installed to provide new overflow protection provisions. Finally, the leachate wet well and leachate storage tank will be retrofitted with communication telemetry to enhance emergency capabilities.

2.11 GROUNDWATER MONITORING SYSTEM

The groundwater monitoring network currently consists of 18 groundwater monitoring wells primarily concentrated along the northern and western margins of the WMU. No changes to the monitoring system components are proposed as part of closure. The locations of the groundwater monitoring wells are shown on Figure 6 (Appendix A). Groundwater monitoring well 87-1 was installed in 1987 and was subsequently used as part of the Water Quality Solid Waste Assessment Test (SWAT) conducted at the Landfill during the late 1980s. The remaining groundwater monitoring wells were installed over the period of 1990 through 1996 as a mechanism to characterize groundwater impacts at the site and to upgrade the Landfill's detection monitoring network. In accordance with the criteria specified in Section D(3)(b) of M&RP Order No. R1-2002-0061, the respective groundwater monitoring wells have the following use designations:

Detection Monitoring Wells:

- 87-1, 90-1, 90-2, 90-5, 90-6, 90-7, 90-8, 92-2, 92-3, 94-1, 94-2, 96-1, 96-2, and 96-3

Corrective Action Monitoring Wells:

- 90-3, 90-4, 92-1, and 92-4

Point of Compliance Wells:

- 87-1, 90-2, 90-3, 90-4, 90-5, 90-7, and 90-8

The two (2) primary water-bearing formation deposits underlying the site correspond to Quaternary alluvial deposits and Plio-Pleistocene upper/lower continental basin deposits. Groundwater monitoring wells completed within the Quaternary alluvial deposits include 87-1, 90-1, 90-3, 90-4, 92-1, and 94-1. These groundwater monitoring wells range in depth from approximately 12 to 35 feet BGS. The remaining groundwater monitoring wells are completed in the Plio-Pleistocene upper or lower continental basin deposits and range in depth from approximately 23 to 160 feet BGS.

Table B-4 in Appendix B of this document provides a summary of the groundwater monitoring well construction characteristics. Copies of exploratory boring logs for the respective groundwater monitoring wells are enclosed in Appendix C.

2.12 SURFCE WATER MONITORING SYSTEM

The surface water monitoring system for the Landfill is comprised of two (2) surface water sampling stations (S-1 and S-2) located along the unnamed ephemeral creek that flows along the northern margin of the WMU from east to west. The surface water sampling stations are shown on Figure 7 (Appendix A). As illustrated on Figure 7, S-1 and S-2 are located upstream and downstream of the WMU, respectively.

It should be noted that a Notice of Termination (NOT) for the Landfill's former stormwater permit (WDID Number 123I001656) was approved by the RWQCB on July 30, 2015 on the basis that industrial activity no longer occurs at the site, nor will it occur in the future as the end use of the Landfill during the postclosure maintenance period will be non-irrigated open space. Surface water monitoring and inspection at the Landfill will continue to be performed as part of the Landfill's postclosure maintenance program (see Section 3), thereby providing long-term provisions for monitoring surface water quality.

2.13 CLOSURE OF SURFACE IMPOUNDMENT

As part of the January 2008 JTD (EBA, 2008), recommendations were provided for assessing the unlined leachate surface impoundment for potential environmental impacts. Authorization to proceed with the assessment was issued by the RWQCB in their letter dated April 24, 2013. The work was subsequently implemented by EBA on August 6, 2013. The scope of work entailed the advancement of four (4) soil borings within the footprint of the surface impoundment to depths ranging from 11.5 to 16.5 feet BGS and the collection of four (4) soil samples from each borehole for chemical analysis. All soil samples from each borehole were analyzed for volatile organic compounds (VOCs), arsenic, and barium. In addition, one (1) soil sample from each borehole was analyzed for organochlorine pesticides, polychlorinated biphenyls, organophosphorus pesticides, chlorinated herbicides, and oil and grease.

Findings from the aforementioned investigation were summarized in a technical report dated October 3, 2013 (EBA, 2013b) and submitted to the RWQCB, CalRecycle, and LEA. Results from the soil sampling activities did not reveal any evidence of appreciable residual contamination associated with the former leachate surface impoundment operations. Based on these results, it was concluded by EBA that no further assessment or remedial actions were necessary. Furthermore, it was recommended that the leachate surface impoundment be backfilled with "clean" engineered fill and the final ground surface graded to promote positive drainage and prevent ponding. These provisions, which are included in the Technical Specifications (Appendix H) and Construction Drawings (Appendix J), meet the closure requirements for surface impoundments as outlined in 27CCR, §21400.

2.14 SEQUENCE OF CLOSURE STAGES
27CCR, §21800(c)

As previously described, the Landfill discontinued waste disposal operations in September 2001 and has been inactive since that time. Thus, the actual implementation of the final closure construction project represents the final sequence of the closure stages. In this regard, the remaining sequence of events that are required to complete the project are as follows:

- Solicitation of competitive bids from qualified contractors to implement the final closure project. The competitive bid process will commence in August 2019 and the contract awarded to the successful bidder by December 2019.

- Completion of the California Environmental Quality Act (CEQA) process, which is currently in progress. The estimated completion date for the CEQA process is August 2019.

- Acquisition of 1602, 401, and 404 permits to allow for streambed alteration associated with the installation of new drainage outfalls in the unnamed ephemeral creek channel. As with the CEQA process, this task is currently in progress with an estimated completion date of December 2019.

- Commence the construction operations by May 2020. Based on an estimated construction period of six months, the corresponding completion date for the construction operations is October 2020.

- Completion of the CQA Certification Report by January 2021.

Please note that a definitive construction schedule for the various tasks associated with the final closure construction project will become available upon selection of a qualified contractor. Such a schedule will be provided to the applicable regulatory agencies at that time.

CITY OF UKIAH LANDFILL
MENDOCINO COUNTY, CALIFORNIA

SECTION 3
FINAL POSTCLOSURE MAINTENANCE PLAN

This section describes the responsibilities, resources, and inspection frequencies for implementing postclosure maintenance for the Landfill upon closure. Specific inspection and maintenance activities are detailed in the subsequent subsections. The contents of this Final Postclosure Maintenance Plan (Final PMP) have been developed to comply with the requirements set forth in 27CCR, §21769(c)(2) and §21830.

3.1 EMERGENCY RESPONSE PLAN
27CCR, §21830(b)(1)

An Emergency Response Plan (ERP) has been prepared for the Landfill in accordance with 27CCR, §21130 and is presented in Appendix K. The ERP identifies steps to be taken in the event of a failure or breakdown of the WMU under potential contingency situations. Appropriate agency and business points of contact are also included in the ERP.

3.2 RESPONSIBLE PARTIES AND RESOURCES
27CCR, §21830(b)(2)

3.2.1 Responsible Parties

The Landfill is wholly owned by the City. Maintenance responsibilities following Landfill final closure will be assigned to the City of Ukiah Public Works Department (Public Works Department). The Public Works Department will be responsible for all inspection, maintenance and monitoring activities related to the final cover system, drainage systems, final grading, environment monitoring and control systems, and emergency response. The person at the Public Works Department responsible for managing the postclosure maintenance activities and the corresponding emergency phone numbers are as follows:

Name	Position	Emergency Phone Numbers
Tim Eriksen	Director of Public Works / City Engineer	(707) 463-6280
Tim Eriksen	Off-hour Emergencies	(707) 972-0839

The work address for Mr. Eriksen and the City office is:

- City of Ukiah
  Public Works Department
  300 Seminary Avenue
  Ukiah, CA 95482

3.2.2 Resources

Current resources of the Public Works Department for inspection, maintenance, and monitoring of the Landfill are as follows:

- *Technical Services Staff:*
  - Public Works Director/City Engineer (Registered Civil Engineer)
  - Deputy Director of Public Works (Registered Civil Engineer)
  - Senior Civil Engineer (Registered Civil Engineer)(position currently vacant)
  - Water, Sewer, and Street Maintenance Supervisor
  - Street Maintenance Leadman
- *Annual Maintenance Contracts:*
  - Gas control system
- *Annual Consultant Agreement for Environmental Monitoring and Consulting Services:*
  - Detection and corrective action monitoring systems
  - Gas monitoring system

Routine and periodic inspection will be conducted by the Street Maintenance Leadman. At least twice a year and immediately after any special events such as major earthquakes, storms, and fires, a thorough and comprehensive inspection will be conducted by one of the three Registered Civil Engineers. Inspection frequency will be as shown in the following table:

INSPECTION RESPONSIBILITIES AND FREQUENCIES				
Activities	***Immediately***	***Monthly***	***Quarterly***	***Semi-Annually***
Special Events	RCE			
Security		SML[(1)]	SML[(2, 3)]	RCE
Final Cover		SML[(1)]	SML[(2)]	RCE
Final Grading		SML[(1)]	SML[(2)]	RCE
Drainage System		SML[(1)]	SML[(2)]	RCE
Leachate Control System		SML[(1)]	SML[(2)]	RCE
Detection and Corrective Action Monitoring System			C[(4)]	C[(4)]
Gas Monitoring System			C	
Gas Control System		C		

RCE: Registered Civil Engineer
SML: Street Maintenance Leadman
C: Consultant

(1) During the wet season (October 1 through April 30)
(2) During the dry season (May 1 through September 30)
(3) Assumes consultant will check security monthly between quarterly inspections as part of gas control system monitoring.
(4) Combination of quarterly and semi-annual sampling frequencies as described in Subsection 3.5.2 (*Monitoring Program*).

3.3 POSTCLOSURE PLANNED USES *27CCR, §21830(b)(3)*

The end use of the Landfill will be non-irrigated open space. The area will be returned to a natural setting with the exception that all necessary access roads, monitoring wells and drainage structures will remain.

3.4 AS-BUILTS FOR MONITORING AND CONTROL SYSTEMS *27CCR, §21830(b)(4)*

Descriptions of the current monitoring and control systems at the Landfill were previously presented in Section 2 (*Final Closure Plan*). Please refer to the following subsections and appendices for details and as-built information:

Gas Monitoring System

- Subsection 2.9.1, Figure 4 (Appendix A), Table B-1 (Appendix B), Appendix C

Gas Control Systems
- Subsection 2.9.2, Figure 4 (Appendix A), Table B-2 (Appendix B)

Leachate Monitoring and Control Systems
- Subsection 2.10, Figure 5 (Appendix A), Table B-3 (Appendix B), Appendix C

Groundwater Monitoring System
- Subsection 2.11, Figure 6 (Appendix A), Table B-4 (Appendix B), Appendix C

Surface Water Monitoring System
- Subsection 2.12, Figure 7 (Appendix A)

Other than the full-scale gas control system to be installed during the final closure construction project (see Subsection 2.9.2 and Appendix G for further details), no other changes to the current monitoring and control systems will be implemented as part of final closure.

3.5 INSPECTION/MAINTENANCE AND MONITORING PROGRAMS *27CCR, §21830(b)(5)*

The following subsections provide a summary of the inspection/maintenance and monitoring programs that will be employed as part of postclosure maintenance. Specific features and components to be targeted by the inspection/maintenance program include the final cover, final grading, drainage system, leachate control system, detection and corrective action monitoring system, gas monitoring system, and security. The monitoring program, in turn, will focus on implementing monitoring and sampling tasks to comply with applicable regulations and facility permits.

3.5.1 Inspection/Maintenance Program

Final Cover

The final cover is designed to limit water infiltration, minimize leachate generation, prevent exposure of waste to people and animals, limit gas emissions, minimize odor, control fires, and provide for a pleasant appearance. As such, the postclosure maintenance program will be instituted to ensure that the final cover continues to meet these objectives. The final cover areas will be visually inspected on a monthly or quarterly basis as previously outlined in Subsection 3.2.2 (*Resources*) and evaluated for:

- Breaches in the liner system
- Odors
- Exposed refuse
- Slope failure
- Leachate seeps
- Sand migration

Based on the nature of the final cover system and the absence of a vegetative soil layer, erosional damage does represent a potential concern at the Landfill. Thus, from an integrity perspective, a physical breach in the final cover's liner system would be the most probable cause prompting the need for final cover maintenance. In this regard, the detection of odors, exposed refuse, and/or leachate seeps would be indicative of a potential breach. In the event a breach is identified, the damaged portion of the liner will be repaired as soon as practical depending upon contractor availability and liner material delivery, as well as weather. With that being said, every effort will be made to implement the repairs as soon as practical. In the interim, provisions will be employed to temporarily tarp and secure the area to prevent water infiltration into the refuse. All repairs to the liner will be to design conditions and in accordance with the Technical Specifications for the respective final cover components. Any underlying subgrade improvements will also be repaired in accordance with the foundation layer Technical Specifications.

Since the sand infill layer is an integral part of the final cover system, the surface of the final cover will be inspected for evidence of bare patches and/or excessive sand accumulation. Bare patches will be repaired by either manually redistributing the sand in the immediate area or adding new sand material. The resulting sand thickness for either approach shall be 5/8-inch minimum. In the case of excessive sand, the accumulated sand will be manually spread around the immediate area to achieve a uniform thickness of at least 5/8-inch. If excess sand remains after such provisions, the excess sand will be physically removed and stockpiled at a location off of the WMU surface. Any areas of displacement or migration that are 1/8-acre in size or larger will be repaired upon their discovery as soon as weather and access conditions permit. Any discernable smaller areas that are identified during the annual facility inspection will be prepared as part of annual winterization maintenance activities in preparation for the wet season. In addition to the monthly and quarterly inspections as previously outlined in Subsection 3.2.2 (*Resources*), inspection of the sand fill layer will also be performed after major storm events.

Final Grading

Surface grading of a closed WMU, when properly designed and constructed, can be an economical method of controlling infiltration and promoting surface water run-off. The final grading configuration is designed to compensate for the effects of settlement, thereby preventing the need for difficult and costly maintenance and repair. Thus, the postclosure maintenance program will be implemented to ensure that the WMU final grades are maintained properly to ensure final cover integrity and effectiveness. The final cover areas will be visually inspected on a monthly or quarterly basis as previously outlined in Subsection 3.2.2 (*Resources*) and evaluated for:

- Visible depressions
- Ponded water
- Settlement and subsidence

Based on the steep slopes that exist throughout the WMU, any settlement that might occur that could potentially compromise drainage or induce ponding would likely be limited to bench areas. If such deficiencies are identified, or in the unlikely scenario that an area(s)

requiring repair occurs on a slope between benches, the ClosureTurf™ material will be removed from the area in question, additional foundation layer soil will be placed and compacted within the depressed area to restore positive drainage, and the exposed area recovered with either the existing (if condition is suitable) or new ClosureTurf™ material. Foundation layer placement and liner repairs will be in accordance with the CQA Plan for the respective final cover components.

As an additional means of monitoring settlement and subsidence, the entire site will be aerially photographed every five years during the postclosure maintenance period and iso-settlement maps prepared to calculate any differential settlement. The iso-settlement maps will be generated with a maximum contour interval of 2 feet and a scale of 1 inch equal to 60 feet.

Drainage System

Drainage control problems can result in accelerated erosion of a particular area. In addition, differential settlement of drainage control structures can limit their usefulness and may result in failure to direct stormwater properly off of the site. Therefore, the postclosure maintenance program will be implemented to ensure that the integrity and effectiveness of the final drainage system are maintained throughout the postclosure maintenance period. The final drainage system will be inspected on a monthly or quarterly basis as previously outlined in Subsection 3.2.2 (*Resources*) and evaluated for:

- Evidence of erosion
- Standing water
- Formation of gullies
- Settlement, blockage of and damage to drainage channels, structures, swales, and culverts

Deficiencies, damage to, and failure of the drainage system will be repaired and restored within two weeks, weather permitting, to design conditions and in accordance with construction specifications. Temporary repairs may be made until permanent repairs can be scheduled. Culverts and drainage basins will be cleaned of sediments before they are no longer able to function properly. Drainage inlet grates will be kept free of debris. Drainage channels will be maintained to permit free flow and sealed or repaired to maintain structural integrity of the system.

