7. RIGHT TO APPEAL DECISION

Persons who are dissatisfied with a decision of the City Council may have the right to a review of that decision by a court. The City has adopted Section 1094.6 of the California Code of Civil Procedure, which generally limits to ninety days (90) the time within which the decision of the City Boards and Agencies may be judicially challenged.

8. CONSENT CALENDAR

The following items listed are considered routine and will be enacted by a single motion and roll call vote by the City Council. Items may be removed from the Consent Calendar upon request of a Councilmember or a citizen in which event the item will be considered at the completion of all other items on the agenda. The motion by the City Council on the Consent Calendar will approve and make findings in accordance with Administrative Staff and/or Planning Commission recommendations.

8.a. Report of Disbursements for the Month of July 2025.

Recommended Action: Approve the report of disbursements for the month of July 2025.

16. ADJOURNMENT

Please be advised that the City needs to be notified 72 hours in advance of a meeting if any specific accommodations or interpreter services are needed in order for you to attend. The City complies with ADA requirements and will attempt to reasonably accommodate individuals with disabilities upon request. Materials related to an item on this Agenda submitted to the City Council after distribution of the agenda packet are available for public inspection at the front counter at the Ukiah Civic Center, 300 Seminary Avenue, Ukiah, CA 95482, during normal business hours, Monday through Friday, 8:00 am to 5:00 pm. Any handouts or presentation materials from the public must be submitted to the clerk 48 hours in advance of the meeting; for handouts, please include 10 copies.

I hereby certify under penalty of perjury under the laws of the State of California that the foregoing agenda was posted on the bulletin board at the main entrance of the City of Ukiah City Hall, located at 300 Seminary Avenue, Ukiah, California, not less than 72 hours prior to the meeting set forth on this agenda.

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Proclamation of the Ukiah City Council Recognizing September as Hispanic Heritage Month in the City of Ukiah.

DEPARTMENT: City Manager / Admin

PREPARED BY: Maria Ceja, Administrative Analyst

PRESENTER: Douglas F. Crane, Mayor or other Councilmember

ATTACHMENTS:

1. Hispanic Heritage Month Proclamation

Summary: The Ukiah City Council will issue a proclamation recognizing September as Hispanic Heritage Month in the City of Ukiah.

Background:

National Hispanic Heritage Month is celebrated annually from September 15th through October 15th to honor the histories, cultures, and lasting contributions of Hispanic and Latino Americans. The City of Ukiah is proud to join in this observance, recognizing the local Hispanic/Latino community whose influence is woven into the city's cultural, social, and economic fabric.

Hispanic and Latino residents, including City employees, elected officials, educators, business leaders, community organizations, and grassroots advocates, have enriched Ukiah by fostering cultural understanding, advancing education, supporting civic life, and strengthening community connections. Their contributions span across the arts, public service, business, and beyond, reflecting a legacy of resilience and achievement that continues to shape our community. By recognizing Hispanic Heritage Month, the City of Ukiah reaffirms its commitment to honoring diversity and promoting an inclusive community for all residents.

Discussion: At the September 3, 2025, Regular Meeting, the City Council will issue a Proclamation (Attachment 1) recognizing September as Hispanic Heritage Month in the City of Ukiah. The proclamation highlights the invaluable contributions of the Hispanic and Latino communities and invites residents to participate in celebrations and activities that honor Hispanic culture, history, and traditions.

Recommended Action: Issue a Proclamation of the Ukiah City Council recognizing September as Hispanic Heritage Month in the City of Ukiah.

Sage Sangiacomo, City Manager

PROCLAMATION

City of Ukiah

Recognizing

Hispanic Heritage Month in the City of Ukiah

Whereas, the City of Ukiah recognizes Hispanic Heritage Month, known in Spanish as "*Mes de la Herencia Hispana*," and is celebrated nationwide from September 15th through October 15th; and

Whereas, the City of Ukiah recognizes that Hispanic Heritage is American Heritage, which we see in our everyday life, such as on television, in the music we hear and dance to, and in the food we eat. We all benefit from the many contributions of Hispanic scientists, doctors, engineers, politicians, civil rights leaders, etc.; and

Whereas, the City of Ukiah recognizes the significant contributions of all Hispanic/Latino residents in our community including, City employees, Ukiah City Council members, educators, local Latino organizations, local business owners, and numerous grassroots leaders; and

Whereas, many Hispanic immigrants belonging to groups such as Dreamers, Temporary Protected Status holders, farm workers, and essential workers have come to this country and have fought for initiatives providing pathways to citizenship and the protection of the right to vote; and

Whereas, throughout the history of the United States, members of the Hispanic community have helped shape the social, political, and economic landscape of this country and our community; and

Whereas, the City of Ukiah is committed to recognizing Hispanic/Latino culture and heritage as an important part of the city and its strong, inclusive community and we encourage the community to educate themselves on Hispanic/Latino culture; and

Whereas, UVA (Ukiah Vecinos en Acción), and SPACE (School of Performing Arts Cultural Education), in collaboration with Periódico Al Punto, will host a celebration recognizing Hispanic Heritage Month on Friday, September the 19th at the Alex R. Thomas Plaza, Downtown Ukiah. Additional details will be provided through social media announcements by event organizers.

Therefore, be it resolved, the City Council of the City of Ukiah acknowledges the many contributions that our Hispanic, Latin Americans, Chicanos, Indigenous, Latinx residents make to our community and hereby proclaim September as:

Hispanic Heritage Month in the City of Ukiah

Signed and sealed, this 3rd day of September in the year Two Thousand and Twenty-Five.

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Presentation from Greater Ukiah Business and Tourism Alliance Regarding Activities and Events.

DEPARTMENT: Economic Development

PREPARED BY: Shannon Riley, Deputy City Manager

PRESENTER: Katrina Kessen, the Executive Director of the Greater Ukiah Business and Tourism Alliance.

ATTACHMENTS:

1. Visit Ukiah Presentation

Summary: The Council will receive a presentation from Katrina Kessen, the Executive Director of the Greater Ukiah Business and Tourism Alliance.

Background: The Greater Ukiah Business and Tourism Alliance(GUBTA) represents the merger between the Chamber of Commerce, Ukiah Main Street Program, and Visit Ukiah. GUBTA plays an important role as a liaison to the business community, while also promoting the region to visitors and engaging in activities that support the preservation of the historic downtown. They manage the visitor center, which was designated an official California Welcome Center within the last year.

The City of Ukiah directly collaborates with GUBTA in the following ways:

- Community Champion Member of the Chamber of Commerce
- City of Ukiah collects Business Improvement District fees (through the business license process), which are passed through to GUBTA for the administration of the Ukiah Main Street Program
- City of Ukiah collects Transient Occupancy Tax from local lodging establishments, which is passed through to GUBTA for the administration of the Visit Ukiah program in accordance with a performance agreement between the organizations
- City of Ukiah is represented on the Executive Board by an appointed City Councilmember and a Staff Liaison

Additionally, the City of Ukiah and GUBTA partner for numerous community events, including Ukiah On Ice, Sundays in the Park, and Ukiah Country Pumpkinfest.

Discussion: Executive Director Katrina Kessen will provide a brief presentation regarding the activities and events of the Greater Ukiah Business and Tourism Alliance.

Recommended Action: Receive presentation from Katrina Kessen, Executive Director of the Greater Ukiah Business and Tourism Alliance.

Agenda Item No: 8.b.

MEETING DATE/TIME: 9/3/2025

ITEM NO: 2025-946

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Adoption of an Ordinance to Establish an Administrative Use Permit Process, Reorganize Performance Standards, and Clarify Related Zoning and Animal Keeping Provisions in the Ukiah City Code.

DEPARTMENT: Community Development

PREPARED BY: Katherine Schaefers, Planning Manager

PRESENTER: Consent Calendar

ATTACHMENTS:

1. Draft AUP Ordinance
2. Planning Commission Resolution

Summary: Council will consider adoption of an ordinance amending the Ukiah City Code to establish an Administrative Use Permit process, reorganize and consolidate performance standards, and clarify related zoning and animal keeping provisions in the Ukiah City Code.

Background: On December 7, 2022, the City Council adopted the 2040 Ukiah General Plan, which included an Agriculture Element focused on supporting and protecting agricultural lands. This element was developed to align City policies with Mendocino County's approach to preserving working lands, with the goal of reducing regulatory overlap and improving consistency across the Ukiah Valley. Since adoption of the General Plan, Staff has made steady progress completing programs and policies within the Agriculture Element. Of the twelve (12) Implementation Programs due to be completed by December 2030, ten (10) Programs have either been implemented through the Council's adoption of an ordinance or are in the process of being developed and/or are on track to be developed by the end of this Fiscal Year (June 2026). These include the following:

1. Implementation Program A - Agricultural Buffer (in progress)
2. Implementation Program B - Right to Farm (completed)
3. Implementation Program C - Align Agricultural Standards (completed/in progress)
4. Implementation Program E - Reduce Regulation - Local Agriculture (in progress)
5. Implementation Program F - Foodscaping (completed)
6. Implementation Program H - Urban Agricultural Definitions (in progress)
7. Implementation Program I - Support Community Gardens (in progress)
8. Implementation Program J - Urban Agricultural Incentive Zone (in progress)
9. Implementation Program K - Local Food: Food Trucks & Farm Stands (in progress)
10. Implementation Program M - Local Purchasing (in progress)

The purpose of this agenda item is to adopt an Ordinance (Attachment 1) to establish an Administrative Use Permit (AUP) process within the zoning code, which would complete Implementation Programs C, E, and I. Although many of the performance standards identified within the AUP ordinance are related to streamlining local agricultural uses, the AUP may prove an effective "zoning vehicle" for the streamlining of other minor uses in the City's zoning code. The AUP concept was first mentioned by Director Schlatter during the 2024 Community Development Department Fee Schedule Update as an option to explore for reducing regulation and increasing certainty within the development process Citywide.

Additionally, in recent years, and continuing into 2025, the City has seen growing public interest in small-scale, neighborhood-serving agricultural uses such as backyard chickens, beekeeping, and community gardens. These uses are generally compatible with residential areas but have often required a Minor Use Permit when a proposal involves even small deviations from adopted standards. That process, which includes public noticing, interdepartmental review, and Planning Commission approval, was developed for more complex land use proposals and has proven to be a barrier for lower-intensity activities.

The proposed ordinance addresses this issue by introducing a staff-level review process for small-scale agricultural uses and community gardens that request minor deviations from existing performance standards. The AUP is intended to reduce administrative burdens while still maintaining oversight and alignment with General Plan goals.

Zoning Reform Ad Hoc and Development of Draft AUP Ordinance

To assist Staff in developing this policy, Mayor Crane and Councilmember Orozco were appointed to a newly created Zoning Reform Ad Hoc by the Council on December 6, 2023. Formed to explore the creation of a new ministerial zoning permit and identify additional zoning streaming and reform efforts to provide better and more consistent development outcomes, the Zoning Reform Ad Hoc met with and provided input to Staff, including review of past draft versions of the Ordinance, approximately once every 2-3 months starting in 2024. After presenting a draft outline of the Ordinance to the Mendocino County Airport Land Use Commission for a consistency review and input in December 2024, Staff finalized language within the Ordinance for presentation to the Planning Commission.

Planning Commission Recommendation

At its regular meeting on July 9, 2025, the Planning Commission reviewed the proposed ordinance and unanimously recommended adoption by the City Council through Resolution No. 2025-05 (Attachment 2). During discussion, and based on Staff's recommendation, the Commission amended the ordinance to explicitly allow beekeeping and apiaries in all zones, with any deviation from standards subject to the new AUP process. The Commission also recommended clarifying the purpose and expiration provisions for Administrative Use Permits. Since the Commission's review, Staff has incorporated these revisions into the proposed Ordinance. An additional clarification has been made to UCC §9266 to address inconsistencies in the appeal process for decisions made by the Zoning Administrator. The updated language confirms that the City Council serves as both the hearing body and the final authority on such appeals.

City Council - Introduction

At its Regular Meeting on August 20, 2025, the Ukiah City Council unanimously voted (5–0) to introduce the ordinance for adoption. The Council adopted the ordinance as recommended by Staff and the Planning Commission, with one minor modification to §9381(C)(1) regarding beekeeping. This change, originally discussed and recommended by the Planning Commission at its July 9, 2025 meeting, had not yet been incorporated into the draft ordinance. The revised language clarifies that the keeping of up to four beehives is permitted in all zones, provided performance standards are met. Any deviation from those standards must be reviewed through the Administrative Use Permit process.

Discussion: The proposed Ordinance supports General Plan Implementation Program C by permitting "animal raising – personal" in all zones, consistent with the previously adopted definition. It also implements Implementation Program E, which directs the City to reduce regulatory barriers to low-intensity agriculture on residential parcels, including gardens, chickens, and beehives. In addition, the ordinance fulfills the intent of Implementation Program I, which seeks to support community gardens by simplifying the permitting process and providing more flexibility for site-specific conditions. Details related to the Ordinance are provided below.

AUP Ordinance Specifics

The proposed ordinance would establish a new Administrative Use Permit (AUP) process, reorganize and relocate existing performance standards into a new article of the Ukiah City Code, and clarify language in several related sections. Consistent with the purpose of the Zoning Reform Ad Hoc, the AUP creates a streamlined, ministerial permit pathway for low-impact uses that may require minor exceptions to performance standards, while maintaining neighborhood compatibility and public oversight. The ordinance also

distinguishes between commercial livestock keeping and personal animal keeping and updates the zoning code to reflect appropriate permitting standards across zoning districts.

Existing performance standards currently found in Ukiah City Code (UCC) Division 9, Chapter 2, Article 15.6 (established by Ordinance No. 1167 in 2016) and Section 9182 of Article 16 ("Animals within the City"), would be relocated to a new Article 23 of Division 9, Chapter 2, titled “Performance Standards for Administrative Use Permits.” This consolidation updates the standards that apply to a range of small-scale or neighborhood-serving uses.

The following uses are included as new sections within Article 23, along with the zoning districts in which each is allowed subject to their respective performance standards:

- **Community Gardens** are allowed in all zoning districts.
- **Live Entertainment** is allowed in the C-1, C-2, and PF districts.
- **Outdoor Dining** is allowed in the C-N, C-1, and C-2 districts when incidental to a restaurant on the same parcel.
- **Sidewalk Cafés** are allowed in the C-N, C-1, and C-2 districts when associated with a restaurant.
- **Outdoor Sales and Displays** are allowed in the C-N, C-1, C-2, and M districts for up to 30 days within a 12-month period when performance standards are met, with sales exceeding that or proposed in residential zones requiring an Administrative Use Permit.
- **Small-scale Animal Keeping**, including the personal keeping of hens and rabbits, along with beekeeping and apiaries, are allowed by right if performance standards are met. Roosters, turkeys, ducks, geese, and swine are prohibited in all zones except AE and the Combining Agricultural (-A) districts, where they are subject to separate permitting under Articles 10 or 13.

This code reorganization allows applicants to find applicable standards in one location and simplifies the process for uses that meet established criteria. An Administrative Use Permit may still be required when a proposed project does not fully comply with the standards or when additional review is warranted based on site context. To ensure compatibility, the Community Development Director may approve, conditionally approve, or deny a permit.

In addition, the Ordinance clarifies Section 4200 of Division 5, Chapter 2, which regulates livestock. The amendment states that the provisions of this chapter apply to commercial keeping of livestock, including for sale, breeding, production, or other business purposes, and that it does not apply to noncommercial or personal animal keeping regulated under Section 9381 of this Code. This distinction clarifies the difference between commercial livestock operations and personal animal keeping within residential or urban zones.

Environmental Review
The proposed ordinance is exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the CEQA Guidelines, also known as the "common sense" exemption. This exemption applies when it can be determined with certainty that the activity will not have a significant effect on the environment. The ordinance does not authorize new land uses or physical development and does not increase the intensity of development. It introduces procedural changes to the City's permitting process by allowing certain low-impact uses, which are currently subject to discretionary review through a Minor Use Permit, Minor Variance, or Minor Site Development Permit, to instead be reviewed through a ministerial and a Staff-level discretionary process. The ordinance does not alter any applicable environmental standards or regulations. As the ordinance streamlines existing procedures without resulting in physical changes or environmental impacts, the ordinance qualifies for the common sense exemption under CEQA.

Recommendation
Staff recommends the Council adopt an ordinance amending the Ukiah City Code to establish an Administrative Use Permit process, reorganize and consolidate performance standards, and clarify related zoning and animal keeping provisions in the Ukiah City Code. If adopted, this ordinance will go into effect in 30 days.

Recommended Action: Adopt an ordinance amending the Ukiah City Code to establish an Administrative Use Permit process, reorganize and consolidate performance standards, and clarify related zoning and animal keeping provisions in the Ukiah City Code.

ORDINANCE NO.

ORDINANCE OF THE CITY COUNCIL OF THE CITY OF UKIAH ADDING A NEW SECTION 9269 AND A NEW ARTICLE 23 TO DIVISION 9, CHAPTER 2 OF THE CITY CODE TO ESTABLISH PROCEDURES AND PERFORMANCE STANDARDS FOR THE ISSUANCE OF ADMINSITRATIVE USE PERMITS.

The City Council of the City of Ukiah hereby ordains as follows:

SECTION ONE. FINDINGS

1. It is a goal of the City to provide a streamlined process for administrative review and determination on requests for uses and activities that have little to no impact on adjacent sites and surroundings.

2. Administrative Use Permits (AUPs) provide a discretionary review process for uses requiring case-by-case evaluation beyond ministerial permits but not rising to the threshold of a public hearing. This process allows the City to impose conditions and ensure compatibility with surrounding land uses while streamlining review to avoid unnecessary delays or complexity.

3. The establishment of clear performance standards and permit procedures for select uses is necessary in maintaining consistency with the intent of zoning regulations and the Ukiah 2040 General Plan. These standards provide an objective framework for reviewing proposed deviations, allowing the City to impose conditions that ensure neighborhood compatibility, protect public health and safety, and mitigate potential impacts on adjacent properties.

4. Pursuant to the Ukiah 2040 General Plan, and specifically Agriculture Implementation Program E, it is the policy of the City to reduce regulation for local agriculture by revising the Zoning Code to allow low-intensity agricultural activities on residential parcels, including but not limited to backyard beehives, chickens, and gardens. The revision includes objective use, development, and environmental standards, along with minimal permit fee requirements.

5. Pursuant to the Ukiah 2040 General Plan, and specifically Agriculture Implementation Program C, it is the policy of the City to adopt terminology and land use definitions consistent with those utilized by adjacent jurisdictions within the Ukiah Valley to support regional planning and potential future annexations.

6. Pursuant to the Ukiah 2040 General Plan, and specifically its Agriculture Implementation Program I, it is further the policy of the City to facilitate and streamline the permitting process for the establishment of community gardens within the City.

SECTION TWO.

Division 5, Chapter 2 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 4200 KEEPING LIVESTOCK INSIDE CITY LIMITS PROHIBITED WITHOUT PERMIT

A. It shall be unlawful for any person, firm, or corporation to keep, harbor or maintain, or cause, permit or suffer to be kept, harbored or maintained, within the corporate limits of the City any cow, bull, calf, horse, mule, jennie, jack, burro, sheep, goat, swine or any other livestock without then and there having a valid permit in writing issued by the Zoning Administrator of the City under the provisions of this chapter.

B. The provisions of this Chapter apply to the commercial keeping of livestock, including for sale, breeding, production, or other business purposes. This Chapter does not apply to noncommercial or personal animal keeping regulated under Section 9381 of this Code.

* * *

SECTION THREE.

Section 9016 of Division 9, Chapter 2, Article 3 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9016 ALLOWED USES

The following uses are allowed in the Low Density Residential (R-1) District, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

Beekeeping and Apiaries

* * *

Community Gardens

* * *

§ 9017 PERMITTED USES

The following uses may be permitted with the securing of an appropriate use permit pursuant to the provisions contained in Article 20 of this Chapter:

* * *

SECTION FOUR.

Section 9031 of Division 9, Chapter 2, Article 4 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9031 ALLOWED USES

The following uses are allowed in Medium Density Residential (R-2) Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

Beekeeping and Apiaries

* * *

Community Gardens

* * *

§ 9032 PERMITTED USES

The following uses may be permitted in Medium Density Residential (R-2) Zoning Districts subject to first securing an appropriate use permit pursuant to the provisions contained in Article 20 of this Chapter:

* * *

SECTION FIVE.

Section 9046 of Division 9, Chapter 2, Article 5 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9046 ALLOWED USES

The following uses are allowed in High Density Residential (R-3) Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

Beekeeping and Apiaries

* * *

Community Gardens

* * *

§ 9047 PERMITTED USES

The following uses may be permitted in High Density Residential (R-3) Districts subject to first securing an appropriate use permit pursuant to provisions contained in Article 20 of this Chapter:

* * *

Outdoor Sales and Display Projects

* * *

SECTION SIX.

Division 9, Chapter 2, Article 6 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9061 USES ALLOWED

The following uses are allowed in Neighborhood Commercial Zoning Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

Beekeeping and Apiaries

Community Gardens

* * *

Outdoor Dining

Outdoor Sales and Display Projects

* * *

Sidewalk Cafe

* * *

Specialty food and beverage sales with tastings

* * *

§ 9062 USES PERMITTED WITH SECURING OF A USE PERMIT

The following uses may be permitted in Neighborhood Commercial (C-N) Districts, subject to first securing an appropriate use permit pursuant to provisions contained in Article 20 of this Chapter:

* * *

SECTION SEVEN.

Division 9, Chapter 2, Article 7 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9081 ALLOWED USES

The following uses are allowed in the Community Commercial (C-1) Zoning District, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

SECTION TWELVE.

Section 9266 in Division 9, Chapter 2, Article 20 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9266 APPEALS

* * *

An appeal of the decision of the Zoning Administrator shall go to the City Council for a final decision. Such an appeal must be made in writing stating the reasons for the appeal, must include the appeal fee, if any, established from time to time by City Council resolution, and must be filed with the City Clerk within ten (10) days of the date the decision was made. The City Council shall conduct a duly noticed public hearing on the appeal in accordance to the applicable procedures as set forth in this Article. At the close of the public hearing, the City Council may affirm, reverse, revise or modify the appealed decision of the Zoning Administrator. All City Council decisions on appeals of the Zoning Administrator's action are final for the City.

* * *

SECTION THIRTEEN.

A new Section 9269 is hereby added to Division 9, Chapter 2, Article 20 of the Ukiah City Code and shall read as follows:

§ 9269 ADMINISTRATIVE USE PERMITS

Administrative Use Permit application and processing procedures and standards shall be as follows:

A. Purpose. Administrative Use Permits allow specific uses to be established within designated zoning districts when deviations are requested from the criteria and performance standards set forth in Article 23 of this Chapter, entitled "Performance Standards," as well as from other applicable standards found elsewhere in this Article. These permits provide a discretionary review pathway for select uses seeking relief from established standards, while preserving consistency with the overarching intent of the zoning regulations and limiting the need for more extensive public hearing procedures. The standards in Article 23 serve as a framework for evaluating such requests, ensuring proposed deviations may be modified or conditioned to maintain compatibility with surrounding development and mitigate potential impacts on adjacent properties.

B. Applicability. The requirements, procedures, and standards set forth in this Section shall be applicable to the uses listed in Division 9, Chapter 2, Article 23 of this Code, subject to any exceptions or additional requirements and standards as set forth in that Article.

This Section shall not apply to facilities or uses governed by Division 2, Chapter 2, Article 10 (entitled "Broadband Deployment") of the Ukiah City Code, which are subject to separate review procedures and standards.

C. Approval Authority. The Community Development Director may approve, conditionally approve, or deny an Administrative Use Permit application, unless otherwise restricted by state law. Development must comply with all of the required standards in Article 23 of this Chapter and with all other requirements of this Section unless specifically exempted in Article 23 of this Chapter.

D. Application. Applications for Administrative Use Permits shall be initiated by submitting the following information to the Planning Division of the Community Development Department: a completed application form, signed by the property owner or authorized agent, accompanied by the required fee, and any other information, plans or maps prescribed by the Community Development Director. Application procedures and processing timeframes shall be in accordance with state law and procedural guidelines established by the Community Development Director.

E. Public notice and hearing. Public notice and/or hearing are not required for issuance of an Administrative Use Permit.

F. Conditions of approval. The Community Development Director may apply reasonable conditions of approval to bring the development into conformity with requisite performance standards.

G. Findings. The Community Development Director may issue an administrative use permit if the following findings can be made:

1. The proposed use is listed in this Chapter as a use permitted pursuant to an administrative use permit and subject to performance standards;

2. The proposed use as conditioned conforms to the performance standards for the proposed use as outlined in the Performance Standards set forth in Article 23 of this Chapter;

3. The site is physically suited for the type, density, and intensity of the proposed use, including access, utilities, and the absence of physical constraints, and can be conditioned to meet all related performance criteria and development standards.

4. Any other findings required under Article 23 of this Chapter for the specific use;

5. The use, together with the conditions applicable thereto, will not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity, or to the general welfare of the city;

H. Notice of decision. The Community Development Director shall prepare a written decision which shall contain the findings of fact upon which such decision is based and conditions of approval, if any. The decision shall be mailed and/or emailed to the applicant.

I. Appeals. Appeals of decisions on Administrative Use Permits shall be filed within five (10) working days of the issuance of the permit. Appeals shall be filed and processed in accordance with the procedure for appeal of a determination regarding a minor discretionary planning permit as set forth in Section 9266 of this Chapter.

J. Effective date of permit. An administrative use permit shall become effective at the end of the appeal period set forth in Section 9266 of this Chapter, unless appealed.

K. Approval to run with the land. Any administrative use permit approval shall run with the land and shall continue to be valid whether or not there is a change of ownership of the site or structure to which it applies.

L. Amendments—New application. Requests for changes in the conditions of approval of an administrative use permit, or a change to site plans or operation that would affect a condition of permit approval, shall be treated as an administrative use permit amendment. The procedures for filing and processing an application for an administrative use permit amendment shall be the same as those established for an initial or new administrative use permit application.

M. Revocation. An administrative use permit that is exercised in violation of a condition of approval or a provision of this title may be revoked, as provided in the revocation procedures set forth in Section 9262.H of this Chapter.

N. New applications following denial or revocation. If an application for an administrative use permit is denied or revoked, no new application for the same, or substantially the same, administrative use permit shall be filed within one year of the date of denial or revocation of the initial application, unless the denial is made without prejudice.

P. Expiration. The following provisions detail the expiration process of administration use permits.

1. Expiration Criteria: An approved administrative use permit shall expire under the following conditions:

a. If any project for which an Administrative Use Permit has been granted is not established within two (2) years of the permit's effective date; or

b. If the established land use for which the permit was granted has ceased or has remained inactive for twenty-four (24) consecutive months.

2. New Application: Nothing herein shall prohibit the holder of an expired administrative use permit under subsection P1a or P1b of this Section from applying for a new permit in accordance with the procedure for new applications under subsection D of this Section.

SECTION FOURTEEN.

Article 21 in Division 9, Chapter 2 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9278 DEFINITIONS

*** * ***

KENNEL: Any lot, building, structure, or premises whereon or wherein five (5) or more dogs or five (5) or more cats, over the age of four (4) months are kept or maintained for commercial purpose, including but not limited to boarding, breeding, training, grooming, or sale. This definition shall not apply to the personal, non-commercial keeping of domestic pets by the occupant(s) of a dwelling unit. This definition also does not apply to a duly licensed veterinary hospital or public animal shelter.

*** * ***

SECTION FIFTEEN.

A new Article 23, entitled "Performance Standards for Administrative Use Permits and for Specific Allowed Uses" is hereby added to Division 9, Chapter 2 of the Ukiah City Code and shall read as follows:

§ 9380 PURPOSE AND INTENT

Performance standards provide the criteria for evaluating requests submitted through the Administrative Use Permit process (see Section 9269 of this Code), certain other use permits, and specific allowed uses that require minimal discretion and review. The performance standards listed in this Article are intended to explicitly describe the required location, configuration, design, amenities and operation of specified uses. The performance standards also mitigate potential adverse impacts on the neighborhood and maintain harmonious uses in the area. The performance standards are consistent with the goals and policies of the City's General Plan.

§ 9381 ANIMALS WITHIN THE CITY

A. Purpose and Applicability. The provisions of this Section establish performance standards for the noncommercial keeping of certain animals within the City of Ukiah. The intent is to protect the public health, safety, and welfare while supporting personal food production, educational programs (e.g., 4-H/FFA), and compatibility with residential neighborhoods.

All other animals commonly kept as pets or for personal enjoyment (e.g., fish, dogs, cats, potbellied pigs, reptiles, birds, hamsters) are exempt from these standards unless separately regulated by the Ukiah Municipal Code or determined by the Community Development Director to pose a nuisance or health risk.

This Section does not apply to commercial livestock operations, which are governed by Division 5, Chapter 2 of the Ukiah City Code.

Furthermore, roosters, turkeys, ducks, geese, and swine, are prohibited in all zoning districts within the City except for the Agricultural Exclusive (AE) and Combining Agricultural (-A) zoning districts, in which this use is subject to the permitting requirements set forth in Article 10 or Article 13 of this Chapter as appropriate.

B. Animal Raising – Personal. Animal Raising – Personal, as defined in Section 9278 of this Code and as may be amended, shall be allowed in any zoning district provided that all standards set forth in the definition in Section 9278 apply.

An application for an Administrative Use Permit allowing exceptions to the standards in Section 9278 may be authorized under Section 9269 of this Chapter. Issuance of an Administrative Use Permit in that

instance will require the following findings:

1. Compliance with Applicable Laws. The keeping of the animal(s) will not violate any provision of the Ukiah City Code or any other applicable provision of law.

2. Humane Treatment of Animals. The keeping of the animal as proposed will not result in an animal receiving inhumane treatment.

3. Odors. The keeping of the animal will not result in obnoxious odors at nearby properties adversely affecting the enjoyment of such property.

4. Flies. The keeping of the animal(s) will not cause or result in flies or other insects adversely affecting the enjoyment of nearby property.

5. Noise. The keeping of the animal(s) will not result in noises which adversely affect the enjoyment of nearby property.

6. Nuisances. The keeping of the animal(s) will not result in other public or private nuisances.

7. Public Health, Sanitation, Safety, Welfare. The keeping of the animal(s) will not result in an adverse effect on the health, sanitation, safety or welfare of an occupant of the premises or other nearby residents.

8. Procreation. The keeping of the animal(s) will not result in procreation which adversely affects nearby properties or the natural habitat.

C. Beekeeping and Apiaries.

1.The keeping of bees in four beehives or less shall be allowed, provided they comply with the following standards and requirements:

a. Colony density

i. The minimum lot size required for an apiary shall be 4,000 square feet.

ii. The maximum number of hives allowed in an apiary shall be determined based on lot sizes as follows:

1. 4,000 square feet to 10,000 square feet: 2 hives

2. 10,001 square feet to 43,560 square feet: 4 hives

3. On any lot of 10,001 square feet in size or larger, more than four beehives may be kept, provided there is an additional lot area of 2,500 square feet for each hive. If a skep, barrel, log gum, or other container are used instead of boxes for a hive, the dimensions of the hive shall not exceed the limits of this subsection.

b. Care and Maintenance

i. Hives should not be kept or maintained within any required front yard area. Hives located within the side and rear yard areas of a lot should maintain a minimum of a 10-foot setback from side and rear property lines to the hives.

ii. Hives and apiaries shall be kept in a manner that facilitates inspection and shall be maintained in a sound and usable condition.

iii. In all instances, there shall be one adequate and accessible water source provided on site and located within 20 feet of the beehive(s). The water source shall be maintained so as not to become stagnant.

iv. A flyway barrier at least six feet in height but no greater than seven feet in height shall be erected parallel to the lot line between the hive opening and any lot line located within 25 feet. The flyway barrier shall consist of a wall, solid fence, dense vegetation, or a combination thereof extending five feet beyond the hive in each direction. A flyway barrier of dense vegetation shall not be limited to seven feet in height provided that the initial planting is four feet in height and the vegetation normally reaches six feet in height or higher. Barriers shall be maintained in good condition so that all bees are forced to fly at an elevation of at least six feet above ground level.

2. All beekepers are required to register their bee colonies with the Mendocino County Agriculture Commissioner and adhere to all state laws related to the keeping of bees, including California Food and Agricultural Code, Division 13, Chapter 1, as may be amended from time to time. Beekepers must also notify the Agriculture Commissioner upon relocation of bee colonies.

3. An application for an Administrative Use Permit allowing exceptions to the above standards may be authorized under Section 9269 of this Chapter.

D. Nonconforming Animal Keeping, Declaration of Public Nuisance. The City Council declares to be a public nuisance any lot where animal keeping is operating in a manner that is not in conformance with this Section.

E. Other Applicable Laws. Nothing in this Section shall exempt any property from enforcement under applicable nuisance, animal control, or public health laws. The Community Development Director may require an administrative use permit if the number, condition, or management of noncommercial animal keeping poses a risk to health, safety, or welfare.

§ 9382 OUTDOOR SALES AND DISPLAY PROJECTS

Outdoor sales establishments are allowed in all Commercial (C-N, C-1, C-2), and Manufacturing Zoning Districts provided that they occur for no more than thirty (30) days within a twelve (12) month period, in accordance with the below standards. Outdoor sales establishments that exceed thirty (30) days within a twelve (12) month period, that are located in Residential (R-1, R-2, or R-3) Zoning Districts or that do not meet the following performance standards may be permitted through an Administrative Use Permit, as regulated by Section 9269 of this Chapter.

A. Parking: Parking shall be designated for a minimum of three (3) automobiles, located off the public right-of-way with no automobile maneuvering permitted in the public right-of-way.

B. Signage: A maximum of twenty-five percent (25%) of the largest side of the vehicle or structure used

in the sales operation. In addition, one sandwich board or A-frame sign pursuant to the standards set forth in Subsection 3227.A.5 of this Code.

C. Utilities: The need for sanitary sewer, water, and electrical services shall be determined through the Administrative Use Permit process, and all connections shall comply with this Code.

D. Business License: Business license must be prominently displayed at all times, and the operator shall have proof of Board of Equalization sales permit.

§ 9383 COMMUNITY GARDENS

Community gardens may be allowed in any zoning district and shall comply with the following standards and requirements:

A. Days and Hours of Operation: Seven (7) days a week from seven o'clock (7:00) A.M. until dusk.

B. Fencing: Fencing is discouraged. When fencing is required to prevent vandalism or theft, trespassing, and/or encroachment by animals, fencing shall comply with the following:

1. Open Fencing: Open fencing (such as chain link, wrought iron, deer) up to seven feet (7') in height, measured from the grade adjacent to the fence to the top of the fence, is allowed at the property line or set back from the property line. This type of fencing allows the garden to be protected and maximizes the size of the garden while creating an open, pedestrian-oriented use consistent with the purposes of this code.

2. Solid Fencing: Solid fencing (such as wood, masonry) is prohibited since this closes off the site to the public realm, presents a solid unbroken surface which is not pedestrian-oriented, and reduces the size of the garden.

C. Herbicides and Pesticides: All pest and weed control shall be accomplished through organic means using the least toxic methods available. If unsure how to combat pests, weeds, and diseases organically, contact the garden team leader or other qualified professionals or organizations for guidance and resources.

D. Motorized Equipment: Use of motorized equipment (such as weed eaters, leaf blowers, rototillers) shall be limited to weekdays from eight o'clock (8:00) A.M. to seven o'clock (7:00) P.M. and weekends and holidays recognized by the City of Ukiah from ten o'clock (10:00) A.M. to five o'clock (5:00) P.M.

E. Noise: Compliance with the City of Ukiah noise regulations and restrictions set forth in Division 7, Chapter 1, Article 6 of this Code is required, except as indicated in Subsection D of this Section, Motorized Equipment, which may be more restrictive.

F. Parking: A minimum of one parking space along the street frontage of the community garden shall be provided. Vehicle use by members of the community garden should be limited to taking supplies to and from the garden, rainy or poor weather, or assisting gardeners with disabilities. Users of the garden shall be encouraged to walk or bike to the site in order to reduce the need for parking and parking impacts on neighboring uses.

G. Signs: Signs are limited to identification, informational, and directional signs in conformance with the

sign regulations set forth in Division 3, Chapter 7 of this Code.

H. Structures – Accessory: The following accessory structures are allowed: tool sheds, greenhouses, cold-frames, hoop houses, compost bins, rain barrel systems, picnic tables, benches, bike racks, garden art, and fences subject to the development standards of the zoning district in which the community garden is located and the requirements of this Section. Commercially maintained portable bathrooms are allowed as accessory structures; provided, that they comply with accessibility standards and comply with the development standards of the zoning district in which the community garden is located.

I. Water Use: Every effort shall be made to reduce water usage. Drip irrigation is required where feasible. Mulch and compost shall be used in order to reduce the amount of water needed for garden plots.

J. Prohibitions: Smoking, drinking alcoholic beverages, using illegal drugs, and gambling are prohibited. Weapons, pets and other animals (except service animals) are also prohibited.

Community gardens that do not meet the above performance standards may be permitted through an Administrative Use Permit, as regulated by Section 9269 of this Chapter.

§ 9384 LIVE ENTERTAINMENT

A. Live entertainment uses may occur in the C-1, C-2, and P-F zoning districts provided they comply with the following standards and requirements:

1. Live entertainment shall commence no earlier than ten o'clock (10:00) A.M. and shall end at eleven o'clock (11:00) P.M. and is limited to two (2) times a week.

2. Live entertainment shall not violate the noise regulations and restrictions set forth in Division 7, Chapter 1, Article 6 of this Code.

3. The number of people within a building where live entertainment is performing shall not exceed the occupancy standards contained in the California Building Code or Ukiah City Code.

4. Businesses desiring to have live entertainment shall provide adequate security during and after live entertainment events.

5. Parking shall generally comply with the Ukiah City Code, although on-street parking within commercial zoning districts may be included in the number of parking spaces provided for the live entertainment.

6. Any building proposed for live entertainment shall comply with all Fire Code requirements and shall be reviewed and approved by the Ukiah Fire Marshal.

B. Management Plan Submittal: As a part of the application for the conducting of live entertainment, the applicant shall submit a management plan addressing the items listed below, which will be distributed by the Planning Division to the Ukiah Police Department and Ukiah Valley Fire Authority for review and comments. The management plan shall, at a minimum, include the following:

1. Potential for loitering and how the business will preclude loitering.

2. Adequacy of lighting for security and safety purposes.

3. Adequacy of parking.

4. Compatibility and suitability with the existing and allowed uses in the area and/or character of the area, including, but not limited to, proximity to sensitive land uses such as residences, schools, parks, daycare facilities, and churches.

5. Details regarding how security will be provided during and after live entertainment events.

6. Likelihood the use would facilitate the vitality, economic viability, and/or provide recreational or entertainment opportunities in an existing commercial area without presenting a significant impact on health and safety.

7. Hours of operation for the business and hours of proposed live entertainment.

8. Other information deemed necessary on a case-by-case basis.

C. Relief from any of the standards or requirements may be sought through the pursuit of an Administrative Use Permit, as regulated within Section 9269 of this Chapter. The determination shall be based, in part, on how much relief is being sought and the location of the proposed live entertainment and its potential to impact the area.

§ 9385 OUTDOOR DINING

On-site outdoor dining may be allowed in the C-N, C-1 and C-2 zoning districts, provided it is incidental to and part of the operation of a restaurant located on the same parcel, and it complies with the standards and requirements listed below:

A. Purpose: The provisions of this Section are intended to allow outdoor dining in association with a restaurant located on the same parcel as the outdoor dining, where the outdoor dining is clearly incidental to the adjacent restaurant use and will not negatively impact the operations and function of the existing restaurant, including parking facilities, pedestrian access and circulation, and disabled access facilities.

B. Location of Outside Dining: Outdoor dining shall be located on the same site as the restaurant which the outdoor dining will serve. Outdoor dining facilities, such as tables, chairs, umbrellas, etc., shall not be located in pedestrian walkways, required parking spaces, or disabled access facilities (such as parking spaces, walkways, entries, etc.). Outdoor dining areas may be located in landscaped areas if located in such a manner as to not damage the landscaping.

C. Hours of Operation: Days and hours of operation for the outdoor dining shall not extend beyond the hours of operation for the restaurant which it serves. Tables, chairs, and all other furniture used in the operation of outdoor dining shall be removed from any pedestrian walkways and stored indoors at night and whenever the cafe is not in operation.

D. Live Entertainment: Outdoor dining shall not be used for live entertainment unless in compliance with Section 9384 of this Code.

E. Tables, Chairs, Furniture, Signage:

1. In order to provide adequate and safe ingress/egress, a minimum unobstructed pedestrian walkway width of forty-eight inches (48") or the width of the doors, whichever is greater, shall be maintained. The required width of the unobstructed pedestrian walkway shall extend from the front of the door(s) to the public sidewalk. A reduced width may be approved by the Building Official in compliance with the building code.

2. A minimum of sixty inches (60") of unobstructed space shall be maintained between exits and any furniture or fixtures related to outdoor dining, or as required by the building code, whichever is greater.

3. All outdoor dining furniture, including tables, chairs, umbrellas, and planters, shall be movable.

4. Umbrellas shall be secured with a minimum base of not less than sixty (60) pounds and shall leave a vertical clearance of seven feet (7') from the sidewalk surface.

5. Outdoor heaters are allowed subject to fire and building code compliance. Non-live music and/or speakers may be used provided the music does not violate the noise regulations and restrictions set forth in Division 7, Chapter 1, Article 6 of this Code.

6. No signage shall be allowed in the outdoor dining area except for the name of the establishment on an awning or umbrella fringe and in compliance with this Section and the signage regulations set forth in Division 3, Chapter 7 of this Code.

F. Maintenance: The property and/or business owner are responsible for maintaining all outdoor dining furnishings and the outdoor dining area in good condition, including, but not limited to, the following:

1. All outdoor dining furnishings and all exterior surfaces within the outdoor dining area shall be easily cleanable and kept clean and free of debris.

2. The outdoor dining area and adjacent areas kept in a clean and safe condition.

G. Food and Beverages: Outdoor dining areas may only serve food and nonalcoholic beverages prepared or stocked for sale at the adjoining indoor restaurant; provided, however, that the service of beer or wine or both, solely for on-premises consumption by customers within the outdoor dining area, may be authorized by the Community Development Director and Police Department if each of the following requirements are met:

1. The outdoor dining operation is duly licensed, or prior to the service of any beer or wine, will be duly licensed by State authorities to sell beer or wine for consumption within the outdoor dining area.

2. The authorized outdoor dining area is identified in a manner which will clearly separate and delineate it from the areas of the sidewalk that will remain open to pedestrian traffic.

3. One or more signs, as approved as part of the encroachment permit, are posted during all times

the sidewalk cafe is in operation, which shall give notice to the cafe's customers that the drinking of beer or wine or the carrying of any open container which contains beer or wine is prohibited and unlawful outside the delineated outdoor dining area.

Outdoor dining areas authorized by the Community Development Department and Police Department and in compliance with the requirements of this section are exempt from section 6000 of this Code.

H. Service Requirements:

1. Service areas (such as busing and service stations) may be located within the outdoor dining area. Service areas shall comply with subsection B of this Section (Location of Outside Dining). Outdoor food preparation in the outdoor dining area is prohibited.

2. Restrooms for the outdoor dining area shall be provided in the adjoining indoor restaurant. Seating for the outdoor dining may be counted in determining the restroom requirements for the indoor restaurant at the discretion of the Building Official.

I. Revocation: The outdoor dining may be revoked by the City upon finding that one or more of the requirements of this section have been violated or that the outdoor dining is being operated in a manner that constitutes a nuisance.

J. Relief from any of the standards or requirements may be sought through the pursuit of an Administrative Use Permit, as regulated within Section 9269 of this Chapter.

§ 9386 SIDEWALK CAFE

A. A sidewalk cafe may be allowed in the C-N, C-1, and C-2 zoning districts, provided it is incidental to and part of the operation of a restaurant and it complies with the standards and requirements listed below.

B. Purpose: The provisions of this section are intended to allow a sidewalk cafe to operate in association with an allowed restaurant use, where the sidewalk cafe is clearly incidental to the restaurant use and will not negatively impact the right-of-way.

C. Permit Requirements: A sidewalk cafe shall require the approval of an encroachment permit from the Department of Public Works and Planning and Community Development Department.

D. Limitations and Requirements: A sidewalk cafe may be allowed only where allowed by section 9385 of this Code and only when the sidewalk cafe is incidental to and part of the operation of an adjacent restaurant and when in compliance with the following requirements of this section:

1. Where Permissible: A sidewalk cafe may be located on a public sidewalk immediately adjacent to and abutting the indoor restaurant which operates the cafe; provided, that the area in which the sidewalk cafe extends is no farther along the sidewalk frontage than the operating indoor restaurant.

2. Location of Sidewalk Cafes: Each cafe shall be confined to a defined location on the sidewalk immediately adjacent to the restaurant which operates the cafe.

3. Hours of Operation: Sidewalk cafes may operate on days whenever fair weather would enhance outdoor dining. The hours of operation shall not exceed eight o'clock (8:00) A.M. to nine o'clock (9:00) P.M. Tables, chairs, and all other furniture used in the operation of a sidewalk cafe shall be removed from the sidewalk and stored indoors at night and whenever the cafe is not in operation. Additional hours may be authorized contingent up on the approval of an Administrative Use Permit.

4. Sidewalk Clearances: A sidewalk cafe may be allowed only where the sidewalk is wide enough to adequately accommodate the usual pedestrian traffic in the area, to comply with California State accessibility standards and federal ADA requirements, and the operation of the proposed cafe.

5. Live Entertainment: A sidewalk cafe shall not be used for live entertainment. Live entertainment at sidewalk cafes may be authorized in compliance with Section 9384 of this Code.

E. Tables, Chairs, Furniture, Signage:

1. All tables and chairs comprising a sidewalk cafe shall be situated in a safe fashion and away from any sidewalk or street barrier including a bollard, and shall not be within eight feet (8') of any designated bus stop.

2. The dining area shall not impede the use of public furnishings such as lighting, benches, etc.

3. In order to provide adequate and safe ingress/egress, a minimum unobstructed public sidewalk width of forty-eight inches (48") shall be maintained for the entire length of the sidewalk cafe. The required width shall extend from the front of the door(s) to the end of the sidewalk cafe.

4. A minimum of sixty inches (60") of unobstructed space shall be maintained between exits and any furniture or fixtures related to the sidewalk cafe, or as required by the building code, whichever is greater.

5. All sidewalk cafe furniture, including tables, chairs, umbrellas, and planters, shall be movable.

6. Umbrellas shall be secured with a minimum base of not less than sixty (60) pounds and shall leave a vertical clearance of seven feet (7') from the sidewalk surface.

7. Outdoor heaters are allowed subject to fire and building code compliance. Music and/or speakers may be authorized contingent up on the approval of an Administrative Use Permit.

8. No signage shall be allowed at the sidewalk cafe except for the name of the establishment on an awning or umbrella fringe and in compliance with this section and the signage regulations set forth in Division 3, Chapter 7 of this Code.

9. All furnishings and other items associated with the sidewalk cafe shall be removed from the sidewalk during nonoperation hours of the cafe. Storage of these items outside may be authorized contingent up on the approval of an Administrative Use Permit.

10. Any proposed seating in the vicinity of street trees shall comply with the City's Management Guidelines adopted December 1, 2010.

F. Maintenance: The permittee is responsible for maintaining all outdoor dining furnishings and the sidewalk cafe area in good condition, including, but not limited to, the following:

1. All outdoor dining furnishings and all exterior surfaces within the sidewalk cafe area shall be easily cleanable and kept clean and free of debris.

2. The sidewalk cafe area and adjacent areas shall be kept in a clean and safe condition.

G. Food and Beverages: A sidewalk cafe may serve only food and nonalcoholic beverages prepared or stocked for sale at the adjoining indoor restaurant; provided, however, that the service of beer or wine or both solely for on-premises consumption by customers within the areas of the sidewalk cafe may be authorized by the Community Development Department and Police Department as part of the required encroachment permit if each of the following requirements are met:

1. The sidewalk cafe operation is duly licensed, or prior to the service of any beer or wine will be duly licensed by State authorities to sell beer or wine for consumption within the area of the sidewalk cafe.

2. The area in which the sidewalk cafe is authorized is identified in a manner, as part of the encroachment permit, which will clearly separate and delineate it from the areas of the sidewalk that will remain open to pedestrian traffic.

3. One or more signs, as approved as part of the encroachment permit, are posted during all times the sidewalk cafe is in operation, which shall give notice to the cafe's customers that the drinking of beer or wine or the carrying of any open container which contains beer or wine is prohibited and unlawful outside the delineated area of the sidewalk cafe. Sidewalk cafes authorized by the Community Development Department and Police Department as part of the required encroachment permit and in compliance with the requirements of this section are exempt from section 6000 of this code.

H. Service Requirements:

1. The outdoor preparation of food and busing and service stations are prohibited at the sidewalk cafe. Outdoor service station may be authorized contingent up on the approval of an Administrative Use Permit.

2. Restrooms for the sidewalk cafe shall be provided in the adjoining indoor restaurant. Seating for the sidewalk cafe may be counted in determining the restroom requirements for the indoor restaurant at the discretion of the Building Official.

3. Trash and refuse receptacles for the sidewalk cafe shall not be permitted within the area designated for the sidewalk cafe or on adjacent sidewalk areas and the permittee shall remove trash and litter as they accumulate. Trash and/or refuse containers may be authorized within the outdoor dining area or adjacent sidewalk areas contingent on the approval of an Administrative Use Permit.

I. Power to Prohibit Operation of the Sidewalk Cafe: Any encroachment permit issued for a sidewalk cafe shall provide that the City shall have the right and power, acting through the City Manager or designee, to prohibit the operation of a sidewalk cafe at any time because of anticipated or actual problems or conflicts in the use of the sidewalk area. Such problems may arise from, but are not limited to, scheduled festivals and similar events, or parades or marches, or repairs to the street or sidewalk, or from demonstrations or emergencies occurring in the area. To the extent possible, the permittee shall be given prior written notice of any time period during which the operation of the sidewalk cafe will be prohibited by the City, but any failure to give prior written notice shall not affect the right and power of the City to prohibit the cafe's operation at any particular time.

J. Conditions: In connection with granting the encroachment permit for a sidewalk cafe, conditions may be imposed in granting approval as deemed necessary for the proposed operation to meet the operating requirements of this section.

K. Modifications: In the event the City determines during the operation of an approved sidewalk cafe that additional or revised conditions are necessary in order for the sidewalk cafe to comply with the requirements of this section, the City shall have the ability to add additional conditions to the approved encroachment permit.

L. Revocation: The encroachment permit to operate a sidewalk cafe may be revoked by the City upon finding that one or more conditions of the permit or this section have been violated or that the sidewalk cafe is being operated in a manner that constitutes a nuisance, or that the operation of the sidewalk cafe unduly impedes the movement of pedestrians past the sidewalk cafe. Revocations may be appealed per the process outlined in Section 5613 of this Code.

M. Relief from any of the standards or requirements may be sought through the pursuit of an Administrative Use Permit, as regulated within Section 9269 of this Chapter.

§ 9387 SPECIALTY FOOD AND BEVERAGE SALES WITH TASTINGS

Specialty food and beverage sales with tastings may be allowed in the C-N, C-1, C-2, and P-F zoning districts provided they comply with the following standards and requirements:

A. Days and Hours of Operation: Days and hours of operation shall be limited to daily from ten o'clock (10:00) A.M. to ten o'clock (10:00) P.M. Additional hours may be authorized with approval of an administrative use permit.

B. Live Entertainment: Live entertainment is allowed in compliance with Section 9384 of this code and may perform until eight o'clock (8:00) P.M. Other arrangements for live entertainment may be authorized with approval of an administrative use permit.

C. Outdoor Seating: Outdoor seating is allowed in compliance with the applicable requirements for Outdoor Dining included in Section 9385 of this Code or Sidewalk Cafes in Section 9386 of this Code.

D. Administrative Use Permit: An application for an Administrative Use Permit to allow additional operating hours and/or live entertainment in a manner that exceeds the operating characteristics required in this Section may be authorized as set forth in Section 9269 of this Chapter, and shall incorporate

findings that address the following considerations:

1. Potential for loitering and how the business will preclude loitering.

2. Adequacy of lighting for security and safety purposes.

3. Adequacy of parking.

4. Compatibility and suitability with the existing and allowed uses in the area and/or character of the area, including but not limited to proximity to sensitive land uses such as residences, schools, parks, daycare facilities, and churches.

5. Likelihood the use would facilitate the vitality, economic viability, and/or provide recreational or entertainment opportunities in an existing commercial area without presenting a significant impact on health and safety.

6. Details regarding how security will be provided during and after live entertainment events.

7. Other information deemed necessary on a case-by-case basis.

SECTION SIXTEEN

The following sections of the Ukiah City Code shall be repealed:

1. Article 15.6 in Division 9, Chapter 2.

2. Section 9182

2. Section 9184

SECTION SEVENTEEN.

1. Publication: Within fifteen (15) days after its adoption, this Ordinance shall be published once in a newspaper of general circulation in the City of Ukiah. In lieu of publishing the full text of the Ordinance, the City may publish a summary of the Ordinance once 5 days prior to its adoption and again within fifteen (15) days after its adoption.

2. Effective Date: The ordinance shall become effective thirty (30) days after its adoption.

3. Severability: If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Ordinance, or its application to any person or circumstance, is for any reason held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Ordinance, or its application to any other person or circumstance. The City Council of the City of Ukiah hereby declares that it would have adopted each section, subsection, subdivision, paragraph, sentence, clause or phrase hereof, irrespective of the fact that any one or more other sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases hereof be declared invalid or unenforceable.

PLANNING COMMISSION RESOLUTION NO. 2025-03

"ADMINISTRATIVE USE PERMIT ORDINANCE"

RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF UKIAH, STATE OF CALIFORNIA, RECOMMENDING CITY COUNCIL ADOPTION OF ZONING ORDINANCE AMENDMENTS TO ESTABLISH AN ADMINISTRATIVE USE PERMIT PROCESS, CLARIFY ANIMAL KEEPING REGULATIONS, AND CONSOLIDATE PERFORMANCE STANDARDS INTO ARTICLE 23 OF DIVISION 9 OF THE UKIAH CITY CODE

WHEREAS, on December 7, 2022, the Ukiah City Council adopted Resolution No. 2022-79 certifying the Environmental Impact Report for the Ukiah 2040 General Plan (State Clearinghouse No. 2022050556), which analyzed the environmental impacts of the City's General Plan and included adoption of a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations; and

WHEREAS, pursuant to Government Code Section 65850, the City is authorized to adopt zoning regulations, including procedures for the issuance of use permits and performance standards for land use consistent with the General Plan; and

WHEREAS, the proposed ordinance would establish a new Administrative Use Permit (AUP) process for qualifying small-scale or neighborhood-serving uses; consolidate and reorganize performance standards into a new Article 23 of Division 9, Chapter 2 of the Ukiah City Code; clarify distinctions between commercial and personal animal keeping; and update land use definitions for clarity and consistency; and

WHEREAS, the proposed ordinance implements key programs of the Ukiah 2040 General Plan Agriculture Element, including Programs C, E, and I, by reducing regulatory barriers for compatible small-scale agriculture and streamlining permit pathways for community-serving uses; and

WHEREAS, the ordinance is exempt from the California Environmental Quality Act (CEQA) pursuant to CEQA Guidelines Section 15061(b)(3), the "common sense exemption," as it can be seen with certainty that the ordinance will not result in a significant effect on the environment, nor authorize any physical development or new use types; and

WHEREAS, public notice of the Planning Commission hearing on the proposed ordinance was provided in accordance with Assembly Bill 2904 and Government Code Sections 65090 and 65091, including publication in a newspaper of general circulation, posting at the Civic Center, and online posting at least 20 days in advance of the hearing; and

WHEREAS, the Planning Commission considered all of the information presented to it, including the Staff Report, public testimony, and supporting documentation; and

WHEREAS, the Planning Commission has reviewed the ordinance, considered all written and oral testimony, and finds that the ordinance is in the public interest, supports streamlined permitting for compatible uses, and is consistent with the General Plan and applicable state law.

NOW, THEREFORE, BE IT RESOLVED that the City of Ukiah Planning Commission, based upon evidence in the record and oral and written testimony presented at public hearings, and all information contained in the record of proceedings related to the Administrative Use Permit Ordinance, makes the following findings and recommendations:

1. The above recitals are true and correct and incorporated herein by this reference.

2. The proposed changes in the Administrative Use Permit Ordinance are consistent with the City of Ukiah 2040 General Plan. Pursuant to Government Code Section 65860, a zoning ordinance is consistent with a general plan if the City has adopted a plan and the various land uses authorized by the ordinance are compatible with the objectives, policies, general land uses, and programs specified in the plan. None of the zoning district articles being modified affect conformity with the 2040 General Plan.

3. The proposed ordinance has been reviewed in compliance with the California Environmental Quality Act (CEQA) and has been found exempt from environmental review pursuant to CEQA Guidelines Section 15061(b)(3), the "common sense exemption," because it can be seen with certainty that there is no possibility the ordinance will have a significant environmental effect.

4. That the City Council adopt an ordinance making the changes shown in the Administrative Use Permit Ordinance, as shown in the attached Exhibit A.

BE IT FURTHER RESOLVED that the Planning Commission designates the City Clerk as the custodian of the document and other materials that constitute the record of proceedings upon which the Planning Commission decision herein is based. These documents may be found at the office of the City of Ukiah Department of Community Development, 300 Seminary Avenue, Ukiah, CA 95482.

PASSED AND ADOPTED by the Planning Commission of the City of Ukiah this 9th day of July 2025, by the following roll call vote:

AYES: Planning Commissioners Johnson, Hilliker, and Chair de Grassi
NOES: None
ABSENT: None
ABSTAIN: None

ORDINANCE NO.

ORDINANCE OF THE CITY COUNCIL OF THE CITY OF UKIAH ADDING A NEW SECTION 9269 AND A NEW ARTICLE 23 TO DIVISION 9, CHAPTER 2 OF THE CITY CODE TO ESTABLISH PROCEDURES AND PERFORMANCE STANDARDS FOR THE ISSUANCE OF ADMINSITRATIVE USE PERMITS.

The City Council of the City of Ukiah hereby ordains as follows:

SECTION ONE. FINDINGS

1. It is a goal of the City to provide a streamlined process for administrative review and determination on requests for uses and activities that have little to no impact on adjacent sites and surroundings.

2. Administrative Use Permits (AUPs) provide a discretionary review process for uses requiring case-by-case evaluation beyond ministerial permits but not rising to the threshold of a public hearing. This process allows the City to impose conditions and ensure compatibility with surrounding land uses while streamlining review to avoid unnecessary delays or complexity.

3. Establishing clear performance standards and permit requirements for these uses is necessary to protect public health and safety, promote neighborhood compatibility, and ensure consistency with the Ukiah 2040 General Plan. These standards provide a predictable framework for reviewing uses such as animal keeping, outdoor dining, and live entertainment, while minimizing potential nuisances and conflicts between adjacent properties.

4. Pursuant to the Ukiah 2040 General Plan, and specifically Agriculture Implementation Program E, it is the policy of the City to reduce regulation for local agriculture by revising the Zoning Code to allow low-intensity agricultural activities on residential parcels, including but not limited to backyard beehives, chickens, and gardens. The revision includes objective use, development, and environmental standards, along with minimal permit fee requirements.

5. Pursuant to the Ukiah 2040 General Plan, and specifically Agriculture Implementation Program C, it is the policy of the City to adopt terminology and land use definitions consistent with those utilized by adjacent jurisdictions within the Ukiah Valley to support regional planning and potential future annexations.

6. Pursuant to the Ukiah 2040 General Plan, and specifically its Agriculture Implementation Program I, it is further the policy of the City to facilitate and streamline the permitting process for the establishment of community gardens within the City.

SECTION TWO.

Division 5, Chapter 2 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 4200 KEEPING LIVESTOCK INSIDE CITY LIMITS PROHIBITED WITHOUT PERMIT

A. It shall be unlawful for any person, firm, or corporation to keep, harbor or maintain, or cause, permit or suffer to be kept, harbored or maintained, within the corporate limits of the City any cow, bull, calf, horse, mule, jennie, jack, burro, sheep, goat, swine or any other livestock without then and there having a valid permit in writing issued by the Zoning Administrator of the City under the provisions of this chapter.

B. The provisions of this Chapter apply to the commercial keeping of livestock, including for sale, breeding, production, or other business purposes. This Chapter does not apply to noncommercial or personal animal keeping regulated under Section 9381 of this Code.

* * *

SECTION THREE.

Section 9016 of Division 9, Chapter 2, Article 3 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9016 ALLOWED USES

The following uses are allowed in the Low Density Residential (R-1) ~~Districts~~District, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

* * *

Community Gardens

* * *

§ 9017 PERMITTED USES

The following uses may be permitted with the securing of an appropriate use permit pursuant to the provisions contained in Article 20 of this Chapter:

* * *

Beekeeping and Apiaries

* * *

SECTION FOUR.

Section 9031 of Division 9, Chapter 2, Article 4 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9031 ALLOWED USES

The following uses are allowed in Medium Density Residential (R-2) Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Community Gardens

* * *

§ 9032 PERMITTED USES

The following uses may be permitted in Medium Density Residential (R-2) Zoning Districts subject to first securing an appropriate use permit pursuant to the provisions contained in Article 20 of this Chapter:

* * *

Beekeeping and Apiaries

* * *

SECTION FIVE.

Section 9046 of Division 9, Chapter 2, Article 5 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9046 ALLOWED USES

The following uses are allowed in High Density Residential (R-3) Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

* * *

Community Gardens

* * *

§ 9047 PERMITTED USES

The following uses may be permitted in High Density Residential (R-3) Districts subject to first securing an appropriate use permit pursuant to provisions contained in Article 20 of this Chapter:

* * *

Beekeeping and Apiaries

* * *

Outdoor Sales and Display Projects

* * *

SECTION SIX.

Division 9, Chapter 2, Article 6 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9061 USES ALLOWED

The following uses are allowed in Neighborhood Commercial Zoning Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

* * *

Community Gardens

* * *

Outdoor Dining

* * *

Outdoor Sales and Display Projects

* * *

Sidewalk Cafe

* * *

Specialty food and beverage sales with tastings

* * *

§ 9062 USES PERMITTED WITH SECURING OF A USE PERMIT

The following uses may be permitted in Neighborhood Commercial (C-N) Districts, subject to first securing an appropriate use permit pursuant to provisions contained in ~~section 9262~~ Article 20 of this Cehapter:

* * *

Beekeeping and Apiaries.

* * *

SECTION SEVEN.

Division 9, Chapter 2, Article 7 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9081 ALLOWED USES

The following uses are allowed in the Community Commercial (C-1) Zoning District, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

* * *

Community Gardens

* * *

Live Entertainment

* * *

Outdoor Dining

Outdoor Sales and Display Projects

* * *

Sidewalk Cafe

* * *

Specialty food and beverage sales with tastings

* * *

§ 9082 PERMITTED USES

The following uses require approval of an appropriate use permit pursuant to the provisions contained in ~~section 9262~~Article 20 of this Cehapter:

* * *

Beekeeping and Apiaries

* * *

~~Outdoor Sales and Display Projects~~

~~Outdoor sales establishments that occur for no more than thirty (30) days within a twelve (12) month period may be considered by the Zoning Administrator. All other applications shall be heard by the Planning Commission.~~

~~A. All outdoor sales establishments shall comply with the following criteria:~~

~~1. Parking: Parking shall be designated for a minimum of three (3) automobiles, located off the public right-of-way with no automobile maneuvering permitted in the public right-of-way. The use permit may require additional parking, depending on the nature of sales proposed.~~

~~2. Signage: A maximum of twenty-five percent (25%) of the largest side of the vehicle or structure used in the sales operation. In addition, one sandwich board or A-frame sign pursuant to subsection 3227A5 of this code.~~

~~3. Utilities: The need for sanitary sewer, water, and electrical services shall be determined through the use permit process, and all hookups shall comply with this code.~~

~~4. Business License: Business license must be prominently displayed at all times, and the operator shall have proof of Board of Equalization sales permit.~~

* * *

SECTION EIGHT.

Division 9, Chapter 2, Article 8 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9096 ALLOWED USES

The following uses are allowed in the Heavy Commercial (C-2) Zoning District, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

* * *

Community Gardens

* * *

Outdoor Dining

* * *

Outdoor Sales and Display Projects

* * *

Sidewalk Cafe

* * *

Specialty food and beverage sales with tastings

* * *

§ 9097 PERMITTED USES

The following uses require approval of an appropriate use permit pursuant to the provisions contained in ~~section 9262~~Article 20 of this Chapter~~code~~:

Beekeeping and Apiaries

* * *

~~Outdoor sales establishments that occur for no more than thirty (30) days within a twelve (12) month period may be considered by the Zoning Administrator. All other applications shall be heard by the Planning Commission.~~

~~A. All outdoor sales establishments shall comply with the following criteria:~~

~~1. Parking: Parking shall be designated for a minimum of three (3) automobiles, located off the public right of way with no automobile maneuvering permitted in the public right of way. The use permit may require additional parking, depending on the nature of sales proposed.~~

~~2. Signage: A maximum of twenty five percent (25%) of the largest side of the vehicle or structure used in the sales operation. In addition, one sandwich board or "A" frame sign pursuant to subsection 3227A5 of this code.~~

~~3. Utilities: The need for sanitary sewer, water, and electrical services shall be determined through the use permit process, and all hookups shall comply with this code.~~

~~4. Business License: Business license must be prominently displayed at all times, and the operator shall have proof of board of equalization sales permit.~~

* * *

SECTION NINE.

Division 9, Chapter 2, Article 9 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9111 USES ALLOWED

The following uses are allowed in Manufacturing (M) Districts, pursuant to the development and operational standards of Article 20 if applicable:

* * *

C. Animal Raising - Personal

D. Community Gardens

E. Outdoor Sales and Display Projects

§ 9112 USES PERMITTED SUBJECT TO FIRST SECURING A USE PERMIT

The following uses may be permitted in Manufacturing (M) Districts subject to first securing an appropriate use permit, as provided in Article 20 of this Chapter, in each case:

Beekeeping and Apiaries

* * *

SECTION TEN.

Section 9160 of Division 9, Chapter 2, Article 13 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9160 AGRICULTURAL EXCLUSIVE OR A-E DISTRICT

* * *

C. Uses Allowed:

* * *

2. Agricultural Uses:

* * *

j. Beekeeping and Apiaries

3. Civic Uses:

a. Community Gardens, pursuant to the development and operational standards of Article 20.

~~a~~b. Day care facilities/small schools.

~~b~~c. Safety services.

~~c~~d. Utility service minor.

* * *

SECTION ELEVEN.

Division 9, Chapter 2, Article 15 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9070.1 ALLOWED USES

The following uses are allowed in the Public Facilities (PF) Zoning District, pursuant to the development and operational standards of Article 20 if applicable:

* * *

Animal Raising - Personal

* * *

Community Gardens

* * *

Live Entertainment

* * *

Specialty food and beverage sales with tastings

* * *

§ 9070.2 PERMITTED USES

The following uses are permitted in the Public Facilities (PF) Zoning District subject to first securing an appropriate use permit pursuant to the provisions contained in Article 20 of this Chapter:

Beekeeping and Apiaries

* * *

SECTION TWELVE.

A new Section 9269 is hereby added to Division 9, Chapter 2, Article 20 of the Ukiah City Code and shall read as follows:

§ 9269 ADMINISTRATIVE USE PERMITS

Administrative Use Permit application and processing procedures and standards shall be as follows:

A. Purpose. Administrative use permits allow certain uses to be established in particular zoning districts if they comply with the specific criteria and performance standards as established in Article 23 of this Chapter, entitled "Performance Standards," and other standards as required elsewhere in this Article. Administrative use permits are intended to streamline the discretionary permit process for select uses where clear performance standards are established and extensive public review is not warranted. The performance standards established in Article 23 of this Chapter are designed to ensure that such uses have an impact only on immediately adjacent properties and can be modified and/or conditioned to ensure compatibility.

B. Applicability. The requirements, procedures, and standards set forth in this Section shall be applicable to the uses listed in Division 9, Chapter 2, Article 23 of this Code, subject to any exceptions or additional requirements and standards as set forth in that Article..

This Section shall not apply to facilities or uses governed by Division 2, Chapter 2, Article 10 (entitled "Broadband Deployment") of the Ukiah City Code, which are subject to separate review procedures and standards.

C. Approval Authority. The Community Development Director may approve, conditionally approve, or deny an administrative use permit application, unless otherwise restricted by state law. Development must comply with all of the required standards in Article 23 of this Chapter and with all other requirements of

this Section unless specifically exempted in Article 23 of this Chapter.

D. Application. Applications for administrative use permits shall be initiated by submitting the following information to the Planning Division of the Community Development Department: a completed application form, signed by the property owner or authorized agent, accompanied by the required fee, and any other information, plans or maps prescribed by the Community Development Director. Application procedures and processing timeframes shall be in accordance with state law and procedural guidelines established by the Community Development Director.

E. Public notice and hearing. Public notice and/or hearing are not required for issuance of an administrative use permit.

F. Conditions of approval. The Community Development Director may apply reasonable conditions of approval to bring the development into conformity with requisite performance standards.

G. Findings. The Community Development Directormay issue an administrative use permit if the following findings can be made:

1. The proposed use is listed in this Chapter as a use permitted pursuant to an administrative use permit and subject to performance standards;

2. The proposed use as conditioned conforms to the performance standards for the proposed use as outlined in the Performance Standards set forth in Article 23 of this Chapter;

3. The site is physically suited for the type, density, and intensity of the proposed use, including access, utilities, and the absence of physical constraints, and can be conditioned to meet all related performance criteria and development standards.

4. Any other findings required under Article 23 of this Chapter for the specific use;

5. The use, together with the conditions applicable thereto, will not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity, or to the general welfare of the city;

H. Notice of decision. The Community Development Director shall prepare a written decision which shall contain the findings of fact upon which such decision is based and conditions of approval, if any. The decision shall be mailed and/or emailed to the applicant.

I. Appeals. Appeals of decisions on administrative use permits shall be filed within five (5) working days of the issuance of the permit. Appeals shall be filed and processed in accordance with the procedure for appeal of a determination regarding a minor discretionary planning permit as set forth in Section 9266 of this Chapter.

J. Effective date of permit. An administrative use permit shall become effective at the end of the appeal period as specified in Section 9266 of this Chapter, unless appealed.

K. Approval to run with the land. Any administrative use permit approval shall run with the land and shall continue to be valid for the time frame specified whether or not there is a change of ownership of the site

or structure to which it applies.

L. Extensions. An administrative use permit may be extended by the Community Development Director if the findings required by Subsection H of this Section remain valid and application is made prior to expiration.

M. Amendments—New application. Requests for changes in the conditions of approval of an administrative use permit, or a change to site plans or operation that would affect a condition of permit approval, shall be treated as an administrative use permit amendment. The procedures for filing and processing an application for an administrative use permit amendment shall be the same as those established for an initial or new administrative use permit application.

N. Revocation. An administrative use permit that is exercised in violation of a condition of approval or a provision of this title may be revoked, as provided in the revocation procedures set forth in Section 9262.H of this Chapter.

O. New applications following denial or revocation. If an application for an administrative use permit is denied or revoked, no new application for the same, or substantially the same, administrative use permit shall be filed within one year of the date of denial or revocation of the initial application, unless the denial is made without prejudice.

P. Expiration. Administrative use permits are valid for one year unless a different expiration date is stipulated at the time of approval, a building permit has been issued and construction diligently pursued, a certificate of occupancy has been issued, or the permit is renewed and extended.

SECTION THIRTEEN.

Article 21 in Division 9, Chapter 2 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§ 9278 DEFINITIONS

* * *

KENNEL: Any lot, building, structure, or premises whereon or wherein five (5) or more dogs or five (5) or more cats, over the age of four (4) months are kept or maintained for ~~any~~ commercial purpose, including but not limited to boarding, breeding, training, grooming, or sale. This definition shall not apply to the personal, non-commercial keeping of domestic pets by the occupant(s) of a dwelling unit. This definition also does not apply~~. Kennel definition shall not be construed as applying~~ to a duly licensed veterinary hospital or public animal shelter.

* * *

SECTION FOURTEEN.

A new Article 23, entitled "Performance Standards for Administrative Use Permits and for Specific Allowed Uses" is hereby added to Division 9, Chapter 2 of the Ukiah City Code and shall read as follows:

§ 9380 PURPOSE AND INTENT

Performance standards provide criteria for issuing administrative use permits, certain other use permits, and specific allowed uses that require minimal discretion and review. (See Section 9269 of this Code for the requirements and procedures for the Administrative Use Permit process.) The performance standards listed in this Article are intended to explicitly describe the required location, configuration, design, amenities and operation of specified uses. The performance standards also mitigate potential adverse impacts on the neighborhood and maintain harmonious uses in the area. The performance standards are consistent with the goals and policies of the City's General Plan.

§ 9381 ANIMALS WITHIN THE CITY

A. Purpose and Applicability. The provisions of this Section established performance standards for the noncommercial keeping of certain animals within the City of Ukiah. The intent is to protect the public health, safety, and welfare while supporting personal food production, educational programs (e.g., 4-H/FFA), and compatibility with residential neighborhoods.

All other animals commonly kept as pets or for personal enjoyment (e.g., fish, dogs, cats, potbellied pigs, reptiles, birds, hamsters) are exempt from these standards unless separately regulated by the Ukiah Municipal Code or determined by the Community Development Director to pose a nuisance or health risk.

This Section does not apply to commercial livestock operations, which are governed by Division 5, Chapter 2 of the Ukiah City Code.

Furthermore, roosters, turkeys, ducks, geese, and swine, are prohibited in all zoning districts within the City except for the Agricultural Exclusive (AE) and Combining Agricultural (-A) zoning districts, in which this use is subject to the permitting requirements set forth in Article 10 or Article 13 of this Chapter as appropriate.

B. Animal Raising – Personal. Animal Raising – Personal, as defined in Section 9278 of this Code and as may be amended, shall be allowed in any zoning district provided that all standards set forth in the definition in Section 9278 apply.

An application for an Administrative Use Permit allowing exceptions to the standards in Section 9278 may be authorized under Section 9269 of this Chapter. Issuance of an Administrative Use Permit in that instance will require the following findings:

1. Compliance with Applicable Laws. The keeping of the animal(s) will not violate any provision of the Ukiah City Code or any other applicable provision of law.

2. Humane Treatment of Animals. The keeping of the animal as proposed will not result in an animal receiving inhumane treatment.

3. Odors. The keeping of the animal will not result in obnoxious odors at nearby properties adversely affecting the enjoyment of such property.

4. Flies. The keeping of the animal(s) will not cause or result in flies or other insects adversely affecting the enjoyment of nearby property.

5. Noise. The keeping of the animal(s) will not result in noises which adversely affect the enjoyment of nearby property.

6. Nuisances. The keeping of the animal(s) will not result in other public or private nuisances.

7. Public Health, Sanitation, Safety, Welfare. The keeping of the animal(s) will not result in an adverse effect on the health, sanitation, safety or welfare of an occupant of the premises or other nearby residents.

8. Procreation. The keeping of the animal(s) will not result in procreation which adversely affects nearby properties or the natural habitat.

C. Beekeeping and Apiaries.

1.The keeping of bees in four beehives or less shall be allowed with approval of an administrative use permit provided they comply with the following standards and requirements:

a. Colony density

i. The minimum lot size required for an apiary shall be 4,000 square feet.

ii. The maximum number of hives allowed in an apiary shall be determined based on lot sizes as follows:

1. 4,000 square feet to 10,000 square feet: 2 hives

2. 10,001 square feet to 43,560 square feet: 4 hives

3. On any lot of 10,001 square feet in size or larger, more than four beehives may be kept, provided there is an additional lot area of 2,500 square feet for each hive. If a skep, barrel, log gum, or other container are used instead of boxes for a hive, the dimensions of the hive shall not exceed the limits of this subsection.

b. Care and Maintenance

i. Hives should not be kept or maintained within any required front yard area. Hives located within the side and rear yard areas of a lot should maintain a minimum of a 10-foot setback from side and rear property lines to the hives.

ii. Hives and apiaries shall be kept in a manner that facilitates inspection and shall be maintained in a sound and usable condition.

iii. In all instances, there shall be one adequate and accessible water source provided on site and located within 20 feet of the beehive(s). The water source shall be maintained so as not to become stagnant.

iv. A flyway barrier at least six feet in height but no greater than seven feet in height shall be erected parallel to the lot line between the hive opening and any lot line located within 25 feet. The flyway barrier shall consist of a wall, solid fence, dense vegetation, or a combination thereof extending five feet beyond the hive in each direction. A flyway barrier of dense vegetation shall not be limited to seven feet in height provided that the initial planting is four feet in height and the vegetation normally reaches six feet in height or higher. Barriers shall be

maintained in good condition so that all bees are forced to fly at an elevation of at least six feet above ground level.

2. All beekepers are required to register their bee colonies with the Mendocino County Agriculture Commissioner and adhere to all state laws related to the keeping of bees, including California Food and Agricultural Code, Division 13, Chapter 1, as may be amended from time to time. Beekepers must also notify the Agriculture Commissioner upon relocation of bee colonies.

D. Nonconforming Animal Keeping, Declaration of Public Nuisance. The City Council declares to be a public nuisance any lot where animal keeping is operating in a manner that is not in conformance with this Section.

E. Other Applicable Laws. Nothing in this Section shall exempt any property from enforcement under applicable nuisance, animal control, or public health laws. The Community Development Director may require an administrative use permit if the number, condition, or management of noncommercial animal keeping poses a risk to health, safety, or welfare.

§ 9382 OUTDOOR SALES AND DISPLAY PROJECTS

Outdoor sales establishments are allowed in all Commercial (C-N, C-1, C-2), and Manufacturing Zoning Districts provided that they occur for no more than thirty (30) days within a twelve (12) month period, in accordance with the below standards. Outdoor sales establishments that exceed thirty (30) days within a twelve (12) month period, that are located in Residential (R-1, R-2, or R-3) Zoning Districts or that do not meet the following performance standards may be permitted through an Administrative Use Permit, as regulated by Section 9269 of this Chapter.

A. Parking: Parking shall be designated for a minimum of three (3) automobiles, located off the public right-of-way with no automobile maneuvering permitted in the public right-of-way.

B. Signage: A maximum of twenty-five percent (25%) of the largest side of the vehicle or structure used in the sales operation. In addition, one sandwich board or A-frame sign pursuant to the standards set forth in Subsection 3227.A.5 of this Code.

C. Utilities: The need for sanitary sewer, water, and electrical services shall be determined through the Administrative Use Permit process, and all connections shall comply with this Code.

D. Business License: Business license must be prominently displayed at all times, and the operator shall have proof of Board of Equalization sales permit.

§ 9383 COMMUNITY GARDENS

Community gardens may be allowed in any zoning district and shall comply with the following standards and requirements:

A. Days and Hours of Operation: Seven (7) days a week from seven o'clock (7:00) A.M. until dusk.

B. Fencing: Fencing is discouraged. When fencing is required to prevent vandalism or theft, trespassing, and/or encroachment by animals, fencing shall comply with the following:

1. Open Fencing: Open fencing (such as chain link, wrought iron, deer) up to seven feet (7') in height, measured from the grade adjacent to the fence to the top of the fence, is allowed at the property line or set back from the property line. This type of fencing allows the garden to be protected and maximizes the size of the garden while creating an open, pedestrian-oriented use consistent with the purposes of this code.

2. Solid Fencing: Solid fencing (such as wood, masonry) is prohibited since this closes off the site to the public realm, presents a solid unbroken surface which is not pedestrian-oriented, and reduces the size of the garden.

C. Herbicides and Pesticides: All pest and weed control shall be accomplished through organic means using the least toxic methods available. If unsure how to combat pests, weeds, and diseases organically, contact the garden team leader or other qualified professionals or organizations for guidance and resources.

D. Motorized Equipment: Use of motorized equipment (such as weed eaters, leaf blowers, rototillers) shall be limited to weekdays from eight o'clock (8:00) A.M. to seven o'clock (7:00) P.M. and weekends and holidays recognized by the City of Ukiah from ten o'clock (10:00) A.M. to five o'clock (5:00) P.M.

E. Noise: Compliance with the City of Ukiah noise regulations and restrictions set forth in Division 7, Chapter 1, Article 6 of this Code is required, except as indicated in Subsection D of this Section, Motorized Equipment, which may be more restrictive.

F. Parking: A minimum of one parking space along the street frontage of the community garden shall be provided. Vehicle use by members of the community garden should be limited to taking supplies to and from the garden, rainy or poor weather, or assisting gardeners with disabilities. Users of the garden shall be encouraged to walk or bike to the site in order to reduce the need for parking and parking impacts on neighboring uses.

G. Signs: Signs are limited to identification, informational, and directional signs in conformance with the sign regulations set forth in Division 3, Chapter 7 of this Code.

H. Structures – Accessory: The following accessory structures are allowed: tool sheds, greenhouses, cold-frames, hoop houses, compost bins, rain barrel systems, picnic tables, benches, bike racks, garden art, and fences subject to the development standards of the zoning district in which the community garden is located and the requirements of this Section. Commercially maintained portable bathrooms are allowed as accessory structures; provided, that they comply with accessibility standards and comply with the development standards of the zoning district in which the community garden is located.

I. Water Use: Every effort shall be made to reduce water usage. Drip irrigation is required where feasible. Mulch and compost shall be used in order to reduce the amount of water needed for garden plots.

J. Prohibitions: Smoking, drinking alcoholic beverages, using illegal drugs, and gambling are prohibited. Weapons, pets and other animals (except service animals) are also prohibited.

Community gardens that do not meet the above performance standards may be permitted through an Administrative Use Permit, as regulated by Section 9269 of this Chapter.

§ 9384 LIVE ENTERTAINMENT

A. Live entertainment uses may occur in the C-1, C-2, and P-F zoning districts provided they comply with the following standards and requirements:

1. Live entertainment shall commence no earlier than ten o'clock (10:00) A.M. and shall end at eleven o'clock (11:00) P.M. and is limited to two (2) times a week.

2. Live entertainment shall not violate the noise regulations and restrictions set forth in Division 7, Chapter 1, Article 6 of this Code.

3. The number of people within a building where live entertainment is performing shall not exceed the occupancy standards contained in the California Building Code or Ukiah City Code.

4. Businesses desiring to have live entertainment shall provide adequate security during and after live entertainment events.

5. Parking shall generally comply with the Ukiah City Code, although on-street parking within commercial zoning districts may be included in the number of parking spaces provided for the live entertainment.

6. Any building proposed for live entertainment shall comply with all Fire Code requirements and shall be reviewed and approved by the Ukiah Fire Marshal.

B. Management Plan Submittal: As a part of the application for the conducting of live entertainment, the applicant shall submit a management plan addressing the items listed below, which will be distributed by the Planning Division to the Ukiah Police Department and Ukiah Valley Fire Authority for review and comments. The management plan shall, at a minimum, include the following:

1. Potential for loitering and how the business will preclude loitering.

2. Adequacy of lighting for security and safety purposes.

3. Adequacy of parking.

4. Compatibility and suitability with the existing and allowed uses in the area and/or character of the area, including, but not limited to, proximity to sensitive land uses such as residences, schools, parks, daycare facilities, and churches.

5. Details regarding how security will be provided during and after live entertainment events.

6. Likelihood the use would facilitate the vitality, economic viability, and/or provide recreational or entertainment opportunities in an existing commercial area without presenting a significant impact on health and safety.

7. Hours of operation for the business and hours of proposed live entertainment.

8. Other information deemed necessary on a case-by-case basis.

C. Relief from any of the standards or requirements may be sought through the pursuit of an Administrative Use Permit, as regulated within Section 9269 of this Chapter. The determination shall be based, in part, on how much relief is being sought and the location of the proposed live entertainment and its potential to impact the area.

§ 9385 OUTDOOR DINING

On-site outdoor dining may be allowed in the C-N, C-1 and C-2 zoning districts, provided it is incidental to and part of the operation of a restaurant located on the same parcel, and it complies with the standards and requirements listed below:

A. Purpose: The provisions of this Section are intended to allow outdoor dining in association with a restaurant located on the same parcel as the outdoor dining, where the outdoor dining is clearly incidental to the adjacent restaurant use and will not negatively impact the operations and function of the existing restaurant, including parking facilities, pedestrian access and circulation, and disabled access facilities.