Leachate Control System

The leachate control system will be inspected on a monthly or quarterly basis as previously outlined in Subsection 3.2.2 (*Resources*). In addition, preventive maintenance will be carried out on all components of the system at regular intervals to ensure proper operations. This consists of performing manufacturer's recommended maintenance on the pump system and monthly/quarterly (depending upon frequency shown in Subsection 3.2.2) inspection of the collection and storage system. This inspection includes assessing the condition of system components for possible leakage, failure, or damage, and adjusting individual pump controls or liquid levels for optimum performance. Any potential or existing

failure points will be noted and repairs implemented promptly. The leachate collection lines will be flushed as needed to remove any sediment buildup in the piping system.

Detection and Corrective Action Monitoring System

The leachate wet well will be inspected on a monthly or quarterly basis in conjunction with the leachate control system inspection as described in the previous subsection. The surface water monitoring system, in turn, requires no maintenance since there is no dedicated equipment or features. Finally, the groundwater and leachate monitoring wells will be inspected regularly in conjunction with the scheduled monitoring tasks (quarterly) for signs of failure or deterioration. If damage is discovered, the nature and extent of the problem will be recorded. A decision will be made to replace or repair the monitoring well. Possible repairs include redevelopment, chemical treatment, partial casing replacement or repair, resealing the annulus, pumping, and testing. If a monitoring well needs to be replaced, it will be properly decommissioned. Damaged monitoring wells will be scheduled for repair or replacement within one (1) month after identifying the problem. As for general maintenance, the following provisions will be performed on a quarterly basis:

- Cut weeds in 2-foot radius around each well, as needed.
- Replace locking well caps, as needed.
- Lubricate enclosure locks and hinges, as needed.

Gas Monitoring System

The gas monitoring system will be inspected quarterly in conjunction with scheduled monitoring tasks. System components will be repaired and replaced as required to maintain full system capabilities as intended at initial installation. Quarterly maintenance provisions will include the following:

- Cut weeds in 2-foot radius around each point, as needed.
- Replace probe parts, as needed.
- Lubricate enclosure locks and hinges, as needed.

Site Security

Site security upon closure will conform with the requirements of 27CCR, §21135. Perimeter fencing will be maintained to exclude cattle from the site. Other security provisions will include:

- Lockable gate at the site entrance.
- Lockable utility boxes, or gates, or both, enclosing the environmental control systems.

At least one sign will be posted in a visible location at the site access road indicating where the Final CPMP is located. The sign will also include a telephone number for emergency notification and will remain throughout the postclosure maintenance period.

3.5.2 Monitoring Program

The monitoring program applies to the environmental monitoring and control systems during the postclosure maintenance period and will coincide with applicable regulations and facility permits. The following subsections present the nature and scope of the respective monitoring components. Please note that in the case of detection and corrective monitoring for leachate, groundwater, and surface water, the scope and frequencies specified herein are proposed and will ultimately be dictated by the postclosure maintenance M&RP to be adopted by the RWQCB.

Detection and Corrective Action Monitoring

For the purpose of this Final PMP, it is assumed that detection and corrective action monitoring for leachate, groundwater, and surface water during the postclosure maintenance period will be similar to what is currently required under existing M&RP Order No. R1-2002-0061, with several modifications. The proposed modifications are outlined below. Please note that the current monitoring frequency required under existing M&RP Order No. R1-2002-0061 is quarterly for each of the aforementioned media.

- Eliminate the analyses for calcium, sodium, magnesium, potassium, bicarbonate, carbonate, and fluoride. Whereas these selected metals and general chemistry parameters were meaningful during previous site characterization work (i.e., definition of water types), they do not represent useful indicator parameters for potential releases, nor do they represent parameters of concern with respect to health and toxicity issues.

- Limit the quarterly monitoring frequency to selected groundwater monitoring wells located along the western property boundary, while reducing the monitoring frequency in the remaining groundwater monitoring wells to semi-annual. The western property boundary groundwater monitoring wells, which include 87-1, 90-2, 94-2, 96-1, and 96-3, are recommended for continued quarterly monitoring since they are situated between the WMU and downgradient off-site receptors that could possibly be influenced by a potential release.

- Remove groundwater monitoring wells 90-8 and 92-4 from the groundwater monitoring network since these monitoring wells are located outside the WMU's watershed and do not appear to be in hydraulic communication with groundwater underlying the WMU.

- Add semi-annual water level monitoring of leachate monitoring wells LW-1 through LW-3. The monitoring should be performed during the first and third quarters to allow for evaluation of seasonal variations.

- Reduce the quarterly monitoring frequency for surface water to semi-annual. The basis for this modification is that surface water flow in the ephemeral creek has historically occurred only between November and April, and sometimes intermittently during this time frame depending upon rainfall totals. Based on this

limited flow period, quarterly monitoring is not appropriate for the site. The semi-annual monitoring should be performed during the first and fourth quarters to provide the best odds for surface water flow being present.

Summaries of the scope and frequency of monitoring/testing proposed herein are presented in Table B-5 (Leachate), Table B-6 (Groundwater), and Table B-7 (Surface Water) of Appendix B.

The monitoring and testing activities will be performed using industry standard protocols. Provisions will include: use of dedicated pumps, sanitized portable pumps, and/or sanitized bailers; measurement of field parameters during purging and sampling; collection of quality assurance/quality control (QA/QC) samples; sample preservation during transport; chain-of-custody documentation; and laboratory QA/QC testing. Field procedures, field data, and laboratory test results will be summarized in the report submittals as described in Subsection 3.7 (*Reporting*).

Perimeter Gas Monitoring

The perimeter gas monitoring system will be monitored on a quarterly basis as required by 27CCR, §20921. The scope of monitoring at each probe will include: measuring static pressure conditions using a Magnehelic pressure gauge; purging the equivalent of one (1) probe volume using an air pump; and measuring methane, oxygen, and carbon dioxide concentrations initially, during and upon completion of the purging operations using a calibrated portable gas detector. The regulatory compliance level for methane along the landfill property boundary is 5 percent by volume.

Gas Emissions Monitoring

The gas control system and WMU surface will be monitored to comply with Assembly Bill 32 requirements in accordance with 17CCR, §95469. The scope of monitoring will include the following:

- Instantaneous surface monitoring will be conducted on a quarterly basis to determine if surface emissions of 500 parts per million by volume (ppmv) or greater, other than non-repeatable, momentary readings, are present at any location on the WMU surface. The monitoring will be accomplished using a calibrated portable gas detector.

- Integrated surface monitoring will be conducted on a quarterly basis to determine if the average methane concentration within designated grid areas exceed 25 ppmv. The monitoring will be accomplished using a calibrated portable gas detector.

- Any components of the gas control system that are under positive pressure will be monitored on a quarterly basis to determine if any leaks are present at methane concentrations exceeding 500 ppmv. The monitoring will be accomplished using a calibrated portable gas detector.

- The wellhead for each extraction well will be monitored on a monthly basis to determine whether the extraction well is being operated under vacuum conditions (i.e., negative pressure). The monitoring will be performed using a Magnehelic pressure gauge.

- The flare will be monitored for temperature and flow rate using dedicated instrumentation and the corresponding data documented using a continuous recorder. In addition, the flare will be source tested on an annual basis to verify compliance with emissions and destruction efficiency criteria.

The test methods and procedures employed to perform the respective monitoring provisions outlined above will be in accordance with the applicable subsections of 17CCR, §95471. This includes portable gas detector instrumentation and calibration, emissions monitoring procedures, wind speed data collection, and precipitation documentation. In addition, in the event that an emissions and/or operating threshold is identified, corresponding corrective actions will be implemented within the time frames specified in 17CCR, §95469. Please refer to the gas control system's Updated Design Plan (Appendix G) for further details regarding the methods and procedures.

Source Testing

In accordance with 17CCR, §95464(b)(4), an initial source test of the flare will be performed within 180 days of initial start-up of the gas control system. This will be followed by annual source testing thereafter during the postclosure maintenance period, or at an alternate frequency if approved by the Mendocino County Air Quality Management District (MCAQMD). The source testing will be performed by a qualified contractor experienced in this type of testing.

3.6 OPERATIONS AND MAINTENANCE PLAN FOR GAS CONTROL SYSTEM *27CCR, §21830(b)(6)*

Preventive maintenance for the existing partial perimeter gas collection system will be carried out on all mechanical equipment at manufacturer's recommended intervals. This includes cleaning, lubrication, and replacement of worn parts. The accessible portions of gas collection piping will be thoroughly inspected on a regular basis for detection of potential failure points and necessary repairs will be noted and implemented. System failures, such as pipe leaks or breaks that reduce gas collection efficiency and control effectiveness will be addressed to operating permit conditions. As previously noted, this system may become obsolete upon installation and operation of the full-scale gas control system. If that is the case, the maintenance provisions described above will be suspended accordingly.

In regards to the proposed full-scale gas control system, please refer to the corresponding Updated Design Plan (Appendix G) for details regarding operation and maintenance of the system. Please note that the totally-enclosed vertical ground flare has yet to be fabricated,

nor has the MCAQMD formally approved the system through the issuance of an Authority to Construct Permit. Any operation and/or maintenance provisions provided by the flare manufacturer or mandated by the MCAQMD through the permitting process will be incorporated into the operations and maintenance program accordingly.

3.7 REPORTING
27CCR, §21830(b)(7)

With the exception for the gas monitoring system (see below), the reporting requirements for the leachate control system, detection and corrective action monitoring system, and gas control system are permit specific. Under the current WDR/M&RP (Order No. R1-2002-0061), the leachate, groundwater, and surface monitoring and/or control data are reported to the RWQCB on a quarterly basis. However, a semi-annual reporting frequency is being requested as part of the new WDR to be issued for postclosure maintenance. As for gas control, documentation as to operation of the existing partial perimeter gas collection system is included as part of the perimeter gas monitoring reports prepared for 27CCR. As for the proposed full-scale gas control system, reporting will be dictated by the Permit to Operate to be issued by the MCAQMD. The reporting frequency recommended in the Updated Design Plan (EBA, 2019) is annually.

In regards to the gas monitoring system, the scope and frequency of reporting is dictated by 27CCR, §20934, which requires quarterly report submittals within a time period specified by the LEA but no more than within 90 days of sampling. Each report shall include methane concentrations, documentation of sampling conditions (i.e., barometric pressure, atmospheric temperatures, general weather conditions, and probe pressures), instrumentation utilized, monitoring personnel, and a brief description of methods.

CITY OF UKIAH LANDFILL
MENDOCINO COUNTY, CALIFORNIA

SECTION 4
CLOSURE AND POSTCLOSURE MAINTENANCE COST ESTIMATES

In accordance with 27CCR, §21769(c)(2)(A), §21800(c) and §21830(b)(8), engineer's cost estimates for closure of the Landfill and associated postclosure maintenance have been prepared by a Registered Professional Engineer or Certified Engineering Geologist and are presented in Appendix L. As presented in Appendix L, the estimated cost for closure of the Landfill is ***$10,987,856***. This cost includes a 20 percent contingency factor. The estimated cost for postclosure maintenance of the Landfill is ***$7,191,931*** for the 30-year postclosure maintenance period. This cost was calculated by multiplying the annual cost for maintenance and monitoring by 30 years (duration of postclosure maintenance period).

The aforementioned information represents the cost of closing the Landfill at the point in its active life (i.e., current site conditions) when the extent and manner of operation would make closure the most expensive. The closure and postclosure maintenance costs will be updated annually to incorporate changes resulting from increased or decreased site activities or monitoring. Any modifications to these costs will be submitted to CalRecycle for approval.

As required by 27CCR, Chapter 6, the operator of a disposal facility is responsible for establishing a "demonstration of financial responsibility" to provide funding for site closure and postclosure maintenance costs. Financial mechanisms to provide for such funding have been established by the City.

CITY OF UKIAH LANDFILL
MENDOCINO COUNTY, CALIFORNIA

SECTION 5
FUND DISBURSEMENT SCHEDULE

In accordance with 27CCR, §21790(b)(8)(F), a preliminary fund disbursement schedule for the final closure construction project has been prepared and is enclosed in Appendix N. Please note that the fund disbursement schedule presented in Appendix M is preliminary in nature as it is based on engineer's estimates for both construction sequencing and associated costs. Both of these variables as presented are subject to change based on the contractor selected from the competitive bid process. It should be further noted that the closure costs, which are based on the engineer's cost estimate presented in Section 4 (*Closure and Postclosure Maintenance Cost Estimates*), exclude the 20 percent contingency. An updated fund disbursement schedule will be provided to the applicable regulatory agencies upon selection of a qualified contractor.

Table B-5
Summary of Leachate Monitoring Parameters
City of Ukiah Landfill

Parameter	*Units*	*Frequency*
Field Parameters		
Total Flow	gallons	Monthly
Flow Rate	gallons per day	Monthly
Specific Conductance	µmhos/cm	Quarterly
pH	pH units	Quarterly
Temperature	degrees F	Quarterly
Monitoring Parameters		
Total Dissolved Solids	mg/L	Quarterly
Chloride	mg/L	Quarterly
Nitrate-Nitrogen	mg/L	Quarterly
Total Ammonia	mg/L	Quarterly
Sulfate	mg/L	Quarterly
Chemical Oxygen Demand	mg/L	Quarterly
Biological Oxygen Demand	mg/L	Quarterly
Total Ammonia	mg/L	Quarterly
Total Alkalinity	mg/L	Quarterly
Volatile Organic Compounds (EPA Method 8260 with MtBE)	µg/L	Quarterly
Total Purgeable/Extractable Petroleum Hydrocarbons	mg/L	Quarterly
1-Year Constituents of Concern		
Inorganics (Dissolved Metals)[1]	mg/L	Annually
Extractable Oil and Grease	mg/L	Annually
5-Year Constituents of Concern		
Semi-Volatile Organic Compounds (EPA Method 8270)	µg/L	Every 5 Years
Organochlorine Pesticides (EPA Method 8081)	µg/L	Every 5 Years
Polychlorinated Biphenyls (PCBs) (EPA Method 8082)	µg/L	Every 5 Years
Organophosphorus Compounds (EPA Method 8141)	µg/L	Every 5 Years
Chlorophenoxy Herbicides (EPA Method 8150)	µg/L	Every 5 Years

µmhos/cm: Micromhos per Centimeter
degrees F: Degrees Fahrenheit
mg/L: Milligrams per Liter
µg/L: Micrograms per Liter
MtBE: Methyl tert-Butyl Ether

(1): Per Appendix II, Subtitle D, 40 Code of Federal Regulations (40 CFR).