B. Location of Outside Dining: Outdoor dining shall be located on the same site as the restaurant which the outdoor dining will serve. Outdoor dining facilities, such as tables, chairs, umbrellas, etc., shall not be located in pedestrian walkways, required parking spaces, or disabled access facilities (such as parking spaces, walkways, entries, etc.). Outdoor dining areas may be located in landscaped areas if located in such a manner as to not damage the landscaping.

C. Hours of Operation: Days and hours of operation for the outdoor dining shall not extend beyond the hours of operation for the restaurant which it serves. Tables, chairs, and all other furniture used in the operation of outdoor dining shall be removed from any pedestrian walkways and stored indoors at night and whenever the cafe is not in operation.

D. Live Entertainment: Outdoor dining shall not be used for live entertainment unless in compliance with Section 9384 of this Code.

E. Tables, Chairs, Furniture, Signage:

1. In order to provide adequate and safe ingress/egress, a minimum unobstructed pedestrian walkway width of forty-eight inches (48") or the width of the doors, whichever is greater, shall be maintained. The required width of the unobstructed pedestrian walkway shall extend from the front of the door(s) to the public sidewalk. A reduced width may be approved by the Building Official in compliance with the building code.

2. A minimum of sixty inches (60") of unobstructed space shall be maintained between exits and any furniture or fixtures related to outdoor dining, or as required by the building code, whichever is greater.

3. All outdoor dining furniture, including tables, chairs, umbrellas, and planters, shall be movable.

4. Umbrellas shall be secured with a minimum base of not less than sixty (60) pounds and shall leave a vertical clearance of seven feet (7') from the sidewalk surface.

5. Outdoor heaters are allowed subject to fire and building code compliance. Non-live music and/or speakers may be used provided the music does not violate the noise regulations and restrictions set forth in Division 7, Chapter 1, Article 6 of this Code.

6. No signage shall be allowed in the outdoor dining area except for the name of the establishment on an awning or umbrella fringe and in compliance with this Section and the signage regulations set forth in Division 3, Chapter 7 of this Code.

F. Maintenance: The property and/or business owner are responsible for maintaining all outdoor dining furnishings and the outdoor dining area in good condition, including, but not limited to, the following:

1. All outdoor dining furnishings and all exterior surfaces within the outdoor dining area shall be easily cleanable and kept clean and free of debris.

2. The outdoor dining area and adjacent areas kept in a clean and safe condition.

G. Food and Beverages: Outdoor dining areas may only serve food and nonalcoholic beverages prepared or stocked for sale at the adjoining indoor restaurant; provided, however, that the service of beer or wine or both, solely for on-premises consumption by customers within the outdoor dining area, may be authorized by the Community Development Director and Police Department if each of the following requirements are met:

1. The outdoor dining operation is duly licensed, or prior to the service of any beer or wine, will be duly licensed by State authorities to sell beer or wine for consumption within the outdoor dining area.

2. The authorized outdoor dining area is identified in a manner which will clearly separate and delineate it from the areas of the sidewalk that will remain open to pedestrian traffic.

3. One or more signs, as approved as part of the encroachment permit, are posted during all times the sidewalk cafe is in operation, which shall give notice to the cafe's customers that the drinking of beer or wine or the carrying of any open container which contains beer or wine is prohibited and unlawful outside the delineated outdoor dining area.

Outdoor dining areas authorized by the Community Development Department and Police Department and in compliance with the requirements of this section are exempt from section 6000 of this code.

H. Service Requirements:

1. Service areas (such as busing and service stations) may be located within the outdoor dining area. Service areas shall comply with subsection B of this section (Location of Outside Dining). Outdoor food preparation in the outdoor dining area is prohibited.

2. Restrooms for the outdoor dining area shall be provided in the adjoining indoor restaurant. Seating for the outdoor dining may be counted in determining the restroom requirements for the indoor restaurant at the discretion of the Building Official.

I. Revocation: The outdoor dining may be revoked by the City upon finding that one or more of the

requirements of this section have been violated or that the outdoor dining is being operated in a manner that constitutes a nuisance.

§ 9386 SIDEWALK CAFE

A. A sidewalk cafe may be allowed in the C-N, C-1, and C-2 zoning districts, provided it is incidental to and part of the operation of a restaurant and it complies with the standards and requirements listed below.

B. Purpose: The provisions of this section are intended to allow a sidewalk cafe to operate in association with an allowed restaurant use, where the sidewalk cafe is clearly incidental to the restaurant use and will not negatively impact the right-of-way.

C. Permit Requirements: A sidewalk cafe shall require the approval of an encroachment permit from the Department of Public Works and Planning and Community Development Department.

D. Limitations and Requirements: A sidewalk cafe may be allowed only where allowed by section 9385 of this code and only when the sidewalk cafe is incidental to and part of the operation of an adjacent restaurant and when in compliance with the following requirements of this section:

1. Where Permissible: A sidewalk cafe may be located on a public sidewalk immediately adjacent to and abutting the indoor restaurant which operates the cafe; provided, that the area in which the sidewalk cafe extends is no farther along the sidewalk frontage than the operating indoor restaurant.

2. Location of Sidewalk Cafes: Each cafe shall be confined to a defined location on the sidewalk immediately adjacent to the restaurant which operates the cafe.

3. Hours of Operation: Sidewalk cafes may operate on days whenever fair weather would enhance outdoor dining. The hours of operation shall not exceed eight o'clock (8:00) A.M. to nine o'clock (9:00) P.M. Tables, chairs, and all other furniture used in the operation of a sidewalk cafe shall be removed from the sidewalk and stored indoors at night and whenever the cafe is not in operation. Additional hours may be authorized contingent up on the approval of an Administrative Use Permit.

4. Sidewalk Clearances: A sidewalk cafe may be allowed only where the sidewalk is wide enough to adequately accommodate the usual pedestrian traffic in the area, to comply with California State accessibility standards and federal ADA requirements, and the operation of the proposed cafe.

5. Live Entertainment: A sidewalk cafe shall not be used for live entertainment. Live entertainment at sidewalk cafes may be authorized in compliance with Section 9384 of this Code.

E. Tables, Chairs, Furniture, Signage:

1. All tables and chairs comprising a sidewalk cafe shall be situated in a safe fashion and away from any sidewalk or street barrier including a bollard, and shall not be within eight feet (8') of any designated bus stop.

2. The dining area shall not impede the use of public furnishings such as lighting, benches, etc.

3. In order to provide adequate and safe ingress/egress, a minimum unobstructed public sidewalk width of forty-eight inches (48") shall be maintained for the entire length of the sidewalk cafe. The required width shall extend from the front of the door(s) to the end of the sidewalk cafe.

4. A minimum of sixty inches (60") of unobstructed space shall be maintained between exits and any furniture or fixtures related to the sidewalk cafe, or as required by the building code, whichever is greater.

5. All sidewalk cafe furniture, including tables, chairs, umbrellas, and planters, shall be movable.

6. Umbrellas shall be secured with a minimum base of not less than sixty (60) pounds and shall leave a vertical clearance of seven feet (7') from the sidewalk surface.

7. Outdoor heaters are allowed subject to fire and building code compliance. Music and/or speakers may be authorized contingent up on the approval of an Administrative Use Permit.

8. No signage shall be allowed at the sidewalk cafe except for the name of the establishment on an awning or umbrella fringe and in compliance with this section and the signage regulations set forth in Division 3, Chapter 7 of this Code.

9. All furnishings and other items associated with the sidewalk cafe shall be removed from the sidewalk during nonoperation hours of the cafe. Storage of these items outside may be authorized contingent up on the approval of an Administrative Use Permit.

10. Any proposed seating in the vicinity of street trees shall comply with the City's Management Guidelines adopted December 1, 2010.

F. Maintenance: The permittee is responsible for maintaining all outdoor dining furnishings and the sidewalk cafe area in good condition, including, but not limited to, the following:

1. All outdoor dining furnishings and all exterior surfaces within the sidewalk cafe area shall be easily cleanable and kept clean and free of debris.

2. The sidewalk cafe area and adjacent areas shall be kept in a clean and safe condition.

G. Food and Beverages: A sidewalk cafe may serve only food and nonalcoholic beverages prepared or stocked for sale at the adjoining indoor restaurant; provided, however, that the service of beer or wine or both solely for on-premises consumption by customers within the areas of the sidewalk cafe may be authorized by the Community Development Department and Police Department as part of the required encroachment permit if each of the following requirements are met:

1. The sidewalk cafe operation is duly licensed, or prior to the service of any beer or wine will be duly licensed by State authorities to sell beer or wine for consumption within the area of the sidewalk cafe.

2. The area in which the sidewalk cafe is authorized is identified in a manner, as part of the encroachment permit, which will clearly separate and delineate it from the areas of the sidewalk that will remain open to pedestrian traffic.

3. One or more signs, as approved as part of the encroachment permit, are posted during all times the sidewalk cafe is in operation, which shall give notice to the cafe's customers that the drinking of beer or wine or the carrying of any open container which contains beer or wine is prohibited and unlawful outside the delineated area of the sidewalk cafe. Sidewalk cafes authorized by the Community Development Department and Police Department as part of the required encroachment permit and in compliance with the requirements of this section are exempt from section 6000 of this code.

H. Service Requirements:

1. The outdoor preparation of food and busing and service stations are prohibited at the sidewalk cafe. Outdoor service station may be authorized contingent up on the approval of an Administrative Use Permit.

2. Restrooms for the sidewalk cafe shall be provided in the adjoining indoor restaurant. Seating for the sidewalk cafe may be counted in determining the restroom requirements for the indoor restaurant at the discretion of the Building Official.

3. Trash and refuse receptacles for the sidewalk cafe shall not be permitted within the area designated for the sidewalk cafe or on adjacent sidewalk areas and the permittee shall remove trash and litter as they accumulate. Trash and/or refuse containers may be authorized within the outdoor dining area or adjacent sidewalk areas contingent on the approval of an Administrative Use Permit.

I. Power to Prohibit Operation of the Sidewalk Cafe: Any encroachment permit issued for a sidewalk cafe shall provide that the City shall have the right and power, acting through the City Manager or designee, to prohibit the operation of a sidewalk cafe at any time because of anticipated or actual problems or conflicts in the use of the sidewalk area. Such problems may arise from, but are not limited to, scheduled festivals and similar events, or parades or marches, or repairs to the street or sidewalk, or from demonstrations or emergencies occurring in the area. To the extent possible, the permittee shall be given prior written notice of any time period during which the operation of the sidewalk cafe will be prohibited by the City, but any failure to give prior written notice shall not affect the right and power of the City to prohibit the cafe's operation at any particular time.

J. Conditions: In connection with granting the encroachment permit for a sidewalk cafe, conditions may be imposed in granting approval as deemed necessary for the proposed operation to meet the operating requirements of this section.

K. Modifications: In the event the City determines during the operation of an approved sidewalk cafe that additional or revised conditions are necessary in order for the sidewalk cafe to comply with the requirements of this section, the City shall have the ability to add additional conditions to the approved encroachment permit.

L. Revocation: The encroachment permit to operate a sidewalk cafe may be revoked by the City upon

finding that one or more conditions of the permit or this section have been violated or that the sidewalk cafe is being operated in a manner that constitutes a nuisance, or that the operation of the sidewalk cafe unduly impedes the movement of pedestrians past the sidewalk cafe. Revocations may be appealed per the process outlined in Section 5613 of this Code.

§ 9387 SPECIALTY FOOD AND BEVERAGE SALES WITH TASTINGS

Specialty food and beverage sales with tastings may be allowed in the C-N, C-1, C-2, and P-F zoning districts provided they comply with the following standards and requirements:

A. Days and Hours of Operation: Days and hours of operation shall be limited to daily from ten o'clock (10:00) A.M. to ten o'clock (10:00) P.M. Additional hours may be authorized with approval of an administrative use permit.

B. Live Entertainment: Live entertainment is allowed in compliance with Section 9384 of this code and may perform until eight o'clock (8:00) P.M. Other arrangements for live entertainment may be authorized with approval of an administrative use permit.

C. Outdoor Seating: Outdoor seating is allowed in compliance with the applicable requirements for Outdoor Dining included in Section 9385 of this Code or Sidewalk Cafes in Section 9386 of this Code.

D. Administrative Use Permit: An application for an Administrative Use Permit to allow additional operating hours and/or live entertainment in a manner that exceeds the operating characteristics required in this Section may be authorized as set forth in Section 9269 of this Chapter, and shall incorporate findings that address the following considerations:

1. Potential for loitering and how the business will preclude loitering.

2. Adequacy of lighting for security and safety purposes.

3. Adequacy of parking.

4. Compatibility and suitability with the existing and allowed uses in the area and/or character of the area, including but not limited to proximity to sensitive land uses such as residences, schools, parks, daycare facilities, and churches.

5. Likelihood the use would facilitate the vitality, economic viability, and/or provide recreational or entertainment opportunities in an existing commercial area without presenting a significant impact on health and safety.

6. Details regarding how security will be provided during and after live entertainment events.

7. Other information deemed necessary on a case-by-case basis.

SECTION FIFTEEN.

The following sections of the Ukiah City Code shall be repealed:

1. Article 15.6 in Division 9, Chapter 2.

2. Section 9182

2. Section 9184

SECTION SIXTEEN.

1. Publication: Within fifteen (15) days after its adoption, this Ordinance shall be published once in a newspaper of general circulation in the City of Ukiah. In lieu of publishing the full text of the Ordinance, the City may publish a summary of the Ordinance once 5 days prior to its adoption and again within fifteen (15) days after its adoption.

2. Effective Date: The ordinance shall become effective thirty (30) days after its adoption.

3. Severability: If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Ordinance, or its application to any person or circumstance, is for any reason held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Ordinance, or its application to any other person or circumstance. The City Council of the City of Ukiah hereby declares that it would have adopted each section, subsection, subdivision, paragraph, sentence, clause or phrase hereof, irrespective of the fact that any one or more other sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases hereof be declared invalid or unenforceable.

2. Response to HCD Findings
3. PC Resolution #2025-02
4. Ordinance

Summary: Council will consider adoption of an ordinance amending the City's accessory dwelling unit and junior accessory dwelling unit regulations to ensure compliance with state law and the findings of the California Department of Housing & Community Development.

Background:

Over the past decade, State housing legislation related to Accessory Dwelling Units (ADUs) has steadily reduced local discretion with the goal of encouraging new housing starts. To remain compliant with changes in State law, the City of Ukiah has amended its local regulations numerous times over the past decade.

The first set of amendments began in 2017 to implement Assembly Bill (AB) 2299, Senate Bill (SB) 1069, and AB 2406. For example, AB 2299 required local governments to ministerially approve (non-discretionary) ADU applications if they met standards around parking, size, and setbacks.

Additional amendments followed in 2020 to address AB 68, AB 881, SB 13, AB 670, and AB 587. AB 670 made covenants or HOA rules that prohibit ADUs or JADUs unenforceable, while SB 13 waived impact fees for ADUs under 750 sq ft and required any fees for larger units to be proportional to size.

In 2024, the City adopted Ordinance No. 1244, which relocated ADU and Junior ADU (JADU) regulations into standalone sections of the Ukiah City Code to provide greater clarity and usability. That same year, the State adopted several new laws to accelerate ADU and JADU production, including SB 1211. This legislation increases the number of detached ADUs allowed on multifamily properties and removes certain local parking replacement requirements.

On April 24, 2025, HCD issued formal findings (Attachment 1) related to Ordinance No. 1244, which had been adopted by the City on September 4, 2024, and submitted for State review on September 5, 2024. HCD determined the City's ordinance did not fully comply with State ADU law under Government Code section 66326(a). The City submitted a written response on May 23, 2025, included as Attachment 2. On June 3, 2025, HCD confirmed that the response brought the ordinance into substantial compliance. Final adoption and submittal of the amended ordinance are necessary to complete this compliance process.

On July 9, 2025, the Ukiah Planning Commission reviewed the proposed amendments to the Ukiah City Code and unanimously recommended approval to the City Council by adopting PC Resolution No. 2025-04 (Attachment 3).

At its Regular Meeting on August 20, 2025, the Ukiah City Council unanimously moved to introduce the ordinance for adoption (5-0).

Discussion: The proposed ordinance (Attachment 4) is intended to bring the City's Accessory Dwelling Unit (ADU) and Junior Accessory Dwelling Unit (JADU) regulations into compliance with current State law and the findings issued by the California Department of Housing and Community Development (HCD) in April 2025. These findings responded to the City's previously adopted Ordinance No. 1244 from September 2024. The proposed ordinance is intended to align with Government Code requirements and preserve the City's 6th Cycle Housing Element certification.

Several of the proposed revisions are minor or clarifying in nature. For example, HCD requires clearer language regarding application approval process and timelines. The proposed update replaces the language "acted upon" with "approve or deny" to meet the requirements of Government Code Section 65852.2. The ordinance also proposes that uncovered parking spaces, in addition to garages and carports, would not need to be replaced if converted to or demolished for an ADU. This resolves a technical issue identified by HCD, but in practice was already addressed by City Staff. Another proposed revision explicitly states that fire sprinklers are not required for ADUs if they are not required in the primary residence, and that construction of an ADU would not trigger new sprinkler requirements in the main dwelling. While this reflects existing State law and the current practices of the City, clarification is necessary for compliance as conveyed by HCD.

More substantive changes under the proposed ordinance include:

- Allowing up to eight detached ADUs on lots with existing multifamily dwellings, consistent with SB 1211.
- Removing unit size caps for ADUs on multifamily properties and exempting certain conversions from size limitations.
- Codifying AB 2533, which allows owners of unpermitted ADUs constructed before January 1, 2020, to obtain permits to permanently "legalize" their ADU, while only meeting the requirements of Health and Safety Code (H&SC) 17920.3. This code section requires buildings to meet sanitary, structural, electrical, plumbing, mechanical, weather protection, approved material, maintenance, exit, and fire health and safety requirements. This incorporates the majority of the requirements in the California Building Standards Code.

Regarding height, the ordinance includes revisions to clarify and refine allowable limits in accordance with HCD guidance. Detached ADUs would continue to be limited to 20 feet in height, but could be approved up to 25 feet through a minor site development permit if they meet conditions related to consistency with the primary structure or local development standards. Attached ADUs are proposed to be permitted up to 25 feet or the maximum height allowed by the applicable zoning district, whichever is greater. This would not constitute a new entitlement, as the height limits for all applicable zoning districts already exceed 25 feet. The ordinance also proposes confirming that ADUs constructed above garages, whether attached or detached, may reach 25 feet or the zoning district's maximum height. Previous language clarified that ADUs may exceed the height of the primary residence.

For JADUs, the updates include proposed corrections to permit processing timelines, revised deed restriction language, and confirmation that separate utility impact fees would not apply when a JADU is constructed independently of a new single-family dwelling.

Pursuant to correspondence received on June 25, 2025 and guidance from the public and the California Department of Housing and Community Development (HCD), the proposed ordinance amending the Ukiah ADU regulations was revised in late-June to align with the requirements of Government Code Section 66323. This section governs specific categories of Accessory Dwelling Units (ADUs) that are exempt from certain local standards. Local agencies cannot apply development or design standards to 66323 Units unless those standards are specifically listed in Government Code section 66323. This includes both local rules and those from State ADU Law. That means local governments can't impose requirements like parking, building height, setbacks, lot size, open space, floor area ratio, or similar zoning rules, unless they're explicitly allowed under section 66323.

Environmental Review
The proposed ordinance is exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15061(b)(3) of the CEQA Guidelines, also known as the “common sense” exemption. This exemption applies when it can be seen with certainty that the activity will not have a significant effect on the environment. The ordinance does not authorize new uses or physical development and does not expand the range of allowable land uses beyond what is already permitted under existing state law. Instead, it modifies and clarifies local permitting procedures to ensure consistency with state requirements. These changes include the expansion of ministerial approval processes, as well as technical corrections to align with the municipal code.

Staff recommends Council adopt the Ordinance amending the City's ADU and JADU regulations to ensure compliance with state law and the findings of the California Department of Housing & Community Development. If adopted, this ordinance will go into effect in 30 days.

Recommended Action: Adopt an ordinance amending the City’s Accessory Dwelling Unit and Junior Accessory Dwelling Unit Regulations to Ensure Compliance with State Law and the Findings of the California Department of Housing & Community Development.

Community Development Department
City of Ukiah
300 Seminary Avenue
Ukiah, CA 95842

Dear Craig Schlatter:

RE: Review of City of Ukiah's Accessory Dwelling Unit (ADU) Ordinance under State ADU Law (Gov. Code, §§ 66310 - 66342)

Thank you for submitting the City of Ukiah's (City) ADU Ordinance No. 1244 (Ordinance), adopted September 4, 2024, to the California Department of Housing and Community Development (HCD). The Ordinance was received on September 5, 2024. HCD has reviewed the Ordinance and submits these written findings pursuant to Government Code section 66326, subdivision (a). HCD finds that the Ordinance fails to comply with State ADU Laws in the manner noted below. Pursuant to Government Code section 66326, subdivision (b)(1), the City has up to 30 days to respond to these findings. Accordingly, the City must provide a written response to these findings no later than May 24, 2025.

The Ordinance addresses many statutory requirements; however, HCD finds that the Ordinance does not comply with State ADU Law as follows:

1. *Senate Bill (SB) 1211 (Chapter 296, § 3, Statutes of 2024)* – As of January 1, 2025, the Legislature changed Government Code section 66323. Subdivision (a)(4)(A)(ii) and (iii), now allows for the following:
    - (ii) On a lot with an existing multifamily dwelling, not more than eight detached accessory dwelling units. However, the number of accessory dwelling units allowable pursuant to this clause shall not exceed the number of existing units on the lot.
    - (iii) On a lot with a proposed multifamily dwelling, not more than two detached accessory dwelling units.

    The Ordinance does not currently list any of this information. The City must add new language reflecting these allowable uses.
2. *Assembly Bill (AB) 2533 (Chapter 834, Statutes of 2024)* - As of January 1, 2025, there are changes to Government Code section 66332. Subdivisions (a) and (b) were changed and subdivisions (d) – (f) were added. Changes include permitting

previously unpermitted ADUs, adding the same protections for JADUs, and setting additional requirements for local agencies. The City should review these new requirements and adjust the Ordinance to comply with State ADU Law.

3. *Statutory Numbering* - The Ordinance contains several references to code sections that were deleted by SB 477, effective March 25, 2024. These include Government Code sections 65852.2, 65852.22 and 65852.26. The contents of these sections were relocated to Government Code, Title 7, Division 1, Chapter 13 (sections 66310-66342, see Enclosure). The City must amend the Ordinance to refer to the correct Government Code sections.

4. Section 9056.1 (E) – *Conversion ADUs* – The Ordinance states, "Accessory dwelling units may be attached to existing single-family or multiple-family residences or detached as separate structures." However, Government Code section 66314, subdivision (d)(3) states, "The accessory dwelling unit is either attached to, **or located within**, the proposed or existing primary dwelling, including attached garages, storage areas or similar uses, or **an accessory structure** or detached from the proposed or existing primary dwelling and located on the same lot as the proposed or existing primary dwelling, including detached garages" (emphasis added). The Ordinance does not mention the option of a conversion ADU, and that an ADU can be attached to an accessory structure. Therefore, the City must amend the Ordinance to clarify that an ADU may be formed by conversion or addition to an existing accessory structure.

5. Section 9056.2 (A) – *Review Process* - The Ordinance states, "Applications for a building permit for an ADU shall be deemed approved if the local agency has not **acted on** the completed application within 60 days" (emphasis added). However, State ADU Law requires: "The permitting agency shall either approve or deny the application to create or serve an accessory dwelling unit or a junior accessory dwelling unit within 60 days from the date the permitting agency receives a completed application if there is an existing single-family or multifamily dwelling on the lot."[1] The Ordinance uses the words "acted on", but State ADU Law requires the City to "approve or deny" the application. Therefore, City must amend the Ordinance to replace "acted on" with "approve or deny".

6. Section 9056.2 (B)(a) – *Conversions of Accessory Structures* – The Ordinance states, "An ADU may be attached to an existing primary residence converted from a portion of the existing living area of the primary residence, detached and on the same legal lot as a primary residence, converted from the entirety of or a portion of an existing accessory structure, or attached to an existing or proposed accessory structure". However, State ADU Law requires, "The accessory dwelling unit is either attached to, or located within, the proposed or existing primary dwelling, including attached garages, storage areas or similar uses, or an accessory structure or detached from the proposed or existing primary dwelling and located on the same lot as the proposed or existing primary

[1] Gov. Code, § 66317, subd. (a).

dwelling, including detached garages."[2]. The Ordinance does not make clear that an ADU may be converted from an attached garage. Therefore, the City must amend the Ordinance to allow attached garages to be converted to ADUs.

7. Section 9056.2 (B)(b) – *Unit Combinations* – The Ordinance states, "The number of ADUs allowed on a single lot shall be: (i). On a lot that contains an existing or proposed single-family dwelling: One (1) ADU attached or detached, (ii). On a lot that contains an existing multifamily dwelling: Two (2) ADUs, detached from the multifamily structure, and up to 25 percent of the number of units in the existing multifamily dwelling converted from existing non-livable space in a multifamily structure. (iii) On a lot that contains a proposed multifamily dwelling: Two (2) ADUs, detached from the multifamily structure."

   However, pursuant to Government Code section 66323, subdivision (a), "Notwithstanding Sections 66314 to 66322, inclusive, a local agency shall ministerially approve an application…to create any of the following: (A) One accessory dwelling unit and one junior accessory dwelling unit per lot with a proposed or existing single-family dwelling…(i) The accessory dwelling unit or junior accessory dwelling unit is within the proposed space of a single-family dwelling or existing space of a single-family dwelling or accessory structure." Additionally, subparagraph (B) permits "[o]ne detached, new construction, accessory dwelling unit that does not exceed four-foot side and rear yard setbacks." The use of the term "any" followed by a list of ADU types permitted under Government Code section 66323, indicate that any of these ADU types can be combined on lots with existing or proposed single-family dwellings. This permits a homeowner, who meets the specified requirements, to create one converted ADU; one detached, new construction ADU; and one JADU. ADU types can be combined on lots with existing or proposed single-family dwellings. Therefore, the City must amend the Ordinance to provide for all ADU combinations described in Government Code section 66323.

8. Section 9056.2 (C) – *Maximum Floor Area of Detached ADU* – The Ordinance states, "The maximum size of the detached ADU shall be one thousand and two hundred (1,200) square feet. The conversion of an existing accessory structure or a portion of the existing primary residence to an ADU is not subject to size requirements." However, Government Code, section 66323, subdivision (a)(4), requires the local agency to approve ADUs that are detached from the multifamily dwelling structure. Detached ADUs on multifamily lots do not have a floor area restriction under Government Code, section 66323, subdivision (a)(4). The City must remove this restriction from the Ordinance.

[2] Gov. Code, § 66314, subd. (d)(3).

9. Section 9056.2 (D) – *Off-site Improvements* – The Ordinance states, “Curb, gutter, sidewalk, paving and street trees, however, shall be required when that infrastructure does not exist, and the proposed building permit value is equal to or greater than one-third (1/3) of the value of the existing structure per UCC §9181”. However, Government Code, section 66315, states: “Section 66314 establishes the maximum standards that a local agency shall use to evaluate a proposed accessory dwelling unit on a lot that includes a proposed or existing single-family dwelling. No additional standards, other than those provided in Section 66314, shall be used, or imposed, including an owner-occupant requirement, except that a local agency may require that the property may be used for rentals of terms 30 days or longer.” Off-site improvements are an additional standard not authorized by State ADU Law. The City must remove these requirements from the Ordinance.

10. Section 9056.2 (G)(c) – *Fire Sprinklers* – The Ordinance states, “Fire sprinklers shall not be required in the ADU if the primary residence is not required to have fire sprinklers.” However, Government Code, section 66314, subdivision (d)(12) and section 66323, subdivision (c) state, “The construction of an accessory dwelling unit shall not trigger a requirement for fire sprinklers to be installed…” in the existing primary dwelling. Therefore, the City must amend the Ordinance to reflect that and ADU may not trigger a requirement that fire sprinklers be installed in the primary dwelling.

11. Section 9056.4 (D) – *Uncovered Parking* – The Ordinance states, “If a garage, carport, or covered parking structure is demolished in conjunction with the construction of an ADU or converted to an ADU, the City shall not require that those off-street parking spaces be replaced.” However, Government Code, section 66314, subdivision (d)(11), states that “A local agency may not require off-street parking spaces to be replaced when a garage, carport, covered parking structure, or *uncovered parking* space is demolished in conjunction with the construction of an ADU or converted to an ADU.” Therefore, the City must amend the Ordinance to include non-replacement of *uncovered parking* when uncovered *parking* is used to construct or is converted to an ADU.

12. Section 9056.6 (A) and (D) – *Height limits* –Section 9056.6 (D), states, “ADUs above a garage (Attached or Detached) can be constructed to the maximum height for the zoning district in which it is located.” However, Government Code, section 66321, subdivision (b)(4) states that height limitations must be prescribed no lower than 16, 18, 20 or 25 feet under certain specified conditions. The City must amend the Ordinance to reflect the various height limits provided in State ADU Law.

13. Section 9056.7 – *Development Standards* – The Ordinance states, "Whenever an ADU is proposed that would involve uses or features that are not explicitly addressed by design and development standards set forth in this Code or State law, the Community Development Director shall determine whether the proposal is appropriate and whether it should be reviewed on a ministerial or discretionary basis." However, Government Code section 66316, states, "An existing accessory dwelling unit ordinance governing the creation of an accessory dwelling unit by a local agency or an accessory dwelling ordinance adopted by a local agency shall provide an approval process that includes only ministerial provisions for the approval of accessory dwelling units and shall not include any discretionary processes, provisions, or requirements for those units, except as otherwise provided in this article." The City may apply additional processes with a compliant Ordinance to further the creation of ADUs that do not otherwise comply with the minimum standards necessary for ministerial review. These processes are intended to provide additional opportunities to create ADUs that would not otherwise be permitted, and a discretionary process may not be used to review ADUs that are fully compliant with State ADU Law. The City must amend the Ordinance to provide an approval process that includes only ministerial provisions for the approval of ADUs.

14. Section 9056.7 – *Development Standards* – Paragraphs (A), (B), (C), and (E), of section 9056.7 impose additional subjective development standards on ADUs which are not authorized by State ADU Law. State ADU Law requires that local agencies review ADUs ministerially without discretionary review and impose only objective standards on ADUs under the provisions of Government Code, section 66414, subdivision (b)(1). Objective standards are defined as "Standards that involve no personal or subjective judgment by a public official and are uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant or proponent and the public official prior to submittal."[3] The City must amend the Ordinance to remove subjective development standards.

15. Section 9057.1 – *JADU* –The Ordinance states, "The department shall **act on** an application to create a JADU within sixty (60) days from the date it receives a completed application if there is an existing single-family dwelling in the lot" (emphasis added). However, Government Code section 66335, subdivision (a)(2), states "[t]he permitting agency shall either approve or deny the application to create or serve a junior accessory dwelling unit within 60 days from the date the permitting agency receives a completed application…" The term "act upon" is old language and was amended to read "approve or deny." Acting on an application does not reflect State ADU Law. The City is required to issue an approval, or a denial with a full set of comments on how to remedy the application within 60 days of receiving a completed application. Therefore, the

[3] Gov. Code, § 66313, subd. (h).

City must amend this section to reflect an application must be approved or denied vs acted upon.

16. Section 9057.1 (A) – *Permit and Fees* – The Ordinance states, "Construction permits (including, but not limited to a building, well, septic, and/or sewer permit) shall be required to establish a JADU." However, JADUs shall not be considered by a local agency, special district, or water corporation to be a new residential use for purposes of calculating connection fees or capacity charges for utilities, unless constructed concurrently with a new single-family dwelling.[4] The City must amend the Ordinance to remove the additional utility fees for junior accessory dwelling units (JADUs) unless it is constructed concurrently with a new single-family dwelling.

17. Section 9057.1 (D)(4)(i) – *Deed Restriction Typo* – The Ordinance states that "The property owner shall record a deed restriction that: (i) A prohibition on the sale of the junior accessory unit separate from the sale of the single-family residence, including a statement that the deed restriction may be enforced against future purchasers; and." That change would break the grammar for (ii), (iii), and (iv). Instead, the City should amend the Ordinance to correct the typing error and write "Includes a prohibition" under (i) instead of "A prohibition."

18. Section 10.1 – *Severability* – The Ordinance states, "If any section, subsection, subdivision, paragraph, sentence, clause, or phrase of this Ordinance, or its application to any person or circumstance, is for any reason held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Ordinance, or its application to any other person or circumstance. The City Council of the City of Ukiah hereby declares that it would have adopted each section, subsection, subdivision, paragraph, sentence, clause, or phrase hereof irrespective of the fact that any one or more other sections, subsections, subdivisions, paragraphs, sentences clauses or phrases hereof be declared invalid or unenforceable." However, Government Code section, 66316 states, "If a local agency has an existing accessory dwelling unit ordinance that fails to meet the requirements of this article, that ordinance shall be null and void and that agency shall thereafter apply the standards established in this article for the approval of accessory dwelling units, unless and until the agency adopts an ordinance that complies with this article." The *Severability* clause implies that some parts of the Ordinance will be valid even if other parts are not valid. The City must remove the Severability clause and apply the standards under Government Code section 66316 when the existing accessory dwelling unit ordinance that fails to meet the requirements of this article.

[4] Gov. Code, § 66324, subd. (b).

The City has two options in response to this letter.[5] The City can either amend the Ordinance to comply with State ADU Law[6], or adopt the Ordinance without changes and include findings in its resolution adopting the Ordinance that explain the reasons the City believes that the Ordinance complies with State ADU Law despite HCD's findings.[7] If the City fails to take either course of action and bring the Ordinance into compliance with State ADU Law, HCD must notify the City and may notify the California Office of the Attorney General that the City is in violation of State ADU Law.[8]

HCD appreciates the City's efforts in the preparation and adoption of the Ordinance and welcomes the opportunity to assist the City in fully complying with State ADU Law. Please feel free to contact Reshma Sen at Reshma.Sen@hcd.ca.gov if you have any questions.

Sincerely,

Jamie Candelaria

Jamie Candelaria, Senior Housing Accountability Manager
Department of Housing and Community Development
Housing Policy Development Division
651 Bannon Street, 10th Floor
Sacramento, CA 95811

Subject: Response to HCD Findings Regarding ADU Ordinance No. 1244 under State ADU Law (Gov. Code, §§ 66310 - 66342)

Dear Ms. Candelaria,

Thank you for HCD's review of the City of Ukiah's Accessory Dwelling Unit (ADU) Ordinance No. 1244, as outlined in the letter dated April 24, 2025. The City of Ukiah appreciates the opportunity for HCD staff, particularly Reshma Sen, HCD Representative II, to collaborate with the City of Ukiah over the past few weeks.

As a designated Pro-Housing City, Ukiah is proud to be on track to meet its 6th Cycle Regional Housing Needs Allocation (RHNA) and continues to implement policies that expand affordable and market-rate housing opportunities and remain committed to aligning our local ordinances with State housing law.

The following is the City's formal response to the 18 findings raised in HCD's letter (enclosed). All identified changes will be incorporated into a revised ordinance, which will be noticed and scheduled for a public hearing before the Planning Commission on June 26, 2025, followed by introduction to, and possible adoption by, the City Council in July:

1. **Senate Bill 1211**: As required by SB 1211, language will be integrated to allow up to 8 detached ADUs on lots with existing multifamily dwellings (not to exceed the existing unit count), and up to 2 detached ADUs on lots with proposed multifamily dwellings.
2. **Assembly Bill 2533**: The ordinance will be revised to include provisions of AB 2533 allowing recognition and regulation of previously unpermitted ADUs and extending protections to JADUs.
3. **Statutory Numbering**: Outdated citations (e.g., §65852.2) were initially flagged for replacement; however, per subsequent correspondence from Reshma Sen the reference to statutory numbering was sent in error. Therefore, no change is required regarding code citations based on that item.
4. **Converted ADUs**: The City will revise §9056.1(E) to explicitly state that ADUs may be created by converting or adding to existing accessory structures (including garages), consistent with §66314(d)(3).
5. **ADU Application Review Language**: The phrase "acted on" will be replaced with "approve or deny" to comply with current State ADU Law.

300 Seminary Avenue • Ukiah • CA • 95482-5400
Phone: (707)467-5786 · Fax: (707)463-6204 · www.cityofukiah.com

6. **Attached Garage Conversions**: The ordinance will be amended to clarify that attached garages may be converted to ADUs. Notably, since 2017, attached garage conversions have comprised a significant share of the ADU permits issued in Ukiah.
7. **ADU Combinations**: The City will amend the ordinance to provide for all ADU combinations described in Government Code §66323.
8. **Size Limits for Multifamily ADUs**: Size limits will be removed for detached ADUs on lots with a multifamily dwelling structure, as requested by HCD staff.
9. **Off-Site Improvement Requirements**: All off-site improvement mandates (e.g., sidewalks, street trees) will be removed in accordance with §66315. Staff recognizes that these improvements are an additional standard not authorized by State ADU Law.
10. **Fire Sprinklers**: The ordinance will clarify that ADUs do not trigger fire sprinkler installation requirements in the primary dwelling, pursuant to §§66314(d)(12) and 66323(c). This codifies the City of Ukiah's existing practice that the construction of an accessory dwelling unit shall not trigger a requirement for fire sprinklers to be installed in the existing primary dwelling.
11. **Uncovered Parking Replacement**: Language will be added to confirm that uncovered parking spaces demolished or converted for ADU construction are not required to be replaced.
12. **Height Standards**: Height provisions will be updated to reflect a 25-foot standard for all detached ADUs.
13. **Section 9056.7 – Development Standards**: §9056.7(A), (B), (C), and (E) will be removed to ensure compliance with §66314(b)(1).
14. **Section 9056.7 – Development Standards**: §9056.7(A), (B), (C), and (E) will be removed to ensure compliance with §66314(b)(1).
15. **JADU Application Review Language**: The phrase "acted on" will be replaced with "approve or deny" to comply with current State ADU Law.
16. **JADU Utility Fees**: It is understood that JADUs are not considered a new residential use for purposes of calculating connection fees or permit for water or sewer. The ordinance will be clarified to reflect this limitation.
17. **Deed Restriction Typo**: The ordinance will correct the grammatical issue in §9057.1(D)(4)(i) by replacing "A prohibition" with "Includes a prohibition."
18. **Severability Clause**: The severability clause will be removed to comply with §66316, which requires that non-compliant ordinances be deemed null and void.

The City of Ukiah remains committed to supporting Accessory Dwelling Units (ADUs) as a key component of its housing strategy. During this 6th Cycle, over 35 new or converted ADU permits have been issued, reflecting strong and sustained local interest in this form of incremental housing. In 2020, the City developed three sets of engineered ADU building plans and made them available to the community at no cost. Each design has now been successfully utilized multiple times. These tools, along with ongoing day-to-day support and interactions continue to lower barriers for residents interested in building ADUs here.

Moving forward, Staff will ensure full compliance and submit materials for timely review by HCD staff as updates become available. We request prompt feedback from HCD so that staff can incorporate any input for discussion or response by the City Council.

City of Ukiah

COMMUNITY DEVELOPMENT DEPARTMENT

Overall, the City's response and these updates are aimed at ensuring full alignment with State ADU Law and reinforcing Ukiah's commitment to increasing housing production through clear, objective, and legally compliant regulations. We welcome continued collaboration with HCD and look forward to working together to provide our experience and advance shared housing objectives across California.

Sincerely,

Craig Schlatter, AICP
Community Development Director

PLANNING COMMISSION RESOLUTION NO. 2025-02

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF UKIAH RECOMMENDING CITY COUNCIL ADOPTION OF AN ORDINANCE AMENDING THE UKIAH CITY CODE REGARDING ACCESSORY DWELLING UNITS (ADUs) AND JUNIOR ACCESSORY DWELLING UNITS (JADUs), IN COMPLIANCE WITH STATE LAW (GOVERNMENT CODE §§ 66310 – 66342)

WHEREAS, on December 7, 2022, the Ukiah City Council adopted Resolution No. 2022-79 certifying the Environmental Impact Report for the Ukiah 2040 General Plan (State Clearinghouse No. 2022050556), which analyzed the environmental impacts of the City's General Plan and included adoption of a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations; and

WHEREAS, pursuant to Government Code Section 65850, the City is authorized to adopt zoning regulations, including regulations governing accessory dwelling units and junior accessory dwelling units, consistent with the General Plan; and

WHEREAS, the City of Ukiah adopted ADU Ordinance No. 1244 on September 4, 2024, regulating the construction and development of accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs) within the city; and

WHEREAS, the California Department of Housing and Community Development (HCD), in its letter dated April 24, 2025, issued formal findings pursuant to Government Code § 66326(a), determining that Ukiah's Ordinance No. 1244 did not fully comply with State ADU Law (Government Code §§ 66310 – 66342); and

WHEREAS, the City of Ukiah timely responded to HCD's letter on May 23, 2025, confirming its intent to amend Ordinance No. 1244 to fully align with updated ADU laws, including recent changes under SB 1211, AB 2533, and other applicable legislation; and

WHEREAS, on June 3, 2025, HCD confirmed the City's response was substantially compliant and instructed the City to proceed with formal adoption of the revised Ordinance and submit the adopted version to HCD; and

WHEREAS, the proposed Ordinance amendments are consistent with the goals and policies of the Ukiah General Plan and 6th Cycle Housing Element, and reflect the City's designation as a Pro-Housing community actively working to address its Regional Housing Needs Allocation (RHNA); and

WHEREAS, on June 23, 2025, the City of Ukiah received informal comments from the California Department of Housing and Community Development (HCD) and subsequently incorporated revisions to the proposed ordinance to ensure compliance with State law, including but not limited to Government Code section 66323, subdivision (a), and other applicable provisions. On June 25, 2025, the Planning Commission continued to a certain date, July 9, 2025, at which time the Planning Commission held a duly noticed public hearing to consider the ordinance, receive the staff report, as well as public comments from interested parties, and after closing the public comments portion discussed the matter; and

WHEREAS, the proposed Ordinance amendments align with the requirements of State law, including recent statutory amendments; promote housing development through clear, objective, and ministerial review processes; are necessary to maintain the validity of the City's ADU

Ordinance and Housing Element certification; reflect HCD-reviewed best practices in regulating ADUs and JADUs; and will benefit Ukiah residents by facilitating a wider range of housing options while minimizing potential impacts on existing neighborhoods;

WHEREAS, the Planning Commission has reviewed the ordinance, considered all written and oral testimony, and finds that the ordinance is in the public interest, supports streamlined permitting for compatible uses, and is consistent with the General Plan and applicable state law.

WHEREAS, the Planning Commission has reviewed the ordinance, considered all written and oral testimony, and finds that the ordinance is in the public interest, supports streamlined permitting for compatible uses, and is consistent with the General Plan and applicable state law.

WHEREAS, the Planning Commission has been advised of the guidance from the California Department of Housing and Community Development (HCD), which clarifies that maintaining a non-compliant ordinance while intending to follow State Accessory Dwelling Unit (ADU) Law does not satisfy Government Code section 66326(b), and that the appropriate action is to repeal the existing ordinance pursuant to Government Code section 66326(b)(2) to ensure legal clarity and compliance.

NOW, THEREFORE, BE IT RESOLVED that the City of Ukiah Planning Commission, based upon evidence in the record and oral and written testimony presented at public hearings, and all information contained in the record of proceedings related to the Accessory Dwelling Unit Ordinance, makes the following findings and recommendations:

1. The above recitals are true and correct and incorporated herein by this reference.

2. The proposed amendments to the Accessory Dwelling Unit Ordinance are consistent with the City of Ukiah 2040 General Plan and implement the goals, objectives, and policies of the certified 6th Cycle Housing Element. In accordance with Government Code Section 65860, the zoning amendments remain compatible with the objectives, policies, and land use designations of the General Plan.

3. The proposed ordinance amendments have been reviewed for compliance with the California Environmental Quality Act (CEQA) and are exempt from environmental review pursuant to CEQA Guidelines Section 15061(b)(3), the "common sense exemption," as it can be seen with certainty that there is no possibility the adoption of the ordinance will have a significant effect on the environment.

4. That the City Council adopt an ordinance amending Ukiah City Code Chapter 2 of Division 9, as shown in the attached Exhibit A, to ensure consistency with current State ADU Law and address the findings issued by the California Department of Housing and Community Development (HCD).

BE IT FURTHER RESOLVED that the Planning Commission designates the City Clerk as the custodian of the document and other materials that constitute the record of proceedings upon which the Planning Commission decision herein is based. These documents may be found at the office of the City of Ukiah Department of Community Development, 300 Seminary Avenue, Ukiah, CA 95482.

PASSED AND ADOPTED by the Planning Commission of the City of Ukiah this 9th day of July 2025, by the following roll call vote:

AYES: Planning Commissioners Johnson, Hilliker, and Chair de Grassi

Exhibit A: Revised Draft Ordinance (06.30.2025)

ORDINANCE NO.

ORDINANCE OF THE CITY COUNCIL OF THE CITY OF UKIAH AMENDING VARIOUS SECTIONS OF THE UKIAH CITY CODE REGULATING ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS

The City Council of the City of Ukiah hereby ordains as follows:

SECTION ONE. FINDINGS AND DECLARATIONS

1. The proposed amendments to Division 9, Chapter 2 of the Ukiah City Code are consistent with the 2040 Ukiah General Plan and support the goals, objectives, and policies outlined in the 6th Cycle Housing Element. The amendments are specifically designed to conform local zoning standards with state housing laws to meet the statutory requirements and policy expectations of the California Department of Housing and Community Development (HCD), thereby supporting the City's obligation to facilitate housing production and maintain certification of its 6th Cycle Housing Element.

2. The adoption of this Ordinance is a necessary action to continue progress towards production of affordable housing in a way that minimizes impacts to local neighborhoods.

3. When the State revises ADU law, a local jurisdiction's ADU Ordinance, if non-compliant with the new ADU laws, is rendered "null and void" and local jurisdictions must continue to process ADU applications through a ministerial process in accordance with State law.

4. On April 24, 2025, the California Department of Housing and Community Development (HCD) completed its review of the City of Ukiah's ADU Ordinance No. 1244, which was adopted on September 4, 2024 and submitted to HCD on September 5, 2024. Per Government Code § 66326(b)(1), the City responded on May 23, 2025 (within 30 days of receipt of HCD's findings). On June 3, 2025, HCD responded that they found the City's response substantially compliant with State ADU Law. Once amended, the City is instructed to upload the adopted Ordinance to HCD.

5. On June 23, 2025, the City of Ukiah received informal comments from the California Department of Housing and Community Development (HCD) and subsequently incorporated revisions to the proposed ordinance to ensure compliance with State law, including but not limited to Government Code section 66323, subdivision (a), and other applicable provisions.

~~5.~~6. On June 25, 2025, the Planning Commission continued to a certain date, July 9, 2025, at which time the Planning Commission held a duly noticed public hearing to consider the ordinance, receive the staff report, as well as public comments from interested parties, and after closing the public comments portion discussed the matter.

~~6.~~7. Through adoption of this ADU Ordinance, the City has responded to HCD's findings and intends to bring the City's ADU Ordinance into compliance with applicable State ADU laws.

SECTION TWO.

Division 9, Chapter 2, Article 5.3 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§9056 PURPOSE AND INTENT

The purpose of this article is to create an expedient ministerial approval process for residential accessory

DRAFT

dwelling units (ADUs). To do so, this article sets forth development standards in conformance with the California Government Code and tailored to meet the changing needs of Ukiah communities and expand housing choices in all neighborhoods.

§9056.1 GENERAL REQUIREMENTS

Accessory dwelling units (ADU) on lots developed with a primary single-family or multifamily residence or for which a primary residence is proposed shall be ministerially permitted and subject to the following standards/criteria:

A. The requirements of this article are applicable to all existing ADUs, as well as those proposed after the effective date hereof, except for legal nonconforming units, or as specifically provided herein. Existing ADUs as of the date hereof inconsistent with the provisions listed herein shall be considered legal nonconforming; provided, that they were legal at the time of their creation.

B. ADUs shall be deemed not to exceed the allowable density for the residential lot upon which an ADU is located. ADUs are deemed a residential use that is consistent with the existing general plan and zoning designation for the lot on which an ADU is located with a primary residence.

C. These regulations do not allow the division of property upon which an accessory dwelling unit is located unless all requirements of the applicable zoning district or State law are met.

D. An ADU may be rented separate from the primary residence but may not be sold or otherwise conveyed separate from the primary residence unless the conveyance meets the requirements of Government Code sections 66340 through 66342.

E. Accessory dwelling units provide complete independent living facilities for one or more persons The accessory dwelling unit is either attached to, or located within, the proposed or existing primary dwelling, including attached garages, storage areas or similar uses, or an accessory structure or detached from the proposed or existing primary dwelling and located on the same lot as the proposed or existing primary dwelling, including detached garages.

F. An ADU must meet all applicable building and fire codes, and shall have electric, water and sewer or septic service with the type of meter arrangement at the property owner's option. Water, sewer, and electrical services shall be available prior to the issuance of a building permit for an ADU. No new water or sewer connection fees may be required for ADUs that are contained within the existing space of a single-family or multifamily residence or accessory structure, unless the ADU is constructed with a new single-family home. Any impact fees charged for an accessory dwelling unit of seven hundred fifty (750) square feet or more shall be charged proportionately in relation to the square footage of the primary dwelling unit.

G. Nothing in this chapter shall preclude the development of a junior accessory dwelling unit as regulated by Ukiah City Code and Government Code sections 66333 through 66339.

§9056.2 DEVELOPMENT REQUIREMENTS

A. Applications for a building permit for an ADU shall be deemed approved if the local agency has not approved or denied the completed application within sixty (60) days. If approved, no additional parking or other development standards shall be applied except for building code and fire safety requirements.

B. Applications for a building permit within any zoning district where residential uses are allowed or permitted shall be approved ministerially to develop any of the following:

1. Unit Type: An ADU may be attached to an existing primary residence converted from a portion of the existing living area of the primary residence or attached garage, detached and on the same legal lot as a primary residence, converted from the entirety of or a portion of an existing accessory structure, or attached to an existing or proposed accessory structure.

2. Number of Units: The number of ADUs allowed on a single lot shall be:

    a) On a lot that contains an existing or proposed single-family dwelling: One (1) new ADU attached or detached. Additionally, one (1) converted ADU created from existing space of the single-family residence or an existing accessory structure. Converted ADUs must have exterior access. ADUs converted from existing structures are eligible for a 150 square-foot expansion to accommodate ingress and egress.

    b) On a lot that contains an existing multifamily dwelling: Eight (8) ADUs, detached from the multifamily structure, and up to twenty-five percent (25%) of the number of units in the existing multifamily dwelling converted from existing non-livable space in a multifamily structure. The number of Accessory Dwelling Units, however, allowable pursuant to this Subsection shall not exceed the number of existing units on the lot.

    c) On a lot that contains a proposed multifamily dwelling: Two (2) ADUs, detached from the multifamily structure.

C. Size: The maximum size of a detached ADU shall be one thousand two hundred (1,200) square feet, unless located on the same parcel as a multi-family structure, in which case there shall be no maximum unit size. The conversion of an existing accessory structure or a portion of the existing primary residence to an ADU is not subject to unit size requirements.

D. Improvements: The City shall not require, as a condition for ministerial approval of a permit application for the creation of an ADU, the correction of nonconforming zoning conditions. For purposes of this section, "nonconforming zoning condition" means a physical improvement on a property that does not conform with current zoning standards.

E. Lot Size: No minimum lot size shall be required.

F. Lot Coverage: The lot coverage limitation of the base zoning district shall not apply to the construction of an ADU.

G. Construction Standards: Not exclusive of other applicable State and local building and fire regulations, ADUs shall comply with the following requirements:

1. Structures within the State responsibility area (SRA) must comply with applicable local and state regulations for setbacks and fire-resistive construction.
2. Structures outside of the SRA must comply with building code regulations for fire-resistive construction, unless more restrictive standards are required pursuant to State law or regulation.
3. Fire sprinklers are not required for the ADU if not required for the primary residence, and the construction of an ADU may not trigger the requirement for fire sprinklers in an existing primary dwelling.

DRAFT

§9056.3 SETBACKS

The following yard setback requirements shall apply to ADUs:

A. Front Yard: The same as the existing primary residence, but no closer than five feet (5') for the construction of a new detached ADU greater than 800 square feet.

1. For construction of a detached ADU, the application of front yard setbacks do not apply to an ADU of eight hundred (800) square feet or less when associated with a Single-Family Dwelling unit.

~~1.~~2. For construction of a detached ADU, the application of front yard setbacks does not apply to construction an ADU when associated with a Multiple-Family Dwelling.

~~A.~~B. Side Yard or Rear Yard: Four feet (4').

~~B.~~C. No setback shall be required for an existing living area, garage, or accessory structure or a structure constructed in the same location and to the same dimensions as an existing structure that is converted to an ADU or to a portion of an ADU.

~~C.~~D. ~~The application of front yard setbacks cannot preclude an ADU of eight hundred (800) square feet or less.~~An ADU created within the existing space of an accessory structure can be expanded beyond the physical dimensions of the structure up to 150 square feet solely for the purpose of accommodating ingress and egress. The resulting ADU shall conform only to setbacks sufficient for fire and safety

§9056.4 PARKING

1. Parking requirements for the ADU shall be one off-street space (independently accessible or tandem) in addition to the accessible parking spaces required for the existing single-family or multifamily residence. If the primary residence was legally constructed at a time when on-site parking was not required, then only the parking space(s) for the ADU shall be required.

2. Off-street parking shall be permitted in setback areas in compliance with the definition of "off-street parking" found in section 9278B of this code or through tandem parking.

3. Parking standards will not be imposed for an ADU in any of the following instances:

    1. The ADU is located within one-half (1/2) mile of a public transit stop;

    2. The ADU is located within an architecturally and historically significant district;

    3. The ADU is part of the existing primary residence or an existing accessory structure;

    4. When on-street parking permits are required but not offered to the occupant of the ADU;

    5. When there is a car share vehicle located within one block of the ADU;

    6. When an application for an ADU is submitted with an application to create a new single-family or multifamily dwelling on the same lot.

4. If a garage (attached or detached), carport, or uncovered or covered parking structure is demolished in conjunction with the construction of an ADU or converted to an ADU, the City shall

DRAFT

not require that those off-street parking spaces be replaced.

5. No parking shall be required for ADUs created pursuant to Government Code § 66323, including:

    1. Converted ADUs in existing single-family homes or accessory structures;

    2. New detached ADUs (≤ 800 square feet);

    3. ADUs converted from non-livable space in multifamily buildings (up to 25% of units);

    4. Detached ADUs on lots with multifamily structures.

§9056.5 LEGAL NONCONFORMING ACCESSORY STRUCTURES

ADUs converted from residential accessory structures determined to be legal nonconforming shall be subject to the following requirements:

A. A legal nonconforming residential accessory structure that is converted to an ADU, or reconstructed as an ADU to the same footprint and dimensions as the original structure, shall not be subject to setback requirements.

B. A legal nonconforming residential accessory structure that is converted to an ADU may be expanded up to one thousand two hundred (1,200) square feet if the expansion will comply with the height limit and setbacks for new detached ADUs.

C. Expansion of floor area within a nonconforming setback is limited to one hundred fifty (150) square feet, if necessary, to accommodate associated utilities, ingress and egress.

D. Delay of Enforcement of Building Standards.

    1. The owner of an Accessory Dwelling Unit that was built before January 1, 2020, may submit an application to the Building Official ~~requesting that~~requesting correction of any violation of building standards. For purposes of this Section, "building standards" refers to those standards enforced by permitting agencies under the authority of Section 17960 of the California Health and Safety Code.

    2. The Building Official shall grant the application if determined that enforcement of the building standard is not necessary to protect health and safety. In making this determination, the Building Official shall consult with the Fire Official.

    3. Any notice to correct a violation of a building standard that is issued to the owner of an Accessory Dwelling Unit built before January 1, 2020, shall include a statement that the owner has a right to request a delay in enforcement of the building standard for an Accessory Dwelling Unit pursuant to this Section.

    4. The City shall not impose impact fees or connection or capacity charges for ADUs ~~or JADUs~~ legalized under this Section.

§9056.6 HEIGHT

A. The maximum height for detached ADUs shall be twenty feet (20').

DRAFT

B. ADUs attached to the primary structure can be constructed to a height of twenty-five feet (25') or the maximum height for the zoning district in which the unit is located.

C. ADUs may be taller than the primary residential structure.

D. ADUs above a garage (attached or detached) can be constructed to the maximum height for the zoning district in which the unit is located, or twenty-five feet (25'), whichever is greater.

E. Detached ADUs greater than twenty feet (20') in height may be approved through the granting of a minor site development permit.

SECTION THREE.

Division 9, Chapter 2, Article 5.4 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§9057 PURPOSE AND INTENT

The purpose of this article is to implement the requirements of the Government Code and provisions of the General Plan Housing Element that encourage the production of affordable housing by expanding housing opportunities for all economic segments of the community.

§9057.1 GENERAL REQUIREMENTS

Junior accessory dwelling units (JADUs) shall be ministerially permitted in zoning districts that allow single-family dwelling units as permitted uses, in compliance with Government Code sections 66333 through 66339, the requirements of this section, and all other requirements of the applicable zoning district. The Department shall approve or deny an application to create a JADU within sixty (60) days from the date it receives a completed application if there is an existing single-family dwelling on the lot. For the purposes of constructing a JADU, attached garages are part of a single-family dwelling.

A. Permit Requirements and Fees: Construction permits (including, but not limited to, a building, electrical, or mechanical permit) shall be required to establish a JADU. A JADU shall not be considered a separate or new dwelling unit for purposes of applying building codes, fire codes, well and septic requirements, or collection of impact fees.

B. Timing: A JADU may be established after or concurrently with the single-family residence.

C. Development Standards:

1. Number of Units: One JADU is allowed per lot, within a single-family residence.

2. Unit Size: The floor area of a JADU shall not exceed five hundred (500) square feet. If the bathroom is shared with the single-family residence, it shall not be included in the floor area.

3. Location: A JADU shall be created from space in an existing, fully permitted, or proposed single-family dwelling or garage attached to the single-family residence.

4. Access: A separate, exterior entrance to the JADU shall be provided.

5. Bathroom: If a permitted junior accessory dwelling unit does not include a separate bathroom, the permitted junior accessory dwelling unit shall include a separate entrance from the main entrance to the structure, with an interior entry to the main

DRAFT

living area.

6. Kitchen: A JADU shall include an efficiency kitchen. The efficiency kitchen must be removed when the JADU use ceases.

7. The owner of a Junior Accessory Dwelling Unit that was built before January 1, 2020, may submit an application to the Building Official requesting that correction of any violation of building standards be delayed for five years. For purposes of this Section, "building standards" refers to those standards enforced by permitting agencies under the authority of Section 17960 of the California Health and Safety Code.

    a. The Building Official shall grant the application if the Building Official determines that enforcement of the building standard is not necessary to protect health and safety. In making this determination, the Building Official shall consult with the Fire Marshal.
    b. Any notice to correct a violation of a building standard that is issued to the owner of a Junior Accessory Dwelling Unit built before January 1, 2020, shall include a statement that the owner has a right to request a delay in enforcement of the building standard for a Junior Accessory Dwelling Unit pursuant to this Section.
    ~~b.~~ c. The City shall not impose impact fees or connection or capacity charges for JADUs legalized under this Section.

D. Use Restrictions

1. JADUs may be rented but shall not be sold separate from the single-family residence.

2. JADUs may not be rented for periods of less than thirty (30) days.

3. The owner of the property must reside in either the single-family home or the newly created JADU. Owner-occupancy shall not be required if the owner is another governmental agency, land trust, or housing organization.

4. Deed Restriction: The property owner shall record a deed restriction that:
    a) Includes a prohibition on the sale of the junior accessory dwelling unit separate from the sale of the single-family residence, including a statement that the deed restriction may be enforced against future purchasers; and
    b) Specifies that the deed restriction runs with the land and is enforceable against future property owners; and
    c) Restricts the size and attributes of the JADU to those established by this section and Government Code section 66333; and
    d) Makes the City of Ukiah a third-party beneficiary of the deed restriction with the right to enforce the provisions of the deed restriction.

SECTION FOUR.

1. PUBLICATION: Within fifteen (15) days after its adoption, this Ordinance shall be published once in a newspaper of general circulation in the City of Ukiah. In lieu of publishing the full text of the Ordinance, the City may publish a summary of the Ordinance once 5 days prior to its adoption and again within fifteen (15) days after its adoption.

2. EFFECTIVE DATE: The ordinance shall become effective thirty (30) days after its adoption.

3. SEVERABILITY: Pursuant to Government Code section 66316, if any part of this ordinance is

DRAFT

determined to be inconsistent with the requirements of state law governing accessory dwelling units or junior accessory dwelling units, the ordinance shall be deemed null and void. In such an event, the City shall apply the standards established in state law for the approval of accessory dwelling units, unless a revised ordinance that complies with state law is duly adopted.

4. ENVIRONMENTAL REVIEW: The ordinance regulates the construction and development of accessory dwelling units, which are either additions to existing structures or new small structures, both of which are categorically and statutorily exempt under CEQA. The City Council, exercising its independent judgment, finds that the adoption of this ordinance is exempt from the California Environmental Quality Act (CEQA) pursuant to the State CEQA Guidelines (Title 14, California Code of Regulations, Chapter 3, beginning at Section 15000). Because the proposed ordinance will not result in a direct or reasonably foreseeable indirect physical change in the environment, it is also exempt under Section 15061(b)(3), the "common sense" exemption, as it can be seen with certainty that there is no possibility the ordinance may have a significant effect on the environment

Kristine Lawler, CMC/City Clerk

ORDINANCE NO. 2025-

ORDINANCE OF THE CITY COUNCIL OF THE CITY OF UKIAH AMENDING VARIOUS SECTIONS OF THE UKIAH CITY CODE REGULATING ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS

The City Council of the City of Ukiah hereby ordains as follows:

SECTION ONE. FINDINGS AND DECLARATIONS

1. The proposed amendments to Division 9, Chapter 2 of the Ukiah City Code are consistent with the 2040 Ukiah General Plan and support the goals, objectives, and policies outlined in the 6th Cycle Housing Element. The amendments are specifically designed to conform local zoning standards with state housing laws to meet the statutory requirements and policy expectations of the California Department of Housing and Community Development (HCD), thereby supporting the City's obligation to facilitate housing production and maintain certification of its 6th Cycle Housing Element.

2. The adoption of this Ordinance is a necessary action to continue progress towards production of affordable housing in a way that minimizes impacts to local neighborhoods.

3. When the State revises ADU law, a local jurisdiction's ADU Ordinance, if non-compliant with the new ADU laws, is rendered "null and void" and local jurisdictions must continue to process ADU applications through a ministerial process in accordance with State law.

4. On April 24, 2025, the California Department of Housing and Community Development (HCD) completed its review of the City of Ukiah's ADU Ordinance No. 1244, which was adopted on September 4, 2024 and submitted to HCD on September 5, 2024. Per Government Code § 66326(b)(1), the City responded on May 23, 2025 (within 30 days of receipt of HCD's findings). On June 3, 2025, HCD responded that they found the City's response substantially compliant with State ADU Law. Once amended, the City is instructed to upload the adopted Ordinance to HCD.

5. On June 23, 2025, the City of Ukiah received informal comments from the California Department of Housing and Community Development (HCD) and subsequently incorporated revisions to the proposed ordinance to ensure compliance with State law, including but not limited to Government Code section 66323, subdivision (a), and other applicable provisions.

6. On June 25, 2025, the Planning Commission continued to a certain date, July 9, 2025, at which time the Planning Commission held a duly noticed public hearing to consider the ordinance, receive the staff report, as well as public comments from interested parties, and after closing the public comments portion discussed the matter.

7. Through adoption of this ADU Ordinance, the City has responded to HCD's findings and intends to bring the City's ADU Ordinance into compliance with applicable State ADU laws.

SECTION TWO.

Division 9, Chapter 2, Article 5.3 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§9056 PURPOSE AND INTENT

The purpose of this article is to create an expedient ministerial approval process for residential accessory

dwelling units (ADUs). To do so, this article sets forth development standards in conformance with the California Government Code and tailored to meet the changing needs of Ukiah communities and expand housing choices in all neighborhoods.

§9056.1 GENERAL REQUIREMENTS

Accessory dwelling units (ADU) on lots developed with a primary single-family or multifamily residence or for which a primary residence is proposed shall be ministerially permitted and subject to the following standards/criteria:

A. The requirements of this article are applicable to all existing ADUs, as well as those proposed after the effective date hereof, except for legal nonconforming units, or as specifically provided herein. Existing ADUs as of the date hereof inconsistent with the provisions listed herein shall be considered legal nonconforming; provided, that they were legal at the time of their creation.

B. ADUs shall be deemed not to exceed the allowable density for the residential lot upon which an ADU is located. ADUs are deemed a residential use that is consistent with the existing general plan and zoning designation for the lot on which an ADU is located with a primary residence.

C. These regulations do not allow the division of property upon which an accessory dwelling unit is located unless all requirements of the applicable zoning district or State law are met.

D. An ADU may be rented separate from the primary residence but may not be sold or otherwise conveyed separate from the primary residence unless the conveyance meets the requirements of Government Code sections 66340 through 66342.

E. Accessory dwelling units provide complete independent living facilities for one or more persons The accessory dwelling unit is either attached to, or located within, the proposed or existing primary dwelling, including attached garages, storage areas or similar uses, or an accessory structure or detached from the proposed or existing primary dwelling and located on the same lot as the proposed or existing primary dwelling, including detached garages.

F. An ADU must meet all applicable building and fire codes, and shall have electric, water and sewer or septic service with the type of meter arrangement at the property owner's option. Water, sewer, and electrical services shall be available prior to the issuance of a building permit for an ADU. No new water or sewer connection fees may be required for ADUs that are contained within the existing space of a single-family or multifamily residence or accessory structure, unless the ADU is constructed with a new single-family home. Any impact fees charged for an accessory dwelling unit of seven hundred fifty (750) square feet or more shall be charged proportionately in relation to the square footage of the primary dwelling unit.

G. Nothing in this chapter shall preclude the development of a junior accessory dwelling unit as regulated by Ukiah City Code and Government Code sections 66333 through 66339.

§9056.2 DEVELOPMENT REQUIREMENTS

A. Applications for a building permit for an ADU shall be deemed approved if the local agency has not approved or denied the completed application within sixty (60) days. If approved, no additional parking or other development standards shall be applied except for building code and fire safety requirements.

B. Applications for a building permit within any zoning district where residential uses are allowed or permitted shall be approved ministerially to develop any of the following:

1. Unit Type: An ADU may be attached to an existing primary residence converted from a portion of the existing living area of the primary residence or attached garage, detached and on the same legal lot as a primary residence, converted from the entirety of or a portion of an existing accessory structure, or attached to an existing or proposed accessory structure.

2. Number of Units: The number of ADUs allowed on a single lot shall be:

    a) On a lot that contains an existing or proposed single-family dwelling: One (1) new ADU attached or detached. Additionally, one (1) converted ADU created from existing space of the single-family residence or an existing accessory structure. Converted ADUs must have exterior access. ADUs converted from existing structures are eligible for a 150 square-foot expansion to accommodate ingress and egress.

    b) On a lot that contains an existing multifamily dwelling: Eight (8) ADUs, detached from the multifamily structure, and up to twenty-five percent (25%) of the number of units in the existing multifamily dwelling converted from existing non-livable space in a multifamily structure. The number of Accessory Dwelling Units, however, allowable pursuant to this Subsection shall not exceed the number of existing units on the lot.

    c) On a lot that contains a proposed multifamily dwelling: Two (2) ADUs, detached from the multifamily structure.

C. Size: The maximum size of a detached ADU shall be one thousand two hundred (1,200) square feet, unless located on the same parcel as a multi-family structure, in which case there shall be no maximum unit size. The conversion of an existing accessory structure or a portion of the existing primary residence to an ADU is not subject to unit size requirements.

D. Improvements: The City shall not require, as a condition for ministerial approval of a permit application for the creation of an ADU, the correction of nonconforming zoning conditions. For purposes of this section, “nonconforming zoning condition” means a physical improvement on a property that does not conform with current zoning standards.

E. Lot Size: No minimum lot size shall be required.

F. Lot Coverage: The lot coverage limitation of the base zoning district shall not apply to the construction of an ADU.

G. Construction Standards: Not exclusive of other applicable State and local building and fire regulations, ADUs shall comply with the following requirements:

1. Structures within the State responsibility area (SRA) must comply with applicable local and state regulations for setbacks and fire-resistive construction.
2. Structures outside of the SRA must comply with building code regulations for fire-resistive construction, unless more restrictive standards are required pursuant to State law or regulation.
3. Fire sprinklers are not required for the ADU if not required for the primary residence, and the construction of an ADU may not trigger the requirement for fire sprinklers in an existing primary dwelling.

§9056.3 SETBACKS

The following yard setback requirements shall apply to ADUs:

A. Front Yard: The same as the existing primary residence, but no closer than five feet (5') for the construction of a new detached ADU greater than 800 square feet.

    1. For construction of a detached ADU, the application of front yard setbacks do not apply to an ADU of eight hundred (800) square feet or less when associated with a Single-Family Dwelling unit.
    2. For construction of a detached ADU, the application of front yard setbacks does not apply to construction an ADU when associated with a Multiple-Family Dwelling.

B. Side Yard or Rear Yard: Four feet (4').

C. No setback shall be required for an existing living area, garage, or accessory structure or a structure constructed in the same location and to the same dimensions as an existing structure that is converted to an ADU or to a portion of an ADU.

D. An ADU created within the existing space of an accessory structure can be expanded beyond the physical dimensions of the structure up to 150 square feet solely for the purpose of accommodating ingress and egress. The resulting ADU shall conform only to setbacks sufficient for fire and safety

§9056.4 PARKING

1. Parking requirements for the ADU shall be one off-street space (independently accessible or tandem) in addition to the accessible parking spaces required for the existing single-family or multifamily residence. If the primary residence was legally constructed at a time when on-site parking was not required, then only the parking space(s) for the ADU shall be required.

2. Off-street parking shall be permitted in setback areas in compliance with the definition of “off-street parking” found in section 9278B of this code or through tandem parking.

3. Parking standards will not be imposed for an ADU in any of the following instances:

    1. The ADU is located within one-half (1/2) mile of a public transit stop;

    2. The ADU is located within an architecturally and historically significant district;

    3. The ADU is part of the existing primary residence or an existing accessory structure;

    4. When on-street parking permits are required but not offered to the occupant of the ADU;

    5. When there is a car share vehicle located within one block of the ADU;

    6. When an application for an ADU is submitted with an application to create a new single-family or multifamily dwelling on the same lot.

4. If a garage (attached or detached), carport, or uncovered or covered parking structure is demolished in conjunction with the construction of an ADU or converted to an ADU, the City shall not require that those off-street parking spaces be replaced.

5. No parking shall be required for ADUs created pursuant to Government Code § 66323, including:

    1. Converted ADUs in existing single-family homes or accessory structures;

    2. New detached ADUs (≤ 800 square feet);

    3. ADUs converted from non-livable space in multifamily buildings (up to 25% of units);

    4. Detached ADUs on lots with multifamily structures.

§9056.5 LEGAL NONCONFORMING ACCESSORY STRUCTURES

ADUs converted from residential accessory structures determined to be legal nonconforming shall be subject to the following requirements:

A. A legal nonconforming residential accessory structure that is converted to an ADU, or reconstructed as an ADU to the same footprint and dimensions as the original structure, shall not be subject to setback requirements.

B. A legal nonconforming residential accessory structure that is converted to an ADU may be expanded up to one thousand two hundred (1,200) square feet if the expansion will comply with the height limit and setbacks for new detached ADUs.

C. Expansion of floor area within a nonconforming setback is limited to one hundred fifty (150) square feet, if necessary, to accommodate associated utilities, ingress and egress.

D. Delay of Enforcement of Building Standards.

    1. The owner of an Accessory Dwelling Unit that was built before January 1, 2020, may submit an application to the Building Official requesting correction of any violation of building standards. For purposes of this Section, “building standards” refers to those standards enforced by permitting agencies under the authority of Section 17960 of the California Health and Safety Code.

    2. The Building Official shall grant the application if determined that enforcement of the building standard is not necessary to protect health and safety. In making this determination, the Building Official shall consult with the Fire Official.

    3. Any notice to correct a violation of a building standard that is issued to the owner of an Accessory Dwelling Unit built before January 1, 2020, shall include a statement that the owner has a right to request a delay in enforcement of the building standard for an Accessory Dwelling Unit pursuant to this Section.

    4. The City shall not impose impact fees or connection or capacity charges for ADUs legalized under this Section.

§9056.6 HEIGHT

A. The maximum height for detached ADUs shall be twenty feet (20').

B. ADUs attached to the primary structure can be constructed to a height of twenty-five feet (25’) or the maximum height for the zoning district in which the unit is located.

C. ADUs may be taller than the primary residential structure.

D. ADUs above a garage (attached or detached) can be constructed to the maximum height for the zoning district in which the unit is located, or twenty-five feet (25'), whichever is greater.

E. Detached ADUs greater than twenty feet (20') in height may be approved through the granting of a minor site development permit.

SECTION THREE.

Division 9, Chapter 2, Article 5.4 of the Ukiah City Code is hereby amended to read as follows (unchanged text is omitted and shown by "* * *"):

§9057 PURPOSE AND INTENT

The purpose of this article is to implement the requirements of the Government Code and provisions of the General Plan Housing Element that encourage the production of affordable housing by expanding housing opportunities for all economic segments of the community.

§9057.1 GENERAL REQUIREMENTS

Junior accessory dwelling units (JADUs) shall be ministerially permitted in zoning districts that allow single-family dwelling units as permitted uses, in compliance with Government Code sections 66333 through 66339, the requirements of this section, and all other requirements of the applicable zoning district. The Department shall approve or deny an application to create a JADU within sixty (60) days from the date it receives a completed application if there is an existing single-family dwelling on the lot. For the purposes of constructing a JADU, attached garages are part of a single-family dwelling.

A. Permit Requirements and Fees: Construction permits (including, but not limited to, a building, electrical, or mechanical permit) shall be required to establish a JADU. A JADU shall not be considered a separate or new dwelling unit for purposes of applying building codes, fire codes, well and septic requirements, or collection of impact fees.

B. Timing: A JADU may be established after or concurrently with the single-family residence.

C. Development Standards:

1. Number of Units: One JADU is allowed per lot, within a single-family residence.

2. Unit Size: The floor area of a JADU shall not exceed five hundred (500) square feet. If the bathroom is shared with the single-family residence, it shall not be included in the floor area.

3. Location: A JADU shall be created from space in an existing, fully permitted, or proposed single-family dwelling or garage attached to the single-family residence.

4. Access: A separate, exterior entrance to the JADU shall be provided.

5. Bathroom: If a permitted junior accessory dwelling unit does not include a separate bathroom, the permitted junior accessory dwelling unit shall include a separate entrance from the main entrance to the structure, with an interior entry to the main living area.

6. Kitchen: A JADU shall include an efficiency kitchen. The efficiency kitchen must be removed when the JADU use ceases.

7. The owner of a Junior Accessory Dwelling Unit that was built before January 1, 2020, may submit an application to the Building Official requesting that correction of any violation of building standards be delayed for five years. For purposes of this Section, "building standards" refers to those standards enforced by permitting agencies under the authority of Section 17960 of the California Health and Safety Code.

    a. The Building Official shall grant the application if the Building Official determines that enforcement of the building standard is not necessary to protect health and safety. In making this determination, the Building Official shall consult with the Fire Marshal.
    b. Any notice to correct a violation of a building standard that is issued to the owner of a Junior Accessory Dwelling Unit built before January 1, 2020, shall include a statement that the owner has a right to request a delay in enforcement of the building standard for a Junior Accessory Dwelling Unit pursuant to this Section.
    c. The City shall not impose impact fees or connection or capacity charges for JADUs legalized under this Section.

D. Use Restrictions

1. JADUs may be rented but shall not be sold separate from the single-family residence.

2. JADUs may not be rented for periods of less than thirty (30) days.

3. The owner of the property must reside in either the single-family home or the newly created JADU. Owner-occupancy shall not be required if the owner is another governmental agency, land trust, or housing organization.

4. Deed Restriction: The property owner shall record a deed restriction that:
    a) Includes a prohibition on the sale of the junior accessory dwelling unit separate from the sale of the single-family residence, including a statement that the deed restriction may be enforced against future purchasers; and
    b) Specifies that the deed restriction runs with the land and is enforceable against future property owners; and
    c) Restricts the size and attributes of the JADU to those established by this section and Government Code section 66333; and
    d) Makes the City of Ukiah a third-party beneficiary of the deed restriction with the right to enforce the provisions of the deed restriction.

SECTION FOUR.

1. PUBLICATION: Within fifteen (15) days after its adoption, this Ordinance shall be published once in a newspaper of general circulation in the City of Ukiah. In lieu of publishing the full text of the Ordinance, the City may publish a summary of the Ordinance once 5 days prior to its adoption and again within fifteen (15) days after its adoption.

2. EFFECTIVE DATE: The ordinance shall become effective thirty (30) days after its adoption.

3. SEVERABILITY: Pursuant to Government Code section 66316, if any part of this ordinance is determined to be inconsistent with the requirements of state law governing accessory dwelling

units or junior accessory dwelling units, the ordinance shall be deemed null and void. In such an event, the City shall apply the standards established in state law for the approval of accessory dwelling units, unless a revised ordinance that complies with state law is duly adopted.

4. ENVIRONMENTAL REVIEW: The ordinance regulates the construction and development of accessory dwelling units, which are either additions to existing structures or new small structures, both of which are categorically and statutorily exempt under CEQA. The City Council, exercising its independent judgment, finds that the adoption of this ordinance is exempt from the California Environmental Quality Act (CEQA) pursuant to the State CEQA Guidelines (Title 14, California Code of Regulations, Chapter 3, beginning at Section 15000). Because the proposed ordinance will not result in a direct or reasonably foreseeable indirect physical change in the environment, it is also exempt under Section 15061(b)(3), the "common sense" exemption, as it can be seen with certainty that there is no possibility the ordinance may have a significant effect on the environment

Agenda Item No: 8.d.

MEETING DATE/TIME: 9/3/2025

ITEM NO: 2025-967

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Adoption of a Resolution Authorizing the City Manager to Execute Agreements with the California Department of Transportation for the City of Ukiah East Perkins Multimodal Transportation Plan; and Approve Corresponding Budget Amendments Once the Agreements have been Executed.

DEPARTMENT: Community Development

PREPARED BY: Andrea Trincado, Grants Manager

PRESENTER: Consent Calendar

ATTACHMENTS:

1. Resolution E Perkins St Multimodal Transportation Plan
2. FY2425 SC Grant Application_East Perkin Multimodal Trans Plan
3. Sustainable Communities FY 202425 Application Guidelines

Summary: Council will consider adoption of a resolution authorizing the City Manager to execute a project-related agreement(s) with the California Department of Transportation for the City of Ukiah East Perkins Multimodal Transportation Plan, and approve the related budget amendments, to take effect upon execution of the agreement(s).

Background: In January 2025, Staff submitted a grant application to the Caltrans Sustainable Transportation Planning Grant Program for the City of Ukiah East Perkins Multimodal Transportation Plan. The application requested $286,395 in state grant funds, with a required local match of $37,105, and a total project cost of $323,500. Matching funds will be provided through engineering and grants management staff time spent on the project.

On July 1, 2025, the California Department of Transportation (Caltrans) notified the City that its proposal was selected for award. To accept the funding and begin work, Caltrans requires City Council adoption of a resolution authorizing the City Manager to execute the grant agreement(s) with the State.

The East Perkins Multimodal Transportation Plan will evaluate and recommend improvements to the pedestrian, bicycle, transit, and vehicular network along the East Perkins Street corridor from Main Street to Oak Manor Drive—approximately 0.70 miles spanning the U.S. Route 101 highway. The goal is to develop a community-driven plan that improves safety, accessibility, and circulation; advances equity and climate resilience; and promotes active transportation, housing, and economic development along this key gateway corridor into Ukiah.

Please see the attached draft Resolution (Attachment 1), Grant Proposal (Attachment 2), and Sustainable Communities Grant Guidelines (Attachment 3).

Discussion: This grant will allow for the completion of a conceptual plan, but does not include funding for the design or implementation phases. However, a completed plan, based on both professional and community input, provides an important foundation for future grant applications that could fund design and implementation, which would not likely occur for at least five years.

Staff recommends that Council adopt the attached resolution authorizing the City Manager to execute project-

related agreement(s) with the California Department of Transportation for the City of Ukiah East Perkins Multimodal Transportation Plan, and approve the related budget amendments, effective upon execution of the agreement(s).

Recommended Action: Adopt a resolution authorizing the City Manager to execute a project-related agreement(s) with the California Department of Transportation for the City of Ukiah East Perkins Multimodal Transportation Plan, and approve the related budget amendments, to take effect upon execution of the agreement(s).

BUDGET AMENDMENT REQUIRED: Yes

RESOLUTION NO. 2025-

RESOLUTION OF THE CITY OF UKIAH CITY COUNCIL AUTHORIZING THE CITY MANAGER TO EXECUTE AGREEMENTS WITH THE CALIFORNIA DEPARTMENT OF TRANSPORTATION FOR THE CITY OF UKIAH EAST PERKINS STREET MULTIMODAL TRANSPORTATION PLAN

WHEREAS, The City Council of the City of Ukiah is eligible to receive Federal and/or State funding for certain transportation planning related plans, through the California Department of Transportation;

WHEREAS, a Restricted Grant Agreement is needed to be executed with the California Department of Transportation before such funds can be reimbursed through the Transportation Planning Grant Program;

WHEREAS, the City of Ukiah wishes to delegate authorization to execute these agreements and any amendments thereto;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ukiah, that the Council authorizes the City Manager or designee, to execute all restricted grant agreements and any amendments thereto with the California Department of Transportation.

PASSED AND ADOPTED at a regular meeting of the City Council held on September 3, 2025, by the following roll call vote:

Application Checklist

The following documents are required and must be submitted via Smartsheet in one single PDF document, not to exceed 25 MB. The Signature Page may be submitted separately if there are issues combining with the single PDF document. Keep the file name brief, as files are corrupted when file names are too long. Refer to the Grant Application Guide for additional information and/or samples. Failure to include any of the required documents will result in a reduced application score.

PDF documents should be submitted in their fillable PDF formats. The original file formats will be required upon grant award.

Required Application Documents	
(✓)	**Ensure these items are completed prior to submitting to Caltrans via Smartsheet**
✔	Application Cover Sheet (complete in Smartsheet and submit with single PDF document)
✔	Signature Page (Electronic signatures accepted; may submit as a separate file if there are issues with combining with single PDF document)
✔	Application Narrative
✔	Scope of Work
✔	Cost and Schedule
	Third Party In-Kind Valuation Plan (if applicable, required upon award)
✔	Map of Project Area
Supplemental Documentation (not required)

FY 2025-26

Grant Category (select only one)

Climate Adaptation (MPOs, RTPAs, Transit Agencies, Cities, Counties, Tribes, other Public Transportation Planning Entities)

	11.47% Local Match requirement (Not Applicable to Native American Tribal Governments)

Sustainable Communities (MPOs with sub-applicant, RTPAs, Transit Agencies, Cities, Counties, Tribes, other Public Transportation Planning Entities)		**Strategic Partnerships** (MPOs & RTPAs only) **Strategic Partnerships Transit** (MPOs, RTPAs & Transit Agencies only)	
x	Sustainable Communities Competitive (11.47% Local Match requirement) **Not applicable to Native American Tribal Governments**		Strategic Partnerships (FHWA SPR Part I) (20% Local Match requirement)
	Sustainable Communities Competitive Technical (11.47% Local Match requirement) **Not applicable to Native American Tribal Governments**		Strategic Partnerships Transit (FTA 5304) (11.47% Local Match requirement)

Application Submittal Type (more than one may be selected)

New		**Prior Phases**		**Re-Submittal**	
	New Application		Continuation of a prior project. If so, list the Grant FY and project title below.	x	Re-submittal from a prior grant cycle.
				2	How many times has an application been submitted for this project, including this one?

PART B. PROJECT INFORMATION

Project Title and Location

Project Title	City of Ukiah East Perkins Street Multimodal Transportation Plan		
Project Location (City)	Ukiah	Project Location (County)	Mendocino

Funding Information

1. Is the applicant proposing to meet the minimum local match requirement or an over-match? Use the Match Calculator to determine the appropriate match. Match Calculator (Posted on STPG Website)

   ☒ Minimum Local Match ☐ Over-Match

2. What is the source of Local Match funds being used?
   (MPOs – Federal Toll Credits, PL, and FTA 5303 cannot be used to match Sustainable Communities Competitive or Adaptation Planning grants)

   ☒ Local Transportation Funds ☒ Local Sales Tax ☐ Special Bond Measures

   ☐ Other, specify:

Grant Funds Requested	Local Match (Cash)	Local Match (In-Kind)	Total Local Match	% Local Match	Total Project Cost
$286,395	**$37,105**	**$0**	**$37,105**	**11.47%**	**$323,500**

Project Description (3-5 Sentences Max.)	
Insert Application Narrative: 1. Project Description	The proposed City of Ukiah East Perkins Street Multimodal Transportation Plan will address deficiencies in pedestrian, bicycle, and transit facilities by studying needs and recommending multimodal and streetscape improvements for East Perkins Street (from Main Street to Oak Manor Drive), a key corridor connecting US 101 to downtown Ukiah. The goal of this project is to develop a community-vetted, technically feasible plan to create a safer, more efficient transportation corridor that promotes active transportation, housing, economic development, climate resilience, and provides accessible mobility options for Ukiah's under-resourced communities. Solutions will be informed by community and stakeholder engagement, data collection, and conceptual analysis. The plan will also consider upcoming developments within the corridor, including a new county courthouse, hospital expansion, and affordable housing projects, which are expected to increase transportation demand. Key outcomes include a meaningful and comprehensive community engagement, an assessment of existing conditions and needs, concept alternatives analysis, and a final plan featuring recommendations, a 30% conceptual design, cost estimate, and an implementation strategy, which will developed in collaboration with Caltrans, the Mendocino Council of Governments, Mendocino Transit Authority, and other key stakeholders.

Project Type

Choose the Project Type that best represents the focus of the proposed project. See Grant Application Guide for examples. Select a maximum of two project types.

- ☐ Active Transportation (Bicycle and Pedestrian)
- ☐ Climate Change (Infrastructure Adaptation, Vulnerability and Resiliency)
- ☐ Complete Streets (Multimodal specific type)
- ☐ Corridor (Local Streets or Highways)
- ☐ Freight/Goods Movement
- ☐ General Plan-Related (Circulation Element, Land Use Element, Specific Plan)
- ☒ Multimodal (Motorized and Active Transportation)
- ☒ Safety (Vision Zero, Safe Routes to Schools)
- ☐ Technical (Modeling, VMT Mitigation, ZEV Infrastructure, ZEB Transition, etc.)
- ☐ Transit (Bus, Light Rail, and Commuter Rail Service)
- ☐ Other, specify:

PART B. PROJECT INFORMATION (CONTINUED)

Under-Resourced Community Definitions

If applicable to the project, what tools were used to identify the under-resourced communities in the project area? Choose all that apply.

- ☒ Rural Communities of 50,000 or less and outside of urbanized areas
- ☐ Native American Tribal Governments
- ☐ Regionally/Locally Defined Under-Resourced Communities
- ☒ At/Below 80% Assembly Bill 1550 (Gomez, Statutes of 2016)
- ☐ At/Above 75% California Department of Education, Free or Reduced Priced Meals Data
- ☐ At/Above 75% CalEnviroScreen Version 4.0
- ☐ At/Below 25% California Healthy Places Index

PART C. CONTACT INFORMATION*

PART D. COMPLIANT HOUSING ELEMENT

City/County Primary/Sub-Applicants for Sustainable Communities Grants	Yes	No
Does the City/County have a compliant Housing Element? If No, explain the current status:	X	
Has the City/County submitted Annual Progress Report to the California Department of Housing and Community Development for calendar years 2022 and 2023?	X	

PART E. OTHER FUNDING PROGRAMS

Applicants may leverage other program funds for this planning grant, as long as the activities are eligible.

	Yes	No	N/A
Is the applicant applying for the Governor's Office of Planning and Research (OPR) Climate Adaptation Planning Grant Program? Applicants should not submit the same project application to both funding programs. However, applicants may propose to leverage funds from one funding program to another. For instance, an applicant with a large project may propose to fund one component with Caltrans funds, and another with OPR funds. Applicants may also propose two entirely different projects to each funding program. If yes, identify the differences between each proposal, and briefly summarize the leverage opportunity if awarded both Caltrans and OPR funding:		X	
Is the applicant applying for any other funding programs to complete this project? If yes, list them here:		X

PART H. APPLICATION NARRATIVE

FY 2025-26

Project Information	
Organization (Legal name)	City of Ukiah
Project Title	City of Ukiah East Perkins Street Multimodal Transportation Plan
Project Area Boundaries	East Perkins Street, Ukiah, from Main Street to Oak Manor Drive
Project Timeframe (Start and End Dates)	January 1, 2026 - April 29, 2028 (28 months)

Do not alter application format and font size 10

Application Narrative

1. **Project Description (10 points) - Do not exceed the space provided (5 sentences maximum)**
   Briefly summarize project in a clear and concise manner, including why the project is necessary, major deliverables, parties involved, and any connections to relevant local, regional, and/or State planning efforts.

The proposed City of Ukiah East Perkins Street Multimodal Transportation Plan will address deficiencies in pedestrian, bicycle, and transit facilities by studying needs and recommending multimodal and streetscape improvements for East Perkins Street (from Main Street to Oak Manor Drive), a key corridor connecting US 101 to downtown Ukiah. The goal of this project is to develop a community-vetted, technically feasible plan to create a safer, more efficient transportation corridor that promotes active transportation, housing, economic development, climate resilience, and provides accessible mobility options for Ukiah's under-resourced communities. Solutions will be informed by community and stakeholder engagement, data collection, and conceptual analysis. The plan will also consider upcoming developments within the corridor, including a new county courthouse, hospital expansion, and affordable housing projects, which are expected to increase transportation demands. Key outcomes include meaningful and comprehensive community engagement, an assessment of existing conditions and needs, conceptual alternatives analysis, and a final plan featuring recommendations, a 30% conceptual design, cost estimate, and an implementation strategy, which will developed in collaboration with Caltrans, the Mendocino Council of Governments, Mendocino Transit Authority, and other key stakeholders.

2A. Project Justification (15 points) - Do not exceed the space provided

- Describe the problems or deficiencies the project is attempting to address, as well as how the project will address the identified problems or deficiencies
- Describe the ramifications and impact of not funding this project
- Clearly define the existing issues surrounding the project (e.g., transportation issues, inadequate transit services, impacts of heavy trucking on local streets, air pollution, etc.)
- Competitive applications support the need for the project with empirical data
- Describe how this project addresses issues raised
- Define the public benefit
- Explain how the public was involved with identifying issues

East Perkins Street is a critical transportation corridor providing primary access between US101 and downtown Ukiah, as well as other key destinations such as the county courthouse, the hospital, pharmacy, the main library, housing, groceries, restaurants, and other amenities. Current conditions prioritize vehicular traffic while discouraging pedestrian and bicycle travel, with no dedicated bicycle facilities and narrow sidewalks adjacent to high-volume vehicular lanes. The corridor also lacks essential streetscape features like shade trees, lighting, and landscaping to create a more secure and comfortable environment for non-motorized users. Long wait times at signalized intersections contribute to idling vehicles and poor air quality. Pedestrian crossings extend up to 80' long, increasing the potential for pedestrian/vehicle collisions. Despite its intersection with the Rail Trail—a section of the Great Redwood Trail—the lack of adequate pedestrian and bicycle facilities on East Perkins discourages use of the Rail Trail to access destinations along the corridor. Sight distances at the eastern US101 access ramp are notably short, creating a difficult access ramp/street interface. The Blue Zones Project, which promotes healthy living through built environment changes. inspired community and City Council support for multimodal improvements, such as roundabouts and a road diet, to transform East Perkins Street. However, the City requires further community input, needs assessment, and detailed analysis to refine priorities and evaluate alternative solutions in order to advance concepts for development.

RAMIFICATIONS OF NOT FUNDING – Without funding, the City will miss the opportunity to use this planning effort as the foundation for investments and pursuit of grants to improve safety and mobility along this critical corridor. East Perkins Street is expected to see significant development in the coming years, with the new courthouse, hospital expansion, and a proposed low-income senior housing development. This development will increase the demand for both motorized and non-motorized travel solutions. Planning studies are necessary to prepare for this growth. As a rural, disadvantaged community, Ukiah relies on grants to fill the funding gap. Failure to fund this study will likely result in worsening safety conditions as the area grows, ultimately exacerbating the challenges faced by residents.

EXISTING ISSUES – East Perkins Street is a heavily traveled corridor, carrying on average 14,000 motor vehicles per day (2040 General Plan EIR) between US101 and Ukiah's urban core. It is also an important transit route with multiple service lines and the highest average weekday total boardings/alightings in Ukiah (see attached heat map from the 2024 Transit Feasibility Study). The street is vehicle-centric, with four travel lanes, narrow curb-attached sidewalks and long crosswalks through multiple lanes of traffic. The absence of bike facilities forces cyclists to ride in the vehicle lanes. The highway ramps between

2A. Project Justification (continued)

Orchard and Oak Manor Drive carry between 2,900 and 4,840 daily (2022 Caltrans Ramp Volumes) on and off the freeway, contributing to bottlenecks. Additionally, the corridor lacks shade and is extremely hot during the summer, with temperatures that frequently exceed 100 degrees. The street lacks adequate lighting, reducing nighttime pedestrian and bicyclist visibility. Together these conditions contribute to a stressful and discouraging environment for non-motorists, users of transit, and motorists alike. Indeed, the 2024 Ukiah Local Road Safety/Action Plan found that East Perkins Street includes some of the most significant high collision and high injury intersections and roadway segments in the city, with unsafe speed and improper turning as the most common violation category (see attached maps and tables).

This PROJECT ADDRESSES ISSUES RAISED by encouraging diverse public input with a comprehensive and meaningful engagement process to understand community needs, studying existing conditions and analyzing innovative solutions, resulting in a well-informed final plan that recommends implementable multimodal transportation solutions to address safety and accessibility needs, while meeting climate goal objectives. It will explore mutlimodal and traffic calming improvements such as roundabouts, lane reductions and enhanced crosswalks to provide more space and protection for pedestrian and bicycle facilities, and first/last mile improvements to transit, while slowing traffic, improving flow, and reducing points of conflict for safety and circulation. Slower speeds with improved efficiency for gas vehicles, coupled with added shade canopy with streetscape landscaping, have the added benefit of reducing greenhouse gas emissions and heat islands, improving air quality, and reducing exposure to extreme heat for non-motorized travelers. These improvements bring equity and dignity to Ukiah's most vulnerable populations, youth, seniors, people with disabilities and others unable to drive or that do not have access to a car and rely on walking, rolling, biking and transit for mobility needs. Promoting active transportation options creates more opportunities for the community to engage in healthy lifestyle choices and encourages future development by making the corridor a more inviting and accessible location.

The PUBLIC BENEFIT will be the development of a community-informed multimodal transportation plan that will be used to pursue implementation funding for the recommended improvements to to increase safety, improve circulation, and beautify the corridor, leading to enhanced active transportation options and improved quality of life for local residents as well as visitors. Further benefits include encouraging infill housing and economic development by calming traffic and making the street more accessible.

PUBLIC INVOLVEMENT – The project builds upon the needs identified by community members through numerous planning efforts and studies, such as the 2022 Ukiah Local Road Safety Plan and the 2024 Ukiah Transit Center Feasibility Study, and at the July 2023 City Council workshop in which Blue Zones transportation experts presented potential tools and strategies for transforming the corridor. Engagement will consist of an interactive series of community workshops, online surveys, walkability audits, and pop up booths at community events and the Civic Center. Initial events and activities will elicit and confirm needs and preferences. The input will then be used to prepare solutions for motorized and non-motorized transportation and streetscape improvements to the East Perkins corridor. Concepts will be presented for feedback and refinement to facilitate community ownership and support. Engagement strategies include targeted outreach to disadvantaged community members through community resource centers and nonprofits. Meetings and materials will be offered in Spanish, as well as English, and food will be provided.

2B. Under-Resourced Communities Justification (5 points) - Do not exceed the space provided

- Explain how the project area or portions of the project area are defined as an under-resourced community, including Native American Tribal Governments and rural communities
- Explain how the proposed project addresses the needs of the under-resourced community
- Describe how under-resourced communities will benefit from the proposed planning project
- Cite data sources, the Grant Application Guide Appendix A tools used to define under-resourced communities, and include a comparison to the statewide thresholds that are established in each tool

Ukiah is a small rural community located outside an urban area with a population of about 16,500, qualifying it as a under-resourced community as defined in Appendix A of the Grant Guidelines. American Community Survey (ACS) 2023) 5-Year census data indicate the median household income (MHI) for the two census tracts 115 and 116 where the project area is located is $46,750 and $61,089 - 49% and 63% of the statewide MHI of $96,344 - which meets the under-resourced community definition of at or below 80% of the state MHI per AB 1550. The ACS data also indicate 8,741 people reside in the two tracts, with 51% and 38% of the populations reported as Hispanic. Additionally, Healthy Places Index ranks Tract 116 in the 24.5th percentile as a whole and bottom 10.3th percentile for access to a car compared to the state. Residents in Tract 115 rank in the bottom 22.1th percentile for access to a car. The tribal lands of Pinoleville, Guideville, Coyote Valley, and Redwood Valley Rancheria are all within close proximity with Ukiah acting as a hub for resources. The project will significantly benefit these residents, many of whom live within walking or bicycling distance of East Perkins Street. A plan that improves conditions for walking, bicycling and connections to transit and key destinations will benefit all residents but will be a greater benefit for lower income residents who live and work in the neighborhoods near the corridor, as well as those who do not own a car or who are more dependent on walking, bicycling and transit to meet their mobility needs.

2C. Under-Resourced Communities Engagement (5 points) - Do not exceed the space provided

- See Grant Application Guide, Appendix A, for community engagement best practices
- Describe how the proposed effort would engage under-resourced communities, including Native American Tribal Governments and rural communities. Include specific outreach methods for involving under-resourced communities
- Describe how under-resourced communities will continue to be engaged during the next phases after the proposed planning project is complete, including project implementation.

The project will ensure inclusive engagement of under-resourced communities, including Native American Tribal Governments and rural residents, through a comprehensive Public Outreach Plan. Engagement methods include in-person and virtual public workshops, surveys, stakeholder meetings, listening sessions, virtual and in-person site visits, and focus groups, with Spanish and English materials and translation services available. Outreach will include low-tech options such as posters, flyers, and comment cards to ensure accessibility. The four federally-recognized tribal governments near the project area (Pinoleville, Guidiville, Coyote Valley, and Redwood Valley Rancherias) will receive direct outreach, including engagement at tribal meetings. Vecinos en Acción will be a partner in outreach to the Spanish speaking community members, with information and community workshop advertisements in the local Spanish newspaper Al Punto. Partnerships with community organizations, non-profits, and agencies will help engage underserved groups such as low-income individuals, seniors, veterans, and youth. During implementation, updates will be provided to the City of Ukiah's Diversity and Equity Committee, along with regular email notifications, social media updates, and follow-up workshops to keep underserved communities informed and involved.

3. Grant Specific Objectives (Total 35 points)
Integrate the following Grant Program Considerations (Grant Application Guide, Chapter 1.2) in the responses for 3A-G below, as applicable:

- Caltrans Strategic Plan
- California Transportation Plan (CTP)
- Modal Plans that Support the CTP
- Strategic Highway Safety Plan
- Title VI and Environmental Justice
- Climate Action Plan for Transportation Infrastructure
- California Adaptation Strategy
- Master Plan for Aging

3A. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal encourages local and regional multimodal transportation, housing and land use planning that furthers the region's RTP SCS (where applicable)
- Demonstrate how the proposed effort would coordinate transportation, housing, and land use planning components of the project to inform one another (i.e., regular coordination meetings between responsible entities, joint community meetings, letters of commitment from all relevant implementing agencies, etc.
- Explain how the proposed effort would contribute to shifts in land use towards more sustainable and equitable communities, such as more affordable housing near transit or more compact regional development patterns (Reference Grant Application Guide, Chapter 2.2, for example project types)

This proposal directly encourages regional multimodal transportation by seeking to improve and expand non-motorized options and increase the safety of vehicular options along the busy East Perkins corridor. The CTP and CAPTI, as well as the region's RTP, support and encourage complete streets and active transportation options. Proposed enhancements using innovative design concepts, such as roundabouts and road diets with streetscape elements, reduce non-motorized crossing distances and encourage walking and biking. These improvements maximize efficient use of the right of way and provide improved connectivity between travel destinations, such as work, shopping, medical appointments, and home. Expanding multimodal and streetscape elements from the downtown core to US101 will create a gateway corridor that will revitalize the area and improve conditions for local underserved residents. The plan will coordinate transportation, housing, and land use planning, by bringing together representatives from Caltrans, the Adventist hospital, the Judicial Council, Pear Tree Shopping Center, Mendocino County, Mendocino Transit Authority, along with responsible City Departments in regular coordination meetings to ensure recommended improvements are supported by decision makers and are implementable. The City is a regional leader in land use planning and affordable housing development, leading to the local goals of improved compact regional development patterns. The City has recently adopted a 2040 General Plan, including Mobility and Housing Elements (Dec 2022). The City has also submitted all Housing Element annual reports to HCD, and it was recently awarded a Prohousing Designation by HCD, with a score of 38 points. Over 100 units of new housing were permitted in 2022 in Ukiah, many of which were in close proximity to East Perkins Street. 77 units of low- and moderate-income housing were recently constructed within walking distance on East Gobbi Street in a mixed-use development, and an additional 35 units of tribal housing units are in the advanced planning stages. Residents adjacent to the corridor will be able to engage in active modes of transportation with increased equity and safety for non-motorized travelers.

3B. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal contributes to the State's GHG reduction targets and advances transportation related GHG emission reduction project types/strategies (i.e., mode shift, demand management, travel cost, operational efficiency, accessibility, and coordination with future employment and residential land use, etc.)

This proposal contributes to the State's GHG reduction targets by providing recommended non-motorized facility improvements along East Perkins Street, where bike lanes are absent and pedestrian infrastructure requires modernization. Improving connections to key destinations, including housing, low/moderate income housing, shopping, medical services, County services, and the Great Redwood Trail/Rail Trail expands the active transportation network, encouraging mode shift with improved access and conditions for residents, visitors, shoppers, and employees able to walk and bike to destinations These enhancements support a shift away from single-occupant vehicles, reducing the Vehicle Miles Traveled (VMT).

Community-supported traffic calming concepts such as roundabouts/road diet will improve circulation and vehicular efficiency, reducing congestion and idling vehicles, which lowers carbon emissions. Adding street trees will also provide carbon sequestration. The project aligns with the Caltrans 2020-24 Strategic Plan goals to "enhance and connect the multimodal transportation network" and "advance equity and livability in all communities." Transportation demand is expected to rise with the relocation of the County Courthouse to East Perkins Street in the next 3-5 years, a planned hospital expansion, and preliminary plans for affordable housing. Strengthening multimodal connections, particularly to the Great Redwood Trail, will support sustainable growth, reduce GHG emissions, and promote equitable access for all.

3C. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal supports other State goals, including but not limited to:
  - State Planning Priorities (Government Code Section 65041.1)
  - Climate Adaptation Goals (State Adaptation Strategy)
  - Goals and Best Practices cited in the 2024 RTP Guidelines, Appendices E and G

This proposal supports State Planning Priorities (Gov. Code Sec 65041.1) to promote infill development and equity by improving existing motorized and non-motorized infrastructure, and streetscape enhancements to support infill development and/or reuse of unused or vacant buildings along the corridor.

The project supports Climate Adaptation Goals (State Adaptation Strategy) PRIORITY 1: Strengthen Protections for Climate Vulnerable Communities with shade trees (GOAL A; Action 4) increase community participation in planning transportation projects to build climate resilience - it does this by including a thorough community outreach & engagement process to invite community input; and GOAL C; Action 7) promote sustainable land use planning and transportation investments that support walkable and bikeable communities and infill development to build resilience of climate vulnerable communities - it does this by identifying multimodal and streescape improvements that expand and improve walkable and bikeable transportation options and build climate resilient infrastructure by planting carbon sequestering and shade producing streetscapes and by reducing vehicular travel & accompanying GHGs.

2017 RTP Guidelines, Appendix L (pg 334) indicates that bicycle and walking transportation modes promote a healthy lifestyle and reduce environmental impacts. A key focus of this project is expanded and improved bicycle and pedestrian access along this corridor, thus supporting a healthy lifestyle.

3D. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal encourages stakeholder involvement
- List the stakeholders involved in the planning effort (e.g., first responders, community-based organizations, local housing and public health departments, transit agencies, and partners including State, federal, local agencies)
- Explain how stakeholders will be involved throughout the project

Stakeholders will be engaged throughout the process through participation in a project advisory group and a technical working group, focus meetings and community workshops, which will include two walking audits. This will provide ample opportunity to provide meaningful input into identifying improvements needed along the corridor. Online public engagement tools (e.g. surveys, mapping, website postings, etc.) will also be used to seek input and engage stakeholders. Low-tech options (flyers, comment cards, printed information, etc.) will be available for those without access to technology.

Stakeholders will include representatives from the City of Ukiah (Public Works, Community Development, Planning Division, Housing Division, Fire, Safety), Caltrans, Judicial Council of California, County of Mendocino, Great Redwood Trail Authority, Mendocino Transit Authority, Walk & Bike Mendocino, Mendocino Council of Governments, Native American Tribal Governments, and Adventist Health Ukiah Valley. Stakeholders may be involved throughout the project in a variety of ways, including attending the well-advertised community events, targeted meetings to discuss project elements and solicit input, accessing the project website for information or providing comment, and receiving project updates via an email contact list.

3E. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal involves active community engagement
- Describe the specific public outreach methods/events that will be employed throughout the project
- Explain how public input will inform the project
- Describe how the effort will survey the public at the end of each outreach event to gauge effectiveness of these activities for the planning effort

This proposal involves active community engagement, reaching out in various ways to low-income, minority, limited-English proficiency, disabled, senior, veteran, Native American, business, and other community members to gather meaningful input on multimodal improvements. A series of initial community workshops will invite feedback on existing transportation facilities and solicit input on needs and priorities. This input will identify the needs and priorities of the community and provide objectives to guide the transportation planners and engineers in development of concepts and solutions. Online surveys will provide additional opportunities for members of the public that prefer contributing comments through online platforms. Walkability audits and tours with community members will offer an opportunity to assess current conditions and discuss possible outcomes. The consultant will use public input, data, and research to develop concepts for review at a second round of community forums, offering further engagement. Information gathered will inform the draft Plan, and outreach on the draft Plan will provide a third opportunity for public comment and contribution to the development of the Plan. A variety of outreach methods will advertise these events and solicit input, including working with local non-profits, news releases, flyers, email notifications, and a project website. Events and online resources will offer individuals the opportunity to provide feedback to assess the effectiveness of the outreach efforts.

3F. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal assists in achieving the Caltrans Mission and Grant Program Objectives (Grant Application Guide, Chapter 1.2): Safety, Sustainability, Preservation, Accessibility, Innovation, Economy, Health, and Social Equity, as applicable

SUSTAINABILITY - This Objective to "promote reliable and efficient mobility of people...while meeting the State's GHG emission reduction goals" is achieved by the project's purpose to improve/expand bicycle & pedestrian infrastructure. PRESERVATION - This Objective to "preserve the transportation system through...improving quality of life" is met by the project's focus to provide enhanced active transportation opportunities which benefit an active and healthy lifestyle. ACCESSIBILITY - This Objective to "increase accessibility of the system and mobility of people" is met by the project's purpose to create more accessibility by improving/expanding multimodal transportation modes, including bicycle, pedestrian, and transit modes. SAFETY - This Objective to "prioritize the elimination of fatal and serious injury crashes and enhance the safe use of roadways" is met through the project's aim to reduce vehicular/non-vehicular conflicts and increase safety of intersecting travel modes along the corridor. HEALTH - This Objective to "decrease exposure to local pollution sources...and promote physical activity across the lifespan... through transportation means" is met by the project's goal to provide an improved and expanded active transportation network between US101 and downtown Ukiah, thus decreasing the need for vehicular travel. SOCIAL EQUITY - This Objective to "promote transportation solutions that prioritize the needs of underserved communities...while encouraging meaningful public involvement" is met by inviting underserved community to become engaged in the planning process to identify and comment on the multimodal transportation needs and accessibility along the East Perkins Street corridor.

3G. Grant Specific Objectives (5 points) - Do not exceed the space provided

- Explain how the proposal ultimately results in funded and programmed multimodal transportation system improvements
- Discuss next steps for project implementation, including timing for programming improvements that would result from the planning effort

The proposed planning project will result in community vetted, well informed plan that identifies best solutions for multimodal and streetscape improvements to the East Perkins Street corridor. The plan will develop recommendations, a preliminary cost estimate, and develop the recommended concept to a 30% design that is technically sound and feasible. The deliverables will provide a foundation that will position the project for the next steps toward implementation.

The plan will provide a solid foundation for City of Ukiah staff to prepare competitive grant applications for state and/or federal grant funding to secure funding for construction of the recommended improvements. The project's inclusion of a robust public engagement process is expected to aid in future grant applications that require a thorough public outreach process.

The City seeks to implement this plan within a five to seven year time frame, provided that grant funding for construction can be secured within this timeline. The plan will be instrumental in obtaining implementation funding.

4.	**Project Management (Total 30 points)** See Scope of Work and Cost and Schedule samples and checklists for requirements (Grant Application Guide, Appendix B), also available on the Caltrans grants website: https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/regional-and-community-planning/sustainable-transportation-planning-grants
4A.	**Scope of Work (15 points)**
4B.	**Cost and Schedule (15 points)**

Scope of Work Checklist

The Scope of Work (SOW) is the official description of the work that is to be completed during the contract. Tasks 1-6 outlined in the SOW are for illustrative purposes only. **Applications with missing components will be at a competitive disadvantage.** Please use this checklist to make sure your Scope of Work is complete.

Scope of Work Checklist	
(✓)	**Ensure these items are completed prior to submitting to Caltrans**
✓	Use the Fiscal Year 2025-26 template provided
✓	Include the activities discussed in the grant application
✓	List all tasks using the same title as stated in the Project Cost and Schedule
✓	Include task numbers in accurate and proper sequencing, consistent with the Cost and Schedule
✓	Exclude sub-task numbers; only include sub-headings
✓	Exclude tasks for project management and/or staff/consultant coordination; these activities should be spread among relevant tasks
✓	Include a thorough Introduction to describe relevant background, related planning efforts, the project and project area demographics, including a description of the under-resourced community involved with the project, if applicable
✓	Include a thorough and accurate narrative description of each task
✓	Task 01 is a required task. It must be titled "Project Administration", it cannot exceed 5% of the grant award amount, and only the grantee and sub-recipient(s) can charge against this Task. This Task must only include the following activities and deliverables: • Caltrans and grantee Project kick-off meeting at the start of the grant • Invoicing and quarterly reporting to Caltrans • DBE Reporting (federal grants only)
✓	Include Task 02 for the procurement of a consultant (if needed). This task is for the grantee and sub-applicant(s) only.
✓	Include detailed public participation and services to diverse communities in the Public Outreach Task (excluding technical projects)
✓	Identify public outreach strategies in a manner that provides flexibility and allows for a diverse range of outreach methods (both in-person and virtual), excluding technical projects
✓	Include a Task(s) for a Draft and Final product. The draft plan must include an opportunity for the public to provide feedback (excluding technical projects).
✓	Include a summary of next steps your agency will take towards implementing the project in the Final Product
✓	List achievable project deliverables for each Task
✓	EXCLUDE environmental, complex design, engineering work, and other ineligible activities outlined in the Grant Application Guide

SCOPE OF WORK

Project Information	
Grant Category	**Sustainable Communities Competitive**
Grant Fiscal Year	**FY 2025-26**
Project Title	**City of Ukiah East Perkins Street Multimodal Transportation Plan**
Organization (Legal name)	**City of Ukiah**

Disclaimer

Agency commits to the Scope of Work below. Any changes will need to be approved by Caltrans prior to initiating any Scope of Work change or amendment.

Introduction

East Perkins Street serves as the primary east-west connection between US-101 and downtown Ukiah's commercial core at Perkins/State Street. Building on the success of the recent Downtown Streetscape Project, which transformed State Street (a former segment of US-101) with a road diet, widened sidewalks, improved crossings, and enhanced streetscape elements like lighting, street trees, and pedestrian amenities, the City of Ukiah seeks to bring similar improvements to East Perkins Street. These upgrades on State Street have created safer, more sustainable, and resilient infrastructure, setting a benchmark for reimagining Ukiah's transportation network.

The proposed transformation focuses on East Perkins Street, spanning from Main Street to Oak Manor Drive on the eastern side of US-101. Currently, this corridor functions as an extension of the highway, characterized by narrow 5-foot sidewalks adjacent to four to five lanes of high-volume, fast-moving vehicular traffic. The absence of bicycle facilities, despite the corridor's connection to the Rail Trail (Great Redwood Trail), exacerbates challenges for active transportation users. These auto-centric conditions contribute to significant stress and discomfort for pedestrians and cyclists.

A recent presentation by Dan Burden, Director of Innovation and Inspiration at the Blue Zone Project, highlighted the need for multimodal improvements on East Perkins Street, including roundabouts and a road diet. These recommendations align with the City's adopted plans and have galvanized community interest in creating a safer, more inclusive corridor. However, the City seeks additional community input and technical analysis of these and other concepts before best solutions for multimodal improvements to the corridor can be determined.

The City of Ukiah East Perkins Street Multimodal Transportation Plan will capitalize on this momentum through a community-driven planning process. The plan will identify needs, collect data, and analyze current conditions to develop actionable recommendations for multimodal enhancements. Proposed improvements will align with the City of Ukiah 2040 General Plan, the Mendocino Council of Governments' 2022 Regional & Active Transportation Plan, and the California Transportation Plan 2050, all of which prioritize "Complete Streets" solutions. This approach ensures equitable, safe, and efficient travel for all modes, including walking, biking, driving, and public transit.

Key enhancements under evaluation include roundabouts, a road diet, streetscape improvements, and gateway features to create a safe and inviting connection between US-101 and downtown Ukiah. The plan will also address access to critical regional destinations along

East Perkins Street, including Adventist Health Ukiah Valley Hospital, the future Mendocino County Superior Courthouse, the Ukiah Main Branch Library, and nearby low- and moderate-income housing, the Rail Trail (Great Redwood Trail), as well as retail centers such as the Pear Tree Shopping Center. Anticipated development projects, including the new courthouse, hospital expansion, and a new road extending from Hospital Drive, underscore the urgent need to prepare East Perkins Street for increased transportation demand.

As an underserved community with a median household income at 68.5% of the statewide average, Ukiah stands to benefit significantly from these improvements. Census tracts along East Perkins Street show even lower income levels, with tracts 115 and 116 at 65.3% and 45.8% of the statewide median, respectively. Planning multimodal upgrades for this corridor will support low- to moderate-income residents, enhance equitable access to regional resources, and contribute to climate goals by encouraging active transportation.

With Caltrans as an active partner, this planning effort will coordinate closely on improvements within and adjacent to Caltrans' right of way. The final study will serve as a roadmap to pursue funding for implementation, ensuring East Perkins Street evolves into a modern, multimodal gateway corridor that enhances connectivity, sustainability, and quality of life for Ukiah residents.

Project Stakeholders

City of Ukiah

The City of Ukiah is the lead applicant and will be the grant recipient. The project will be overseen by a small team comprised of staff from the Public Works Streets and Community Development Planning, Housing and Grants Management Divisions, with a key point of contact assigned for grant administration and coordination. The City will execute the Restricted Grant Agreement with Caltrans and execute an agreement with its sub-applicant, CivicWell, a 501(c)3 non-profit organization. The City will conduct a competitive bid process to select a qualified consultant team with multimodal transportation planning, traffic engineering and urban design expertise. The City will provide $37,105 in matching funds to meet the 11.47-percent local match. Staff will coordinate with Caltrans District staff and other project partners and agencies, establish a Project Advisory Group and Technical Working Group, participate in community engagement activities, attend meetings, provide data and policy documents, review consultant products, and direct revisions. City staff will prepare quarterly invoices and reports to Caltrans with documentation support from CivicWell and the selected consultant. Staff will also coordinate with partners to help publicize the project and ensure public participation in all aspects of the community planning process.

CivicWell

CivicWell will assist the City with project coordination and documentation. Staff will help the City assemble and facilitate a Project Advisory Group, organize the community engagement events, develop publicity materials with local input, and document public input for inclusion in the resulting plan document. CivicWell staff will work closely with the City and consultant team to design and implement community engagement activities including in-person and virtual workshops, walk audits, and stakeholder listening sessions and focus group meetings. CivicWell has extensive experience in public engagement in planning processes, multi-modal transportation planning and community design. Since 2001, CivicWell has worked on over 80 planning projects funded by Caltrans throughout the state. CivicWell has staff that is fluent in Spanish and can produce outreach materials and conduct meetings and workshops in English and Spanish.

Consultant

The selected consultant (or team of consultants) will have expertise in active transportation, multimodal transportation planning, traffic engineering and urban design. The consultant will do the following:

- Analyze and document detailed baseline conditions for multimodal access, connectivity, traffic safety and operations, and transit service and operations,
- Actively participate in facilitation of community engagement activities,
- Develop design concepts and visualizations, generate recommendations that respond to input from residents, stakeholders and responsible agencies,
- Conduct technical analysis which will include:
    - Review and documentation of existing right of way, land use and transit conditions, and previous analysis for potential alignments and improvements on the corridor,
    - Collect and evaluate traffic data for all modes at a detailed level.
    - Develop conceptual plans and design detailing proposed infrastructure and operational improvements (with the final recommended plan developed to 30% completion).
    - Prepare preliminary cost estimates, implementation phasing, actions, presentations, and approvals required for proposed improvements.
- Prepare the City of Ukiah East Perkins Street Multimodal Transportation Plan document.

Community and Agency Stakeholders

As described in the scope of work tasks below, numerous stakeholders will be engaged throughout the planning effort, including (but not limited to) representatives from Caltrans, Mendocino Council of Governments, Mendocino Transit Authority, Mendocino County Departments of Planning, Social Services, Public Health, and Transportation, City of Ukiah Fire Authority, Ukiah Police Department, Ukiah diversity and Equity Committee, the local tribes of Pinoleville, Guidiville, Coyote Valley Rancheria, and Redwood Rancheria, Vecinos en Accion, Great Redwood Trail Authority, Adventist Health - Mendocino County, the Blue Zones Project, Judicial Council of California/Mendocino County Court, Walk & Bike Mendocino, North Coast Opportunities, Greater Ukiah Business and Tourism Alliance, and Climate Action Mendocino, City of Ukiah Housing Division, East Perkins Street business owners and property owners, and organizations that work with youth, seniors, and people with disabilities. Other stakeholders may be included, according to availability, such as local schools, disability advocates, and other non-profits.

Overall Project Objectives

The primary objectives of this project are to promote multimodal transportation by creating safer, more accessible, and efficient travel networks for all users while enhancing aesthetics and establishing inviting gateways into Ukiah from regional corridors.

Community support has highlighted interest in improvements such as roundabouts and a road diet along the corridor. The planning effort will evaluate these options, among others, as potential solutions to meet project objectives. This process will involve comprehensive data collection, research, and analysis of current conditions along East Perkins Street, from the eastern ramps of US-101 to Main Street, as well as the anticipated impacts of proposed changes.

Recommendations will identify the most effective strategies to achieve project goals. The City will collaborate closely with Caltrans to assess any impacts on the highway system and, ensure recommended improvements function in harmony with highway operations, and where feasible, propose recommendations to enhance highway-street intersections.

Additional objectives include:

- Develop, evaluate, and identify a shared vision and design concepts for new and enhanced pedestrian, bicycle, and transit access and connectivity.
- Improve safety for vulnerable road users in the corridor such as youth, seniors, pedestrians, bicyclists, and people with disabilities.
- Develop equitable, viable and affordable mobility choices for under-resourced populations.
- Develop mobility solutions that support infill housing and mixed-use development within walking distance to key commercial and service destinations and transit stops.
- Reduce VMT and GHG emissions through increased active transportation and shared mobility options, and operation and circulation improvements for motor vehicles,
- Facilitate community input and collaboration with a wide range of people through a wide range of engagement methods on their needs and desires to create a shared vision for the mobility network that will enhance pedestrian, bicycle, and transit access and connectivity.

Summary of Project Tasks

The following is a description of tasks to complete the project.

Task 01: Project Administration

The City will manage and administer the grant project according to the Grant Application Guidelines, Regional Planning Handbook, and the executed Restricted Grant Agreement between Caltrans and the City. Costs for this task will not exceed 5 percent of the grant award amount.

Kick Off Meeting with Caltrans
The City will attend a project kick-off meeting with Caltrans to review the scope of work for the grant, grant reporting, invoicing and other elements of the grant requirements.

Quarterly Progress Reports
The City, with support from CivicWell, will submit quarterly project reports and fiscal reports to Caltrans District staff to provide a summary and percent completion of project progress and grant/local match expenditures.

Invoicing
The City will submit complete invoice packages to Caltrans District staff (at least quarterly, but no more frequently than monthly).

Task Deliverables
• Notes from the kick-off meeting with Caltrans • Quarterly progress reports (City, CivicWell) • Quarterly invoice packages (City, CivicWell)

Task 02: Consultant Procurement and Sub-Contracting

Request for Proposals
In consultation with Caltrans staff, the City will prepare and advertise a request for proposals and scope of work to solicit a consultant (or team of consultants) with the necessary expertise, qualifications, and experience to develop the plan. The RFP will follow the proper procurement procedures established by Caltrans for these projects. A Review Committee will be formed to evaluate the proposals and select the consultant.

The consultant procurement process will comply with state and, if applicable, federal requirements, including the Local Assistance Procedures Manual for non-Architectural and Engineering consultants, the Grant Application Guide, the Regional Planning Handbook, and the terms of the executed grant contract.

Consultant On-boarding
The City will execute an agreement with the consultant to deliver the Multimodal Plan and supporting engagement and hold a kick-off meeting with the consultant and CivicWell.

Agreement with Sub-applicant
The City will execute an agreement with CivicWell to assist with project management, consultant coordination, jurisdiction and agency engagement, and stakeholder and community outreach, engagement, education and documentation.

Task Deliverables
• Copy of RFP (City) • Copy of agreement between the City and consultant (City) • Copy of the agreement between the City and CivicWell (City) • Agenda and notes from the kick-off meeting (City, CivicWell)

Task 3: Outreach Planning and Coordination

The City will identify key stakeholders, assemble an advisory group and technical working group, develop an outreach and engagement strategy and produce and distribute outreach materials. Activities to be completed under this task are described below.

Assemble Stakeholder List
The City, with support from CivicWell, will assemble and maintain a stakeholder contact database of representatives from the public, nonprofit and private sectors and other interest groups that reflect the demographics and perspectives of City residents. Special efforts will be made to identify agencies and organizations that work with disadvantaged communities. The initial list will include:

- Caltrans District 1
- Mendocino Council of Governments
- Mendocino Transit Authority
- Mendocino County Departments of Planning, Social Services, Public Health, and Transportation
- Ukiah Valley Fire Authority
- Ukiah Police Department
- City of Ukiah Housing Division
- Ukiah Diversity and Equity Committee
- Pinoleville, Guidiville, Coyote Valley, and Redwood Valley Rancherias
- Vecinos en Acción
- Great Redwood Trail Authority
- Adventist Health – Mendocino County
- Blue Zones Project – Mendocino County
- Great Redwood Trail Authority
- East Perkins Street Property and Business Owners
- Grater Ukiah Business and Tourism Alliance
- North Coast Opportunities
- Walk & Bike Mendocino
- Climate Action Mendocino

- County Courthouse Representatives
- Organizations that work with youth, seniors and people with disabilities

The database will continue to evolve throughout the project under the activities described below and subsequent tasks.

Convene Advisory Group
The City will establish a community and stakeholder outreach advisory group of approximately 12 individuals for project guidance and meet periodically during the course of the project. Participants will include representatives from local and regional agencies and other organizations and groups from the stakeholder list described above. CivicWell will assist with planning, organization, facilitation, and documentation of meetings. The group will identify important sensitivities to consider and pertinent information regarding the conditions, history, and needs of residents, workers, and visitors. It will help determine strategies for framing and communication and for engaging all population segments and maximizing participation at public events, as well as opportunities for coordination and synergy with other local events, initiatives and planning activities impacting the community. Meetings will also provide a venue for discussion of plan concepts and strategies for implementation.

The group is expected to meet on at least three occasions during the course of the project, with ongoing communication, solicitation for input and support with outreach and promotion, and additional check-in meetings as needed.

- Meeting #1 will take place during the existing conditions phase. Topics will include key issues to address in the Plan, problem areas to study, locations with the greatest safety challenges, scheduling and location for outreach events, key stakeholders to consult, and strategies for engaging underserved residents.

- Meeting #2 is anticipated before the community workshops. The agenda will focus on a review of existing conditions prepared by the consultant team and outreach and planning for the events.

- Meeting #3 will occur following the initial round of community workshops and engagement activities to debrief the input received to date and potential gaps to consider for further outreach.

Convene Technical Working Group
The City will establish a technical working group that will meet periodically, virtually or in-person, throughout the project on an as-needed basis. It will include key representatives from Caltrans District 1, City of Ukiah Departments of: Public works, Planning, Fire and Police, Mendocino Transit Authority, and Mendocino Council of Governments, and others as deemed necessary by the group. The group will identify data sources, documents, and critical issues to address, discuss and vet concepts developed by the consultant, and collect feedback and input on plan elements prior to seeking community input on proposed improvements. CivicWell and the consultant will assist the City with planning, organization, facilitation, and documentation of meetings.

Project Outreach Plan
CivicWell will prepare a detailed outreach plan and assist with implementation in close coordination with the City and in consultation with the advisory group to inform and engage the public. It will include an outreach schedule, stakeholder and target audience contact list, and methods, channels, venues and activities to engage diverse segments of the community for input and feedback. Forums will include an online public engagement platform, surveys, community workshops, focus group meetings, and a project website. Opportunities for informational presentations to tribal councils and other community groups, and tabling at community events will also be included. Means will be identified for direct engagement with under-resourced and

marginalized populations that have been historically excluded or overlooked in planning processes. Low-tech outreach and input options (posters, flyers, comment cards, etc.) will be provided as appropriate for people without access to technology. Materials and activities will be provided in Spanish and English as needed.

Promotion
The City and CivicWell, with support from the advisory group, will identify effective outreach and publicity methods to ensure public awareness and involvement. Materials will be produced in English and Spanish as necessary to inform all segments of the community about the planning process and how they can participate. Materials will be shared digitally, and through email, newsletters and social media sources. Advisory group members and select stakeholders will be asked to distribute flyers and information about the project and ways to participate through their networks and at standing meetings, gatherings and events. Opportunities will be identified to engage with stakeholders through print materials and word of mouth at places where residents go for other purposes such as coffee shops, community centers, civic, faith-based and cultural centers, and other gathering places. Community-based organizations will be solicited for promotion and direction on how to best reach and communicate with their constituents.

The City and CivicWell will distribute updates to local and regional media, such as the Ukiah Daily Journal, Ukiah Post, The Mendocino Voice, Al Punto and other outlets identified by the advisory group. The City and CivicWell will also consult with advisory group members to identify social media platforms that residents use. Announcements, presentations and plan documents will be posted on the project website, and events will be publicized on social media platforms and through the website. The City also uses social media to inform residents about engagement in projects and will do so here as well in both English and Spanish.

Task Deliverables
• List of stakeholders (CivicWell) • Advisory Group meeting agendas and notes (CivicWell) • Technical Working Group meeting agendas and notes (CivicWell, Consultant) • Project outreach plan (CivicWell) • Publicity materials, including flyers, posters, announcements and other Informational materials (City, CivicWell)

Task 4: Existing Conditions/Needs Assessment

The consultant will conduct a comprehensive analysis of existing conditions along the East Perkins Street corridor. Specific components are described below.

Policies and Plans Review
The consultant will review and summarize relevant sections of local and regional plans, policies, studies and improvement projects to increase mobility options in Ukiah and improve safety, access, mobility and development opportunities on East Perkins Street. Key documents and studies include the City of Ukiah 2040 General Plan Mobility Element, Land Use Map, Zoning Code and Urban Core Rehabilitation and Transportation project, Mendocino Council of Government's 2022 Regional & Active Transportation Plan, California Transportation Plan 2050, and others that will be identified in consultation with the technical working group and advisory group.

Site Visits
The consultant will conduct a field assessment of the corridor and activity areas to observe and assess existing right of way, roadway, traffic control, pedestrian, bicycle and transit conditions and infrastructure, and adjacent land uses. One or more site visits will be scheduled in

conjunction with meetings with the project advisory group and technical working group, enabling the consultant, City, CivicWell, and others to tour the corridor for shared observations and collective input.

Base Maps
The consultant will document existing corridor cross sections (right of way, curb to curb widths, travel and turning lanes, on-street parking, sidewalks and streetscape, etc.) by defined segment through review of existing ariel maps, GIS data and CAD layers as available, and site checks for verification. The consultant will prepare an aerial base map that includes existing and planned pedestrian and bicycle facilities, vehicle travel and turning lanes, transit routes and stops, right of way and property lines, and other key features. The base map will be used to illustrate detailed existing conditions for design and analysis work, and to generate easy-to-interpret maps for reference and input from residents and stakeholders during meetings, in-person and virtual engagement activities.

Infrastructure and Operations
The consultant will collect a wide range of data, including traffic counts and patterns for vehicles, bicycles, and pedestrians; collision and safety data; traffic signal operations; utility maps, and right-of-way surveys; and highway and highway ramp volumes. A traffic analysis using existing volume and peak hour data will identify operational bottlenecks. The consultant may identify key areas to collect traffic counts to supplement available data. Additionally, the consultant will consider development forecasts for projects planned along the corridor to ensure the assessment aligns with future growth and demand. The findings will be integrated with insights gathered through community engagement activities such as listening sessions, surveys, and workshops. These activities will provide valuable perspectives from users of the corridor, helping to identify barriers and inform the needs assessment.

Existing Conditions and Needs Assessment Report
The consultant will prepare a report that summarizes relevant policies, plans and projects, safety, traffic, access and land use data analysis and conditions. It will also include identified multimodal barriers, identified needs, and opportunities for improvement. A draft report will be submitted for review and feedback from the working group and advisory group, with revisions incorporated as necessary. This assessment will emphasize data-driven insights while reflecting community priorities, serving as a foundational document for subsequent planning and design phases.

Task Deliverables
• Existing Conditions Summary /Needs Assessment Report (Consultant) • Base maps in digital format and print format for engagement activities (Consultant)

Task 5: Community Engagement

The project will prioritize meaningful, inclusive, and representative engagement to affirm community values and aspirations, and gather input on transportation needs and preferences for mobility and streetscape solutions along the corridor. It will include an iterative series of meetings and events with activities to gather input and provide opportunities for feedback. Spanish translation services will be provided at all events, and key outreach materials will be produced in Spanish to ensure accessibility. Meetings will be offered in both in-person and virtual formats to maximize reach and participation.

Community Workshops
Three rounds of community-wide public workshops are planned for this project – the first to solicit community input early in the project, the second to review and confirm findings, input received and proposed designs and recommendations for the corridor, and the last to be held after the draft plan is available for public review. The City and CivicWell, with help from the advisory group and local co-hosts, will arrange facilities and food (in accord with grant guidelines for eligible snack and refreshment expenses), and other supporting promotional and celebratory activities.

The conceptual scope of events includes:

- Round 1 - *Needs and Possibilities.*
  The City will host a kick-off workshop in which CivicWell and the consultant will present tools and strategies for active transportation, complete streets and placemaking, followed by small group map activities or stations where participants will identify issues and mark up opportunities for change. The team will also conduct a walking audit with community members of key locations on the corridor in conjunction with the workshop. A second workshop will follow to confirm the input received and present initial ideas for change that the team will explore and bring back to the public for feedback.

- Round 2 – *Concepts and Recommendations.*
  The City will host a workshop where the consultant will present proposed improvements and a walking tour where participants can discuss proposed changes in the field. Breakouts and weighing activities will be used to identify support and concerns, preferences and priorities, and collect feedback to inform refinements.

- Round 3 – *Draft Plan Review.*
  Following release of the draft plan for public review, the City, with support from CivicWell, will organize and widely publicize an evening workshop where the consultant will present the full draft plan to stakeholders and the community. This will provide an opportunity for stakeholders and residents to provide feedback on the tools, designs and recommendations and to make sure critical issues have been addressed.

Focus Meetings
The City, with input from the advisory group and support from CivicWell and selected consultant, will conduct approximately 5 to 10 small group listening sessions to learn about mobility needs across sectors and representative population segments. These will be scheduled in conjunction with the existing conditions/needs assessment phase and the first round of workshops. Additional meetings may be held as needed during the second round and plan development phase. These sessions will be designed to capture candid feedback, insights, and ideas in a casual and open format. Participants may include (but not be limited to) individuals from:

- Housing authorities, affordable housing providers, and apartment communities
- Corridor area property owners and developers
- Businesses, property owners and employers
- K-12 School students, schools, and district representatives
- Tribal governments
- Organizations that represent and work with Latino and Spanish-speaking populations
- Organizations that work with and represent people with disabilities
- Organizations that work with and represent youth, seniors and veterans
- Environmental justice and social equity advocacy groups
- Local art, music, food and entertainment associations and advocates

Website
A City of Ukiah East Perkins Street Multimodal Transportation Plan web page will be established to will provide project updates and access to plan documents, publicize upcoming events, and

serve as an additional hub to engage with stakeholders and residents for comments and ideas. Workshop presentations will be recorded and hosted on the website. Informational and educational materials on tools and strategies proposed for the corridor will also be included.

Online and In-Person Survey
The City and CivicWell will distribute an online survey in English and Spanish developed with the consultant to solicit community input on transportation needs along the East Perkins Street corridor. It will be widely advertised with a QR code for easy access. A paper version will be available for completion or pick up at in-person events and other locations for those who do not have access to the internet or prefer to complete by hand. Special emphasis will be placed on collecting input from historically marginalized populations to inform solutions that increase access to affordable and healthy transportation opportunities.

Task Deliverables
• Community Workshop agendas, presentations and notes (CivicWell, Consultant) • Focus group participant lists and meeting noes (CivicWell) • Project website/ongoing updates (CivicWell, Consultant) • Electronic and paper survey and summary of results (CivicWell, Consultant)

Task 6: Conceptual Alternatives and Evaluation

Building upon the corridor assessment and stakeholder and community input described in the previous tasks, the consultant will develop conceptual alternatives for vetting with the working group, stakeholders and the public as part of the concepts and recommendations workshop described under Task 2.

Geometric Design and Operations Evaluation
The Consultant will prepare multimodal and streetscape improvement concepts for the East Perkins Street corridor along with an analysis of how they may affect the operations, safety and capacity of the roadway network. The analysis will include evaluation of various solutions, with a particular focus on previously identified community-supported tools and strategies such as roundabouts, lane reductions, wider sidewalks, bicycle lanes and landscaping improvements. Layouts and cross sections will provide spatial visualization of proposed concepts, highlighting opportunities, constraints, and the relationship between proposed improvements and existing infrastructure. Each concept will be assessed for feasibility, including right-of-way constraints and acquisition needs, corridor and US 101 interchange traffic impacts, vehicle turning movement needs, and site distance and operational issues along the corridor where the street extends over US 101.

Plans and Projects Consistency Review
The analysis will incorporate a review of relevant current and in progress polices, plans and improvement projects, such as MCOG's Pedestrian Needs Assessment, MCOG's Regional and Active Transportation Plan, the Ukiah Valley Area Plan, the City of Ukiah's 2040 General Plan Mobility, Land Use and Housing Elements, Downtown Zoning Code Map, Downtown Streetscape Improvement Project, Local Road/Safety Action Plan, Bike and Pedestrian Master Plan, and Climate Action Plan. Additionally, future development plans—such as the Mendocino County Courthouse project (anticipated completion in 2026) and the Ukiah Valley Adventist Hospital expansion—will be reviewed to ensure alignment with anticipated land use and transportation demands. The Consultant will also integrate concepts inspired by Dan Burden's 2023 Blue Zones presentation on design improvements for the corridor which gained initial community support and emphasizes creating healthier, more walkable communities.

Summary Report
The development and evaluation of alternatives will culminate in a summary report that synthesizes the findings and presents a range of preliminary concepts for the corridor. This report will include detailed technical analysis, maps, and data visualizations to facilitate community review and feedback. The preliminary concepts will reflect a balanced approach to meeting multimodal transportation goals, addressing safety, accessibility, and connectivity, while aligning with the community's vision and priorities. This work will serve as the foundation for refining and prioritizing recommendations to be included in the final plan.

Task Deliverables
• Conceptual layouts and cross sections (Consultant) • Presentation materials for meetings and Community Workshop to present findings and concepts being considered, comments received (Consultant) • Draft Proposed Alternatives Report (Consultant)

Task 7: Recommendations and Draft Plan

Using the findings from previous tasks, the consultant will develop feasible and implementable recommendations for the "City of Ukiah East Perkins Street Multimodal Transportation Plan." These recommendations will be designed to address multimodal transportation needs while ensuring alignment with community priorities and technical feasibility. Components of the plan will include:

- Documentation of existing conditions, constraints and opportunities.
- Documentation of the public process and input.
- A series of maps illustrating with preferred conceptual designs for roadways, intersections, sidewalks and other paths of travel (e.g., multiuse trails) to improve safety, access, comfort and convenience for walking, bicycling and use of transit.
- Evaluation of the consistency of recommendations with agency standards and impacts of proposed recommendations on the highway system.
- Analysis of impacts on safety, capacity and operations for all modes, reduction in VMT and GHGs, and potential to support infill and housing development opportunities.
- Prioritization of the proposed improvements with preliminary cost estimates and phasing to enable components of the Plan to be pursued through various funding sources and timelines, maximizing flexibility and financial viability.

The consultant will prepare and the City will circulate the administrative draft of the Multimodal Mobility Plan for review by the technical working for review and feedback. The draft will then be released for public review and presented at a community workshop as described under Task 3. The document will be made available for download from the Plan website.

Task Deliverables
• Draft Plan, including 30% conceptual design for preferred improvements (Consultant) • Presentation materials for Draft Plan and recommendations (Consultant) • Public review comments (City, CivicWell)

Task 8: Final Plan and City Council Review/Approval

Based on the feedback received during the draft plan review, the Consultant will prepare a proposed final plan for City staff review. Feedback will be incorporated as appropriate, and the

final City of Ukiah East Perkins Street Multimodal Transportation Plan will be presented for acceptance by the City Council in a public meeting.

The City Council will be kept appraised through presentations to the Complete Streets Ad Hoc Committee, a two-member City Council advisory group. The consultant and CivicWell will brief the Committee on project progress, input received, and proposed concepts and recommendations for feedback at key points during the project. The City, with support from the consultant and CivicWell will present the draft plan to the Committee for their review before finalization and City Council approval.

Task Deliverables
• Final Plan that includes a summary of next steps towards implementation, identifies potential grant funding opportunities, and credits FHWA, FTA, and/or Caltrans on the cover or title page, submitted to Caltrans in an ADA accessible electronic copy (Consultant) • Complete Streets Ad Hoc Committee meeting agendas, minutes and any presentation materials (City, CivicWell, Consultant) • City Council staff report, presentation materials and minutes with Council acceptance/approval (City, Consultant)

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant
"East Perkins Multimodal Transportation Improvement Plan"

Dear Director Taylor,

As the Assemblymember representing Mendocino County, I am pleased to support the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Improvement Plan."

The proposed plan will identify and propose multimodal improvements to East Perkins Street, an arterial corridor connecting downtown to U.S. Highway 101. This plan, when implemented, will result in a safer, more functional, and aesthetically improved east-west transportation corridor in Ukiah.

Improving travel facilities for all travel modes – transit, vehicles, bicycles, and pedestrians– will promote active transportation and lead to an improved quality of life for all, especially members of underserved communities and those without access to motorized transportation.

I offer this project my enthusiastic support and encourage you to give this application your full consideration. Please feel free to contact me at 707-576-2526 if you have any questions or require additional information.

Sincerely,

Chris Rogers

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Street Multimodal Transportation Plan"

Dear Mr. Sangiacomo,

Blue Zones Project Mendocino County is pleased to support the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Improvement Plan."

The proposed plan will identify and propose multimodal improvements to East Perkins Street, an arterial corridor connecting the downtown district to U.S. Highway 101. This plan, when implemented, will result in a safer, more functional, and aesthetically improved east-west transportation corridor in the City of Ukiah.

Improving travel facilities for all travel modes – transit, vehicles, bicycles, and pedestrians– will promote active transportation and lead to an improved quality of life for all, especially members of underserved communities and those without access to motorized transportation.

We are pleased to offer strong support for this important application.

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Multimodal Transportation Improvement Plan"

Dear Mr. Sangiacomo,

Mendocino Transit Authority (MTA) pleased to support the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Improvement Plan."

The proposed plan will identify and propose multimodal improvements to East Perkins Street, an arterial corridor connecting the downtown district to U.S. Highway 101. This plan, when implemented, will result in a safer, more functional, and aesthetically improved east-west transportation corridor in the City of Ukiah.

Improving travel facilities for all travel modes – transit, vehicles, bicycles, and pedestrians– will promote active transportation and lead to an improved quality of life for all, especially members of underserved communities and those without access to motorized transportation.

I am pleased to offer my strong support for this important application.

RE: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Multimodal Transportation Improvement Plan"

Dear Mr. Sangiacomo,

Adventist Health Ukiah Valley is proud to support the City of Ukiah in its application for the Caltrans Sustainable Communities Transportation Planning Grant for the "East Perkins Street Multimodal Transportation Improvement Plan."

This proposed initiative aims to identify and recommend multimodal enhancements to East Perkins Street, a vital arterial corridor linking the downtown district to U.S. Highway 101. Upon implementation, the plan is expected to deliver a safer, more efficient, and visually enhanced east-west transportation corridor within the City of Ukiah.

By improving facilities for all modes of travel—transit, vehicles, bicycles, and pedestrians—the plan will encourage active transportation, foster inclusivity, and elevate the overall quality of life, particularly for underserved communities and individuals without access to motorized transportation.

We are pleased to extend our strong support for this critical application.

Thank you,

Eric Stevens

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning GrantApplication for the "East Perkins Street Multimodal Transportation Improvement Plan"

Dear Director Taylor,

I am writing to express support for the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Plan."

It is my understanding that the proposed plan will identify and recommend multi-modal improvements to East Perkins Street, which acts as a major corridor connecting the downtown district to U.S. Highway 101. This plan, when implemented, will result in safer, more functional, and aesthetically improved, east-west transportation corridor in the City of Ukiah.

Improving travel facilities for all travel modes –vehicles, bicycles, and pedestrians– will promote active transportation and lead to an improved quality of life for all, especially members of underserved communities and those without access to motorized transportation.

I am pleased to offer my strong support for this important application.

Respectfully,

MO MULHEREN
Mendocino County Second District Supervisor

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Street Multimodal Transportation Improvement Plan"

Dear Mr. Sangiacomo,

As a Mendocino County Planning Commissioner and former Chair of the Mendocino County Climate Action Committee, I want to offer my full support for the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Improvement Plan."

The proposed plan is definitely needed and will be used to identify and propose multimodal improvements to East Perkins Street, a primary east-west corridor, connecting Downtown Ukiah to U.S. Highway 101. After implementation, we will have a safer, more functional, and aesthetically improved east-west transportation corridor in the City of Ukiah.

Improving travel facilities for all travel modes – vehicles, bicycles, and pedestrians– will reduce greenhouse gas emissions result in smart growth and help improve the urban form of Ukiah. .

Sincerely,

Marie Jones
Mendocino County Planning Commissioner
Former Chair, Mendocino County Climate Action Committee
Executive Director of Jug Handle Nature Center

Climate Action Mendocino

806 W. Mill St., Ukiah, CA 95482

December 20, 2024

Mr. Sage Sangiacomo, City Manager
City of Ukiah
300 Seminary Avenue
Ukiah, CA 95482

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Multimodal Transportation Improvement Plan"

Dear Mr. Sangiacomo,

Climate Action Mendocino eagerly supports the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Improvement Plan".

The proposed plan will identify and suggest multimodal improvements to East Perkins Street, our arterial corridor connecting Ukiah's downtown to U.S. Highway 101. We've all driven on Perkins Street and have been slowed by traffic jams at various times of the day. This plan, when implemented, will result in a safer, more functional and aesthetically improved east-west transportation corridor in the City of Ukiah.

Streets that are efficient for cars and also where pedestrians and cyclists have their own space to travel for safety are streets where everyone can enjoy the beauty of the street's landscaping and, importantly, promote active transportation.

Improving travel facilities for all travel modes will lead to an improved quality of life for everyone, especially members of the underserved communities and those without access to motorized transportation, enhancing the quality of life for everyone in our city.

Climate Action Mendocino is very much in favor of the Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Street Multimodal Transportation Improvement Plan". We are definitely looking forward to a much more safe access to Ukiah for residents and visitors.

Most sincerely,

Eileen Mitro

December 23, 2024

Mr. Sage Sangiacomo, City Manager
City of Ukiah
300 Seminary Avenue
Ukiah, CA 95482

Re: Letter of Support for Caltrans Sustainable Communities Transportation Planning Grant Application for the "East Perkins Street Multimodal Transportation Improvement Plan"

Dear Mr. Sangiacomo,

North Coast Opportunities and Walk and Bike Mendocino are pleased to support the City of Ukiah's application for a Caltrans Sustainable Communities Transportation Planning Grant application for the "East Perkins Street Multimodal Transportation Plan."

The proposed plan will identify and propose multimodal improvements to East Perkins Street, a primary corridor connecting the downtown district to U.S. Highway 101. This plan, when implemented, will result in safer, more functional, and aesthetically improved east-west transportation corridors in the City of Ukiah.

Improving travel facilities for all travel modes – vehicles, bicycles, and pedestrians– will promote active transportation and lead to an improved quality of life for all, especially members of underserved communities and those without access to motorized transportation.

Sincerely,

Radhika Misri
Project Manager
North Coast Opportunities/Walk and Bike Mendocino

High-Injury Locations

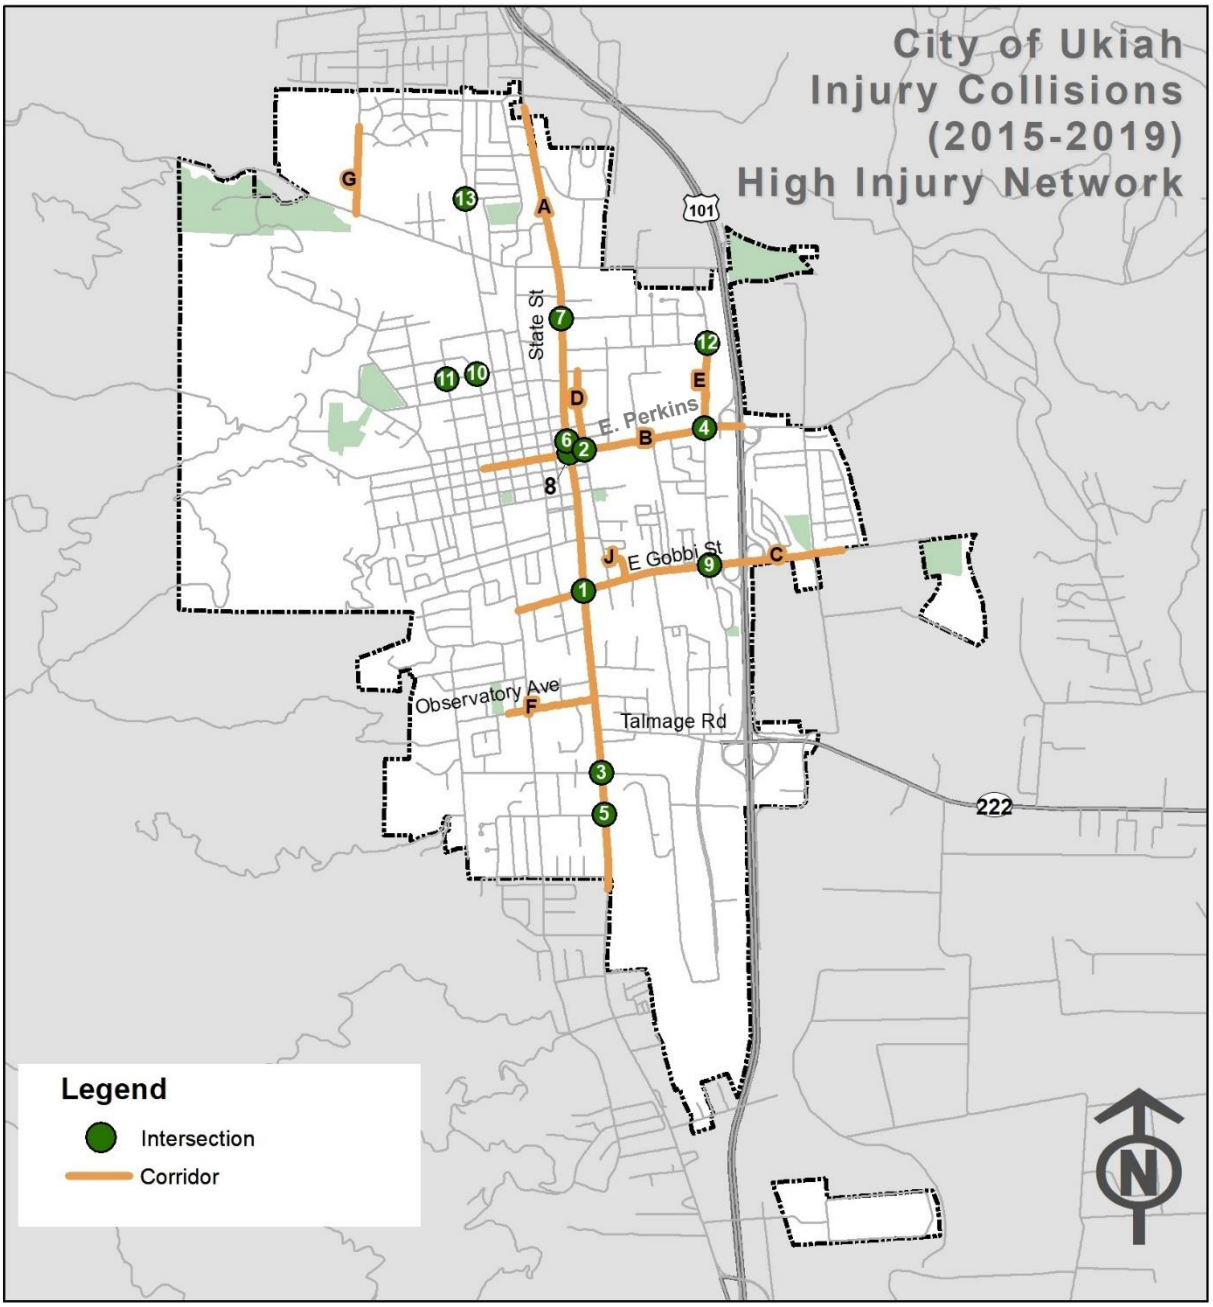
Following the detailed collision analysis, the next step was to identify the high-risk roadway segments and intersections in the City of Ukiah. The methodology for scoring the high injury locations is the same method used in the severity weight section.

Figure 34 shows the top eight high-collision roadway segments, and top 13 high-collision intersections based on 2015-2019 collision analysis.

Figure 35 shows the top eight high-collision roadway segments, and top 11 high-collision intersections based on 2020-2022 collision analysis.

For the purposes of the high collision network analysis, intersections include collisions that occurred within 250 feet of it and roadways include all collisions that occurred along the roadway except for collisions that occurred occur directly at an intersection, or collisions that occurred at a distance of zero feet from an intersection as per the SWITRS.

Figure 34. City of Ukiah High Injury Network (2015-2019)



High Injury Intersections (2015-2019)

Table 8 lists the most significant high-collision intersections identified in the 2015-2019 analysis.

Table 8. High Injury Intersections (2015-2019)

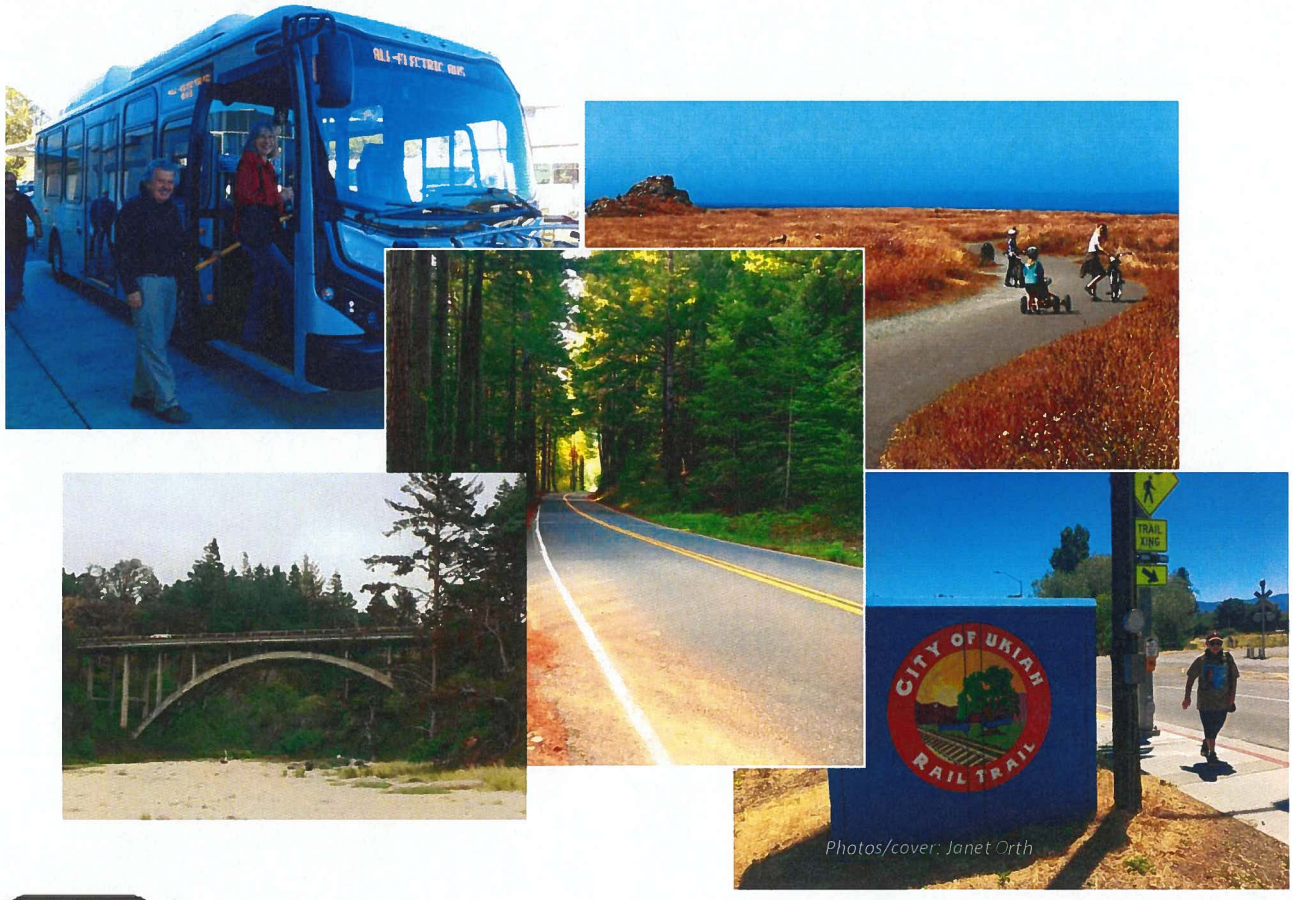
2022 MENDOCINO COUNTY REGIONAL TRANSPORTATION PLAN & ACTIVE TRANSPORTATION PLAN



Photos/cover: Janet Orth

MCOG

Prepared for:
Mendocino Council
of Governments

Prepared by:
Davey-Bates
Consulting

COMPLETE STREETS (CS)

Goal: Improve our public spaces so the street, road and transportation system meets the needs of all surface transportation modes, including vehicular, bicycle, pedestrian, and transit.

Objective CS 1: Incorporate bicycle, pedestrian, and transit improvements when planning roadway improvements, unless the roadway is exempt by law, or the project receives a specific waiver authorized through a local, public process, or for basic maintenance and rehabilitation activities.

Policy CS 1.1. Coordinate funding programs to provide multiple components of an infrastructure project when appropriate.

Policy CS 1.2. Seek funding sources for multiple modes of transportation.

Policy CS 1.3. Facilitate coordination between local transportation agencies and Mendocino Transit Authority.

Policy CS 1.4. Consider waivers in cases where environmental issues constrain improvement options, transit service is not planned or currently provided, or where the benefit/cost ratio of providing bike/pedestrian improvements is low (as would be expected in isolated rural areas).

Objective CS 2: Provide new bicycle, pedestrian and transit facilities on existing streets and roads where none exist.

Policy CS 2.1. Seek funding to fill gaps in bicycle and pedestrian facilities adjacent to roadways and provide bus stop improvements along fixed transit routes.

Objective CS 3: Encourage Caltrans to include complete street components on transportation projects in Mendocino County, where feasible.

Policy CS 3.1. Identify non-motorized projects on State highways that serve as "Main Street" in rural communities, for funding through Caltrans' State Highway Operation and Protection Program (SHOPP).

Policy CS 3.2. Nominate eligible non-motorized projects for inclusion in Caltrans Active Transportation (CAT) Plan.

GOODS MOVEMENT (GM)

Goal: A transportation system allowing the efficient free flow of goods and freight, including agricultural goods, within and through the region.

Objective GM 1: Develop State Highway routes and local routes capable of efficiently moving goods and agricultural products to, from, and through the Region.

Policy GM 1.1. Prioritize State Highway and local road projects that improve connectivity and overall mobility, and increase efficiency with which freight can travel throughout the region.

Policy GM 1.2. Encourage local agencies to consider the need for on-site truck parking, as appropriate, for developments that will generate significant goods movement (agriculture, manufacturing, industrial, large retail) to ensure truck drivers' safety and reduce idling.

Policy GM 1.3. Support State efforts to develop a Surface Transportation Assistance Act (STAA) route to eliminate the only STAA gap between the Bay Area and Eureka. (Note: the

Policy SH 1.2. Seek funding for priority improvements identified on major corridors and interregional routes, including the consideration of Regional Improvement Program (RIP) programming and pursuit of other State and Federal funding sources.

Policy SH 1.3. Identify, prioritize, and seek funding for access improvements (interchanges & intersections) to the Principal Arterial System.

Policy SH 1.4. Consider funding participation in staged widening of two-lane segments of U. S. 101 south of Ukiah.

Objective SH 2: Provide a system of Minor Arterial Highways consistent with statewide needs and local priorities.

Policy SH 2.1. Encourage State funding for maintenance of Minor Arterial Highway segments within the County.

Policy SH 2.2. Coordinate with Caltrans to identify and program needed operational and safety improvements.

Policy SH 2.3. Consider local funding partnership to correct safety concerns as appropriate.

Objective SH 3: Provide safe traveling conditions on all State Highways within Mendocino County.

Policy SH 3.1. Prioritize projects that correct safety issues (particularly in locations with high accident rates) for support and funding consideration.

Policy SH 3.2. Continue to implement and maintain a system of motorist aid call boxes consistent with the Call Box Implementation Plan per MCOG's role as the Service Authority for Freeway Emergencies (SAFE) for Mendocino County.

Objective SH 4: Provide for efficient, free-flowing travel on all State Highways in Mendocino County.

Policy SH 4.1. Maintain a minimum Level of Service C on rural segments of the Principal Arterial System and a minimum Level of Service of D in "urbanized" areas as measured by the current Highway Capacity Manual.

Policy SH 4.2. Maintain a minimum Level of Service D on the "main line" at all interchanges and at-grade crossings on the state Highway System.

Policy SH 4.3. Consider a lower standard for Level of Service along segments of State Routes that serve as "Main Street" through communities.

Objective SH 5: Balance the needs for transportation improvements with quality of life for residents of and visitors to the region.

Policy SH 5.1. Consider context sensitive solutions when planning and designing highway improvements, particularly in communities where a State highway serves as "Main Street."

Policy SH 5.2. Consider "complete streets" strategies when planning major corridor improvements that include the needs of bicyclists, pedestrians, and transit users.

Policy SH 5.3. Pursue multiple funding sources (State Transportation Improvement Program - STIP, Active Transportation Program - ATP, State Highway Operation Protection Program - SHOPP) on corridor projects to fund multi-modal aspects of the project.

LOCAL STREETS & ROADS (LSR)

Goal: Provide a safe and efficient transportation network, connecting local community roads and major transportation corridors and meeting the transportation needs of the communities served by these facilities.

Objective LSR 1: Identify and prioritize capital improvements to the regional road system.

Policy LSR 1.1. Conduct planning activities to identify critical, high priority improvements.

Policy LSR 1.2. Seek funding for needed improvements, including consideration of RIP funding and other state and federal grant sources.

Policy LSR 1.3. Prioritize improvements to principal local roadways, particularly those providing primary access to communities, those that connect to the State Highway system, or those that relieve the impact on the State Highway system.

Objective LSR 2: Balance the need for safety and operational improvements with the need for maintenance of the existing system.

Policy LSR 2.1. Maintain a Pavement Management Program to analyze and determine the best use for funds available for pavement maintenance and rehabilitation.

Policy LSR 2.2. Assist local agencies in identifying, prioritizing, and funding safety improvements on local streets and roads systems, including projects identified in Local Road Safety Plans.

Policy LSR 2.3. Seek reliable funding sources for ongoing maintenance and rehabilitation efforts in order to protect investment in existing system.

Policy LSR 2.4. Consider "fix-it-first" projects when considering funding sources that are appropriate for maintenance and rehabilitation of the existing system, such as SB 1 funding.

Objective LSR 3: Support timely delivery of projects on local streets and roads systems.

Policy LSR 3.1. Provide local agencies with tools and technology to analyze impacts of transportation projects on network.

Policy LSR 3.2. Conduct transportation planning projects that prepare local and state agencies to deliver projects.

ACTIVE TRANSPORTATION (AT)

The Active Transportation System element of this RTP, along with these goals policies and objectives, also serves as the region's Active Transportation Plan. Some of the goals from that plan fall under the Complete Streets section of goals and policies, and are therefore listed in that section.

Goal: Provide a safe and useable network of bicycle and pedestrian facilities throughout the region as a means to lessen dependence on vehicular travel and improve the health of Mendocino County's residents through increased walking and biking.

Objective AT 1: Maximize funding opportunities for local agencies to develop and construct bicycle and pedestrian facilities.

Policy AT 1.1. Update the regional Active Transportation Plan on a timely basis to ensure local agency eligibility for Active Transportation Program funds and other grant programs.

Policy AT 1.2. Provide support to local agencies in pursuing grant funding such as Active Transportation Program funding for needed improvements.

Policy AT 1.3. Continue to reserve and allocate 2% of Local Transportation Funds for bicycle and pedestrian projects.

Policy AT 1.4. Consider RIP funding for priority active transportation projects.

Objective AT 2: Provide a non-motorized transportation network that offers a feasible alternative to vehicular travel.

Policy AT 2.1. Prioritize improvements providing access to schools, employment, and other critical services.

Policy AT 2.2. Prioritize projects that link to an existing facility or provide connectivity, including first mile and last mile connections to transit.

Policy AT 2.3. Fund planning activities in MCOG's annual Overall Work Program to identify priority improvements for commute purposes, such as safe routes to schools plans.

Policy AT 2.4. Consider the addition/improvement of bicycle and pedestrian facilities when planning and implementing local street and road improvements.

Policy AT 2.5. Encourage implementation of identified priority projects, such as projects from the "Pedestrian Needs Assessment & Engineered Feasibility Study" and segments of the Great Redwood Trail.

Policy AT 2.6. Maximize use of the non-motorized transportation facilities through support of and participation in non-infrastructure activities that increase awareness of and encourage use of these facilities.

Objective AT 3: Improve property value and strengthen local economies through more accessible commercial and residential areas.

Policy AT 3.1. Encourage the addition of pedestrian and bicycle improvements in local business areas and existing residential areas.

Objective AT 4: Provide context sensitive facilities.

Policy AT 4.1. Encourage flexibility of design standards in order to allow facilities in very rural or built-out areas.

Policy AT 4.2. Work with State or Federal agencies to allow design exceptions when needed.

Objective AT 5: Maximize investment in non-motorized transportation facilities through maintenance. Maintain active transportation facilities in order to ensure their continued use and availability.

Policy AT 5.1. Each local agency shall be responsible for conducting the maintenance of active transportation facilities within their jurisdiction, unless an alternative agreement exists. A variety of funding sources should be considered for maintenance activities.

Policy AT 5.2. If appropriate, local agencies may enter into maintenance agreements with other agencies or organizations for continued maintenance of active transportation facilities.

4 Mobility Element

Aviation Facilities. Ukiah Municipal Airport, a public use, General Aviation (GA) facility, serves the Ukiah Valley region. The City has owned and operated the airport since the 1930s. In 1942, the airport was established as an auxiliary military landing strip. The airport runway was lengthened to 4,423 feet in 1954. In 1968, the runway was relocated 585 feet south at its current location.

The Ukiah Municipal Airport Land Use Compatibility Plan (UKIALUCP) was adopted by the Mendocino County Airport Land Use Commission on May 20, 2021. On July 7, 2021, the Ukiah City Council adopted Ordinance 1215, requiring all future land use plans, zoning, and districting plans to comply with the UKIALUCP, including the 2040 Ukiah General Plan. The UKIALUCP includes protection for a future 5,000-foot runway to accommodate operations by CALFIRE Lockheed C-130 fire attack aircraft and was based on a 20-year forecast of 30,916 annual operations, representative of the airport's current condition and potential growth.

Travel Patterns

Journey to Work Data. According to longitudinal employer household dynamics (LEHD) data, 51 percent of workers employed in Ukiah live outside of the city, 28 percent live in the city and are employed outside of the city, and 21 percent both live and work in the city,

Rates of Walking and Bicycling. Historically, rates of walking and biking have fluctuated over time in Ukiah. Walking as a means of transportation was highest in 2009 based on U.S. Census Bureau American Community Survey 2009-2917 data, preceding a fluctuation, then a positive trend from 2014 to 2017. Similarly, biking as a means of transportation has also fluctuated, but has been decreasing following a peak in 2014.

Goods Movement. Goods movement in the City of Ukiah was examined through the lens of Caltrans Truck Annual Average Daily Traffic (AADT) data. U.S. 101 exists as a Terminal Access (STAA). Between 1990 and 2010, heavy truck AADT has varied between 1,375 and 1,696, followed by a decline in 2011. Between 2001 and 2014, AADT varied, followed by an increase from 2015 to 2017. While heavy truck AADT has increased over this period, the percentage of trucks with 3+ axels have been the lowest between 2015 and 2017, compared to previous years. Two axel trucks comprised the majority, or 72 percent, of heavy truck AADT in 2017. Three-axel, four-axel, and five-axel trucks comprise 6 percent, 2 percent and 20 percent, respectively, of total heavy truck AADT in 2017. Increases in online shopping have resulted in more significant impacts to local roads.

4.3 Planned Transportation Network

This section describes the planned street and transportation network. The Mobility Element is intended to provide long-term transportation solutions while maintaining the city's friendly, small-scale character.

Guiding Principles

The planned transportation network will provide an efficient transportation system that includes a citywide network of Complete Streets. Multi-modal approaches to increasing travel options are emphasized in Ukiah as part of the planning process prior to undertaking expensive and urban- appearing street improvements. Ukiah recognizes that simply accommodating cars first and looking for alternatives afterwards shortchanges opportunities for alternate transportation and a more spontaneous, diverse, and lively community. Air quality, land use, and circulation are closely interrelated. A commitment to providing Complete Streets is a key to effective transportation planning and will maximize the effectiveness of the existing street network. One means of increasing the capacity of the existing system is to consider all forms of transportation when making planning decisions.

Emphasis on Sustainable Mobility

Planning that respects the small-town quality of life in Ukiah will retain the intimacy of streets that attract pedestrian usage. Maintaining a balance between the various travel mode options during the planning process ensures that getting from home to work, shop, or play is convenient and easy without requiring use of a motor vehicle.

In addition, planning that respects the small-town quality of life in Ukiah will retain the intimacy of streets that attract pedestrian usage. Historically, priority has gone to automobile-centric needs over multi-modal usage in transportation development, representing a focus on Level of Service (LOS) efficiency rather than comprehensive mobility planning. Prioritizing multi-modal travel goals in order to achieve a balance between the various options to vehicular access during the planning process ensures that getting from home to work, shop, or play is convenient and easy without the automatic need for a car.