Table B-6
Summary of Groundwater Monitoring Parameters
City of Ukiah Landfill

Parameter	*Units*	*Frequency*
Field Parameters		
Temperature	degrees F	Quarterly[2] / Semi-Annually[3]
Groundwater Elevation	Feet Above MSL	Quarterly[4]
Specific Conductance	µmhos/cm	Quarterly[2] / Semi-Annually[3]
pH	pH units	Quarterly[2] / Semi-Annually[3]
Turbidity	NTUs	Quarterly[2] / Semi-Annually[3]
Monitoring Parameters		
Total Dissolved Solids	mg/L	Quarterly[2] / Semi-Annually[3]
Chloride	mg/L	Quarterly[2] / Semi-Annually[3]
Sulfate	mg/L	Quarterly[2] / Semi-Annually
Nitrate-Nitrogen	mg/L	Quarterly[2] / Semi-Annually[3]
Manganese	mg/L	Quarterly[2] / Semi-Annually[3]
Boron	mg/L	Quarterly[2] / Semi-Annually[3]
Un-Ionized and Total Ammonia	mg/L	Quarterly[2] / Semi-Annually[3]
Total Alkalinity	mg/L	Quarterly[2] / Semi-Annually[3]
Volatile Organic Compounds (EPA Method 8260 with MtBE)	µg/L	Quarterly[2] / Semi-Annually[3]
Total Purgeable/Extractable Petroleum Hydrocarbons	mg/L	Quarterly[2] / Semi-Annually[3]
1-Year Constituents of Concern		
Inorganics (Dissolved Metals)[1]	mg/L	Annually
Extractable Oil and Grease	mg/L	Annually
5-Year Constituents of Concern		
Semi-Volatile Organic Compounds (EPA Method 8270)	µg/L	Every 5 Years
Organochlorine Pesticides (EPA Method 8081)	µg/L	Every 5 Years
Polychlorinated Biphenyls (PCBs) (EPA Method 8082)	µg/L	Every 5 Years
Organophosphorus Compounds (EPA Method 8141)	µg/L	Every 5 Years
Chlorophenoxy Herbicides (EPA Method 8150)	µg/L	Every 5 Years

degrees F: Degrees Fahrenheit
MSL: Mean Sea Level
µmhos/cm: Micromhos per Centimeter
NTUs: Nephelometric Turbidity Units
mg/L: Milligrams per Liter
µg/L: Micrograms per Liter
MtBE: Methyl tert-Butyl Ether

(1): Per Appendix II, Subtitle D, 40 Code of Federal Regulations (40 CFR).

(2): Corresponds to groundwater monitoring wells 87-1, 90-2, 94-2, 96-1 and 96-3.

(3): Corresponds to groundwater monitoring wells 90-1, 90-3, 90-4, 90-5, 90-6, 90-7, 92-1, 92-2, 92-3, 94-1 and 96-2.

(4): Corresponds to all groundwater monitoring wells listed above in Footnotes 2 and 3.

MONITORING WELL MW-96-1

Drilling Method: 8" Hollow Stem Auger
Sampling Method: Continuous Core (CC); Drive Sample (DS)
Date Completed: 12/20/96
Elevation (Top of Casing):

Sampler Type	OVM	Blows per Foot	Inches Driven/Rec	Samples	Symbols	USCS	Description
CC			60/60			GM	Reddish brown sandy clayey GRAVEL, stiff, some iron staining around clasts, rounded red chert pebbles to 2-inch diameter, dry.
CC			60/60			CL	Red-brown gravelly silty SAND, dry, poorly graded, medium sand, rounded gravel to 1/2-inch diameter, red iron oxide staining on pebbles.
CC			60/18				Sandstone pebbles to 3-inch diameter.
CC			60/24				Becomes dark brown, moist. Half-inch thick black carbonized layer, very moist.
CC			60/60			CL	Greenish gray silty CLAY, moist.
						ML	Greenish gray silty fine SAND, wet.
						CL	Greenish gray silty to fine sandy CLAY.
DS		90	18/18			ML	Greenish gray silty sandy GRAVEL, with rounded to semi-angular quartz, chert, sandstone pebbles to 2-inch diameter.

NOTES:
1. Drilled with 8-inch hollow stem auger with continuous core sampling to 26.5 feet bgs on 12/19/96 and 12/20/96. Bottom sealed with plug back bentonite to 23.5 feet bgs.
2. Reamed to 10-inch diameter to 23.5 feet bgs on 12/20/96
3. Four-inch diameter groundwater monitoring well installed on 12/20/96. Four-inch diameter Schedule 40 PVC casing from 2 feet ags to 8.0 feet bgs. Four-inch diameter Schedule 40 flush threaded PVC 0.010-inch slotted screen from 8.0 to 23.0 feet bgs. Filter pack constructed with #2/12 Lone Star sand.

APPENDIX D

ENGINEERED ALTERNATIVE ANALYSIS

TECHNICAL MEMORANDUM

Project: City of Ukiah Landfill
Mendocino County, California

Project No.: 02-907

Subject: Engineered Alternative Analysis for Final Cover System

Date: August 2015

Prepared By: Damon Brown, P.G., C.E.G., C.Hg., EBA Engineering
Mike Delmanowski, P.G., C.E.G., C.Hg., EBA Engineering

FINAL COVER SYSTEM DESCRIPTION

The proposed final cover system will consist of a patented geosynthetic product identified as "ClosureTurf™". ClosureTurf™ is a three-component system comprised of a structured geomembrane, a specialized tufted geotextile, and a sand infill layer. The structured geomembrane component serves as the low-hydraulic conductivity layer (LHCL), whereas the specialized tufted geotextile and sand infill layer represent the erosion-resistant layer as defined in 27CCR. Literature for the ClosureTurf™ product is enclosed in Attachment 1 of this Technical Memorandum.

Overall, the proposed final cover system design can be summarized as follows (in ascending order):

- Minimum 1-foot thick soil foundation layer.
- 50 mil linear low-density polyethylene (LLDPE) geomembrane liner (Super Gripnet® with Spike Down).
- Specialized tufted geotextile (Engineered Turf).
- Minimum ½-inch thick sand infill layer.

In addition to the above features, the final cover system will also be equipped with a gas relief component. This component will consist of a series of 3.5-foot wide collection strips placed parallel and/or perpendicular to slopes and spaced at maximum 220-foot intervals. The collection strips, which will be constructed of the same Super Gripnet® with Spike Down material described above for the geomembrane liner component, will be connected to the LFG collection system to prevent the build-up of gas pressures beneath the final cover system. Pressure release valves will also be installed at regular intervals between the collection strips as an additional precautionary measure.

Please refer to the Technical Specifications (Appendix H), Construction Quality Assurance (CQA) Plan (Appendix I), and Construction Drawings (Appendix J) of this Final Closure and Postclosure Maintenance Plan for details regarding material and installation specifications for the respective final cover system components described above.

ENGINEERED ALTERNATIVE ANALYSIS

As outlined above, the proposed engineered alternative presented herein substitutes the patented geosynthetic product ClosureTurf™ in lieu of the LHCL prescriptive standard (i.e., CCL) required under 27CCR. Regulatory consideration of an engineered alternative is allowed under 27CCR, §20080(b), which stipulates that an engineered alternative may be considered if construction of the prescriptive standard is unreasonably and unnecessarily burdensome and will cost substantially more than the proposed alternative. Furthermore, the engineered alternative must be consistent with the performance goal addressed by the prescriptive standard and afford equivalent protection against water quality impairment. The following information has been compiled to demonstrate compliance with these criteria and includes data regarding the properties of the ClosureTurf™, as well as comparisons of performance and costs of the proposed ClosureTurf™ engineered alternative to that of the prescriptive standard and the previously proposed geosynthetic clay liner (GCL) final cover system.

Performance

One of the primary variables for demonstrating equivalency to the prescriptive standard is infiltration through the final cover system. In this regard, infiltration equivalency analyses have been performed on the ClosureTurf™ product versus a prescriptive Subtitle D cover system. The analyses have included the use of two methodologies: 1) the Hydrologic Evaluation of Landfill Performance (HELP) Model; and 2) the Giroud Method (Giroud et al., 1997). Both methods were employed for a generic landfill site in Texas. Findings from these analyses revealed the following:

INFILTRATION EQUIVALENCY ANALYSIS ClosureTurf™ vs. SUBTITLE D FINAL COVER SYSTEMS		
Methodology	***ClosureTurf™ Final Cover System***	***Prescriptive Subtitle D Final Cover System***
HELP Model for Site in Texas – Average Annual Infiltration (Cubic Feet)	8.3	347
Giroud Method with Silty-Sandy Soil below the ClosureTurf™ (Gallons per Day)	1.33	4.51
Giroud Method with Silty-Sandy Soil with Some Clay below the ClosureTurf™ (Gallons per Day)	0.24	4.51

As demonstrated in the above table, the ClosureTurf™ product exhibits substantially lower infiltration rates for the respective scenarios as compared to the prescriptive standard. This can be attributed to the lower hydraulic conductivity characteristics of the LLDPE geomembrane liner as compare to a CCL, as well as the more efficient removal of moisture above the LHCL component, thereby reducing the amount of potential infiltration into the WMU. Based on these circumstances, the ClosureTurf™ product meets the required performance goal for an engineered alternative by providing equal to or greater protection against potential water quality impairment. Other features afforded by ClosureTurf™ that demonstrate its suitability as an engineered alternative from a performance perspective can be summarized as follows:

- The slope stability characteristics of ClosureTurf™ far exceeds those provided by other geosynthetic products (including GCLs), which is very important based on the steep slopes that exist at the Landfill. The bottom spiked friction surface of the Super Gripnet® provides maximum interface friction and a high factor of safety against sliding at the liner/foundation layer soil interface.

- The Engineered Turf component eliminates the potential for soil creep and veneer failures resulting from saturation of the vegetative soil cover that is a required component of the prescriptive Subtitle D final cover and other traditional geosynthetic cover systems. As noted in the previous bullet item, this potential is exacerbated by the very steep slopes that exist at the Landfill.

- The drainage aspects of the ClosureTurf™ are designed to allow rainfall to penetrate rapidly through the sand infill layer and into the structured drain liner below which has a very high transmissivity for subsequent conveyance of the water off of the liner system. The sand infill has been demonstrated to handle over six inches per hour of rainfall intensity without erosion when applied on three horizontal to one vertical (3H:1V) slopes. Such rainfall energy conditions on a traditional vegetative soil cover would likely result in significant erosional damage.

- The drainage aspects of the ClosureTurf™ as described above promote very "clean" and low turbidity stormwater run-off, which represents a beneficial feature

since the collected run-off is subsequently discharged to the ephemeral creek that borders the northern boundary of the WMU. Achieving comparable stormwater run-off quality from a traditional vegetative soil cover would be difficult.

- ClosureTurf™ is designed to provide weathering resistance and geomembrane protection when exposed to extreme heat and ultra-violet (UV) exposure. Based on results of independent, real-world weathering tests and data from existing projects, ClosureTurf™ can provide decades of reliable performance beyond the standard 30-year postclosure maintenance period.

- ClosureTurf™ has been tested for wind uplift resistance and demonstrated no uplift when exposed to 120 miles per hour wind. As such, the ClosureTurf™ can withstand most wind conditions that could realistically be encountered at the site.

As presented in the product literature data enclosed herein as Attachment 1, ClosureTurf™ has been approved for use as an engineered alternative by the RWQCB at two sites in California. These sites correspond to the Crazy Horse Landfill and Portola Landfill located Monterey County and Plumas County, respectively. This product has also been successfully employed at a number of landfill sites throughout the United States, including sites in the southeast and east that are subject to much harsher weather conditions than would be experienced at the Landfill.

Installation

The installation and CQA testing of the ClosureTurf™ product at the Landfill would be significantly easier than for a CCL. The following provides a summary to support this position:

- In general, ClosureTurf™ deployment is very straightforward, both from a placement and seaming standpoint. Furthermore, heavy equipment requirements for ClosureTurf™ deployment are limited primarily to a rubber-tire forklift or equivalent. Conversely, CCL construction is very labor intensive with substantial reliance on heavy equipment (i.e., scrapers, dozers, compactors, etc.).

- Less CQA is required for ClosureTurf™ due to the consistency of the materials and manufacturing process. CQA testing for a CCL, in turn, is more extensive and occurs at a higher frequency to verify the consistency of borrow source materials and the contractor's ability to achieve moisture content, compaction, and hydraulic conductivity during construction.

- Installation of a sealed, double-ring infiltrometer (SDRI) is required to test the field permeability of CCLs, which is costly and time consuming. Such a provision is not required for ClosureTurf™.

In comparison to other geosynthetic liner systems, ClosureTurf™ is slightly more labor intensive due to the placement of the sand infill layer. However, this increased labor is

more than offset be the elimination of the vegetative soil layer. Similar to the CCL construction, construction of a vegetative soil layer is also very labor intensive with substantial reliance on heavy equipment. In addition, in the case of the GCL final cover system that was previously proposed for the Landfill, the gas relief layer material and labor requirements are significantly greater as compared to the ClosureTurf™. Thus, the ClosureTurf™ final cover system installation represents the least intensive approach from an installation standpoint.

Maintenance

ClosureTurf™ offers a significant maintenance advantage over a prescriptive Subtitle D final cover and any other traditional geosynthetic cover systems that require a vegetative soil cover. In essence, vegetative soil covers often require regular maintenance related to the repair of erosional damage, installation of erosion control measures (i.e., silt fences, hay bales, wattles, etc.), slope repairs, and revegetation. Erosion from the vegetative soil cover also causes siltation of drainage ditches and culverts that require subsequent repair. Such provisions are not required with the ClosureTurf™ product, thereby providing a significant cost savings over the course of the postclosure maintenance period.

Cost

The cost of the final cover system using ClosureTurf™ was compared to the GCL final cover system as previously proposed in the January 2008 JTD (EBA, 2008) and subsequent October 31, 2013 *Final Closure Construction Submittal Package* (EBA, 2013). Since the different products influence other aspects of the final cover construction (i.e., foundation layer, gas relief layer, erosion-resistant layer, drainage, access roads, etc.), the cost comparison included these variables in the analysis. Conversely, those final closure construction items not influenced by the final cover system design (i.e., mobilization, leachate control system improvements, LFG collection and control system, etc.) are not included in the analysis. The corresponding estimated construction costs for the two final cover systems are presented in the following table.

CONSTRUCTION COST COMPARISONS ClosureTurf™ vs. GCL FINAL COVER SYSTEMS		
Item	***ClosureTurf™ Final Cover System***	***GCL Final Cover System***
Foundation Layer / Engineered Fill	$594,530	$465,890
Gas Relief Layer	$86,200	$2,290,360
Low-Hydraulic Conductivity Layer (LHCL)(1)	$2,034,620	$1,493,690
Erosion-Resistant Layer(2)	$3,807,850	$1,866,300
Drainage System Components	$552,910	$695,590
Erosion Control	$100,300	$581,930
Access Roads	$172,580	$374,790
EXTENDED TOTAL	***$7,348,990***	***$7,768,550***

GCL: Geosynthetic Clay Liner

(1) The LHCL component for the ClosureTurf final cover system includes the Super Gripnet® with Spike Down, while the GCL final cover system includes the GCL.

(2) The erosion-resistant layer component for the ClosureTurf final cover system includes the Engineered Turf and sand infill layer, while the GCL final cover system includes a geonet composite drainage layer and vegetative soil layer.

As presented in the above table, the cost for the ClosureTurf™ final cover system is approximately $419,560 less than the GCL final cover system. In addition, as noted in the previous subsection, long-term maintenance associated with ClosureTurf™ is substantially less than any final cover system that requires an erosion-resistant layer comprised of a vegetative soil cover. The estimated cost savings from a maintenance perspective over the 30-year postclosure maintenance period equates to approximately $277,400. Thus, the overall cost savings resulting from replacing the previously proposed GCL final cover system with ClosureTurf™ is approximately $696,960.

CONCLUSIONS

As demonstrated by the comparative information presented herein, the proposed ClosureTurf™ engineered alternative meets or exceeds the performance criteria addressed by the prescriptive standard. Furthermore, the cost analysis comparing construction costs for the ClosureTurf™ versus the previously proposed GCL final cover system reveals that a significant cost savings can be realized through implementation of the ClosureTurf™ option. Based on these circumstances, it can be concluded that the ClosureTurf™ engineered alternative meets the qualifying criteria specified in 27CCR, §20080(b).

Infiltration Equivalency Analysis

The minimum technical requirements as defined by the EPA for Subtitle D Final Cover Systems are contained in 40 CFR 258.60. This regulation allows for an alternative (performance based) cover system. One of the requirements for determining equivalency is infiltration. Typically, this is evaluated using two methodologies – (i) the Hydrologic Evaluation of Landfill Performance (HELP) Model and (ii) the Giroud Method1. Both of these methods have been used to compare the infiltration performance of the **ClosureTurf®** Final Cover System to the Prescriptive Subtitle D Cover. A comparison of infiltration rates is shown in the Table for both methodologies for a generic site in Texas.