Source: Ukiah Bicycle & Pedestrian Master Plan, August 2015

4.4 Complete Streets

Goal and Policies

MOB-1 *To provide a citywide network of complete streets that meet the needs of all users, including pedestrians, bicyclists, motorists, transit, movers of commercial goods, children, seniors, and persons with disabilities. (Source: New Goal)*

MOB-1.1 Complete Streets
The City shall design streets holistically, using a complete streets approach, which considers pedestrians, bicyclists, motorists, transit users, and other modes together to adequately serve future land uses. *(New Policy)*

MOB-1.2 Multi-modal Access
The City shall require that all new development and redevelopment projects include provisions for multi-modal access provisions such as pedestrian and bicycle facilities, and vehicle and transit where relevant. *(Existing Policy CT-3.1, modified)*

MOB-1.3 Reallocate Space for Complete Streets.
The City shall reallocate roadway space to allow complete streets improvements on streets with excess traffic capacity. *(New Policy)*

MOB-1.4 Block Length
The City shall limit block lengths to 600 feet wherever feasible to enhance multi-modal circulation and connectivity. *(New Policy)*

MOB-1.5 Balance Transportation Spending
The City will provide funding for transportation improvements for each of the key travel modes to support the long-term viability and safety of each mode, as well as required maintenance. *(New Policy)*

MOB-1.6 Roundabouts
The City shall consider the installation of roundabouts to enhance safety at intersections, and as a key component of Ukiah's sustainability strategy. *(New Policy)*

MOB-1.7 Land Use and Street Classification Compatibility
The City shall ensure that General Plan land use density and intensity standards are compatible with the classification of streets from which the land uses are accessed. *(Source: Existing Program CT-1.1a, modified)*

MOB-1.8 **New Development and Complete Streets**

The City shall require all new development to provide adequate access for pedestrians, bicyclists, motorists, transit users, and persons with disabilities, as well as facilities necessary to support the City's goal of maintaining a complete street network. *(Source: Existing Program CT-1.1b, modified)*

MOB-1.9 **Bikeway Network**

The City shall strive to complete the citywide bicycle network to create a full network of bicycle facilities throughout Ukiah, including bicycle lanes on all arterial and collector street segments where feasible. *(New Policy)*

MOB-1.10 **Bicycle Parking Standards**

The City shall maintain efficient and updated parking standards for bicycle parking to ensure development provides adequate bicycle parking, while reducing reliance on automobiles. *(New Policy)*

MOB-1.11 **Pedestrian Barriers & Utility Relocation**

The City shall support elimination of barriers to pedestrian travel on sidewalks and walking paths including requiring the relocation or undergrounding of utilities where appropriate. *(New Policy)*

4.5 Vehicle Miles Traveled

Goals and Policies

MOB-2 *To reduce vehicle miles traveled (VMT) to and from residences, jobs and commercial uses in Ukiah. (Source: New Goal)*

MOB-2.1 **Vehicle Miles Traveled (VMT) Reduction**

The City shall support development and transportation improvements that help reduce VMT below regional averages on a "residential per capita" and "per employee" basis. *(New Policy)*

MOB-2.2 **Transportation Demand Management**

The City shall support programs to reduce vehicle trips, including measures such as reduced parking requirements that aim to increase transit use, car-pooling, bicycling and walking. *(New Policy)*

MOB-2.3 **Pedestrian Facilities**

The City shall encourage new development and redevelopment that increases connectivity through direct and safe pedestrian connections to public amenities, neighborhoods, shopping and employment destinations throughout the City. *(New Policy)*

MOB-2.4 **Transit Facility Design**

The City shall require new development to include facilities designed to make public transportation convenient. *(Source: Existing Policy CT-9.1, modified)*

MOB-2.5 **Transit Ridership**

The City shall support funding and incentives to increase transit ridership opportunities. *(Source: Existing Policy CT-9.2, modified)*

MOB-2.6 **Downtown Transit Center**
The City shall support creation of a Transit Center. (*Source: Existing Policy CT-10.5)*

MOB-2.7 **Bicycle Accessible Transit**
The City shall encourage the MTA and other public transportation providers to make bus routes connecting Ukiah with other areas bicycle accessible. *(Source: Existing Program CT-8.1e, modified)*

4.6 Transportation Safety and Planning

Goals and Policies

MOB-3 *To provide a safe transportation system that eliminates traffic-related fatalities and reduces non-fatal injury collisions. (Source: New Goal)*

MOB-3.1 **Safety Improvements**
The City shall provide safety improvements along high-injury and fatality streets and intersections. *(Source: New Policy)*

MOB-3.2 **Safe Routes to Schools**
The City shall promote Safe Routes to Schools programs for all schools serving the City. *(Source: New Policy)*

MOB-3.3 **Safety and Traffic Calming**
The City shall use traffic calming methods within residential and mixed-use areas, where necessary, to create a pedestrian-friendly circulation system. *(Source: New Policy)*

MOB-3.4 **Safety Considerations**
The City shall ensure that planned non- transportation capital improvement projects, on or near a roadway, consider safety for all travel modes during construction and upon completion. *(Source: New Policy)*

MOB-3.5 **Community Engagement**
The City shall engage the community in promoting safe walking and bicycling through education and outreach. *(Source: New Policy) PI]*

MOB-3.6 **Emergency Access**
The City shall work with the Ukiah Valley Fire Authority to address street design and the accessibility required for emergency vehicles. *(Source: New Policy)*

MOB-3.7 **Video Enforcement**
The City shall consider the use of video surveillance for traffic enforcement. *(Source: New Policy)*

MOB-3.8 **Truck Traffic in Residential Areas.**
The City shall discourage truck traffic on local residential streets to increase safety and reduce noise *(Source: New Policy)*

4.7 Transportation and Mobility Needs

MOB-4 *To maintain an ongoing periodic evaluation process to inventory transportation and mobility needs. (Source: Existing GP Goal CT-5)*

MOB-4.1 Multi-modal Transportation Studies

The City shall conduct multi-modal transportation studies in association with required updates to the Regional Transportation Plan to update the General Plan and appropriately update and amend the Mobility Element. *(Source: Existing Policy CT-5.1, modified)*

MOB-4.2 Transportation Performance Measures

The City shall evaluate transportation performance holistically, taking into consideration multi-modal system performance measures that emphasize the efficient movement of people. *(Source: New Policy)*

MOB-4.3 Safety Monitoring

The City shall monitor high-priority corridors and intersections to better understand the potential for safety improvements. *(Source: New Policy)*

MOB-4.4 Level of Service

The City shall use peak-hour traffic level of service (LOS) to consider whether a street or intersection has adequate remaining capacity to service the traffic generated by a proposed project, except that meeting traffic LOS goals should not occur in a manner that would limit travel by other modes or result in increased VMT. *(Source: New Policy)*

MOB-4.5 Peak Hour Traffic LOS Goals

The City shall adopt the following intersection peak hour traffic Level of Service (LOS) goals to guide street network planning (but not to be used for assessing CEQA impacts):

a) At intersections with signals, roundabouts or four-way stop signs: operation at LOS D, except where pedestrian volumes are high in which case LOS E may be acceptable.

b) At intersections with stop signs on side streets only: operation at LOS E, except where side streets have very low traffic volumes, in which case LOS F conditions may be acceptable. *(Source: Existing Program CT-16.4e, modified)*

MOB-4.6 Alternate Access Routes

The City shall explore the feasibility of establishing alternate north/south and east/west access routes. *(Source: Existing Goal CT-19, modified)*

MOB-4.7 Meet Future Travel Demand

The City shall extend existing streets or construct new streets as needed to meet existing and future travel demands. *(Source: Existing Policies CT-19.1, CT-19.2, modified)*

2.5 Special Planning Areas

Development in Ukiah is focused to achieve more specific outcomes by designating three special planning areas: the Downtown Zoning Code, the Ukiah Valley Area Plan, and the Ukiah Municipal Airport Land Use Compatibility Plan). These special planning areas have more detailed development standards while remaining consistent with the overall direction of the General Plan.

Downtown Zoning Code

In 2012 the City adopted the Downtown Zoning Code (DZC) to encourage the development of a healthy, safe, diverse, compact, and walkable urban community. The DZC created three downtown-specific zoning districts, shown on Figure 2-3:

- **General Urban (GU)** zone allows for mixed-use and urban residential uses in a wide range of building types, from single use and single-family to a mix of uses and multifamily. GU zone allows for residential densities between 10 and 28 du/ac.
- **Urban Center (UC)** zone allows for higher-density residential and mixed-use buildings that may accommodate retail, office, services, local and regional civic uses, and residential uses. This zone has a tight network of streets with wide sidewalks, regularly spaced street tree planting, and buildings set close to lot frontages. The UC zones allows for residential densities between 15 and 28 du/ac.
- **Downtown Core (DC)** zone allows the highest density and intensity of development by allowing a wide variety of commercial and residential uses located in mixed-use buildings. This zone has small, walkable blocks with regularly spaced street trees and buildings set at the frontage line. The DC zone allows for residential densities between 15 and 28 du/ac.

Figure 2-3 Downtown Specific Zoning Districts

City of Ukiah

Housing Element Update 2019-2027

Draft completed: July 12, 2019
Adopted: October 23, 2019
Certified by HCD: December 5, 2019

Prepared by:
City of Ukiah Community Development Department
300 Seminary Ave. Ukiah, CA 95482
www.cityofukiah.com/community-development

project applicant or City Staff could initiate an amendment to the General Plan to accommodate the project or activity. This process involves internal staff review, CEQA compliance, a public hearing before the Planning Commission, and a public hearing before the City Council.

This Housing Element Update has been guided by the goals and polices of the existing General Plan. The General Plan includes the following Vision Statements:

"We envision development that provides a mix of housing types and prices."

"We envision aesthetically designed, affordable housing, planned to encourage walking, bicycling, and public transit."

D. Public Participation and Community Outreach

Recognizing the importance of engaging the community in a dialogue about housing- defining problems and creating solutions- the City deployed a collaborative public participation approach and extensive outreach effort to help ensure appropriate housing goals and policies were more efficiently and effectively evaluated, developed, and implemented. The following steps were taken to engage community members and housing stakeholders in this process:

1. Release of a Community Housing Satisfaction Survey in December 2017 in advance of the City beginning the update process of the Housing Element. The City received responses from 385 survey participants.

2. Development of a Housing Element webpage on the Projects page of the City's website. The City distributed information and updates on the webpage throughout the development of the Housing Element: https://www.cityofukiah.com/projects/housing-element-update/.

3. Advertising of two community housing workshops, including email notifications and phone calls to a list of nearly 100 local stakeholders of developers, lenders, housing advocacy groups, water and sewer providers, and representatives of local tribes. Both meetings were advertised for at least two weeks prior to the meeting date and also announced during televised City Council meetings prior to the two dates. Announcements were also posted on the City of Ukiah's Facebook page.

4. Presentations and tables/booths at Hispanic community events and meetings, including *Ukiah Vecinos en Acción*, *Latinx*, and the Mexican Consulate.

5. Development of a press release sent to local media outlets. This press release was picked up by the primary local newspaper in the region, *The Ukiah Daily Journal*. A series of news articles was written by *The Ukiah Daily Journal* about the updating of the City's Housing Element, which helped increase public awareness.

6. Posting of flyers announcing the two workshops in both English and Spanish at lower income housing developments across the City.

7. Hosting of two Community Housing Workshops:

Community Housing Workshop #1

The City of Ukiah hosted the first Community Housing Workshop on March 21, 2019, from 5:30 pm to 7:30 pm. Over 100 local stakeholders were invited; approximately 40 people attended. City staff made a presentation describing the Housing Element Update process and State requirements, Regional Housing Needs Allocation, and an overview of the existing (2014-19) Housing Element goals and programs. The existing goals were evaluated with the public's input in mind and goals were revised and added based on this input.

Community Housing Workshop #2

The City of Ukiah hosted a second Community Housing Workshop on April 25, 2019, from 5:30 pm to 7:30 pm. Over 100 stakeholders/residents were again invited, including additional individuals that had been asked to be added to the invitation list; 31 attended. City staff made a presentation of key updated housing and demographic data that had been collected since the first workshop and included a summary of comments received from the first workshop. Attendees participated in exercises to arrive at suggested goals and policies and voted for those policies that were most important to them.

The input received at both workshops is summarized in Appendix A and has been incorporated into the Housing Element where applicable. Also included in Appendix A is a list of stakeholders invited to participate in the Housing Element Update process. Appendix B contains the results of the Community Housing Satisfaction Survey.

December 5, 2019

Sage Sangiacomo, City Manager
City of Ukiah
300 Seminary Avenue
Ukiah, CA 95482

Dear Sage Sangiacomo:

RE: City of Ukiah's 6th Cycle (2019-2027) Adopted Housing Element

Thank you for submitting Ukiah's Housing Element adopted October 23, 2019 and received for review on October 28, 2019. Pursuant to Government Code section 65585, subdivision (h), the California Department of Housing and Community Development (HCD) is reporting the results of its review.

HCD is pleased to find the adopted Housing Element in full compliance with state Housing Element law (Article 10.6 of the Government Code). The adopted element was found to be substantially the same as the revised draft Housing Element that HCD's June 22, 2019 review determined met statutory requirements.

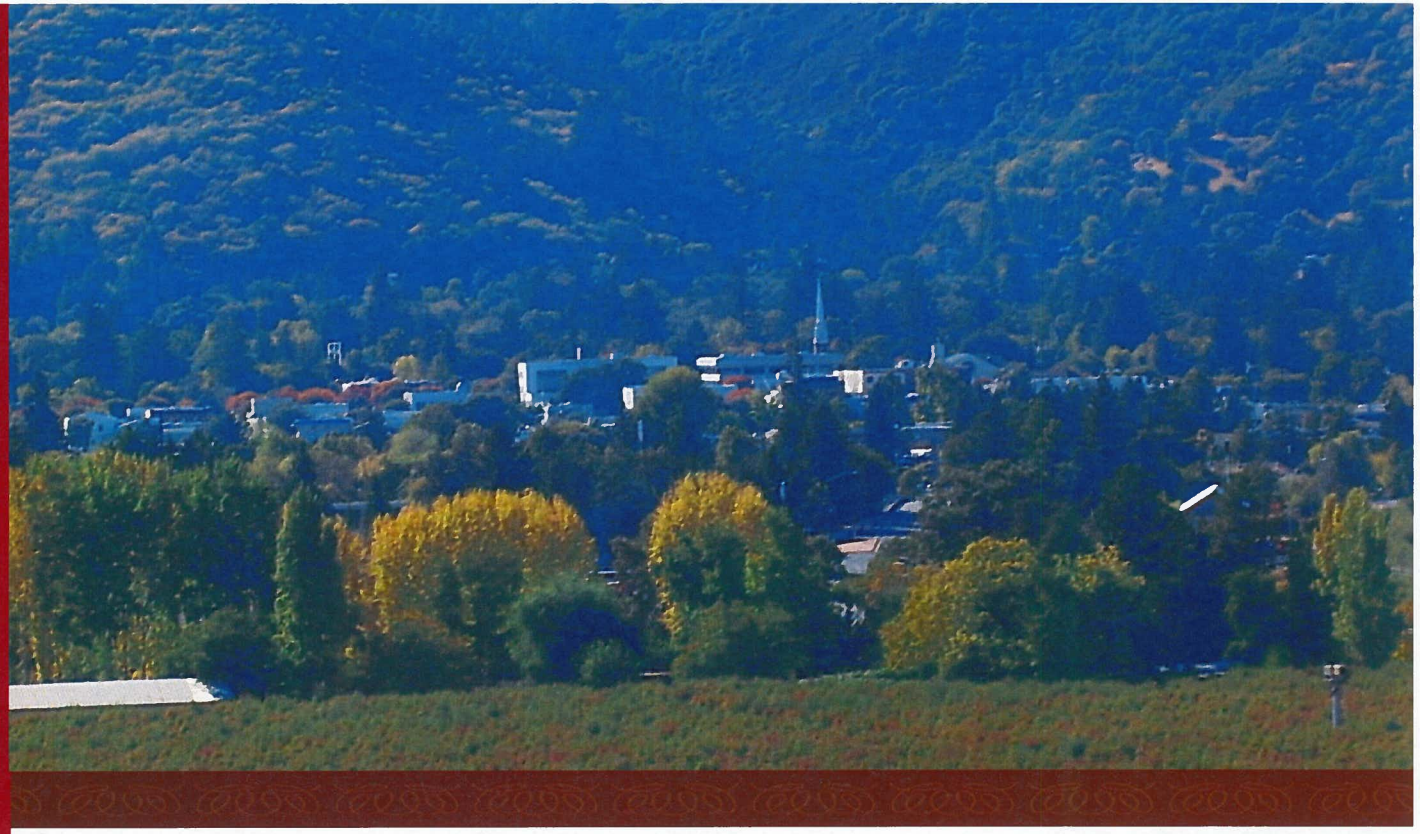
For your information, some General Plan element updates are triggered by Housing Element adoption. HCD reminds the City of Ukiah to consider timing provisions and welcomes the opportunity to provide assistance. For information, please see the Technical Advisories issued by the Governor's Office of Planning and Research at: http://opr.ca.gov/docs/OPR_Appendix_C_final.pdf and http://opr.ca.gov/docs/Final_6.26.15.pdf.

Several federal, state, and regional funding programs consider Housing Element compliance as an eligibility or ranking criteria. For example, CalTrans Senate Bill (SB) 1 Sustainable Communities grants; the Strategic Growth Council and HCD's Affordable Housing and Sustainable Communities program; and the SB 2 Planning Grants as well as ongoing SB 2 funding consider Housing Element compliance and/or annual reporting requirements pursuant to Gov. Code section 65400. With Housing Element compliance, City of Ukiah meets the Housing Element requirements for these funding sources.

HCD appreciates the hard work and dedication Craig Schlatter, Community Development Director, provided throughout the course of the Housing Element review. HCD wishes the City of Ukiah success in implementing its Housing Element and looks forward to following its progress through the General Plan annual progress reports pursuant to Gov. Code section 65400. If HCD can provide assistance in implementing the Housing Element, please contact Sohab Mehmood, of our staff, at (916) 263-1968.

Sincerely,

Shannan West
Land Use & Planning Manager



Section

Excerpts from

The Ukiah Valley Area Plan

U.S. 101 is an important scenic corridor that provides travelers and residents visual access to the beauty of the Valley. Prior efforts to enhance the corridor's appearance included the Chamber of Commerce's U.S. 101 beautification program that resulted in the planting of trees in an area between Burke Hill Drive and Lake Mendocino Drive. Organized efforts such as Caltrans' Adopt-a-Highway program provides litter cleanup by local groups, improving the overall aesthetic beauty of the Valley. Improvement of the appearance along the U.S. 101 corridor enhance the impressions on the users of that highway.

Gateways are important because they provide a resident or visitor's "first impression" of the Valley and its various community areas. The major Valley gateways include U.S. 101, State Routes 20 and 253, and Eastside Road. Within the Valley, entrances to the various community areas such as the City of Ukiah, Talmage, and Calpella are also considered gateways. Several of the Valley's gateways present a panorama of orchards, vineyards, trees, mountain sides, and various levels of development. It is important to protect and enhance gateway views which can become cluttered with too many structures and a proliferation of signs and billboards. The community wishes to preserve and enhance the beauty that is an attraction to visitors and source of pride for residents.

The gateways into the City of Ukiah and the immediate surrounding vicinity include North and South State Street, Perkins Street, Gobbi Street, Talmage Road and Low Gap Road. These gateways focus attention on the streetscape and development immediately visible in the area. The relatively intense and disorganized commercial development at many of these gateways could negatively influence the perception of the area for first time visitors and everyday residents alike. Indeed much of State Street outside of downtown Ukiah is dominated by commercial strip development. While street trees have been installed along some property frontages, the tree species generally lack the ultimate growth size needed to provide a significant visual presence by softening or unifying the streetscape.

Both Talmage and Calpella are distinct communities which have gateways that provide visitors with an overall impression of each community's unique characteristics. Talmage contains unique features such as the entrance to the City of Ten Thousand Buddhas which is visible as one approaches from the south on Eastside Road. Calpella includes features such as Russian River views, open space and agricultural lands immediately adjacent to the built environment, and an eclectic style of buildings in close

Section 5

Circulation and Transportation

GOAL CT-1
Provide for efficient and safe circulation networks throughout the Ukiah Valley.

GOAL CT-2
Enhance pedestrian, bicycle, and transit connectivity between land use types.

GOAL CT-3
Coordinate transportation planning needs, developer obligations, and construction responsibilities.

BACKGROUND

The relationship between circulation and land use is very strong. The transportation network influences where and how land develops. At the same time, every land use type is responsible for the generation of trips. How this network functions impacts drivers, pedestrians, bicyclists, and transit users. It also impacts air quality, plant and animal habitat, storm water runoff, noise, energy consumption, and greenhouse gas emissions. The UVAP Circulation and Transportation Section, in conjunction with the Land Use Section, addresses transportation infrastructure issues in an integrated manner.

The need for an efficient transportation system to carry existing and future traffic is of critical importance. Since the circulation network crosses jurisdictional boundaries, it is important for the County to work together with the City of Ukiah, Mendocino Council of Governments (MCOG), and the California Department of Transportation (Caltrans) to develop a Valley wide network that benefits all modes of transportation. It is important that this section and future collaborative transportation documents are coordinated with adopted MCOG transportation plans such as the Mendocino County Regional Transportation Plan and Mendocino County Regional Bikeway Plan.

A pedestrian-friendly residential street that incorporates stormwater management elements.

Since road improvement financing methods are limited and vary depending on whether improvements are necessary to alleviate existing deficiencies or accommodate new traffic flows, other funding mechanisms may need to be considered.

As a consequence, many communities have turned to development impact fees as a means of generating funds to pay for improvements that are necessitated by proposed projects. It should be noted that this method of financing cannot be used to correct existing deficiencies. An impact fee may be imposed on a project in relation to the project's proportionate impact on an intersection or road segment.

In addition to building new roads, other methods of improving traffic flow also exist. These can include changing the frequency and type of intersection control (e.g. stop sign, signal, traffic circle) and routing traffic to avoid conflicts (e.g. reducing the number of driveways and the use of center turn lanes and medians). Providing safe routes for bicycles can also help move traffic safely and efficiently through the Valley.

Alternatives to road expansion should be considered during the planning process, prior to undertaking expensive and environmentally impacting road construction projects. Alternatives to the automobile for travel from home to work, retail, and recreational locations should also be included where feasible when undertaking road construction projects. Historically, minimal attention has been given to the needs of pedestrians, bicyclists and public transit riders in both existing and newly developing areas. Several policies and implementation measures contained in this section will help prioritize these alternatives.

THE ROAD CLASSIFICATION SYSTEM

The term "road classification" refers to the hierarchy by which roads are grouped according to the type of service that they provide. The Ukiah Valley is served by a transportation system consisting of State highways, City and County roads, and private roads. This system can be described according to a hierarchy of functional classifications which assist in linking road capabilities and land uses. Map 5.1 depicts the current and proposed road network for the Ukiah Valley.

The State highway system includes U.S. 101 and State Routes 20, 222 and 253. U.S. 101 (State Route 101) is an important north-south arterial between the City of Ukiah and communities in the Valley. The freeway has four lanes where access is controlled and limited to freeway interchanges. State Route 20 (Highway 20) within the Ukiah Valley is an east-west, two lane arterial connecting U.S. 101 west of Calpella with Interstate 5 (I-5) and the North Sacramento Valley. State Route 222 (Talmage Road), a major collector between U.S. 101 and Talmage, was designated a state highway when it served the former State Mental Hospital (now the City of the 10,000 Buddahs) in Talmage. State Route 253, also known as Boonville-Ukiah Road, links Ukiah with Highway 128 and ultimately State Route 1 on the Mendocino coast. This two lane connector intersects U.S. 101 at the South State Street interchange.

The County road system extends from the State highway system to serve the unincorporated areas of the County. The County road system is primarily a network of two lane roads including paved and unpaved roads. This system consists of arterials, collectors, and local roads.

Finally, some local rural or residential roads in Mendocino County are not maintained by the County Department of Transportation, but rather by the property owners whose properties they serve. Other private rural roads are operated by commercial, industrial,

or timber operations and extend outward from the existing road network. Aside from the timber haul roads, the remaining private roads function as local roads.

Level of Service

Level of Service (LOS) is a metric that allows comparison of traffic volumes between different types of roads and intersections. The LOS ratios and corresponding letter names were established by the Institute of Traffic Engineers (ITE) and is explained in Table 5.1 below. Road segment level of service is the relationship of traffic volume to the capacity of a segment of road between two defined points. Intersection level of service defines traffic congestion at an intersection, and is expressed as the traffic volume in relation to intersection capacity. Both measures of level of service are important in determining whether the road network is capable of handling the additional traffic generated by a proposed project. Level of Service F operating conditions occur when the number of vehicles trying to use a particular road segment or intersection exceed its design capacity.

Future Road and Circulation Patterns

To accommodate the future growth projected under full buildout within the planning area and to improve circulation patterns, the Mendocino County Department of Transportation in conjunction with the Mendocino Council of Governments (MCOG) has identified a series of new roads or road extensions that may be needed over the life of the UVAP.

U.S. 101 is the major north-south arterial, serving not only interregional travel but widely used for travel in the local Ukiah Valley. U.S. 101 has nine interchanges serving the Ukiah area including Burke Hill Road; South State Street/State Route 253; Talmage Road; Gobbi Street, Perkins Street/Vichy Springs Road; Softball Fields (Northbound only); North State Street; Lake Mendocino Drive; and Moore Avenue.

Traffic waits to pass through the intersection of Gobbi Street and Waugh Lane.

Although U.S. 101 has no capacity issues now or in the future, Caltrans has indicated that the several interchanges do not meet current engineering guidelines for safety or capacity. Of particular concern are the North State, Perkins, Gobbi and the Talmage intersections. All have ramp configurations that pose potential safety concerns due to their placement in respect to surface street intersections, line of sight issues, and interaction with private driveways. The close distance between the Gobbi and Perkins interchanges leads to safety concerns for traffic on U.S. 101 itself. There are also capacity concerns with the southbound off ramps at North State Street and Talmage as well as both directions at Perkins.

OTHER MODES OF TRANSPORTATION

Mendocino County is heavily dependent on the use of single-occupant vehicles for transportation. As a result, almost thirty percent of all land in urban areas is typically dedicated for circulation purposes, most of which goes to accommodate motor vehicles. Acquisition of land for new roads and widening existing roads is expensive and has social and environmental implications. This Area Plan envisions that the County, City and other agencies will be proactive in facilitating the use of alternative modes of transportation such as walking, bicycling, ride-sharing and increased public transportation use.

Encouraging alternatives to single occupant vehicles delivers a number of benefits to the Valley. Fewer vehicles on the road helps to maintain air quality by reducing emissions. It can also defer the need for road widening or other improvements. By having additional non-vehicular transportation options, households may also be able to lower their transportation expenses by driving less.

Improving intermodal transportation (the use of more than one method of travel in a single trip) is important to improving connectivity within the Valley and beyond. The Circulation Section addresses intermodal by identifying integrated transportation corridor which includes the Valley arterials, rail, major north-south bus lines, and air transportation.

A bicycle and pedestrian network that is integrated into the transportation system can enhance the quality of life in the Ukiah Valley. Both transportation plans and development proposals should incorporate the needs of bicyclists and pedestrians into their documents. By including these facilities into a plan, a more balanced transportation network that encourages people to leave their cars can be developed. Several planning documents that attempt to improve bicycle and pedestrian access already exist. The Mendocino County Regional Bikeway Plan provides a coordinated system in the Valley. The City of Ukiah has adopted a Bicycle and Pedestrian Master Plan which includes the Rail Trail, a bicycle and pedestrian path within the portion of the North Coast Rail Authority right-of-way located within the City limits. Based upon information contained on the North Coast Rail Authority (NCRA) web site, the NCRA is not opposed to bike and pedestrian paths on its right-of-way. Extension of bikeways to the north could provide an important link to Mendocino College, Lake Mendocino and beyond. Easy to use paths, with convenient secure bicycle parking and safe travel ways will encourage people to use bikes or walk on short trips and errands. A bicycle and pedestrian system can be combined for both transportation and recreational purposes.

Traffic calming measure on a residential street.

Improving the safety, location, access, and connectivity can increase and encourage walking for short errands or to reach another mode of transportation such as the bus. Sidewalks with shade reduce heat reflection from paved areas. Separating pedestrian paths from the roadway with landscaping, or even a bicycle lane or parking, provides walkers with a greater sense of safety. Walking can be encouraged by providing sidewalks within and between residential neighborhoods and commercial areas. Providing shortcuts between areas not interconnected by roads can also promote walking.

Complete Streets

In order to facilitate increased use of alternative modes of transportation, to reduce reliance upon the automobile and to improve community health, it is important to provide the infrastructure that creates an environment that is safe and enjoyable to pedestrians and bicyclists.

The Ukiah Valley currently has many portions of road that do not offer bicycle lanes and some that do not even provide pedestrian access. As a result of the lack of infrastructure, many people do not currently feel safe biking or walking as a regular means of transportation. By creating complete streets, which meet the needs of multiple modes of transportation, the County can increase the comfort people have with walking and bicycling, for commuting and recreation. Increasing bike lanes and paths and developing a connected route for bicycle travel will allow for greater use of the bicycle as a more commonly used mode of transportation. Providing sidewalks, crosswalks, and safe resting points in medians for pedestrians crossing larger streets, and the inclusion of traffic calming devices also increases the ability for pedestrians to safely access more of their community.

In addition to addressing safety concerns, aesthetics play an important role in increasing pedestrianism. Including landscaping, street trees, benches, and wide sidewalks for pedestrians provides a more enjoyable experience. Landscaping may be used in conjunction with traffic calming measures, such as roundabouts, and bulb-outs, to increase safety as well as provide an attractive environment for drivers, bicyclers, and pedestrians alike.

In addition to aesthetics, landscaping may also provide opportunities to address stormwater runoff as well. By integrating Best Management Practices for stormwater management into landscape design for road construction or improvements, many benefits to the community may be achieved at once.

UKIAH DOWNTOWN STREETSCAPE IMPROVEMENT PLAN OPPORTUNITIES AND CONSTRAINT MAP

Scale 1"=100'
JULY, 2008

Attachment 2

City of Ukiah Downtown Streetscape Project 2020

Downtown Streetscape Improvement Project

This project will provide streetscape improvements in downtown Ukiah on State Street, Perkins Street, and Standley Street, including sidewalk widening, curb ramps and bulb outs, street lights, street furniture and tree planting.

The project also includes a road diet between Henry Street and Mill Street that will transform the existing four-lane cross section into a three-lane cross section with one travel lane in each direction and a two way left-turn lane in the center with on-street parking maintained. In addition to the road diet, signal modifications will be made at each of the three signalized intersections (Standley Street, Perkins Street, and Mill Street) to provide vehicle detection, improve coordination and re-orient the signal equipment to support the road diet alignment. This work will also include a pavement overlay, striping, and pavement markings.

1. GRANT PROGRAM OVERVIEW

The Sustainable Transportation Planning Grant Program was created to support the California Department of Transportation's (Caltrans) Mission: Provide a safe and reliable transportation network that serves all people and respects the environment.

The California Legislature passed, and Governor Edmund G. Brown Jr. signed into law, Senate Bill 1 (SB 1, Beall, Chapter 5, Statutes of 2017) – The Road Repair and Accountability Act of 2017, a transportation funding bill that provides a reliable fund source to maintain and integrate the State's multi-modal transportation system. In addition to the $9.5 million in traditional State and federal grants, approximately $25 million in SB 1 funds for Sustainable Communities Grants is available for each grant cycle.

The State-funded Sustainable Communities grants ($29.5 million) are intended to support and implement Regional Transportation Plan (RTP) Sustainable Communities Strategies/Alternative Planning Strategies (SCS/APS) (where applicable) and to ultimately achieve the State's greenhouse gas (GHG) reduction target of 40 and 80 percent below 1990 levels by 2030 and 2050, respectively.

The State-funded Climate Adaptation Planning grants ($31.9 million) enacted with Senate Bill 198 (Committee on Budget and Fiscal Review, Chapter 71, Statutes of 2022), will support local and regional identification of transportation-related climate vulnerabilities through the development of climate adaptation plans, as well as project-level adaptation planning to identify adaptation projects and strategies for transportation infrastructure.

The federal-funded Strategic Partnerships and Strategic Partnership Transit grants ($4.5 million) support Federal Planning Factors and address State highway/transit issues of regional, interregional, and/or statewide significance, in partnership with Caltrans.

Eligible planning projects must have a transportation nexus per Article XIX Sections 2 and 3 of the California Constitution. Therefore, successful planning projects are expected to directly benefit the multi-modal transportation system. These grants will also improve public health, social equity, environmental justice, the environment, and provide other important community benefits. The period of grant fund availability spans over three FYs and approximately 32 months for grant project activities after the grant agreement is executed and Caltrans issues a Notice to Proceed. Refer to Chapter 9.2 for details regarding the anticipated grant project start and expiration dates.

1.1 Sustainable Transportation Planning Grant Summary Chart

Grant	Fund Source	Purpose	Who May Apply	Local Match
Sustainable Communities Competitive	**Budget** RMRA and SHA State funds Approx. $17 million Approx. $3 million set-aside for technical projects Approx. $500,000 set-aside for Native American Tribal Governments Goal: 50% of grants should benefit Underserved Communities*** **Grant Minimum** $50,000 for Underserved Communities, including Native American Tribal Governments and rural communities; $100,000 for all others **Grant Maximum** $700,000	Funds local and regional multimodal transportation and land use planning projects that further the region's RTP SCS/APS (where applicable), contribute to the State's GHG reduction targets, address the needs of underserved communities, and assist in achieving the Caltrans Mission and Grant Program Objectives (See Chapter 1.2).	**The following are eligible to apply as a primary applicant:** • MPOs **with sub-applicants** • RTPAs • Transit Agencies; • Cities and Counties with compliant Housing Elements and completed Annual Progress Reports; • Native American Tribal Governments • Other Public Transportation Planning Entities **The following are eligible to apply as a sub-applicant:** • MPOs/RTPAs • Transit Agencies • Universities and Community Colleges • Native American Tribal Governments • Cities and Counties with compliant Housing Elements and completed Annual Progress Reports • Community-Based Organizations • Non-Profit Organizations (501.C.3) • Other Public Entities**	11.47% minimum* (in cash or an in-kind contribution).
Sustainable Communities Formula	**Budget** RMRA State funds $12.5 million	Funds local and regional multimodal transportation and land use planning projects that further the region's RTP SCS/APS (where applicable), contribute to the State's GHG reduction targets, and assist in achieving the Caltrans Mission and Grant Program Objectives (See Chapter 1.2).	**The following are eligible to apply as a primary applicant:** • MPOs	11.47% minimum* (in cash or an in-kind contribution).

* For local match requirements, refer to Chapter 6.5 of this Guide.

** Public entities include state agencies, the Regents of the University of California, district, public authority, public agency, and any other political subdivision or public corporation in the State (Government Code Section 811.2).

*** For purposes of this grant program, underserved communities are the most vulnerable places that are facing disproportionate rates of economic, environmental, and health burdens, and are defined according to the tools in Appendix A.

Grant	Fund Source	Purpose	Who May Apply	Local Match
Climate Adaptation Planning	**Budget** State funds Cycle 2: $31.9 million total Up to $3.9 million set-aside for Native American Tribal Governments Goal: 50% of grants should benefit Underserved Communities*** **Grant minimum** $100,000 **Grant maximum** $1.5 million (single organization); above $1.5-$3 million to be considered for partnership applications	Funds local and regional identification of transportation-related climate vulnerabilities through the development of climate adaptation plans, as well as project-level climate adaptation planning to identify adaptation projects and strategies for transportation infrastructure.	**The following are eligible to apply as a primary applicant:** • MPOs • RTPAs • Transit Agencies; • Cities and Counties • Native American Tribal Governments • A joint exercise of powers authority established pursuant to Chapter 5 of Division 7 of Title 1, with the consent of a transportation planning agency or a county transportation commission for the jurisdiction in which the transportation project will be developed. • A local transportation authority created or designated pursuant to Division 12.5 or Division 19 of the Public Utilities Code. **The following are eligible to apply as a sub-applicant:** • MPOs/RTPAs • Transit Agencies • Universities and Community Colleges • Native American Tribal Governments • Cities and Counties • Community-Based Organizations • Non-Profit Organizations (501.C.3) • Other Public Entities**	11.47% minimum* (in cash or an in-kind contribution); not required for Native American Tribal Governments

* For local match requirements, refer to Chapter 6.5 of this Guide.

** Public entities include state agencies, the Regents of the University of California, district, public authority, public agency, and any other political subdivision or public corporation in the State (Government Code Section 811.2).

*** For purposes of this grant program, underserved communities are the most vulnerable places that are facing disproportionate rates of economic, environmental, and health burdens, and are defined according to the tools in Appendix A.

Grant	Fund Source	Purpose	Who May Apply	Local Match
Strategic Partnerships	**Budget** FHWA SPR, Part I Federal funds $1.5 million **Grant Minimum** $100,000 **Grant Maximum** $500,000	Funds transportation planning studies in partnership with Caltrans that address the regional, interregional, and statewide needs of the State highway system, and also assist in achieving the Caltrans Mission and Grant Program Objectives (See Chapter 1.2).	**The following are eligible to apply as a primary applicant:** • MPOs • RTPAs **The following are eligible to apply as a sub-applicant:** • MPOs/RTPAs • Transit Agencies • Universities and Community Colleges • Native American Tribal Governments • Cities and Counties • Community-Based Organizations • Non-Profit Organizations (501.C.3) • Other Public Entities**	20% minimum* (in non-federal funds or an in-kind contribution).
Strategic Partnerships – Transit	**Budget** FTA Section 5304 Federal funds $3 million **Grant Minimum** $75,000 for rural RTPAs; $100,000 for MPOs **Grant Maximum** $500,000	Funds multi-modal planning studies, with a focus on transit, in partnership with Caltrans, of regional, interregional and statewide significance, and also assist in achieving the Caltrans Mission and Grant Program Objectives (See Chapter 1.2)	**The following are eligible to apply as a primary applicant:** • MPOs • RTPAs **The following are eligible to apply as a sub-applicant:** • MPOs/RTPAs • Transit Agencies • Universities and Community Colleges • Native American Tribal Governments • Cities and Counties • Community-Based Organizations • Non-Profit Organizations (501.C.3) • Other Public Entities**	11.47% minimum* (in non-federal funds or an in-kind contribution).

* For local match requirements, refer to Chapter 6.5 of this Guide.

** Public entities include state agencies, the Regents of the University of California, district, public authority, public agency, and any other political subdivision or public corporation in the State (Government Code Section 811.2).

1.2 Grant Program Objectives and Considerations

Successful grant applications address and articulate how the project relates to the Caltrans Mission, Grant Program Objectives, and Grant Program Considerations. The Grant Specific Objectives identified in Chapters 2.1, 3.1, 4.1 and 5.1 indicate the specific purpose of the Sustainable Communities, Climate Adaptation, and Strategic Partnership transportation planning grants, respectively, and must also be considered when preparing an application.

Grant Program Objectives

The following Grant Program Objectives are focused on achieving the Caltrans Mission and are intended to inform application development, including:

Objective	Description
Sustainability	Promote reliable and efficient mobility for people, goods, and services, while meeting the State's GHG emission reduction goals, preserving the State's natural and working lands, and preserving the unique character and livability of California's communities.
Preservation	Preserve the transportation system through protecting and/or enhancing the environment, promoting energy conservation, improving the quality of life, and/or promoting consistency between transportation improvements and State and local planning growth and economic development patterns.
Accessibility	Increase the accessibility of the system and mobility of people, inclusive of older adults, those with disabilities, and freight.
Safety	Prioritize the elimination of fatal and serious injury crashes and enhance safe use of our roadways through the Safe System approach to realize a vision of zero road fatalities and serious injuries by 2050.
Innovation	Promote the use of technology and innovative designs to improve the performance and social equity of our transportation system and provide sustainable transportation options.
Economy	Support the economic vitality of the area (i.e., enables global competitiveness, enables increased productivity, improves efficiency, increases economic equity by enabling robust economic opportunities for individuals with barriers to employment and for Disadvantaged Business Enterprise (DBE), etc.).
Health	Decrease exposure to local pollution sources, reduce serious injuries and fatalities on the transportation system, and promote physical activity across the lifespan, inclusive of those with disabilities, especially through transportation means.
Social Equity	Promote transportation solutions that focus on and prioritize the needs of underserved communities most affected by poverty, air pollution and climate change, and promote solutions that integrate community values with transportation safety and performance while encouraging meaningful public involvement in the transportation decision making process.

Grant Program Considerations

The Grant Program supports related State and federal mandated initiatives. The Plans and Programs listed below should be considered in grant application development. Definitions and links to these resources can be found in Appendix A.

Caltrans Strategic Plan

The Strategic Plan is a declaration of the Caltrans vision and mission, core values, strategic imperatives, and six goals to deliver a world-class transportation system for one of the nation's most populous, innovative, and diverse states:

- Safety first
- Cultivate excellence
- Enhance and connect the multimodal transportation network
- Strengthen stewardship and drive efficiency
- Lead climate action
- Advance equity and livability in all communities

This plan guides and informs the development of the Sustainable Transportation Planning Grant Program. Competitive applications will articulate how they will assist in achieving the Caltrans vision and mission, the six strategic goals above.

California Transportation Plan 2050

The California Transportation Plan (CTP) 2050 is a long-range transportation plan, updated every five years pursuant to state and Federal law, and is statutorily required to be fiscally unconstrained:

- Defines a vision for the future transportation system, establishes new statewide priorities, and guides Caltrans and partner agencies in implementing its recommendations
- Identifies strategies and policies that are required to make transparent and transformational transportation decisions
- Recognizes the unique transportation needs and interests of urban, suburban, rural, and Tribal communities
- Guides transportation decision makers at all levels of government, while emphasizing the importance of shared responsibility in meeting our transportation needs

The CTP does not contain projects, but policies and strategies required to close the gap between what the regional transportation plans (RTP) aim to achieve and how much more is required to meet 2050 goals. Competitive applications will discuss how proposed projects will assist in achieving the CTP 2050 vision, goals, recommendations, and the modal plans that support it.

Modal Plans that Support the California Transportation Plan

The CTP is the umbrella plan that informs and pulls together the State's long-range modal plans listed below, to envision the future system:

- Interregional Transportation Strategic Plan
- California Freight Mobility Plan
- California State Rail Plan
- California State Bicycle and Pedestrian Plan
- Statewide Transit Strategic Plan
- California Aviation System Plan

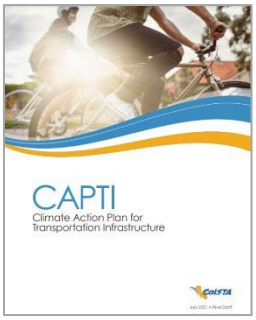
Title VI and Environmental Justice

Title VI of the U.S. Civil Rights Act prohibits discrimination on the basis of race, color, or national origin in programs or activities receiving federal financial assistance. A similar prohibition applies to recipients of state funds under California Government Code section 11135, which prohibits discrimination on the basis of race, color or national origin, as well as ethnic group identification, religion, age, sex, sexual orientation, genetic information, or disability.

Caltrans integrates Title VI as well as environmental justice in all activities. In the past, low-income and minority communities disproportionately bore many of the negative impacts of transportation projects, which they continue to feel the consequences from today. It is the goal of environmental justice to ensure that when transportation decisions are made, low-income and minority communities have a full opportunity to participate in the decision-making process, and they receive an equitable distribution of benefits and not a disproportionate share of burdens, which contribute to poor health outcomes.

Climate Action Plan for Transportation Infrastructure

The Climate Action Plan for Transportation Infrastructure (CAPTI) details how the state recommends shifting and investing billions of discretionary transportation dollars annually to aggressively combat and adapt to climate change while supporting public health, safety and equity. CAPTI builds on executive orders signed by Governor Gavin Newsom in 2019 and 2020 targeted at reducing greenhouse gas (GHG) emissions in transportation, which account for more than 40 percent of all emissions, to reach the state's ambitious climate goals. Competitive grant applications will discuss how proposed projects will assist in implementing the CAPTI Investment Framework, Guiding Principles, and align with the Implementation Strategies and Key Actions.

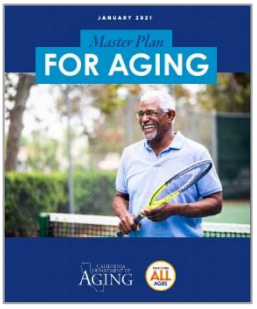


California Climate Adaptation Strategy

The California Climate Adaptation Strategy, mandated by Assembly Bill 1482 (Gordon, 2015), links the state's existing and planned climate adaptation efforts, showing how they fit together to achieve California's six climate resilience priorities. The Strategy is organized around outcome-based priorities, enabling a coordinated, integrated approach to building climate resilience. The Strategy shows how the state's efforts fit together to deliver on six priorities for climate resilience action in California: Strengthen Protections for Climate Vulnerable Communities; Bolster Public Health and Safety to Protect Against Increasing Climate Risks; Make Decisions Based on the Best Available Climate Science; Build a Climate Resilient Economy; Accelerate Nature-Based Climate Solutions and Strengthen Climate Resilience of Natural Systems; Partner and Collaborate to Leverage Resources. Competitive grant applications will discuss how proposed projects consider climate resilience and align with the California Climate Adaptation Strategy.

Master Plan for Aging

The Master Plan for Aging is a blueprint for aging across the lifespan, not simply a plan for today's older adults. California's over-60 population is projected to diversify and grown faster than any other age group. In response, the Master Plan calls on all California communities to build a California for All Ages: for older Californians currently living through the many different stages of the second half of life; for younger generations who can expect to live longer lives than their elders; for communities of all ages – family, friends, neighbors, coworkers, and caregivers – surrounding older adults. Competitive grant applications will discuss specific connections and help achieve the Master Plan's five goals and twenty-three strategies to build a California for All Ages by 2030.



2. SUSTAINABLE COMMUNITIES COMPETITIVE AND TECHNICAL

Approximately $12 million in State Road Maintenance and Rehabilitation Account (RMRA) funds and $5 million in State Highway Account (SHA) funds, or a combined total of $17 million will be distributed through a competitive program to Metropolitan Planning Organizations (MPOs) with a sub-applicant(s), Regional Transportation Planning Agencies (RTPAs), cities and counties, transit agencies, and Native American Tribal Governments. **MPOs must have a sub-applicant in order to be eligible and apply to the Sustainable Communities Competitive and Technical grants.**

Approximately $3 million will be set-aside for a technical project sub-category. In accordance with the recent release of the guidance documents for the implementation of Senate Bill 743 (SB 743, Chapter 386, Statutes of 2013), there is a current need for improved tools to measure VMT and induced travel and to develop and implement VMT mitigation programs.

Approximately $500,000 will be set-aside for Native American Tribal Governments.

Funding distribution for the competitive program will depend on the quality and number of applications.

2.1 Purpose and Specific Objectives

The purpose of the Sustainable Communities grants is to fund local and regional multimodal transportation and land use planning projects that further the region's RTP SCS/APS (where applicable), contribute to the State's GHG reduction targets, and assist in achieving the Caltrans Mission and Grant Program Objectives, which must be considered when preparing the grant application.

A minimum threshold of 50 percent of Sustainable Communities Competitive and Technical Grants has been identified for projects that benefit underserved communities, which includes Native American Tribal Governments and rural communities (for transportation planning purposes, rural is defined as all areas of the State that are not included in urbanized areas of 50,000 in population or greater; refer to Appendix C. Caltrans/Regional Agency Boundaries Map, which indicates rural areas). For purposes of the grant program, acceptable underserved communities definitions are described in Appendix A and include:

- Rural communities of 50,000 or less and outside of urbanized areas
- Native American Tribal Governments
- Regionally/locally defined underserved communities
- At or below 80% Assembly Bill 1550 (Gomez, Statutes of 2016)
- At or above 75% California Department of Education, Free or Reduced Priced Meals Data
- At or above 75% CalEnviroScreen Version 4.0
- At or below 25% California Healthy Places Index (HPI)

Sustainable Communities Competitive and Technical applicants must demonstrate how the project fits every aspect of the following Specific Objectives, as appropriate for the applicant and project type:

- Encourage local and regional multimodal transportation and land use planning that furthers the region's RTP SCS/APS (where applicable). For applicants not in an MPO region,

address how the project encourages local and regional multimodal transportation and land use planning that advances sustainability

- Contribute to the State's GHG reduction targets and other State goals, including but not limited to, the goals and best practices cited in the 2017 RTP Guidelines
- Address the needs of underserved communities through robust public engagement
- Assist in achieving the Caltrans Mission and Grant Program Objectives (See Chapter 1.2).

Sustainable Communities Technical project types do not require extensive public engagement due to their technical nature, but they will explain and demonstrate:

- How the public will be involved at later stages of the planning process
- How they will collaborate with and involve appropriate stakeholders with technical expertise to review and validate quantification assumptions and methods
- How stakeholders will be involved in the application and Scope of Work

Technical project applications are scored under the same criteria as all other project types, but they are grouped with other technical projects, and they compete at the same level. Refer to Chapter 2.2 for Example Technical Project Types. Applicants should contact their Caltrans District listed in Appendix D to help decide which grant category is the best fit for their project.

Below is a list of Appendix A. Guidance, Tools, and Resources to assist applicants in preparing a competitive grant application that is consistent with the Grant Program Objectives, Grant Program Considerations, and Specific Objectives.

- Advance Transportation Related GHG Reduction Project Types/Strategies
- Addressing the Needs of Underserved Communities
- Public Health Resources
- Active Community Engagement
- Integrated Housing, Land Use and Transportation Planning
- Promote the Region's RTP SCS/APS (where applicable) and State Planning Priorities, and Climate Adaptation Goals
- Climate-Ready Transportation

2.2 Example Project Types

The examples below are organized in the following grant project types: Active Transportation; Corridor and Freight; Social Equity; Integrated Housing, Land Use, and Transportation; Multimodal; Safety; Technical; and Transit.

Active Transportation

- Active transportation plans, including bicycle, pedestrian, and trail master plans
- Plans for bike parking facilities
- Rural planning studies or plans that provide rural counties the ability to develop active transportation plans with a rural context-sensitive focus and allow for rural regions to contribute to the State's GHG reduction targets
- Studies or plans that include a temporary built environment demonstration, e.g., tactical urbanism

Corridor and Freight

- Comprehensive Multimodal Corridor Plans
- Corridor enhancement studies
- Studies or plans related to zero emissions vehicle goods movement
- Freight/goods movement plans and studies
- Local or regional corridor plans
- Studies and plans that can help to quantify and highlight the value and importance of the rural State transportation system which connects large urban centers to rural open space, State and federal lands, and recreation and agriculture hubs.
- Studies and plans to mitigate for impacts to the rural transportation system due to increased interregional tourism and visitor traffic
- Modeling improvements that address SB 743 implementation and induced travel (see Sustainable Communities – Technical grant-specific objectives in Chapter 2.1)
- Complete Streets plans that consider last-mile freight
- Curbside freight management plans
- Sustainable freight plans
- Agriculture goods movement plans
- Freight/supply chain resiliency studies

Social Equity

- Community Needs Assessments
- Health and transportation studies, including health equity transportation studies and other plans that incorporate health into transportation planning
- Studies to improve access to social services and other community destinations for underserved communities
- Studies, plans or planning methods that address environmental justice issues in a transportation related context
- Congestion pricing studies including plans that enhance social equity and avoid inequitable cost burdens
- Planning to remove or reduce barriers created by transportation infrastructure such as highways, overpasses and underpasses, that create disconnected communities
- Studies or plans to ensure that infill and transit-oriented development benefits existing residents and businesses, low-income and underserved communities, and minimizes displacement
- Outreach to educate underserved communities on mode shifts to electric forms of transportation, as part of a plan or study as appropriate
- Student internships for rural agencies and/or underserved communities

Integrated Housing, Land Use, and Transportation

- Studies, plans or planning methods that assist transportation agencies in creating sustainable communities and transit-oriented development

- SCS/APS development
- Studies that promote greater access between affordable housing and job centers
- Station area planning
- Integration of transportation and environmental planning
- First Mile/Last Mile project development planning
- An update to a general plan land use element or zoning code that increases development opportunities around key transportation corridors or nodes
- Creation of a Transit-Oriented Development overlay zone or other special zoning district around key transportation corridors or nodes
- Studies, plans, and policies that address land use conflicts with major transportation corridors such as major highways, ports, shipping and freight corridors, etc. that are near sensitive land uses such as homes, schools, parks, etc. or potentially impacted by climate change

Multimodal

- Complete Streets plans or multimodal transportation plans
- Long range transportation plans for tribal governments
- Studies, plans or planning methods that advance a community's effort to reduce single occupancy vehicle trips and transportation related GHG through strategies including, but not limited to, advancing mode shift, demand management, travel cost, operational efficiency, accessibility, and coordination with future employment and residential land use
- Context-sensitive streetscapes or town center plans
- Studies that evaluate accessibility and connectivity of the multimodal transportation network
- Shared mobility services planning studies
- Community outreach plans for park-and-ride lots

Safety

- Bike and pedestrian plans with a safety enhancement focus, including Vision Zero plans
- Community to school studies or safe routes to school plans
- Traffic calming and safety enhancement plans

Technical

- Transportation modeling studies or planning activities that address SB 743 implementation and induced travel, active transportation, emerging technology, public health, VMT and other impacts
- Planning for zero or near zero emission vehicles
- Electric vehicle charging infrastructure network planning
- Transit planning for zero emission bus fleets
- Planning for autonomous vehicles
- Road or parking pricing studies
- Transportation Demand Management studies
- Commute trip reduction studies and plans

- Data collection/data sharing initiatives
- Integration of transit, new emerging technologies, and shared mobility services
- Educational outreach as part of a plan or study as appropriate, e.g., for mode shifts to electric forms of transportation

Transit

- Identification of policies, strategies, and programs to preserve transit facilities and optimize transit infrastructure
- Transit planning studies related to accessible transit, paratransit, mobility management, etc.
- Studies, plans, or outreach for school public transit, school pool ridesharing
- Strategies to increase transit ridership
- Studies or plans that evaluate commuter rail or multi-modal connectivity
- Studies or plans that evaluate first and last mile transit connectivity

2.3 Eligible and Ineligible Activities and Expenses

Eligible Activities and Expenses

Eligible activities must have a transportation nexus per the California Constitution, Article XIX Section 2 and 3. Applicants need to consult with Caltrans district staff for more information on whether costs are eligible for funding.

Some examples of eligible costs include:

- Data gathering and analysis
- Report writing and the development of associated graphics
- Planning consultant procurement
- Advertising for consultant procurement
- Advertising for public workshops, e.g., flyers, paid media ads
- Travel expenses (See Chapter 6.5 for details)
- Up to 30 percent design or conceptual drawings
- Equipment (as defined in 2 CFR Part 200.33)[1] purchases must remain under $5,000 or depreciation will need to be taken in to account when the grant project is completed since equipment could have future uses. *2 CFR Part 200.436*[2] provides the criteria for depreciation.
- Community surveys, meetings, public workshop room rental, charrettes, focus groups
- Virtual outreach activities and on-line meetings

---

[1] Electronic Code of Federal Regulations, 2 Code of Federal Regulations, Part 200.33, 2020, https://www.ecfr.gov/on/2017-01-03/title-2/subtitle-A/chapter-II/part-200/subpart-A/subject-group-ECFR2a6a0087862fd2c/section-200.33

[2] Govinfo, 2 Code of Federal Regulations, Part 200.436, 20, https://www.govinfo.gov/app/details/CFR-2022-title2-vol1/CFR-2022-title2-vol1-sec200-436

- Bilingual services for interpreting and/or translation services for meetings
- Community/stakeholder advisory groups
- Light snacks and refreshments for public workshops (no full meals), subject to Caltrans approval
- Project administration (up to 5 percent of the grant is allowed, i.e., quarterly reports, invoicing, and kick-off meeting with Caltrans)

Ineligible Activities and Expenses

Some activities, tasks, project components, etc. are not eligible under these grant programs. If an application has any of the following elements, it will be disqualified.

Ineligible activities and expenses include:

- Environmental studies, plans, or documents normally required for project development under the National Environmental Policy Act or the California Environmental Quality Act
- Engineering plans and design specification work
- Project Initiation Documents
- Program or project implementation
- Repurposing unspent grant funds (not applicable to Sustainable Communities Formula)
- Application development to pursue construction funds/project implementation
- RTPs or updates to the RTP, excluding SCS/APS development
- Construction projects, capital costs, such as the building of a facility, or maintenance
- Office furniture purchases, or other capital expenditures
- Decorations, e.g., for public workshop events
- Acquisition of vehicles or shuttle programs
- Organizational membership fees
- Incentives for public participation, e.g., full meals, prizes, freebies, promotional/marketing items, stipends
- Charges passed on to sub-recipient for oversight of awarded grant funds
- Other items unrelated to the project

2.4 Tips for Successful Sustainable Communities Grant Applications

Criteria for Successful Sustainable Communities Grant Applications

Some guidance is provided below however, it is not intended to be all inclusive.

- Integrate Grant Program Considerations (See Chapter 1.2)
- Advance transportation related GHG emission reduction project types/strategies (i.e., mode shift, demand management, travel cost, operational efficiency, accessibility, and coordination with future employment and residential land use, etc.)
- Identify and address deficiencies in the multimodal transportation system, including the needs of environmental justice and underserved communities, including Native American Tribal Governments and rural communities

- Encourage stakeholder collaboration
- Involve active community engagement
- Coordinate transportation, housing, and land use planning
- Result in funded and programmed multimodal transportation system improvements

General Tips

- Some sections of the grant application may seem redundant when discussing underserved community engagement, overall public engagement, and stakeholder involvement. Although the general public and underserved communities are stakeholders for any project, for application purposes, the strategy, and methods for engaging these groups will be different, as described below.
    - Overall public engagement will describe the general strategy to engage the public at large.
    - Underserved communities engagement will explain how the project will go above and beyond business as usual or what is statutorily required to address the specific needs of underserved communities and use unique methods to involve these groups in the decision-making process. Refer to Appendix A. Active Community Engagement, which includes case studies for examples of equitable community engagement.
    - Stakeholder engagement will explain how partner agencies, businesses, and/or non-profit community-based organizations will be involved throughout the project.
- Consult with your district representative for technical assistance before the application deadline.
- Use the Samples and Checklists provided for the Application, Scope of Work, and Cost and Schedule.
- Include Caltrans as an active partner in the study.
- Provide tailored letters of support and project area photographs to enhance the application. If applicants/supporters do not have the time/resources to provide tailored letters of support, a petition signed by supporters in a simple table format that lists the supporters **and** specifically how supporters will benefit the proposed project will suffice.

Project Description

Concisely describe the project. Explain "What parties are involved, the proposed major milestones, and why the project is necessary."

Project Justification

- Clearly define and explain the transportation problem or deficiency that the project will attempt to address and how the project will address the problem. Why is it critical to address the problem now? Make the case for a critical need that the project will address and support it with verifiable data, if available.
- Explain how the project affects underserved communities. The tools in Appendix A are intended to help applicants define an underserved community in the project area. Please cite data sources, the tools used, and include a comparison to the statewide thresholds that are established in each tool.

- If the applicant is a Native American Tribal Government or a rural area (outside of the urbanized areas with 50,000 in population or greater) of the State, describe population characteristics such as demographics, location, and size.

Grant Specific Objectives

Demonstrate how the project fits every aspect of the Grant Specific Objective, as appropriate for the applicant and project type. Some guidance is provided below; however, it is not intended to be all inclusive. Applications should reference Appendix A for Resources to Advance Sustainable Communities Grant Specific Objectives.

Successful applications should include:

Planning for Housing, Housing Element Compliance, and Prohousing Designation

- To avoid a deduction of 5 points, applicants must demonstrate how they integrate housing planning into their policies, programs, and project, or commit to coordinate housing and transportation in future policies and programs throughout the application (e.g., narrative and scope of work). See Chapter 2.2 for a list of example projects that coordinate housing, land use, and transportation.
- To be eligible for a grant award, city and county primary/sub-grant applicants are required to submit:
    1. A housing element adopted by the local government to the Department of Housing and Community Development (HCD), and HCD must find the adopted housing element in substantial compliance with state housing element law pursuant to Government Code Section 65585.
    2. Annual Progress Reports (APRs) to HCD for at least the previous two years, 2021 and 2022.
- City or county primary/sub-applicants will receive a high recommendation from HCD if they have a Prohousing Designation, which can be earned by adopting local policies that facilitate the planning, approval, and construction of housing. The HCD Prohousing Designation Program provides incentives to cities and counties in the form of additional points or other preference in the scoring of competitive housing, community development, and infrastructure programs. For HCD Prohousing Designation Program information and how to develop a competitive application, refer to Appendix A, *Integrated Housing, Land Use, and Transportation Planning*.

IMPORTANT TIPS:

- ✓ City and county primary/sub-grant applicants are required to submit:
    1. A housing element adopted by the local government to HCD.
    2. Annual Progress Reports to HCD for at least the previous two years, 2021 and 2022.

Note: Charter cities are not exempt from this specific program requirement and must submit an Annual Progress Report for the calendar years mentioned above.

Community Engagement

- Refer to Appendix A for Community Engagement Best Practices.
- Evidence of additional public outreach measures that promote access to decision-making and program implementation for all segments of the community, including special needs populations, underserved communities, and a variety of socio-economic groups (e.g., households across the income and employment spectrum, ethnically and racially diverse households).
- The application narrative should outline specific outreach strategies that will be utilized, considering the current COVID-19 environment.
- Tailored letters of support with electronic signatures from community-based organizations or public advocacy groups to demonstrate their support or involvement in identifying the issues that the proposed project is attempting to address.
- If applicants/supporters do not have the time/resources to provide tailored letters of support, a petition electronically signed by supporters in a simple table format that indicates specifically how supporters will benefit the proposed project will suffice.

Integrated Housing, Land Use, and Transportation Planning

- Application narrative and any relevant supporting or illustrative data should describe how the proposed project integrates and connects land use and transportation, including how transportation and land use agencies or jurisdictions are actively collaborating on the project in all project phases.
- Competitive grant applications should demonstrate how the project furthers this coordinated and integrated approach to planning. For example:
    - Demonstrate how the project will support or align with the region's Regional Early Action Planning (REAP)[3] grant investments or other regional planning or implementation efforts. REAP 2.0 seeks to accelerate infill housing development, reduce Vehicle Miles Traveled (VMT), increase housing supply at all affordability levels, affirmatively further fair housing, and facilitate the implementation of adopted regional and local plans to achieve these goals. Eligible uses include projects that invest in infrastructure to expand active transportation and fund and implement parking and transportation demand management programs or ordinances.

HELPFUL TIPS:

Tailored letters of support from local agencies that not only provide support for the project, but also confirms that the proposed project:

- ✓ Helps to implement the RTP SCS/APS and/or State priorities
- ✓ Involves a coordinated approach to integrating land use and transportation in all phases of project planning and implementation.

[3] REAP Website: Programs: Active | California Department of Housing and Community Development

- Describe how the project aligns with state housing policies and goals by serving a community within ½ mile of a transit station or stop that has received a positive Prohousing Designation Program score, certified by HCD.
- Explain how the project is located in an area that has earned a Prohousing Designation and positive scores for Prohousing Enhancement policies from HCD. Jurisdictions supporting integrated housing, land use, and transportation planning may have policies that include Prohousing Enhancement Factors, which represent a multi-faceted approach to planning objectives, are consistent with state priorities, go beyond state law, etc. Competitive applications may also identify a jurisdiction's policies that promote housing development and reduce VMT. For information about the HCD Prohousing Designation Program and how applicants can develop a competitive application with Prohousing Enhancement Factors or VMT reducing policies, refer to Appendix A, *Integrated Housing, Land Use, and Transportation Planning.* HCD will highly recommend awards for City and county primary/sub-applicants that earn this designation.

Project Management

- **Scope of Work**: Refer to the Scope of Work Checklist in Appendix B.
- **Cost and Schedule**: Refer to the Cost and Schedule Checklist in Appendix B.

3. SUSTAINABLE COMMUNITIES FORMULA

$12.5 million will be distributed to the MPOs on a formula basis. The formula funds for the MPOs will reflect the same formula used to distribute Federal Highway Administration (FHWA) Metropolitan Planning PL funds.

The FHWA PL formula has three components:

1. A base allocation
2. A two-part population component which distributes funds by the proportion of the total population of each MPO based on California Department of Finance estimates each January
3. An Air Quality component based on the proportion of federal Congestion Mitigation Air Quality funds to total programmatic FHWA PL funds

3.1 Purpose and Specific Objectives

The purpose of the Sustainable Communities Formula is to fund local and regional multimodal transportation and land use planning projects that further the region's RTP SCS/APS (where applicable), contribute to the State's GHG reduction targets, and assist in achieving the Caltrans Mission and Grant Program Objectives (See Chapter 1.2).

The intent of the Sustainable Communities Formula Grants is to carry out the objectives of the region's RTP SCS/APS (where applicable) and the RTP Guidelines Appendices K and L.

The specific objectives, eligibility requirements, and performance considerations for the Sustainable Communities Formula Grants awarded to MPOs are consistent with the Sustainable Communities Competitive Grants.

The intent of the Sustainable Communities Formula Grants is to carry out the objectives of the region's RTP SCS/APS (where applicable) and the RTP Guidelines Appendices K and L. In addition, MPOs are strongly encouraged to administer Sustainable Communities Formula funding in a transparent manner and maintain non-profit eligibility, consistent with the legislative intent of SB 1 - The Road Repair and Accountability Act of 2017.

3.2 Guidance and Approval Process

Minimum Eligibility Criteria

MPOs should meet the following minimum eligibility criteria to apply for Sustainable Communities Formula grants:

- Of the Consolidated Planning Grant, FHWA PL carryover is at or below 100 percent of the annual FHWA PL allocation
- Have an RTP SCS/APS that meets the SB 375 GHG reduction targets
- Meet civil rights and environmental justice obligations, as summarized in Section 4.2 of the RTP Guidelines

If an MPO does not meet the minimum eligibility criteria listed above by **April 30, 2024**, their allocation will be redistributed to the remaining MPOs that are eligible and apply for the Sustainable Communities Formula Grants.

IMPORTANT NOTE:

✓ If an MPO does not meet the minimum eligibility criteria, their allocation will be redistributed to the remaining MPOs that are eligible and apply for the Sustainable Communities Formula Grants.

Annual Draft Overall Work Program (OWP) Development and Approval Process

Sustainable Communities Formula Grants are part of the annual draft Overall Work Program (OWP) development and approval process. The draft OWP process includes meaningful consultation with Caltrans district staff and the Headquarters Office of Regional and Community Planning (ORCP). MPOs are responsible for including a draft Work Element(s) for Sustainable Communities Formula Grant funds in the draft FY 2024-24 OWP and sending a list of activities using the provided template to Caltrans, no later than **March 1, 2024**. Draft OWPs are submitted to the district Regional Planning Liaison who will coordinate with ORCP. The draft Work Element(s) should include an explanation of how the project supports the Sustainable Communities Grant Specific Objectives and provide the same level of detail included in the grant application Scope of Work and Cost and Schedule for the Sustainable Communities Competitive Grants. The Work Element name and number must remain unchanged until the project(s) is completed. If Work Elements do not provide enough detail, MPOs will need to submit the competitive grant application Scope of Work and Cost and Schedule. More information and detailed requirements are outlined in the *SB 1 Guidance for OWPs and Requests for Reimbursements*, available upon request.

3.3 Example Project Types

MPOs have flexibility for how the Formula Grant allocation is administered. For example, MPOs may use these funds for a regional competitive grant program, integrated land use and transportation planning activities related to developing their SCS/APS, carrying out the best practices cited in the RTP Guidelines, or a combination thereof. If an MPO uses Formula Grant funds to administer a regional grant program, the MPO must submit their grant program criteria and list of eligible applicants and sub-applicants to the Caltrans district and ORCP. This step is to ensure the MPO's grant program aligns with the Caltrans Sustainable Communities Competitive Grants, including city and county housing element compliance. MPOs will also submit a list of awarded grants to the Caltrans district and ORCP. MPOs should coordinate the submittal of this information with the Caltrans district and ORCP to avoid delays for releasing the call-for-projects and grant awards. For additional example project types, refer to Chapter 2.2.

3.4 Eligible and Ineligible Activities and Expenses

Refer to Chapter 2.3 for eligible and ineligible activities and expenses.

3.5 Formula Grant Allocation Estimates

The following funding table estimates how formula funds may be distributed to each MPO, contingent upon meeting the minimum eligibility criteria:

Sustainable Communities Formula Grants	
Metropolitan Planning Organization	**Total Formula Grant Allocation**
Tahoe Metropolitan Planning Organization	$160,750
Madera County Transportation Commission	$164,209
Kings County Association of Governments	$162,943
Shasta Regional Transportation Agency	$163,172
Butte County Association of Governments	$180,569
Merced County Association of Governments	$197,424
San Luis Obispo Council of Governments	$195,962
Tulare County Association of Governments	$246,944
Santa Barbara County Association of Governments	$224,579
Stanislaus Council of Governments	$291,053
San Joaquin Council of Governments	$341,671
Kern Council of Governments	$374,899
Association of Monterey Bay Area Governments	$315,267
Fresno Council of Governments	$407,484
Sacramento Area Council of Governments	$774,991
San Diego Association of Governments	$1,021,553
Metropolitan Transportation Commission	$2,106,140
Southern California Association of Governments	$5,170,390
Total	**$12,500,000**

4. CLIMATE ADAPTATION PLANNING

Climate change adaptation aims to anticipate and prepare for climate change impacts to reduce the damage from climate change and extreme weather events. Adaptation is distinct from, but complements, climate change mitigation, which aims to reduce GHG emissions. This funding is intended to advance adaptation planning on California's transportation infrastructure, including but not limited to roads, railways, bikeways, trails, bridges, ports, and airports.

The State-funded Climate Adaptation Planning grants ($31.9 million) will support tribal, local, and regional identification of transportation-related climate vulnerabilities through the development of climate adaptation plans, as well as project-level adaptation planning to identify adaptation projects and strategies for transportation infrastructure. Applicants at all stages of adaptation planning efforts including those who have not yet started adaptation work are encouraged to apply.

Climate adaptation planning projects are defined by:

- Identification of transportation system vulnerabilities and climate-related risks to existing transportation infrastructure, including resilience improvement plans.
- Identification of adaptation planning projects that address climate risk impacts to existing transportation infrastructure including sea level rise, storm surge, changes in temperature and precipitation.
- Planning for specific climate projects that can be programmed in existing local or regional transportation plans.

4.1 Purpose and Specific Objectives

California's climate leadership has made the ambitious commitment to reduce greenhouse gas emissions and facilitate a transition to a carbon neutral economy. However, as made clear by the impacts already affecting California and the recent IPCC report, impacts of climate change are occurring sooner than expected and they disproportionately affect the most vulnerable among us (See Appendix A. for IPCC report). Many impacts, such as increased wildfires, droughts, landslides, rising sea levels, floods, severe storms, heat waves, and impacts to wildlife, are already occurring already and are expected to become more frequent and severe.

Climate change is increasingly impacting the State's transportation system. Adaptation efforts will enhance the resiliency of the transportation system to better withstand climate impacts. The overarching goal of this grant program is to support planning actions at local and regional levels that advance climate change adaptation efforts on the transportation system, especially efforts that serve the communities most vulnerable to climate change impacts. Taking steps now to adapt to climate change will protect public health and safety, infrastructure, and the California economy into the future.

Caltrans awarded three cycles of local adaptation planning grants allocated through the passage of SB 1. This program operated from FY 2017-18 through FY 2019-20 and was able to fund innovative tribal, local, and regional adaptation planning grants across California. Examples of the completed projects supported by the SB 1 Climate Adaptation Planning Grant Program can be found on the California Adaptation Clearinghouse's case study[4] page. The current funding in this program aims to build upon the successful SB 1 program to further advance transportation adaptation planning.

[4] Adaptation Clearinghouse's case study website: https://resilientca.org/challenges/

Equity, including regional representation, will be considered when awarding projects. A minimum threshold of 50 percent of the funds has been identified for projects that benefit underserved communities, which includes Tribal, local, regional, and rural communities (for transportation planning purposes, rural is defined as all areas of the State that are not included in urbanized areas of 50,000 in population or greater; refer to Appendix C. Caltrans/Regional Agency Boundaries Map, which indicates rural areas). For purposes of the grant program, acceptable underserved communities definitions are described in Appendix A and include:

- Rural communities of 50,000 or less and outside of urbanized areas
- Native American Tribal Governments
- Regionally/locally defined underserved communities
- At or below 80% Assembly Bill 1550 (Gomez, Statutes of 2016)
- At or above 75% California Department of Education, Free or Reduced Priced Meals Data
- At or above 75% CalEnviroScreen Version 4.0
- At or below 25% California Healthy Places Index (HPI)

Furthermore, up to 10% of the funds ($3.9 remaining) will be set-aside for Native American Tribal Governments.

Climate Adaptation Planning grant applicants must demonstrate how the project fits the Grant Specific Objectives listed below, as appropriate for the applicant and project type. Additional resources (guidance, data sources, etc.) to assist in achieving these objectives can be found in Appendix A:

Applicants are required to demonstrate how the proposed effort will accomplish one or more of the following:

- Identify specific transportation infrastructure vulnerabilities[5] to climate change impacts.
- Identify adaptation strategies and specific actions to remedy identified climate-related vulnerabilities, including short-, medium-, and long-term strategies that will address the overall risk for the entire service life of the asset or capital project using the best available science and guidance.
- Include economic analysis and/or cost-benefit analysis of identified adaptation strategy or strategies when applicable.

Applicants must also demonstrate how the proposed effort will accomplish one or more the following:

- Identify benefit(s) to underserved communities, including transit-dependent populations.
- On-going collaboration and partnerships between sectors and jurisdictions, across levels of government at a regional scale.
- Identify co-benefits of the adaptation work, such as benefits to public health, natural ecosystems, air quality, social equity, the economy, or reductions in greenhouse gas emissions. Projects prioritizing nature-based solutions through natural and green infrastructure planning and adaptation strategies will be prioritized.

[5] Transportation infrastructure includes, but is not limited to, roads, railways, bikeways, trails, bridges, ports, and airports. Vulnerable transportation infrastructure is transportation infrastructure that is susceptible to the impacts of climate change (e.g., a pedestrian-use trail that cuts through a forested area that is expected to see increased fire risk due to climate change).

- Consistency with priorities and goals of the 2021 California State Adaptation Strategy, as well as any applicable local/regional resilience planning, and that the effort will identify ways to incorporate transportation-related climate adaptation needs into existing transportation plans.
- Projects must include a multistakeholder process that provides an opportunity for meaningful community engagement from communities potentially impacted by any projects identified or developed as part of the planning grant.

Competitive applicants will demonstrate one or more of the following:

- Alignment with or augmentation of existing plans, including climate action plans/adaptation plans, hazard mitigation plans, safety elements of general plans, resilience improvement plans, and/or Certified Local Coastal Programs[6], that will lead to the identification and development of capital projects that can be programmed as part of local or regional transportation plans. Projects should follow State Guidance on Adaptation Planning (see Appendix A) or be aligned with local plans.
- Collaboration and partnerships with diverse external stakeholders such as businesses, non-governmental agencies, community-based organizations, Federal, state, or local agencies, and community residents.
- Consideration of the adaptation needs of environmental resources in proximity to the transportation system such as coastal resources including but not limited to tidal marsh or beaches, wildlife connectivity, wetlands, or fish passage needs.
- Consideration of public access and Complete Streets' needs.

4.2 Example Project Types

Caltrans aims to fund a variety of project types from a diverse pool of applicants to respond to these climate impacts. Applicants who have adaptation planning efforts underway, as well as those who have not yet started adaptation planning, are encouraged to apply.

The examples below are provided to illustrate the range of projects that may be appropriate for the grant program, as well as to provide ideas to potential applicants. The project types range from initial vulnerability assessment and broad planning efforts to project-level planning needs, for instance through local studies on natural hazards to inform a future project. Proposed projects are not constrained by the examples below.

- **Climate Vulnerability and Risk Assessments** (identification of climate vulnerabilities and risks to transportation infrastructure)

- **Planning for extreme weather events,** which could include:
  - Evacuation planning.
  - Identifying communities and individuals with inadequate access to transportation options (e.g., survey to determine number and location of transit dependent residents).
  - Planning for increased transportation options (e.g., multimodal) in evacuation corridors.
  - Planning for roadway warning systems for extreme weather events.

[6] More information about Certified Local Coastal Programs and whether a project is located in this area can be found on the Coastal Commission's website and further verified by reaching out to Coastal Commission staff at the applicable Coastal Commission District office. https://coastal.ca.gov/lcps.html

  - Planning and evaluating for decentralized energy storage needs for electric vehicle charging infrastructure to safeguard against loss of power and impacts to electric vehicles due to climate-related grid disruptions.

- **Transportation Infrastructure Adaptation and Resilience Improvement Plans, and/or integration of transportation adaptation planning into existing plans** such as a climate mitigation or adaptation plan, Certified Local Coastal Program, Hazard Mitigation Plan, General Plan (including compliance with Senate Bill 379 requirements (Jackson, Chapter 608, Statutes of 2015)), **or other related planning efforts, including project-level planning for capital projects**. For instance, this can include:
  - Prioritization of adaptation needs and strategies in a given region/location.
  - Project-level planning that can be programmed through an existing local or regional transportation plan, such as evaluating infrastructure resilience to climate impacts, especially projects that integrate natural infrastructure or provide multiple benefits. Specific examples could include: adaptation strategies related to realigning/relocating transportation infrastructure impacted by sea level rise; providing transit shelters with shade, water, or other means of cooling in locations expected to see temperature increases; preparing for increased landslide risk; etc.

- **Natural and green infrastructure planning** (e.g., wetlands restoration along transportation corridors to protect transportation infrastructure from flooding and storm impacts, identifying and removing barriers to habitat and wildlife connectivity.)

- **Technical feasibility studies required to advance project-level adaptation planning,** for instance coastal hazards analysis at a potential adaptation project location, or a precipitation study that incorporates future climate risk.

- **Technical assistance projects for under-resourced and climate vulnerable communities to perform climate adaptation planning.**

- **Development of educational resources, trainings and workshops for local jurisdictions and transportation service providers on any of the above listed adaptation planning activities.**

4.3 Eligible and Ineligible Activities and Expenses.

Eligible activities must have a transportation nexus per the California Constitution, Article XIX Section 2 and 3. Applicants need to consult with Caltrans district staff for more information on whether costs are eligible for funding.

Eligible Activities and Expenses

Please consult with Caltrans district staff for clarification regarding specific eligible activities or expenses. Example eligible costs include:

- Staff time
- Consultant time
- Up to 30 percent design or conceptual drawings
- Data and geospatial analysis
- Report writing and the development of associated graphics
- Community surveys, meetings, charrettes, and focus groups
- Bilingual services for interpreting and/or translation services for meetings
- Community/stakeholder advisory groups

- Project-specific staffing
- Web application development and dashboard
- Light snacks and refreshments for public workshops (no full meals), subject to Caltrans approval

Ineligible Activities and Expenses

Some activities, tasks, project components, etc. are not eligible under this grant program. If an application has any of the following elements, it will be disqualified. Ineligible activities and expenses include:

- Projects without a transportation nexus
- Project Initiation Documents
- Environmental studies, plans, or documents normally required for project development under the National Environmental Policy Act or the California Environmental Quality Act
- Engineering plans and design specification work
- Regional Transportation Plans (RTP) or updates to the RTP
- Construction projects or capital costs, such as the building of a facility, or maintenance
- Purchasing of office furniture or other capital expenditures
- Decorations (e.g., for public workshop events)
- Acquisition of vehicles or shuttle programs
- Organizational membership fees
- Incentives for public participation, e.g., "Stuff We All Get" (SWAG), full meals, prizes, freebies, promotional/marketing items, stipends
- Charges passed on to sub-recipient for oversight of awarded grant funds
- Other items unrelated to the project

4.4 Tips for a Successful Climate Adaptation Planning Grant Application

Strong applications will integrate all aspects of the grant program's purpose and specific objectives listed above. Additionally, strong applications will support statewide goals and objectives currently being implemented by the State of California, including the Grant Program Considerations (see Chapter 1.2).

Some guidance is provided below; however, it is not intended to be all inclusive.

Criteria for Successful Climate Adaptation Planning Grant Applications

- Clearly demonstrate how the project promotes climate change adaptation planning on the California transportation system and how the project aligns with the grant specific objectives.
- Partner with Caltrans to identify and address statewide, interregional, or regional transportation adaptation needs in the State highway system (or multimodal transportation system for transit-focused and/or active transportation projects.
- Strengthen government-to-government relationships.

- Demonstrate that the proposed planning effort will lead to adaptation project funding proposals and/or programmed system improvements. This can include advancing planning to lead to project development through development of a cost estimate, pursuing a technical feasibility study for adaptation options, and/or developing a conceptual design.
- Identify and address deficiencies in the multimodal transportation system, including the needs of environmental justice and underserved communities, including Native American Tribal Governments and rural communities.
- Encourage stakeholder collaboration and include active community engagement.
- Promote the region's RTP SCS (where applicable), State planning priorities (Government Code Section 65041.1), and climate adaptation goals (State Adaptation Strategy).
- Demonstrate that the proposed planning effort will use the best available science for climate change projections.
- For proposed planning efforts in the California Coastal Zone, demonstrate that all analyses and final deliverables will be consistent with the applicable Certified Local Coastal Program, California Coastal Act (for projects in the Coastal Commission's retained jurisdiction), and Coastal Commission guidance documents on sea level rise, environmental justice, and Tribal community engagement.

General Tips

- Refer to existing State guidance on climate adaptation planning to ensure alignment with State direction, State data, and guidance, including the California Adaptation Planning Guide, and resources that can be found on the State Adaptation Clearinghouse.
- Consult with your district representative for technical assistance before the application deadline.
- Use the Samples and Checklists provided for the Application, Scope of Work, and Cost and Schedule.
- Provide tailored letters of support and photos of project area as relevant to enhance the application. Project supporters should describe why they support the project and how they would benefit from the project. If applicants/supporters do not have the time/resources to provide tailored letters of support, a petition signed by supporters in a simple table format that lists the supporters and specifically how supporters will benefit the proposed project will suffice.
- Include Caltrans as an active partner in the study, as applicable.
- Some sections of the grant application may seem redundant when discussing underserved community engagement, overall public engagement, and stakeholder involvement. Although the general public and underserved communities are stakeholders for any project, for application purposes, the strategy and methods for engaging these groups will be different, as described below.
    - Overall public engagement will describe the general strategy to engage the public at large;
    - Underserved communities' engagement will explain how the project will go above and beyond business as usual to address the specific needs of underserved communities and use unique methods to involve these groups in the decision-making process; and
    - Stakeholder engagement will explain how partner agencies, businesses, and/or

non-profit community-based organizations will be involved throughout the project.

Project Management

- **Scope of Work**: Refer to the Scope of Work Checklist in Appendix B.
- **Cost and Schedule**: Refer to the Cost and Schedule Checklist in Appendix B.

5. STRATEGIC PARTNERSHIPS

$1.5 million in FHWA State Planning and Research (SPR) Part 1 funds and $3 million in Federal Transit Administration (FTA) Section 5304 funds, or a combined total of $4.5 million, will be distributed through a competitive program to MPOs and RTPAs. Funding distribution for the competitive program will depend on the quality and number of applications.

5.1 Purpose and Specific Objectives

Strategic Partnerships are intended to fund planning projects that partner with Caltrans to address needs on or connecting to the State Highway System (SHS), while the transit sub-category will address multimodal planning projects that focus on transit.