The results demonstrate that the **ClosureTurf®** Final Cover System provides superior protection against Infiltration when compared to the Prescriptive Subtitle D Standard landfill final closure systems.

Infiltration Equivalency Analysis	ClosureTurf® Cover System	Prescriptive Subtitle D Cover System
HELP Model for Site in Texas – Average Annual Infiltration (Cubic Feet)	8.3	347
Giroud Method with Silty-Sandy Soil below the ClosureTurf® (Gallons / day)	1.33	4.51
Giroud Method with Silty-Sandy Soil with Some Clay below the ClosureTurf® (Gallons / day)	0.24	4.51

Summary of Results for Infiltration Equivalency Analyses for a Generic Site in Texas

Sliding Slope.
Stable Slope.
ClosureTurf™
Brought to you by Agru America
U.S. Patent Nos. 7,682,105 & 8,585,322 • Canada Patent No. 2,663,170 • Other Patents Pending

Soil slopes don't work, although they keep you working.

Soil erosion continually plagues the ongoing management of landfills, industrial waste sites, CCR storage areas, and other environmental containment applications requiring constant rebuilding of slopes weakened by rain and wind. In addition to ongoing maintenance headaches, traditional systems utilizing soil as their main component are costly to maintain, slow to install, and introduce unwanted slope instabilities.

There is an alternative solution available for these challenging applications which address the lessons learned by the industry since the implementation of Subtitle D. The innovative solution is called ClosureTurf™ which meets and/or exceeds the requirements set forth by the EPA in Subtitle D. A three component system, ClosureTurf is revolutionizing the way engineers, owners, government agencies and many others solve containment challenges. The ClosureTurf system offers exceptional durability and pleasing aesthetics at a lower cost than traditional practices.

ClosureTurf™ makes fast, cost-efficient erosion control so easy—it's virtually install and that's all.

ClosureTurf is a patented three component system comprised of a structured geomembrane, an engineered turf, and a specialized sand infill. The ClosureTurf system provides many advantages over a typical Subtitle D landfill cover such as:

- Reduces construction and long-term maintenance costs
- Improves short term and long term slope stability
- Excellent performance in extreme weather conditions
- Provides for enhanced gas collection (when applicable)
- Improves stormwater quality
- Incremental closures for odor control and leachate reduction (close as you go)

With several square miles of installed product, ClosureTurf has proven to be superior in performance when compared to other cover solutions—not only in the laboratory but also in real life applications where it counts. The system has a proven track record to significantly outperform traditional vegetative closure methods with regard to installation, maintenance and environmental compliance.

ClosureTurf™ delivers superior performance

Performance:

- Prevents common erosion, storm water and siltation problems–even during severe weather events.
- Utilizes the highest interface friction geomembrane available in the market which provides greater stability on steeper grades and reduces the need to rebuild slopes.
- The lifespan of the ClosureTurf system extends well beyond the required 30 year post closure maintenance period. It protects against driving forces, severe weather conditions, heat and wind uplift.

Timber Ridge Landfill

Cost Savings:

- Significantly lowers upfront capital costs.
- Dramatically reduces maintenance costs.
- Reduces the cost associated with the repair of significant failures.

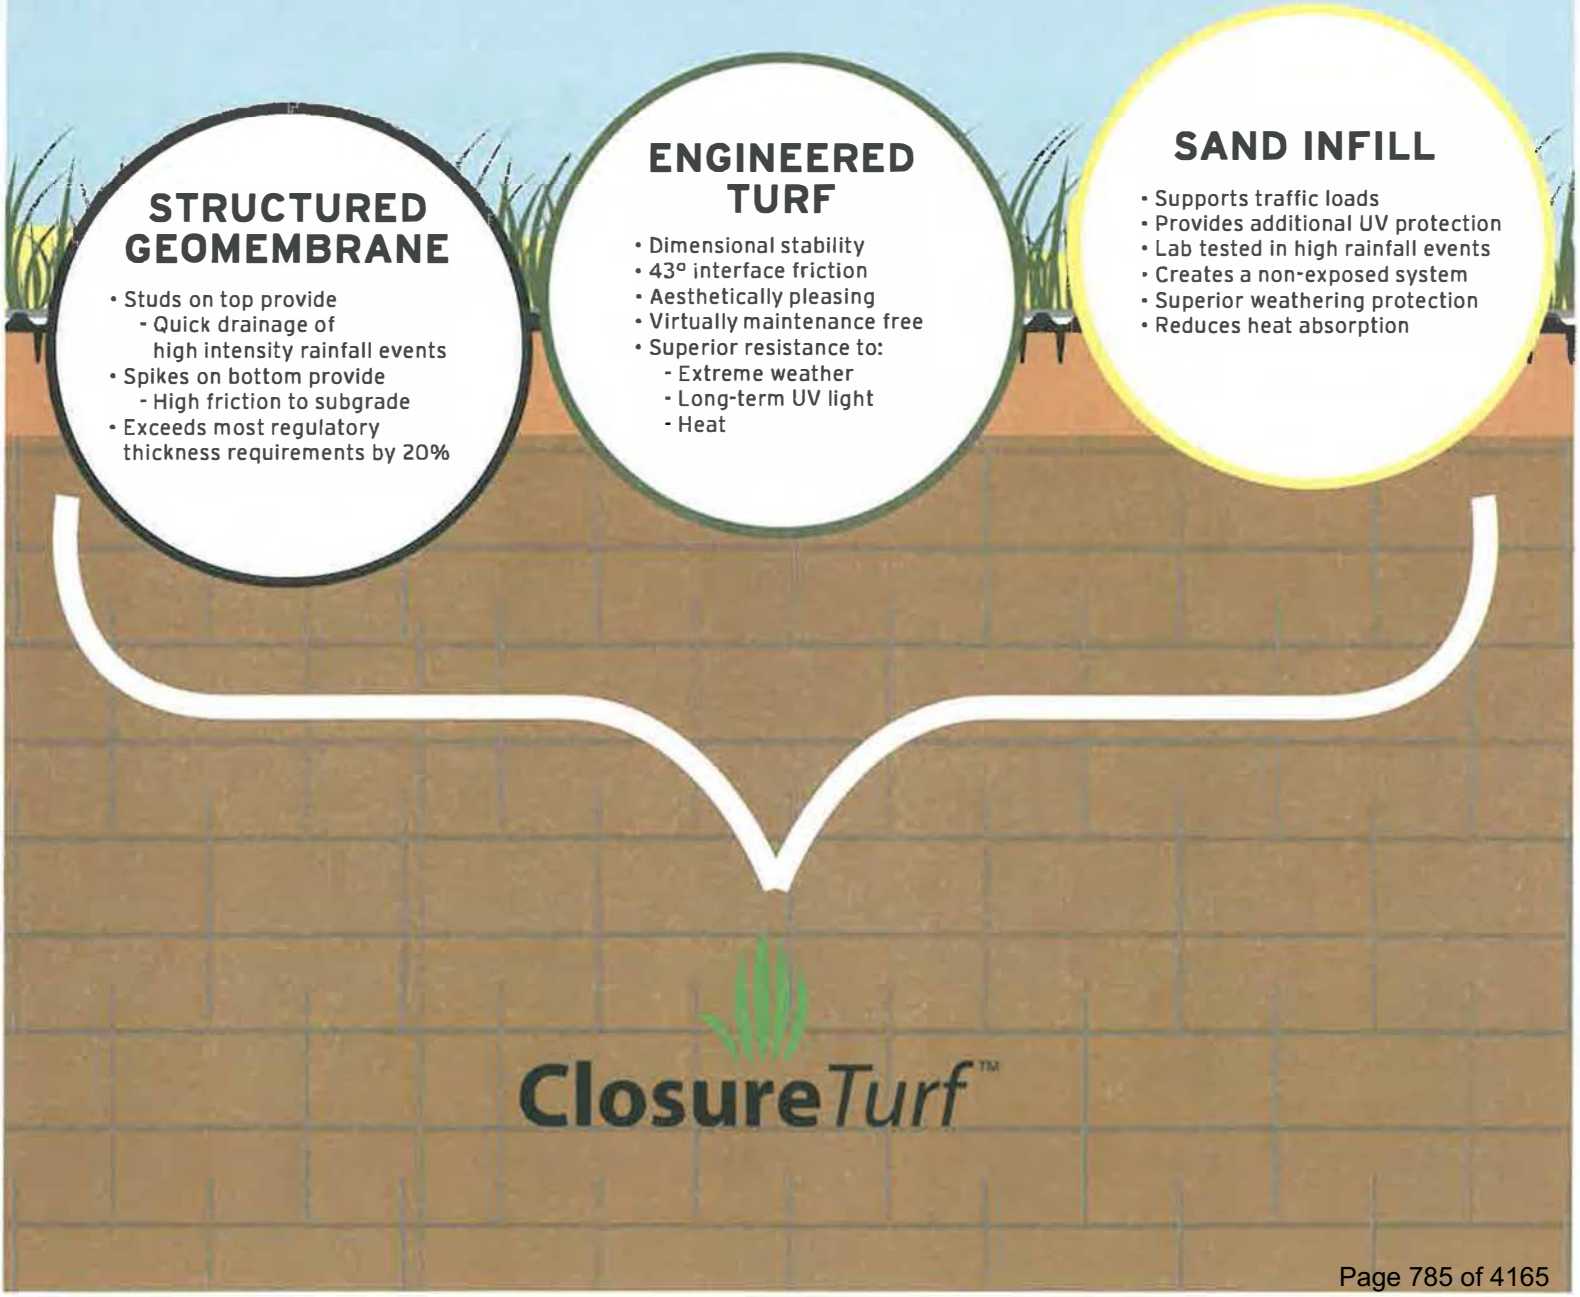
Saufley Landfill

Environmental Benefits:

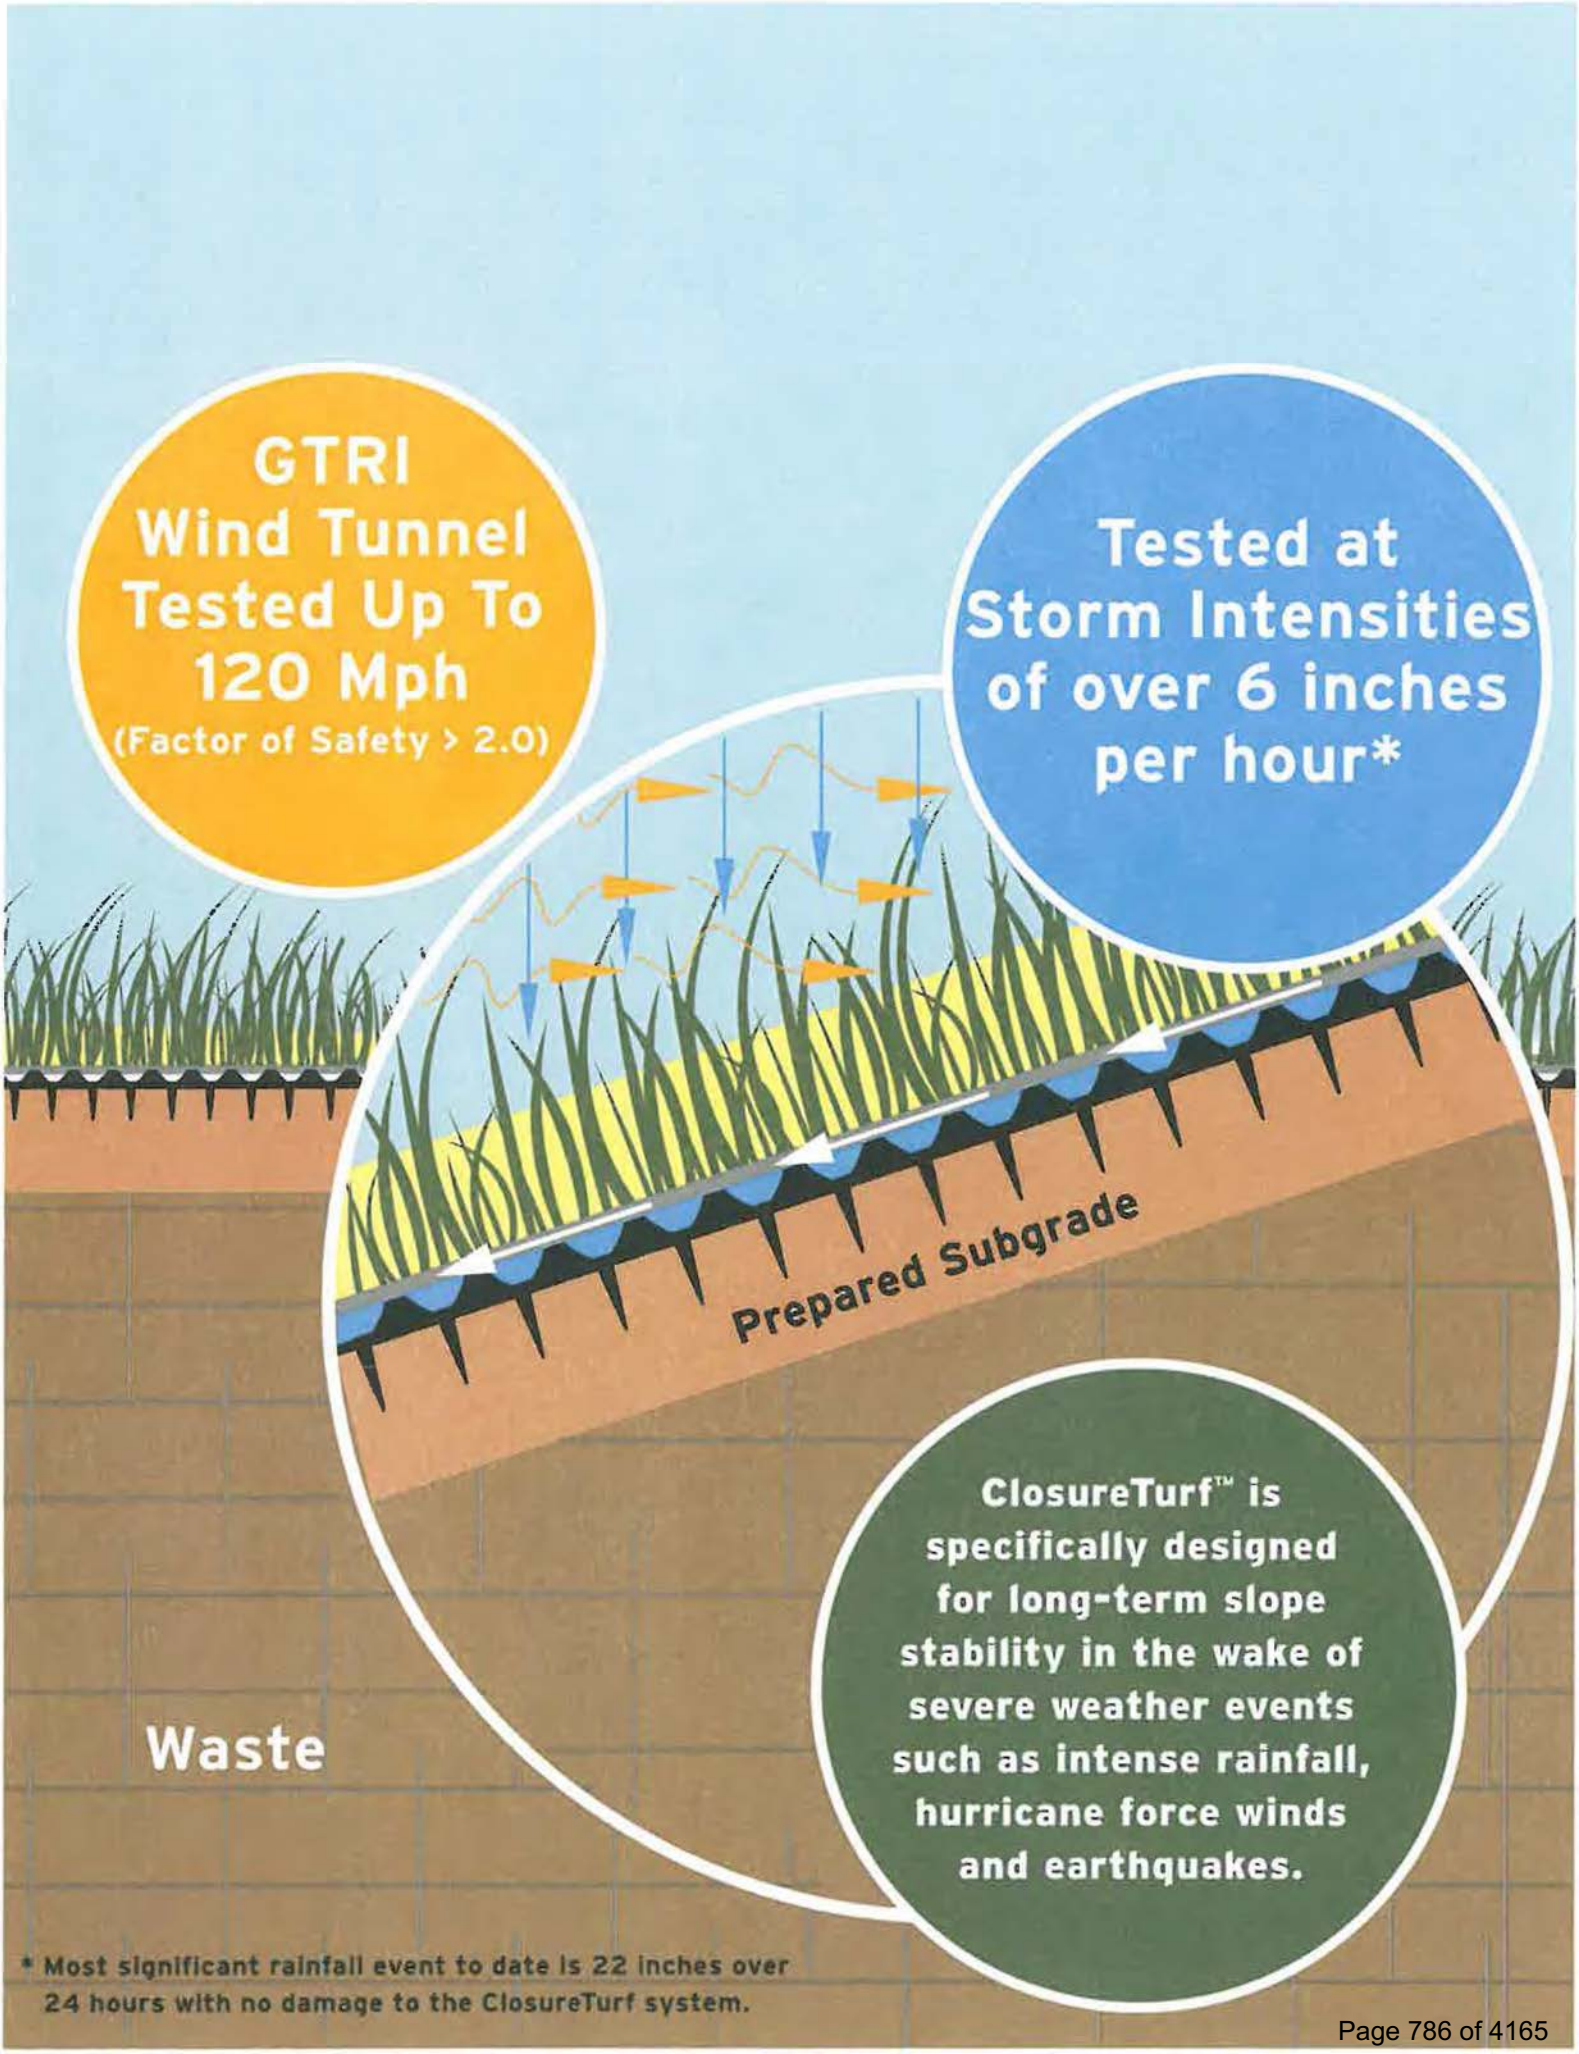
- Obtain control over gas collection sooner than later ("close as you go").
- Reduces environmental carbon footprint by up to 75% during construction.
- Lowers the production of leachate by allowing incremental closures.
- Durable system construction designed to safely convey internal gas pressures, reduce unwanted releases and avoid slope stability issues.
- The ClosureTurf system requires no irrigation, fertilizing, seeding or mowing.
- Provides filtration resulting in clean storm water runoff.