The objectives of the Strategic Partnerships and Strategic Partnerships - Transit grants are to:

- Strengthen government-to-government partnerships
- Accomplish the Federal Planning Factors
- Achieve the Caltrans Mission and the Grant Program Objectives

5.2 Federal Planning Factors

1. Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency
2. Increase the safety of the transportation system for motorized and non-motorized users
3. Increase the security of the transportation system for motorized and non-motorized users
4. Increase accessibility and mobility of people and freight
5. Protect and enhance the environment, promote energy conservation, improve the quality of life, and promote consistency between transportation improvements and State and local planned growth and economic development patterns
6. Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight
7. Promote efficient system management and operation
8. Emphasize the preservation of the existing transportation system
9. Improve the resiliency and reliability of the transportation system and reduce or mitigate stormwater impacts of surface transportation
10. Enhance travel and tourism

5.3 Example Project Types

Example Project Types - Strategic Partnerships

- Studies that identify interregional, inter-county, and/or statewide mobility and access needs
- Comprehensive Multimodal Corridor Plans
- Corridor performance/preservation studies
- Studies that evaluate transportation issues involving ground access to international borders, seaports, airports, intermodal facilities, freight hubs, and recreational sites
- Development of planning activities intended to result in investment in sustainable transportation projects
- Enhanced tools to capture GHG benefits of Operations and System Management projects
- Integration of transportation and economic development
- Planning for sustainable freight
- Planning for transportation safety
- Studies for relinquishment of state routes
- Statewide or interregional research or modeling tools
- Transportation demand management plans
- System investment prioritization plans
- Assessment and integration of new technology
- Complete street plans that consider last-mile freight
- Curbside freight management plans
- Agriculture goods movement plans
- Freight/supply chain resiliency studies

Example Project Types - Strategic Partnerships Transit

- Identification of policies and procedures to integrate transit into the transportation system and planning process
- Statewide transit planning surveys and research
- Identification of policies, strategies, and programs to preserve transit facilities and optimize transit infrastructure
- Projects that evaluate accessibility and connectivity of the multi-modal transportation network
- Transit technical planning studies to optimize system performance
- Studies or plans that evaluate commuter rail or multi-modal connectivity
- Studies or plans that evaluate first and last mile transit connectivity

5.4 Eligible and Ineligible Activities and Expenses

Eligible Activities and Expenses

Eligible activities must have a transportation nexus per the California Constitution, Article XIX Section 2 and 3. Please consult with Caltrans district staff for more information on whether costs are eligible for funding.

Some examples of eligible costs include:

- Data gathering and analysis
- Planning consultant procurement
- Advertising for consultant procurement
- Advertising for public workshops, e.g., flyers, paid media ads
- Virtual outreach activities and on-line meetings
- Travel expenses (See Chapter 6.5 for details)
- Up to 30 percent conceptual drawings and design
- Equipment (as defined in 2 CFR Part 200.33)[7] purchases must remain under $5,000 or depreciation will need to be taken in to account when the grant project is completed since equipment could have future uses. 2 CFR Part 200.436[8] provides the criteria for depreciation, at the Govinfo website.
- Community surveys, meetings, public workshop room rental, charrettes, focus groups
- Bilingual services for interpreting and/or translation services for meetings
- Community/stakeholder advisory groups
- Light snacks and refreshments for public workshops (no full meals), subject to Caltrans and federal approval
- Project administration (up to 5 percent of the grant is allowed, i.e., quarterly reports, invoicing, and kick-off meeting with Caltrans)

Ineligible Activities and Expenses

Some activities, tasks, project components, etc. are not eligible under these grant programs. If an application has any of the following elements, it will be disqualified. Ineligible activities and expenses include:

- Environmental studies, plans, or documents normally required for project development under the National Environmental Policy Act or the California Environmental Quality Act
- Engineering plans and design specification work
- Project Initiation Documents

---

[7] Electronic Code of Federal Regulations, 2 Code of Federal Regulations, Part 200.33, 2020, https://www.ecfr.gov/on/2017-01-03/title-2/subtitle-A/chapter-II/part-200/subpart-A/subject-group-ECFR2a6a0087862fd2c/section-200.33

[8] Govinfo, 2 Code of Federal Regulations, Part 200.436, 2022, https://www.govinfo.gov/app/details/CFR-2022-title2-vol1/CFR-2022-title2-vol1-sec200-436

- Program or project implementation
- Repurposing unspent grant funds
- Consultant mark-ups
- Application development to pursue construction funds/project implementation
- RTPs or updates to the RTP
- Economic development plans or studies
- Land use plans or studies
- General Plans or updates to elements
- Construction projects, capital costs, such as the building of a facility, or maintenance
- Office furniture purchases, or other capital expenditures
- Decorations, e.g., for public workshop events
- Acquisition of vehicles or shuttle programs
- Organizational membership fees
- Incentives for public participation, e.g., full meals, prizes, freebies, promotional/marketing items, stipends
- Charges passed on to sub-recipient for oversight of awarded grant funds
- Other items unrelated to the project

5.5 Tips for Successful Strategic Partnerships Grant Applications

Criteria for Successful Strategic Partnerships Grant Applications

- Partner with Caltrans to identify and address statewide, interregional, or regional transportation deficiencies in the State highway system (or multimodal transportation system for transit-focused projects)
- Strengthen government-to-government relationships, and
- Result in programmed system improvements

General Tips

- Refer to Appendix A. Multimodal System Planning guidance documents in the development of proposed corridor plans/studies, freight plans/studies, and other multimodal system planning documents.
- Consult with your district representative for technical assistance before the application deadline.
- Use the Samples and Checklists provided for the Application, Scope of Work, and Cost and Schedule.
- Include Caltrans as an active partner in the study.
- Provide tailored letters of support and project area photographs to enhance the application. Project supporters should describe why they support the project and how they would benefit from the project.
- If applicants/supporters do not have the time/resources to provide tailored letters of

support, a petition signed by supporters in a simple table format that lists the supporters and specifically how supporters will benefit the proposed project will suffice.

Project Summary

- Concisely describe the project in less than 150 words. Explain "What parties are involved, the proposed major milestones, and why the project is necessary."

Project Justification

- Clearly define and explain the transportation problem or deficiency that the project will attempt to address. Why is it critical to address the problem now? Make the case for a critical need that the project will address and support it with verifiable data, if available.

Grant Specific Objective

Demonstrate how the project fits every aspect of the Grant Specific Objective, as appropriate for the applicant and project type.

Project Management

- **Scope of Work:** Refer to the Scope of Work Checklist in Appendix B.
- **Cost and Schedule :** Refer to the Cost and Schedule Checklist in Appendix B.

6. GRANT PROJECT ADMINISTRATIVE REQUIREMENTS

The content of this chapter should be notably considered in the development of grant applications as it lays the foundation for what to expect when applying for these grant funds. Upon award, grantees will receive more specific guidelines including administrative and reporting requirements.

6.1 Coordination with Caltrans

Caltrans is committed to be an active partner. If awarded a grant, the applicant should include Caltrans district staff when planning both technical advisory and community meetings. In addition, Caltrans district staff will help to ensure that the approved Scope of Work, Cost and Schedule, and project funding will be maintained throughout the life of the contract. Applicants are also recommended to engage Caltrans district staff throughout the entire grant life, when applicable.

Caltrans may contact grantees to participate in peer exchange forums to promote information sharing and best practices.

If an agency does not demonstrate adequate performance and timely use of funds, Caltrans may take appropriate actions, which can include termination of the grant.

6.2 Third Party Contracts

The agreements between a grantee and a sub-applicant/recipient, consultant, or sub-consultant are often referred to as "third party contracts." An eligible sub-applicant should be identified by an eligible applicant at the onset of the application. Eligible sub-applicants/recipients may be added to an application after award with prior Caltrans approval. If a grantee or a sub-recipient is going to hire a consultant to perform work during the project, then proper procurement procedures must always be used.

Grantees may use their agency's procurement procedures as long as they comply with the State Contracting Manual, Chapter 5, the Local Assistance Procedures Manual, Chapter 10, and the terms of the agreement with Caltrans. In addition, work can only be contracted if it has been stated in the applicant's Scope of Work and Cost and Schedule. A grantee is fully responsible for all work performed by its sub-recipient, consultant, or sub-consultant. Caltrans solely enters into a contract directly with the grantee; therefore, the grantee is responsible to ensure that all third parties adhere to the same provisions included in the contractual agreement between Caltrans and the grantee.

All government funded consultant procurement transactions must be conducted using a fair and competitive procurement process that is consistent with the State Contracting Manual, Chapter 5,[9] the Local Assistance Procedures Manual, Chapter 10,[10] and the terms of the agreement with Caltrans. All documentation of third-party contract procurements must be retained, and copies of

[9] California State Contracting Manual Volume 1, Chapter 5, 2018, https://www.dgs.ca.gov/OLS/Resources/Page-Content/Office-of-Legal-Services-Resources-List-Folder/State-Contracting

[10] Caltrans Local Assistance Procedures Manual, Chapter 10, 2020, https://dot.ca.gov/programs/local-assistance/guidelines-and-procedures/local-assistance-procedures-manual-lapm

all agreements must be submitted to Caltrans. For more information on third party contracting, visit the State Contracting Manual and the Local Assistance Procedures Manual Websites.

6.3 Quarterly Reporting

Quarterly Progress Reports (QPR) are required to be submitted for each State FY quarter after the grant recipient has received a Notice to Proceed letter. The table below illustrates the State FY timeframes for submitting the QPR to Caltrans district staff.

Quarterly Progress Report Timeframes			
Quarter 1	**Quarter 2**	**Quarter 3**	**Quarter 4**
July – September	October – December	January – March	April – June

For MPOs and RTPAs, the progress and expenditure of each awarded grant project must be included as part of the OWP Quarterly Progress and Expenditure Report. If this method of reporting is not adequately satisfied, Caltrans staff will require separate quarterly reports for each awarded grant project.

All other primary grant recipients shall submit progress reports every quarter for each awarded grant project. Caltrans district staff will provide the brief report form and due dates.

6.4 Integrated Climate Adaptation and Resiliency Program (ICARP) Case Studies

Caltrans and the Governor's Office of Planning and Research are sharing the lessons learned from this grant opportunity to inform other existing or new state grant programs. To this end, Climate Adaptation Planning primary grant recipients will prepare a final case study/write-up upon grant completion to be included in the ICARP Clearinghouse (described in Appendix A., Pages 70-71), which was developed to share information, resources, and case studies with local and regional jurisdictions. Previous case studies can be found on the ICARP Case Study website[11]. These case studies will be used to develop guidance for adaptation work in the future. Caltrans will share progress reports with the ICARP Technical Advisory Council at regular intervals.

Climate Adaptation Planning grant recipients are also invited and encouraged to request technical assistance support from the ICARP program, including bringing key challenges or lessons learned to the Technical Advisory Council for their input. Caltrans staff will provide ICARP contact information upon request.

Final Case Study Requirements:

- Include images and GIS files of maps, when applicable
- Emphasize processes or results that can be adapted or replicated for use in multiple jurisdictions or in various parts of the state
- Document the underserved community's involvement throughout the entire process of the proposed project and tools used to capture this information

[11] ICARP Case Study website: https://resilientca.org/case-studies/

6.5 Invoicing and Financial Requirements

Pre-Award Audit

The Sustainable Communities grants are available in amounts up to $700,000, Strategic Partnerships grants are up to $500,000 and Climate Adaptation Planning grants are up to $3,000,000. However, any awarded grant in excess of $250,000 may require a pre-award audit. The pre-award audit is to ensure that recipients of State or federal funds maintain adequate financial management systems prior to receiving the funds. Pre-award audits may be required of new grantees, agencies that have not recently been audited, agencies that have undergone prior audits with significant weaknesses or deficiencies in their financial management systems, or those determined to be a higher risk to Caltrans. If a pre-award audit is needed, the local Caltrans district office will contact the grantee to facilitate the appropriate action.

Accounting Requirements

Grantees and sub-applicants/recipients are required to maintain an accounting system that properly records, and segregates incurred project costs and matching funds by line item. The accounting system of the grantee, including its sub-applicants and subcontractors, must conform to Generally Accepted Accounting Principles that enable the determination of incurred costs at interim points of completion and provides support for reimbursement payment vouchers or invoices sent to or paid by Caltrans. Allowable project costs must comply with 2 Code of Federal Regulations (CFR), Part 200. It is the grantee's responsibility, in conjunction with Caltrans district staff, to monitor work and expenses to ensure the project is completed according to the contracted Scope of Work and Cost and Schedule. Grantees must monitor work and costs to ensure invoices are submitted on a regular and timely basis (monthly or quarterly as milestones are completed). Grantees must communicate with their local Caltrans district office to ensure any issues are addressed early during the project period.

Local Match

All grant project tasks/activities require a grant amount and a local match, except a grant amount for administrative Tasks 01, 02 is optional. The local match is a financial requirement that demonstrates the grantee/local agency is vested in the project.

Because the local match is part of the total project cost, the local match can only fund eligible grant activities. Therefore, grant recipients must fund ineligible activities with funds other than the local match.

The local match can be all cash, all third-party in-kind contributions, or a combination of the two. The minimum local match is a percentage of the total project cost (i.e., minimum local match amount plus the grant amount) and is identified in the Cost and Schedule at the Task level.

Beginning with FY 2021-22, grantees can provide a tapered local match, which allows grantees to vary the required local match ratio for each task and with every Request for Reimbursement. Applicants must identify if they will utilize the tapered match on the Cost and Schedule. Grantees agree to satisfy the total local match amount by the grant expiration date.

Local Match Sources

- **Sustainable Communities Competitive and Technical**
  Federal toll credits, FHWA PL, and FTA Section 5303, and Sustainable Communities Formula are ineligible match sources; otherwise, any source of funds may be used if the proposed grant work is an eligible activity for the local match fund source.
- **Sustainable Communities Formula**
  Federal toll credits are an ineligible match source; otherwise, any source of funds may be used if the proposed grant work is an eligible activity for the local match fund source. If MPOs are matching with federal Consolidated Planning Grant (CPG) funds (i.e., FHWA PL or FTA Section 5303), the work must all be eligible. However, federal approval is required as CPG objectives may differ and must be aligned with Sustainable Communities Formula specific objectives and 23 CFR Part 450 requirements.[12]
- **Climate Adaptation Planning**
  Federal toll credits, FHWA PL, and FTA Section 5303, and Sustainable Communities Formula are ineligible match sources; otherwise, any source of funds may be used if the proposed grant work is an eligible activity for the local match fund source.

  Local match is not required for Native American Tribal Governments.
- **Strategic Partnerships and Strategic Partnerships – Transit**
  Any non-federal source of funds may be used if the proposed grant work is an eligible activity for the local match fund source. If MPOs are matching with Sustainable Communities Formula funds, the objectives for each grant must be in alignment. Caltrans approval is required.

Cash Match

- Staff time from the primary applicant counts as cash match. Staff time charged to a specific project that has been funded and or reimbursed, cannot be used to meet the match requirement for another project.
- Sub-applicant staff time, if reimbursed, is considered cash match. If donating their time, it is considered in-kind.
- Revenue sources for local cash match can include local sales tax, special bond measures, private donations, private foundations, etc.

Third-Party In-Kind Match

Third party in-kind contributions are typically goods and services donated from outside the primary grantee's agency and can be counted towards the minimum local match requirement. Examples of third-party in-kind contributions is the value of donated:

- Public outreach materials
- Interpreter Services
- Facilities
- Equipment
- Advertising
- Student volunteers and other stakeholder staff time
- Other goods and services

[12] Title 23, Code of Federal Regulations, Part 450,

https://www.govinfo.gov/content/pkg/CFR-2004-title23-vol1/pdf/CFR-2004-title23-vol1-part450.pdf

The Third-Party In-Kind Valuation Plan is required to itemize and place value on donated goods and services. It must be submitted to Caltrans for approval only if the grant application is awarded. The Third-Party In-Kind Valuation Plan Checklist and Template can be found in Appendix B.

In addition:

- The value of third-party in-kind contributions must be directly benefiting and specifically identifiable to the project.
- Minimum wage standards for student workers or Caltrans pay rates for equal-level volunteers are acceptable base values of volunteer time.
- Third-party in-kind contribution information must be identified on the Grant Application Cover Sheet, the Cost and Schedule, and the project specific Work Element in the OWP (if applicable).

Minimum Local Match Requirements

Applicants/grantees will be held responsible for any local commitments above the minimum requirement included in the grant application and will be made part of the grant agreement with Caltrans. Once the agreement is executed, any decrease to local match commitments above the minimum required amount will require Caltrans approval through an amendment. The example shown in the following table illustrates the minimum local match requirement based on a grant request of $300,000. Applicants must use the Local Match Calculator[13] to ensure the correct amounts are reflected on the Grant Application Cover Sheet and the Cost and Schedule.

Minimum Local Match Requirements (Percentage of Total Project Cost)			
Grant Program	**Grant Request**	**Local Match**	**Total Project Cost**
Sustainable Communities, Climate Adaptation Planning, and Strategic Partnerships –Transit	**88.53%** Example: $300,000	**11.47%*** Example: $38,868	**100%** Example: $338,868
Strategic Partnerships	**80%** Example: $300,000	**20%** Example: $75,000	**100%** Example: $375,000

*Climate Adaptation Planning local match is not required for Native American Tribal Governments.

Indirect and Direct Costs

Direct costs are those costs that can be identified specifically with a particular final cost objective, such as a state award, or other internally or externally funded activity, or that can be directly assigned to such activities relatively easily with a high degree of accuracy. Costs incurred for the same purpose in like circumstances must be treated consistently as either direct or indirect costs, also known as facilities and administrative costs or overhead costs.

Indirect Costs are costs that are incurred for a common or joint purpose. These costs benefit more than one cost objective and cannot be readily identified with a particular final cost objective.

[13] Local Match Calculator posted on-line at (will download as MS Excel spreadsheet): https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/regional-and-community-planning/sustainable-transportation-planning-grants

Reproduction costs, computer purchase, and office supplies are considered indirect costs, unless they are tied to a specific task or activity then they are considered direct costs.

Indirect Cost Allocation Plan/Indirect Cost Rate Proposal

If a grantee, including sub-recipients and third-party contractors/consultants, are seeking reimbursement of indirect costs, they must submit an Indirect Cost Allocation Plan (ICAP)or an Indirect Cost Rate Proposal (ICRP) to Caltrans. Submissions should be sent to Caltrans Internal Audits Office (CIAO) or Independent Office of Audits and Investigations (IOAI).

CIAO is responsible for the review and approval of government entities and non-profits ICAP submissions.

IOAI is responsible for the review and approval of for profit (Consultant) ICAP submissions. Consultants submit their ICAPs only when they are initially included in the contract and not on an annual basis.

IMPORTANT NOTE

- ✓ Applications must include the estimated indirect cost rate on the Cost and Schedule.

An ICAP or ICRP must be prepared and submitted yearly in accordance with 2 CFR, Part 200. Indirect costs may be sought for reimbursement only after the grantee has received ICAP/ICRP approval from CIAO. For guidance on the ICAP/ICRP submission process, visit Caltrans Internal Audit Office[14] and the Caltrans LAPM Chapter 5 Accounting/ Invoicing. [15]

Most Common Types of Indirect Cost Rates

The following are the most common types of Indirect Cost Rates:

- Fixed Rate
- Final Rate
- De Minimis Rate
- Safe Harbor Rate

Changes to the De Minimis Rate are outlined in the revised 2 CFR Part 200.414(f)[16] that became effective November 12, 2020.

Applications must include the estimated indirect cost rate on the Cost and Schedule.

Travel Expenses

Grantees may be eligible to claim travel expenses if they have been approved in the Scope of Work and Cost and Schedule. Travel expenses and per diem rates are not to exceed the rate specified by the State of California Department of Personnel Administration for similar employees (i.e., non-represented employees). Any request for reimbursement that exceeds the State rates will

[14] Caltrans Internal Audits Office, ICAP/ICRP Submission Process, 2022, https://dot.ca.gov/programs/audits/submission-review-main

[15] Caltrans Local Assistance Procedures Manual Chapter 5, 2020, https://dot.ca.gov/-/media/dot-media/programs/local-assistance/documents/lapm/ch05.pdf

[16] Electronic Code of Federal Regulations, 2 Code of Federal Regulations, Part 200.414(f), 2020, https://www.ecfr.gov/cgi-bin/text-idx?node=se2.1.200_1414&rgn=div8

be denied. The grantee is responsible for paying beyond the State rates and cannot use the local match because it is an ineligible activity.

For more information on eligible travel expenses, visit the Caltrans Travel Guide Website. [17]

Requests for Reimbursements

- Grant payments are made only as reimbursements.
- Grant reimbursements will be based on actual allowable incurred costs.
- Grant costs will be reimbursed if incurred on or after the start date and the issuance of the Notice to Proceed and before the expiration date.
- Request for Reimbursements (RFRs) must be submitted at least quarterly, but no more frequently than monthly.
- A one-time, lump sum invoice or RFR for the entire grant is not allowed.
- Grantees must pay sub-recipients and subcontractors prior to submitting an RFR to Caltrans.
- Incomplete or inaccurate RFRs will be returned for correction.
- An accounting management system generated report must accompany all RFRs.
- Refer to Chapter 9.2 to determine final RFR dates
- When requesting reimbursement of indirect costs, the following items are required as part of the submitted RFR package:
    - An approved ICAP/ICRP rate must be on file for the FY in which the costs occurred.
    - A financial management system report that segregates direct/indirect costs by fund source.
    - ICAP support document spreadsheet that identifies direct charges and rate applied to those charges.

6.6 Non-Discrimination Requirements

Title VI Non-Discrimination Requirement

The FHWA and the FTA each have requirements that recipients of Metropolitan Planning federal funds must demonstrate continued compliance with Title VI. Compliance with Title VI includes conducting meetings in a fair and reasonable manner that are open to all members of a community. Compliance reflects not only the law but is also a good policy that builds the kind of trust and information sharing upon which successful planning is done. Even where a city or county may not be receiving federal funding for transportation, the Civil Rights Restoration Act of 1987 also obligates that a city or county comply with Title VI, if it receives any other federal funding for any program. Refer to the Caltrans Title VI website[18] for more information.

Disadvantaged Business Enterprises

Successful grant applicants are expected to market contracting opportunities to all small businesses, including DBEs and Disabled Veteran Business Enterprises.

---

[17] Caltrans Travel Guide, 2020, https://dot.ca.gov/programs/accounting/travel-guide

[18] Caltrans, Title IV of the Civil Rights Act of 1964, 2020, https://dot.ca.gov/programs/civil-rights/title-vi

Grant recipients of federal funds are required to report any contracting opportunities that may involve DBE participation. DBE reporting is required twice a year: April 1 and October 1. For details about DBE requirements, visit the Office of Regional Planning website.[19]

6.7 Final Product

All final reports funded through the Sustainable Transportation Planning Grant Program shall credit the FHWA, FTA, or Caltrans' financial participation on the cover or title page. An Americans with Disabilities Act of 1994 (ADA)-accessible electronic copy of all final reports shall be forwarded to the Caltrans district office responsible for the administration and oversight of the grant. There are resources to assist with development of ADA compliant documents.[20]

Any technologies or inventions that may result from the use of these grants are in the public domain and may not be copyrighted, sold, or used exclusively by any business, organization, or agency. Caltrans reserves a royalty-free, non-exclusive, and irrevocable license to reproduce, publish, or otherwise use and to authorize others to use for public purposes.

Applicants should thoughtfully develop the project title. Once a Caltrans grant agreement is executed, changes to the original grant project title are not allowed. Grantees may use an "Also Known As" (AKA), but both the AKA and the original title must be included in the final product.

Grantees must submit their final product with the final RFR to Caltrans for approval and reimbursement. Grantees will not be reimbursed for activities that are not completed, and the activity budget must be left unexpended.

6.8 Project Close-Out Survey

Once awarded grant projects are completed, grantees will complete a close-out survey to describe the successes and challenges of their project. The survey will give the opportunity to (1) highlight successes and obstacles in project implementation of the concepts identified by the planning process, (2) identify best practices in transportation planning, with an emphasis in public engagement, and (3) identify studies/plans that have been or will be funded for continued project development. Information from the survey will be compiled into a report to illustrate the value of the grant program and inform planning practitioners in their planning efforts. Caltrans' goal is to provide transparency and accountability for the program, as well as to use the survey feedback to better serve future grant applicants.

6.9 California Public Records Act

All applications are subject to the California Public Records Act of 1968[21]. As such, applicants may be contacted by anyone who requests their grant application. While Caltrans is obligated to share applications at any time, awarded applicants should avoid a potential conflict of interest when contacted by consultants who may inquire about the grant-funded project and not give the consultant an unfair advantage for the consultant procurement process.

[21] Leg info, California Government Code, Sections 6250 - 6270.7, https://leginfo.legislature.ca.gov/faces/codes_displayText.xhtml?division=7.&chapter=3.5.&lawCode=GOV&title=1.&article=1.

7. APPLICATION SUBMITTAL PROCESS

The Sustainable Transportation Planning Grant Program is highly competitive. This section provides applicants with supplemental information as well as details on required documents that must accompany an application at the time of submittal. All applicants are strongly encouraged to adhere to these requirements in order to score competitively during the application evaluation process.

7.1 Applicant Eligibility

Primary applicants must have statutory authority to conduct transportation/transit planning for their jurisdiction. Generally, the local and regional agencies have this specific authority. Native American Tribal Governments must be Federally recognized to be eligible. Refer to the public entity's bylaws to find this information.

7.2 Early Coordination and Technical Assistance for Primary Applicants

Sub-applicants are encouraged to work far in advance of the application deadline with the appropriate primary applicant to coordinate application development. It is also beneficial for sub-applicants to be informed of the appropriate primary applicant process and schedule, as they may differ slightly from those of Caltrans. RTPAs residing within MPO boundaries should also coordinate application development with the MPO, as it is critical to ensure that proposed studies align with the RTP SCS/APS for the entire MPO region and do not duplicate efforts being applied for or already awarded to the MPO.

Caltrans district staff (See Appendix D) are available during the application period to answer questions and help interested groups complete their applications.

For questions specific to the Grant Application Guide, applicants are also welcomed to contact:

Application Guide Technical Assistance	Contacts
Sustainable Communities and Strategic Partnerships	**Grant Management Branch** Caltrans Division of Transportation Planning Office of Regional and Community Planning Email: Regional.Planning.Grants@dot.ca.gov
Climate Adaptation Planning	**Julia Biggar, Climate Change Branch Chief** Caltrans Division of Transportation Planning Office of Air Quality and Climate Change Email: Julia.Biggar@dot.ca.gov
Questions about Housing Element Compliance for Sustainable Communities Competitive and Technical	**Paul McDougall** Department of Housing and Community Development Email: Paul.McDougall@hcd.ca.gov

7.3 Application Submittal Instructions

The Grant Application Guide, Application forms, and required templates are available on the Caltrans Sustainable Transportation Planning Grant Program website, at: https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/regional-and-community-planning/sustainable-transportation-planning-grants

- All grant application packages are required to be submitted via Smartsheet
- Smartsheet features work better with Google Chrome browser
- Smartsheet progress cannot be saved. To avoid issues, follow these instructions:
  1. Complete the Application Cover Sheet in MS Word
  2. Copy and paste the Application Cover Sheet fields into the Smartsheet form
  3. Have the PDF attachment ready to upload into the Smartsheet form
- An agency may only submit one application package per Smartsheet submittal.
- An application cannot be submitted to more than one grant category.
- The required items outlined on the Grant Application Checklist in Appendix B must be submitted as a single PDF document (not to exceed 25MB); if awarded, original formats will be requested.
- All application documents must list the applicant's legal name.
- A confirmation of receipt can be sent via Smartsheet if the applicant checks the box to receive a copy of the submittal.

Submit applications via Smartsheet Form no later than
THURSDAY, JANUARY 18, 2024 BY 5:00 P.M.

Hard copies will not be accepted and late applications will not be reviewed.

Caltrans anticipated award announcements: Summer 2024

Caltrans district staff are available during the application period to answer questions and help interested groups complete their applications. Refer to Appendix D. Caltrans District Contact List for contact information.

Download the latest version of Adobe Reader DC ® to complete the application form. This version of Adobe is available free of charge.

7.4 Application Supplemental Documentation

The following documents **are not required, but enhance the overall application and typically result** in a more competitive application during the evaluation process:

Letters of Support

If submitted, letters of support must be included with the application package. Letters received separate from the application package may not be considered. The letters should be addressed to the applicant. Such letters can come from community-based organizations, local governments, regional governments, Native American Tribal governments, service agencies, and elected officials.

Graphics

Clearly labeled photographs, maps, planning diagrams, land use or design illustrations, or other relevant graphic representations of the proposed project area convey existing conditions and help to further explain the need for the grant and the priority of the proposed planning project with respect to community need. Please ensure that graphics include a text description to provide context.

The following documents are not required, but enhance the overall application and typically result in a more competitive application during the evaluation process:

- Letters of Support
- Graphics
- Safety Data
- Travel Mode Data
- Other Data

Safety Data

Statistical data such as pedestrian-vehicle injuries/crashes or fatalities resulting from lack of safe infrastructure, or other road conditions that contribute to possible injuries. This information may be obtained from police reports, transit agencies, National Highway Traffic Administration, or the Governor's Highway Safety Association.

Travel Mode Data

Data on mode share, commute patterns, accessibility for low-income and underserved populations, access to job centers, or other data to show the need and potential for mode shift to non-auto transportation modes.

Other Data

As applicable, to indicate the need and potential for reducing VMT and GHG, where available.

8. APPLICATION REVIEW PROCESS

8.1 Two-Tiered Application Review Process

This chapter provides a brief overview of the grant application review process. Grant application evaluation is a two-tiered process that consists of:

- Caltrans District Review and Evaluation
- Caltrans Headquarters (HQ) Interagency Review Committees Evaluation

Caltrans district staff conducts the first-level review of all applications for content, submission of proper documentation, overall relationship to regional and local planning efforts, and documents their evaluations. Caltrans district staff scores, prioritizes, and recommends the most highly ranked Sustainable Communities and all Strategic Partnerships applications for the next level of review with the Interagency Review Committees. Grant applications from Native American Tribal Governments, Transit Agencies, and proposed projects spanning multiple Caltrans districts or projects having a statewide significance, may also move on directly from Caltrans districts to HQ for review.

The HQ Interagency Review Committees conduct the second-level review and comprise staff from Caltrans HQ, the Federal Highway Administration, the Federal Transit Administration, the California Department of Housing and Community Development, the California Department of Public Health, the Governor's Office of Planning and Research, the Strategic Growth Council, and the California Air Resources. Caltrans HQ also coordinates with internal specialists, depending on the grant application subject matter, to provide high-level reviews of the proposed project to avoid funding duplicative efforts or efforts that are not supportive of State planning efforts. The committees for each grant category convene to develop funding recommendations that are approved by every level of Caltrans management and the California State Transportation Agency.

8.2 Application Evaluation/Scoring Process

Grant applications that address every aspect of the grant specific objectives will score higher overall. Caltrans has diverse applicants and project types, which makes it difficult to use a one-size fits all scoring rubric that would not unintentionally put some applicant/project types at a disadvantage. Therefore, applications will be scored based on how well they are able to describe the project, justify need, incorporate the grant specific objectives, and develop a Scope of Work and Cost and Schedule, all in accordance with this grant guide, samples and checklists provided, as applicable and appropriate for the applicant and project type. Once the grant review committees evaluate, rank, and select the best applications for grant funding, final recommendations are presented to Caltrans management and California State Transportation Agency for approval.

8.3 Past Performance Award Considerations

Previous Caltrans transportation planning grantee performance will be considered during the evaluation process. Applicants with a history of inadequate performance and/or unresolved past grant performance issues may be at a competitive disadvantage in the application review process. Past performance issues could include the following:

- Poor grant project management
- Lack of communication/coordination with Caltrans
- Failure to achieve grant project milestones
- Untimely invoice submittals

- Excessive balances and consistently relinquish transportation funds administered by Caltrans Planning
- Unresolved audit issues or findings
- Overall poor quality of the final grant product
- Failure to satisfy the required state and federal planning requirements including submittal and administration of OWPs, RTPs, and Transportation Improvement Programs

If an agency does not demonstrate adequate performance and timely use of funds, Caltrans may take appropriate actions, which can include denial of extenuating circumstance time extension requests and termination of the grant.

9. APPLICATION AWARD PROCESS

9.1 Award and Non-Award

Successful grant applicants will receive an award letter via email. A list of award and non-awarded grants will be posted to the Caltrans Sustainable Transportation Planning Grant Program website.

Caltrans Sustainable Transportation Planning Grant Program Website:

https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/regional-and-community-planning/sustainable-transportation-planning-grants

Conditional Award Teleconferences

Each grantee will receive a Conditional Award Letter that outlines the grant project cost, important expiration and final invoice dates.

Caltrans district staff will schedule individual teleconferences to provide the specific and general conditions of grant acceptance that are necessary to accept grant funding, including any revisions to the grant application, Scope of Work and Cost and Schedule. Conditions may include revisions to the project Scope of Work to bolster public participation, consider land use and housing, and to coordinate with local housing and community development departments and health departments. Awardees are required to submit all supporting materials and a signed agreement or risk forfeiting the grant award.

Non-Award Teleconferences

Unsuccessful grant applicants are encouraged to request a debriefing from Caltrans. Applicants typically receive specific comments from the District/Interagency Review Committee on how to improve applications to re-apply in a future grant cycle. If the application advanced to the second-level review, HQ provides the Interagency Review Committee score, as well as how close the application was relative to the cut-off score for available grant funding. Applicants sometimes apply two or three times before they are successful due to the competitiveness of the grant program.

9.2 Contracting with Caltrans

All awarded grant funds must be under an executed agreement with Caltrans during the State FY 2024-25. The project start date depends on the method of contracting with Caltrans.

MPOs and Rural RTPAs

All MPOs/RTPAs with a current Master Fund Transfer Agreement (MFTA) must have the entire grant award and local match programmed in the FY 2024-25 OWP within 90-days of receiving the signed FY 2023-24 reconciliation letter. Due to the competitiveness of this grant program, failure to program funds may result in forfeiture of grant funds. MPOs/RTPAs should include a place-holder Work Element in the Draft FY 2024-25 OWP and satisfy specific grant conditions before the first FY 2024-25 OWP amendment. MPO/RTPAs can anticipate starting their projects in November 2024, after the OWP amendment is processed and Caltrans issues a formal Notice to Proceed.

Non-MPOs/RTPAs

Grantees that do not have a current MFTA with the Caltrans Office of Regional and Community Planning (i.e., cities, counties, transit agencies, Tribal Governments), Caltrans will contract directly with the primary grantees through the Restricted Grant Agreement (RGA) process. For grantees

that undergo the RGA contracting process, work may begin as early as November 2024, assuming the grantee has received a fully executed contract and Caltrans district staff send a formal Notice to Proceed which allows grantees to begin work.

Estimated Project Start/Expiration Dates

It is important for applicants to reflect the estimated project start date in the Scope of Work and Cost and Schedule. Project Timeline constraints for both methods of contracting with Caltrans are provided below. Grantees must consider these dates when developing the Scope of Work and Cost and Schedule:

Master Fund Transfer Agreement Project Timeline (MPOs/RTPAs Only)	
November 2024	• Anticipated start date
June 30, 2027	• Grant project end/expiration date • Reimbursable work must be completed • Grant extensions are only allowed for extenuating circumstances and may require a formal Overall Work Program (OWP) amendment
August 30, 2027	• All Final Request for Reimbursements for must be submitted no later than 60 days after the end of the fiscal year to coincide with the submission of the OWP Final Expenditure Report.
Restricted Grant Agreement Project Timeline (Non-MPO/RTPAs)	
November 2024	• Anticipated start date
June 30, 2027	• Grant project end/expiration date • Reimbursable work must be completed • Grant extensions are only allowed for extenuating circumstances and require a formal amendment.
August 30, 2027	• Final Request for Reimbursements and final products must be submitted to Caltrans for approval and reimbursement. This allows Caltrans sufficient time to comply with the State Controller's Office payment requirements.

Native American Tribal Governments

Native American Tribal Governments have the following options for contracting with Caltrans:

(1) Contracting with Tribes Directly – The authority Caltrans uses to contract with tribes directly comes from California Streets and Highways Code section 94. Caltrans requires tribes to provide a limited waiver of sovereign immunity that is very specifically limited in scope and in time to only apply to the grant contract itself (and to any possible audits). The RGA boilerplate template for Native American Tribal Governments is available upon request to help weigh the options for contracting with Caltrans.

(2) Partnering with a Regional Agency – Another mechanism for contracting with Caltrans is to collaborate with an MPO or RTPA. Caltrans can pass through grant funding to tribes for

planning projects where options or time are limited. This option uses the three-part contract, MFTA/OWP/OWPA, and is usually the quickest option to allow planning projects to get started.

(3) Transferring Funds Pursuant to 23 U.S.C. 202(a)(9) – Section 202(a)(9) of title 23, United States Code encourages cooperation between States and Tribes by allowing any funds received from a State, county, or local government to be credited to appropriations available for the Tribal Transportation Program (TTP). One potential source of such funding is funds apportioned or allocated to a State under title 23. Section 104(f)(3) allows the Secretary of Transportation to, at the request of a State, transfer among States, or to the FHWA, funds that have been so apportioned or allocated. This provision, used in conjunction with the authority under 23 U.S.C. 209(a)(9), allows State funds to be transferred to FHWA, which in turn would provide the funds to the specified Tribe.

For more information visit the FHWA website.[22]

Caltrans has successfully used the federal Section 202(a)(9) process to transfer Sustainable Communities grant funds to a Native American Tribal Government. In order to use this transfer process, an agreement would need to be in place with the FHWA or the Bureau of Indian Affairs, the Tribe, and the State that clearly identifies the project and the roles and responsibilities of all parties. Each interagency fund transfer includes 1) a fund transfer template and 2) an addendum lining out the specifics of the terms. This option requires involvement and approval by Caltrans Legal and the funds must be used for the intended purpose of the awarded Sustainable Communities grant.

[22] Federal Highway Administration, Office of Tribal Transportation , 2020 https://flh.fhwa.dot.gov/programs/ttp/documents/Funds-Transfer-Procedures-Pursuant-to-23-U.S.C.202%28a%29%289%29.pdf

APPENDICES

APPENDIX A. GUIDANCE, TOOLS, AND RESOURCES FOR PREPARING A GRANT APPLICATION

Grant Program Considerations

The Grant Application Guide incorporates guidance from many sources. The following links are provided to assist applicants in preparing a competitive grant application consistent with the grant program, specific objectives, and the Grant Program Considerations:

- Caltrans Strategic Plan
- California Transportation Plan (CTP) 2050
- Modal Plans that Support the CTP
    - Interregional Transportation Strategic Plan
    - California Freight Mobility Plan
    - California State Rail Plan
    - California State Bicycle and Pedestrian Plan
    - Statewide Transit Strategic Plan
    - California Aviation System Plan
- Title VI and Environmental Justice
- Climate Action Plan for Transportation Infrastructure
- California Climate Adaptation Strategy
- Master Plan for Aging

Caltrans Strategic Plan

The purpose of the Strategic Plan is to be a roadmap of Caltrans' role, expectations, and operations as we meet the challenges of modernizing Caltrans into a world-class Department of Transportation. The tools we use to implement this Plan are performance management, transparency, accountability, sustainability, and innovation. The Plan serves a number of functions:

- Provides clear direction for meeting statewide objectives;
- Creates and deepens strategic partnerships; and
- Provides performance measures that monitor success

https://dot.ca.gov/-/media/dot-media/programs/risk-strategic-management/documents/sp-2020-16p-web-a11y.pdf

California Transportation Plan 2050

The CTP 2050 is the State's statutorily fiscally unconstrained long-range transportation roadmap for positive change that:

- Provides a unifying and foundational policy framework for making effective, transparent, and transformational transportation decisions in California
- Addresses the varied transportation needs of urban, suburban, rural, and Tribal communities
- Emphasizes implementation and identifies a timeline, roles, and responsibilities for each plan recommendation.

The CTP does not contain projects, but policies and strategies required to close the gap between what the regional transportation plans (RTP) aim to achieve and how much more is required to meet 2050 goals. Competitive applications will discuss how proposed projects will assist in achieving the CTP 2050.

https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/ctp-2050-v3-a11y.pdf

Modal Plans that Support the California Transportation Plan

The CTP is the umbrella plan that informs and pulls together the State's long-range modal plans, described below, to envision the future system:

Interregional Transportation Strategic Plan (ITSP)

A Caltrans document that provides guidance for the identification and prioritization of interregional transportation improvements to be funded in the Interregional Transportation Improvement Program (ITIP). The ITSP analyzes the entire interregional transportation system including highways and rail. While the ITSP informs the ITIP, the purpose of the plan is to be a guiding document for all investment in the interregional transportation system regardless of funding source.

https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/multi-modal-system-planning

California Freight Mobility Plan

A statewide, long-range plan for California's freight transportation system. Developed in collaboration with our partners, the California Freight Mobility Plan (CFMP) was developed by the California State Transportation Agency (CalSTA) and Caltrans in consultation with the California Freight Advisory Committee.

https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/strategic-freight-planning

California State Rail Plan

A statewide plan that provides a framework for planning and implementing California's rail network for the next 20 years and beyond. The Rail Plan is a strategic plan with operating and capital investment strategies that will lead to a coordinated, statewide travel system.

https://dot.ca.gov/programs/rail-and-mass-transportation/california-state-rail-plan

California State Bicycle and Pedestrian Plan

"Toward an Active California," California's first statewide plan that lays out the policies and actions that Caltrans and its partner agencies will take to achieve the Department's ambitious statewide goals to double walking and triple bicycling trips by 2020.

https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/f0020350-activeca-final-plan-2017-05-18-a11y.pdf

Statewide Transit Strategic Plan

The plan allows the State to prepare for the expanding landscape of personal mobility choices and the integration of urban and regional transit systems with the California High Speed Rail project. The Statewide Transit Strategic Plan highlights a sustainable transportation system that supports the outcomes of the CTP, the California State Rail Plan, and the California State Bicycle and Pedestrian Plan.

https://dot.ca.gov/programs/rail-and-mass-transportation/statewide-transit-strategic-plan

California Aviation System Plan

A multi-element plan prepared by Caltrans with the goal of developing and preserving the system of publicly owned, public-use airports and to promote the development of a safe, efficient, and sustainable air transportation system that meets the integrated mobility needs of the state of California.

https://dot.ca.gov/programs/aeronautics/california-aviation-system-plan

Title VI and Environmental Justice

Title VI of the U.S. Civil Rights Act prohibits discrimination on the basis of race, color, or national origin in programs or activities receiving federal financial assistance. A similar prohibition applies to recipients of state funds under California Government Code section 11135, which prohibits discrimination on the basis of race, color or national origin, as well as ethnic group identification, religion, age, sex, sexual orientation, genetic information, or disability. Title VI specifically provides the following:

> *No person in the United States shall, on the ground of race, color, national origin, religion, sex, age, or disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving financial assistance from the Federal government.*

https://dot.ca.gov/programs/civil-rights/title-vi

The following tools are provided to assist grant applicants with integrating environmental justice in their proposed activities:

EJSCREEN: Environmental Justice Screening and Mapping Tool

EJSCREEN, developed by the United States Environmental Protection Agency, geospatially displays public health and environmental data and allows users to compare local data against state and national averages.

https://www.epa.gov/ejscreen

Environmental Justice Agency Assessment 2020

The California Environmental Justice Alliance completed the fifth Environmental Justice Agency Assessment, the only one in the nation to formally examine how state agencies develop, implement, and monitor environmentally related policies that particularly impact low-income communities and communities of color. The assessments in this report are made in the spirit of holding state agencies and elected officials accountable to the public, and to provide guidance on how they can make their work more equitable.

https://caleja.org/wp-content/uploads/2021/07/CEJA-Agency-Assessment-062021-FINAL-WEB.pdf

Climate Action Plan for Transportation Infrastructure

The Climate Action Plan for Transportation Infrastructure (CAPTI) details how the state recommends investing billions of discretionary transportation dollars annually to aggressively combat and adapt to climate change while supporting public health, safety and equity. CAPTI builds on executive orders signed by Governor Gavin Newsom in 2019 and 2020 targeted at reducing greenhouse gas (GHG) emissions in transportation, which account for more than 40 percent of all emissions, to reach the state's ambitious climate goals.

https://calsta.ca.gov/-/media/calsta-media/documents/capti-july-2021-a11y.pdf

California Climate Adaptation Strategy

The California Climate Adaptation Strategy, mandated by Assembly Bill 1482 (Gordon, 2015), links the state's existing and planned climate adaptation efforts, showing how they fit together to achieve California's six climate resilience priorities. The Strategy is organized around outcome-based priorities, enabling a coordinated, integrated approach to building climate resilience. The Strategy shows how the state's efforts fit together to deliver on six priorities for climate resilience action in California: Strengthen Protections for Climate Vulnerable Communities; Bolster Public Health and Safety to Protect Against Increasing Climate Risks; Make Decisions Based on the Best Available Climate Science; Build a Climate Resilient Economy; Accelerate Nature-Based Climate Solutions and Strengthen Climate Resilience of Natural Systems; Partner and Collaborate to Leverage Resources.

https://www.climateresilience.ca.gov/

Master Plan for Aging

The Master Plan for Aging is a blueprint for aging across the lifespan and outlines five goals and twenty-three strategies to build a California for All Ages by 2030. It also includes a Data Dashboard for Aging to measure progress and a Local Playbook to drive partnerships that will assist in meeting the goals of the Master Plan.

https://mpa.aging.ca.gov/

Resources to Advance Grant Specific Objectives

Applicants must demonstrate how the project fits every aspect of the Grant Specific Objective, as appropriate for the applicant and project type. The following resources are provided in this section:

- Multimodal System Planning
- Advance Transportation Related GHG Reduction Project Types/Strategies
- Addressing the Needs of Underserved Communities
- Public Health Resources
- Active Community Engagement
- Integrated Housing, Land Use, and Transportation Planning
- Promote the Region's RTP SCS/APS, State Planning Priorities, and Climate Adaptation Goals
- Climate Ready Transportation and Climate Adaptation Planning

Multimodal System Planning

The following guidance documents can be used in the development of proposed corridor plans/studies, freight plans/studies, and other multimodal system planning documents.

Comprehensive Multimodal Corridor Plan Guidelines

The California Transportation Commission developed the Comprehensive Multimodal Corridor Plan Guidelines (plan guidelines) to provide guidance to eligible Solutions for Congested Corridors Program applicants regarding the statutory requirements for comprehensive corridor plans utilized by agencies to apply for funding through the Congested Corridors Program. Applicants proposing to develop a comprehensive corridor plan are encouraged to review the plan guidelines to ensure their application and final product would align with and compete well for the Solutions for Congested Corridors Program.

https://catc.ca.gov/programs/sb1/solutions-for-congested-corridors-program/comprehensive-multimodal-corridor-plan-guidelines

Caltrans Corridor Planning Process Guide

The Caltrans Division of Transportation Planning prepared the Corridor Planning Process Guide (Guide) for use in preparing corridor planning documents. This Guide establishes a comprehensive planning approach through desired protocols and procedures to identify and implement multimodal transportation needs. It is neither intended as nor does it establish, a legal standard for these functions.

https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/system-planning/systemplanning/corridor-planning-process-guide-april-2022-a11y.pdf

Planning for Operations Strategic Work Plan

The Planning for Operations Strategic Work Plan is a statewide framework for multimodal system management planning, aims to identify the specific steps needed to implement multimodal system management planning at Caltrans and prioritize implementation actions.

https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/system-planning/systemplanning/caltrans-p4ops-strategic-work-plan-2018-a11y.pdf

Caltrans Climate Change Emphasis Area Guide for Corridor Planning

Consideration of climate change adaptation and mitigation must be included in the corridor planning process. This guidance was developed to describe how to address climate risk in the context of the Caltrans Corridor Planning Process Guide's 8 steps process.

https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/cc_ea_guide_for_corridor_planning_march2020_a11y.pdf

Active Transportation Emphasis Area Guidance

Active Transportation is one of several distinct emphasis areas to be considered in corridor plan analysis. Caltrans Active Transportation guidance has one goal – to provide corridor planners with a framework to assess and analyze the variety of Active Transportation issues that can be addressed in Corridor Plans. As the "Eight Step" process will be required to develop Corridor Plans, this Active Transportation Emphasis Area (EA) Guidance is based upon those eight steps.

https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/active-transportation-complete-streets/20220131active-transportation-emphasis-area-guidance-final-version-v7a11y.pdf

Advance Transportation Related GHG Reduction Project Types/Strategies

CARB 2017 Climate Change Scoping Plan, Appendix C

The California Air Resources Board (CARB) adopted the *2017 Climate Change Scoping Plan Update* which includes *Appendix C, Vibrant Communities and Landscapes – A Vision for California in 2050*, to guide how the State develops communities, preserves and protects its landscapes, and ensures that all Californians have equitable access to housing, health care, jobs, and opportunity. Competitive Sustainable Communities grant applications will demonstrate a linkage to this land use vision.

The CARB 2017 Climate Change Scoping Plan (Appendix C) also includes *Potential State-Level Strategies to Advance Sustainable, Equitable Communities and Reduce Vehicle Miles of Travel (VMT)* which outlines a list of potential additional strategies that the State could pursue to help achieve further VMT reduction, support local and regional actions already underway, and advance multiple additional goals.

While this document is intended to guide State-level actions, many of the strategies can also be implemented at a regional and local level. Sustainable Communities grant applicants are encouraged to explore these strategies and apply them, as appropriate, to proposed planning projects.

CARB 2017 Climate Change Scoping Plan, Appendix C:
https://ww2.arb.ca.gov/sites/default/files/classic//cc/scopingplan/2030sp_appc_vmt_final.pdf

For current CARB activities and future updates on Scoping Plan efforts, visit:
https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan

Senate Bill 375

The Sustainable Communities and Climate Protection Act (SB 375) was signed in 2008. It supports the State's climate goals by helping reduce greenhouse gas emissions through coordinated transportation, housing, and land use planning.

Under the Sustainable Communities Act, the California Air Resources Board (CARB) sets regional targets for greenhouse gas emissions reductions from passenger vehicle use. CARB set targets for 2020 and 2035 for each of the 18 MPO regions.

Each of the MPO regions must prepare a Sustainable Communities Strategy/Alternative Planning Strategy (SCS/APS), as an integral part of its regional transportation plan, that contains land use, housing, and transportation strategies that, if implemented, would allow the region to meet CARB's targets. Once the SCS/APS is adopted by the MPO, CARB must review the adopted SCS/APS to accept or reject the MPO's determination that the SCS/APS, if implemented, would meet the targets.

Sustainable Communities grant applicants, where applicable, should explore their regions Sustainable Communities Strategy/Alternative Planning Strategy, and apply them, as appropriate, to proposed planning projects.

CARB SCS/APS Evaluations: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plans-evaluations

SB 375: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=200720080SB375

Senate Bill 743

Senate Bill (SB) 743 was signed in 2013, with the intent to "more appropriately balance the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions." When implemented, "traffic congestion shall not be considered a significant impact on the environment" within California Environmental Quality Act (CEQA) transportation analysis. The CEQA guidelines have since established Vehicle Miles Traveled (VMT) as one of the measures of transportation-related environmental impact, beginning December of 2018. A key element of transportation analysis under the new guidance is forecasting induced vehicular travel.

Applicants who wish to pursue model improvements or develop VMT Mitigation Programs using Sustainable Communities Competitive Technical or Formula grants are encouraged to review available materials relating to forecasting induced travel, including those found on the Caltrans SB 743 implementation website, and refer to the example below. Refer to the Caltrans Traffic Analysis Framework for a detailed list of recommended standards for improved forecasting of induced vehicular travel.

Examples include:

- Integration of land use modeling into travel demand models, improving long-term induced travel modeling capability
- Incorporation of impacts to trip-making behaviors as a result of network improvements
- Improved congestion feed-back into existing models, or pre- and post-processing procedures
- Induced travel case studies

SB 743: http://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201320140SB743

Caltrans SB 743 Implementation: https://dot.ca.gov/programs/sustainability/sb-743

Addressing the Needs of Underserved Communities

Caltrans encourages eligible applicants to apply for Sustainable Communities Competitive Grants to address transportation needs and deficiencies in underserved communities. Supporting planning projects that benefit a underserved community is a priority; therefore, a minimum threshold of 50 percent of Sustainable Communities Competitive Grants has been identified for projects that benefit underserved communities, which includes Native American Tribal Governments and rural communities (for transportation planning purposes, rural is defined as all areas of the State that are not included in urbanized areas of 50,000 in population or greater; see map in Appendix C which indicates rural areas). In sum, acceptable underserved communities definitions include:

- Rural communities of 50,000 or less and outside of urbanized areas
- Native American Tribal Governments
- Regionally/locally defined underserved communities
- At or below 80% Assembly Bill 1550 (Gomez, Chapter 369, Statutes of 2016)
- At or above 75% California Department of Education, Free or Reduced Priced Meals Data
- At or above 75% CalEnviroScreen Version 4.0
- At or below 25% California Healthy Places Index (HPI)

Grant applicants are required to provide a justification in their grant application for how the project area meets the definition of an underserved community and a description of how the project will benefit these communities, as well as how these communities will be engaged throughout the project.

The following tools, related to income level, environmental burden, and health inequities, are intended to help applicants identify the most vulnerable places that are facing disproportionate rates of economic, environmental, and health burdens. These tools must be cited in the grant application, as well as how the project area is compared to the statewide thresholds that are established in each tool.

IMPORTANT INFORMATION:

Grant applicants are required to provide a justification in their grant application for how the project area meets the definition of underserved communities and a description of how the project will benefit these communities, as well as how these communities will be engaged throughout the project.

Regionally and/or Locally Defined Underserved Communities

Regionally and/or locally defined underserved communities may be acceptable as long as statewide thresholds for the tools below are not circumvented. Applicants that use a regional or local definition should also provide data for their project, using the statewide tools below. Caltrans may not accept the regional/local definition if it is inadequately supported in the justification section of the grant application.

Assembly Bill (AB) 1550 (Gomez, Chapter 369, Statutes of 2016)

AB 1550 further enhanced the Greenhouse Gas Reduction Fund statutory requirements to invest a minimum of twenty-five percent in underserved communities and another ten percent in low-income households or communities. AB 1550 provides definitions for low-income households and low-income communities that may be considered in application development:

(1) "Low-income households" are those with household incomes at or below 80 percent of the statewide median income or with household incomes at or below the threshold designated as low income by the Department of Housing and Community Development's list of state income limits adopted pursuant to Section 50093.

(2) "Low-income communities" are census tracts with median household incomes at or below 80 percent of the statewide median income or with median household incomes at or below the threshold designated as low income by the Department of Housing and Community Development's list of state income limits adopted pursuant to Section 50093.

AB 1550: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160AB1550

California Department of Education, Free or Reduced Priced Meals (FRMP) Data

The California Department of Education maintains the complete data files pertaining to students who are eligible for FRMP. FRPM data are collected annually and can also be used to assist Sustainable Communities applicants to define their underserved community. Per SB 99 (Chapter 359, Statutes of 2013), the State's Active Transportation Program disadvantaged community's definition includes low-income schools, where at least 75 percent of students are eligible to receive free or reduced meals under the National School Lunch Program.

FRMP data files: https://www.cde.ca.gov/ds/sd/sd/filessp.asp

SB 99: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201320140SB99

CalEnviroScreen Version 4.0

CalEnviroScreen is a screening methodology that can be used to help identify California communities that are disproportionately burdened by multiple sources of pollution. CalEnviroScreen uses environmental, health, and socioeconomic information to produce a numerical score for each census tract in the state. For purposes of SB 535 (De León, Statutes of 2012), disadvantaged communities are defined as the top 25 percent scoring areas from CalEnviroScreen along with other areas with high amounts of pollution and vulnerable populations.

https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40

California Healthy Places Index (HPI)

The California Healthy Places Index (HPI) is an interactive data and mapping tool that provides a detailed snapshot of the social determinants of health across California, mapped down to the Census tract level. HPI provides comparison rankings of Census tracts statewide and an accompanying policy action guide. Therefore, the HPI can be a useful tool in prioritizing areas with high levels of social and economic disadvantage for funding, policy, and planning interventions.HPI was developed by the Public Health Alliance of Southern California in collaboration with health departments and data experts across the state. Because the HPI focuses on the social and environmental conditions that contribute to health, policy makers and local agencies can use it to identify actionable policies that would improve health in their community, such as improving transportation access, housing affordability and quality, or access to parks and open space, HPI also incorporates "decision support layers" that can be overlaid to show additional indicators such as the California Department of Public Health's (CDPH) climate change and health vulnerability indicators (see Appendix A. under Public Health Resources, **CDPH Climate Change and Health Vulnerability Indicators** for more information.).

https://healthyplacesindex.org/

Understanding the HPI Score

The HPI includes a composite score for each Census tract in the State. The higher the score, the healthier the community conditions. Each Census tract's score is converted to a percentile, which allows it to be compared to other California Census tracts. For example, an HPI percentile of 79 indicates that a Census tract has healthier community conditions than 79 percent of the Census tracts in California. HPI percentile rankings are further broken into quartiles, with percentiles below 25 typically used to indicate disadvantaged communities. Thus, lower scores can be used to demonstrate a community, or project/service area, is underserved for purposes of qualifying for the minimum threshold of 50 percent for underserved communities in this program.

In addition to the composite score and percentile ranking, applicants can review the individual domain scores or indicators themselves and explain how their project will improve one or more of these public health challenges. The numeric value and percentile ranking for these component indicators can be found either by using the live map or by accessing the data directly. See the following table for HPI examples.

These HPI tools can be accessed at:

Live Map: https://map.healthyplacesindex.org/

HPI Learning Center: https://www.healthyplacesindex.org/learning-center

HPI Examples		
Indicator	**HDI Percentile**	**How will the project improve this health challenge?**
Policy Action Area (Composite) Scores		
Neighborhood	Percentile ranking of all neighborhood-related indicators	Demonstrate how this plan will address health and transportation challenges related to neighborhood indicators (park access, supermarket access, retail density, alcohol availability and tree canopy)
Transportation	Percentile ranking of all transportation indicators	Demonstrate how this plan will address health and transportation challenges related automobile access and active commuting
Individual Indicators		
Automobile Access	XX percent	Describe how plan will increase and improve transportation access to vital destinations, goods and services for those without auto access.
Active Commuting	XX percent	Describe how the plan will improve transportation options for those without a car, specifically regarding active commuting by foot, bike, and transit in the project area.
Park Access	XX percent	Demonstrate how project will improve transportation access to parks/ open space.

For more information on the HPI, including how to calculate a score for your project area and suggested project types for improving public health, visit https://healthyplacesindex.org/.

Senate Bill 1000 (Leyva, Chapter 587, Statutes of 2016)

SB 1000 requires local jurisdictions to develop environmental justice elements in their next General Plan updates. Specifically, the environmental justice element, or the environmental justice goals, policies, and objectives in other elements, must be adopted or reviewed upon the adoption or next revision of 2 or more elements concurrently on or after January 1, 2018. Grant applicants are encouraged to describe efforts to comply with this new general plan requirement.

https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160SB1000

California Environmental Justice Alliance SB 1000 Toolkit

The California Environmental Justice Alliance SB 1000 Toolkit may help applicants describe their efforts to include the Environmental Justice element in their general plan updates.

https://caleja.org/2017/09/sb-1000-toolkit-release/

Governor's Office of Planning and Research (OPR) General Plan Guidelines Senate Bill 1000 Technical Advisory

The OPR General Plan Guidelines for Senate Bill 1000 provides guidance for determining whether an Environmental Justice element or equivalent is required in a local jurisdiction, including

identifying the location of disadvantaged communities (as defined in Gov. Code, § 65302, subdivision (h)(4)(A))[23] as well as the nature of their environmental burdens, health risks, and needs. It also provides guidance for community engagement when addressing Environmental Justice disadvantaged communities; and goals, policies, and programs that address the unique and compounded health risks in disadvantaged communities and prioritize improvements and programs that meet the needs of disadvantaged communities.

https://opr.ca.gov/docs/20200706-GPG_Chapter_4_EJ.pdf

Displacement/Gentrification

Transportation improvements, especially new rail lines and stations to low-income communities, can increase access to opportunities. But they can also result in much higher property values and an increase in the cost of owning and renting property, inadvertently displacing existing residents and businesses. Being forced to leave a home is a stressful, costly and traumatic life event, especially when affordable housing is so limited. There is a growing recognition of tools and strategies that can be implemented alongside community investments to reduce displacement.

Grant applicants are encouraged to reference the *2017 RTP Guidelines, Appendices K and L,* for best practices in addressing displacement of low income and underserved communities.

Transformative Climate Communities Program

The State's Transformative Climate Communities Program provides a framework for applicants to avoid displacement and may assist Sustainable Communities grant applicants in addressing displacement.

https://sgc.ca.gov/meetings/council/2022/docs/20220428-Item5a_TCC_Guidelines_Round%204_Technical%20Amendment_Clean.pdf

Implementing Senate Bill 350 (De Leon, Chapter 547, Statues of 2015) and Community Needs Assessments

Caltrans supports implementation of SB 350, the Clean Energy and Pollution Reduction Act of 2015, which establishes the State priority to reduce GHG emissions through the promotion of various clean energy policies, including widespread transportation electrification, for the benefit of all Californians. Transforming the State's transportation sector to support widespread electrification requires increasing access for all Californians, including low-income residents and those living in underserved communities, across a broad spectrum of clean transportation and mobility options to address community specific transportation needs. Caltrans is leading efforts to identify low-income residents and underserved communities' transportation and mobility needs through ongoing and potential future statewide planning processes.

In support of this State goal, Sustainable Communities applicants are encouraged to conduct local Community Needs Assessments of low-income resident and underserved communities' transportation and mobility needs to ensure feedback is incorporated in transportation planning. Community Needs Assessments include an evaluation of the following categories of transportation barriers and opportunities at the community level: (1) Access and Reliability; (2) Convenience; (3) Safety; (4) Demographic Characteristics and Community Setting; and, (5) Planning, Infrastructure and Investments.

SB 350: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160SB350

---

23 https://leginfo.legislature.ca.gov/faces/codes_displayText.xhtml?lawCode=GOV&division=1.&title=7.&part=&chapter=3.&article=5.

Final Guidance Document, Low-Income Barriers Study, Part B: Overcoming Barriers to Clean Transportation Access for Low-Income Residents

In February 2018, the California Air Resources Board released the Final Guidance Document, *Low-Income Barriers Study, Part B: Overcoming Barriers to Clean Transportation Access for Low-Income Residents*. This Guidance Document provides background for SB 350 and may assist Sustainable Communities applicants with developing Community Needs Assessments as a standalone project or as part of a proposed project.

https://ww2.arb.ca.gov/resources/documents/carb-barriers-report-final-guidance-document

Public Health Resources

The following tools can be used to further describe the community's climate change and health vulnerability, and other needs, including helping to create qualitative descriptions of existing community health risks and vulnerabilities and how the proposal will address them.

Community Health Needs Assessments

Community Health Needs Assessments (CHNA) and implementation strategies are regularly conducted by county public health departments and are newly required of tax-exempt hospitals as a result of the Patient Protection and Affordable Care Act. These assessments and strategies create an important opportunity to improve the health of communities. They ensure that hospitals have the information they need to provide community benefits that meet the needs of their communities. They also provide an opportunity to improve coordination of hospital community benefits with other efforts to improve community health. By federal statute, the CHNAs must take into account input from "persons who represent the broad interests of the community served by the hospital facility, including those with special knowledge of or expertise in public health." To avoid duplicative efforts, grant applicants are encouraged to contact and coordinate with local health departments/non-profit hospitals to take advantage of information that may have been collected as part of CHNA efforts, such as low-income resident and underserved communities' transportation and mobility needs. It is important for grant applicants to connect with these public health entities for both partnership building on transportation needs for under-resourced communities, but also to not over-burden those communities with multiple assessments or efforts asking similar questions.

CDPH Climate Change and Health Vulnerability Indicators (CCHVIs)

CDPH developed the Climate Change and Health Vulnerability indicators, narratives, and data to provide local health departments and partners the tools to better understand the people and places in their jurisdictions that are more susceptible to adverse health impacts associated with climate change, specifically extreme heat, wildfire, sea level rise, drought, and poor air quality. The assessment data can be used to screen and prioritize where to focus deeper analysis and plan for public health actions to increase resilience.

The CCHVIs can be viewed on "CCHVIz", CDPH's interactive data visualization platform: https://discovery.cdph.ca.gov/ohe/CCHVIz/. The CCHVIs have also been incorporated into the HPI as decision support layers, to better integrate addressing health outcomes associated with climate change and various social determinants of health. See above for more information on the HPI.

https://www.cdph.ca.gov/Programs/OHE/Pages/CC-Health-Vulnerability-Indicators.aspx

CDPH Climate Change and Health Profile Reports (CHPRs)

The CDPH Climate Change and Health Profile Reports are designed to help counties in California prepare for the health impacts related to climate change through adaptation planning. The reports present projections for county and regional climate impacts, the climate-related health

risks, and local populations that could be vulnerable to climate effects. The information is based on available science compiled from previously published, state-sponsored research and plans.

https://www.cdph.ca.gov/Programs/OHE/Pages/ClimateHealthProfileReports.aspx

CDPH Healthy Communities Data and Indicators Project (HCI)

The goal of the HCI is to enhance public health by providing a standardized set of statistical measures, data, and tools that a broad array of sectors can use for planning healthy communities and evaluating the impact of plans, projects, policy, and environmental changes on community health. The Healthy Community Framework identifies 20 key attributes (i.e., "aspirational goals", such as "Safe, sustainable, and affordable transportation options" or "Access to affordable and safe opportunities for physical activity") of a healthy community through all stages of life, clustered in five broad categories (i.e., "domains", such as "Meets the Basic Needs of All" or "Quality and Sustainability of Environment"). HCI data indicators, narratives, and visualizations are found here.

https://www.cdph.ca.gov/Programs/OHE/Pages/HCI-Search.aspx

Integrated Transport and Health Impact Model (ITHIM)

The California version of the Integrated Transport and Health Impact Model (ITHIM) is a planning tool that answers the question of "How much benefit or harm to human health can we expect by changing the mix of active and motorized travel across a county, region, or the entire State of California?" ITHIM contrasts one travel pattern that serves as a reference with an alternative that has a different profile of fine particulate air pollution from vehicle exhaust, physical activity from walking and cycling, and injuries from traffic collisions. ITHIM calculates the change in deaths, years of life shortening and disability, and costs due to these changes in air pollution, physical activity, and traffic injuries. Grant applicants are encouraged to reference and utilize ITHIM to assess the health impacts their projects and programs.

https://skylab.cdph.ca.gov/HealthyMobilityOptionTool-ITHIM/

Health In All Policies (HiAP) Approach

The California Health in All Policies (HiAP) initiative is a collaborative approach designed to improve the health of Californians by incorporating health, equity, and sustainability considerations into policymaking across sectors. The approach recognizes that chronic illness, climate change, health inequities, and increasing health care costs are interrelated and influenced by policies, programs, and investments across sectors. The initiative provides access to tools, resources and journal articles highlighting Health in All Policies approaches, techniques, and concepts from California and beyond.

https://sgc.ca.gov/programs/healthandequity/hiap/approach.html

Active Community Engagement

Sustainable Communities Competitive Grant applications must include an explanation of how local residents and community-based organizations will be meaningfully engaged in developing the final product, especially those from underserved and low-income communities, and how the final product will address community-identified needs. Applicants are encouraged to implement, as applicable and appropriate the tips, best practices, and tools listed below:

Community Engagement Best Practices

- Refer to the following case studies that meaningfully demonstrate the expectations of equitable community engagement:
    - The community driven Carsharing and Mobility Hubs in Affordable Housing Pilots[24] offer a strong example of equitable community engagement. The equity-based project incorporated community input from start to finish through community partnership building.
    - The Mobility Equity Framework[25] should be used to assess and compare multimodal transportation options and centers community needs and shifts decision making power to the public. For successful implementation examples, refer to: (1) California Air Resources Board (CARB) Clean Mobility Options Program[26], (2) City of Portland, Oregon, Pricing Options for Equitable Mobility Project[27], and North Carolina's Transit Equity Campaign[28].
- Refer to Greenlining Institute's Six Standards for Equitable Investment[29] to implement qualitative measures of equity. These standards feature a list of approaches, ranging from the minimum to transformative approach, depending on how much time, resources, and effort are generally required because equity approaches differ in each community context and conditions.
- Refer to Greenlining Institute's Making Equity Real in Mobility[30], a toolkit of clear strategies and best practices to put equity in action
- Clarify the type of engagement will be utilized, as seen in the Public Participation Spectrum[31]. Agencies and communities need to understand where engagement level falls from the "inform" to "empower" model.
- Utilize a Participatory Budgeting (PB) planning process, as appropriate. PB is a democratic approach to public spending that meaningfully and deeply engages people in government

[31] Public Participation Spectrum: https://sustainingcommunity.wordpress.com/2017/02/14/spectrum-of-public-participation/

and the community. During PB, community members democratically decide how to spend part of a public budget, enabling them to make the fiscal decisions that affect their lives and the health of their communities.

- Seek existing community-based organizations or agencies that organize vulnerable populations, to be able to reach out and form collaborative relationships.
- Involve local health departments which can assist in reaching community-based organizations and underserved and vulnerable community members.
- Collaborate with underserved and vulnerable communities to design and implement programs, plans and policies. Robust engagement of underserved and vulnerable communities in significant agency decisions brings about better decisions through increased input from different perspectives, increases buy-in and acceptance of decisions and support for their implementation.
- Make opportunities for input accessible in terms of formats (pop-up workshops, temporary built-environment demonstrations, online, in public meetings, one on one, by mail, etc.), venues (at school and community events, community centers, libraries, transit hubs, etc.), hours (evening or weekend), and language (accessible to lay people and translated into the principal languages of the relevant communities, including accessible media such as caption videos).
- Develop a written collaboration agreement or memorandum of understanding that defines respective roles, expectations, desired outcomes, and agreements for how to work together.
- Establish an advisory group of representatives of vulnerable communities, including community leaders and give them worthwhile roles to design the public engagement process, so that community capacity is built during the collaboration process.
- Conduct targeted outreach to community groups representing special needs populations, underserved communities and a variety of socio-economic groups through various methods.
- Use a variety of outreach methods to optimize participation, such as creating and marketing user-friendly survey websites for public feedback, conducting surveys in multiple languages to collect input on local citizens' priorities, and carrying out meetings at accessible times and meeting locations (e.g., using community group buildings, hosting pop-up workshops at public venues, etc.).

Note: The applicant should increase efforts beyond basic public noticing and public hearings. Options for demonstrating additional public outreach could include, but not limited to all the above.

Additional Public Engagement Best Practices and Strategies

Public engagement has adapted to the COVID-19 pandemic with surprising results . Applicants will need to consider how to conduct public outreach and engagement during these times. Below are some resources to help applicants evaluate and develop the best strategy for public engagement.

- **Caltrans Planning Horizons, "Digital Public Engagement and Transportation: Getting It Right – Theory, Techniques and Best Practices.":** Digital engagement can greatly increase the reach of public education and involvement; many public agencies have been surprised by the positive results and substantial increase in participants.

  https://youtu.be/85t9ibR2U7Q

- **The Great Pivot - Public Engagement in the Wake of COVID-19:** Celia McAdam and Natalie Porter of AIM Consulting hosted a WTS seminar where they provided examples and strategies

for public outreach, including diverse and underserved communities, during the COVID-19 pandemic.

https://youtu.be/k2dPVqhlwvc

- **Digital Environmental Engagement Resource Catalogue:** The California Natural Resources Agency and the California Environmental Protection Agency developed a resource catalogue of online sessions on community engagement and equity. This resource catalogue comes from the "Online Environmental Engagement: Building Our Skills Together" conference. From June 2nd to 4th 2020, forty-nine panelists and approximately 1,500 registrants from California and across the nation gathered together online to discuss their successes, challenges and practical tips for online environmental engagement.

  https://resources.ca.gov/Outreach/Digital-Environmental-Engagement-Resource-Catalogue

- **Tips ad Tools to Engage Your Community in a Digital Environment:** Ensuring inclusive public participation is more challenging than ever because of physical distancing requirements, the digital divide, language access challenges and technology learning curves. With those challenges in mind, ILG offered a helpful webinar in July 2020, that featured innovative strategies for using high-tech and low-tech virtual platforms to engage residents on a variety of topics without meeting face-to face.
  https://www.ca-ilg.org/digitalengagement

- **Broadening Participation Using Online Engagement Tools:** This document provides examples and guidance to local governments interested in enhancing public participation outcomes with online engagement tools.
  https://www.ca-ilg.org/sites/main/files/file-attachments/broadening_participation_via_online_tools_final_draft_1.pdf

- **The Guide to Remote Community Engagement:** A collection of resources designed to support cities that wish to create and maintain strong, institutionalized practices of community engagement during periods of remote working and in an increasingly digital world. Refer to the article, *5 Methods for Non-Internet Based Remote Community Engagement*, for ideas on how to supplement traditional online public engagement efforts to be inclusive of residents lacking high-speed broadband internet access.
  https://medium.com/the-guide-to-remote-community-engagement

- **Virtual Public Involvement:** The U.S. Department of Transportation, Federal Highway Administration, developed this innovation spotlight to provide an overview of virtual public involvement tools that enhance and broaden the reach of public engagement efforts by making participation more convenient, affordable, and enjoyable for greater numbers of people.
  https://www.fhwa.dot.gov/planning/public_involvement/vpi/

- **Designing Parks Using Community-Based Planning:** This document inspires meaningful community engagement for future public projects. It shares methods learned through California's Statewide Park Development and Community Revitalization Program. These methods have been proven effective in urban, rural, and suburban settings.
  https://www.parksforcalifornia.org/planning_guide

Integrated Housing, Land Use, and Transportation Planning

Development patterns directly impact GHG emissions, including those from transportation between jobs, services, and housing. Improved coordination between housing and transportation can reduce commute times, increase transit ridership, lower vehicle miles traveled, lower pollution and GHG, provide greater economic opportunity, and other positive outcomes.

Housing Element Compliance

To support planning for housing California's growing population, the State Department of Housing and Community Development (HCD) reviews each local government's housing element of its general plan.

- The housing element must plan to meet the local government's existing and regional housing needs allocation and quantify and analyze the specific needs and resources available to address the housing needs.
- A housing element can also provide a mechanism to adopt efficient land-use strategies, including those that address climate change and reduce vehicle miles traveled. For example, strategies could include the promotion of affordable higher density, infill development, mixed-use development, or transit-oriented development near transit stations or transit corridors.
- Local governments are required to annually submit progress reports on the implementation of the housing element and provide a detail of production toward their projected housing needs.

For more information on:

  - Housing element requirements, see the HCD Building Blocks website at https://www.hcd.ca.gov/planning-and-community-development/housing-elements/building-blocks
  - Adopted housing element requirements, see the "Housing Element Process" section at https://www.hcd.ca.gov/planning-and-community-development/housing-elements
  - A local government's housing element compliance, see https://www.hcd.ca.gov/planning-and-community-development/housing-open-data-tools/housing-element-review-and-compliance-report
  - Annual Progress Reports, see https://www.hcd.ca.gov/planning-and-community-development/annual-progress-reports

Prohousing Designation Program

The State 2019-20 Budget Act, Assembly Bill 101 enacted the Prohousing Designation Program (Program), which enables HCD to designate local jurisdictions as Prohousing when they demonstrate policies and planning that accelerate the production of housing. To receive the Prohousing Designation, local jurisdictions must meet basic threshold requirements related to compliance with the Housing Element Law and other state housing laws and demonstrate actions worth at least 30 points spread across each of four categories of Prohousing policies: favorable zoning and land use, acceleration of housing production timeframes, reduction of construction and development costs, and providing financial subsidies. The benefit to local jurisdictions receiving the Prohousing Designation includes being given an advantage such as priority processing or additional points when applying for several competitive funding programs, including:

- Affordable Housing and Sustainable Communities
- Infill Infrastructure Grant
- Transformative Climate Communities
- Transit and Intercity Rail Capital Program

Vehicle Miles Traveled (VMT) reducing policies and the Prohousing Enhancement Factors below help indicate that a project is within a jurisdiction supporting integrated housing, land use, and transportation planning. These policies show that a jurisdictions further supports state housing priorities in promoting affordable housing, reducing development barriers, and reducing vehicle miles travelled.

Prohousing Enhancement Factors include policies that:

- Represent one element of a unified, multi-faceted strategy to promote multiple planning objectives, such as efficient land use, access to public transportation, affordable housing, climate change solutions, and/or hazard mitigation.
- Promote development consistent with the state planning priorities pursuant to Government Code section 65041.1.
- Go beyond state law requirements in reducing displacement of lower income households and conserving existing housing stock that is affordable to lower income households.
- Rezoning and other policies that support high-density development in Location Efficient Communities.

VMT reducing policies may include projects located in jurisdictions that are/have:

- Permitting missing middle housing uses (e.g., triplexes and fourplexes) by right in existing low-density, single-family residential zones.
- With density bonus programs which exceed statutory requirements by 10 percent or more.
- Increasing allowable density in low-density, single-family residential areas beyond the requirements of state Accessory Dwelling Unit law (e.g., permitting more than one ADU or JADU per single-family lot). These policies shall be separate from any qualifying policies under category (ii) above.
- Reducing or eliminating parking requirements for residential development as authorized by Government Code sections 65852.2; adopting vehicular parking ratios that are less than the relevant ratio thresholds at subparagraphs (A), (B), and (C) of Government Code section 65915, subdivision (p)(1); or adopting maximum parking requirements at or less than ratios pursuant to Government Code section 65915, subdivision (p).
- Zoning to allow for residential or mixed uses in one or more non-residential zones (e.g., commercial, light industrial). Qualifying non-residential zones do not include open space or substantially similar zones.
- Modifying development standards and other applicable zoning provisions to promote greater development intensity. Potential areas of focus include floor area ratio; height limits; minimum lot or unit sizes; setbacks; and allowable dwelling units per acre. These policies must be separate from any qualifying policies under Category (ii) above.
- Adopted a Nondiscretionary Local Approval Process for residential and mixed-use development in all zones permitting multifamily housing, established a Workforce Housing Opportunity Zone, as defined in Government Code section 65620, or a housing sustainability district, as defined in Government Code section 66200.
- Zoning more sites for residential development or zoning sites at higher densities than is required to accommodate 150 percent of the minimum regional housing need allocation for the Lower-Income allocation in the current housing element cycle.
- Priority permit processing or reduced plan check times for Accessory Dwelling Units (ADUs)/Junior Accessory Dwelling Units (JADUs), multifamily housing, or homes affordable to Lower- or Moderate-Income households.
- Adopted ordinances or implemented other mechanisms that result in less restrictive requirements than Government Code sections 65852.2 and 65852.22 to reduce barriers for property owners to create ADUs/JADUs. Examples of qualifying policies include, but are not

limited to, development standards improvements, permit processing improvements, dedicated ADU/JADU staff, technical assistance programs, and pre-approved ADU/JADU design packages.

- Measures that reduce costs for transportation-related infrastructure or programs that encourage active modes of transportation or other alternatives to automobiles. Qualifying policies include, but are not limited to, publicly funded programs to expand sidewalks or protect bike/micro-mobility lanes; creation of on-street parking for bikes; transit-related improvements; or establishment of carshare programs.
- Established pre-approved or prototype plans for missing middle housing types (e.g., triplexes and fourplexes) in low-density, single-family residential areas.
- Documented practice of streamlining housing development at the project level, such as by enabling a by-right approval process or by utilizing statutory and categorical exemptions as authorized by applicable law (Pub. Resources Code, sections 21155.1, 21155.4, 21159.24, 21159.25; Gov. Code, section 65457; Cal Code Regs., tit. 14, sections 15303, 15332; Pub. Resources Code, sections 21094.5, 21099, 21155.2, 21159.28).
- Policies that represent one element of a unified, multi-faceted strategy to promote multiple planning objectives, such as efficient land use, access to public transportation, affordable housing, climate change solutions, and/or hazard mitigation.
- Policies that promote development consistent with the state planning priorities pursuant to Government Code section 65041.1.
- Rezoning and other policies that support high-density development in Location Efficient Communities.

For more information on the Prohousing Designation Program, email HCD at ProhousingPolicies@hcd.ca.gov or visit the following HCD websites:

Program Website

https://www.hcd.ca.gov/planning-and-community-development/prohousing-designation-program

Prohousing Designation Application Status List

Prohousing Designation Program FAQs

hcd.ca.gov/community-development/prohousing/docs/ProhousingFAQ.pdf

Promote the Region's RTP SCS/APS, State Planning Priorities, and Climate Adaptation Goals

SB 1 - The Road Repair and Accountability Act of 2017 (Beall, Chapter 5, Statutes of 2017)

The intent of additional Sustainable Communities grant funding, pursuant to SB 1 - The Road Repair and Accountability Act of 2017, is to encourage local and regional planning that furthers state goals, including but not limited to, the goals and best practices cited in the RTP Guidelines. Competitive applications will incorporate these cutting-edge planning practices into their proposed planning projects.

SB 1: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201720180SB1

2017 RTP Guidelines (Appendix K, Page 273; Appendix L, Page 309)

The California Transportation Commission adopted the 2017 RTP Guidelines for RTPAs and 2017 RTP Guidelines for MPOs which includes Appendix K – Promoting Health and Health Equity in MPO RTPs and Appendix L – Planning Practice Examples. These appendices highlight planning practices that are undertaken by large, medium, and small MPOs in both rural and urban areas throughout the State.

https://catc.ca.gov/-/media/ctc-media/documents/rtp-2017-guidelines-mpos-011817-a11y.pdf

SB 375 (Steinberg, Chapter 728, Statutes of 2008)

Caltrans supports SB 375 RTP SCS/APS efforts. Successful applications must be compatible with an existing adopted SCS/APS, where applicable, that meets the region's GHG targets, and must strongly support and aim to implement regional SCS/APS efforts. The SCS/APS planning process is intended to help communities reduce transportation related GHG emissions, coordinate land use and transportation planning, and assist local and regional governments in creating sustainable communities for residents throughout the State.

Although most rural areas of the State are not subject to SB 375 SCS/APS requirements, Caltrans still promotes the development of sustainable communities in these areas of the State and efforts to match GHG reduction targets and other goals embodied in SCS/APSs under SB 375. Eligible rural agencies are strongly encouraged to apply for Sustainable Communities Competitive Grants.

Information on SB 375-related planning efforts:

https://ww2.arb.ca.gov/our-work/topics/sustainable-communities

SB 375: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=200720080SB375

Complete Streets and Smart Mobility Framework

In recognition that walking, biking, transit, and passenger rail are integral to our vision of delivering a brighter future for all through a world-class transportation network, Caltrans also supports Complete Streets and the Smart Mobility Framework (SMF). In locations with current and/or future pedestrian, bicycle, or transit needs, Caltrans encourages applicants to consider the tools and techniques contained in the SMF as well as typical components of Complete Streets. Specifically, this might include how the project addresses components of community design, regional accessibility, place types, and priority activities to achieve smart mobility outcomes, community transition, and associated multimodal performance measures for the appropriate context of the problem. Information on these efforts can be found at:

Complete Streets

https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/active-transportation-and-complete-streets

Smart Mobility Framework

https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/active-transportation-and-complete-streets/smart-mobility-framework

Climate Ready Transportation and Climate Adaptation Planning

Through the Grant Program, Caltrans supports the State's broader efforts to help ensure our transportation infrastructure is climate-ready. In order to prioritize these investments, Governor Gavin Newsom signed Executive Order (EO) N-19-19 on September 20, 2019 to redouble the state's "efforts to reduce greenhouse gas emissions and mitigate the impacts of climate change while building a sustainable, inclusive economy." The EO lists California's ambitious and essential climate goals to transition to a healthier, more sustainable and more inclusive economy, including:

- Reducing greenhouse gas emissions 40 percent below 1990 levels by 2030
- Providing 100 percent of the State's electricity from clean energy sources by 2045
- Reducing methane emissions and hydrofluorocarbon gases by 40 percent
- Adding five million zero-emission vehicles to the State's roads by 2030

To help achieve these goals, the EO directs the California State Transportation Agency to leverage over $5 billion in annual state transportation spending toward transportation construction, operations, and maintenance to lower fuel consumption and greenhouse gas emissions from transportation. This includes strategies for lowering vehicle miles traveled, such as supporting housing development near available jobs, and supporting active modes of transportation such as biking and walking that also benefit public health. The EO specifically requires that the State Transportation Agency also work to mitigate increased transportation costs for low-income communities.

https://www.gov.ca.gov/wp-content/uploads/2019/09/9.20.19-Climate-EO-N-19-19.pdf

Integrated Climate Adaptation and Resiliency Program

Senate Bill 246 (Wieckowski, Chapter 606, Statutes of 2015) established the Integrated Climate Adaptation and Resiliency Program (ICARP) within the Governor's Office of Planning and Research to coordinate regional and local efforts with State climate adaptation strategies (Public Resources Code Section 71354). Grant applicants may refer to the ICARP website to explore the State Adaptation Clearinghouse, a centralized source of information and resources to assist decision makers at the state, regional, and local levels when planning for and implementing climate

adaptation projects to promote resiliency across California. Caltrans is coordinating with ICARP staff on the OPR Climate Adaptation Planning Grant Program.

ICARP Website: https://opr.ca.gov/climate/icarp/

SB 246: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160SB246

Adaptation Planning Grants: https://www.opr.ca.gov/climate/icarp/grants/adaptation-planning-grant.html

California Adaptation Clearinghouse

The Adaptation Clearinghouse serves as a centralized source of information that provides the resources necessary to guide decision makers at the state, regional, and local levels when planning for and implementing climate adaptation projects to promote resiliency to climate change in California.

https://resilientca.org/

ResilientCA Adaptation Planning Map (RAP-Map)

The Integrated Climate Adaptation and Resiliency Program (ICARP)—supported through the Governor's Office of Planning & Research—contains a statewide inventory of local government adaptation and resiliency planning efforts. It is an open data tool, to inventory local government climate risk, adaptation, and resiliency planning efforts across the state and track progress towards statewide adaptation planning goals.

https://resilientca.org/rap-map/

Community Climate Resiliency

Grant applicants are encouraged to consider if the surrounding community is experiencing any specific climate vulnerabilities and how the proposed planning project aims to address specific concerns. Grant applicants should also describe how potential climate impacts are taken into consideration in the proposed planning project, such as the incorporation of natural infrastructure, and, if applicable, how the project conforms with the local implementation of SB 379 (Jackson, Statutes of 2015), Government Code Section 65302(g)(4), where cities and counties are required to address climate adaptation and resiliency strategies in the safety element of their general plan.

Defining Vulnerable Communities in an Adaptation Context, OPR Resource Guide

The Governor's Office of Planning and Research, with input from the Integrated Climate Action and Resiliency Program (ICARP) Technical Advisory Council, developed a resource guide for practitioners to use when first considering how to define vulnerable communities in an adaptation context. The document includes: (1) The ICARP Technical Advisory Council's definition of climate-vulnerable communities, (2) A summary of existing statewide assessment tools that can be used to identify vulnerable communities in a climate adaptation context, including a crosswalk with the indicators that are required elements of an SB 1000 (Leyva, Statutes of 2016) analysis; (3) Additional indicators that could be used to assess underlying vulnerability on a case-by-case basis; (4) A list of process guides that can serve to aid agencies undertaking efforts to define vulnerable communities.

https://opr.ca.gov/climate/icarp/vulnerable-communities.html

State Guidance for Adaptation Planning

2017 General Plan Guidelines, Safety Element (Ch. 4)

The General Plan Guidelines set out each statutory requirement in detail, provides OPR recommended policy language, and includes online links to city and county general plans that have adopted similar policies. The guidelines include information on how to consider climate change during general plan development/updates. In accordance with Senate Bill 379, general plans must address climate adaptation and resilience within the Safety element. Local governments are required to include a climate change vulnerability assessment, measures to address vulnerabilities, and a comprehensive hazard mitigation and emergency response strategy.

https://opr.ca.gov/docs/OPR_COMPLETE_7.31.17.pdf

California Climate Adaptation Planning Guide – local/regional agency guidance

The Adaptation Planning Guide provides guidance to support regional and local communities in proactively addressing the unavoidable consequences of climate change. It provides a step-by-step process for local and regional climate vulnerability assessment and adaptation strategy development.

https://resilientca.org/apg/

Planning and Investing for a Resilient California – State Agency guidance

Introduces a four-step process for building resilience and a set of resilient decision-making principles for state agencies when considering climate-informed infrastructure investments. These steps include identifying how climate change could affect a project or plan, conducting an analysis of climate risks, making a climate-informed decision, and tracking and monitoring progress.

https://www.opr.ca.gov/docs/20180313-Building_a_Resilient_CA.pdf

Ocean Protection Council Sea-Level Rise Guidance

The State of California Sea-Level Rise Guidance reflects advances in sea-level rise science and addresses the needs of state agencies and local governments as they incorporate sea-level rise into their planning, permitting, and investment decisions.

http://www.opc.ca.gov/webmaster/ftp/pdf/agenda_items/20180314/Item3_Exhibit-A_OPC_SLR_Guidance-rd3.pdf

California Coastal Commission Sea Level Rise Policy Guidance

This guide provides an overview of the best available science on sea level rise for California and recommended methodology for addressing sea level rise in Coastal Commission planning and regulatory actions.

https://documents.coastal.ca.gov/assets/slr/guidance/2018/0_Full_2018AdoptedSLRGuidanceUpdate.pdf

Coastal Adaptation Planning Guidance for Critical Infrastructure

This guidance from the California Coastal Commission addresses two main types of infrastructure – transportation and water – and presents six key considerations for successful adaptation planning. These considerations are accompanied by recommendations for stakeholders on how to plan effectively for the impacts of sea level rise on coastal infrastructure, a description of the regulatory framework that applies to adaptation planning for infrastructure.

https://documents.coastal.ca.gov/assets/slr/SLR%20Guidance_Critical%20Infrastructure_12.6.2021.pdf

Coastal Adaptation Planning Guidance and Environmental Justice Considerations

The Environmental Justice Policy is the Coastal Commission's framework for identifying and analyzing project impacts on underserved and disadvantaged communities. The policy is designed to achieve more meaningful engagement, equitable process, effective communication and stronger coastal protection benefits for all Californians.

https://documents.coastal.ca.gov/assets/env-justice/CCC_EJ_Policy_FINAL.pdf

Coastal Adaptation Planning Guidance and Tribal Consultation

The Coastal Commission adopted a Tribal Consultation Policy, which is intended to guide outreach and collaboration. It also helps to inform permit applicants how the Commission will review coastal development permit applications to ensure adequate Tribal consultation occurs.

https://documents.coastal.ca.gov/assets/env-justice/tribal-consultation/CCC%20Tribal%20Consultation%20Policy%20Adopted%208.8.2018.pdf

Climate Data Sources and Adaptation Plans

Cal-Adapt

Cal-Adapt is the repository for State-endorsed climate change projections, developed through the State's Climate Change Assessment efforts. Cal-Adapt offers free public access to peer-reviewed data that show climate change impacts on state infrastructure, communities, and natural resources. Find tools, data, and resources to conduct research, develop adaptation plans and build applications.

https://cal-adapt.org/

Climate Action Plans

Many California cities and counties are developing Climate Action Plans to reduce their GHG emissions. Agencies may have existing plans that include strategies or insight on potential approaches to implementing climate change considerations on the transportation network. CARB has created a webmap that can be used to identify plans created, GHG inventory information, GHG reduction targets, local strategies planned to meet these targets, and more. The second website provides a host of resources, including example Climate Action Plans and templates. This information can also be found on the Adaptation Clearinghouse.

https://webmaps.arb.ca.gov/capmap/
http://www.ca-ilg.org/climate-action-plans

Caltrans Vulnerability Assessments

To ensure the resiliency of the State Highway System, Caltrans conducted vulnerability assessments statewide. These Summary Reports and associated Technical Reports describe climate change effects in each of Caltrans' 12 districts.

https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/air-quality-and-climate-change/2019-climate-change-vulnerability-assessments.

Local Vulnerability Assessments

If local vulnerability assessments have been developed along a corridor, their data may be interwoven with Cal-Adapt data, Caltrans Climate Change Vulnerability Assessments, and/or other vulnerability information for more granular analysis of specific local areas, particularly those in more densely populated areas or with a high density of affected transportation assets. Many of these assessments and case studies can be found on the Integrated Climate Action and Resiliency Program (ICARP) Case Studies and Examples search page (https://resilientca.org). Some transit

and rail providers in California have also developed vulnerability assessments for their 21 networks as well, which may contain detailed analysis that could be useful.

Caltrans Climate Change Adaptation Strategy Report

Through this report, Caltrans is aiming to adopt a leadership role in the process of climate change adaptation through developing a "how to" guide for integrating climate change adaptation into agency activities and decision-making. This Adaptation Strategy Report initially outlines an overall "pathway" for adopting recommendations on how Caltrans should mainstream adaptation strategies throughout functional areas and develop an approach to coordinate with partner agencies. Recognizing the important role of transit and active transportation facilities and routes, this report will develop solutions for all modes of transportation. This report also has a section focused on the incorporation of climate change considerations into System Planning documents.

California Department of Conservation – Landslide Hazards

The California Landslide Inventory is an ongoing project to make the California Geological Survey landslide information publicly accessible.

http://www.conservation.ca.gov/cgs/geologic_hazards/landslides

State Wildlife Action Plan

The State Wildlife Action Plan includes conservation actions that respond to current and future challenges with objectives and goals that are specific, measurable, and time bound.

https://www.wildlife.ca.gov/SWAP/Final

CDFW Regional Conservation Investment Strategies

This program encourages a voluntary, non-regulatory regional planning process intended to result in higher-quality conservation outcomes and includes an advance mitigation tool. The Program

uses a science-based approach to identify conservation and enhancement opportunities that, if implemented, will help California's declining and vulnerable species by protecting, creating, restoring, and reconnecting habitat and may contribute to species recovery and adaptation to climate change and resiliency.

https://www.wildlife.ca.gov/conservation/planning/regional-conservation

CDFW Natural Communities Conservation Plans

A Natural Communities Conservation Plan identifies and provides for the regional protection of plants, animals, and their habitats, while allowing compatible and appropriate economic activity.

https://www.wildlife.ca.gov/conservation/planning/nccp

California Sustainable Freight Action Plan

In July 2015, Governor Edmund G. Brown Jr. issued Executive Order B-32-15, which provides a vision for California's transition to a more efficient transport system. This transition of California's freight transport system is essential to supporting the State's economic development in coming decades while reducing harmful pollution affecting many California communities. As a key first step, the Governor's Executive Order directs the California State Transportation Agency, California Environmental Protection Agency, Natural Resources Agency, California Air Resources Board, California Department of Transportation, California Energy Commission, and Governor's Office of Business and Economic Development to develop a California Sustainable Freight Action Plan (Action Plan), by July 2016. This Action Plan is an unprecedented effort, intended to integrate investments, policies, and programs across several State agencies to help realize a singular vision for California's freight transport system. The Action Plan provides a recommendation on a high-level vision and broad direction to the Governor to consider for State agencies to utilize when developing specific investments, policies, and programs related to the freight transport system that serves our state transportation, environmental, and economic interests. Competitive grant applications will highlight how their planning effort will support this Action Plan.

APPENDIX B. SAMPLE APPLICATION PACKAGE

The Grant Application Guide and all fillable application documents can be found on the Sustainable Transportation Planning Grant website.

- Application Checklist, Cover Sheet, and Signature Page
- Application Narratives for Sustainable Communities, Climate Adaptation Planning, and Strategic Partnerships
- Scope of Work and Checklist
- Cost and Schedule and Checklist
- Third-Party In-Kind Valuation Plan and Checklist
- Local Resolution and Checklist

Application Checklist

The following documents are required and must be submitted via Smartsheet in one single PDF document, not to exceed 25 MB. The Signature Page may be submitted separately if there are issues combining with the single PDF document. Keep the file name brief, as files are corrupted when file names are too long. Refer to the Grant Application Guide for additional information and/or samples. Failure to include any of the required documents will result in a reduced application score.

PDF documents should be submitted in their fillable PDF formats. The original file formats will be required upon grant award.

Required Application Documents	
(✓)	**Ensure these items are completed prior to submitting to Caltrans via Smartsheet**
	Application Cover Sheet (complete in Smartsheet and submit with single PDF document)
	Signature Page (Electronic signatures accepted; may submit as a separate file if there are issues with combining with single PDF document)
	Application Narrative
	Scope of Work
	Cost and Schedule
	Third Party In-Kind Valuation Plan (if applicable, required upon award)
	Map of Project Area
Supplemental Documentation (not required)	
	Graphics of Project Area (when applicable)
	Letter(s) of support
	Data

Sustainable Transportation Planning Grant Program
GRANT APPLICATION COVER SHEET

PART A. APPLICATION INFORMATION

FY 2024-25

Grant Category (select only one)

Climate Adaptation (MPOs, RTPAs, Transit Agencies, Cities, Counties, Tribes, other Public Transportation Planning Entities)	
☐	11.47% Local Match requirement (Not Applicable to Native American Tribal Governments)

Sustainable Communities (MPOs with sub-applicant, RTPAs, Transit Agencies, Cities, Counties, Tribes, other Public Transportation Planning Entities)		**Strategic Partnerships** (MPOs and RTPAs only)	
☐	Sustainable Communities Competitive (11.47% Local Match requirement)	☐	Strategic Partnerships (FHWA SPR Part I) (20% Local Match requirement)
☐	Sustainable Communities Competitive Technical (11.47% Local Match requirement)	☐	Strategic Partnerships Transit (FTA 5304) (11.47% Local Match requirement)

Application Submittal Type (more than one may be selected)

New		**Prior Phases**		**Re-Submittal**	
☐	New Application	☐	Continuation of a prior project. If so, list the Grant FY and project title below.	☐	Re-submittal from a prior grant cycle.
				☐	How many times has an application been submitted for this project, including this one?

PART B. PROJECT INFORMATION

Project Title and Location			
Project Title			
Project Location (City)		Project Location (County)	

Funding Information

1. Is the applicant proposing to meet the minimum local match requirement or an over-match? Use the Match Calculator to determine the appropriate match. Match Calculator

   ☐ Minimum Local Match ☐ Over-Match

2. What is the source of Local Match funds being used?
   (MPOs – Federal Toll Credits, PL, and FTA 5303 cannot be used to match Sustainable Communities Competitive or Adaptation Planning grants)

   ☐ Local Transportation Funds ☐ Local Sales Tax ☐ Special Bond Measures

   ☐ Other, specify:

Grant Funds Requested	Local Match (Cash)	Local Match (In-Kind)	Total Local Match	% Local Match	Total Project Cost
$	$	$	$		$

1

Sustainable Transportation Planning Grant Program
GRANT APPLICATION COVER SHEET

PART B. PROJECT INFORMATION (CONTINUED)

Project Description (3-5 Sentences Max.)	
Insert Application Narrative: 1. Project Description	

Project Type

Choose the Project Type that best represents the focus of the proposed project. See Grant Application Guide for examples. Two max. may be selected.

- ☐ Active Transportation (Bicycle and Pedestrian)
- ☐ Climate Change (Infrastructure Adaptation, Vulnerability and Resiliency)
- ☐ Complete Streets (Multimodal specific type)
- ☐ Corridor (Local Streets or Highways)
- ☐ Freight/Goods Movement
- ☐ General Plan-Related (Circulation Element, Land Use Element, Specific Plan)
- ☐ Multimodal (Motorized and Active Transportation)
- ☐ Safety (Vision Zero, Safe Routes to Schools)
- ☐ Technical (Modeling, VMT Mitigation, ZEV Infrastructure, ZEB Transition, etc.)
- ☐ Transit (Bus, Light Rail, and Commuter Rail Service)
- ☐ Other, specify:

Underserved Community Definitions

If applicable to the project, what tools were used to identify the underserved communities in the project area? Choose all that apply.

- ☐ Rural Communities of 50,000 or less and outside of urbanized areas
- ☐ Native American Tribal Governments
- ☐ Regionally/Locally Defined Underserved Communities
- ☐ At/Below 80% Assembly Bill 1550 (Gomez, Statutes of 2016)
- ☐ At/Above 75% California Department of Education, Free or Reduced Priced Meals Data
- ☐ At/Above 75% CalEnviroScreen Version 4.0
- ☐ At/Below 25% California Healthy Places Index

Sustainable Transportation Planning Grant Program
GRANT APPLICATION COVER SHEET

PART D. COMPLIANT HOUSING ELEMENT

City/County Primary/Sub-Applicants for Sustainable Communities Grants	Yes	No
Does the City/County have a compliant Housing Element? If No, explain the current status:		
Has the City/County submitted Annual Progress Report to the California Department of Housing and Community Development for calendar years 2021 and 2022?		

PART E. OTHER FUNDING PROGRAMS

Applicants may leverage other program funds for this planning grant, as long as the activities are eligible.

	Yes	No	N/A
Is the applicant applying for the Governor's Office of Planning and Research (OPR) Climate Adaptation Planning Grant Program? Applicants should not submit the same project application to both funding programs. However, applicants may propose to leverage funds from one funding program to another. For instance, an applicant with a large project may propose to fund one component with Caltrans funds, and another with OPR funds. Applicants may also propose two entirely different projects to each funding program. If yes, identify the differences between each proposal, and briefly summarize the leverage opportunity if awarded both Caltrans and OPR funding:			
Is the applicant applying for any other funding programs to complete this project? If yes, list them here:			

Sustainable Transportation Planning Grant Program
GRANT APPLICATION COVER SHEET

PART F. LEGISLATIVE INFORMATION

Use the following link to determine the appropriate legislative members in the Project area.

Search by address: http://findyourrep.legislature.ca.gov/

State Senator(s)		Assembly Member(s)	
District	Name	District	Name

PART G. LETTERS OF SUPPORT

List all letters of support received for the proposed project. Letters should be addressed to the applicant.

Name/Agency	Name/Agency

Sustainable Transportation Planning Grant Program
SUSTAINABLE COMMUNITIES - GRANT APPLICATION NARRATIVE

PART H. APPLICATION NARRATIVE	FY 2024-25

Project Information	
Organization (Legal name)	
Project Title	
Project Area Boundaries	
Project Timeframe (Start and End Dates)	

Do not alter application format and font size 10

Application Narrative

1. **Project Description (10 points)**
   Briefly summarize project in a clear and concise manner, including why the project is necessary, major deliverables, parties involved, and any connections to relevant local, regional, and/or State planning efforts. **3-5 sentences maximum; Do not exceed the space provided.**

2A. Project Justification (15 points)

- Describe the problems or deficiencies the project is attempting to address, as well as how the project will address the identified problems or deficiencies
- Describe the ramifications and impact of not funding this project
- Clearly define the existing issues surrounding the project (e.g., transportation issues, inadequate transit services, impacts of heavy trucking on local streets, air pollution, etc.)
- Competitive applications support the need for the project with empirical data
- Describe how this project addresses issues raised
- Define the public benefit
- Explain how the public was involved with identifying issues
- **Do not exceed the space provided**

Sustainable Transportation Planning Grant Program
SUSTAINABLE COMMUNITIES - GRANT APPLICATION NARRATIVE

2B. Underserved Communities Justification (5 points)

The tools in Grant Application Guide, Appendix A, are intended to help applicants define an underserved community.

- Explain how the project area or portions of the project area are defined as an underserved community, including Native American Tribal Governments and rural communities
- Explain how the proposed project addresses the needs of the underserved community
- Describe how underserved communities will benefit from the proposed planning project
- Cite data sources, the tools used, and include a comparison to the statewide thresholds that are established in each tool
- **Do not exceed the space provided**

2C. Underserved Communities Engagement (5 points)

See Grant Application Guide, Appendix A, for best practices in community engagement

- Describe how the proposed effort would engage underserved communities, including Native American Tribal Governments and rural communities. Include specific outreach methods for involving underserved communities
- Describe how underserved communities will continue to be engaged during the next phases after the proposed planning project is complete, including project implementation.
- **Do not exceed the space provided**

3. Grant Specific Objectives (Total 35 points)

Integrate the following Grant Program Considerations (Grant Application Guide, Chapter 1.2) in the responses for 3A-G below, as applicable:

- Caltrans Strategic Plan
- California Transportation Plan (CTP)
- Modal Plans that Support the CTP
- Title VI and Environmental Justice
- Climate Action Plan for Transportation Infrastructure
- California Adaptation Strategy
- Master Plan for Aging

Sustainable Transportation Planning Grant Program
SUSTAINABLE COMMUNITIES - GRANT APPLICATION NARRATIVE

3A. Grant Specific Objectives (5 points)

- Explain how the proposal encourages local and regional multimodal transportation, housing and land use planning that furthers the region's RTP SCS (where applicable)
- Demonstrate how the proposed effort would coordinate transportation, housing, and land use planning components of the project to inform one another (i.e., regular coordination meetings between responsible entities, joint community meetings, letters of commitment from all relevant implementing agencies, etc.
- Explain how the proposed effort would contribute to shifts in land use towards more sustainable and equitable communities, such as more affordable housing near transit or more compact regional development patterns (Reference Grant Application Guide, Chapter 2.2, for example project types)
- **Do not exceed the space provided**

3B. Grant Specific Objectives (5 points)

- Explain how the proposal contributes to the State's GHG reduction targets and advances transportation related GHG emission reduction project types/strategies (i.e., mode shift, demand management, travel cost, operational efficiency, accessibility, and coordinationwith future employment and residential land use, etc.)
- **Do not exceed the space provided**

3C. Grant Specific Objectives (5 points)

- Explain how the proposal supports other State goals, including but not limited to:
  - State Planning Priorities (Government Code Section 65041.1)
  - Climate Adaptation Goals (State Adaptation Strategy)
  - Goals and Best Practices cited in the 2017 RTP Guidelines, Appendices K and L.
- **Do not exceed the space provided**

3D. Grant Specific Objectives (5 points)

- Explain how the proposal encourages stakeholder involvement
  - List the stakeholders involved in the planning effort (e.g., first responders, community-based organizations, local housing and public health departments, transit agencies, and partners including State, federal, local agencies)
  - Explain how stakeholders will be involved throughout the project
- **Do not exceed the space provided**

Sustainable Transportation Planning Grant Program
SUSTAINABLE COMMUNITIES - GRANT APPLICATION NARRATIVE

3E. Grant Specific Objectives (5 points) • Explain how the proposal involves active community engagement • Describe the specific public outreach methods/events that will be employed throughout the project • Explain how public input will inform the project • Describe how the effort will survey the public at the end of each outreach event to gauge effectiveness of these activities for the planning effort • **Do not exceed the space provided**
3F. Grant Specific Objectives (5 points) • Explain how the proposal assists in achieving the Caltrans Mission and Grant Program Objectives (Grant Application Guide, Chapter 1.2)   ○ Sustainability, Preservation, Accessibility, Safety, Innovation, Economy, Health, and Social Equity, as applicable • **Do not exceed the space provided**
3G. Grant Specific Objectives (5 points) • Explain how the proposal ultimately results in funded and programmed multimodal transportation system improvements. Applicants should discuss next steps for project implementation, including timing for programming improvements that would result from the planning effort • **Do not exceed the space provided**
4. Project Management (Total 30 points) See Scope of Work and Cost and Schedule samples and checklists for requirements (Grant Application Guide, Appendix B), also available on the Caltrans grants website: https://dot.ca.gov/programs/transportation-planning/regional-planning/sustainable-transportation-planning-grants
4A. Scope of Work (15 points)
4B. Cost and Schedule (15 points)

Sustainable Transportation Planning Grant Program
CLIMATE ADAPTATION PLANNING - GRANT APPLICATION NARRATIVE

PART G. APPLICATION NARRATIVE | **FY 2024-25**

Project Information	
Organization (legal name)	
Project Title	
Project Area Boundaries	
Project Timeframe (Start and End Dates):	

Application Narrative

1. Project Description (5 points)
Briefly summarize project in a clear and concise manner, including why the project is necessary, major deliverables, desired outcomes, parties involved, and alignment with relevant local, regional, and/or State planning efforts. **3-5 sentences maximum; Do not exceed the space provided.**

2A. Project Justification (10 points)

- Describe the problem or deficiencies the project is attempting to address, including the climate adaptation need and any other priority needs, as well as how the project will address the identified problems or deficiencies
- Describe the impact of not funding the project
- Describe the public benefits
- **Do not exceed the space provided**

2B. Underserved Communities Justification (5 points)

The tools in the Grant Application Guide, Appendix A, are intended to help applicants define an underserved community.

- Explain how the project area or portions of the project area benefit underserved communities, including Tribal, local, regional, and rural communities as applicable
- Explain how the proposed project addresses the needs of the communities and how they will benefit from the proposed project, including if the communities informed the scope of the project
- Cite data sources, the tools used, and include a comparison to the statewide thresholds that are established in each tool
- **Do not exceed the space provided**

Sustainable Transportation Planning Grant Program
CLIMATE ADAPTATION PLANNING - GRANT APPLICATION NARRATIVE

2C. Underserved Communities Engagement (5 points)

See Grant Application Guide, Appendix A. for best practices in community engagement

- Describe how the proposed project will engage underserved communities and how the effort was informed by engagement with underserved communities, including Tribal, local, regional, and rural communities as applicable
    - Include specific outreach methods for involving underserved communities
- Describe how underserved communities will continue to be engages during the next phases after the proposed planning project is complete, including implementation
- **Do not exceed the space provided**

3. Grant Specific Objectives (Total 40 points)

Integrate the following Grant Program Considerations (Grant Application Guide, Chapter 1.2) in the responses for 3A-D below, as applicable:

- Caltrans Strategic Plan
- California Transportation Plan (CTP)
- Modal Plans that Support the CTP
- Title VI and Environmental Justice
- Climate Action Plan for Transportation Infrastructure
- California Adaptation Strategy
- Master Plan for Aging

3A. Grant Specific Objectives; climate risk and adaptation (15 points)

- Explain how the project identifies and assesses climate change impact risks to multimodal transportation infrastructure vulnerabilities to climate change impacts in the project area
- Explain how the project will identify adaptation strategies and specific actions to remedy identified climate related vulnerabilities. Projects and plans should describe short-, medium-, and long-term strategies that will address the overall risk for the entire service life of the asset or capital project using the best available science and guidance.
- Articulate how the project will advance the planning of specific climate adaptation projects, such as developing a cost estimate, pursuing a technical feasibility study for adaptation options, or developing a conceptual design (up to 30%)
- When applicable, explain how the project includes economic analysis and/or cost-benefit analysis of identified adaptation strategy or strategies
- **Do not exceed the space provided**

Sustainable Transportation Planning Grant Program
CLIMATE ADAPTATION PLANNING - GRANT APPLICATION NARRATIVE

3B. Grant Specific Objectives; co-benefits (10 points)

- Identify co-benefits of the adaptation work, such as benefits to public health, natural ecosystems, air quality, social equity, the economy, or reductions in greenhouse gas (GHG) emissions.
    - If reductions in GHG emissions are identified as a co-benefit, explain how the project advances transportation related GHG emission reductions specifically through different project types/strategies (e.g., mode shift, demand management, accessibility, etc.)
- Describe if and how nature-based solutions will be integrated into the proposed project
- Describe how adaptation needs of environmental resources in proximity to the transportation system such as coastal resources like tidal marsh or beaches, wildlife connectivity, wetlands, or fish passage needs are considered in the proposed project (if applicable)
- **Do not exceed the space provided**

3C. Grant Specific Objectives; partnerships and stakeholder process (10 points)

- Explain how the project demonstrates on-going collaboration and partnerships between sectors and jurisdictions, and across levels of government at a regional scale
- Explain if the project also includes collaboration and partnerships with diverse external stakeholders such as businesses, non-governmental agencies, federal, state, or local agencies, community-based organizations, and community residents
- Explain how the project includes a multistakeholder process that provides an opportunity for meaningful community engagement from communities potentially impacted by any project identified or developed as part of the planning grant

Do not exceed the space provided

3D. Grant Specific Objectives; alignment with other plans and State Goals (10 points)

- Explain how the project is consistent with priorities, goals, and actions of the California State Adaptation Strategy, follows State guidance on adaptation planning, and is consistent with any applicable local/regional resilience planning.
- Articulate if the project will identify ways to incorporate transportation-related climate adaptation needs into existing transportation plans, specifically how the project will lead to the identification and development of capital projects that can be programmed as part of local or regional plans
- Explain how the project is in alignment with or augments existing plans, including climate action/adaptation plans, hazard mitigation plans, safety elements of general plans, resilience improvement plans, and/or Coastal Act/Certified Local Coastal Program plans
- Explain how the proposed project addresses public access and Complete Streets needs
- **Do not exceed the space provided**

4. Project Management (Total 30 points)

See Scope of Work and Cost and Schedule samples and checklists for requirements (Grant Application Guide, Appendix B), also available on the Caltrans grants website: https://dot.ca.gov/programs/transportation-planning/regional-planning/sustainable-transportation-planning-grants

Sustainable Transportation Planning Grant Program

STRATEGIC PARTNERSHIPS - GRANT APPLICATION NARRATIVE

PART H. APPLICATION NARRATIVE

FY 2024-25

Project Information	
Organization (Legal name)	
Project Title	
Project Area Boundaries	
Project Timeframe (Start and End Dates)	

Do not alter application format and font size 10

Application Narrative

1. **Project Description (10 points)**
   Briefly summarize the project in a clear and concise manner, including why the project is necessary, major deliverables, parties involved, and any connections to relevant local, regional, and/or State planning efforts. **3-5 sentences maximum; Do not exceed the space provided.**

2. **Project Justification (30 points)**
   - Describe the problems or deficiencies the project is attempting to address, as well as how the project will address the identified problems or deficiencies
   - Describe the ramifications and impact of not funding this project
   - Clearly define the existing issues surrounding the project (e.g., transportation issues, in-adequate transit services, impacts of heavy trucking on local streets, air pollution, etc.)
   - Competitive applications support the need for the project with empirical data
   - Describe how this project addresses issues raised
   - **Do not exceed the space provided**

Sustainable Transportation Planning Grant Program
STRATEGIC PARTNERSHIPS - GRANT APPLICATION NARRATIVE

3. Grant Specific Objectives (Total 20 points)
Integrate the following Grant Program Considerations (Grant Application Guide, Chapter 1.2) in the responses for 3A-3D below, as applicable:

- Caltrans Strategic Plan
- California Transportation Plan (CTP) 2050
- Modal Plans that Support the CTP 2050
- Title VI and Environmental Justice
- Climate Action Plan for Transportation Infrastructure
- California Adaptation Strategy
- Master Plan for Aging

3A. Grant Specific Objectives (5 points)

- List and explain how the proposal would accomplish the Federal Planning Factors (Grant Application Guide, Chapter 5.2), achieve the Caltrans Mission and the Grant Program Objectives (Grant Application Guide, Chapter 1.2.)
- **Do not exceed the space provided**

3B. Grant Specific Objectives (5 points)

- Explain how the proposal partners with Caltrans to identify and address statewide, interregional, or regional transportation deficiencies in the State Highway System (or multimodal transportation system for transit-focused projects)
- Clearly define how Caltrans will be a partner in the proposed project, as appropriate for the project
- **Do not exceed the space provided**

3C. Grant Specific Objectives (5 points)

- Explain how the proposal strengthens government-to-government relationships
- Outline the entities involved with the proposed project and how partnerships will be strengthened as a result
- **Do not exceed the space provided**

3D. Grant Specific Objectives (5 points)

- Explain how the proposal results in programmed system improvements
- Discuss next steps for project implementation, including timing for programming improvements that would result from the planning effort
- **Do not exceed the space provided**

Sustainable Transportation Planning Grant Program
STRATEGIC PARTNERSHIPS - GRANT APPLICATION NARRATIVE

4. Project Management (Total 40 points) See Scope of Work and Cost and Schedule samples and checklists for requirements (Grant Application Guide, Appendix B), also available on the Caltrans grants website, https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/regional-and-community-planning/sustainable-transportation-planning-grants
4A. Scope of Work (20 points)
4B. Cost and Schedule (20 points)

Scope of Work Checklist

The Scope of Work (SOW) is the official description of the work that is to be completed during the contract. Tasks 1-6 outlined in the SOW are for illustrative purposes only. **Applications with missing components will be at a competitive disadvantage.** Please use this checklist to make sure your Scope of Work is complete.

Scope of Work Checklist	
(✓)	**Ensure these items are completed prior to submitting to Caltrans**
	Use the Fiscal Year 2024-25 template provided
	Include the activities discussed in the grant application
	List all tasks using the same title as stated in the Project Cost and Schedule
	Include task numbers in accurate and proper sequencing, consistent with the Cost and Schedule
	Exclude sub-task numbers; only include sub-headings
	Exclude tasks for project management and/or staff/consultant coordination; these activities should be spread among relevant tasks
	Include a thorough Introduction to describe relevant background, related planning efforts, the project and project area demographics, including a description of the underserved community involved with the project, if applicable
	Include a thorough and accurate narrative description of each task
	Task 01 is a required task. It must be titled "Project Administration", it cannot exceed 5% of the grant award amount, and only the grantee and sub-recipient(s) can charge against this Task. This Task must only include the following activities and deliverables: • Caltrans and grantee Project kick-off meeting at the start of the grant • Invoicing and quarterly reporting to Caltrans • DBE Reporting (federal grants only)
	Include Task 02 for the procurement of a consultant (if needed). This task is for the grantee and sub-recipient(s) only.
	Include detailed public participation and services to diverse communities in the Public Outreach Task (excluding technical projects)
	Identify public outreach strategies in a manner that provides flexibility and allows for a diverse range of outreach methods (both in-person and on-line), excluding technical projects
	Include a Task(s) for a Draft and Final product. The draft plan must include an opportunity for the public to provide feedback (excluding technical projects).
	Include a summary of next steps your agency will take towards implementing the project in the Final Product
	List achievable project deliverables for each Task
	EXCLUDE environmental, complex design, engineering work, and other ineligible activities outlined in the Grant Application Guide

SCOPE OF WORK

Project Information	
Grant Category	
Grant Fiscal Year	
Project Title	
Organization (Legal name)	

Disclaimer

Agency commits to the Scope of Work below. Any changes will need to be approved by Caltrans prior to initiating any Scope of Work change or amendment.

Introduction

[Provide a detailed summary of the grant project. Include a thorough Introduction to describe relevant background, related planning efforts, the project and project area demographics, including a description of the underserved community involved with the project, if applicable]

Project Stakeholders

[Provide a detailed summary of who the Project Stakeholders are. Will a consultant be working on the project? If so, what activities/tasks will they be involved with?]

Overall Project Objectives

[Provide a detailed summary of the Overall Project Objectives]

Summary of Project Tasks

[Project Management activities must be identified within the task they are occur and not as standalone tasks.]

Task 01: Project Administration

This is an Administrative Task that shall only be charged against by the Grantee for the Administration of this grant project. Costs for this task cannot exceed 5% of the grant award amount.

Grantee will manage and administer the grant project according to the Grant Application Guidelines, Regional Planning Handbook, and the executed grant contract between Caltrans and the grantee.

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[The following are the only allowable deliverables for this Task. This Task is not for the management of the consultant or meetings between the grantee and the consultant]

Kick-off meeting with Caltrans - Meeting Notes, quarterly invoices and progress reports, DBE reporting (federal Grants only).

Task 02: Consultant Procurement

[Provide a detailed narrative of activities to be completed in this Task]

Grantee will procure a consultant, consistent with state and federal requirements, Local Assistance Procedures Manual for procuring non-Architectural and Engineering consultants, the Grant Application Guide, Regional Planning Handbook, and the executed grant contract between Caltrans and the grantee.

Task Deliverables
[List achievable deliverables for this Task]
Examples: Grantees current procurement procedures, copy of the Request for Proposal/Qualifications, copy of the contract between consultant and grantee, copies of all amendments to the consultant contract, meeting notes from project kick-off with consultant

Task 1: Existing Conditions

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[List achievable deliverables for this Task]
Examples: Summary of Existing Conditions

Task 3: Analysis

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[List achievable deliverables for this Task]
Examples: Summary of Analysis

Task 4: Public Outreach

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[List achievable deliverables for this Task]

Examples: PowerPoint Presentations, flyers, website announcements, sign-in sheets, community surveys, conceptual drawings, bilingual services, receipts for light snacks (Caltrans approval required prior to purchase. No full meals)

Task 5: Advisory Committee Meetings

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[List achievable deliverables for this Task]
Examples: Agendas, meeting notes, list of attendees, list of action items

Task 6: Draft and Final Plan

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[List achievable deliverables for this Task]
Examples: Draft Plan, Public Review – list of comments, Final Plan that includes a summary of next steps towards implementation, credits FHWA, FTA, and/or Caltrans on the cover or title page, submitted to Caltrans in an ADA accessible electronic copy.

Task 7: Board Review/Approval

[Provide a detailed narrative of activities to be completed in this Task]

Task Deliverables
[List achievable deliverables for this Task]
Examples: Board Agenda, presentation materials, meeting minutes with board acceptance/approval.

Cost and Schedule Checklist

The Cost and Schedule is the official budget and timeline for the project. Tasks 1-6 outlined in the Cost and Schedule are for illustrative purposes only. **The Cost and Schedule must be consistent with the Grant Application Cover Sheet. Applications with missing components will be at a competitive disadvantage.**

Cost and Schedule Checklist	
(✓)	**Ensure these items are completed prior to submitting to Caltrans**
	Use the Fiscal Year 2024-25 template provided (do not alter the template)
	List all tasks with the same title as stated in the Scope of Work
	Include task numbers in proper sequencing, consistent with the Scope of Work
	Exclude sub-task numbers and sub-headings
	Exclude tasks for project management and/or staff/consultant coordination; these activities should be spread among relevant tasks
	Task 01 is a required task. It must be titled "Project Administration", it cannot exceed 5% of the grant amount requested, and only the grantee and recipient(s) can charge against this Task. This Task must only include the following activities and deliverables: • Project kick-off meeting between the grantee and Caltrans at the start of the grant • Invoicing and quarterly reporting to Caltrans • DBE Reporting (federal grants only)
	Include Task 02 for procurement of consultants, if consultants are needed. This task is for the grantee and sub-recipient(s) only.
	Complete all budget columns as appropriate: Total Cost, Grant Amount, Local Cash Match, and if applicable, Local In-Kind Match
	Ensure the correct minimum local match amount, calculated as a percentage of the total project cost (grant plus local match), is provided
	Use the Local Match Calculator to ensure the total Local Match amount meets the minimum required Local Match for the specified Grant Category
	Include a grant amount for each Task (excluding Tasks 01 and 02)
	Identify if a Tapered Local Match approach will be used, which allows grantees to vary the required local match ratio over the life of the grant contract. Grantee agrees to satisfy the total local match amount by the contract expiration date.
	Identify the estimated indirect cost rate if indirect costs will be reimbursed. If FY 2023-24 indirect cost rates are not available, the rate will be an estimate based on the currently approved rate.
	Include a best estimate of the amount of time needed to complete each task
	State a realistic total cost for each task based on the work that will be completed
	Use only whole dollars in the financial information fields. No rounding up or down and no cents.
	Start the timeframe at the beginning of the grant period (November 2024)
	Extend the timeframe to the end of the grant period (June 2027)

Third Party In-Kind Valuation Plan Checklist

The Third Party In-Kind Valuation Plan is an itemized breakdown by task and serves as documentation for the goods and/or services to be donated. The Third Party In-Kind Valuation Plan must be consistent with the information provided on the Cost and Schedule and Grant Application Cover Sheet. This document is required upon grant award as a condition of grant acceptance. Refer to Grant Application Guide, Chapter 6.5 for a Third-Party In-Kind description and examples.

Third-Party In-Kind Valuation Plan Checklist	
(✓)	**Ensure these items are completed prior to submitting to Caltrans**
	Use the Fiscal Year 2024-25 template provided (do not alter the template).
	Name the third party in-kind local match provider; this cannot be the Grantee
	Describe how the third party in-kind local match will be tracked and documented for accounting purposes.
	Describe the fair market value of third party in-kind contributions and how the values were determined.
	Include an itemized breakdown by task, consistent with the Cost and Schedule.
	Ensure the in-kind local match amount is consistent with the Grant Application Cover Sheet and Cost and Schedule.

Local Resolution Checklist

A Local Resolution is NOT required at the grant application stage; however, it is required upon award as a condition of grant acceptance.

Local Resolution Checklist	
(✓)	Ensure these items are completed prior to submitting to Caltrans
	State the title of the project (1)
	State the job title of the person authorized to enter into a contract with Caltrans on behalf of the applicant (2)
	NOT be more than a year old, or it will not be accepted (3)
	Signed by the grant applicant's governing board (4)

Sample Local Resolution

CITY OF CAN DO RESOLUTION
NO. 009-2012

RESOLUTION OF THE BOARD OF DIRECTORS OF THE CITY OF CAN DO AUTHORIZING THE EXECUTIVE DIRECTOR TO EXECUTE AGREEMENTS WITH THE

1

CALIFORNIA DEPARTMENT OF TRANSPORTATION FOR THE CITY OF CAN DO COMPLETE STREET PLAN

WHEREAS, the Board of Directors of the City of Can Do is eligible to receive Federal and/or State funding for certain transportation planning related plans, through the California Department of Transportation;

WHEREAS, a Restricted Grant Agreement is needed to be executed with the California Department of Transportation before such funds can be reimbursed through the Transportation Planning Grant Program;

WHEREAS, the City of Can Do wishes to delegate authorization to execute these agreements and any amendments thereto;

2

NOW, THEREFORE, BE IT RESOLVED by the Board of Directors of the City of Can Do, authorize the Executive Director, or designee, to execute all Restricted Grant Agreements and any amendments thereto with the California Department of Transportation.

APPROVED AND PASSED this 4th day of December 2023.

Agenda Item No: 8.e.

MEETING DATE/TIME: 9/3/2025

ITEM NO: 2025-980

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Approve the Notice of Completion for the Thickening and Dewatering Improvements Project, Specification No. 23-02, and Direct the City Clerk to File the Notice of Completion with the County Recorder.

DEPARTMENT: Water Resources

PREPARED BY: Jason Benson, Senior Civil Engineer

PRESENTER: Sean White, Water Resources Director

ATTACHMENTS:

1. WWTP Thickening and Dewatering Improvements Plans & Specs
2. Spec 23-02 Thickening and Dewatering Improvements Project Change Orders
3. Notice-of-Completion

Summary: Council will consider approving the Notice of Completion for the Thickening and Dewatering Improvements Project and authorizing the release of the 5% retention to Pacific Infrastructure.

Background: On March 15, 2023, City Council approved the plans, specifications, and estimate for the Thickening and Dewatering Improvements Project and directed staff to advertise for bids. On June 7, 2023, the Council awarded the project construction contract to Pacific Infrastructure in the amount of $2,994,000 with a 10% contingency.

The project consisted of systemic improvements at the Wastewater Treatment Plant, including the installation of a new screw press and suspended air flotation (SAF) unit to replace failing equipment. These improvements increase efficiency, reduce maintenance needs, and improve biosolid quality for beneficial reuse.

Discussion: The project was completed in accordance with the approved plans and specifications (Attachment 1). The final construction cost, including approved change orders (Attachment 2), totaled $3,151,889.84 which was below the Council approved authorization amount for the project.

The contract work was substantially completed on August 29, 2025. Final payment of the retention will be made to Pacific Infrastructure after 35 days from the date the Notice of Completion (Attachment 3) is filed with the County Recorder.

Recommended Action: Approve the Notice of Completion for the Thickening and Dewatering Improvements Project, Specification No. 23-02, and direct the City Clerk to file the Notice of Completion with the County Recorder.

BUDGET AMENDMENT REQUIRED: No

CURRENT BUDGET AMOUNT: 84027225.80100.18130: $3,151,889.84

NOTES:

1. PAVEMENT SHALL BE REPLACED PER STANDARD TRENCH BACKFILL DETAIL.
2. ASPHALT CONCRETE (AC) MUST BE SAWCUT FULL DEPTH.
3. IF DISTANCE BETWEEN EDGE OF TRENCH TO GUTTER LIP (OR EDGE OF PAVEMENT) IS 4' OR LESS, THEN REMOVE ALL AC UP TO GUTTER LIP (OR EDGE OF PAVEMENT) AND REPAVE.
4. FINAL PAVING SHALL CONSIST OF THE TRENCH WIDTH PLUS 12" ON EACH SIDE OF THE TRENCH.
5. THESE ARE MINIMUM REQUIREMENTS. IF OTHER JURISDICTIONAL (CITY, COUNTY, STATE) AGENCY REQUIREMENTS EXCEED THOSE SHOWN, THE HIGHER REQUIREMENTS SHALL BE MET.
6. RECYCLED AB IS NOT ALLOWED.

3 EXISTING BELT FILTER PRESS PIPING TO BE DEMOLISHED

4 BELT FILTER PRESS PANEL

NOTES:

1. PROVIDE TEMPORARY DEWATERING SYSTEM DURING THE DEMOLITION OF BELT FILTER PRESS AND INSTALLATION OF THE NEW SCREW PRESS.
2. DEWATREING SYSTEM SHALL BE LOCATED NORTH OF THE SLUDGE DEWATERING SYSTEM, SEE DRAWING C001.
3. DEWATERING SYSTEM SHALL BE DESIGNED FOR 25 GPM CONTINUOUS FLOW AT 2% DIGESTED SLUDGE. A MAXIMUM OF THREE DAYS STOARGE IS AVAILABLE.
4. THE CITY WILL BE RESPONSIBLE FOR DISPOSAL OF DEWATERED SOLIDS. DEWATERED SOLIDS SHALL BE LOADED INTO A TRUCK PROVIDED BY THE CITY. THE MINIMUM PERCENT DEWATERED SOLIDS SHALL BE 16 PERCENT. THE CITY WILL DISPOSE OF DEWATERED SOLIDS LESS THAN 16 PERCENT BUT THE CONTRACTOR SHALL PAY FOR THE DIFFERENCE IN COST IF THE DEWTAERED SOLIDS WERE AT 16 PERCENT.
5. PROVIDE A PROJECT PLAN THAT INCLUDES A BIOSOLIDS SPILL RESPONSE AND PREVENTION PLAN, TRAFFIC PLAN AND SAFETY PLAN.
6. PROVIDE SPILL CONTAINMENT.
7. THE WATER FROM THE TEMPORARY DEWATERING SYSTEM MAY BE DISPOSED OF IN A DRAIN LOCATED IN THE BOILER ROOM.

STRUCTURAL NOTES

GENERAL

1. ALL STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH THE CIVIL, ARCHITECTURAL, MECHANICAL, ELECTRICAL, AND SHOP DRAWINGS AND THE PROJECT SPECIFICATIONS (IF ANY).
2. CONSTRUCTION SHALL MEET THE REQUIREMENTS OF THE 2022 CALIFORNIA BUILDING CODE (CBC). THE CBC SHALL GOVERN EXCEPT WHERE OTHER APPLICABLE CODES OR THESE DOCUMENTS ARE MORE RESTRICTIVE.
3. NOTHING SHOWN OR OMITTED FROM THESE DOCUMENTS SHALL RELIEVE THE CONTRACTOR FROM FULL COMPLIANCE WITH ALL APPLICABLE CODES AND ORDINANCES.
4. THE CONTRACTOR ALONE IS RESPONSIBLE FOR JOB SITE SAFETY. SITE REVIEW OF THE CONSTRUCTION BY THE ENGINEER IS TO DETERMINE CONFORMANCE WITH THE PLANS AND SPECIFICATIONS. IT DOES NOT ENCOMPASS SAFETY PROCEDURES OR OPERATIONS.
5. WITHOUT EXCLUSION OF ANY REFERENCE IN THE CONSTRUCTION DOCUMENTS TO ANY RULE OR REGULATION, THE ENGINEER IS NOT ASSUMING ANY PROVISIONS OF SUPERVISION OF CONSTRUCTION METHODS OR PROCESSES.
6. STRUCTURES HAVE BEEN DESIGNED FOR OPERATIONAL LOADS ON THE COMPLETED STRUCTURES. DURING CONSTRUCTION, BRACING OR SHORING SHALL SUPPORT STRUCTURES WHEREVER EXCESSIVE CONSTRUCTION LOADS MAY OCCUR.
7. SEE ALL OTHER PROJECT DOCUMENTS FOR REGLETS, PIPE SLEEVES, CONDUITS AND OTHER ITEMS TO BE EMBEDDED OR PASSED THROUGH THE CONCRETE.
8. PENETRATIONS THROUGH WALLS OR SLABS LESS THAN 12 INCHES IN DIAMETER MAY NOT BE SHOWN ON THE STRUCTURAL DRAWINGS. REFER TO ASSOCIATED DRAWINGS FOR LOCATIONS.
9. THE MINIMUM CLEAR DISTANCE BETWEEN PIPE AND CONDUIT PENETRATIONS SHALL BE 3 TIMES THE DIAMETER OF THE PENETRATION OR 8 INCHES, WHICHEVER IS SMALLER.
10. WRITTEN DIMENSIONS SHALL BE USED FOR CONSTRUCTION. DO NOT SCALE DRAWINGS.
11. STRUCTURAL DIMENSIONS CONTROLLED BY OR RELATED TO MECHANICAL AND/OR ELECTRICAL EQUIPMENT SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO CONSTRUCTION.
12. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES AND EMBEDMENTS NOT SHOWN ON THE DRAWINGS SHALL BE PROVIDED BY THE CONTRACTOR PRIOR TO PLACING CONCRETE.
13. DIMENSIONS INDICATED WITH AN * SHALL BE COORDINATED WITH MECHANICAL AND/OR ELECTRICAL DRAWINGS AND EQUIPMENT SUPPLIED.
14. ALL DIMENSIONS SHALL BE FIELD VERIFIED BY THE CONTRACTOR. SHOULD CONFLICTS OR INTERFERENCE OCCUR, THEY SHALL BE RESOLVED WITH THE ENGINEER AT NO ADDITIONAL COST TO THE OWNER. EXISTING FIELD CONDITIONS AT VARIANCE WITH THE PLANS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER BEFORE ANY WORK IS PERFORMED.
15. USE PERTINENT STANDARD DETAILS SHOWN, EVEN THOUGH THEY MAY NOT BE CALLED OUT AT LOCATIONS WHERE THEY APPLY.
16. CONDITIONS NOT SPECIFICALLY SHOWN OR INDICATED SHALL BE CONSTRUCTED SIMILAR TO DETAILS SHOWN FOR THE RESPECTIVE MATERIALS OR CONDITIONS.

DEFERRED SUBMITTALS

1. THE FOLLOWING PORTIONS OF THE PROJECT ARE DEFERRED SUBMITTAL ITEMS. DEFERRED SUBMITTALS LISTED BELOW ARE THE RESPONSIBILITY OF THE CONTRACTOR. DEFERRED SUBMITTAL ITEMS HAVE NOT BEEN DESIGNED BY THE ENGINEER OF RECORD. REFER TO CONTRACT DOCUMENTS FOR ADDITIONAL INFORMATION.
   a) FRP GRATING PLATFORM SYSTEMS
   b) MECHANICAL EQUIPMENT STANCHIONS/RAILS
   c) SHIPPING CONTAINER
2. UNLESS OTHERWISE NOTED, DEFERRED SUBMITTAL ITEMS SHALL BE STAMPED AND SIGNED BY A PROFESSIONAL CIVIL OR STRUCTURAL ENGINEER REGISTERED IN THE STATE OF CALIFORNIA.
3. DEFERRED SUBMITTAL ITEMS SHALL BE SUBMITTED TO THE OWNER FOR APPROVAL DURING THE CONSTRUCTION PHASE OF THE PROJECT.
4. DEFERRED SUBMITTAL ITEMS SHALL NOT BE FABRICATED UNTIL THE ENGINEER OF RECORD HAS REVIEWED THE SUBMITTAL DOCUMENTS AND INDICATED THAT THEY HAVE BEEN REVIEWED AND THAT THEY HAVE BEEN FOUND TO BE IN GENERAL CONFORMANCE WITH THE CONTRACT DOCUMENTS.
5. DEFERRED SUBMITTAL ITEMS SHALL NOT BE FABRICATED UNTIL THEIR DESIGN AND SUBMITTAL DOCUMENTS HAVE BEEN FAVORABLY REVIEWED BY THE OWNER.

DESIGN LOADS

1. LIVE LOADS:

USE OR OCCUPANCY	UNIFORM LOAD (psf)	CONCENTRATED LOAD (lbs)
EQUIPMENT FLOOR AREAS	100	300
EQUIPMENT ROOM FLOORS	250	-
CATWALKS FOR MAINTENANCE ACCESS	100	-

2. WIND:

BASIC WIND SPEED V_{ult} (3-SECOND GUST):	99 MPH
RISK CATEGORY:	III
WIND EXPOSURE CATEGORY:	C

3. SEISMIC:

SEISMIC IMPORTANCE FACTOR (I_E)	1.0
RISK CATEGORY:	III
MAPPED SPECTRAL RESPONSE ACCELERATIONS:	S_S = 1.865g, S_1 = 0.712g
SITE CLASS	D
SPECTRAL RESPONSE COEFFICIENTS:	S_{DS} = 1.492g, S_{D1} = 0.807g
SEISMIC DESIGN CATEGORY:	E
DESIGN BASE SHEAR:	V = 0.47 W
SEISMIC RESPONSE COEFFICIENT:	C_S = 0.47
RESPONSE MODIFICATION FACTOR:	R = 2.5
ANALYSIS PROCEDURE USED:	ASCE 7, CHAPTER 13

4. SNOW:

GROUND SNOW LOAD (P_g):	16 PSF
FLAT-ROOF SNOW LOAD (P_f):	15 PSF
SNOW EXPOSURE FACTOR (C_e):	0.9
SNOW LOAD IMPORTANCE FACTOR (I_s):	1.1
THERMAL FACTOR (C_t):	1.2

SOIL PARAMETERS

1. ALLOWABLE SOIL BEARING CAPACITY:

FOUNDATION TYPE	ALLOWABLE BEARING CAPACITY (1) FOR DL + LL
MAT FOUNDATION	1,000 psf

(1) ALLOWABLE BEARING VALUES MAY BE INCREASED BY 1/3 FOR LOAD CASES INCLUDING WIND AND/OR SEISMIC.
(2) PRESUMPTIVE LOAD BEARING VALUES, CBC TABLE 1806.2; USCS "CL".

2. LATERAL EARTH PRESSURES:

SOIL CONDITION	AT REST (1) (pcf)		ACTIVE (1) (pcf)		PASSIVE (1) (pcf)	
	w/o GW (2)	w/ GW (2)	w/o GW (2)	w/ GW (2)	w/o GW (2)	w/ GW (2)
CLASS 2 AGG. BASE	55	93	35	83	300	210
USCS "CL" MATERIAL	100	145	-	-	100	70

(1) EQUIVALENT FLUID DENSITY
(2) GROUNDWATER (GW) TABLE AT GRADE.

3. COEFFICIENT OF FRICTION:

   A COEFFICIENT OF SLIDING FRICTION OF 0.25 MAY BE ADDED TO PASSIVE RESISTANCE.

SPECIAL INSPECTION

1. SPECIAL INSPECTION SHALL BE CONDUCTED IN ACCORDANCE WITH THE REQUIREMENTS SET FORTH IN CHAPTER 17 OF THE CBC. UNLESS OTHERWISE NOTED IN THE PROJECT SPECIFICATIONS, SPECIAL INSPECTION SHALL BE PROVIDED BY AND PAID FOR BY THE DISTRICT. THE FOLLOWING ITEMS, AS A MINIMUM, SHALL RECEIVE SPECIAL INSPECTION:

ITEM	CONCRETE INSPECTIONS AND VERIFICATION	FREQUENCY	
		CONTINUOUS	PERIODIC
1.	INSPECTION OF REINFORCING STEEL, INCLUDING PRESTRESSING TENDONS, AND PLACEMENT.		X
2.	INSPECTION OF REINFORCING STEEL WELDING IN ACCORDANCE WITH TABLE 1705.3, ITEM 2.	X	
3.	INSPECTION OF ANCHORS CAST IN CONCRETE WHERE ALLOWABLE LOADS HAVE BEEN INCREASED OR WHERE STRENGTH DESIGN IS USED.		X
4.	INSPECTION OF ANCHORS POST-INSTALLED IN HARDENED CONCRETE MEMBERS.	X	
5.	VERIFYING USE OF REQUIRED DESIGN MIX.		X
6.	AT THE TIME FRESH CONCRETE IS SAMPLED TO FABRICATE SPECIMENS FOR STRENGTH TESTS, PERFORM SLUMP AND AIR CONTENT TESTS, AND DETERMINE THE TEMPERATURE OF THE CONCRETE.	X	
7.	INSPECTION OF CONCRETE AND SHOTCRETE PLACEMENT FOR PROPER APPLICATION TECHNIQUES.	X	
8.	INSPECTION FOR MAINTENANCE OF SPECIFIED CURING TEMPERATURE AND TECHNIQUES.		X
9.	INSPECT FORMWORK FOR SHAPE, LOCATION AND DIMENSIONS OF THE CONCRETE MEMBER BEING FORMED.		X
	SPECIAL PROVISIONS FOR SEISMIC RESISTANCE		
10.	TEST ASTM A 615 REINFORCING STEEL THAT IS TO BE WELDED, CHEMICAL TESTS SHALL BE PERFORMED TO DETERMINE WELDABILITY IN ACCORDANCE WITH SECTION 26.6.4.1 OF ACI 318.		X

ITEM	FOUNDATION INSPECTIONS AND VERIFICATION	FREQUENCY	
		CONTINUOUS	PERIODIC
	SOILS		
1.	VERIFY SUBGRADE MATERIALS BELOW THE FOOTING FOR DESIGN BEARING CAPACITY.		X
2.	VERIFY DEPTH OF EXCAVATION AND TYPE OF SUBGRADE MATERIALS REACHED.		X
3.	PERFORM CLASSIFICATION AND COMPACTION TESTING OF CONTROLLED BACKFILL MATERIALS.		X
4.	VERIFY MATERIALS USED, LAYERED THICKNESSES AND COMPACTION OF BACK FILLS.	X	
5.	VERIFY THE SUBGRADE AND SITE PREPARATIONS FOR CONTROLLED FILL.		X

ITEM	INSPECTIONS AND VERIFICATION FOR SEISMIC RESISTANCE IN OTHER BUILDING SYSTEMS	FREQUENCY	
		CONTINUOUS	PERIODIC
	MECHANICAL & ELECTRICAL COMPONENTS		
1.	PIPING SYSTEMS INTENDED TO CARRY FLAMMABLE, COMBUSTIBLE OR HIGHLY TOXIC CONTENTS AND THEIR ASSOCIATED MECHANICAL UNITS IN STRUCTURES ASSIGNED TO SEISMIC DESIGN CATEGORY C, D, E OR F.		X

NOTATION:

"X" DENOTES EITHER CONTINUOUS OR PERIODIC INSPECTIONS.
"---" DENOTES AN ACTIVITY THAT IS EITHER A ONE TIME ACTIVITY OR ONE WHOSE FREQUENCY IS DEFINED IN SOME OTHER MANNER

DEFINITIONS:
CONTINUOUS - SPECIAL INSPECTION BY THE SPECIAL INSPECTOR WHO IS PRESENT WHEN AND WHERE THE WORK TO BE INSPECTED IS BEING PERFORMED (CBC, SECTION 202)

PERIODIC - SPECIAL INSPECTION BY THE SPECIAL INSPECTOR WHO IS INTERMITTENTLY PRESENT WHERE THE WORK TO BE INSPECTED IS BEING PERFORMED (CBC, SECTION 202)

SPECIAL INSPECTOR - A QUALIFIED PERSON EMPLOYED OR RETAINED BY THE OWNER AND APPROVED BY THE AUTHORITY HAVING JURISDICTION AS HAVING THE COMPETENCE NECESSARY TO INSPECT A PARTICULAR TYPE OF CONSTRUCTION REQUIRING SPECIAL INSPECTION.

CONDUITS AND PIPES EMBEDDED IN CONCRETE

1. CONDUIT, PIPES, AND SLEEVES OF ANY MATERIAL NOT HARMFUL TO CONCRETE AND WITHIN LIMITATIONS OF THE PROJECT DRAWINGS AND SPECIFICATIONS, AND ACI 318 MAY BE PERMITTED TO BE EMBEDDED IN CONCRETE SUBJECT TO PRIOR APPROVAL BY THE ENGINEER OF RECORD, PROVIDED THEY ARE NOT CONSIDERED, BY THE ENGINEER OF RECORD, TO DISPLACE STRUCTURAL CONCRETE, EXCEPT AS PROVIDED HEREIN.
2. CONDUITS AND PIPES OF ALUMINUM SHALL NOT BE EMBEDDED IN STRUCTURAL CONCRETE.
3. CONDUITS AND PIPES, WITH THEIR FITTINGS, EMBEDDED WITHIN A COLUMN SHALL NOT DISPLACE MORE THAN 4-PERCENT OF THE AREA OF THE CROSS SECTION ON WHICH THE STRENGTH IS CALCULATED OR WHICH IS REQUIRED FOR FIRE PROTECTION. THE ENGINEER OF RECORD SHALL DETERMINE IF THE STRENGTH OF THE CONSTRUCTION HAS BEEN SIGNIFICANTLY IMPAIRED.
4. CONDUITS AND PIPES EMBEDDED WITHIN A SLAB, WALL, OR BEAM SHALL SATISFY THE FOLLOWING:
   a) THEY SHALL NOT BE LARGER IN OUTSIDE DIAMETER THAN 1/3 THE OVERALL THICKNESS OF SLAB, WALL, OR BEAM IN WHICH THEY ARE EMBEDDED.
   b) MINIMUM CENTER-TO-CENTER SPACING BETWEEN CONDUIT AND/OR PIPING RUNS SHALL BE 3 TIMES OUTSIDE DIAMETER OR WIDTH.
   c) THEY SHALL BE LOCATED IN SUCH A MANNER AS TO MAINTAIN A MINIMUM OF 1-INCH CLEAR SPACE BETWEEN THE EMBEDDED ITEM AND PRIMARY REINFORCEMENT.
   d) THEY SHALL NOT SIGNIFICANTLY IMPAIR THE STRENGTH OF THE CONSTRUCTION. THE ENGINEER OF RECORD SHALL DETERMINE IF THE STRENGTH OF THE CONSTRUCTION HAS BEEN SIGNIFICANTLY IMPAIRED.
5. NO LIQUIDS, GAS, OR VAPOR, EXCEPT WATER NOT EXCEEDING 90 DEGREES FAHRENHEIT NOR 50 PSI, SHALL BE PLACED IN THE PIPES UNTIL THE CONCRETE HAS ATTAINED ITS DESIGN STRENGTH.
6. IN SOLID SLABS, CONDUITS AND/OR PIPING SHALL BE PLACED BETWEEN THE TOP AND BOTTOM REINFORCEMENT AT THE CENTERLINE OF THE SLAB. AT A MINIMUM, THEY SHALL BE LOCATED IN SUCH A MANNER AS TO MAINTAIN A MINIMUM OF 1-INCH CLEAR SPACE BETWEEN THE EMBEDDED ITEM AND PRIMARY REINFORCEMENT.
7. CONCRETE COVER FOR PIPES, CONDUITS, AND FITTINGS SHALL NOT BE LESS THAN 2-INCHES FOR CONCRETE EXPOSED TO EARTH, CONTAINED LIQUIDS, OR WEATHER, NOR LESS THAN 1-INCH FOR CONCRETE NOT EXPOSED TO CONTAINED LIQUIDS, WEATHER OR IN CONTACT WITH GROUND.
8. ADDITIONAL REINFORCEMENT WITH AN AREA NOT LESS THAN 0.002 TIMES THE AREA OF CONCRETE SECTION SHALL BE PROVIDED NORMAL TO THE CONDUIT AND/OR PIPING.
9. CONDUITS AND/OR PIPING SHALL BE SO FABRICATED AND INSTALLED THAT CUTTING, BENDING, OR DISPLACEMENT OF PRIMARY REINFORCEMENT FROM ITS PROPER LOCATION WILL NOT BE REQUIRED.
10. PIPES PASSING THROUGH WALLS OF A LIQUID - CONTAINING STRUCTURE SHALL INCLUDE AN INTEGRAL WATERSTOP.

SITE WORK

1. A GEOTECHNICAL REPORT WAS NOT AVAILABLE FOR THIS PROJECT. SOIL DESIGN PARAMETERS ARE BASED ON VALUES PRESENTED IN CHAPTER 18 OF THE CBC FOR A CLASS 3 (3, 4, OR 5) MATERIAL.
2. EXCAVATION FOR PADS AS SHOWN ON THE DRAWINGS:
   THE BOTTOMS OF ALL EXCAVATIONS SHALL BE LEVEL, TAMPED FIRM, CLEAN AND FREE FROM ALL DEBRIS OR FOREIGN MATTER.
3. OVER-EXCAVATION SHALL EXTEND LATERALLY BEYOND THE OUTSIDE EDGE OF FOOTINGS BY A MINIMUM OF 1/2 THE DEPTH OF OVER-EXCAVATION BELOW THE FOOTING OR 12-INCHES.
4. WHERE PRACTICABLE, SIDES OF FOOTINGS SHALL BE CUT NEAT AND CONCRETE POURED DIRECTLY AGAINST THE EXCAVATION. IF FORMING IS REQUIRED, THE TRENCHES SHALL BE EXCAVATED WIDE ENOUGH TO PERMIT THE ERECTION AND REMOVAL OF FORMS.
5. THE BOTTOM OF ALL EXCAVATIONS SHALL BE SCARIFIED TO A DEPTH OF 8 INCHES, MOISTURE CONDITIONED TO WITHIN 5 PERCENT (±1 PERCENT) OVER THE OPTIMUM MOISTURE CONTENT, AND COMPACTED TO A LEAST 89 PERCENT (±1 PERCENT) RELATIVE COMPACTION.
6. CLASS 2 AGGREGATE BASEROCK SHALL CONSIST OF MATERIAL FREE FROM DEBRIS AND ORGANIC OR OTHER DELETERIOUS MATERIALS. BACKFILL MATERIAL SHALL BE PLACED IN 8-INCH LAYERS, LEVELED, RAMMED AND TAMPED IN PLACE. COMPACTION OF ALL LAYERS SHALL BE A MINIMUM OF 95 PERCENT MAXIMUM DRY DENSITY IN ACCORDANCE WITH ASTM D1557.

CONCRETE

1. REINFORCED CONCRETE SHALL CONFORM TO ACI 318.
2. PORTLAND CEMENT SHALL CONFORM TO ASTM C150 TYPE II. ONE BRAND OF CEMENT SHALL BE USED THROUGHOUT THE WORK.
3. USE OF UP TO 25% POZZOLAN (FLY, ASH, CLASS F) CONTENT OF TOTAL CEMENTITIOUS MATERIAL IS PERMITTED.
4. USE OF GRANULATED GROUND BLAST FURACE SLAG (GGBFS) IN THE CONCRETE IS NOT PERMISSIBLE.
5. ALL AGGREGATES SHALL CONFORM TO ASTM C33. THE MAXIMUM SIZE AGGREGATE SHALL BE 1 INCH. USE OF RECYCLED CONCRETE, AGGREGATE OR OTHER RECYCLABLE MATERIALS IS NOT PERMISSIBLE.
6. CONCRETE COMPRESSIVE STRENGTH SHALL MEET THE MINIMUM REQUIREMENTS LISTED BELOW.

LOCATION	MIN 28 DAY STRENGTH (psi)
STRUCTURAL CONCRETE	4,000
CONCRETE FILL	2,500

7. ADDITIONAL BENEFITS OF INCREASED COHESION, IMPROVED COMPACTION, REDUCED SCALING AND ENHANCED LONG TERM QUALITY AND DURABILITY, ALL CONCRETE SHALL HAVE AIR CONTENT (ENTRAPPED + ENTRAINED) OF 5.0 - 7.0 PERCENT.
8. CONSTRUCTION JOINTS SHALL NOT BE PLACED AT LOCATIONS OTHER THAN THOSE SHOWN ON THE DRAWINGS WITHOUT THE PRIOR APPROVAL OF THE ENGINEER OF RECORD.
9. ALL EXPOSED CORNERS OF CONCRETE SHALL HAVE 3/4" MINIMUM CHAMFER, UNLESS NOTED OTHERWISE.

CONCRETE FINISHING, CURING AND PATCHING

1. AS SOON AS CONCRETE IN SLABS HAS SET SUFFICIENTLY TO BE WORKABLE, IT SHALL BE HAND FLOATED WITH A WOOD FLOAT. FINAL TROWELING OF THE INTERIOR SLABS AND WALL PANELS SHALL BE DONE WITH A STEEL TROWEL EXCEPT WHERE DRAWINGS SPECIFICALLY CALL FOR ANOTHER TYPE OF FINISH. ALL EXTERIOR SLABS, INCLUDING SIDEWALKS, SHALL BE GIVEN A LIGHT BROOM NON-SLIP FINISH UNLESS OTHERWISE NOTED ON THE DRAWINGS.
2. FINISHED SURFACES OF ALL SLABS AND PANELS SHALL BE TRUE AND FLAT IN ACCORDANCE WITH ELEVATIONS AND SLOPES SHOWN ON THE DRAWINGS. THE MAXIMUM VARIATION ALLOWED FROM THE SPECIFIED SLOPES AND SURFACES SHALL BE 1/8 INCH WITH NOT MORE THAN 1/8-INCH VARIATION IN ANY 10-FOOT LENGTH.
3. CONCRETE SLABS AND PANELS SHALL BE CURED BY MEANS OF AN APPROVED CURING COMPOUND APPLIED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS.
4. EDGE FORMS 8 INCHES OR LESS IN HEIGHT AT SLABS AND PANELS SHALL REMAIN IN PLACE 24 HOURS AFTER PLACEMENT. AT CAST-IN-PLACE WALLS, BEAMS AND COLUMNS, FORMS SHALL NOT BE REMOVED UNTIL CONCRETE HAS SET ADEQUATELY TO PREVENT DAMAGE DURING AND AFTER REMOVAL.
5. IMMEDIATELY AFTER FORM REMOVAL, FORM TIES SHALL BE REMOVED FROM EXPOSED SURFACES AND HOLES AND OTHER VOIDS SHALL BE POINTED FLUSH WITH MORTAR COMPOSED OF ONE PART PORTLAND CEMENT AND TWO PARTS SAND. FINS, BURRS, ETC. SHALL BE REMOVED WHILE THE CONCRETE IS STILL GREEN. VOIDS, POCKETS, AND HONEYCOMBS WHICH WOULD EITHER WEAKEN CONCRETE OR DISFIGURE EXPOSED SURFACES SHALL BE SIMILARLY PATCHED. IF, IN THE ENGINEER'S OPINION, HONEYCOMBING IS SUCH THAT THE STRENGTH OF THE STRUCTURE IS IMPAIRED, WHOLE SECTIONS OF THE WORK MAY BE REQUIRED BY THE ENGINEER TO BE REMOVED AND REPLACED AS DIRECTED, AT THE CONTRACTOR'S EXPENSE.
6. GROUT TOPPING SHALL BE TWO COMPONENT POLYMER-MODIFIED, PORTLAND CEMENT, FAST SETTING TROWEL-GRADE MORTAR WITH MIGRATING CORROSION INHIBITOR.

CONCRETE REINFORCING

1. REINFORCING STEEL SHALL CONFORM TO THE LATEST EDITION OF ASTM SPECIFICATION A706 OR A615, GRADE 60.
2. REINFORCING STEEL FABRICATION SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF CRSI MANUAL OF STANDARD PRACTICE.
3. REINFORCING SHALL HAVE THE FOLLOWING CLEAR CONCRETE COVER, UNLESS OTHERWISE NOTED ON THE DRAWINGS.

CONDITION	COVER (INCHES)
UNFORMED SURFACES IN CONTACT WITH EARTH	3
FORMED SURFACES EXPOSED TO EARTH, WATER AND/OR WEATHER	2
BOTTOM SURFACES FOR SLAB OVER WATER	2
CONCRETE SURFACES FOR DRY CONDITIONS	
- WALLS, SLABS AND JOISTS	1 1/2
- BEAMS AND COLUMNS:	
- PRIMARY REINFORCING	2
- STIRRUPS, SPIRALS AND TIES	1 1/2

4. SPLICED BARS SHALL HAVE A MINIMUM CLASS B CONTACT LAP AS SPECIFIED IN THE LATEST EDITION OF ACI 315 DETAILING MANUAL AND ACI 318 UNLESS OTHERWISE NOTED ON THE DRAWINGS. WHERE SHOWN ON THE DRAWINGS, ld = DEVELOPMENT LENGTH AS DEFINED IN THE STANDARD DETAILS OF THESE DRAWINGS. HOOKS OF REINFORCING STEEL SHALL COMPLY WITH ACI 318.
5. WRITTEN SPACING AND LOCATION OF REINFORCING SHALL TAKE PRECEDENCE OVER DEPICTED SPACING AND LOCATION.
6. UNLESS OTHERWISE NOTED ON THE DRAWINGS, REINFORCING BARS SHOWN TERMINATING WITH A HOOK SHALL BE FABRICATED WITH A STANDARD HOOK AS DEFINED WITHIN ACI 318. WHERE SECTION THICKNESS DOES NOT ALLOW FOR FULL HOOK EXTENSION, TILT HOOK UNTIL HOOK FITS. ALTERNATIVELY CONTRACTOR MAY USE 180° HOOK OR TWO SMALLER HOOKED BARS OF EQUIVALENT AREA OF STEEL.
7. IN CASES WHERE REINFORCING BARS CANNOT BE EXTENDED AS FAR AS REQUIRED DUE TO THE LIMITED EXTENT OF THE ADJACENT CONCRETE STRUCTURE, THE BARS SHALL EXTEND AS FAR AS POSSIBLE AND BE TERMINATED WITH A STANDARD HOOK.
8. AT FOOTING CORNERS AND INTERSECTIONS, EXTEND BARS AROUND CORNERS AND LAP A MINIMUM OF 40 BAR DIAMETERS.

CONCRETE ANCHORS

1. CAST-IN ANCHOR RODS/BOLTS SHALL BE STAINLESS STEEL. TYPE 304 FOR INTERIOR DRY CONDITIONS AND TYPE 316 FOR INTERIOR WET, EXTERIOR OR SUBMERGED CONDITIONS.
2. POST-INSTALLED CONCRETE ANCHORS, INCLUDING ADHESIVE AND EXPANSION ANCHORS, SHALL CONFORM TO MANUFACTURER'S RECOMMENDATIONS AND THE APPROPRIATE EVALUATION REPORT. ANCHORS WITHOUT A CURRENT ICC-ES ESR, IAPMO-UES ER OR EQUAL SHALL NOT BE USED.
3. UNLESS OTHERWISE INDICATED, ALL ADHESIVE AND EXPANSION ANCHORS FOR INSTALLATION IN CONCRETE SHALL HAVE SATISFIED THE REQUIREMENTS OF THE SIMULATED SEISMIC TESTS OF ACI 355.4 OR ACI 355.2, NO SUBSTITUTION SHALL BE ALLOWED.
4. CONTRACTOR SHALL LOCATE EXISTING REBAR USING NON-DESTRUCTIVE METHODS PRIOR TO DRILLING HOLES FOR POST-INSTALLED ANCHORS. ADJUST SPACING OF ANCHORS TO MISS EXISTING REINFORCING. TOTAL NUMBER OF ANCHORS PROVIDED SHALL BE EQUAL TO THAT SHOWN ON THE DRAWINGS.
5. ADHESIVE ANCHORS SHALL CONSIST OF A TWO-COMPONENT RESIN ADHESIVE. THE PACKAGES CONTAINING EACH COMPONENT SHALL BE ATTACHED TO A DISPENSING MANIFOLD. AN AUGER STYLE NOZZLE SHALL BE ATTACHED FOR PROPER MIXING OF THE ADHESIVE COMPONENTS. WHERE THREADED RODS ARE REQUIRED, RODS SHALL CONFORM TO ASTM A193 GRADE B7. WHERE STAINLESS STEEL IS CALLED FOR ON THE DRAWINGS, STAINLESS STEEL SHALL BE TYPE 316.
6. WHERE THE DESIGN OF THE ANCHORAGE REQUIRES ADDITIONAL SUPPLEMENTAL CONCRETE REINFORCING STEEL TO PROTECT AGAINST CONCRETE FAILURE MODES, THE DESIGN OF THE ADDITIONAL SUPPLEMENTAL REINFORCING STEEL SHALL BE INCLUDED AS PART OF THE SUBMITTED ANCHORAGE CALCULATIONS. THE ADDITIONAL SUPPLEMENTAL CONCRETE REINFORCING STEEL SHALL BE TREATED AS PART OF THE REQUIRED BUILDING AND/OR EQUIPMENT ANCHORAGE AND SHALL BE PROVIDED AND INSTALLED AT NO ADDITIONAL COST TO THE DISTRICT.

CONCRETE JOINTS

1. REINFORCING STEEL SHOWN IS FOR CLARITY ONLY. SEE PLANS AND SECTIONS FOR REINFORCING SIZES, SPACING, LOCATIONS AND DETAILS.
2. ALL SURFACES SHALL BE PREPARED IN ACCORDANCE WITH SPECIFICATION SECTION 03150.
3. EXCEPT WHERE OTHERWISE NOTED ON THE DETAILS JUNCTION BARS (JB) SHALL BE THE SAME SIZE AS THE LARGER OF WALL OR SLAB REINFORCING.
4. ALL LAP SPLICES SHALL BE CLASS B TENSION CONTACT LAP.
5. UNLESS OTHERWISE NOTED, SEALANT SHALL BE PROVIDED IN JOINTS WHERE SHOWN ON THE DRAWINGS AND WHERE INDICATED BY THE FOLLOWING:
   a) CONTROL JOINTS FOR WALLS AND SLABS IN LIQUID CONTAINMENT STRUCTURES SHALL HAVE SEALANT APPLIED TO THE LIQUID SIDE(S) OF THE JOINT.
   b) EXPANSION JOINTS SHALL HAVE SEALANT APPLIED TO BOTH SIDES OF THE JOINT, EXCEPT FOR THE SOIL SIDE OF A JOINT FOR A BASE SLAB.
   c) CONSTRUCTION JOINTS WILL NOT REQUIRE SEALANT, UNLESS OTHERWISE NOTED ON THE DRAWINGS.
6. UNLESS OTHERWISE NOTED, WATERSTOPS SHALL BE PROVIDED IN JOINTS WHERE SHOWN ON THE DRAWINGS AND WHERE INDICATED BY THE FOLLOWING:
   a) IN ALL JOINTS IN WALLS AND SLABS OF LIQUID CONTAINMENT STRUCTURES TO PREVENT EXFILTRATION OF LIQUID INTO SOIL OR DRY AREAS OF THE STRUCTURE.
   b) IN ALL BELOW-GRADE JOINTS IN WALLS AND SLABS TO PREVENT INFILTRATION OF GROUNDWATER INTO STRUCTURE.

FRP MOLDED GRATING

1. GRATING AND SUPPORTS SHALL BE YELLOW IN COLOR, MANUFACTURED WITH POLYESTER FIRE RETARDANT RESIN WITH A FLAME SPREAD RATING OF 25 OR LESS WHEN TESTED IN ACCORDANCE WITH THE ASTM E-84 TUNNEL TEST. THICKNESS SHALL BE AS INDICATED ON THE DRAWINGS.
2. GRATING SHALL BE MOLDED, ONE-PIECE CONSTRUCTION WITH A 1 1/2" SQUARE MESH PATTERN AND A MENISCUS SURFACE.
3. GLASS CONTENT SHALL BE A MINIMUM OF 25 PERCENT AND A MAXIMUM OF 35 PERCENT BY WEIGHT AS DETERMINED BY ASTM D2584. GRATING PANELS SHALL HAVE NO EXPOSED DRY GLASS OR VOIDS CONTAINING DRY GLASS.
4. FRP GRATING SHALL BE CAPABLE OF SUPPORTING A UNIFORM LIVE LOAD OF 100 PSF WHILE MAINTAINING A DEFLECTION OF LESS THAN 1/4-INCH OR L/200 WHICHEVER IS SMALLER. GRATING SHALL BE CAPABLE OF SUPPORTING A CONCENTRATED LIVE LOAD OF 300 LB/FT TRANSVERSE TO THE SPAN. A FACTOR OF SAFETY OF 5.0 SHALL BE APPLIED TO ULTIMATE CAPACITIES TO DETERMINE ALLOWABLE SPANS.
5. CONTRACTOR SHALL BE REQUIRED TO FURNISH CERTIFIED LOAD/DEFLECTION STATISTICAL QUALITY CONTROL DATA AND LOAD/DEFLECTION INFORMATION FOR THE SUPPLIED GRATING.
6. ALL GRATING WHICH REQUIRES CUTTING DURING INSTALLATION SHALL HAVE THE AFFECTED SURFACES SEALED WITH CATALYZED RESIN SEALANT OF EQUAL OR SUPERIOR CORROSION RESISTANCE TO THE GRATING.
7. FASTENERS, ANCHORS, BOLTS, NUTS AND WASHERS FOR GRATING AND SUPPORTS SHALL BE TYPE 304 OR 316 STAINLESS STEEL. ALL FRP GRATING SHALL BE SECURELY FASTENED TO SUPPORTS WITH STAINLESS STEEL GRATING CLIPS AND STAINLESS STEEL ANCHORS, UNLESS OTHERWISE NOTED.
8. GRATING PANEL LAYOUT SHALL PROVIDE FOR THE REMOVAL OF GRATING AROUND PIPE AND OTHER GRATING PENETRATIONS. MULTIPLE GRATING SECTIONS SHALL BE PROVIDED SUCH THAT NO ONE SECTION IS GREATER THAN 75 POUNDS IN WEIGHT.

STRUCTURAL AND MISCELLANEOUS STEEL

1. STRUCTURAL SHAPES, PLATES AND BARS SHALL CONFORM TO ASTM A36, UNLESS OTHERWISE NOTED.
2. STRUCTURAL STEEL TUBES SHALL CONFORM TO ASTM A500, GRADE B.
3. STRUCTURAL STEEL PIPE SHALL CONFORM TO ASTM A53, TYPE S, GRADE B.
4. MACHINE BOLTS (MB) SHALL CONFORM TO ASTM A307.
5. NUTS SHALL BE HEAVY HEX IN ACCORDANCE WITH ANSI B8.2.1.1.
6. ALL STRUCTURAL STEEL SHALL BE FABRICATED, ERECTED AND CONNECTED IN COMPLIANCE WITH THE LATEST AISC MANUAL.
7. CONNECTIONS FOR STRUCTURAL STEEL SHALL CONFORM TO ASTM A325, SC, CLASS A. UNLESS OTHERWISE NOTED, ALL BOLTS SHALL BE 3/4 INCH DIAMETER MEETING THE REQUIREMENTS OF ASTM A325. BOLTS SHALL BE TIGHTENED USING THE TURN-OF-THE-NUT METHOD. THREADED RODS AND ANCHOR BOLTS SHALL BE FURNISHED WITH FLAT WASHERS AND HEAVY HEX NUTS, UNLESS OTHERWISE NOTED ON DRAWINGS.
8. ALL WELDING SHALL BE DONE IN ACCORDANCE WITH THE LATEST EDITION OF THE STRUCTURAL WELDING CODE, AWS (D1.1). ALL WELDING SHALL BE PERFORMED BY CERTIFIED WELDERS.
9. WELDING ELECTRODES SHALL MEET THE MINIMUM REQUIREMENTS OF E70XX. FILLER METAL FOR WELDS IN MOMENT CONNECTIONS SHALL HAVE A MINIMUM CVN VALUE OF 20 FT-LB AT 0 DEGREE F.
10. ALL METAL FABRICATIONS SHALL RECEIVE A SHOP COAT OF RUST INHIBITIVE PAINT MEETING FEDERAL SPECIFICATION TT-P-86, TYPE III.
11. WHERE BUTT WELDS ARE SHOWN, MATERIAL SHALL BE GROUND TO A BEVEL AND WELD SHALL BE FULL PENETRATION.
12. ALL BOLT HOLES SHALL BE PUNCHED OR DRILLED (REAMED). BURNING OF HOLES IS NOT ACCEPTABLE.
13. SHOP DRAWINGS SHALL BE SUBMITTED FOR REVIEW BY THE ENGINEER PRIOR TO FABRICATION.
14. SHOP PAINTING AND FIELD PAINTING, IF REQUIRED, SHALL BE DONE IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS. STRUCTURAL STEEL SHALL BE SHOP PRIMED UNLESS OTHERWISE NOTED.