Crazy Horse Landfill

Other Benefits:



- Reduces overall surface emissions.
- Easily adapted during or after construction for solar field development.
- Rapid, low-impact construction.



Hartford Landfill

Take a closer look at ClosureTurf™

ClosureTurf™ is a patented, three component system comprised of a structured geomembrane, an engineered turf, and a specialized sand infill. The foundation of the system is an impermeable, highly transmissive structured geomembrane. It provides for the highest interface friction values available in the market. The engineered turf component gives the system its natural look and feel of grass while protecting the geomembrane from extreme weather conditions for the long term. The specialized sand infill component is placed between the blades of the engineered turf and allows the system to be trafficked while also providing additional protection from weathering. When required, ClosureTurf's patented surficial gas system is included with the system to vent landfill gas emissions. ClosureTurf is fast and easy to install for an aesthetically pleasing, cost-effective landfill closure solution.

More engineered solutions...

CLOSURETURF™ SURFICIAL GAS COLLECTION SYSTEM

ClosureTurf's patented surficial gas collection system reduces, and in some cases, eliminates the need for traditional gas wells and piping. It can function as a standalone system or in conjunction with a traditional system. Underneath the ClosureTurf system, gas is generated and rises to the surface where a vacuum created by the differential pressures is vented through the surficial gas collection foot. This method provides an efficient method of gas collection while reducing the amount of condensate that needs to be managed.

The unique design of the ClosureTurf Surficial Gas Collection System resulted in one landfill winning an International Achievement Award for a combined gas collection and closure system and the Solid Waste Association of North America (SWANA) Gold Excellence Award for landfill gas collection in 2012.

VERSACAP™

VersaCap is a low-cost, intermediate landfill cover solution designed to help prevent erosion, infiltration, runoff and gas emissions during the operational phases of the landfill.

Fast and easy to install, VersaCap is a wind-resistant membrane comprised of a synthetic turf and specially-formulated polymer backing that improves the quality of surface water runoff and eliminates downstream siltation by preventing erosion of the cover soils. VersaCap does not require tires or sandbags to keep it in place and can easily be taken up and reused in future areas.

HYDROTURF™

HydroTurf is an economical, environmentally-friendly alternative revetment to rock riprap and piped channels. It is a patented three component system made up of a structured geomembrane, an engineered turf and a specialized pozzolanic infill (HydroBinder™). Created specifically for bench drains, downchutes and perimeter channels on landfill covers, HydroTurf will flex and move with typical differential settlements that occur on landfill covers. It provides superior hydraulic performance capable of handling large velocity and large flows resulting in very high velocities.

Delivering the same advantages as ClosureTurf, HydroTurf offers rapid, low impact installation that's significantly less costly than hard armor and piping, and is projected to last more than 100 years when properly maintained. Best of all, unlike hard armor riprap channels, HydroTurf improves the environment by producing cleaner storm water runoff.

SOLAR

The nature of the ClosureTurf system provides an excellent opportunity for generating environmentally friendly renewable energy through the implementation of solar panel arrays. ClosureTurf's geosynthetic cover enables panels to operate in a clean environment significantly reducing dust and erosion. The engineered turf provides an excellent surface for easy access and eliminates the risk of panel damage from mowing and maintenance required for other types of ground cover.

The exceptionally durable heavy load bearing ClosureTurf platform enables complete accessibility for installation, maintenance and replacement of PV panels.

ClosureTurf's proven technology is working hard for these landfills.

Industrial Ash and Sludge Lagoon, Southeast USA

- Saved 20 acres of land from destruction for borrow.
- Created a 70-acre watershed of clean runoff.
- Unique lightweight construction allowed for closure on soft, weak subgrade.

Crazy Horse Landfill, Salinas, CA

- Eliminated 26,000 truck trips for soil borrow (equivalent to 660,000 miles).
- Combination of soil import elimination and reduced heavy equipment needs reduced the project's carbon footprint by 70%.
- Eliminates dirty storm water run-off by replacing cover soils with a cover system that produces very clear and clean water free of fertilizer and muddy runoff.
- Provided the perfect foundation for solar panel racking system.
- Eliminated slope veneer failures high seismic loads (site is adjacent to San Andreas Fault).

LaSalle Landfill, Jena, LA

- Endured more than 330 inches of rainfall since installation in 2008.
- Survived a tornado when 70 mph winds hit across the front of landfill.
- Sand infill remained in place with no erosion when a levee broke releasing 5 acres of water across the turf.
- Eliminated annual slope rebuilding–a savings of over $300,000 to date.

Timber Ridge Landfill, Richwoods, MO

- Proprietary ClosureTurf system collected 500 SCFM of gas over a ten-acre closure with no vertical wells.
- Winner of the International Achievement Award for combined gas collection and closure system.
- Winner of the Solid Waste Association of North America (SWANA) Gold Excellence Award for landfill gas collection.

Based on these and other successes, ClosureTurf exceeds requirements of EPA Subtitle D and has been approved and installed in many states.

ClosureTurf™

The cost-efficient, compliance-driven, environmentally-friendly landfill solution.

With slope erosion and vegetative maintenance an ongoing battle, and compliance issues ever looming, choose the cover solution designed to eliminate the most common problems associated with landfill management.

ClosureTurf is specifically designed to solve soil erosion, slope instability, gas emissions, and high costs of installation and maintenance. Discover the solution that makes your job a lot easier, keeps you compliant and makes you look good in the process.

For more information on ClosureTurf, visit closureturf.com, email us at info@closureturf.com or call 800-373-2478.

v.5.14

ClosureTurf™

Brought to you by Agru America

U.S. Patent Nos. 7,682,105 & 8,585,322 • Canada Patent No. 2,663,170 • Other Patents Pending

ClosureTurf™ ensures fast, cost-efficient and environmentally-friendly erosion control—even in some of the toughest applications.

ClosureTurf™ is a three component system comprised of an impermeable, highly transmissive structured geomembrane, a specialized engineered turf, and sand infill. The structured geomembrane component is the foundation of the system and provides for the highest interface friction values available in the market. The engineered turf component is placed on top of the geomembrane giving the system its natural look and feel of a grass while protecting the geomembrane component from extreme weather conditions for the long term. Finally, the sand infill placed in the engineered turf enables the system to be trafficked, while also providing for additional protection and an additional factor of safety against weathering. A virtually maintenance free technology designed to last, ClosureTurf has proven to be the most sustainable closure option available for the waste industry. See how ClosureTurf performs in some of the most demanding applications.

1

LASALLE-GRANT LANDFILL

QUICK STATS

Location: Jena, LA
Completed: 2009
Owner: Progressive Waste Solutions
Size: 9 acres

PROJECT SCOPE

The soil of the LaSalle-Grant Landfill in central Louisiana was highly erodible, had a high plasticity index, and had a natural pH of 4.0, so its characteristics weren't conducive to side slope maintenance. In fact, every spring the existing vegetative slopes required slope repair, reseeding and liming in order to remain intact. Pressure to find a more stable solution led the operator to implementing Closure Turf's 43 degree interface friction technology, which is more than a 3.0 factor of safety against sliding failure, over 10 acres of the landfill.

2

CRAZY HORSE LANDFILL

QUICK STATS

Location: Salinas, CA
Completed: 2013
Owner: Progressive Waste Solutions
Size: 68 acres

PROJECT SCOPE

Situated adjacent to the San Andreas Fault in California, the Crazy Horse Landfill in Salinas, CA, required a solution that would enable capping without modifying steep slopes of 2.25H:1V. And, since most available borrow soil was expensive and environmentally impacted with agricultural chemicals, the site was especially challenged in producing surface water quality that met the regulations. The 68-acre landfill is also situated in a residential area that demanded a final cover system that was aesthetically-pleasing and not subjected to on-going erosion and maintenance noise.

3

TIMBER RIDGE LANDFILL

QUICK STATS

Location: Richwoods, MO
Completed: 2010
Owner: Progressive Waste Solutions
Size: 10 acres

PROJECT SCOPE

Due to its location in a seismic area, concerns over slope stability that could compromise gas collection and containment was a major concern for this landfill. The lack of quality borrow soil and the high cost of procuring it made a ClosureTurf system an easy choice. Likewise, gas collection using deep wells would drastically increase installation costs and compromise speed of closure. A system that could perform effectively without deep vertical wells was greatly advantageous.

4

HARTFORD LANDFILL

QUICK STATS

Location: Hartford, CT
Completed: 2013
Owner: Connecticut Resources Recovery Authority
Size: 38 acres

PROJECT SCOPE

The vision that the owner had for the Hartford Landfill was one where they would be able support the initiatives to promote renewable energy that were consistent with both the CTDEEP and the City of Hartford, CT. ClosureTurf enabled them to do just that, by providing for the best closure technology available and is capable of incorporating traditional rigid or flexible solar photovoltaic panels.

RESULTS

Operators quickly learned of Closure Turf's ability to provide long-term erosion control as the system controlled rainfall runoff in excess of 4 inches per hour at times during it's first year in action. In fact, the system has endured more than 300 inches of rainfall since 2008. And, three months after phase one of the project was completed, a tornado producing shear winds of 70 mph hit across the front of the landfill without damaging the turf cap. Finally, the LaSalle sand infill remained in place with no erosion when a levee broke, releasing water over 5 acres of the project area.

The Closure Turf system requires no mowing, little maintenance, and has remained in tact even under the most extreme weather conditions. Low maintenance costs can relate to significant savings over the 30 year post closure period. Best of all, soil erosion, water infiltration, leachate reduction and fugitive gas emissions were immediately controlled once the ClosureTurf system was installed.

"We'd been killing ourselves working and reworking our slopes, but after we installed the Closure Turf system we didn't have to do anything to it again. The grass looks great, the sand hasn't moved and there's no erosion."

Delaney Lewis,
District Landfill Manager,
IESI Corp. A Progressive Waste Solution Company

RESULTS

Installation of the ClosureTurf system was successfully achieved with currently developed slopes under earthquake loading, eliminating 11,000 round trip truck loads (equivalent to 660,000 miles) that would have been required for soil borrow. The combination of soil import elimination and reduced heavy equipment needs reduced the project's carbon footprint by 70%.

ClosureTurf eliminated dirty storm water runoff by replacing a traditional vegetated cover with a cover system that produces very clear and clean water free of fertilizer and muddy runoff. In addition, ClosureTurf eliminated slope veneer failures from high seismic loads and reduced yearly maintenance activities for the SVSWA to essentially zero. These would have included rebuilding slopes because of erosion, revegetation, dust control efforts, mowing of weeds and grasses to reduce fire danger, and controlling rodent populations.

"We've been extremely impressed with the stability of our slopes and quality of the water runoff. Plans now include a 2 mega-watt solar array system down the road, which will mean this land will produce renewable energy source that gives back to the environment."

Dave Meza, P.E.
Project Manager
Salinas Valley Solid Waste Authority

RESULTS

ClosureTurf's patented system precluded the need for gas wells or piping. This resulted in a cost savings of $15,000 per acre that would have been required for installing deep gas wells. ClosureTurf's structured membrane reduces oxygen in the system that results in higher quality methane gas to be vented for flaring or alternative energy generation.

Under the ClosureTurf system, the gas rises to the surface due to positive pressure and generates little condensate to be collected and managed. The Timber Ridge system is consistently venting 500 SCFM of gas over a ten-acre closure with no vertical wells. This achievement has resulted in Timber Ridge winning an International Achievement Award for a combined gas collection and closure system and the Solid Waste Association of North America (SWANA) Gold Award for landfill gas collection in 2012.

"Capturing 100% of methane has provided options for carbon credits and given us more fuel to burn for generating energy. As soon as an area is closed, all emissions can be controlled which is great. And, the structured membrane protects against oxygen infiltration, eliminating that as a fire pathway."

Mike Freisen, P.E.
Regional Engineer
IESI Corp. A Progressive Waste Solution Company

RESULTS

ClosureTurf was selected for use by the owner for the following reasons: ClosureTurf's geomembrane component had a proven track record in landfill closure applications, the engineered turf with sand infill was durable and strong protecting the underlying geomembrane from ultraviolet degradation while also enabling the system to be driven across by light rubber tire vehicles without damaging the SGN required for normal solar field operations. As the best long-term solution for Hartford, ClosureTurf also provided for an aesthetically-pleasing environment in a high-profile area.

ClosureTurf™
Brought to you by Agru America

Engineering Report

ClosureTurf™ has been extensively tested in the lab and in "real-world" applications for performance and durability.

The goal was to produce a system that performs better than current "Subtitle D" requirements and can resist the many common failure modes of today's closure covers. Traditional approaches to landfill closure have customarily involved the use of a vegetative cover. However, many of these cover systems have failed as a result of excessive erosion, gas pressure buildup, earthquake loads, poor maintenance and inadequate oversight procedures after site closure.

In response to numerous failures of these closure systems and associated rising costs, engineers have looked at new approaches in establishing a more stable and environmentally sound solution. An old solution to address cover failures and the associated environmental impacts is the implementation of exposed geomembranes. However, exposed geomembrane systems are still costly to maintain, are not wind resistant, and do not provide for an aesthetically pleasing solution. For these reasons, many state agencies do not grant final cover status to exposed geomembrane cover systems. After all, the geomembrane is still exposed to the elements for the entire duration of the application. The best approach still involves covering and protecting the underlying geomembrane, however instead of using two feet of soil to do it, it can be done with a specialized tufted geotextile ("engineered turf"), infilled with sand that has been engineered to perform better than the traditional soil cover.

Combining an engineered turf infilled with sand and a highly transmissive structured geomembrane forms a system known as ClosureTurf. The next generation closure system, ClosureTurf has proven to be environmentally protective and more stable than traditional vegetative/soil solutions as a cover system.

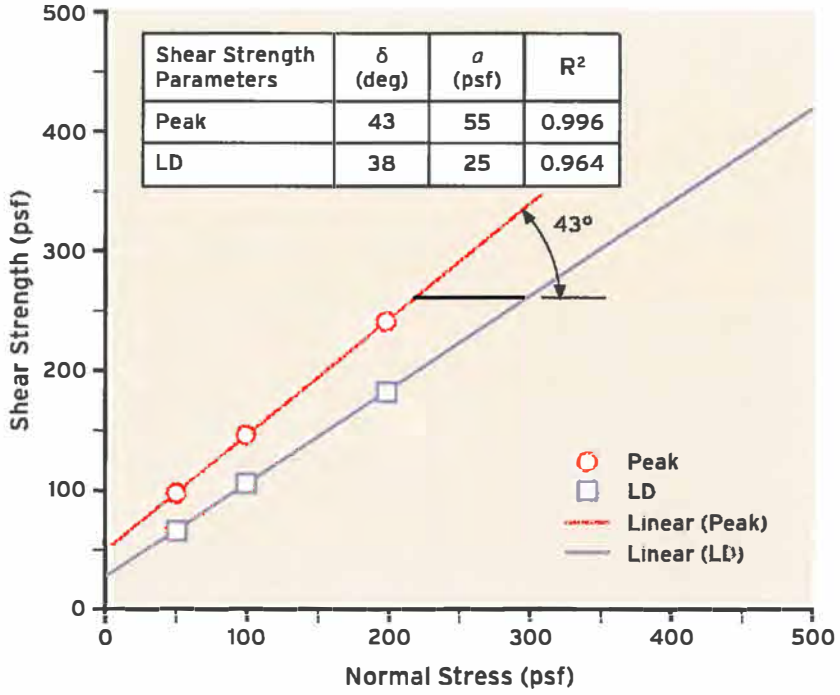
The engineered turf technology was originally developed for professional sports venues. Over the last decade the market has expanded greatly and technology has improved dramatically. The latest generation of polyethylene material now provides excellent residual strength and color durability against UV light.

By combining the newest technology of engineered turf with a 50 mil thick geomembrane that has the highest interface friction available in the market, and adding approximately a 0.5 inch of sand for infill, the ClosureTurf system is quickly becoming the preferred choice among the engineering community for covering landfills, mines, industrial waste sites, and CCR storage areas. The product is proven to significantly outperform current closure methods while allowing engineers to deliver a sound solution with net savings to their clients.

The driving performance criteria for the product are stability, transmissivity and durability. These criteria serve to mitigate LFG emissions and liquid infiltration for a duration that extends well beyond the post-closure period. The graphs and charts represent a summary of the performance.

U.S. Patent Nos. 7,682,105 & 8,585,322
Canada Patent No. 2,663,170
Other Patents Pending

Stability

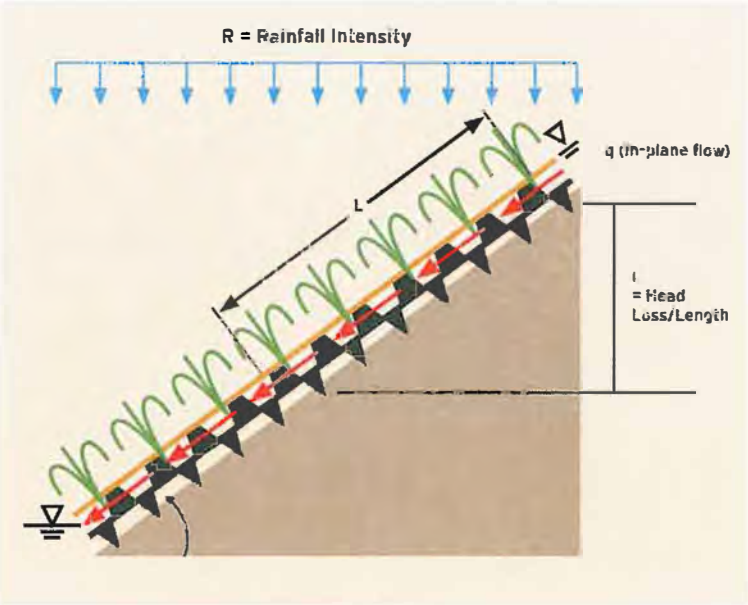


On landfills and mine piles, sliding of the soil cover along steep side slopes is of primary concern, particularly after major storm events. During a rain event, **the rainfall will penetrate quickly through the sand infill and drain directly in the drainage system below avoiding sand erosion and maintaining stability** of the sand infill. **"The infill is also held in place by the unique structure of the engineered turf** that traps the sand to anchor and ballast the engineered turf to the surface it covers. Note that:

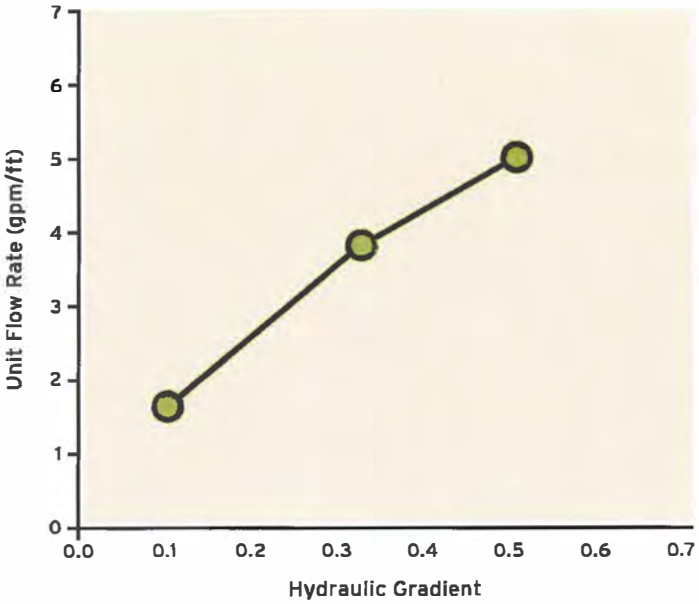
- **ClosureTurf™ can be placed on very steep slopes**
- **Tests indicate 43 degrees interface friction value**
- **The slope stability safety factor can be calculated from the chart using the equation:**

  SF= tan φ/tan α

ClosureTurf System Interface Evaluation



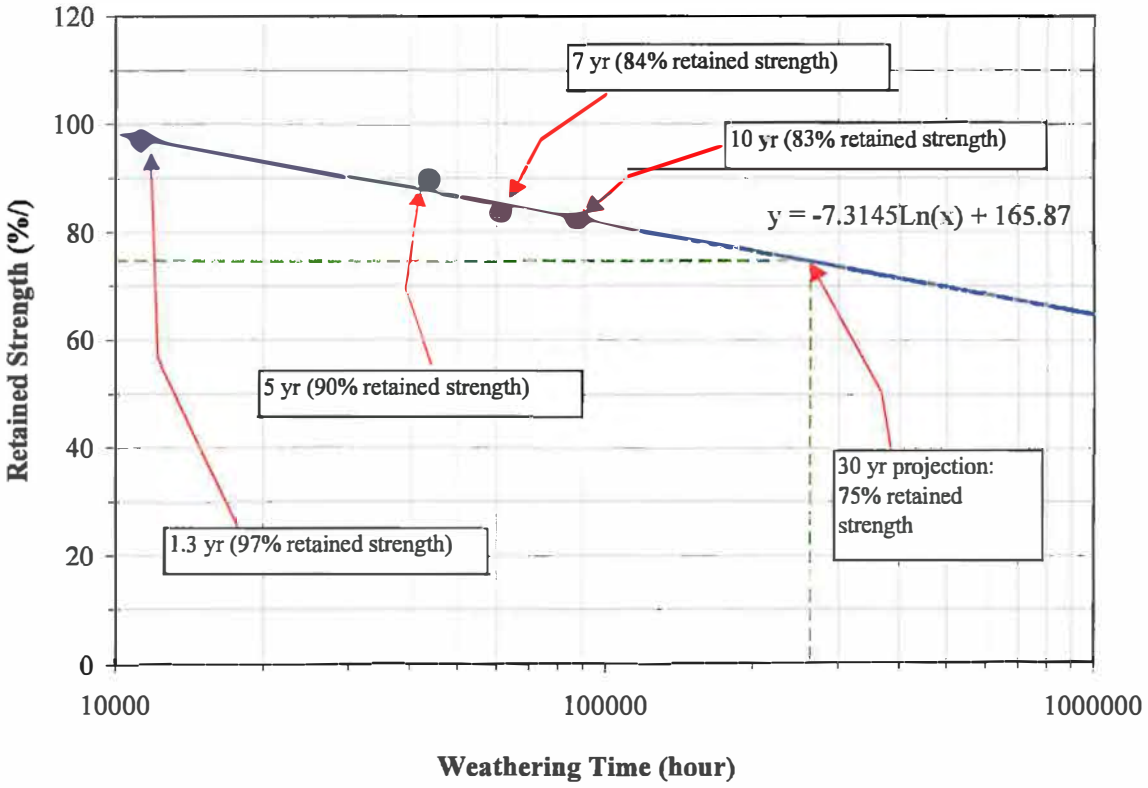
Slope angle	Slope	SF
34	1.5H: 1V	1.4
27	2.0H : 1V	1.9
18	3.0H: 1V	2.8
14	4.0H: 1V	3.7



Drainage

ClosureTurf™ sand infill material is **stable on steep slopes under severe weather conditions.** The stability of the sand infill is controlled by the following product characteristics:

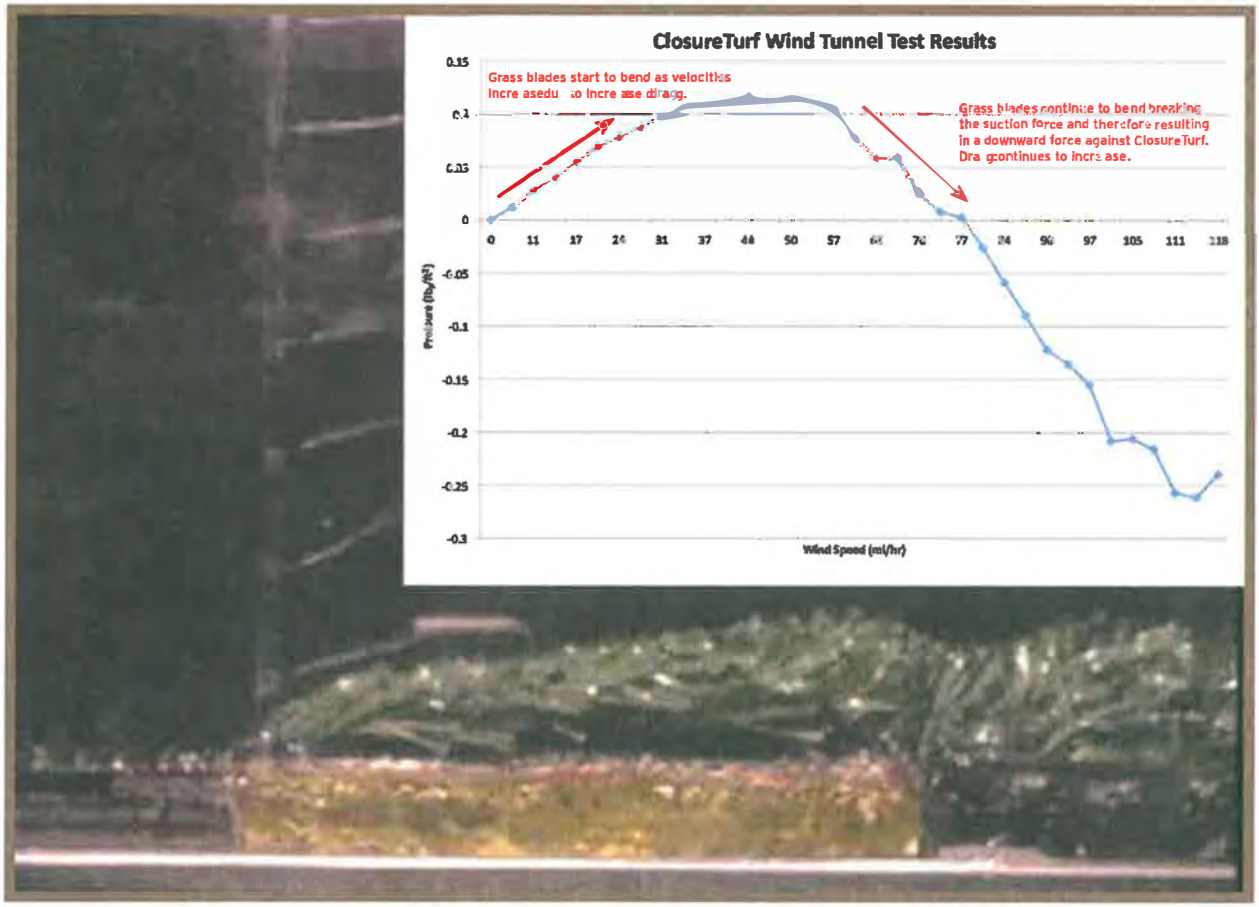
- **Percolation/Permeability**
- **Transmissivity**
- **Sand friction**
- **Grass interlocking grid**
- **Sand gradation**



ClosureTurf was designed with the above characteristics in mind. The sand infill can handle **over six inches per hour of rainfall intensity without erosion** when applied on 3H:1V slopes.