STRUCTURAL STAINLESS STEEL

1. ALL FRAMING SUPPORT SYSTEMS FOR PIPE AND VALVE ASSEMBLIES AND APPURTENANCES SHALL BE FABRICATED OF TYPE 316 STAINLESS STEEL.
2. STAIINLESS STEEL PLATES, SHEETS, AND STRUCTURAL SHAPES SHALL CONFORM TO ASTM A167, TYPE 316 (TYPE 316L FOR WELDING) STAINLESS STEEL AND SHALL NOT BE GALVANIZED.
3. STAINLESS STEEL BOLTS, NUTS, AND WASHERS SHALL CONFORM TO ASTM F593 AND ASTM F594, TYPE 316.
4. ALL STRUCTURAL STAINLESS STEEL SHALL BE FABRICATED, ERECTED AND CONNECTED IN COMPLIANCE WITH THE LATEST AISC MANUAL.
5. ALL WELDING SHALL BE DONE IN ACCORDANCE WITH THE LATEST EDITIONS OF THE STRUCTURAL WELDING CODE, AWS (D1.1). ALL WELDING SHALL BE PERFORMED BY CERTIFIED WELDERS. QUALIFICATIONS AND CERTIFICATIONS OF WELDING INSPECTORS SHALL BE PER ANSI/AWS QC1.
6. ALL WORK SHALL BE FORMED TRUE TO DETAIL, WITH CLEAN, STRAIGHT, SHARPLY DEFINED PROFILES AND SMOOTH SURFACES OF UNIFORM COLOR AND TEXTURE AND FREE FROM DEFECTS IMPAIRING STRENGTH OR DURABILITY. HOLES SHALL BE DRILLED OR PUNCHED. EDGES SHALL BE SMOOTH AND WITHOUT BURRS. FABRICATE SUPPLEMENTARY PIECES NECESSARY TO COMPLETE EACH ITEM EVEN IF SUCH PIECES ARE NOT DEFINITIVELY SHOWN OR SPECIFIED.
7. CONNECTIONS AND ACCESSORIES SHALL BE OF SUFFICIENT STRENGTH TO SAFELY WITHSTAND THE STRESSES AND STRAINS TO WHICH THEY WILL BE SUBJECTED. EXPOSED JOINTS SHALL BE CLOSE-FITTING AND JOINTED WHERE LEAST CONSPICUOUS. THREADED CONNECTIONS SHALL HAVE THE THREADS CONCEALED WHERE PRACTICAL. WELDED CONNECTIONS SHALL HAVE CONTINUOUS WELDS OR INTERMITTENT WELDS AS SPECIFIED OR SHOWN. THE FACE OF WELDS SHALL BE DRESSED FLUSH AND SMOOTH. PROVIDE HOLES FOR TEMPORARY FIELD CONNECTIONS AND FOR ATTACHMENT OF THE WORK OF OTHER TRADES.
8. ALL ANCHORING AND CONNECTING HARDWARE SHALL BE TYPE 316 STAINLESS STEEL.

GENERAL NOTES

1. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH ADOPTED BUILDING CODES (OR CURRENT WHERE NONE HAVE BEEN ADOPTED):

   2019 CALIFORNIA BUILDING CODE (BASED ON THE 2018 INTERNATIONAL BUILDING CODE)

   2019 CALIFORNIA RESIDENTIAL CODE (BASED ON THE 2018 INTERNATIONAL RESIDENTIAL CODE)

   2019 CALIFORNIA ELECTRICAL CODE (BASED ON THE 2018 INTERNATIONAL ELECTRICAL CODE)

   2019 CALIFORNIA MECHANICAL CODE (BASED ON THE 2018 UNIFORM MECHANICAL CODE)

   2019 CALIFORNIA PLUMBING CODE (BASED ON THE 2018 UNIFORM PLUMBING CODE)

   2019 CALIFORNIA FIRE CODE (BASED ON THE 2018 INTERNATIONAL FIRE CODE)

   2019 CALIFORNIA ENERGY CODE

   2019 CALIFORNIA GREEN BUILDING STANDARDS CODE

2. ALL WORK SHALL BE DONE IN A NEAT, WORKMANLIKE, FINISHED AND SAFE MANNER UNDER COMPETENT SUPERVISION.

3. ALL MATERIALS SHALL BE NEW AND OF THE BEST QUALITY, MANUFACTURED IN ACCORDANCE WITH NEMA, ANSI, U.L. OR OTHER APPLICABLE STANDARDS. THE USE OF MANUFACTURER'S NAMES, MODELS AND NUMBERS IS INTENDED TO ESTABLISH STYLE, QUALITY, APPEARANCE, USEFULNESS AND BID PRICE. PROPOSED SUBSTITUTION SHALL BE SUBMITTED IN WRITING AND REVIEWED BY THE ENGINEER PRIOR TO MATERIAL PROCUREMENT.

4. PROTECT ALL ELECTRICAL MATERIAL AND EQUIPMENT INSTALLED UNDER THIS CONTRACT AGAINST DAMAGE BY OTHER TRADES, WEATHER CONDITIONS OR ANY OTHER CAUSES. EQUIPMENT FOUND DAMAGED OR IN OTHER THAN NEW CONDITION WILL BE REJECTED AS DEFECTIVE.

5. LEAVE THE SITE CLEAN. REMOVE ALL DEBRIS, EMPTY CARTONS, TOOLS, CONDUIT, WIRE SCRAPS AND MATERIALS USED IN THE WORK DURING CONSTRUCTION. ALL COMPONENTS SHALL BE FREE OF DUST, GRIT AND FOREIGN MATERIALS BEFORE FINAL ACCEPTANCE OF WORK.

6. ALL WIRE SHALL BE COPPER UNLESS OTHERWISE NOTED.

7. ALL WIRING DEVICES AND ELECTRICAL EQUIPMENT SHALL BE HEAVY DUTY GRADE.

8. VERIFY EXACT LOCATION, MOUNTING HEIGHT AND ELECTRICAL REQUIREMENTS OF ALL EQUIPMENT PRIOR TO ROUGH-IN. PROVIDE ALL ASSOCIATED EQUIPMENT FOR PROPER OPERATION AND FINAL CONNECTIONS TO EQUIPMENT AS INDICATED IN THE PROJECT DOCUMENTS.

9. PROVIDE GROUND WIRE IN ALL RACEWAYS SIZED PER NEC ARTICLE 250.

10. INSTALL 250-LB PULL CORD IN ALL EMPTY CONDUITS INSTALLED AS PART OF THIS PROJECT.

11. ALL CEILINGS AND WALL PENETRATIONS SHALL BE CAULKED OR SEALED TO PRESERVE FIRE RATINGS AND WATERPROOF INTEGRITY. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS TO THE GOVERNING INSPECTORS FOR EACH PENETRATION, WHICH SHOW COMPLETE CONFORMANCE TO THE UL LISTING REQUIREMENTS.

12. ALL CONDUITS TO BE GALVANIZED RIGID STEEL (GRS) CONDUIT UNLESS NOTED OTHERWISE ON THE DRAWINGS.

13. THE CONTRACTOR IS TO VERIFY THE CONDITION OF EXISTING INSTALLATIONS/CONDITIONS WHICH MAY AFFECT HIS BID OR WORK. NO ALLOWANCES WILL BE MADE AFTER THE BID FOR EXISTING CONDITIONS OR FOR THE CONTRACTOR'S FAILURE TO VERIFY EXISTING. THE CONTRACTOR IS TO PROVIDE ALL MATERIAL NECESSARY FOR A COMPLETE AND FINISHED PROJECT.

14. THE CONTRACTOR SHALL COORDINATE ALL WORK WITH THE OWNER'S REPRESENTATIVE. ALL ELECTRICAL WORK REQUIRING AN OUTAGE SHALL BE COORDINATED WITH THE OWNER AND THE SERVING UTILITY. THE CONTRACTOR SHALL PROVIDE ALL NECESSARY TEMPORARY ELECTRICAL EQUIPMENT REQUIRED FOR MAINTAINING CONTINUOUS OPERATION OF EMERGENCY AND/OR FIRE ALARM SYSTEMS.

15. MATERIALS AND INSTALLATION SHALL COMPLY WITH REQUIREMENTS FOR INSTALLATION IN SEISMIC ZONE "3".

16. CONTRACTOR SHALL COORDINATE PROJECT DOCUMENTS AND BE AWARE OF THE EXTENT OF WORK REQUIRED PRIOR TO BID. THE CONTRACTOR SHALL VISIT THE SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS THAT MAY AFFECT THE WORK. FAILURE TO DO SO SHALL NOT ENTITLE THE CONTRACTOR TO ADDITIONAL MONIES.

17. CONTRACTOR SHALL NOTIFY AND COORDINATE WITH THE OWNER AND ELECTRICAL ENGINEER FOR ANY DISCREPANCIES PRIOR TO BID.

18. FEEDER/BRANCH CIRCUIT HOMERUNS ARE SHOWN TO TERMINATE AT EXISTING ELECTRICAL PANEL WHERE EXISTING EQUIPMENT IS CONNECTED. FEEDER/BRANCH CIRCUIT HOMERUNS ARE SHOWN TO BE ROUGHED-IN VIA NEW AND/OR EXISTING CONDUIT AS FEASIBLE. PRIOR TO ANY CONNECTIONS, CONTRACTOR SHALL VERIFY, ANALYZE, AND EVALUATE EXISTING ELECTRICAL EQUIPMENT FOR EACH EXISTING FEEDER, BRANCH CIRCUIT WIRE, CONDUIT, ALL EQUIPMENT IF INTENDED TO BE REUSED. FIELD VERIFY EACH EXISTING BRANCH CIRCUIT, LOCATE, IDENTIFY, AND LABEL NEW AND/OR EXISTING BRANCH CIRCUIT TO REMAIN PER N.E.C. COORDINATE WITH ENGINEER FOR ANY DISCREPANCIES.

19. CONTRACTOR SHALL CONFIRM ALL NEW ELECTRICAL EQUIPMENT AT EXISTING BUILDING IS BONDED AND GROUNDED PER N.E.C. ARTICLE 250.

20. ALL NEW CIRCUIT BREAKERS INSTALLED IN EXISTING PANELS SHALL BE COMPATIBLE AND CAPABLE OF WITHSTANDING THE AVAILABLE FAULT CURRENT. NEW CIRCUIT BREAKER SHALL MAINTAIN UL LISTING OF EXISTING ELECTRICAL EQUIPMENT.

REFER TO SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.

ENLARGED DAFT BUILDING PLAN
SCALE: 1/4=1'-0"

GENERAL NOTES

1. REFER TO DRAWING 00-E-003 THROUGH 00-E-004 FOR ELECTRICAL INSTALLATION DETAILS.
2. REFER TO DRAWING 00-E-006 FOR CONDUIT AND CABLE REQUIREMENTS.
3. FOLLOW ALL LOCKOUT/TAGOUT AND ARC FLASH SAFETY PROCEDURES.
4. AN 18-INCH BOUNDARY ALONG DAFT BASIN WALLS AND 18-INCH HIGH BY 10-FEET HORIZONTAL BOUNDARY BEYOND DAFT BASIN WALL ENVELOPES ARE CLASSIFIED AS A CLASS 1, DIVISION 2 AREAS AND SHALL CONFORM TO ALL APPLICABLE CODES.

KEY NOTES

1. INSTALL CONDUIT(S) ALONG CEILING.
2. INSTALL NEW CONDUITS FROM POLYMER SYSTEM CONTROL PANEL'S TO PLC31299.
3. INSTALL NEW CONDUITS FROM POLYMER SYSTEM CONTROL PANEL'S TO MCC.
4. CORE DRILL EXISTING BLOCK WALL FOR EACH CONDUIT. INSTALL GROUT OR APPROVED FIRESTOPPING METHOD.
5. INSTALL NEW CONDUITS FROM POLYMER SYSTEM CONTROL PANEL'S TO MCC.
6. INSTALL POWER FEEDER FOR SAF/FROTH GENERATOR SKID. NO1 IN EXISTING CONDUIT P70221A. RE-NAME WITH NEW TAG NUMBER.
7. INSTALL POWER FEEDER FOR SAF/FROTH GENERATOR SKID. NO1 IN EXISTING CONDUIT P70222A. RE-NAME WITH NEW TAG NUMBER.

DEWATERING BUILDING DEMO PLAN

SCALE: 1/4"=1'-0"

GENERAL NOTES

1. REFER TO DEMOLITION SHEETS 75-D-001 THROUGH 75-D-003 FOR ADDITIONAL REQUIREMENTS.
2. REFER TO ONE LINE DEMOLITION SHEET 75-E-110 FOR ADDITIONAL REQUIREMENTS.
3. FOLLOW ALL LOCKOUT/TAGOUT AND ARC FLASH SAFETY PROCEDURES.
4. ALL SITE CONDITIONS INCLUDING, BUT NOT LIMITED TO, EQUIPMENT, FIELD WIRING, CONDUIT AND STRUCTURES SHALL BE FIELD VERIFIED PRIOR TO WORK COMMENCING.
5. ALL AREAS AFFECTED BY DEMOLITION WORK SHALL BE PATCHED AND REPAIRED TO MATCH EXISTING CONDITIONS.
6. CONTRACTOR SHALL RETURN ALL DEMOLISHED ITEMS TO OWNER IN WORKING CONDITIONS.
7. COORDINATE WITH CITY STAFF OR THEIR REPRESENTATIVE FOR DEMOLITION OF EXISTING EQUIPMENT.
8. ALL SITE CONDITIONS INCLUDING, BUT NOT LIMITED TO, EQUIPMENT, FIELD WIRING, CONDUIT, AND STRUCTURES SHALL BE FIELD VERIFIED PRIOR TO COMMENCING WORK.

KEY NOTES

1. DISCONNECT AND REMOVE CONDUCTORS BACK TO SOURCE. BREAKOUT CHICO FROM SEAL-OFFS. DISCONNECT AND REMOVE CONDUCTORS BACK TO (E) BELT PRESS MAIN CONTROL PANEL. REMOVE SEAL-OFFS AND EXPOSED CONDUITS TO THE BELT PRESS EQUIPMENT AND LOCAL CONTROL PANEL. INSTALL COUPLING AND THREADED PLUG ON EXPOSED CONDUITS PENETRATING FLOOR.
2. EQUIPMENT TO BE REMOVED WITH BELT PRESS. REFER TO OTHER DEMOLITION NOTES ON DEMO SHEETS.
3. DISCONNECT AND SALVAGE LOCAL CONTROL PANEL.
4. DISCONNECT AND REMOVE ALL COMPONENTS FROM REAR MOUNTING PANEL. DISCONNECT AND REMOVE ALL DOOR MOUNTED DEVICES. INSTALL HOLE PLUGS SUITABLE TO MAINTAIN THE ENCLOSURE RATING.
5. BREAKOUT CHICO FROM SEAL-OFFS. DISCONNECT AND REMOVE CONDUCTORS (POWER AND SIGNALS) BACK TO SOURCE. DISCONNECT SEAL-OFF AND EXPOSED CONDUIT TO POLYMER SYSTEM CONTROL PANEL. INSTALL COUPLING AND THREADED PLUG ON EXPOSED CONDUIT PENETRATING FLOOR.
6. (E) HORIZONTAL BELT CONVEYOR MOTOR (M75040). BREAKOUT AND CHICO FROM SEAL-OFF. DISCONNECT AND REMOVE CONDUCTORS BACK TO MCC-D. REMOVE SEAL-OFF AND EXPOSED CONDUIT TO THE MOTOR. INSTALL COUPLING AND THREADED PLUG ON EXPOSED CONDUIT PENETRATING FLOOR.
7. (E) INCLINED BELT CONVEYOR MOTOR (M75050). BREAKOUT AND CHICO FROM SEAL-OFF. DISCONNECT AND REMOVE CONDUCTORS BACK TO MCC-D. REMOVE SEAL-OFF AND EXPOSED CONDUIT TO THE MOTOR. INSTALL COUPLING AND THREADED PLUG ON EXPOSED CONDUIT PENETRATING FLOOR.
8. (E) SLUDGE FEED PUMP (P75010). DISCONNECT AND REMOVE CONDUCTORS BACK TO MCC-D. REMOVE EXPOSED CONDUIT TO THE MOTOR. INSTALL COUPLING AND THREADED PLUG ON EXPOSED CONDUIT PENETRATING FLOOR.

W:\Clients\592 City of Ukiah\50-22-14 Screw Press and SAF Eng. and CM\CAD\Production\Electrical\592-50-22-14-75-E-100.dwg 7-17-23 09:44:32 AM sbarber

GENERAL NOTES

1. REFER TO DRAWING 00-E-001 FOR ELECTRICAL SYMBOLS, LEGENDS AND ABBREVIATIONS.
2. REFER TO DRAWING 00-E-002 FOR GENERAL PROJECT ELECTRICAL NOTES AND DEMO NOTES.
3. REFER TO DRAWING E-00-003/004 FOR ELECTRICAL INSTALLATION DETAILS.
4. REFER TO DRAWING 00-E-006 FOR CONDUIT AND CABLE REQUIREMENTS.
5. FOLLOW ALL LOCKOUT/TAGOUT AND ARC FLASH SAFETY PROCEDURES.
6. OBSERVE AND FOLLOW CLASS1 DIV 2 GROUP D RULES AND REGULATIONS FOR CLASSIFIED AREAS.

KEY NOTES

1. INSTALL CONDUIT(S) ALONG CEILING
2. EXTEND 2-#14, #14 GND, 1/2"LFMC FROM JUNCTION BOX TO EACH SOLENOID (V75031, V75032, V75033).
3. UTILIZE EXISTING CONDUIT UNDERGROUND TO PANEL "B". INSTALL 2#10, 1#10 GND IN EXISTING CONDUIT. EXTEND TO POLYMER SYSTEM CONTROL PANEL (LCP75020).
4. CORE DRILL EXISTING BLOCK WALL FOR EACH CONDUIT. INSTALL GROUT OR APPROVED FIRESTOPPING METHOD.

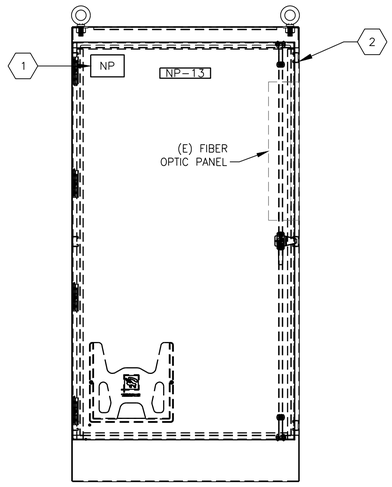
PLC-5 CABINET INTERIOR ELEVATION - DEMO

NOT TO SCALE



PLC-5 CABINET EXTERIOR ELEVATION

NOT TO SCALE

GENERAL NOTES

1. ENCLOSURE AND DOOR MOUNTED DEVICES SHALL MAINTAIN UL TYPE 4 RATING.
2. ASSEMBLY SHALL HAVE 10,000 AMP SCCR.
3. PLC MOUNTING PANEL SHALL MEET UL 508A REQUIREMENTS AND SHALL BEAR UL 508A CONTROL PANEL ASSEMBLY LABEL.

KEY NOTES

1. PROVIDE NAMEPLATE INFORMATION REQUIRED PER NFPA 70, ARTICLE 409.110 (MANUFACTURER NAME, SUPPLY VOLTAGE RATING, NUMBER OF PHASES, FREQUENCY, FULL LOAD CURRENT, FED FROM ###, SCCR).
2. REPLACE OUTER DOOR WITH NEW. ENCLOSURE IS A HOFFMAN CATALOG NUMBER A-723630FS.

DEMOLITION NOTES

- D1 COORDINATE WITH CITY STAFF FOR DEMOLITION OF EXISTING EQUIPMENT.
- D2 DISCONNECT AND REMOVE ELECTRICAL EQUIPMENT. SALVAGE TO OWNER.
- D3 DISCONNECT AND REMOVE POWER AND SIGNAL WIRES AND CABLES FOR ALL DOOR MOUNTED COMPONENTS.

NOTICE TO BIDDERS **1**

INSTRUCTIONS TO BIDDERS **2**

GENERAL CONDITIONS

SECTION 1. PROPOSAL REQUIREMENTS AND GENERAL CONDITIONS **4**

1-01. Definitions
1-02. Examinations of Plans, Special Provisions and Site of Work
1-03. Proposal
1-04. Withdrawal of Bids
1-05. Public Opening of Bids
1-06. Bid Guaranty
1-07. Qualification of Bidders
1-08. Disqualification of Bidders
1-09. Identification of Subcontractors
1-10. General Provisions of the Standard Specifications
1-11. Addenda

SECTION 2. AWARD AND EXECUTION OF CONTRACT **6**

2-01. Award of Contract
2-02. Return of Proposal Guaranties
2-03. Execution of Contract

SECTION 3. SCOPE AND INTENT OF CONTRACT **6**

3-01. Effect of Inspection and Payments
3-02. Effect of Extension of Time
3-03. Extra Work
3-04. Assignment of Contract
3-05. Subcontractors
3-06. Interpretation of Special Provisions and Drawings
3-07. Addenda
3-08. Liability of City Officials
3-09. Dispute Resolution

SECTION 4. BONDS **8**

4-01. Faithful Performance Bond
4-02. Material and Labor Bond
4-03. Defective Material and Workmanship Bond
4-04. Notification of Surety Companies

SECTION 5. INSURANCE REQUIREMENTS FOR CONTRACTORS **8**

5-01. Minimum Scope of Insurance
5-02. Minimum Limits of Insurance
5-03. Deductibles and Self-Insured Retentions
5-04. Other Insurance Provisions
5-05. Acceptability of Insurers
5-06. Verification of Coverage
5-07. Subcontractors

SECTION 6. RESPONSIBILITIES AND RIGHTS OF CONTRACTOR 10

6-01. Legal Address of Contractor
6-02. Office of Contractor at Site
6-03. Attention to Work
6-04. Liability of Contractor
6-05. Protection of Persons and Property
6-06. Protection of City Against Patent Claims
6-07. Protection of Contractor's Work Property
6-08. Regulations and Permits
6-09. Construction Utilities
6-10. Approval of Contractor's Plans
6-11. Suggestions to the Contractor
6-12. Termination of Unsatisfactory Subcontracts
6-13. Preservation of Stakes and Marks
6-14. Assistance to Engineer
6-15. Removal of Condemned Materials and Structures
6-16. Proof of Compliance with Contract
6-17. Errors and Omissions
6-18. Cooperation
6-19. Right of Contractor to Stop Work
6-20. Hiring and Dismissal of Employees
6-21. Wage Rates
6-22. Cleaning Up
6-23. Guaranty

SECTION 7. RESPONSIBILITIES AND RIGHTS OF CITY 15

7-01. Authority of the Engineer
7-02. Inspection
7-03. Surveys
7-04. Rights-of-Way
7-05. Retention of Imperfect Work
7-06. Changes in the Work

CITY OF UKIAH, MENDOCINO COUNTY, CALIFORNIA

NOTICE TO BIDDERS

FOR

THICKENING AND DEWATERING IMPROVEMENTS SPECIFICATION NO. 23-02

NOTICE IS HEREBY GIVEN that sealed standard proposals for THICKENING AND DEWATERING IMPROVEMENTS will be received at the Office of the City Clerk, Ukiah Civic Center, 300 Seminary Avenue, Ukiah California until 2:00 p.m. on Tuesday, May 16, 2023. Bids shall be addressed to the City Clerk and shall be endorsed THICKENING AND DEWATERING IMPROVEMENTS. Bids are required for the entire work described herein. No fax bids will be accepted. As soon thereafter as possible, the bids will be publicly opened and read in the Council Chambers at 300 Seminary Avenue, Ukiah. The bid opening will also be visible via live streaming at http://www.cityofukiah.com/meetings/.

Plans and Special Provisions may be inspected and/or copies obtained from the City's website at www.cityofukiah.com/purchasing. No bid will be considered unless it is made on the forms furnished by the City and is made in accordance with the details of the Special Provisions. Each bidder must be licensed as required by law. Further information regarding the work or these specifications can be obtained by calling Seth Strader, Administrative Analyst at (707) 467-5719 or by email at sstrader@cityofukiah.com.

The City Council reserves the right to reject any or all bids and to determine which proposal is, in its opinion, the lowest responsive bid by a responsible bidder and which it deems in the best interest of the City to accept. The City Council also reserves the right, but not the obligation, to waive any irregularity or failure to strictly comply with the bidding requirements, that the City determines in the reasonable exercise of its discretion does not provide the bidder with a competitive advantage over other bidders.

No contractor or subcontractor may be listed on a bid proposal for a public works unless registered with the Department of Industrial Relations ("DIR") pursuant to Labor Code section 1725.5 except as allowed. under Labor Code section 1771.1(the prime contractor shall be responsible for posting job site notices as prescribed by regulation. This project is subject to compliance monitoring and enforcement by the DIR.

Pursuant to provisions of Section 1770, including amendments thereof, of the Labor Code of the State of California, the DIR Director has ascertained the general prevailing rate of wages for straight time, overtime, Saturdays, Sundays and Holidays including employer payment for health and welfare, vacation, pension and similar purposes for the City of Ukiah. Copies of his General Prevailing Wage Determination are available on the Internet at web address: http://www.dir.ca.gov/DLSR/PWD/ The prime contractor for the work herein shall possess a current, valid State of California, Class A Contractor's License. Pursuant to California Public Contract Code §22300, this contract includes provisions that allow substitutions of certain types of securities in lieu of the City withholding a portion of the partial payments due the Contractor to insure performance under this contract.

By order of the City Council, City of Ukiah, County of Mendocino, State of California.

Dated:_____ _____

Kristine Lawler, City Clerk, City of Ukiah, California

PUBLISH TWO TIMES:

INSTRUCTIONS TO BIDDERS

THICKENING AND DEWATERING IMPROVEMENTS shall be performed in accordance with the Plans and Special Provisions therefor adopted, to which special reference is hereby made.

Each bidder must supply all the information required by the bid documents and Special Provisions.

Minority business enterprises will be afforded full opportunity to submit bids in response to this invitation and will not be discriminated against on the grounds of race, color or national origin in consideration for an award of any contract entered into pursuant to this advertisement. Women will be afforded equal opportunity in all areas of employment. However, the employment of women shall not diminish the standards or requirements for the employment of minorities.

All proposals or bids shall be accompanied by a cashier's check or certified check payable to the order of the City of Ukiah amounting to 10 percent of the bid, or by a bond in said amount and signed by the bidder and a corporate surety, payable to said City. Said check shall be forfeited, or said bond shall become payable to said City in case the bidder depositing the same does not, within fifteen (15) days after written notice that the contract has been awarded to him: (a) enter into a contract with the City and (b) furnish certificates of insurance and endorsements, a bond of faithful performance and a payment bond as described in the Special Provisions.

No bidder shall withdraw his or her bid for a period of thirty (30) calendar days after the date set by the City for the opening thereof.

The Contractor and any subcontractors shall each possess a valid City of Ukiah Business License prior to the start of any work.

The Contractor shall furnish a project schedule to the Engineer prior to the start of any work and start work as scheduled.

The work is to be completed within three hundred and thirty-five (335) calendar days. The Contractor will pay to the City the sum of five hundred ($500.00) dollars per day for each and every calendar day's delay beyond the time prescribed.

The staff shall notify a bidder by telephone or email, if it intends to recommend the rejection of the bidder’s bid. Any bid protest must be filed with the City Clerk not more than five calendar days following the bid opening, or 2 calendar days following notice that staff is recommending the rejection of a bid. If any such timely written protest is filed, all bidders shall be provided a copy of the protest within 2 calendar days of its receipt, which may be delivered to the bidders as an email attachment. All such bidders may file with the City Manager a written objection or other response to the protest.

All objections or responses filed not more than 5 days after receipt of the written protest will be presented to the City Council at its next regular meeting occurring not less than 12 calendar days following the bid opening. The City Council will resolve the bid protest at that meeting based on the written protest, any staff recommendation and all timely written objections and responses. In accordance with the Brown Act, any person may address the City Council on this item during the meeting. The City Council action on the protest shall represent a final decision by the City on the protest.

Examination of Site, Drawings, Etc.

Each bidder shall visit the site of the proposed work and fully acquaint himself with local conditions, construction and labor required so that he or she may fully understand the facilities, difficulties and restrictions attending the execution of the work under the Contract. A mandatory pre-bid meeting will be held at 10:00 am on April 4, 2023 at 300 Plant Road, Ukiah, CA 95482. Bidders shall thoroughly examine and be familiar with the Plans and Special Provisions. The failure of any bidder to receive or examine any

form, instrument, addendum, or other document, or to visit the site and acquaint himself with conditions there existing, shall in no way relieve the bidder from any obligation with respect to his or her proposal or to the contract. The drawings for the work show conditions as they are supposed or believed by the Engineer to exist; but, it is neither intended nor shall it be inferred that the conditions as shown thereon constitute a representation by the Engineer, the City or its officers that such conditions are actually existent, nor shall the City, the Engineer or any of their officers or representatives be liable for any loss sustained by the Contractor as a result of a variance between the conditions shown on the drawings and the conditions actually revealed during the progress of the work or otherwise.

The bidder's attention is directed to the possible existence of obstructions and public improvements within the limits of the work or adjacent thereto, which may or may not be shown on the Drawings. Any bid shall take into consideration that conditions may exist underground or otherwise that are not known to the City or easily detected during a site inspection that could impact the time or cost of completing the project. The City expects the bids to anticipate such conditions so that it can know for budgeting and other purposes the total cost to complete the project before accepting a bid and undertaking the legal obligation to construct the project. In awarding the contract the City relies on the contractor's representation that its bid anticipates differing site conditions and the additional time or cost that such conditions may necessitate.

The bidder shall investigate to his or her satisfaction the conditions to be encountered, the character, quality and quantities of work to be performed and materials to be furnished and the requirements of the Plans, Special Provisions, Standard Specifications, Standard Plans, and Contract Documents. The submission of a proposal shall be considered conclusive evidence that the bidder has made such examination and has accepted the project workplace as a safe workplace to perform the work of the Contract.

Bidder Inquiries and Questions

Inquiries and questions must be submitted in writing via email to the following designated contact person:

Seth Strader, Administrative Analyst
Email: sstrader@cityofukiah.com

The City reserves the right to not respond to inquiries or questions submitted within 3 business days of the bid opening.

Location of the Work

All of the work to be performed is within the City of Ukiah. Project is located at 300 Plant Road, Ukiah, California 95482.

GENERAL CONDITIONS

SECTION 1. PROPOSAL REQUIREMENTS AND GENERAL CONDITIONS

1-01. Definitions. Whenever any word or expression defined in this section, or pronoun used in its stead, occurs in these contract documents, it shall have and is mutually understood to have the meaning given:

a. "City of Ukiah" or "City" shall mean the City of Ukiah, Mendocino County, California, acting through its City Council or any other board, body, official or officials to which or to whom the power belonging to the Council shall by virtue of any act or acts, hereafter pass or be held to appertain.

b. "Engineer" shall mean the Engineer duly and officially appointed by the City to supervise and direct the work of construction under this contract, acting personally or through agents or assistants duly authorized by him, such agents or assistants acting within the scope of the particular duties entrusted to them.

c. "Inspector" shall mean the engineering or technical inspector or inspectors duly authorized or appointed by the Engineer, limited to the particular duties entrusted to him or her or them.

d. "Contractor" shall mean the party entering into contract with the City of Ukiah for the performance of work covered by this contract and his or her authorized agents or legal representatives.

e. "Date of signing of contract" or words equivalent thereto, shall mean the date upon which this contract, with the signature of the Contractor affixed, together with the prescribed bonds, shall be or shall have been delivered to the City or its duly authorized representatives.

f. "Day" or "days", unless herein otherwise expressly defined, shall mean a calendar day or days of twenty-four hours each.

g. "The work" shall mean and include all the work specified, indicated, shown or contemplated in the contract to construct the improvement, including all alterations, amendments or extensions thereto made by contract change order or other written orders of the Engineer.

h. "Contract drawings", "drawings", "plans" shall mean and include 1) all drawings or plans which may have been prepared by or on behalf of the City, as a basis for proposals, when duly signed and made a part of this contract by incorporation or reference, 2) all drawings submitted in pursuance of the terms of this contract by the successful bidder with his or her proposal and by the Contractor to the City if and when approved by the Engineer and 3) all drawings submitted by the Engineer to the Contractor during the progress of the work as provided for herein.

i. Where "as shown", "as indicated", "as detailed" or words of similar import are used, it shall be understood that reference to the drawings accompanying these Special Provisions is made unless stated otherwise.

Where "as directed", "as permitted", "approved" or words of similar import are used, it shall be understood that the direction, requirements, permission, approval or acceptance of the Engineer is intended unless stated otherwise.

As used herein, "provide" or "install" shall be understood to mean "provide or install complete in place", that is, "furnish and install". "Shall" is mandatory; "may" is permissive.

1-02. Examination of Plans, Special Provisions and Site of Work. The bidder shall examine carefully the Proposal, Plans, Special Provisions, Contract forms and the site of the work contemplated therefor. It will be assumed that the bidder has investigated to his or her satisfaction the conditions to be encountered and the character, quality and requirements of all Plans, Special Provisions, Standard Specifications, and Standard Plans involved.

1-03. Proposal. Bids shall be made on the blank forms prepared by the City. All bids shall give the prices bid, both in writing and in figures and shall be signed by the bidder or his or her authorized representative, with his or her address. If the bid is made by an individual or partner, his or her name and the post office address of his or her business or partnership, along with his or her signature or the signature of one or more partners must be shown; if made by a corporation, the bid shall show the name of the state under the laws of which the corporation is chartered, the name of the corporation and the title of the person who signs on behalf of the corporation.

Each proposal shall be enclosed in a sealed envelope, endorsed as specified in the notice to bidders. Bidders are warned against making erasures or alterations of any kind and proposals which contain omissions, erasures, conditions, alterations, additions not called for, additional proposals or irregularities of any kind may be rejected.

1-04. Withdrawal of Bids. Any bid may be withdrawn at any time prior to the hour fixed in the notice to bidders for the openings of bids, provided that a request in writing, executed by the bidder or his or her duly authorized representative, for the withdrawal of such bid is filed with the City. The withdrawal of a bid will not prejudice the right of a bidder to file a new bid.

1-05. Public Opening of Bids. Bids will be opened and read publicly at the time and place indicated in the notice to bidders. Bidders or their agents are invited to be present.

1-06. Bid Guaranty. Each bid must be accompanied by a certified check, cashier's check or bidder's bond executed by an admitted surety insurer, payable to the order of the City of Ukiah in an amount not less than 10 percent of the bid as a guarantee that the bidder will enter into a contract, if awarded the work.

1-07. Qualification of Bidders. No contractor or subcontractor may be listed on a bid proposal for a public works project (submitted on or after March 1, 2015) unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5 [with limited exceptions from this requirement for bid purposes only under Labor Code section 1771.1(a)]. No contractor or subcontractor may be awarded a contract for public work on a public works project (awarded on or after April 1, 2015) unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. The prime contractor shall be responsible for posting job site notices as prescribed by regulation. This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

Each bidder shall be licensed under the provisions of Chapter 9, Division 3 of the Business and Professions Code and shall be skilled and regularly engaged in the general class or type of work called for under this contract. A statement setting forth this experience and business standing shall be submitted by each bidder on the form provided herewith. It is the intention of the City to award a contract only to a bidder who furnishes satisfactory evidence that he or she has the requisite experience and ability and that he or she has sufficient capital, facilities and equipment to enable him or her to prosecute the work successfully and promptly within the time and in the manner agreed.

In determining the degree of responsibility to be credited to a bidder, the City may weigh evidence that the bidder or his or her personnel charged with the responsibility in the work, has performed satisfactorily other contracts of like nature and magnitude or comparable difficulty at similar rates of progress.

1-08. Disqualification of Bidders. More than one bid from an individual business, partnership, corporation or association, under the same or different names, will not be considered. Reasonable grounds for believing that any bidder is financially interested in more than one bid for the work will cause the rejection

of all bids in which he or she is so interested. If there is reason to believe that collusion exists among the bidders, none of the participants in such collusion will be considered. Bids in which the prices obviously are unbalanced may be rejected.

1-09. Identification of Subcontractors. All bids shall comply with the Subletting and Subcontracting Fair Practices Act (Public Contract Code Section 4100 and following) and shall set forth:

(a) The name and the location of the place of business of each subcontractor who will perform work or labor, or render service to the prime contractor in or about the construction of the work, or to a subcontractor licensed by the State of California who, under subcontract to the prime contractor, specially fabricates and installs a portion of the work according to detailed drawings contained in the plans and Special Provisions, in an amount in excess of one-half of 1 percent of the prime contractor's total bid.

(b) The portion of the work which will be done by each such subcontractor. The prime contractor shall list only one subcontractor for each such portion defined by the prime contractor in his or her bid.

1-10. General Provisions of the Standard Specifications. All provisions of the General Provisions, Sections 1 through 11, of the Standard Specifications, shall be applicable to the contract except as modified by these Special Provisions. The Standard Specifications are set forth in Section 12-06 of these Special Provisions.

1-11. Addenda. If it becomes necessary to revise any part of these plans and specifications after they have been released, the City will issue an addendum containing the revision. All addenda will be posted on the City's website at www.cityofukiah.com/purchasing with the rest of the bid documents. Anyone who intends to submit a bid in response to this Request for Bid must check the website frequently for any posted addenda. Anyone submitting a bid will be deemed to have seen and agreed to be bound by the posted addenda.

SECTION 2. AWARD AND EXECUTION OF CONTRACT

2-01. Award of Contract. Award of the contract, if it be awarded, will be to the lowest responsible bidder whose bid complies with all the specified requirements. The award, if made, will be made within thirty (30) days after opening of the bids. The City reserves the right to reject any and all bids and to waive any irregularity in the proposal not pertaining to cost.

2-02. Return of Proposal Guaranties. All bid guaranties will be held until the contract has been fully executed, after which they will be returned upon request to the respective bidders whose bids they accompany.

2-03. Execution of Contract. The contract agreement shall be executed in duplicate by the successful bidder and returned, together with the contract bonds, insurance certificates and endorsements, within fifteen (15) days after written notice of the award of the contract. After execution by the City; one copy shall be filed with the City and one copy shall be returned to the Contractor. If the bidder fails or refuses to enter into the contract agreement within the required time, then the bid guaranty accompanying the bid shall be forfeited to the City.

SECTION 3. SCOPE AND INTENT OF CONTRACT

3-01. Effect of Inspection and Payments. Neither the inspection by the Engineer or an inspector, nor any order, measurement or approved modification, nor certificate or payment of money, nor acceptance of any part or whole of the work, nor any extension of time, nor any possession by the City or its agents, shall operate as a waiver of any provision of this contract or of any power reserved therein to the City, or of any

right to damages thereunder; nor shall any breach of this contract be held to be a waiver of any subsequent breach. All remedies shall be construed as cumulative.

3-02. Effect of Extension of Time. The granting of any extension of time on account of delays which, in the judgement of the City, are avoidable delays shall in no way operate as a waiver on the part of the City of its rights under this contract.

3-03. Extra Work. If extra work orders are given in accordance with provisions of this contract, such work shall be considered a part hereof and shall be subject to each and all of its terms and requirements.

3-04. Assignment of Contract. The contract may be assigned or sublet in whole or in part only upon the written consent of the City acting through its authorized agents. Consent will not be given to any proposed assignment which would relieve the original contractor or its surety of their responsibilities under the contract nor will the Engineer consent to any assignment of a part of the work under the contract.

3-05. Subcontractors. The Contractor shall be as fully responsible for the acts and omissions of his or her subcontractors and of persons either directly or indirectly employed by them, as he or she is for the acts and omissions of persons directly employed by him.

The Contractor shall cause appropriate provisions to be inserted in all subcontracts relative to the work to bind subcontractors to the terms of this Contract which are applicable to the work of subcontractors.

Nothing contained in this contract shall be construed to create or shall be relied upon to create any contractual relationship between any subcontractor and the City and no action may be brought by any subcontractor against the City based on this contract.

3-06. Interpretation of Special Provisions and Drawings. The Special Provisions and the Contract Drawings are intended to be explanatory of each other. Any work indicated in the Contract Drawings and not in the Special Provisions, or vice versa, is to be executed as if indicated in both. In case of a discrepancy or conflict between the Technical Specifications and Contract Plans, the Technical Specifications shall govern. All work shown on the Contract Drawings, the dimensions of which are not figured, shall be accurately followed to the scale to which the drawings are made, but figured dimensions are in all cases to be followed, where given, though they differ from scaled measurements. Large scale drawings shall be followed in preference to small scale drawings. Should it appear that the work to be done, or any of the matters relative thereto, are not sufficiently detailed or explained in these contract documents, including the contract drawings, the Contractor shall apply to the Engineer for such further explanations as may be necessary and shall conform thereto as part of this contract, so far as may be consistent with the terms of this contract. In the event of any doubt or questions arising respecting the true meaning of the Special Provisions, reference shall be made to the Engineer and his or her decision thereon shall be final. If the Contractor believes that a clarification or interpretation justifies an increase in the contract price or contract time, the Contractor must comply with the written notice provisions of Sections 9-05 and 10-07 of these Special Provisions. Contractor's attention is directed to Section 12-06 of the Technical Specifications regarding the Standard Specifications and Standard Plans.

3-07. Addenda. If it becomes necessary to revise any part of these plans and specifications after they have been released, the City will issue an addendum containing the revision. All addenda will be posted on the City's website at www.cityofukiah.com/purchasing with the rest of the bid documents. Anyone who intends to submit a bid in response to this Request for Bid must check the website frequently for any posted addenda. Anyone submitting a bid will be deemed to have seen and agreed to be bound by the posted addenda.

3-08. Liability of City Officials. No city official, nor the Engineer, nor any authorized assistant of any of them, shall be personally responsible for any liability arising under this contract.

3-09. Dispute Resolution. Claims of $375,000 or less by the Contractor that arise under this Contract are subject to the mandatory dispute resolutions provisions in Public Contract Code Sections 20104-20104.6.

SECTION 4. BONDS

4-01. Faithful Performance Bond. As a part of the execution of this contract, the Contractor shall furnish a bond of a surety company or other securities providing equivalent protection such as cash, letter of credit, or certificates of deposit, acceptable to the City, conditioned upon the faithful performance of all covenants and stipulations under this contract. The amount of the bond shall be 100 percent of the total contract price, as this sum is set forth in the agreement.

4-02. Material and Labor Bond. As a part of the execution of this contract, the Contractor shall furnish a bond of a surety company or other securities providing equivalent protection such as cash, letter of credit or certificates of deposit acceptable to the City in a sum not less than 50 percent of the total contract price, as this sum is set forth in the agreement for the payment in full of all persons, companies or corporations who perform labor upon or furnish materials to be used in the work under this contract, in accordance with the provisions of Sections 3247 through 3252 inclusive of the Civil Code of the State of California and any acts amendatory thereof.

4-03. Defective Material and Workmanship Bond. As a condition precedent to the completion of this contract, the Contractor shall furnish a bond of a surety company acceptable to the City in an amount not less than 5 percent (5%) of the final contract price, to hold good for a period of one (1) year after the completion and acceptance of the work, to protect the City against the results of defective materials, workmanship and equipment during that time. This bond shall be delivered to the City before the final payment under this contract will be made.

4-04. Notification of Surety Companies. The surety companies shall familiarize themselves with all of the conditions and provisions of this contract and they waive the right of special notification of any change or modification of this contract or of extension of time, or decreased or increased work, or of the cancellation of the contract, or of any other act or acts by the City or its authorized agents, under the terms of this contract; and failure to so notify the aforesaid surety companies of changes shall in no way relieve the surety companies of their obligation under this contract.

SECTION 5. INSURANCE REQUIREMENTS FOR CONTRACTORS

(WITH CONSTRUCTION RISKS)

Contractor shall procure and maintain for the duration of the contract insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the work hereunder by the Contractor, his or her agents, representatives, employees or subcontractors.

5-01. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office Commercial Liability Coverage (occurrence form CG 0001).
2. Insurance Services Office form number CA 0001 (Ed. 1/87) covering Automobile Liability, code 1 (any auto).
3. Worker's Compensation insurance as required by the State of California and Employer's Liability Insurance.
4. Course of Construction insurance covering for “all risks” of loss.

5-02. Minimum Limits of Insurance
Contractor shall maintain limits no less than:

1. General Liability: $1,000,000 per occurrence for bodily injury, personal injury and property damage including operations, products and completed operations. If Commercial General Liability Insurance or other form with a general aggregate limit is used, either the general aggregate limit shall apply separately to this project/location or the general aggregate limit shall be twice the required occurrence limit.
2. Automobile Liability: $1,000,000 per accident for bodily injury and property damage.
3. Employer's Liability: $1,000,000 per accident for bodily injury and property damage.
4. Course of Construction: Completed value of the project with no co-insurance penalty provisions.

5-03. Deductibles and Self-insured Retentions. Any deductibles or self-insured retentions must be declared to and approved by the City. At the option of the City, either: the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects the City, its officers, officials, employees and volunteers; or the Contractor shall provide a financial guarantee satisfactory to the City guaranteeing payment of losses and related investigations, claim administration and defense expenses.

5-04. Other Insurance Provisions

The general liability and automobile liability policies are to contain, or be endorsed to contain, the following provisions:

1. The City, its officers, officials, employees and volunteers are to be covered as Additional Insured with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. General liability coverage can be provided in the form of an endorsement to the Contractor's insurance, or as a separate owner's policy.
2. The workers' compensation policy is to be endorsed with a waiver of subrogation. The insurance company, in its endorsement, agrees to waive all rights of subrogation against the City, its officers, officials, employees and volunteers for losses paid under the terms of this policy which arises from the work performed by the named insured for the City.
3. For any claims related to this project, the Contractor's insurance coverage shall be primary insurance as respects the City, its officers, officials, employees or volunteers. Any insurance or self-insurance maintained by the City, its officers, officials, employees or volunteers shall be excess of the Contractor's insurance and shall not contribute with it.
4. Each insurance policy required by this clause shall be endorsed to state that coverage shall not be canceled by either party, except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to the City.
5. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under Subdivision (b) of Section 2782 of Civil Code.
6. Course of Construction policies shall contain the following provisions:
   a.) The City shall be named as loss payee.
   b.) The insurer shall waive all rights of subrogation against the City.

5-05. Acceptability of Insurers

Insurance is to be placed with insurers with a current A.M. Best's rating of no less than the following:

A++ VII	A- VIII
A+ VII	B++ X
A VII	B+ X

5-06. Verification of Coverage. Contractor shall furnish the City with original certificates and amendatory endorsements effecting coverage required by this clause. The endorsements shall be on forms provided by the City or on other than the City's forms, provided those endorsements or policies conform to the requirements. All certificates and endorsements are to be received within 15 days from written notice of contract award, and the work shall not commence until the certificates and endorsements have been approved by the City. The City reserves the right to require complete certified copies of all required insurance policies, including endorsements affecting the coverage required by these Special Provisions at any time.

5-07. Subcontractors. Contractor shall include all subcontractors as insureds under its policies or shall furnish separate certificates and endorsements for each subcontractor. All coverages for subcontractors shall be subject to all of the requirements stated herein.

SECTION 6. RESPONSIBILITIES AND RIGHTS OF CONTRACTOR

6-01. Legal Address of Contractor. Both the address given in the proposal and the Contractor's office in the vicinity of the work are hereby designated as places to either of which drawings, samples, notices, letters or other articles or communications to the Contractor may be mailed or delivered. The delivery at either of these places of any such thing from the City or its agents to the Contractor shall be deemed sufficient service thereof upon the Contractor and the date of such service shall be the date of such delivery. The address named in the proposal may be changed at any time by notice in writing from the Contractor to the City. Nothing herein contained shall be deemed to preclude or render inoperative the service of any drawing, sample, notice, letter or other article or communication to or upon the Contractor personally.

6-02. Office of Contractor at Site. During the performance of this contract, the Contractor shall maintain a suitable office at the site of the work which shall be the headquarters of a representative authorized to receive drawings and any such thing given to the said representatives or delivered at the Contractor's office at the site of work in his or her absence shall be deemed to have been given to the Contractor.

6-03. Attention to Work. The Contractor shall give his or her personal attention to and shall supervise the work to the end that it shall be prosecuted faithfully and when he or she is not personally present on the work, he or she shall at all reasonable times be represented by a competent superintendent or foreman who shall receive and obey all instructions or orders given under this contract and who shall have full authority to execute the same and to supply materials, tools and labor without delay and who shall be the legal representative of the Contractor. The Contractor shall be liable for the faithful observance of any instructions delivered to him or her or to his or her authorized representative.

6-04. Liability of Contractor. The Contractor shall do all of the work and furnish all labor, materials, tools and appliances, except as otherwise herein expressly stipulated, necessary or proper for performing and completing the work herein required in the manner and within the time herein specified. The mention of any specific duty or liability imposed upon the Contractor shall not be construed as a limitation or restriction of any general liability or duty imposed upon the Contractor by this contract, said reference to any specific duty or liability being made herein merely for the purpose of explanation.

The right of general supervision by the City shall not make the Contractor an agent of the City and the liability of the Contractor for all damages to persons or to public or private property, arising from the Contractor's execution of the work, shall not be lessened because of such general supervision.

Until the completion and final acceptance by the City of all the work under and implied by this contract, the work shall be under the Contractor's responsible care and charge. The Contractor shall rebuild, repair, restore and make good all injuries, damages, re-erections and repairs, occasioned or rendered necessary by causes of any nature whatsoever, excepting only acts of God and none other, to all or any portions of the work, except as otherwise stipulated.

To the fullest extent permitted by law, Contractor shall indemnify and hold harmless the City and its officers, directors, agents and employees from and against all claims, damages, losses and expenses including but not limited to attorneys' fees, costs of suit, expert witness fees and expenses and fees and costs of any necessary private investigators arising out of or resulting from the performance of the work, provided that any such claim, damage, loss or expense (1) is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property, other than the work itself, including the loss of use resulting therefrom and (2) is caused in whole or in part by any act or omission of the Contractor, any subcontractor, or anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, regardless of whether or not it is caused in part by a party indemnified hereunder, or by the negligence or omission of a party indemnified herein.

In any and all claims against the City or any of its agents or employees by any employee of the Contractor, any subcontractor, anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, the indemnification obligation shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the Contractor or any subcontractor under workers' or workmen's compensation acts, disability benefit acts, or other employee benefit acts. The obligation to indemnify shall extend to and include acts of the indemnified party which may be negligent or omissions which may cause negligence.

The City shall have the right to estimate the amount of such damage and to cause the City to pay the same and the amount so paid for such damage shall be deducted from the money due the Contractor under this contract; or the whole or so much of the money due or to become due the Contractor under this contract as may be considered necessary by the City, shall be retained by the City until such suits or claims for damages shall have been settled or otherwise disposed of and satisfactory evidence to that effect furnished to the City.

6-05. Protection of Persons and Property. The Contractor shall furnish such watchman, guards, fences, warning signs, walks and lights as shall be necessary and shall take all other necessary precautions to prevent damage or injury to persons or property.

All property line fences and improvements in the vicinity of the work shall be protected by the Contractor and, if they are injured or destroyed, they and any other property injured by the Contractor, his or her employees or agents, shall be restored to a condition as good as when he or she entered upon the work.

6-06. Protection of City Against Patent Claims. All fees, royalties or claims for any patented invention, article or method that may be used upon or in any manner connected with the work under this contract shall be included in the price bid for the work and the Contractor and his or her sureties shall protect and hold the City, together with all of its officers, agents, servants and employees, harmless against any and all demands made for such fees or claims brought or made on account of this contract. The Contractor shall, if requested by the Engineer, furnish acceptable proof of a proper release from all such fees or classes.

Should the Contractor, his or her agents, servants or employees, or any of them be enjoined from furnishing or using any invention, article, material or appliance supplied or required to be supplied or used under this contract, the Contractor shall promptly substitute other articles, materials or appliance, in lieu thereof, of equal efficiency, quality, finish, suitability and market value and satisfactory in all respects to the Engineer. Or, in the event that the Engineer elects, in lieu of such substitution, to have supplied and to retain and use, any such invention, article, material or appliance, as may by this contract be required to be supplied, in that event the Contractor shall pay such royalties and secure such valid licenses as may be requisite and necessary for the City, its officers, agents, servants and employees, or any of them, to use such invention, article, material or appliance without being disturbed or in any way interfered with by any proceeding in law

or equity on account thereof. Should the Contractor neglect or refuse to make the substitution promptly, or to pay such royalties and secure such licenses as may be necessary, then in that event the Engineer shall have the right to make such substitution, or the City may pay such royalties and secure such licenses and charge the cost thereof against any money due to the Contractor from the City or recover the amount thereof from him or her and his or her sureties notwithstanding final payment under this contract may have been made.

6-07. Protection of Contractor's Work Property. The Contractor shall protect his or her work, supplies and materials from damage due to the nature of the work, the action of the elements, trespassers, or any cause whatsoever under his or her control, until the completion and acceptance of the work. Neither the City nor any of its agents assumes any responsibility for collecting indemnity from any person or persons causing damage to the work of the Contractor.

6-08. Regulations and Permits. The Contractor shall secure and pay for all permits, give all notices and comply with all laws, ordinances, rules and regulations bearing on the conduct of the work as drawn and specified. If the Contractor observes that the Plans and Special Provisions are at variance therewith, he or she shall promptly notify the Engineer in writing and any necessary changes shall be adjusted as provided in the contract for changes in the work. The contractor and any subcontractors shall each secure and maintain a valid City of Ukiah Business License. The City of Ukiah will issue a no fee encroachment permit to the Contractor allowing him or her to perform work within City right of way or within City property after the Contract Documents have been executed and insurance certificates and endorsements have been approved by the City.

6-09. Construction Utilities. The Contractor shall be responsible for providing for and in behalf of his or her work under this contract, all necessary utilities, such as special connection to water supply, telephones, power lines, fences, roads, watchmen, suitable storage places, etc.

6-10. Approval of Contractor's Plans. The approval by the Engineer of any drawing or any method of work proposed by the Contractor in accordance with paragraph 8-06 shall not relieve the Contractor of any of his or her responsibility for his or her errors therein and shall not be regarded as any assumption of risk or liability by the City or any officer or employee thereof and the Contractor shall have no claim under this contract on account of the failure or partial failure or inefficiency of any plan or method so approved. Such approval shall be considered to mean merely that the Engineer has no objection to the Contractor's using, upon his or her own full responsibility the plan or method approved.

6-11. Suggestions to the Contractor. Any plan or method of work suggested by the Engineer to the Contractor, but not specified or required, if adopted or followed by the Contractor in whole or in part, shall be used at the risk and responsibility of the Contractor; and the Engineer and the City shall assume no responsibility thereof.

6-12. Termination of Unsatisfactory Subcontracts. Should any subcontractor fail to perform in a satisfactory manner the work undertaken by him, such subcontract shall be terminated immediately by the Contractor upon notice from the Engineer.

6-13. Preservation of Stakes and Marks. The Contractor shall preserve carefully bench marks, reference points and stakes and in case of destruction he or she shall replace his or her stakes, reference points and bench marks and shall be responsible for any mistakes that may be caused by their unnecessary loss or disturbance. Contractor’s attention is directed to Section 7-03 of these Special Provisions.

6-14. Assistance to Engineer. At the request of the Engineer the Contractor shall provide men from his or her force and tools, stakes and other materials to assist the Engineer temporarily in making measurements and surveys and in establishing temporary or permanent reference marks. Payment for such materials and assistance will be made as provided for under the caption "Extra Work," provided, however, that the cost of setting stakes and marks carelessly lost or destroyed by the Contractor's employees will be assessed to the Contractor.

6-15. Removal of Condemned Materials and Structures. The Contractor shall remove from the site of the work, without delay, all rejected and condemned materials or structures of any kind brought to or incorporated in the work and upon his or her failure to do so, or to make satisfactory progress in so doing, within forty-eight (48) hours after the service of a written notice from the Engineer, the condemned material or work may be removed by the City and the cost of such removal shall be taken out of the money that may be due or may become due the Contractor on account of or by virtue of this contract. No such rejected or condemned material shall again be offered for use by the Contractor under this Contract.

6-16. Proof of Compliance with Contract. In order that the Engineer may determine whether the Contractor has complied with the requirements of this contract, not readily enforceable through inspection and tests of the work and materials, the Contractor shall, at any time when requested, submit to the Engineer properly authenticated documents or other satisfactory proofs as to his or her compliance with such requirements.

6-17. Errors and Omissions. If the Contractor, in the course of the work, finds any errors or omissions in plans or in the layout as given by survey points and instruction, or if he or she finds any discrepancy between the plans and the physical conditions of the locality, he or she shall immediately inform the Engineer, in writing and the Engineer shall promptly verify the same. Any work done after such discovery, until authorized, will be done at the Contractor's risk.

6-18. Cooperation. The Contractor shall cooperate with all other contractors who may be performing work in behalf of the City and workmen who may be employed by the City on any work in the vicinity of the work to be done under this contract with the work of such contractors or workmen. he or she shall make good promptly, at his or her own expense, any injury or damage that may be sustained by other contractors or employees of the City at his or her hands.

Any difference or conflict which may arise between the Contractor and other contractors, or between the contractor and workmen of the City in regard to their work shall be adjusted and determined by the Engineer. If the work of the Contractor is delayed because of any acts or omissions of any other contractor or of the City, the Contractor shall on that account have no claim against the City other than for an extension of time.

6-19. Right of Contractor to Stop Work. Under the following conditions the Contractor shall have the right, if he or she so desires, to stop the work and terminate the contract upon ten (10) days written notice to the Engineer and recover from the City payment for all work actually performed and for all satisfactory materials actually delivered to the site of the work for permanent incorporation therein, all as may be shown by the estimate of the Engineer.

(1) If the work is stopped under an order of any court or other competent public authority for a period of time of three (3) months through no act or fault of the Contractor or of anyone employed by him.

(2) If the Engineer fails to issue the monthly certificate for payment in accordance with the terms of this contract.

(3) If the City fails to pay the Contractor within sixty (60) days after it shall have become due, as provided by the terms of this contract, any sum certified by the Engineer or awarded by the City.

All provided that if such action to terminate the contract be not instituted by the Contractor within ten (10) days after the alleged existence of such condition and if written notice of such action be not at that time delivered to the City and the Engineer, then such right shall lapse until another occasion arises according to this section.

6-20. Hiring and Dismissal of Employees. The Contractor shall employ only such foremen, mechanics and laborers as are competent and skilled in their respective lines of work and whenever the Engineer shall notify the Contractor that any person on the work is, in his or her opinion, incompetent, unfaithful, intemperate or disorderly, or refuses to carry out the provisions of this contract, or uses threatening or abusive language to any person on the work representing the City, or is otherwise unsatisfactory, such

person shall be discharged immediately from the work and shall not be re-employed upon it except with the consent of the Engineer.

6-21. Wage Rates.

1. Contractor shall pay all mechanics and laborers employed or working upon the site of the work unconditionally and without subsequent deductions or rebate on any account the full amounts due at the time of payment at wage rates not less than those contained in the applicable prevailing wage determination, regardless of any contractual relationship which may be alleged to exist between the Contractor and subcontractors and such laborers and mechanics.

2. Contractor shall comply with the California Labor Code Section 1775. In accordance with said Section 1775, Contractor shall forfeit as a penalty to the Owner, $50.00 (or the higher minimum penalty as provided in Section 1775(B)(ii) – (iii)) for each calendar day or portion thereof, for each workman paid less than the stipulated prevailing rates for such work or craft in which such workman is employed for any work done under the Contract by him or her or by any subcontractor under him or her in violation of the provisions of the Labor Code and in particular, Labor Code Sections 1770 to 1780, inclusive. In addition to said penalty and pursuant to Section 1775, the difference between such stipulated prevailing wage rates and the amount paid to each workman for each calendar day or portion thereof for which each workman was paid less than the stipulated prevailing wage rate shall be paid to each workman by the Contractor.

3. Pursuant to the provision of Section 1770 of the Labor Code of the State of California, Owner has ascertained the general prevailing rate of wages (which rate includes employer payments for health and welfare, vacation, pension and similar purposes) applicable to the work to be done, for straight time work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of workmen concerned. Copies of the General Prevailing Wage Determination are available on the Internet at web address: http://www.dir.ca.gov/DLSR/PWD The Contractor shall post the wage determination at the site of work in a prominent place where it can easily be seen by the workers.

4. City will not recognize any claim for additional compensation because the Contractor has paid any rate in excess of the prevailing wage rate obtained by the Contractor. The possibility of wage increases is one of the elements to be considered by the Contractor in determining his or her bid and will not in any circumstances be considered as the basis for a claim against the City.

5. The Labor Commissioner through the Division of Labor Standards Enforcement (DLSE) may at any time require contractors and subcontractors to furnish electronic certified payroll records directly to DLSE. Commencing with contracts awarded or after April 1, 2015, all contractors and subcontractors must furnish electronic certified payroll records directly to the DLSE.

6. Travel and Subsistence Payments.

   Contractor shall make travel and subsistence payments to each workman needed to execute the work in accordance with the requirements in Section 1773.8 of the Labor Code (Chapter 880, Statutes of 1968).

7. Apprentices.

   Attention is directed to the provisions in Sections 1777.5 (Chapter 1411, Statutes of 1968) and 1777.6 of the California Labor Code concerning the employment of apprentices by the Contractor or any subcontractor under him. Contractor and any subcontractor under him or her shall comply with the requirements of said sections in the employment of apprentices.

   Information relative to apprenticeship standards, wage schedules and other requirements may be obtained from the Director of Industrial Relations, ex officio the Administrator of Apprenticeship, San Francisco, California, or from the Division of Apprenticeship Standards and its branch offices.

6-22. Cleaning Up. The Contractor shall not allow the site of the work to become littered with trash and waste material, but shall maintain the same in a neat and orderly condition throughout the construction period. The Engineer shall have the right to determine what is or is not waste material or rubbish and the place and manner of disposal.

On or before the completion of the work, the Contractor shall without charge therefore carefully clean out all pits, pipes, chambers or conduits and shall tear down and remove all temporary structures built by him or her and shall remove rubbish of all kind from any of the grounds which he or she has occupied and leave them in first class condition.

6-23. Guaranty. All work shall be guarantied for a period of one year from the date of acceptance by the City. The Contractor shall promptly make all needed repairs arising out of defective materials, workmanship and equipment.

The City is hereby authorized to make such repairs if within ten days after the mailing of a notice in writing to the Contractor or his or her agent, the Contractor shall neglect to make or undertake with due diligence the aforesaid repairs, provided, however, that in case of an emergency where, in the opinion of the City delay would cause serious loss or damage, repairs may be made without notice being sent to the Contractor and the Contractor shall pay the costs thereof.

Pursuant to the provisions of Section 4-03 of these Special Provisions, the Contractor shall furnish a Defective Material and Workmanship Bond in an amount not less than 5 percent of the final contract price, which shall be effective for a period of one (1) year after the completion and acceptance of the work.

SECTION 7. RESPONSIBILITIES AND RIGHTS OF CITY

7-01. Authority of the Engineer. All work done under this contract shall be done in a workmanlike manner and shall be performed to the reasonable satisfaction of the Engineer, who shall have general supervision of all work included hereunder. To prevent disputes and litigation, the Engineer (1) shall in all cases determine the amount, quality, acceptability and fitness of the several kinds of work and materials which are to be paid for under this contract, (2) shall decide all questions relative to the true construction, meaning and intent of the Special Provisions and Drawings, (3) shall decide all questions which may arise relative to the classifications and measurements of quantities and materials and the fulfillment of this contract and (4) shall have the power to reject or condemn all work or material which does not conform to the terms of this contract. his or her estimate and decision in all matters shall be a condition precedent to an appeal for arbitration, or the right of the Contractor to receive, demand, or claim any money or other compensation under this agreement and a condition precedent to any liability on the part of the City to the Contractor on account of this contract. Whenever the Engineer shall be unable to act, in consequence of absence or other cause, then such engineer as the Engineer or the City shall designate, shall perform any and all of the duties and be vested with any or all of the powers herein given to the Engineer.

7-02. Inspection. The City will provide engineering personnel for the inspection of the work.

The Engineer and his or her representatives shall at all times have access to the work whenever it is in preparation or progress and the Contractor shall provide proper facilities for such access and inspection.

If the Special Provisions, the Engineer's instruction, laws, ordinances, or any public authority require any work to be specially tested or approved, the Contractor shall give the Engineer timely notice of its readiness for inspection and, if the inspection is by an authority other than the Engineer, of the date fixed for such inspection. Inspections by the Engineer shall be promptly made at the source of supply where practicable. If any work shall be covered up without approval or consent of the Engineer, it must, if required by the Engineer, be uncovered for examination and properly restored at the Contractor's expense.

Re-examination of any work may be ordered by the Engineer and, if so ordered, the work must be uncovered by the Contractor. If such work is found to be in accordance with the contract documents, the

City shall pay the cost of re-examination and replacement. If such work is not in accordance with the contract documents, the Contractor shall pay such cost.

Properly authorized and accredited inspectors shall be considered to be the representatives of the City limited to the duties and powers entrusted to them. It will be their duty to inspect materials and workmanship of those portions of the work to which they are assigned, either individually or collectively, under instructions of the Engineer and to report any and all deviations from the Drawings, Special Provisions and other contract provisions which may come to their notice. Any inspector may be considered to have the right to order the work entrusted to his or her supervision stopped, if in his or her opinion such action becomes necessary, until the Engineer is notified and has determined and ordered that the work may proceed in due fulfillment of all contract requirements.

7-03. Surveys. Contractor shall furnish all land surveys, establish all base lines and bench marks and make sufficient detailed surveys needed for working points, lines and elevations. The Contractor shall develop all slope stakes and batter boards. Contractor shall also develop all additional working points, lines and elevations as he or she may desire to facilitate his or her methods and sequence of construction.

7-04. Rights-of-Way. The City will provide all necessary rights-of-way and easements in or beneath which work will be performed by the Contractor under this contract.

7-05. Retention of Imperfect Work. If any portion of the work done or material furnished under this contract shall prove defective and not in accordance with the Plans and Special Provisions, and if the imperfection in the same shall not be of sufficient magnitude or importance to make the work dangerous or undesirable, the Engineer shall have the right and authority to retain such work instead of requiring the imperfect work to be removed and reconstructed, but he or she shall make such deductions therefor in the payments due or to become due the Contractor as may be just and reasonable.

7-06. Changes in the Work. The Engineer shall have the right, in writing, to order additions to, omissions from, or corrections, alterations and modifications in the line, grade, form, dimensions, plan, or kind or amount of work or materials herein contemplated, or any part thereof, either before or after the beginning of construction. However, the arithmetical sum of the cost to the City of additions and subtractions from the work under this contract shall not exceed 10 percent of original contract amount or $5,000, whichever is the greater, unless based upon a supplementary agreement to be made therefore.

The order of such additions, omissions, corrections, alterations and modifications shall be in writing and signed by the Engineer and, in order, shall then be binding upon the Contractor. The Contractor shall proceed with the work as changed and the value of such change shall be determined as provided for in section 10-07 of these Special Provisions.

Such alterations shall in no way affect, vitiate, or make void this contract or any part thereof, except that which is necessarily affected by such alterations and is clearly the evident intention of the parties to this contract.

7-07. Additional Drawings by City. The drawings made a part of this contract at the time of its execution are intended to be fairly comprehensive and to indicate in more or less detail the scope of the work. In addition to these drawings, however, the Engineer shall furnish such additional drawings from time to time during the progress of the work as are necessary to make clear or to define in greater detail the intent of the Special Provisions and the contract drawings and the Contractor shall make his or her work conform to all such drawings.

7-08. Additional and Emergency Protection. Whenever, in the opinion of the Engineer, the Contractor has not taken sufficient precautions for the safety of the public or the protection of the works to be constructed under this contract, or of adjacent structures or property which may be injured by the processes of construction on account of such neglect and whenever, in the opinion of the Engineer, an emergency shall arise and immediate action shall be considered necessary in order to protect public or private, personal

or property interest, then and in that event, the Engineer, with or without notice to the Contractor may provide suitable protection to the said interests by causing such work to be done and such material to be furnished as shall provide such protection as the Engineer may consider necessary and adequate.

The cost and expense of such work and material so furnished shall be borne by the Contractor and, if the same shall not be paid on presentation of the bills therefor, then such costs shall be deducted from any amounts due or to become due the Contractor.

The performance of such emergency work under the direction of the Engineer shall in no way relieve the Contractor from any damages which may occur during or after such precaution has been taken by the Engineer.

7-09. Suspension of Work. The City may at any time suspend the work or any part thereof by giving five (5) days written notice to the Contractor. The work shall be resumed by the Contractor within ten (10) days after the date fixed in the written notice from the City to the Contractor so to do. The City shall reimburse the Contractor for expense incurred by the Contractor in connection with the work under this contract as a result of such suspension.

If the work, or any part thereof, shall be stopped by the notice in writing aforesaid and if the City does not give notice in writing to the Contractor to resume work at a date within ten (10) days of the date fixed in the written notice to suspend, then the Contractor may abandon that portion of the work so suspended and he or she will be entitled to the estimates and payments for all work done on the portions so abandoned, if any, plus 5 percent of the value of the work so abandoned, to compensate for loss of overhead, plant expense and anticipated profit.

7-10. Right of City to Terminate Contract. If the Contractor should be adjudged a bankrupt, or if he or she should make a general assignment for the benefit of his or her creditors, or if a receiver should be appointed on account of his or her insolvency, or if he or she should persistently or repeatedly refuse or should fail, except in cases for which extension of time is provided, to supply sufficient properly skilled workmen or proper materials, or if he or she should fail to make prompt payments to subcontractors or for material or labor, or persistently disregard laws, ordinances or the instructions of the Engineer, or otherwise be guilty of a substantial violation of any provision of the contract, then the City, upon the certificate of the Engineer that sufficient cause exists to justify such action, may, without prejudice to any other right or remedy and after giving the Contractor seven days written notice, terminate the employment of the Contractor and take possession of the premises and of all materials, tools and appliances and finish the work by whatever method the City may deem expedient. In such case, the Contractor shall not be entitled to receive any further payment until the work is finished. If the unpaid balance of the contract price shall exceed the expense of finishing the work, including compensation for additional managerial and administrative services, such excess shall be paid to the Contractor. If such expense shall exceed such unpaid balance, the Contractor shall pay the difference to the City. The expense incurred by the City as herein provided and the damage incurred through the Contractor's default, shall be certified by the Engineer. In the event that a termination under this section is determined to be improper, such termination shall be deemed a constructive termination for convenience taken pursuant to section 7-12 below.

7-11. Use of Completed Portions. The City shall have the right to take possession of and use any completed or partially completed portions of the work, notwithstanding the time for completing the entire work or such portions which may not have expired; but such taking possession and using shall not be deemed an acceptance of any work not completed in accordance with the contract documents. If such prior use increases the cost of or delays the work, the Contractor shall be entitled to such extra compensation, or extension of time or both, as the Engineer may determine.

7-12. **Right of City to Terminate Contract for Convenience**. The City may terminate performance of the work called for by the contract documents in whole or, from time to time, in part, if the City determines that a termination is in the City's best interest. The Contractor shall terminate all or any part of the work upon delivery to the Contractor of a notice of termination specifying that the termination is for the convenience of the City, the extent of termination, and the effective date of such termination. After receipt

of notice of termination, and except as directed by the Engineer, the Contractor shall, regardless of any delay in determining or adjusting any amounts due under this termination for convenience clause, immediately proceed with the following obligations:

Stop work as specified in the notice.

Complete any work specified in the notice of termination in a least cost/shortest time manner while still maintaining the quality called for under the contract documents.

Leave the property upon which the Contractor was working and upon which the facility (or facilities) forming the basis of the contract documents is situated in a safe and sanitary manner such that it does not pose any threat to the public health or safety.

Terminate all subcontracts to the extent that they relate to the portions of the work terminated.

Place no further subcontracts or orders, except as necessary to complete the continued portion of the contract.

Submit to the Engineer, within ten (10) calendar days from the effective date of the notice of termination, all of the usual documentation called for by the contract documents to substantiate all costs incurred by the Contractor for labor, materials and equipment through the effective date of the notice of termination. Any documentation substantiating costs incurred by the Contractor solely as a result of the City's exercise of its right to terminate this Contract pursuant to this clause, which costs the contractor is authorized under the contract documents to incur, shall: (1) be submitted to and received by the Engineer no later than 30 calendar days after the effective date of the notice of termination; (2) describe the costs incurred with particularity; and (3) be conspicuously identified as “Termination Costs occasioned by the City's Termination for Convenience.”

Termination of the contract shall not relieve Surety of its obligation for any just claims arising out of or relating to the work performed. In the event that the City exercises its right to terminate this contract pursuant to this clause, the City shall pay the Contractor, upon the Contractor's submission of the documentation required by this clause and other applicable provisions of the contract documents, the following amounts:

All actual reimbursable costs incurred according to the provisions of this contract.

A reasonable allowance for profit on the cost of the Work performed, provided Contractor establishes to the satisfaction of the Engineer that it is reasonably probable that Contractor would have made a profit had the contract been completed and provided further, that the profit allowed shall in no event exceed fifteen (15%) percent of the costs.

A reasonable allowance for Contractor's administrative costs in determining the amount payable due to termination of the contract under this Article.

Notwithstanding any other provision of this Article, when immediate action is necessary to protect life and safety or to reduce significant exposure or liability, the City may immediately order Contractor to cease work on the project until such safety or liability issues are addressed to the satisfaction of the City or the contract is terminated.

SECTION 8. WORKMANSHIP, MATERIALS and EQUIPMENT

8-01. General Quality. Materials and equipment shall be new and of a quality equal to that specified or approved. Work shall be done and completed in a thorough and workmanlike manner.

8-02. Quality in Absence of Detailed Specifications. Whenever under this contract it is provided that the Contractor shall furnish materials or manufactured articles or shall do work for which no detailed specifications are set forth, the materials or manufactured articles shall be of the best grade in quality and workmanship obtainable in the market from firms of established good reputation, or, if not ordinarily carried in stock, shall conform to the usual standards for first-class materials or articles of the kind required, with due consideration of the use to which they are to be put. In general, the work performed shall be in full conformity and harmony with the intent to secure the best standard of construction and equipment of the work as a whole or in part.

8-03. Materials and Equipment Specified by Name. Whenever any material or equipment is indicated or specified by patent or proprietary name or by the name of the manufacturer, such specification shall be considered as used for the purpose of describing the material or equipment desired and shall be considered as followed by the words "or approved equal". The Contractor may offer any material or equipment which shall be equal in every respect to that specified, provided that written approval first is obtained from the Engineer.

8-04. Source of Materials. Price, fitness and quality being equal, preference shall be given by the Contractor for supplies grown, manufactured or produced in the State of California and, next, for such products partially produced in this State in accordance with Government Code Section 4332.

8-05. Storage of Materials. Materials shall be so stored to ensure the preservation of their quality and fitness for the work. They shall be so located and disposed that prompt and proper inspection thereof may be made.

8-06. Drawings, Samples and Tests. As soon as possible after execution of the contract, the Contractor shall submit to the Engineer, in quintuplicate, sufficient information including, if necessary, assembly and detail drawings to demonstrate fully that the equipment and materials to be furnished comply with the provisions and intent of these Special Provisions and Drawings. If the information thus submitted indicates the equipment or materials is acceptable, the Engineer will return one copy stamped with his or her approval; otherwise, one copy will be returned with an explanation of why the equipment or material is unsatisfactory. The Contractor shall have no claims for damages or for extension of time on account of any delay due to the revision of drawings or rejection of material. Fabrication or other work performed in advance of approval shall be done entirely at the Contractor's risk. After approval of equipment or material, the Contractor shall not deviate in any way from the design and specifications given without the written consent of the Engineer.

When requested by the Engineer, a sample or test specimens of the materials to be used or offered for use in connection with the work shall be prepared at the expense of the Contractor and furnished by him or her in such quantities and sizes as may be required for proper examination and tests, with all freight charges prepaid and with information as to their sources.

All samples shall be submitted before shipment and in ample time to permit the making of proper tests, analyses, or examination before the time at which it is desired to incorporate the material into the work. All tests of materials furnished by the Contractor shall be made by the Engineer. Samples shall be secured and tested whenever necessary to determine the quality of the material.

SECTION 9. PROSECUTION OF WORK

9-01. Equipment and Methods. The work under this contract shall be prosecuted with all materials, tools, machinery, apparatus and labor and by such methods as are necessary to the complete execution of everything described, shown, or reasonably implied. If at any time before the beginning or during the progress of the work, any part of the Contractor's plant or equipment, or any of his or her methods of execution of the work, appear to the Engineer to be unsafe, inefficient, or inadequate to insure the required quality or the rate of progress of the work, he or she may order the Contractor to increase or improve his or her facilities or methods and the Contractor shall comply promptly with such orders; but, neither compliance

with such orders nor failure of the Engineer to issue such orders shall relieve the Contractor from his or her obligation to secure the degree of safety, the quality of the work and the rate of progress required of the Contractor. The Contractor alone shall be responsible for the safety, adequacy and efficiency of his or her plant, equipment and methods.

9-02. Time of Completion. The Contractor shall promptly begin the work under this contract and shall complete and make ready for full use all portions of the project made the subject of this contract within the time set forth in the agreement bound herewith.

9-03. Avoidable Delays. Avoidable delays in the prosecution or completion of the work shall include all delays which might have been avoided by the exercise of care, prudence, foresight and diligence on the part of the Contractor. The City will consider as avoidable delays within the meaning of this contract (1) delays in the prosecution of parts of the work, which may in themselves be unavoidable, but do not necessarily prevent or delay the prosecution of other parts of the work nor the completion of the whole work within the time herein specified, (2) reasonable loss of time resulting from the necessity of submitting plans to the Engineer for approval and from the making of surveys, measurements, inspections, and testing and (3) such interruptions as may occur in the prosecution of the work on account of the reasonable interference of other contractors employed by the City which do not necessarily prevent the completion of the whole work within the time herein specified.

9-04. Unavoidable Delays. Unavoidable delays in the prosecution or completion of the work under this contract shall include all delays which may result, through cause beyond the control of the Contractor and which he or she could not have provided against by the exercise of care, prudence, foresight and diligence. Orders issued by the City changing the amount of work to be done, the quantity of material to be furnished or the manner in which the work is to be prosecuted and unforeseen delays in the completion of the work of other contractors under contract with the City will be considered unavoidable delays, so far as they necessarily interfere with the Contractor's completion of the whole of the work. Delays due to normally adverse weather conditions will not be regarded as unavoidable delays. However, truly abnormal amounts of rainfall, temperatures or other weather conditions for the location of the work and time of year may be considered as unavoidable delays if those conditions necessarily cause a delay in the completion of the work.

9-05. Notice of Delays. Whenever the Contractor foresees any delay in the prosecution of the work and, in any event, immediately upon the occurrence of any delay which the contractor regards as an unavoidable delay, he or she shall notify the Engineer in writing of the probability of the occurrence of such delay and its cause, in order that the Engineer may take immediate steps to prevent, if possible, the occurrence or continuance of the delay, or, if this cannot be done, may determine whether the delay is to be considered avoidable or unavoidable, how long it continues and to what extent the prosecution and completion of the work are to be delayed thereby.

9-06. Extension of Time. Should any delays occur which the Engineer may consider unavoidable, as herein defined, the Contractor shall, pursuant to his or her application, be allowed an extension of time proportional to said delay or delays, beyond the time herein set forth, in which to complete this contract; and liquidated damages for delay shall not be charged against the Contractor by the City during an extension of time granted because of unavoidable delay or delays.

Any claim by Contractor for a time extension based on unavoidable delays shall be based on written notice delivered to the Engineer within 15 days of the occurrence of the event giving rise to the claim. Failure to file said written notice within the time specified shall constitute a waiver of said claim. Notice of the full extent of the claim and all supporting data must be delivered to the Engineer within 45 days of the occurrence unless the Engineer specifies in writing a longer period. All claims for a time extension must be approved by the Engineer and incorporated into a written change order.

9-07. Unfavorable Weather and Other Conditions. During unfavorable weather and other conditions, the Contractor shall pursue only such portions of the work as shall not be damaged thereby. No portions of the work whose satisfactory quality or efficiency will be affected by any unfavorable conditions shall be

constructed while these conditions remain, unless, by special means or precautions approved by the Engineer, the Contractor shall be able to overcome them.

The Contractor shall be granted a time extension of one day for each unfavorable weather day which prevents him or her from placing concrete forms or placing and finishing concrete or asphalt concrete. Such unfavorable weather day is defined as a rain day where precipitation prevents the contractor from performing the work more than four (4) continuous hours within the authorized work period or a temperature day where the ambient temperature is below that specified for the placement of materials associated with the controlling work item for more than four (4) continuous work hours of the authorized work period.

9-08. Saturday, Sunday, Holiday and Night Work. No work shall be done between the hours of 6 p.m. and 7 a.m., nor on Saturdays, Sundays or legal holidays except such work as is necessary for the proper care and protection of work already performed, or except in cases of absolute necessity and in any case only with the permission of the Engineer.

It is understood, however, that night work may be established as a regular procedure by the Contractor if he or she first obtains the written permission of the Engineer and that such permission may be revoked at any time by the Engineer if the Contractor fails to maintain at night adequate force and equipment for reasonable prosecution and to justify inspection of the work.

9-09. Hours of Labor. Eight (8) hours of labor shall constitute a legal day's work and the Contractor or any subcontractor shall not require or permit more than eight hours of labor in a day from any person employed by him or her in the performance of the work under this contract, unless paying compensation for all hours worked in excess of eight (8) hours per day at not less than 1½ times the basic rate of pay. The Contractor shall forfeit to the City, as a penalty, the sum of twenty-five dollars ($25.00) for each workman employed in the execution of the contract by him or her or by any subcontractor, for each calendar day during which such laborer, workman, or mechanic is required or permitted to labor more than eight hours in violation of the provisions of Section 1810 to 1816, inclusive, (Article 3, Chapter 1, Part 7, Division 2) of the Labor Code of the State of California and any acts amendatory thereof.

SECTION 10. PAYMENT

10-01. Certification by Engineer. All payments under this contract shall be made upon the presentation of certificates in writing from the Engineer and shall show that the work covered by the payments has been done and the payments thereof are due in accordance with this contract.

10-02. Progress Estimates and Payment. The Engineer shall, within the first seven (7) days of each month, make an estimate of the value of the work performed in accordance with this contract during the previous calendar month.

The first estimate shall be of the value of the work satisfactorily completed in place and meeting the requirements of the contract. And every subsequent estimate, except the final estimate, shall be of the value of the work satisfactorily completed in place since the last preceding estimate was made; provided, however, that should the Contractor fail to adhere to the program of completion fixed in this contract, the Engineer shall deduct from the next and all subsequent estimates the full calculated accruing amount of the liquidated damages to the date of said estimate, until such time as the compliance with the program has been restored.

The estimate shall be signed by the Engineer and, after approval, the City shall pay or cause to be paid to the Contractor in the manner provided by law, an amount equal to 95 percent of the estimated value of the work satisfactorily performed and complete in place.

10-03. Substitution of Securities.

1. At such times that Public Contract Code Section 22300 is in effect Contractor may propose the substitution of securities of at least equal market value for any moneys to be withheld to ensure performance

under the Contract. Market value shall be determined as of the day prior to the date such substitution is to take place. Such substitution shall be made at the request and expense of the Contractor. The securities shall be one or more of the following types:

(a) Bonds or interest-bearing notes or obligations of the United States, or those for which the faith and credit of the United States are pledged for the payment of principal and interest.

(b) Bonds or interest-bearing notes on obligations that are guaranteed as to principal and interest by a federal agency of the United States.

(c) Bonds of the State of California, or those for which the faith and credit of the State of California are pledged for the payment of principal and interest.

(d) Bonds or warrants, including, but not limited to, revenue warrants, of any county, city, metropolitan water district, California water district, California water storage district, irrigation district in the State of California, municipal utility district, or school district of the State of California, which are rated by Moody's or Standard and Poor as A or better.

(e) Bonds, consolidated bonds, collateral trust debentures, consolidated debentures, or other obligations issued by federal land banks or federal intermediate credit banks established under the Federal Farm Loan Act, as amended; debentures and consolidated debentures issued by the Central Bank for Cooperatives and banks for cooperatives established under the Farm Credit Act of 1933, as amended; bonds, or debentures of the Federal Home Loan Bank Board established under the Federal Home Loan Bank Act; and stock, bonds, debentures and other obligations of the Federal National Mortgage Association established under the National Housing Act as amended and bonds of any Federal Home Loan Mortgage Corporation.

(f) Commercial paper of "prime" quality as defined by a nationally recognized organization which rates such securities. Eligible paper is further limited to issuing corporations: (1) organized and operating within the United States; (2) having total assets in excess of five hundred million dollars ($500,000,000); and (3) approved by the Pooled Money Investment Board of the State of California. Purchases of eligible commercial paper may not exceed 180 days' maturity, nor represent more than 10 percent of the outstanding paper of an issuing corporation.

(g) Bills of exchange or time drafts on and accepted by a commercial bank, otherwise known as bankers acceptances, which are eligible for purchase by the Federal Reserve System.

(h) Certificates of deposits issued by a nationally or state-chartered bank or savings and loan association.

(i) The portion of bank loans and obligations guaranteed by the United States Small Business Administration or the United States Farmers Home Administration.

(j) Student loan notes insured under the Guaranteed Student Loan Program established pursuant to the Higher Education Act of 1965, as amended (20 U.S.C. 1001, et seq.) and eligible for resale to the Student Loan Marketing Association established pursuant to Section 133 of the Education Amendments of 1972, as amended (20 U.S.C. 1087-2).

(k) Obligations issued, assumed or guaranteed by International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, or the Government Development Bank of Puerto Rico.

(l) Bonds, debentures and notes issued by corporations organized and operating within the United States. Such securities eligible for substitution shall be within the top three ratings of a nationally recognized rating service.