Rainfall penetrates quickly through the sand and into the structured drain liner below which has a very high transmissivity. The energy that could cause erosion is on the structured geomembrane and not on the surface of the sand. The transmissivity is presented in the graphic at left.

Weathering Resistance For a Long Life

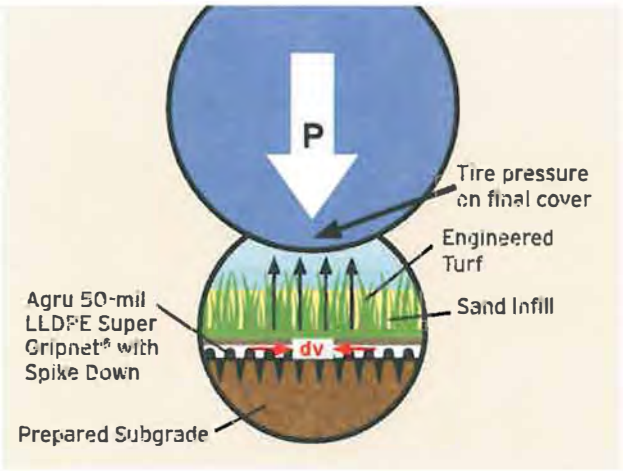


ClosureTurf™ is designed to provide weathering resistance and geomembrane protection when exposed to the **most extreme conditions**. Based on independent, real-world weathering tests performed at Atlas Material Testing Laboratories in New River, AZ. The tensile strength of the engineered turf fibers is projected to have 75% retention after 30 years. This means that with typical traffic loading forces, the material can provide over **four times the strength required after thirty years of extreme heat and UV exposure**. Based on the testing data collected and shown in the graph above, and data from many existing ClosureTurf projects, the system can **provide decades of reliable performance beyond the standard thirty-year post-closure maintenance period**.

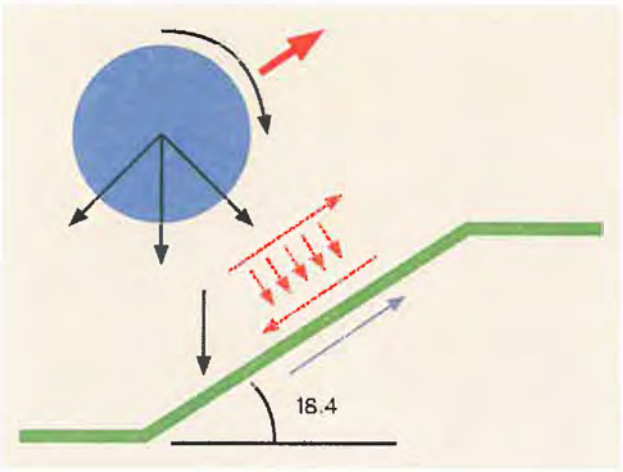
Wind Uplift Resistance

Wind Tunnel Testing at GTRI

Since all exposed geomembranes are susceptible to damage from high winds, the technology must withstand these forces. A study was performed on the wind uplift reactions by Georgia Tech Research Institute. To complete their evaluation wind tunnel testing was performed. The ClosureTurf™ product indicated no uplift when exposed to 120 mph winds. This is in contrast with exposed geomembrane systems where extensive anchoring is required even for 30 mph winds.

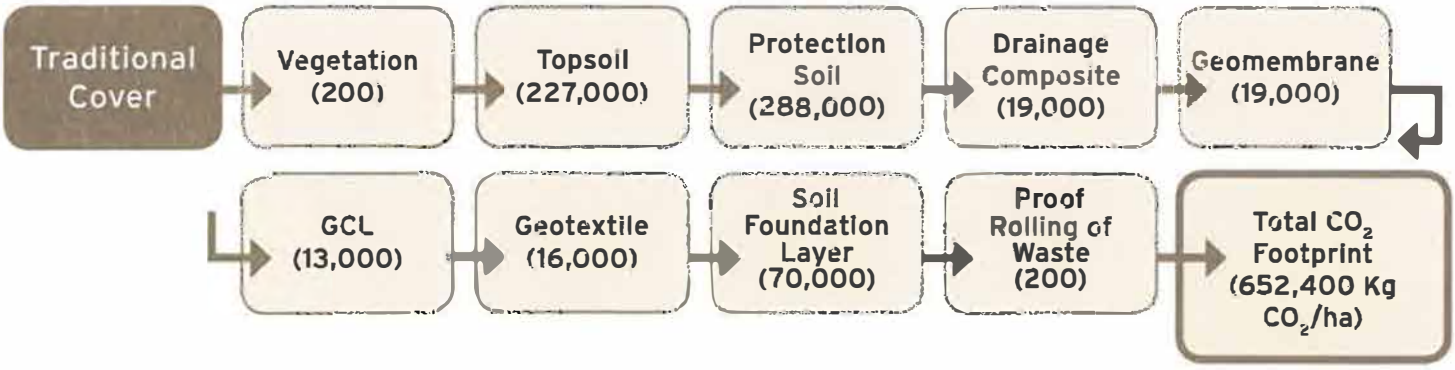


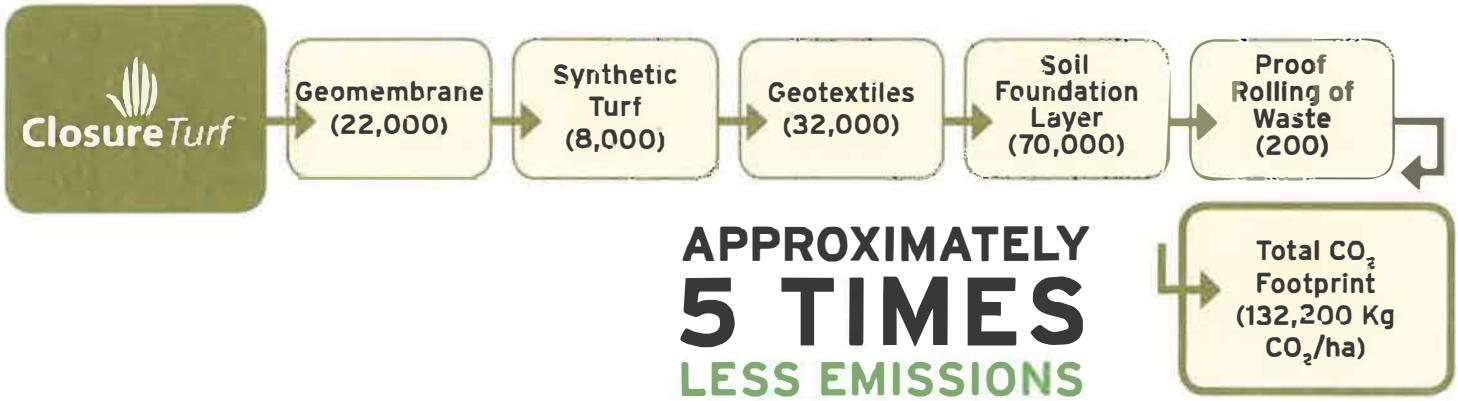
ClosureTurf technology provides features that help mitigate the forces of wind, such as a porous surface to break vacuum and engineered turf blades that will increase the aerodynamic boundary conditions and blades bending and reacting against the wind causing a resistance to the uplift.



Drivability

Gas system monitoring locations or wells in the landfill will have to be accessed by persons on foot or in vehicles. The typical exposed geomembrane closures, being fully exposed, would likely be damaged during access. Further, the geomembrane can be damaged by birds or other animals. All such damage to the geomembrane would have to be continually repaired and replaced at additional costs after construction. The ClosureTurf™ is thicker, covered with sand infill that not only ballast the system but also allows for access of a 60 psi tire pressure vehicle on 3:1 slopes and up to 90 psi tire pressure in flatter areas without being susceptible to damage.





Sustainability

CO_2 Footprint: Traditional vs. ClosureTurf™ *

APPROXIMATELY
5 TIMES
LESS EMISSIONS

Subject: Literature Review and Assessment of ClosureTurf® UV Longevity

Dear Mr. Urrutia:

Watershed Geosynthetics, Inc. (Watershed) has patented an alternative landfill closure system termed, ClosureTurf®. ClosureTurf® consists of high-density polyethylene (HDPE) grass blades tufted through a polypropylene (PP) geotextile backing which overlies Super Gripnet®, an HDPE or linear low-density polyethylene (LLDPE) geomembrane manufactured by AGRU America Inc. The addition of a layer of sand ballast during installation completes the system. The sand ballast provides cover for the lower portion of the HDPE grass blades, the PP geotextile backing, and the Super Gripnet® (Figure 1). The ClosureTurf® system, therefore, is a "hybrid" closure system in the sense that it is neither a traditional soil cover or an exposed geomembrane. ClosureTurf® has been used to close a number of landfills throughout the United States. A select list of sites where it has been used is shown in Table 1. Applications extend to other facilities as well, such as capping of coal ash ponds.

Watershed has requested that Geosyntec Consultants, Inc. (Geosyntec) provide an assessment of the longevity of the ClosureTurf® system with regard to UV degradation. Since ClosureTurf® has elements (i.e., the HDPE grass blades) that are permanently exposed to UV radiation, this assessment will be particularly focused on the exposed portion of the system. However, the UV longevity of the PP geotextile backing and HDPE geomembrane will also be addressed by reference.

Geosyntec's approach to this assessment has been to conduct a literature review of pertinent documents available (journal papers, white papers, presentations, etc.), distill the results of the review, and perform limited analysis. This report concludes with a summary of the review and analysis along with brief discussion for recommendations.

EXECUTIVE SUMMARY

The UV longevity assessment of the ClosureTurf® system (Figure 1) began with a literature review. In general, relatively little published information was discovered regarding exposed HDPE grass blade degradation. The information that is available consists of retained tensile strength test results of HDPE grass blades after exposure (1, 5, 7 and 10 years) at a field test facility in New River, Arizona (Watershed, 2014). Extrapolation of this data by Watershed (2014) resulted in a prediction of 65% retained tensile strength after 100 years of service. In addition, Richgels *et al* (2015) published half-life (i.e., 50% retained tensile strength) predictions of exposed HDPE grass blades using a laboratory data release from the Geosynthetics Institute (GSI) on HDPE geomembrane strips exposed to UV lamp irradiation. Richgels *et al* (2015) obtains an upper bound and lower bound half-life predictions of 247 years and 176 years, respectively. Extrapolation of the field data from New River, Arizona yielded a half-life of 216 years.

Geosyntec checked the calculations shown in Richgels *et al* (2015) and obtained 277 years and 214 years for the upper and lower bound estimates of HDPE grass blade half-life. Differences in the results between Geosyntec and Richgels *et al* (2015) are attributed to rounding. Geosyntec attempted to repeat these calculations for actual performance requirements (i.e., 12.5% of original tensile strength) of the HDPE grass blades rather than a randomly assigned half-life, however the predictions resulted in service lives that were too lengthy to be reasonable. The most likely explanation is that the laboratory data has not degraded enough to allow for service life predictions using 12.5% retained tensile strength. Future data releases from GSI will aid in providing more accurate predictions below the half-life.

Based on Richgels *et al* (2015) predictions, as well as the prediction given in Watershed (2014) it appears that the half-life of the HDPE grass blades exposed to Arizona-like conditions is on the order of 100 years. These results are promising; however additional field test data is needed to improve the half-life predictions, particularly since half-life predictions for exposed HDPE geomembrane are also approximately 100 years (Koerner *et al*, 2015). Understanding the differences in weathering between HDPE grass blades in a synthetic turf and an HDPE geomembrane will provide additional insight into the similar half-life predictions of the two geosynthetics. Finally, the service life of the HDPE grass blades in the ClosureTurf® system should ideally be based on its performance requirements rather than a half-life which will result in a longer service life prediction.

In addition to the HDPE grass blades, there are two unexposed elements of the ClosureTurf® system: (i) the PP geotextile backing for turf component; and (ii) the Super Gripnet® which consist of a HDPE geomembrane (see Figure 1).

Watershed has incorporated UV degradation inhibitors into the PP geotextile backing which, according to Watershed has lead to an improvement in UV resistance by a factor of 14 over the original prediction of 65% retained tensile strength after 100 years (Watershed, 2014). Koerner (2011) has estimated that covered HDPE geomembrane will have a half-life of 446 years at 20 degrees Celsius and 265 years at 25 degrees Celsius.

Therefore, the most critical component of the ClosureTurf® appears to be the exposed HDPE grass blades when it comes to UV degradation. However, degradation of the HDPE grass blades to unserviceable levels can be remediated by replacement of the turf component of the ClosureTurf® system.

BACKGROUND AND LITERATURE REVIEW SUMMARY

In total, Geosyntec has reviewed approximately 40 technical documents to date. The database is a combination of documents provided to Geosyntec by Watershed as well as documents collected by Geosyntec. A complete reference list of the documents in the database can be made available upon request.

In general, relatively little information was found on the topic of exposed HDPE grass blades with respect to degradation due to UV radiation. The documents that were obtained and reviewed are listed below.

1. Field test data provided by Watershed from the New River, Arizona testing facility on the HDPE grass blades (Watershed, 2014).

2. Testing results (Atlas-MTS) discussing the UV longevity of polyethylene and polypropylene grass used for outdoor European athletic facilities.

3. Technical paper by Richgels, *et al.* (2015a) published in the conference proceedings for Geosynthetics 2015 in Portland, Oregon.

4. Presentation by Richgels., C. at the Geosynthetics Conference for 2015 in Portland, Oregon (Richgels, 2015b).

5. Presentation by Diguilio, D. at the Northern New England SWANA Conference on 25 September 2013 (Diguilio, 2013).

The following documents on the topic of HDPE Geomembrane degradation due to UV exposure were reviewed and found to contain useful information regarding this assessment.

1. Geosynthetic Research Institute (GRI) White Paper #6 (Koerner *et al.*, 2011). This white paper contained degradation data (% retained strength and elongation) on laboratory aged samples of 1.5 mm HDPE geomembrane. Aging was completed using a UV Fluorescent device per ASTM D7238 at 70 degrees Celsius (^{o}C).

2. Geosynthetic Institute (GSI) webinar presentation by Koerner *et al.*, (2015). This presentation contained a slide that compared predicted (laboratory vs. field) half-life of geomembranes of various resins, including HDPE, as well as a suggestion for estimating lower bound half-life.

3. Journal paper authored by Rowe *et al.* (2010) published in the Journal of Geotechnical and Geoenvironmental Engineering.

DISCUSSION OF DOCUMENTS AND DATA

The data from the New River, AZ testing facility on the artificial grass component of ClosureTurf® (Watershed, 2014) appears to be the only data set of its kind in our compiled database. The data consists of tensile property testing from field samples exposed to the Arizona environment at approximate exposure periods of 1, 5, 7 and 10 years. At each of the four exposure periods, 20 samples were tested for a total of 80 tests. The average values for tensile strength retained at each corresponding time period is 97%, 90%, 84% and 83%, respectively (Figure 2).

One additional data point was found in the Atlas-MTS document. That data point indicated that approximately 90% of tensile strength of polyethylene grass would be available after 20 years of field exposure assuming average European climatic conditions (temperature, irradiance, etc.). However, the average European irradiance is approximately one-half to one-third that of Arizona (Figure 3) notwithstanding temperature effects. Therefore, the Atlas-MTS data point will be consistent with the data from the New River, AZ facility in the 7 to 10 year time frame once adjusted for the relative levels of exposure and temperature between Europe and Arizona. As such, this data point will not extend the exposure duration covered by the New River, AZ data.

The paper and corresponding presentation by Richgels (2015a, 2015b) utilized the laboratory data released from the GSI on UV degradation of HDPE samples to make upper and lower bound estimates of the field half-life of the HDPE grass blades. The upper bound method utilizes Arrhenius

modeling of lab data to project exposure times at half-life to site temperatures combined with ratios of UV irradiance between the laboratory lamp and monthly average irradiance at New River, AZ to develop half-life loss per month. A similar procedure using a linear extrapolation (rather than Arrhenius) was demonstrated for a lower bound estimate. The Watershed (2014) field data set was plotted in between the upper and lower bound estimates. This method is further discussed in the section below titled, "HDPE Grass Blade Service Life Calculations".

Koerner *et al.* (2011) discusses the UV longevity of both exposed and unexposed geomembranes made from various resins, including HDPE based on GSI's laboratory testing program. This document is particularly useful in regard to the ClosureTurf® elements that are considered non-exposed (i.e., the PP geotextile backing for the turf component and the underlying HDPE geomembrane).

The presentation by Koerner *et al.* (2015) includes estimates of half-life of exposed HDPE geomembranes as well as a recommendation for linear data extrapolation as a lower bound limit that was implemented by Richgels (2015b).

PERFORMANCE REQUIREMENTS

The definition of service life of an HDPE (or other resin) geosynthetic (grass blades and geotextiles/geomembranes) typically invokes the half-life criteria. However, the half-life criteria is arbitrary and while useful as a general indicator for comparison it does not directly relate to any aspect of field performance for ClosureTurf® or any other geosynthetic. Therefore it is more appropriate to define the service life in terms of field requirements placed on the material.

HDPE Grass Blades

For the case of the HDPE grass blades on the ClosureTurf® system, tensile strength requirements fall in the range of 2.5 to 3.5 lbs, based on applied loads of pullout forces from equipment operation and water runoff forces (Diguilo, 2013). The ClosureTurf® HDPE grass blades are manufactured with 20 lbs. of tensile strength immediately following the process (Diguilo, 2013). Therefore, without considering a factor of safety, the required tensile strength of the HDPE grass blade is equal to approximately 12.5% to 17.5% of original strength capacity.

PP Geotextile Backing and HDPE Geomembrane

Performance requirements for the PP geotextile backing and HDPE geomembrane depend on more site-specific parameters (e.g., steepness of slopes, seismicity, etc.) than the HDPE grass blades. Therefore until a parametric study is completed which will define the performance requirements over a range of expected conditions, the half-life will have to be used as a benchmark for degradation of the PP geotextile and HDPE geomembrane.

HDPE GRASS BLADE SERVICE LIFE CALCULATIONS

In order to develop a prediction for the longevity of the HDPE grass blades with respect to UV degradation, Geosyntec implemented the method found in Richgels (2015a, 2015b) for two levels of retained tensile strength. The first level is the 50% of tensile strength, or half-life, criterion that is commonly used as a benchmark for geosynthetic service life. Geosyntec performed this calculation to compare our results with the results presented by Richgels (2015a, 2015b). Once the half-life estimates were calculated, Geosyntec attempted to repeat the calculations using a retained tensile strength of 12.5% of an HPDE grass blade.

Half-Life Estimation (50% of Retained Strength)

The assessment utilized by Richgels (2015a, 2015b) begins with a laboratory data release from GSI (Figure 4). The data includes retained tensile strength of HDPE samples that have been incubated under a UV lamp at elevated temperatures, which accelerates the UV weathering process in accordance with ASTM D7238.

As mentioned, the GSI data includes samples tested at three elevated temperatures: (i) 80 degrees Celsius (^{o}C); (ii) 70^{o}C; and (iii) 60^{o}C. The testing program appears to have originally included only the 70^{o}C data, with the 80 ^{o}C and 60^{o}C testing added at a later date (therefore, weathering is not as advanced). The 70^{o}C data set has reached approximately 66%, while the 80^{o}C and 60^{o}C data sets have reached approximately 78% and 86%, respectively. Nonetheless, logarithmic extrapolations to 50% retained strength were performed for each data set. The amount of exposure time (on a log scale) corresponding to the 50% retained strength plotted vs. the inverse of the corresponding temperature (80^{o}C, 70^{o}C and 60^{o}C) is shown in Figure 5. Figure 5 allows for extrapolation to find the laboratory exposure time required to achieve 50% retained strength at temperatures lower than the test temperatures (i.e., actual field temperatures).

Once the curve is defined relating any temperature to a level of laboratory lamp exposure, the remaining task is to develop a relationship between laboratory exposure and field exposure for a

particular site. In this case, the testing site in New River, AZ where Watershed has performed tests on HDPE grass blades, was selected.

Richgels (2015a, 2015b) presents monthly averages at the site for: (i) peak turf temperature; and (ii) irradiance as a fraction of the laboratory lamp irradiance. Using these two values for a given month combined with the Arrhenius model, an estimate of half-life loss per month is obtained. Summation of the half-life lost per month over a year yields the annual half-life loss. The inverse of the annual half-life loss is the predicted half-life in years. Using this method, Richgels obtains a half-life of approximately 247 years, while Geosyntec obtained a half-life of 277 years using the same data (Table 2). The difference is attributable to rounding errors in the logarithmic projections.

Following the suggestion of Koerner *et al.* (2015), Richgels (2015b) treated the results of the half-life mentioned above as an upper bound estimate. For the lower bound estimate, Koerner *et al.* (2015) suggests performing a linear extrapolation of the laboratory data to lower field temperatures, rather than using the Arrhenius model.

With the linear extrapolation, the ratio of monthly irradiance to laboratory lamp irradiance is scaled linearly to calculate the number of months required to reach half-life at 80C, 70C and 60C. Linear extrapolations per month are made from the elevated temperatures to the corresponding peak turf temperature in that month. The resulting half-life loss per month is summed to obtained half-life loss per year. The inverse of that result is the half-life in years. Richgels (2015b) calculates a half-life of 176 years using this linear model. Geosyntec's calculation using the same data resulted in a half-life of 214 years (Table 3 and Figure 6). The difference in the calculations is approximately the same as with the calculation using the Arrhenius (logarithmic) model.

Figure 7 shows the calculated upper (Arrhenius - logarithmic) and lower (linear) bound curves calculated by Richgels (2015b) along with the field data on the HDPE grass blades provided by Watershed (2014). As shown in Figure 7, the trend line fit to the field data falls in between the upper and lower bound curves produced by Richgels (2015b). Note that the first point from the field data at approximately 1 year is omitted from the trend line. This is because the first data point is assumed to be within the anti-oxidant phase of degradation rather than the polymer oxidation stage as suggested by Rowe *et al.* (2010). Additional discussion regarding the stages of degradation for polyolefin materials can be found in CUR 243 (2012).

Service Life Estimation Based on Performance Requirements (12.5% of Retained Strength)

Geosyntec repeated the calculations discussed above for the estimation of half-life, but extrapolated the GSI laboratory data down to 12.5% rather than 50% at 80C, 70C and 60C. Upper bound

(Arrhenius – logarithmic) and lower bound (linear) estimates were 2,500 years and 2,043 years, respectively.

These estimates of service life are simply too large to be reasonable. A likely explanation is that the samples tested at 80C, 70C and 60C have not degraded enough to produce accurate predictions at 12.5% retained strength. As previously mentioned, the data for 80C has reached 78% retained strength; the data for 70C has reached 66% retained strength; and the data for 60C has reached 86% retained strength. Therefore, the extrapolation for each of these data sets to 50% retained strength will be much more accurate than extrapolations to 12.5%. In addition, small uncertainties in log-based extrapolations will greatly influence results.

For these reasons, it is not practical or useful at this time to quantitatively assess service life in terms of actual performance requirements when those requirements are substantially below the half-life. There is some value, however in a qualitative use of performance requirements in comparisons with half-life estimates (i.e., to establish the factor of safety remaining at 50% degradation).

SUMMARY AND CONCLUSIONS

Geosyntec's literature review of approximately 40 documents yielded few sources of UV degradation data for exposed HDPE grass blades. Relevant data that was found included the field test data from the New River, AZ testing facility provided by Watershed (2014) and one data point from Atlas-MTS. The Atlas-MTS data point indicated that HDPE grass blades in average European climatic conditions would retain approximately 90% of its original strength after 20 years of field exposure. Taking into account the differences in temperature and UV irradiance between New River, AZ and European averages, the data point is consistent with the New River, AZ test data in the 7 to 10 year range.

Following the method presented in Richgels (2015a, 2015b) for HDPE grass blades, Geosyntec calculated an upper bound half-life of 277 years compared with Richgels 247 years using the Arrhenius (semi-log) extrapolations to site temperatures and ratio of laboratory lamp to field irradiance. Geosyntec calculated a lower bound half-life based on linear temperature extrapolations, as suggested by Koerner *et al.* (2015), of 214 years compared with 176 years obtained by Richgels (2015b). The differences between Geosyntec and Richgels calculations were attributed to rounding. As shown in Figure 7, the field data from New River, AZ suggests a half-life of 216 years when considering only the last three data points (i.e., polymer oxidation stage).

Another prediction of HDPE grass blade degradation is included in Watershed (2014) using the same (New River, AZ) field data. That prediction of retained tensile strength at 100 years of service life is 65%.

Therefore, it appears that the half-life of the HDPE grass blades will be on the order of 100 years based on the existing field data set and extrapolation methods found in the literature and presented herein. The results are promising; however additional field test data is needed to improve the half-life prediction, particularly since the half-life predictions for exposed HDPE geomembranes are also approximately 100 years (Koerner, 2015). Half-life predictions presented herein will also need to be revisited when additional labratory data is released from the GSI testing program.

Geosyntec attempted to calculate the service life of the HDPE grass blades using 12.5% of retained strength, rather than an arbitrarily assigned half-life. However, the calculation resulted in unreasonably long service life. This result is likely due to uncertainties in extrapolating the laboratory data released from GSI down to the 12.5% retained strength level. The data release has degraded to 78%, 66% and 86% for the 80 ^{o}C, 70 ^{o}C, and 60 ^{o}C test temperatures. Therefore, extrapolations to 50% may be warranted while extrapolations to 12.5% may not be until additional lab data is available. That being said, it should be recognized that half-life, or 50% of retained strength, has a factor of safety of 2.8 to 4.0 when considering the tensile capacity performance requirements of HDPE grass blades.

With regard to the unexposed elements of the ClosureTurf® system, Watershed (2014) indicates that the retained tensile strength of the PP geotextile backing prior to the addition of UV inhibitors is 65% after 100 years. This estimate is based on exhumed samples of the geotextile from the LaSalle-Grant Landfill in Louisiana. According to Watershed (2014), the addition of proprietary UV inhibitors to the PP geotextile backing has led to an improvement in UV resistance by a factor of 14. The final geosynthetic in the ClosureTurf® system is the covered HDPE geomembrane. Koerner (2011) estimates that the half-life of a covered HDPE geomembrane is 446 years at 20C, and 265 years at 25C. Furthermore, the degradation of the unexposed elements of the ClosureTurf® system invoke the half-life criteria. As discussed with regard the exposed HPDE grass blades, actual performance requirements should ideally be used to determine system longevity. However, the existing testing programs need to be allowed to degrade further before projections to lower values are made.

It is worth reiterating that applications of ClosureTurf® in areas of the United States where the UV irradiance and the temperatures are lower will result in longer half-life predictions than discussed above. In some cases (e.g., the Northeastern States), the differences will likely be quite large when compared with Arizona.

Finally, once UV degradation of the most susceptible component of ClosureTurf® (i.e., the exposed HDPE grass blades) does result in a tensile break, replacement of the HDPE grass and PP geotextile backing can be performed.

CLOSING

Geosyntec appreciates the opportunity to assist Watershed in the development of its ClosureTurf® products. Questions and comments may be directed to either of the undersigned at 678-202-9500.

Sincerely,

Will Tanner, P.E.
Project Engineer

Ming Zhu, Ph.D., P.E.

SUBJECT: CLOSURE TURF INFILTRATION EQUIVALENCE CALCULATION

The infiltration equivalence of Closure Turf to the Texas final cover prescriptive standard can be estimated by several methods. One method was described by J.P. Giroud et.al.[1] for assumed circular defects in geomembranes. Estimates of infiltration, Q (m^3/sec) can be found from the following equation:

$$Q = 0.976\, C_{qo}\left[1 + 0.1\left(\frac{h}{t_{UM}}\right)^{0.95}\right] d^{0.2}\, h^{0.9}\, k_{UM}^{0.74} \qquad [1]$$

Where, h = hydraulic head over the liner (m)
t_{UM} = thickness of the infiltration layer (m)
d = diameter of defect (m)
k_{UM} = permeability of infiltration layer (m/sec)

The contact coefficient C_{qo} is either 0.21 or 1.15 to account for good or poor contact conditions between the geomembrane and the infiltration layer soil. With typical CQA procedures controlling installation, the contact coefficient would be 0.21. This equation is only valid for infiltration soil permeability's less than the so-called Giroud permeability, k_G. Higher permeability values result in Bernoulli type orifice flow through the defects. The upper permeability limit is found from:

$$k_G = \left\{\frac{0.3891\, d^{1.8}}{C_{qo}\left[1 + 0.1\left(\frac{h}{t_{UM}}\right)^{0.95}\right] h^{0.4}}\right\}^{1/0.74} \qquad [2]$$

The infiltration potential of the Closure Turf final cover system is compared to the Texas prescriptive standard using Equation 1. The final cover profiles analyzed are as follows:

---

[1] *Rate Of Liquid Migration Through Defects In A Geomembrane Placed On A Semi-Permeable Medium*, J.P. Giroud, T.D. King, T.R. Sanglerat, T. Hadj-Hamou and M.V. Khire, Geosynthetics International 1997, Vol. 4, Nos. 3-4

Texas Final Cover Prescriptive Standard	Closure Turf Final Cover System
1 foot of Topsoil[2]	½" sand ballast (minimum thickness)
Geomembrane[3]	Artificial HDPE grass turf tufted into a polypropylene double-layered woven geotextile
	50-mil LLDPE Supergripnet (SGN) geomembrane
18-inch infiltration layer (k = 1x10-5 cm/sec)	12" minimum infiltration layer

The results of the Giroud analysis are shown on Table 1 below. Two scenarios for the soil layer beneath the Closure Turf system were compared against the prescriptive standard;

a. A silty sandy soil with permeability higher than the prescriptive standard for a infiltration layer, and

b. A silty, clayey sand with permeability at the prescribed level of the prescriptive standard.

It should be noted the required permeability value of $1x10^{-5}$ cm/sec in the infiltration layer is quite achievable with typical soils. Lower permeability soils require significant clay content (typically greater than 50% passing the #200 sieve). This permeability specification is basically common soil.

As can be seen on Table 1, the estimated infiltration of the Closure Turf final cover system is well below the estimated infiltration rates for the prescriptive standard final cover system for both assumed subgrade soil conditions. The assumed permeabilities of the subgrade soils are below the upper limit as calculated by Equation 2, so use of Equation 1 in performing these calculations is valid.

These results are primarily due to the much lower hydraulic head capacity of the Closure Turf system with only a ½" topsoil layer in a saturated ballast sand.

[2] The prescriptive standard only calls for 6-inches, but that is too difficult to place without damaging the liner.

[3] A drainage media (typ. Geocomposite) is also required for stability

Table 1

Landfill Final Cover Infiltration Equivalency Calculation

Soil Type: Silty-sandy soil

	Prescriptive Cover		Closure Turf	
Topsoil (h)	12 in	0.3048 m	0.5 in	0.0127 m