2. The securities shall be deposited with City or with any commercial bank as escrow agent, who shall arrange for transfer of such securities to the Contractor upon satisfactory completion of the contract. Any interest accrued or paid on such securities shall belong to the Contractor and shall be paid upon satisfactory completion of the contract.

The market value of the securities deposited shall at all times be maintained in an amount at least equal, in the sole judgment of City, to the moneys to be withheld pursuant to the Contract Documents to ensure performance of the Contract. In order to comply with this condition, Contractor shall deposit additional securities as necessary upon request by City or the escrow agent.

3. Upon acceptance of any Proposal that includes substituting securities for amounts withheld to ensure performance, a separate escrow agreement satisfactory in form and substance to City shall be prepared and executed by City, the Contractor and the escrow agent, which may be City. The escrow agreement shall specify, among other matters, value of securities to be deposited; procedures for valuing the securities and for adding or withdrawing securities to maintain the market value of the deposited securities at least equal to the amount of moneys which would otherwise be withheld; the terms and conditions of conversion to cash in case of the default by the Contractor; and terms, conditions and procedure for termination of the escrow. City shall have no obligation to enter any such Agreement that does not provide the City with the unilateral right to convert securities to cash and to gain immediate possession of the cash.

10-04. Acceptance. The work must be accepted by vote of the City Council of the City of Ukiah when the whole shall have been completed satisfactorily. The Contractor shall notify the Engineer, in writing, of the completion of the work, whereupon the Engineer shall promptly, by personal inspection, satisfy himself as to the actual completion of the work in accordance with the terms of the contract and shall thereupon recommend acceptance by the City Council.

10-05. Final Estimate and Payment. The Engineer shall, as soon as practicable after the final acceptance of the work done under this contract, make a final estimate of the amount of work done thereunder and the value thereof.

Such final estimate shall be signed by the Engineer, and after approval, the City shall pay or cause to be paid to the Contractor, in the manner provided by law, the entire sum so found to be due hereunder, after deducting therefrom all previous payments and such other lawful amounts as the terms of this contract prescribe.

In no case will final payment be made in less than thirty-five (35) days after the filing of the notice of completion with the County Recorder.

10-06. Delay Payments. Should any payment due the Contractor or any estimate be delayed, through fault of the City beyond the time stipulated, such delay shall not constitute a breach of contract or be the basis for a claim for damages, but the City shall pay the Contractor interest on the amount of the payment at the rate of 6 percent per annum for the period of such delay. The terms for which interest will be paid shall be reckoned, in the case of any monthly or progress payment, from the twentieth day of the month next succeeding the month in which the work was performed to the date of payment of the estimate; and in the case of the final estimate, from the forty-fifth day after acceptance to the date of payment of the final estimate.

The date of payment of any estimate shall be considered the day on which the payment is offered or mailed as evidenced by the records of the Treasurer of the City. If interest shall become due on any delayed payment, the amount thereof, as determined by the City, shall be added to a succeeding payment. If the interest shall become due on the final payment, it shall be paid on a supplementary voucher to interest or any sum or sums which, by the terms of this contract, the City is authorized to reserve or retain.

10-07. Extra Work and Work Omitted. Whenever corrections, alterations, or modifications of the work under this contract ordered by the Engineer and approved by the City increase the amount of work to be done, such added work shall be known as "extra work"; and when such corrections, alterations, or modifications decrease the amount of work to be done, such subtracted work shall be known as "work omitted".

When the Contractor considers that any changes ordered involve extra work, he or she shall immediately notify the Engineer in writing and subsequently keep him or her informed as to when and where extra work is to be performed and shall make claim for compensation therefor each month not later than the first day of the month following that in which the work claimed to be extra work was performed and he or she shall submit a daily complete statement of materials and labor used and expenses incurred on account of extra work performed, showing allocation of all materials, labor and expenses.

All such claims shall state the date of the Engineer's written order and the date of approval by the City authorizing the work on account of which claim is made. Unless such notification is made in writing within the time specified and unless complete statements of materials used and expenses incurred on account of such extra work are furnished as above required, the Contractor shall not be entitled to payment on account of extra work and Contractor shall be deemed to have waived the right to make any future claims for compensation for such extra work.

When changes decrease the amount of work to be done, they shall not constitute a claim for damages on account of anticipated profits on the work that may be omitted.

10-08. Compensation for Extra Work or Work Omitted. Whenever corrections, additions, or modifications in the work under this contract change the amount of work to be done or the amount of compensation due the Contractor, excepting increases or decreases in contract items having unit contract prices for each measurable quantity installed in place, and such changes have been ordered in writing by the Engineer and approved by the City prior to the Contractor performing the extra work, then a price may be agreed upon. Failing such an agreement in price, the Contractor shall be compensated for performing extra work pursuant to the provisions of Section 4-1.03 D, "Extra Work", and Section 9-1.03,"Force Account Payment" of the Standard Specifications.

This method of determining the price of work shall not apply to the performance of any work which is required or reasonably implied to be performed or furnished under this contract.

10-09. Compensation to the City for Extension of Time. In case the work called for under this contract is not completed within the time limit stipulated herein, the City shall have the right as provided hereinabove, to extend the time of completion thereof. If the time limit be so extended, the City shall have the right to charge to the Contractor and to deduct from the final payment for the work the actual cost to the City of engineering, inspection, superintendence and other overhead expenses which are directly chargeable to the contract and which accrue during the period of such extension, except that the cost of final unavoidable delays shall not be included in such charges.

10-10. Liquidated Damages for Delay. It is agreed by the parties to the contract that time is of the essence and that, in case all the work is not completed before or upon the expiration of the time limit as set forth, damage, other than those cost items identified in section 10-09, will be sustained by the City and that it is and will be impracticable to determine the actual amount of damage by reason of such delay; and it is therefore agreed that the Contractor will pay to the City the sum of five hundred dollars ($500.00) per day for each and every calendar day's delay beyond the time prescribed.

In compliance with the provisions of California Public Contract Code § 7102, the Contractor will be compensated for damages incurred due to delays in completing the work due solely to the fault of the City, where such delay is unreasonable under the circumstances and not contemplated by the parties. The Contractor and City agree that determining actual damages is impracticable and extremely difficult. As such, the Contractor shall be entitled to the appropriate time extension and to payment of liquidated damages in the sum of $250 per day of delay in excess of the time specified for the completion of the work. Such amount shall constitute the only payment allowed and shall necessarily include all overhead (direct or indirect), all profit, all administrative costs, all bond costs, all labor, materials, equipment and rental costs, and any other costs, expenses and fees incurred or sustained as a result of such delay. The Contractor expressly agrees to be limited solely to the liquidated damages for all such delays as defined in this subsection.

SECTION 11. MISCELLANEOUS

11-01. Notice. Whenever any provision of the contract documents requires the giving of written notice, it shall be deemed to have been validly given if delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended, or if delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice. If mailed, the notice shall be deemed received on the date of delivery stated in the return receipt.

11-02. Computation of Time. When any period of time is referred to in the Contract Documents by days, it shall be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day shall be omitted from the computation.

11-03. Claims Procedure

Contractor shall timely comply with all notices and requests for changes to the contract time or contract price, as a prerequisite to filing any claim governed by this Article. The failure to timely submit a notice of delay or notice of change, or to timely request a change to the contract time or contract price, or to timely provide any other notice or request required herein shall constitute a waiver of the right to further pursue the claim under the contract or at law.

A. **Intent.** Effective January 1, 1991, Section 20104 et seq., of the California Public Contract Code prescribes a process utilizing informal conferences, non-binding judicial supervised mediation, and judicial arbitration to resolve disputes on construction claims of $375,000 or less. Effective January 1, 2017, Section 9204 of the Public Contract Code prescribes a process for negotiation and mediation to resolve disputes on construction claims. The intent of this Article is to implement Sections 20104 et seq. and Section 9204 of the California Public Contract Code. This Article shall be construed to be consistent with said statutes.

B. **Claims.** For purposes of this Article, “Claim” means a separate demand by the Contractor, for (A) a time extension, (B) payment of money or damages arising from work done by or on behalf of the Contractor pursuant to the Contract, or (C) an amount the payment of which is disputed by the District. Claims governed by this Article may not be filed unless and until the Contractor completes all procedures for giving notice of delay or change and for the requesting of a time extension or change order. Claims governed by this Article must be filed no later than the date of final payment. The claim shall be submitted in writing to the District and shall include on its first page the following in 16 point capital font: “THIS IS A CLAIM.” Furthermore, the claim shall include the documents necessary to substantiate the claim. Nothing herein is intended to extend the time limit or supersede notice requirements otherwise provided by contract for the filing of claims, including all requirements pertaining to compensation or payment for extra work, disputed work, and/or changed conditions. Failure to follow such contractual requirements shall bar any claims or subsequent lawsuits for compensation or payment thereon.

C. **Supporting Documentation.** The Contractor shall submit all claims in the following format:

Summary of claim merit and price, reference Contract Document provisions pursuant to which the claim is made

List of documents relating to claim:

Specifications
Drawings
Clarifications (Requests for Information)
Schedules
Other
Chronology of events and correspondence
Analysis of claim merit
Analysis of claim cost
Time impact analysis in CPM format

If Contractor's claim is based in whole or in part on an allegation of errors or omissions in the Drawings or Specifications for the project, Contractor shall provide a summary of the percentage of the claim subject to design errors or omissions and shall obtain a certificate of merit in support of the claim of design errors and omissions.

D. City's Response. Upon receipt of a claim pursuant to this Article, City shall conduct a reasonable review of the claim and, within a period not to exceed 45 days, shall provide the Contractor a written statement identifying what portion of the claim is disputed and what portion is undisputed. Any payment due on an undisputed portion of the claim will be processed and made within 60 days after the City issues its written statement.

If the City needs approval from its governing body to provide the Contractor a written statement identifying the disputed portion and the undisputed portion of the claim, and the City's governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of a claim sent by registered mail or certified mail, return receipt requested, the City shall have up to three days following the next duly publicly noticed meeting of the City's governing body after the 45-day period, or extension, expires to provide the Contractor a written statement identifying the disputed portion and the undisputed portion.

Within 30 days of receipt of a claim, the City may request in writing additional documentation supporting the claim or relating to defenses or claims the District may have against the Contractor. If additional information is thereafter required, it shall be requested and provided pursuant to this subdivision, upon mutual agreement of City and the Contractor. The City's written response to the claim, as further documented, shall be submitted to the Contractor within 30 days (if the claim is less than $15,000, within 15 days) after receipt of the further documentation, or within a period of time no greater than that taken by the Contractor in producing the additional information or requested documentation, whichever is greater.

E. Meet and Confer. If the Contractor disputes the City's written response, or the City fails to respond within the time prescribed, the Contractor may so notify the City, in writing, either within 15 days of receipt of the City's response or within 15 days of the City's failure to respond within the time prescribed, respectively, and demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand, the City shall schedule a meet and confer conference within 30 days for settlement of the dispute.

F. Mediation. Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the City shall provide the Contractor a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the City issues its written statement. Any disputed portion of the claim, as identified by the Contractor in writing, shall be submitted to nonbinding mediation, with the City and the Contractor sharing the associated costs equally. The City and Contractor shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing, unless the parties agree to select a mediator at a later time.

If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator.

For purposes of this section, mediation includes any nonbinding process, including, but not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

Unless otherwise agreed to by the City and the Contractor in writing, the mediation conducted pursuant to this section shall excuse any further obligation under Public Contract Code Section 20104.4 to mediate after litigation has been commenced.

The mediation shall be held no earlier than the date the Contractor completes the work or the date that the Contractor last performs work, whichever is earlier. All unresolved claims shall be considered jointly in a single mediation, unless a new unrelated claim arises after mediation is completed.

G. Procedures After Mediation. If following the mediation, the claim or any portion remains in dispute, the Contractor must file a claim pursuant to Chapter 1 (commencing with Section 900) and Chapter 2 (commencing with Section 910) of Part 3 of Division 3.6 of Title 1 of the Government Code prior to initiating litigation. For purposes of those provisions, the running of the period of time within which a claim must be filed shall be tolled from the time the Contractor submits his or her written claim pursuant to subdivision (a) until the time the claim is denied, including any period of time utilized by the meet and confer conference.

H. Civil Actions. The following procedures are established for all civil actions filed to resolve claims of $375,000 or less:

Within 60 days, but no earlier than 30 days, following the filing or responsive pleadings, the court shall submit the matter to non-binding mediation unless waived by mutual stipulation of both parties or unless mediation was held prior to commencement of the action in accordance with Public Contract Code section 9204 and the terms of this Contract. The mediation process shall provide for the selection within 15 days by both parties of a disinterested third person as mediator, shall be commenced within 30 days of the submittal, and shall be concluded within 15 days from the commencement of the mediation unless a time requirement is extended upon a good cause showing to the court.

If the matter remains in dispute, the case shall be submitted to judicial arbitration pursuant to Chapter 2.5 (commencing with Section 1141.10) of Title 3 of Part 3 of the Code of Civil Procedure, notwithstanding Section 1114.11 of that code. The Civil Discovery Act of 1986 (Article 3 (commencing with Section 2016) of Chapter 3 of Title 3 of Part 4 of the Code of Civil Procedure) shall apply to any proceeding brought under this subdivision consistent with the rules pertaining to judicial arbitration. In addition to Chapter 2.5 (commencing with Section 1141.10) of Title 3 of Part 3 of the Code of Civil Procedure, (A) arbitrators shall, when possible, be experienced in construction law, and (B) any party appealing an arbitration award who does not obtain a more favorable judgment shall, in addition to payment of costs and fees under that chapter, also pay the attorney's fees on appeal of the other party.

I. Government Code Claims. In addition to any and all contract requirements pertaining to notices of and requests for compensation or payment for extra work, disputed work, construction claims and/or changed conditions, the Contractor must comply with the claim procedures set forth in Government Code Sections 900, et seq. prior to filing any lawsuit against the City. Such Government Code claims and any subsequent lawsuit based upon the Government Code claims shall be limited to those matters that remain unresolved after all procedures pertaining to extra work, disputed work, construction claims, and/or changed conditions have been followed by Contractor. If no such Government Code claim is submitted, or if the prerequisite contractual requirements are not satisfied, no action against the City may be filed. A Government Code claim must be filed no earlier than the date the work is completed or the date the Contractor last performs work on the project, whichever occurs first. A Government Code claim shall be inclusive of all unresolved claims unless a new unrelated claim arises after the Government Code claim is submitted.

J. Non-Waiver. The City's failure to respond to a claim from the Contractor within the time periods described in this Article or to otherwise meet the time requirements of this Article shall result in the claim being deemed rejected in its entirety.

11-04. Litigation and Forum Selection. Contractor and City stipulate and agree that any litigation relating to the enforcement or interpretation of this contract, arising out of Contractor's performance or relating in any way to the work shall be brought in Mendocino County and that venue will lie in Mendocino County.

Except as otherwise expressly provided by law, the parties waive any objections they might otherwise have to the propriety of jurisdiction or venue in the state courts in Mendocino County and agree that California law shall govern any such litigation.

The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto and, in particular but without limitation, the warranties, guaranties and obligations imposed upon the Contractor and all of the rights and remedies available to the City thereunder, shall be in addition to and shall not be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by law or contract, by special warranty or guaranty, or by other provisions of the contract documents and the provisions of this paragraph shall be as effective as if repeated specifically in the contract documents in connection with each particular duty, obligation, right and remedy to which they apply. All warranties and guaranties made in the contract document shall survive final payment and termination or completion of this contract. The City disclaims an express or implied warranty that the plans and specifications identify all site conditions that could affect the time or cost to complete the Work.

11-05. Waiver. The Contractor shall strictly comply with all notices and other contract requirements. Waiver by the City of any failure of the Contractor to comply with any term of the contract, including the notice provisions, shall not be deemed a waiver of a subsequent breach.

TECHNICAL SPECIFICATIONS

SECTION 12. GENERAL INFORMATION

12-01. Location and Scope of Work. All of the work to be performed is within the City of Ukiah and consists of following:

1. Demolition of existing equipment, piping and valves, concrete and various other items in the DAFT and Dewatering areas as shown on the drawings

2. Assembly and installation of a Suspended Air Flotation (SAF) System that was pre-purchased by the Owner

3. Furnishing and installing a container structure to house the Suspended Air Flotation Feed System

4. Furnishing and installation of two Polymer Systems in the existing DAFT Building

5. Installation of 8-inch diameter piping from the Plant Drain Pump Station to a connection point with the 8-inch Washwater Piping

6. Furnishing and installation of variable speed drives for the existing Washwater Pumps and Primary Scum Pumps

7. Assembly and installation of a Screw Press Dewatering and Polymer Blending System that was pre-purchased by the Owner

8. Construction of a concrete containment area for dewatered sludge cake

9. Furnishing and installing all mechanical, structural, electrical and instrumentation and controls associated with above items and as shown on the drawings

General locations of the work are at the Ukiah WWTP, 300 Plant Road, Ukiah, CA 95482.

The Contractor should familiarize himself with the local conditions of the project sites. Failure to do so will in no way relieve him of the responsibility for performing any of the work or operations required as a part of this contract. Further information regarding the work or these specifications can be obtained from Seth Strader at (707) 463-6233.

12-02. Arrangement of Technical Specifications. The Technical Specifications are arranged in sections covering the various phases of work as follows:

Section No.	Title
12	General Information
13	Construction Details (Not Used)
14	Exclusions from General Conditions
15	Amendments to General Conditions

12-03. Arrangement of Plans. General locations and linear quantities of the work are shown in Appendix "A". A map will be provided to the successful bidder showing the exact locations of the work to be done.

12-04. Business Licenses. The Contractor and any subcontractors shall each secure and maintain a valid City of Ukiah Business License prior to the start of any portion of the work.

12-05. Permits. The Contractor shall provide, procure, and pay for all permits required to complete this work.

12-06. Standard Specifications and Standard Plans. The Standard Specifications and Standard Plans of the California State Department of Transportation, 2018, are hereby made a part of these Special Provisions and are hereinafter referred to as "California Standard Specifications" and "California Standard Plans."

Whenever in the California Standard Specifications and the California Standard Plans the following terms are used, they shall be understood to mean and refer to the following:

Department of Transportation - The City Council.

Director of Public Works - The City of Ukiah Director of Public Works.

Engineer - The Engineer, designated by the City Council, acting either directly or through properly authorized agents, such agents acting within the scope of the particular duties entrusted to them.

Laboratory - The designated laboratory authorized by the City of Ukiah to test materials and work involved in the contract.

State - The City of Ukiah

Other terms appearing in the California Standard Specifications and the California Standard Plans shall have the intent and meaning specified in Section I, Definition of Terms of the California Standard Specifications.

In case of discrepancy between the contract documents, the order of precedence from the highest to lowest is as follows:

1. (City) Special Provisions
2. (City) Project Plans
3. City Standard Plans and Details
4. California Standard Plans
5. California Standard Specifications

12-07. Temporary Facilities. All temporary facilities are the responsibility of the Contractor. The removal of said facilities shall be the responsibility of the Contractor. The Contractor shall be responsible for any and all damages to existing facilities which are a result of the work.

12-08. Public Convenience and Safety. The Contractor shall conduct operations so as to cause the least possible obstruction and inconvenience to public traffic. The Contractor shall, at his or her expense, furnish such flag persons and furnish, erect, construct and maintain such fences, barriers, lights, signs, detours, pedestrian walkways, driveway ramps and bridging as may be necessary to give adequate warning to the public that work is in progress and that dangerous conditions exist, to provide access to abutting properties and to permit the flow of pedestrian and vehicular traffic to safely and expeditiously pass the work.

12-09. Maintaining Traffic. Attention is directed to Section 7-1.08, "Public Convenience," 7-1.09, "Public Safety," 7-1.092, "Lane Closure," and 7-1.095, "Flagging Costs," of the California Standard Specifications.

Streets shall be open to through vehicular traffic during non-working hours. All public traffic shall be permitted to pass through the work with as little inconvenience and delay as possible.

Full costs for "Maintaining Traffic", including "Flagging Costs", shall be considered as included in the various items of work and no additional compensation will be made.

12.10. Stream Pollution. The Contractor shall exercise every reasonable precaution to prevent muddying or silting of live streams, and the Contractor's attention is called to the fact that the terms of this contract do not relieve him or her of responsibility for compliance with Sections 5650 and 12015 of the Fish and Game Code or other applicable statutes relating to pollution prevention or abatement.

12-11. Warranties. Unless otherwise indicated, the Contractor shall warrant all materials provided and work performed under this contract for a period of one year from the date of final acceptance. He shall replace promptly and at his own expense any materials and/or workmanship which fail during this warranty period.

12-12. Utilities. No water, sewer or electrical services will be provided by the owner. It is the Contractor's sole responsibility to arrange such services as necessary.

12-13. Preconstruction Conference. A preconstruction conference will be held before any work will be allowed to commence. This meeting will cover inspection, schedule for work, and among other items, the responsibilities and procedures of each of the interested parties to assure that the project will be completed in accordance with the contract documents.

12-14. Safety Requirements. The Contractor shall comply with all pertinent provisions of the Department of Labor "Safety and Health Regulations for Construction (29 FCS Part 1518, 36 CFR 7340)", with additions or modifications thereto, in effect during construction of this project.

SECTION 13 - CONSTRUCTION DETAILS (NOT USED)

SECTION 14. EXCLUSIONS FROM GENERAL CONDITIONS

14-01. Provisions to be Excluded from General Conditions. The following designated provisions of the General Conditions are hereby determined to be inapplicable to the proposed work and, therefore, are hereby excluded from the terms of the Notice to Bidders, Proposal, Agreement and other contract documents as though entirely omitted from said General Conditions:

Section 6-02. Office at the Site

Section 7-03. Surveys

No other exclusions.

SECTION 15. AMENDMENTS TO GENERAL CONDITIONS

15-01. Sections of General Conditions to be Amended.

The following designated sections of the Special Provisions are hereby amended to read as follows:

No amendments.

CITY OF UKIAH
MENDOCINO COUNTY, CALIFORNIA

PROPOSAL

FOR
THICKENING AND DEWATERING IMPROVEMENTS
Specification No. 23-02

The undersigned, as bidder,

declares that he or she has examined thoroughly all of the contract documents herein contained, that this proposal is made without collusion with any other person, firm or corporation and that all laws and ordinances relating to the interest of public officers in this contract have been complied with in every respect.

AND he or she proposes and agrees, if this proposal is accepted,

1) that he or she will contract with the City of Ukiah, Mendocino County, California, in the form of the copy of the agreement herein contained

    a) to provide all necessary machinery, tools, apparatus and other means of construction;

    b) to furnish all materials;

    c) to provide all superintendence, overhead expenses and all labor and expenses of whatever nature necessary to complete the job in conformity with the specifications and drawings and other contract provisions herein or reasonably implied hereby or as necessary to complete the work in the manner and within the time named herein and according to the requirements and to the reasonable satisfaction of the City Engineer;

    d) to pay all charges of freight transportation and hauling;

2) that he or she indemnifies the City against any loss or damage arising from any act of the undersigned as Contractor; and

3) that he or she will accept as full payment therefor the following sums:

BIDDING SCHEDULE

In the case of any discrepancy between the unit price and the total set forth for the item, the unit price shall prevail; provided, however, that if the amount set forth as a unit price is ambiguous, unintelligible or uncertain for any reason, or is omitted, or in the case of lump sum items, is not the same amount as the entry in the "Total" column, then the amount set forth in the "Total" column for the item shall prevail in accordance with the following:

As to lump sum items, the amount set forth in the "Total" column shall be the unit price;

As to unit basis items, the amount set forth in the "Total" column shall be divided by the estimated quantity for the item and the price thus obtained shall be the unit price.

The Total Base Bid shall be the sum of the items in the "Total" column. In case of discrepancy between the sum of the items in the "Total" column and the amount entered as Total Base Bid, the sum of the "Total" column items shall prevail. The bid comparison will be based on the sum of the items in the "total" column for each bidder.

The Unit prices for the various Construction Items below include all costs associated with the General Conditions, Special Provisions, Requirements of the Construction Contract, and represent the total, complete, in-place cost for each specific Construction Item in accordance with the Construction Documents, including all elements, work components, accessories, and connections, shown in applicable details or required to yield a complete, sound and functional component or system appropriate for its intended function, whether or not such is specifically described or listed in any description of measurement or payment. The total amount of the Construction items below shall represent the total and complete cost of the fully functional Project. All work not specifically listed below be required to complete the work of the various construction items and the cost of such shall be considered as included throughout the various unit prices indicated.

Lowest bid will be based on the lowest Base Bid.

BIDDER'S BOND

KNOW ALL MEN BY THESE PRESENTS,

That we, _____

_____, as PRINCIPAL and

_____

_____, as SURETY,

are held and firmly bound unto the City of Ukiah in the penal sum of 10 PERCENT OF THE TOTAL AMOUNT OF THE BID of the Principal above named, submitted by said Principal to the City of Ukiah, as the case may be, for the work described below, for the payment of which sum in lawful money of the United States, well and truly to be made, to the City Clerk to which said bid was submitted, we bind ourselves, our heirs, executors, administrators and successors jointly and severally, firmly by these presents. In no case shall the liability of the surety hereunder exceed the sum of $_____

THE CONDITION OF THIS OBLIGATION IS SUCH,

That whereas the Principal has submitted the above mentioned bid to the City of Ukiah, as aforesaid, for certain construction specifically described as follows, for which bids are to be opened at the Office of the City Clerk, Ukiah Civic Center, Ukiah, California, on April 20, 2023 for THICKENING AND DEWATERING IMPROVEMENTS

NOW, THEREFORE, If the aforesaid Principal is awarded the contract and, within the time and manner required under the specifications, after the prescribed forms are presented to him or her for signatures, enters into a written contract, in the prescribed form, in accordance with the bid and files two bonds with the City of Ukiah, one to guarantee faithful performance and the other to guarantee payment for labor and materials, as required by law, then this obligation shall be null and void; otherwise, it shall be and remain in full force and virtue.

CITY OF UKIAH
Mendocino County, California

AGREEMENT

FOR

THICKENING AND DEWATERING IMPROVEMENTS
Specification No. 23-02

THIS AGREEMENT, made this _____ day of _____, 20____, by and between the City of Ukiah, Mendocino County, California, hereinafter called the City and _____ hereinafter called the Contractor,

WITNESSETH:

WHEREAS, the City has caused to be prepared in accordance with law, specifications, drawings and other contract documents for the work herein described and shown and has approved and adopted these contract documents, specifications and drawings and has caused to be published in the manner and for the time required by law a notice to bidders inviting sealed proposals for doing the work in accordance with the terms of this contract and

WHEREAS, the Contractor, in response to the notice to bidders, has submitted to the City a sealed proposal accompanied by a proposal guaranty in an amount of not less than 10 percent of the bid price for the construction of the proposed work in accordance with the terms of this contract and

WHEREAS, the City, in the manner prescribed by law, has publicly opened, examined and canvassed the proposals submitted and as a result has determined and declared the Contractor to be the lowest and best regular responsible bidder for the work and for the sums named in the proposal,

NOW, THEREFORE, THIS AGREEMENT WITNESSETH:

Article 1. Work to be Done and Contract Days Allowed.

That the Contractor shall provide all necessary machinery, tools, apparatus and other means of construction; shall furnish all materials, superintendence, overhead, expenses, all labor and expenses of whatever nature necessary for completion of the work in conformity with the Special Provisions and other contract documents hereto attached and according to such instructions as may be given by the Engineer. The Contractor shall complete the work within three hundred and thirty-five (335) calendar days. Contract days shall be counted starting with the 10th day following receipt of notice that the contract has been executed by the City. Contractor, at his or her option, may begin work prior to start of counting contract days, however, in no event shall the Contractor start work without giving notification to the Engineer at least 72 hours prior to the start of work, without obtaining an encroachment permit from the City, or without having submitted certificates of insurance that have been accepted and approved by the Engineer

Article II. Contract Prices.

That the City shall pay the Contractor the prices stated in the proposal submitted by the Contractor, for complete performance of the contract by the Contractor. The Contractor hereby agrees to accept the prices

as full compensation for all material and appliances necessary to the work, for all labor and use of tools and other implements necessary to execute the work contemplated in this contract; for all loss or damage arising out of the nature of the work or from the action of the elements, or from any unforeseen obstructions or difficulties which may be encountered in the prosecution of the work; for all risks of every description connected therewith; for all expenses of the work, as herein specified; for all liability and other insurance, for all overhead and other expenses incident to the work; all according to the Contract Drawings, the Special Provisions, the Details, the instructions and the requirements of the City.

Article III. Labor Discrimination.

Attention is directed to Section 1735 of the Labor Code, which reads as follows:

> "No discrimination shall be made in the employment of persons upon public works because of the race, color, national origin or ancestry, or religion of such persons and every contractor for public works violating this section is subject to all the penalties imposed for a violation of this chapter."

In connection with the performance of work under this contract, the Contractor agrees as follows:

(a) The Contractor will not willfully discriminate against any employee or an applicant for employment because of race, color, religion, ancestry, or national origin. The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, ancestry, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the awarding authority setting forth the provisions of this Fair Employment Practice section.

(b) The Contractor will send to each labor union or representative of workers with which he or she has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the awarding authority, advising the said labor union or worker's representative of the Contractor's commitments under this section, to employees and applicants for employment.

(c) The Contractor will permit access to his or her records of employment, employment advertisements, application forms and other pertinent data and records by the Fair Employment Practices Commission, City of Ukiah or any other appropriate agency of the State of California designated by the awarding authority, for the purposes of investigation to ascertain compliance with the Fair Employment Practices section of this contract.

(d) A finding of willful violation of the Fair Employment Practices section of this Contract or of the Fair Employment Practices Act shall be regarded by the awarding authority as a basis for determining the Contractor to be not a "responsible bidder" as to future contracts for which such Contractor may submit bids, for revoking the Contractor's pre-qualification rating, if any and for refusing to establish, reestablish or renew a pre-qualification rating for the Contractor.

The City of Ukiah shall deem a finding of willful receipt of written notice from the Fair Employment Practices Act to have occurred upon that it has investigated and determined that the Contractor has violated the Fair Employment Practices Act and has issued an order under Labor Code Section 1426 or obtained an injunction under Labor Code Section 1429.

Upon receipt of such written notice from the Fair Employment Practices Commission, the City shall notify the Contractor that unless he or she demonstrates to the satisfaction of the awarding authority within a stated period that the violation has been corrected, his or her pre-qualification rating will be revoked at the expiration of such period.

(e) The Contractor agrees that should the City determine that the Contractor has not complied with the Fair Employment Practices section of this Contract, then pursuant to Labor Code Section 1735 and 1775 the Contractor shall, as a penalty to the City, forfeit for each calendar day or portion thereof, for each person who was denied employment as a result of such non-compliance, the penalties provided in the Labor Code for violation of prevailing wage rates. Such monies may be recovered from the Contractor. The City may deduct any such damages from any monies due the Contractor.

(f) Nothing contained in this Fair Employment Practices section shall be construed in any manner of fashion so as to prevent the City or the State of California from pursuing any other remedies that may be available at law.

(g) Prior to awarding the Contract, the Contractor shall certify to the awarding authority that he or she has or will meet the following standards for affirmative compliance, which shall be evaluated in each case by the awarding authority:

(1) The Contractor shall provide evidence, as required by the City that he or she has notified all supervisors, foremen and other personnel officers in writing of the content of the anti-discrimination clause and their responsibilities under it.

(2) The Contractor shall provide evidence, as required by the City, that he or she has notified all sources of employees' referrals (including unions, employment agencies, advertisements, Department of Employment) of the content of the anti-discrimination clause.

(3) The Contractor shall file a basic compliance report, as required by the City. Willfully false statements made in such reports shall be punishable as provided by law. The compliance report shall also spell out the sources of the work force and who has the responsibility for determining whom to hire, or whether or not to hire.

(4) Personally, or through his or her representatives, the Contractor shall, through negotiations with the unions with whom he or she has agreements, attempt to develop an agreement which will:

a. Spell out responsibilities for nondiscrimination in hiring, referral, upgrading and training.

b. Otherwise implement an affirmative anti-discrimination program in terms of the unions' specific areas of skill and geography to the end that qualified minority workers will be available and given and equal opportunity for employment.

(5) The Contractor shall notify the City of opposition to the anti-discrimination clause by individuals, firms or organizations during the period of its pre-qualification.

(h) The Contractor will include the provisions of the foregoing paragraphs 1 through 5 in every first tier subcontract so that such provisions will be binding upon each such subcontractor.

The "Fair Employment Practices Certification" must be completed and signed prior to the time of submitting the bid.

Article IV. Parts of the Contract.

That the complete contract consists of the following documents, all of which shall be considered a part of this agreement.

1. Notice to Bidders
2. Wage Rates
3. General Conditions

4. Technical Specifications
5. Proposal
6. Fair Employment Practices Certification
7. Agreement
8. Contract Bonds
9. Contract Drawings and Construction Details
10. Standard Drawings
11. Indemnification Agreement

INDEMNIFICATION AGREEMENT

This Indemnification Agreement is made and entered in Ukiah, California, on _____, 20___, by and between the City of Ukiah (Ukiah) and _____ (Contractor).

Contractor is

_____

_____ for Ukiah.

As a condition of issuing the work order, attached hereto, Ukiah requires assurance that Contractor will protect Ukiah from damage or damage claims which arise from its performance of the work.

Accordingly, Contractor agrees as follows:

1. **Indemnification**. Contractor shall indemnify and hold harmless Ukiah and its officers, agents, and employees from and against any claim, loss, or damage, including the legal and other costs of defending against any claim of damage or loss which arises out of the Contractor's negligent or wrongful performance under the work order attached hereto, except for claims, losses, or damages resulting from the sole and exclusive negligence or other wrongful conduct of Ukiah or its officers, agents and employees.

TITLE: _____

CITY OF UKIAH
Mendocino County, California

PERFORMANCE BOND

BOND No._____

KNOW ALL PERSONS BY THESE PRESENTS:

THAT WHEREAS, the City of Ukiah, organized and operating under the laws of the State of California, (hereinafter referred to as the "City") has awarded to _____, (hereinafter referred to as the "Contractor") an agreement for Contract No. _____ (hereinafter referred to as the "Project").

WHEREAS, the work to be performed by the Contractor is more particularly set forth in the Contract for the Project dated _____, (hereinafter referred to, together with all attachments and exhibits thereto, as "Contract Documents"), the terms and conditions of which are expressly incorporated herein by reference; and

WHEREAS, the Contractor is required by the Contract Documents to perform the terms thereof and to furnish a bond for the faithful performance of said Contract Documents.

NOW, THEREFORE, we, _____, the undersigned Contractor and _____, as Surety, a corporation organized and duly authorized to transact business under the laws of the State of California, are held firmly bound until the City in the sum of _____ ($_____), for which amount well and truly to be made, we bind ourselves, our heirs ,executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH that, if the Contractor, his or its heirs, executors, administrators, successors or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions and agreements in the Contract Documents and any alteration thereof made as therein provided, on its part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their intent and meaning; and shall faithfully fulfill all obligations; and shall indemnify and save harmless the City, its officials, officers, employees, and authorized volunteers, as stipulated in said Contract Documents, then this obligation shall become null and void; otherwise it shall be and remain in full force and effect.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees including reasonable attorneys' fees, incurred by the City in enforcing such obligation.

As a condition precedent to the satisfactory completion of the Contract Documents, unless otherwise provided for in the Contract Documents, the above obligation shall hold good for a period of one (1) year after the acceptance of the work by the City, during which time if Contractor shall fail to make full, complete, and satisfactory repair and replacements and totally protect the City from loss or damage resulting from or caused by defective materials or faulty workmanship. The obligations of Surety hereunder shall continue so long as any obligation of Contractor remains. Nothing herein shall limit the City's rights or the Contractor or Surety's obligations under the Contract Documents, law or equity, including, but not limited to, California Code of Civil Procedure Section 337.15.

Whenever Contractor shall be, and is declared by the City to be, in default under the Contract Documents, the Surety shall remedy the default pursuant to the Contract Documents, or shall promptly, at the City's option:

i. Take over and complete the Project in accordance with all terms and conditions in the Contract Documents; or

ii. Obtain a bid or bids for completing the Project in accordance with all terms and conditions in the Contract Documents and upon determination by Surety of the lowest responsive and responsible bidder, arrange for a contract between such bidder, the Surety and the City, and make available as work progresses sufficient funds to pay the cost of completion of the Project, less the balance of the contract price, including other costs and damages for which Surety may be liable. The term "balance of the contract price" as used in this paragraph shall mean the total amount payable to Contractor by the City under the Contract and any modification thereto, less any amount previously paid by the City to the Contractor and any other set offs pursuant to the Contract Documents.

iii. Permit the City to complete the Project in any manner consistent with California law and make available as work progresses sufficient funds to pay the cost of completion of the Project, less the balance of the contract price, including other costs and damages for which Surety may be liable. The term "balance of the contract price" as used in this paragraph shall mean the total amount payable to Contractor by the City under the Contract and any modification thereto, less any amount previously paid by the City to the Contractor and any other set offs by the City pursuant to the Contract Documents.

Surety expressly agrees that the City may reject any contractor or subcontractor which may be proposed by Surety in fulfillment of its obligations in the event of default by the Contractor.

Surety shall not utilize Contractor in completing the Project nor shall Surety accept a bid from Contractor for completion of the Project if the City, when declaring the Contractor in default, notifies Surety of the City's objection to Contractor's further participation in the completion of the Project.

The Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Contract Documents or to the Project to be performed thereunder shall in any way affect its obligation on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Contract Documents or to the Project.

PAYMENT BOND

BOND No. _____

KNOW ALL PERSONS BY THESE PRESENTS:

WHEREAS, the City of Ukiah ("City") has awarded to _____ ("Contractor/Principal") a contract (City Agreement No. _____, dated _____, _____, referred to as the "Agreement") for the work described as _____. The Agreement is incorporated by this reference into this Payment Bond ("Bond"); and

WHEREAS, Contractor/Principal is required to furnish a bond in connection with the Agreement and pursuant to California Civil Code section 9550;

NOW, THEREFORE, we _____, the undersigned Contractor/Principal, and _____ ("Surety"), a corporation organized and existing under the laws of the State of _____, and duly authorized to transact business under the laws of the State of California, as Surety, are held firmly bound until the City, and to any and all persons, companies, or corporations entitled by law to file stop payment notices under California Civil Code Section 9100, or any person, company, or corporation entitled to make a claim on this bond, in the sum of $_____, for which payment will and truly be made, we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH that if Contractor/Principal, its heirs, executors, administrators, successors, or assigns, or subcontractor, shall fail to pay any person or persons named in Civil Code section 9100; or fail to pay for any materials, provisions, or other supplies, used in, upon, for , or about the performance of the work contracted to be done, or for any work or labor thereon of any kind, or for amounts due under the Unemployment Insurance Code, with respect to work or labor thereon of any kind; or shall fail to deduct, withhold, and pay over to the Employment Development Department, any amounts required to be deducted, withheld, and paid over by Unemployment Insurance Code Section 13020 with respect to work and labor thereon of any kind, then Surety will pay for the same, in an amount not exceeding the amount herein above set forth, and in the event suit is brought upon this bond, also will pay such reasonable attorneys' fees as shall be fixed by the court, awarded and taxed as provided in California Civil Code Section 9550, et seq.

It is further stipulated and agreed that the Surety of this bond shall not be exonerated or released from the obligation of the bond by any change, extension of time for performance, addition, alteration or modification in, to, or of any contract, plans, or specifications, or agreement pertaining or relating to any scheme or work of improvement herein above described; or pertaining or relating to the furnishing of labor, materials, or equipment therefor; nor by any change or modification of any terms of payment or extension of time for payment pertaining or relating to any scheme or work of improvement herein above described; nor by any rescissions or attempted rescission of the contract, agreement or bond; nor by any conditions precedent or subsequent in the bond attempting to limit the right of recovery of claimants otherwise entitled to recover under any such contract or agreement or under the bond; nor by any fraud practiced by any person other than the claimant seeking to recover on the bond; and that this bond be construed most strongly against the Surety and in favor of all persons for whose benefit such bond is give; and under no circumstances shall the Surety be released from liability to those for whose benefit such bond has been given, by reason of any breach of contract between the Owner and Contractor/Principal or on the part of any oblige named in such bond; that the sole condition of recovery shall be that the claimant is a person described in California Civil Code section 9100, and who has not been paid the full amount of his or her claim; and that the Surety does hereby waive notice of any such change, extension of time, addition, alteration or modification herein mentioned, including but not limited to the provisions of section 2819 and 2845 of the California Civil Code.

Any notice to Surety may be given in the manner specified in the Agreement and delivered or transmitted to Surety as follows:

Attn:_____

Address:_____

City/State/Zip:_____

Phone:_____

Fax:_____

Email:_____

IN WITNESS WHEREO, two identical counterparts of this Bond, each of which shall for all purposes be deemed an original thereof, have been duly executed by Contractor/Principal and Surety above named, on the __ day of _____, 202__.

NOTE: Signatures of those executing for Surety must be properly acknowledged, the bond must be accompanied by a properly acknowledged Power of Attorney from the Surety authorizing its agent to bind it to this bond. A copy of such Power of Attorney must be in file with the City.

DIRECTIONS FOR PREPARATION OF PERFORMANCE AND MATERIAL AND LABOR BOND

1. Individual sureties, partnerships, or corporations not in the surety business will not be acceptable.
2. The name of the Principal shall be shown exactly as it appears in the Contract.
3. The penal sum shall not be less than required by the Specifications.
4. If the Principals are partners or joint venturers, each member shall execute the bond as an individual and state his place of residence.
5. If the Principal is a corporation, the bond shall be executed under its corporate seal.

   If the corporation has no corporate seal, it shall so state and affix a scroll or adhesive seal following the corporate name.
6. The official character and authority of the person(s) executing the bond for the Principal, if a corporation, shall be certified by the Secretary or Assistant Secretary thereof under the corporate seal, or copies attached to such records of the corporation as will evidence the official character and authority of the officer signing, duly certified by the Secretary or Assistant Secretary, under the corporate seal, to be true copies.
7. The current power-of-attorney of the person signing for the surety company must be attached to the bond.
8. The date of the bond must not be prior to the date of the Contract.
9. The following information must be placed on the bond by the surety company:
   a. The rate of premium in dollars per thousand; and
   b. The total dollar amount of premium charged.
10. The signature of a witness shall appear in the appropriate place attending to the signature of each party of the bond.
11. Type or print the name underneath each signature appearing on the bond.
12. An executed copy of the bond must be attached to each copy of the Contract (original counterpart) intended for signing.

CITY OF UKIAH
Mendocino County, California

DEFECTIVE MATERIAL AND WORKMANSHIP (MAINTENANCE) BOND

KNOW ALL MEN BY THESE PRESENTS,

That we, _____

_____, as **PRINCIPAL**

and_____

_____, as **SURETY**,

are held and firmly bound unto the **City of Ukiah** as Obligee, in the penal sum of

_____

_____($_____),
(5 PERCENT OF THE FINAL CONTRACT AMOUNT)

to which payment well and truly to be made, we do bind ourselves, our and each of our heirs, executors, administrators' successors and assigns jointly and severally, firmly by these presents.

WHEREAS, the said Principal entered into a Contract with the City of Ukiah dated_____
for

_____

_____

WHEREAS, said Contract has been completed, and was approved on the _____ day of _____,
_____,

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the Principal shall guarantee that the work will be free of any defective materials or workmanship which become apparent during the period of one (1) year following completion of the Contract, then this obligation shall be void, otherwise to remain in full force and effect, provided however, any additional warranty or guarantee whether expressed or implied is extended by the Principal or Manufacturer only, and the surety assumes no liability for such a guarantee.

Signed, sealed, and dated this _____ day of _____, 20_____.

SECTION 01110

SUMMARY OF WORK

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. General description of the Project and the Work to be performed by the Contractor.

1.02 WORK COVERED BY CONTRACT

A. The Work covered under this Contract will be performed at the site of the City of Ukiah's Water Pollution Control Facility, (300 Plant Road, Ukiah, CA 95482 The project location is indicated on the Drawings.

B. The Work to be performed by the Contractor generally includes:

1. Furnishing all labor, superintendence, materials, power, water, tools, equipment and services required by the Contract Documents or required to complete the Work.

2. Coordinate work of all trades.

3. Furnishing and installing miscellaneous items incidental to or necessary for completion of the Work, whether these items are specifically indicated in the Contract Documents or not.

C. The Work consists of the construction of the following items:

1. Demolition of existing equipment, piping and valves, concrete and various other items in the DAFT and Dewatering areas as shown on the drawings

2. Assembly and installation of a Suspended Air Flotation (SAF) System that was pre-purchased by the Owner

3. Furnishing and installing a container structure to house the Suspended Air Flotation Feed System

4. Furnishing and installation of two Polymer Systems in the existing DAFT Building

5. Installation of 8-inch diameter piping from the Plant Drain Pump Station to a connection point with the 8-inch Washwater Piping

6. Furnishing and installation of variable speed drives for the existing Washwater Pumps and Primary Scum Pumps

7. Assembly and installation of a Screw Press Dewatering and Polymer Blending System that was pre-purchased by the Owner

8. Construction of a concrete containment area for dewatered sludge cake

9. Furnishing and installing all mechanical, structural, electrical and instrumentation and controls associated with above items and as shown on the drawings

D. Owner-Furnished Equipment:

1. Owner will furnish the following products to Contractor for installation:

a. Heron SAF Flocculation Tubes and Clearmixer (As shown in Appendix A)

b. FKC Screw Press (As shown in Appendix B)

2. Work under this Contract includes all provisions necessary to fully incorporate Owner-furnished products, including piping, fasteners, supports, conduit and

conductors, coatings and other provisions necessary for a complete and operational installation.

1.03 OTHER CONTRACTS

A. The Owner will be undertaking other projects including the Phase 4 Recycled Water Project at the plant site simultaneously with the Work to be completed under this project. Coordination with the contractors undertaking related work or un-related work within the plant is the responsibility of the Contractor.

1.04 SPECIFICATION LANGUAGE

A. Specifications may be written in the imperative mood in streamlined form in accordance with practices and principals of the Construction Specifications Institute.

B. Imperative language is directed to the Contractor unless specifically noted otherwise.

C. The words “shall be” are included by inference where a colon (:) is used within sentences or phrases.

1.05 REGULATORY REQUIREMENTS

A. Comply with all Federal, State, and local laws, regulations, codes, and ordinance applicable to the work.

B. References in the Contract Documents to local codes shall mean those of the City of Ukiah.

C. Other standards and codes that apply to the work are designated in the Specifications.

1.06 ACCESS BY GOVERNMENT OFFICIALS

A. Authorized representatives of governmental agencies shall have access to the work area at all times. Provide proper facilities for access and inspection.

1.07 PROTECTION OF PUBLIC AND PRIVATE PROPERTY

A. Construction will encounter numerous existing features of various types, such as curbs, asphalt pavement, utility poles, guy wires and other surface structures. Contractor shall protect existing features of this nature and all features affected by construction operations shall be restored to their original condition.

B. To the greatest extent possible, remove existing features without damaging the materials and re-use the material to place back in the original condition. When existing features are damaged during removal, install new materials of similar type, appearance and function, at no additional cost to the Owner.

C. Contractor shall be responsible for all damage to streets, roads, driveways, highways, shoulders, ditches, embankments, culverts, bridges, and other public or private property, regardless of location or character, that may be caused by transporting equipment, materials, or workers to or from the work or any part or site thereof, whether by Contractor or Contractor’s subcontractors or suppliers.

D. Keep fire hydrants and water control valves free from obstruction and available for use at all times.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01140

WORK SEQUENCE AND CONSTRAINTS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Schedule requirements, construction constraints, and a suggested Work sequence for specific elements of the Project.

1.02 REFERENCED SECTIONS

A. The following Section is reference in this Section

1. Section 01999 – Reference Forms

1.03 GENERAL SEQUENCING REQUIREMENTS

A. The sequencing requirements and construction constraints described are critical elements of the Work and are presented to underscore the importance of proper management, planning, scheduling, coordination, and execution of the Work.

B. Sequencing requirements and construction constraints have been defined in this Section for only certain structures, facilities, and elements of the Work. All work, whether or not addressed in this Section, shall be governed by applicable specified requirements. If additional shutdown constraints are necessary to allow implementation of Contractor's construction procedures and schedule, the Engineer will establish such constraints.

C. Contractor's Construction Schedule:

1. Clearly illustrate the proposed sequence of construction.

2. Conform to the sequencing requirements and limitations specified in this Section.

3. Modify or adapt the suggested sequencing as necessary to complete the project provided all environmental and service continuity requirements are met.

1.04 OPERATIONAL CONTINUITY

A. The City of Ukiah owns and operates wastewater collection and treatment facilities. The Work under this project will interface with these existing facilities.

B. The existing wastewater collection system and treatment plant continuously receives, conveys and treats wastewater. Do not interrupt functions necessary to maintain operation of these facilities except as approved by the Engineer through review of the Contractor's Facility Outage Plan and as specified herein.

C. Coordinate the Work to minimize interference and interruption of the normal operation of the Owner's existing facilities through proper planning and by making temporary connections.

D. Except for allowable out-of-service periods as specified, maintain operation of sanitary and storm sewers, service laterals, catch basins, manholes, and similar facilities.

1. Provide temporary pumps, piping, power, bulkheads, plugs, and other devices that are required to keep such facilities in operation when these must be temporarily taken out of service in order to conduct the Work.

2. Notify the Engineer in writing 3 days in advance of the time it is necessary to take utilities out of service.

3. Notify public agencies and utility companies when service to customers will be temporarily interrupted to perform the Work and coordinate shutdowns with these agencies.

1.05 PERMIT VIOLATIONS

A. The wastewater treatment facilities must continuously comply with the Owner's National Pollutant Discharge Elimination System (NPDES) permit and Mutual Agreement and Order (MAO) requirements.

B. Construction of the Work under this Contract must be undertaken in compliance with the terms and conditions of various permits that the Owner has obtained for this project.

C. In the event NPDES permit [or MAO] violations or spills are caused or, in the Owner's opinion, will be caused by the Contractor's operations, the Owner shall be entitled to immediately employ others to stop the violations or potential spills without giving written notice to the Contractor. All costs incurred by the Owner to stop or prevent permit violations shall be paid by the Contractor.

D. Under no circumstances shall wastewater be discharged, bypassed or spilled to creeks, drainage ditches, or other waterways; storm drain systems; or the ground surface. In the event accidental discharge or bypassing is caused by the Contractor's operations, the Owner shall immediately be entitled to employ others to stop the bypassing without giving written notice to the Contractor. All costs incurred by the Owner to stop or prevent the bypass shall be paid by the Contractor.

E. Penalties imposed on and costs incurred by the Owner as a result of violations caused by the actions of the Contractor, his employees, or subcontractors, shall be borne in full by the Contractor, including legal fees and other expenses to the Owner resulting directly or indirectly from Contractor's actions.

1. Under the terms of the NPDES permit issued to the Owner, the Owner is liable for the following penalties:

a. NPDES Permit No. R1-2018-0035 - $10,000 per day for each violation

1.06 ACCESS

A. The existing facility where Contractor's work is to be done will be occupied by the Owner throughout the construction period. Access to the site by the Owner's personnel is required for daily operations, maintenance, and administration. Additionally, regular traffic into and out of the site is to be expected.

B. Contractor shall provide all necessary access to the Owner's personnel as required to safely and efficiently operate/maintain the facilities. At all times during the Contract duration, the Contractor is to provide the Owner's personnel and representatives safe and immediate access to all process control equipment.

C. Contractor shall provide for unimpeded access for all delivery vehicles transporting materials, chemicals and equipment to the facility for the Owner's operations. Contractor shall coordinate the work to avoid interference with vehicular access to the existing plant site and normal operation of plant equipment and processes.

1.07 FACILITY OUTAGE PLAN

A. Prepare and submit a detailed Facility Outage Plan when removal of an existing facility from service is necessary to complete the Work.

B. Submit the Facility Outage Plan to the Engineer for review and approval at least 2 weeks prior to the scheduled outage. Develop the Facility Outage Plan to satisfy the Work Sequence restrictions and conditions specified in this Section. Do not proceed with any Work involving facility outages until the Outage Plan has been approved by the Engineer.

C. The Facility Outage Plan shall describe, as applicable, a listing of existing facilities that will be taken out of service, methods for preventing bypassing of other treatment units, the length of time required to complete the operation, and the necessary personnel and equipment which will be provided in order to successfully complete the operation.

D. A System Outage Request (SOR) form shall accompany each outage or bypass plan (See Section 01999). Coordinate the outage schedule with the overall construction schedule.

1.08 REMOVING EXISTING FACILITIES FROM SERVICE

A. Existing systems or individual equipment items shall be isolated, decommissioned, de-energized, or depressurized only by the Owner's operations personnel. This work will be done in accordance with the Facility Outage Plan and schedule prepared by the Contractor.

B. The Contractor shall design and provide all necessary bulkheads, cofferdams, and support structures to allow isolation of work areas from tanks, pipes, and/or channels that are in service. Bulkheads, cofferdams, and support structures shall conform to applicable OSHA requirements.

C. The Contractor shall provide all necessary temporary pumps, piping, power, electrical wiring, controls, and labor during and subsequent to all shutdown activities as required. Maintain adequate access to the plant facilities, utilities, and equipment during construction to allow continued operation and maintenance by Owner's personnel to take place.

D. Prior to any shutdown or flow diversion, all materials, bypass pumps, fittings, supports, equipment and tools shall be on the site and all necessary skilled labor scheduled prior to starting any connection work.

E. If valves or gates need to be opened or closed, or mechanical equipment turned off or turned on, or similar operations performed to allow construction to proceed, this is to be performed by the Owner's operations staff working in coordination with Contractor personnel. Valves and gates that may be used to isolate lines and facilities may not completely seal. Contractor shall allow for leakage in planning the Work. Contractor shall clean the work areas as required to perform the work.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 WORK COORDINATION

A. Schedule and coordinate the overall Work and construction operations, including the work of subcontractors and the timely provision of products and supplies.

B. Perform Work in an orderly and logical sequence. Individual specification Sections may identify specific requirements that are related to Work sequence. These types of constraints are not repeated in this Section but shall be followed by the Contractor.

3.02 WORK CONSTRAINTS

A. Work Hours

1. Except as otherwise required for the safety or protection of persons and except as otherwise stated in the Contract Documents, Work may only be performed Monday through Friday during the hours of 7:00 am and 6:00 pm. Contractor will not perform Work on a Sunday or any legal holiday defined by the City of Ukiah without written consent from the Owner.

2. Legal holidays are defined as:

a. New Year's Day on January 1.

b. Memorial Day on the last Monday in May.

c. Independence Day on July 4.

d. Labor Day on the first Monday in September.

e. Thanksgiving Day on the fourth Thursday in November.

f. Christmas Day on December 25.

g. When a holiday falls on Sunday, the following Monday is recognized as the legal holiday. When a holiday falls on a Saturday, the preceding Friday is recognized as the legal holiday.

B. Contractor shall undertake the Work in compliance with the constraints defined in the following paragraphs:

1. The Owner's ability to operate the treatment plant shall be maintained at all times, except as authorized in writing in accordance with a Facility Outage Plan and accompanying SOR.

2. The new 8-inch WW piping to the Plant Drain Pump Station must be installed before work on the DAFTs can begin.

3. At least one DAFT must always remain in operation. Work shall begin on DAFT 2 first. The second DAFT unit cannot be taken out of service until the SAF system for one DAFT is operational and accepted.

4. The temporary sludge dewatering system must be operational before the existing belt filter press can be demolished and the new screw press installed.

5. The Digester have a maximum of three days of storage.

6. The temporary sludge dewatering system must operate successfully for two days before demolition work on the existing belt filter press can began.

7. Continuous operation of the temporary dewatering system shall not begin on after 1:00 pm on a Thursday or a Friday, Saturday or Sunday.

8. Work in the DAFT and Dewatering areas can occur in parallel.

3.03 SUGGESTED WORK SEQUENCE

A. The following work sequence is one suggested means of constructing the project, and shall be followed in general unless another suitable method of completing the work is developed by the Contractor and approved by the Owner. This suggested work sequence is general in nature and does not include all work activities required by this Contract for completion of the work. The suggested work sequence shall be coordinated with the requirements of other specification Sections and the Drawings in order to complete the Work in a timely and satisfactory manner.

B. Suggested Work Sequence

1. Install SAF unit for DAFT 2

a. Install the new 8-inch WW piping to the Plant Drain System.

b. Cap existing PSC pipe at grade to prevent flow to DAFT 2. Close valves to prevent Polymer, MS and WW flow to DAFT 2. Demolish saturation tank, air supply and nitrogen purge system for DAFT 2 and cap AFE and SA lines at grade. Cap PF line at DAFT 2 connection above grade.

c. Demolish concrete slab above piping for DAFT 2 to the extent that the 8'x24' container will fit as shown on 70-M-001. Keep DAFT 1 piping in service.

d. Connect from the existing PSC line to the new PSC pipe that feeds DAFT 2. When DAFT 1 is taken out of service later, temporary piping can be placed while proposed piping is constructed.

e. Connect from the existing POL line to the new POL pipe that feeds DAFT 2. When DAFT 1 is taken out of service later, temporary piping can be placed while proposed piping is constructed.

f. Construct new WW, MS, Polymer, and PSC lines for DAFT 2 and connect to existing with one two (2) hour shut down per pipe. PSC piping will require a temporary connection to the existing PSC piping to DAFT 1. All valving to remain closed.

g. Demolish remaining WW, MS and Polymer lines above grade and cap below grade.

h. Pour new concrete foundation next to the DAFT 2 structure.

i. Install above ground equipment and piping including the SAF, Clearmixer, WW, MS, POL, and PSC lines.

j. Place the 8'x24' Container with the frothing generation equipment and run froth piping upstream of the Clearmixer.

k. In the equipment building, remove the existing polymer system servicing DAFT 2 as shown on 70-D-006. Install the new polymer blending system to provide polymer to the new SAF unit.

l. Perform all testing required by manufacturer of SAF system. Once seven consecutive days of successful testing has been performed and approved, the SAF system for DAFT 2 shall be placed into operation.

2. Install SAF for DAFT 1

a. Close valves to prevent PSC, Polymer, MS and WW flow to DAFT 1. Demolish saturation tank, air supply and nitrogen purge system for DAFT 1 and cap AFE and SA lines at grade. Cap PF line at DAFT 1 connection above grade.

b. Demolish concrete slab above piping for DAFT 1.

c. Construct new WW, MS, POL, PSC and Drain lines and connect to existing with one two (2) hour shut down per pipe. Connect PSC and POL line to DAFT 2, and remove temporary piping. All valving to remain closed.

d. Demolish remaining WW, MS and Polymer lines above grade and cap below grade.

e. Pour new concrete foundation.

f. Install above ground equipment and piping including the SAF, Clearmixer, WW, MS, Polymer, and PSC lines.

g. In the equipment building, remove the existing polymer system servicing DAFT 1 as shown on 70-D-006. Install the new polymer blending system to provide polymer to the new SAF unit.

h. Perform all testing required by manufacturer of SAF system. Once seven consecutive days of successful testing has been performed and approved, the SAF system for DAFT 1 shall be placed into operation.

i. Demolish remaining equipment in the DAFT area and equipment building, keep saturation pumps in service until the SAF system is accepted.

3. Install Screw Press in Dewatering Building

a. Set up a temporary dewatering site as shown on C001 and 75-D-001.

b. Demolish existing Belt Filter Press.

c. Demolish existing polymer system. Keep the existing polymer tote stand to support one the new tote.

d. Construct Screw Press concrete pedestals and grating as shown on 75-S-002.

e. Install new Screw Press and polymer system.

f. Construct the dewatered solids containment wall as shown on 75-S-001.

g. Perform all testing required by manufacturer of Screw Press system. Once seven consecutive days of successful testing has been performed and approved, the Screw Press shall be placed into operation.

h. Decommission and remove the temporary dewatering equipment.

END OF SECTION

SECTION 01200

MEASUREMENT AND PAYMENT

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Methods of measurement and payment for specific items of Work under this Contract. Refer also to General Conditions for administrative aspects of payments by the Owner to the Contractor.

1.02 BID COMPONENTS AND PAYMENT

A. General

1. All Bid Items identified on the Bid Form will be “Lump Sum Work”. Contractor’s cost for “Lump Sum Work” shall cover all Work indicated by the Contract Documents. Lump Sum Work will be paid for on a progress payment basis in accordance with the provisions of the General Conditions.

B. Summary

1. The Bid Amounts for each Bid Item will be used for comparative bid analysis. The Bid amounts will also form the basis of monthly progress payments. Each Lump Sum bid amount will undergo further breakdown as described later in this section. Bid Item 2, WORKER PROTECTION AND SAFETY/SHORING, will also demonstrate the Contractor's compliance with the California Labor Code relating to the price for sheeting, shoring, and bracing of excavations. Bid items are not intended to be exclusive descriptions of work categories and the Contractor shall determine and include in its pricing all materials, labor, and equipment necessary to complete each Bid Item (work phase) as shown and specified.

C. Base Bid Item No. 1, Mobilization/Demobilization.

1. The lump sum bid for mobilization shall not exceed four percent (4%) of the total bid price. Mobilization shall include: the obtaining of insurance and bonds; moving onto the site of all equipment; submittal and approval of initial project schedule; obtaining and paying for all permits by other agencies as applicable; furnishing temporary construction utilities (temporary power, toilets, water, fences, etc.); installing construction signs; temporary buildings and field office trailer(s); and other construction all as required for the proper performance and completion of the work.

2. The lump sum bid for demobilization shall not be less than two percent (2%) of the total bid price. Demobilization shall include site cleaning and restoration of surfaces within the job site, post-construction meeting, removal of all temporary facilities and equipment from the work area, disconnection of the temporary construction utilities and turnover of project to the Owner.

3. In the event the Contractor writes in a Mobilization/Demobilization price greater than six percent (6%) on the Bid Schedule found in the BID FORM, the Owner will pay any excess with the final Progress Payment.

4. Contractor may apply for payment of mobilization on a percent complete basis as the items covered in the Mobilization are being completed.

5. Contractor may apply for payment of demobilization after the overall project substantial completion is achieved and the project begins to demobilize.

6. The lump sum price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools and incidentals to complete this item.

D. Base Bid Item No. 2, Workers Protection and Safety/Shoring.

1. The lump sum amount for providing a detailed plan of worker safety and maintaining safety during construction, including conforming to the California Labor Code all applicable safety orders and permits. Contractor may apply for payment for this Bid Item on a percent complete basis as the items covered in Worker Protection and Safety/Shoring are being completed.

2. The lump sum price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools and incidentals to complete this item.

E. Base Bid Item No. 3, All Work at the Ukiah WWTP Site in Accordance with the Contract Documents for the SAF System (Area 70), with the Exception of Work Included Under Bid Items 1, 2, 4, 5, 6, 7, and 8.

1. The lump sum amount for providing the total cost to complete all work at the Ukiah WWTP site for the SAF and Polymer Blending systems (Area 70) in accordance with the contract documents including civil/site work, 8-inch WW piping to the Plant Drain Pump Station, SAF Frothing Equipment container, demolition work, concrete work, piping and valving, light poles and all associated mechanical, electrical and instrumentation and control work.

2. The SAF equipment as shown in Appendix A is Owner provided and the Contractor shall assemble and install the equipment.

3. The lump sum price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools and incidentals to complete this item.

F. Base Bid Item No. 4, All Work at the Ukiah WWTP Site in Accordance with the Contract Documents for the Dewatering System (Area 75), with the Exception of Work Included Under Bid Items 1, 2, 3, 5, 6 7, and 8.

1. The lump sum amount for providing the total cost to complete all work at the Ukiah WWTP site for the Dewatering and Polymer Blending Systems (Area 75) in accordance with the contract documents including civil/site work, dewatered storage containment wall, piping and valving, demolition work, concrete work, and all associated mechanical, electrical and instrumentation and control work.

2. The Dewatering and Polymer Blending System as shown in Appendix B are Owner provide and the Contractor shall assemble and install the equipment.

3. The lump sum price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools and incidentals to complete this item.

G. Base Bid Item No. 5, All Work at the Ukiah WWTP Site in Accordance with the Contract Documents for providing the operational cost for Temporary Dewatering Biosolids, with the Exception of Work Included Under Bid Items 1, 2, 3. 4, 6, 7 and 8.

1. The unit price per dry ton is the amount for dewatering biosolids and loading the dewatered biosolids into the City's truck for disposal by the City in accordance with the contract documents. The unit price per dry ton shall include all labor, materials, equipment, chemical costs, operational costs and environmental permitting and monitoring necessary to legally extract, dewater, and load dewatered biosolids into a City truck.

2. The unit price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools, temporary power, chemicals including polymer, containment, and incidentals to complete this item.

3. The bid item quantity for this bid item may vary from 0% to 200% of the estimated quantity of 100 dry tons without affecting the unit bid price. The quantity of dry tons will be measured by the City by taking at a minimum four representing samples to be composited into one sample per truck load and measuring percent dry solids.

H. Base Bid Item No. 6, All Work at the Ukiah WWTP Site in Accordance with the Contract Documents for the furnishing and installing of VFDs for the Washwater Pumps (Area 12), with the Exception of Work Included Under Bid Items 1, 2, 3, 4, 5, 7, and 8.

1. The lump sum amount for providing the total cost to complete all work at the Ukiah WWTP site for the furnishing and installing of VFDs for the Washwater Pumps (Area 12) in accordance with the contract documents including VFDs, ductbanks, conduit and wiring, civil/site work, and all associated electrical and instrumentation and control work.

2. The lump sum price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools and incidentals to complete this item.

I. Base Bid Item No. 7, All Work at the Ukiah WWTP Site in Accordance with the Contract Documents for the furnishing and installing of VFDs for the Primary Scum Pumps (Area 31), with the Exception of Work Included Under Bid Items 1, 2, 3, 4, 5, 6 and 8.

1. The lump sum amount for providing the total cost to complete all work at the Ukiah WWTP site for the furnishing and installing of VFDs for the Primary Scum Pumps (Area 31) in accordance with the contract documents including VFDs, ductbanks, conduit and wiring, civil/site work, and all associated electrical and instrumentation and control work.

2. The lump sum price shall be full compensation for the preparation and installation or submittal of these materials, and for all labor, equipment, tools and incidentals to complete this item.

J. Base Bid Item No. 8, All Work at the Ukiah WWTP Site in Accordance with the Contract Documents for mobilization and demobilization of the Temporary Dewatering System in Bid Item 5, with the Exception of Work Included Under Bid Items 1, 2, 3. 4, 5, 6 and 7.

1. The lump sum amount for providing the total cost to complete all work at the Ukiah WWTP site for the mobilization and demobilization of the temporary dewatering system (Bid Item 5) in accordance with the contract documents. The lump sum price shall include all labor, materials, equipment and environmental permitting and monitoring necessary to install and remove the dewatering equipment from the site.

2. The lump sum price shall be full compensation for the preparation and installation and removal or submittal of these materials, and for all labor, equipment, tools, incidentals to complete this item.

1.03 SCHEDULE OF VALUES

A. Format: Identify each line item in the Schedule of Values with number and title of the major Specification sections. Submit typed schedule on 8½ x 11-inch paper; Contractor's standard form or media-driven printout will be considered on request.

B. At the pre-construction meeting, submit a preliminary Schedule of Values to the Owner’s Representative for review. The Contractor shall incorporate any review comments from the Owner’s Representative, and submit a final Schedule of Values at least 21 days prior to submitting the first Application for Payment.

C. The Schedule of Values shall assign a fair, reasonable and equitable dollar value for each activity on the Contractor's construction schedule. The Schedule of Values shall include anticipated progress payments for each item in the bid schedule through the final payment. In addition, a detailed breakdown of lump sum prices shall be included in the Schedule of Values.

D. The Schedule of Values shall specifically indicate installed cost for materials and equipment for each bid and sub-bid item.

E. Each activity's assigned value shall consist of labor, equipment and materials cost and a prorata contribution to overhead and profit. Breakdown shall be so organized as to facilitate assessment of work and payment of subcontractors.

F. The sum of the assigned values shall equal the lump sum price of the activity.

G. If, in the opinion of the Owner’s Representative or Owner, the Schedule of Values is not balanced, the Contractor shall provide documentation substantiating the cost allocations of those activities believed to be unbalanced. Cost allocation will be considered unbalanced if an activity on the construction schedule has been assigned a disproportionate allocation of labor, direct, or overhead and profit costs which result in progress payment request(s) which would create a condition where insufficient funds are available to complete the unfinished work. Upon request by Owner, support values shall be given with data that will substantiate their accuracy. Upon Owner's request, the Contractor shall submit additional detailed cost information.

H. Upon acceptance of the Schedule of Values, it shall be used as a basis for processing all progress payment requests.

1.04 PROGRESS PAYMENT REQUESTS

A. Submit Progress Payment Requests during the course of the project in conformance with the General Condition.

B. Submittal of progress record drawings of the project will be required at 25%, 50%, 75%, and substantial completion of the project. These submittals shall accompany the progress payment request and will be a condition of processing payment requests.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01310

PROJECT MEETINGS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements for calling for and conducting meetings for the Work.

1.02 REFERENCED SECTIONS

A. The following Section is referenced in this Section

1. Section 01320 – Construction Schedule

1.03 GENERAL

A. Project meetings and conferences are an important administration and communication requirement of all project participants. Meetings will be conducted throughout the course of the construction to address issues related to the Work, review and coordinate progress of the Work, and to discuss other matters of common interest to project participants.

B. Meeting and conference locations and qualified participants will be determined by the Engineer and the Contractor based on the meeting agenda topics.

1.04 PRECONSTRUCTION CONFERENCE

A. Prior to the start of construction, the Engineer will schedule a meeting of the Contractor, Owner, and their respective representatives. The general purpose of the meeting will be to establish working relationships, begin coordination of construction matters, discuss the Work, and to review the pertinent features of the Contract. The duration of the preconstruction conference will take approximately 4 hours.

B. The agenda for the meeting will cover at least the following items, a more detailed agenda will be distributed at the meeting:

1. Organization of the Contractor's forces and personnel, including subcontractors and materials suppliers.

2. Lines of authority and channels and procedures for communication.

3. Contractor’s construction schedule, including sequence of critical work.

4. Processing of shop drawings and other data that will be submitted to Owner for review.

5. Processing of change order requests and monthly applications for payment.

6. Procedures for quality control, housekeeping and related matters.

C. Contractor should be prepared to discuss the following topics:

1. Preliminary construction schedule and critical path.

2. Schedule of submittals and submittals needing short turn-around times.

3. Schedule of Values for construction payments.

4. Critical work sequencing.

5. Plans for mobilization, arrangement and use of staging and storage areas, use of site, location and arrangement of field offices, and site security.

D. Minutes of Meeting

1. The Engineer will compile minutes of the meeting and distribute copies to all participants.

1.05 PROGRESS MEETINGS

A. Unless otherwise arranged, there will be a weekly progress meeting at a time and at an on-site location that is mutually agreed upon between the Contractor, Engineer and Owner.

1. Meetings are to enable orderly project review during the progress of work.

2. Engineer, Owner, Contractor's Superintendent, representatives of subcontractors, suppliers' representatives as may be needed, other Contractors working at the site, and other parties shall attend these meetings.

3. Engineer will preside over the meeting and will compile and distribute minutes of the meeting.

B. The purpose of the weekly meetings is to coordinate the efforts of all concerned to result in smooth and coordinated progress towards completion of the overall project.

C. Contractor shall bring to each weekly meeting the updated 3-week "look ahead" schedule.

D. The Contractor will be required to address the following items at the weekly meeting:

1. Work completed last week.

2. Work anticipated next week.

3. Log of submittals and Requests for Information.

4. Contract document deficiencies or questions noted during prior week.

5. Schedule status and corrective measures and procedures that are planned to place the project back on schedule, if such action is necessary.

6. Report of any accidents, and any site safety issues that need to be addressed.

E. Other agenda items to be discussed include:

1. Review and revise as necessary and approve minutes of previous meetings.

2. Status of Requests for Information, Change Order Requests, submittals and shop drawings.

3. Identify problems that impede planned progress.

4. Other current business pertaining to the Work.

F. Revision of Minutes

1. Unless published minutes are challenged in writing prior to the next regularly scheduled progress meeting, they will be accepted as properly stating the activities and decisions of the meeting.

2. Persons challenging published minutes shall reproduce and distribute copies of the challenge to all indicated recipients of the particular set of minutes.

3. Challenge to minutes shall be settled as priority item of "old business" at the next regularly scheduled meeting.

1.06 PROGRESS SCHEDULE AND PROGRESS BILLING MEETINGS

A. Once each month, a progress schedule and progress payment meeting will be conducted with the Engineer. The purpose of this meeting is to review the Progress Payment Estimate and reach agreement on the extent of the Work completed during the pay period.

B. The meeting date will be scheduled in accordance with the Owner's deadline for submittal of Progress Pay Estimate.

C. The updated progress schedule will also be reviewed at this meeting as described in Section 01320. Schedule impacts, time extension requests, actual and anticipated schedule activity sequence/duration changes, delays, and other schedule-related topics will be discussed.

D. The Engineer may require more frequent progress schedule meetings should there be schedule revisions that necessitate such a meeting.

1.07 SUBMITTAL MEETINGS

A. When required in the individual technical specification, or if requested by the Contractor or the Engineer, a meeting regarding a required submittal will be held to facilitate the timeliness of the submittal preparation and review process.

1.08 QUALITY ASSURANCE MEETINGS

A. The Contractor or the Engineer may request a meeting prior to the start of a particular phase of the project to discuss how the Work shall be accomplished in accordance with the quality requirements of the Contract Documents, Codes, permits and industry standards. Quality assurance inspections and tests that are applicable to the Work will be discussed.

1.09 PRE-INSTALLATION MEETINGS

A. When required in the individual specification, or if requested by the Contractor or Engineer, a pre-installation meeting will be held to review conditions of the installation, installation procedures, and coordination with related work. This meeting will be scheduled to take place in advance of installation of the equipment or as required in the technical specifications.

1.10 PRE-SUBSTANTIAL COMPLETION MEETING

A. Thirty (30) days prior to the estimated substantial completion, the Owner, Engineer, Contractor, and appropriate subcontractors will meet to review maintenance manuals, guarantees, closeout submittals, bonds, and service contracts for materials and equipment.

1.11 SPECIAL MEETINGS

A. Any time during progress of the Work, the Owner and the Construction Manager shall have the authority to require the Contractor and any subcontractor, suppliers, or service providers to attend job-site conferences on matters which require immediate or special attention. Any notice of such conference shall be duly observed and complied with by the Contractor and subcontractors, suppliers, or service providers without extra cost to Owner.

1.12 POST CONSTRUCTION GUARANTY PERIOD MEETING

A. Contractor shall meet with a representative of the Owner and the Engineer approximately eleven (11) months after the date of Substantial Completion to inspect the Work. Meeting will be arranged by the Owner at least seven (7) days before meeting. The Contractor will require attendance of its Project Manager/Superintendent, appropriate manufactures and appropriate subcontractors.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01320

CONSTRUCTION SCHEDULE

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Procedures for preparing and revising the construction schedule used for planning and managing construction activities.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. General Conditions

1.03 COORDINATION WITH GENERAL CONDITIONS

A. Prepare and submit a Preliminary Schedule in accordance with the requirements of General Conditions.

B. The Contractor's execution of the Work shall begin based on the Preliminary Schedule accepted by the Engineer. As Work progresses, the Schedule shall be updated and resubmitted in accordance with the requirements of this Section.

1.04 USE OF SCHEDULE

A. The schedule and subsequent updates provide a basis for determining the progress status of the project relative to the completion time, specific dates, and for determining the acceptability of the Contractor's progress payment estimates.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 DESCRIPTION

A. The Contractor shall prepare a time scale network schedule using a critical path method. A general guide for preparing such a schedule is contained in "The Use of CPM in Construction, a Manual for Contractors," published by the Associated General Contractors of America.

B. The schedule shall depict all significant construction activities and all items of work listed in the breakdown of contract prices submitted by the Contractor in accordance with the General Conditions.

1. Indicate assigned values for each part of the work.

2. Indicate dependencies between activities to establish the effect the progress of any one activity has on the schedule.

C. Completion time shall be shown on the schedule. Activities making up the critical path shall be identified.

D. No activity on the schedule shall have a duration longer than 21 days or assigned value greater than $50,000, except activities comprising only fabrication and delivery, which may extend for more than 21 days.

1. Activities that exceed these limits shall be divided into more detailed components.

2. The scheduled duration of each activity shall be based on the work being performed during the normal 40-hour workweek with allowances made for legal holidays and normal weather conditions.

3.02 SUBMITTAL PROCEDURES

A. Submit Preliminary Schedule in accordance with the General Conditions.

B. Submit the following items:

1. Two copies of the project schedule formatted to fit 11x17 inch sheets.

2. Electronic file of the schedule.

C. The Engineer will review the Preliminary Schedule to ascertain compliance with specified project constraints, compliance with milestone dates, reasonableness of durations and sequence, accurate inter-relationships and completeness.

D. Review comments will be transmitted to Contractor following completion of preliminary review.

E. Revise and resubmit schedule in accordance with written comments, or request joint meeting to resolve objections.

F. When schedule reflects the Engineer and Contractor's agreement of project approach and sequence, schedule will be accepted as the Base Schedule. Use the accepted Base Schedule for planning, organizing and directing the work and for reporting progress.

3.03 UPDATING THE SCHEDULE

A. Submit an updated schedule with each Application for Payment.

B. Progress payment requests may not be processed by Engineer if updated schedule has not been submitted or if update is found unacceptable.

C. Prepare update using most recent accepted version of schedule including:

1. Actual start date of activities that have been started.

2. Actual finish date of activities that have been completed.

3. Percentage of completion of activities that have been started but not finished.

4. Actual dates on which milestones were achieved.

D. Submit narrative report in conjunction with updated schedule describing:

1. Activities added to or deleted from schedule. Identify added activities in manner distinctly different from original activity designations.

2. Changes in sequence or estimated duration of activities.

3. Current or anticipated problems and delays affecting progress, impact of these problems and delays and measures taken to mitigate impact.

4. Assumptions made and activities affected by incorporating change order work into the schedule.

3.04 REVISIONS TO SCHEDULE

A. Submit revised schedule within five (5) days when:

1. Delay in completion of any activity or group of activities indicates an overrun of the contract time or milestone dates by twenty (20) working days or five (5%) percent of the remaining duration, whichever is less.

2. Delays in submittals, deliveries, or work stoppages are encountered making necessary the replanning or rescheduling of activities.

3. The schedule does not represent the actual progress of activities.

4. Any change to the sequence of activities, the completion date for major portions of the work, or when changes occur that affect the critical path.

5. Contract modification necessitates schedule revision; submit schedule analysis of change order work with cost proposal.

B. Submit printed copies of the revised schedule and electronic file.

C. Make revisions on most recently accepted version of schedule.

3.05 THREE WEEK “LOOK AHEAD” SCHEDULE

A. In addition to the overall Construction Schedule, provide a “Look Ahead” schedule in bar chart format. Show work activities undertaken in the preceding week and the work activities that will be undertaken during the upcoming three weeks.

B. Prepare the Look Ahead schedule weekly and submit to the Engineer at the weekly construction progress meeting.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01325

FIELD ENGINEERING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements for surveying and surveying record documents.

1.02 REFERENCED SECTION

A. The following Section is referenced in this Section

1. Section 01330 – Submittals
2. Section 01770 – Contract Closeout Procedures
3. Section 01780 – Record Documents

1.03 DATUM

A. Vertical and horizontal datum are based on the coordinates and benchmarks shown on the Drawings or past drawings.

1. Locate and protect Owner furnished control points prior to starting the Work and preserve control points during construction.
2. Re-establish control points disturbed by operations at no cost to Owner.
3. The elevations of any existing facilities, in particular where tie-ins to this Project are required, must be field verified by the Contractor and confirmed with relation to the elevations for the facilities under this Project.

B. Establish other vertical and horizontal control from these Owner furnished reference points as required to properly layout and construct the Work. Install connections based on actual elevations of existing structures to which connections are made.

C. Base layout upon existing structures and the vertical and horizontal datum established by the Owner.

D. The Contractor shall be responsible for the preservation of existing survey monuments or permanent bench marks. Any monuments or bench marks disturbed or destroyed by Contractor shall be referenced and replaced by a licensed land surveyor.

1.04 QUALITY ASSURANCE

A. The Contractor’s Surveyor shall be a land surveyor registered in California or civil engineer qualified and licensed in California with at least five (5) years surveying experience of similar projects.

B. Dimensions for existing structures, piping, paving, and other nonstructural items are taken from the available information during the Owner’s planning and design.

1. Field verify dimensions and conditions in advance of any construction in the area.
2. Any discrepancy between the field survey and the information indicated in the Contract Documents shall be immediately brought to Construction Manager’s attention by written notification.
3. In questions arising as to proper location of lines and grades, the Construction Manager's decision will be final.

C. Accuracy of the Contractor’s stakes, alignments and grades may be periodically and randomly checked by the Construction Manager.

1. If requested by Construction Manager, the Contractor shall supply field labor as required, at no extra charge to Owner, to aid and assist the Construction Manager in checking location and grades of the work as set by the Contractor.

2. This shall include postponing parts of the Work affected by survey check, moving materials and equipment that interfere with a clear line of sight between horizontal control points and the construction work.

3. The Contractor is not to assume that Construction Manager’s check substitutes or complements the Contractor’s required field quality control procedures.

D. The Contractor's registered land surveyor shall check the line and grade of the slab or footing concrete forms prior to the first slab or footing pour at each structure and building.

1.05 SUBMITTALS

A. Comply with Section 01330.

B. Furnish Construction Manager with one (1) copy of all land surveyor notes, calculations, sketches and drawings within 48 hours after completion of each survey task.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 PROJECT SURVEY REQUIREMENTS

A. As part of the bid price for the construction of the improvements provide and be responsible for the layout of all work specified in the contract.

B. Provide necessary surveys, field staking, and positioning for the construction of all components at the proper alignment, elevations, grades, and positions, as indicated on the Drawings and as required for the proper operation and function.

C. Stake the work limits and right-of-way lines prior to the start of sitework.

D. Lay out work, including structures and pipelines, and be solely responsible for executing the Work in accordance with the lines and grades indicated.

3.02 RECORD DOCUMENTS

A. Prepare, maintain and submit Record Documents as specified in Section 01780. The Contractor’s land surveyor is to affix his signature and registration number to applicable record drawings certifying the accuracy of lines and grades shown.

B. Submit survey record drawings before final completion as specified in Section 01770.

END OF SECTION

SECTION 01326

PHOTOGRAPHS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Photographs required before, during and after construction to provide record of site conditions, construction progress, as-built features and significant planned/unplanned events.

1.02 PHOTOGRAPHY

A. Employ a competent professional photographer to record this important factual information.

B. Digital Camera

1. Single lens reflex design
2. 24 mega pixels or greater
3. Nikon D7500 or equal

C. Prepare color photographs, in both print and digital file format, as directed by the Construction Manager. All electronic files are to be furnished in jpeg format and stored on a flash drive.

PART 2 - PRODUCTS

2.01 DELIVERABLE PRODUCTS

A. Provide electronic files, with 8-1/2" x 11" color printed page with thumbnail views and file name identification for each picture.

B. Compile digital images on flash drive and provide with a descriptive index of the images.

C. Index printed pages chronologically and provide in a three-ring binder.

D. Label flash drive’s and protect in an individual plastic case.

PART 3 - EXECUTION

3.01 PRE-CONSTRUCTION PHOTOGRAPHS

A. Provide one hundred (100) preconstruction photographs prior to commencement of Work on the sites.

B. Take at locations to be designated by the Construction Manager.

C. Submit prior to beginning construction.

3.02 DURING CONSTRUCTION PHOTOGRAPHS

A. Provide construction color photographs showing the progress of the Work.

B. Take photos of all Work prior to being buried or covered, including piping, fittings, transitions, tie-ins and valves.

C. Take photos of any significant planned or unplanned events.

D. Take photos from the same four locations at monthly intervals to record progress of work from same vantage points. These vantage points will be determined by the Construction Manager.

E. For pipeline projects, take photos at a maximum of one hundred (100) ft intervals.

F. Take a minimum of forty-eight (48) photographs every month during construction. Submit no more than two hundred (200) photographs each month.

G. Submit photos with each month's Application for Payment.

3.03 AERIAL PHOTOGRAPHS

A. Aerial photographs shall be taken by a professional aerial photographer service approved by the Construction Manager every three months. Aerial photographs must be taken (1) prior to moving facilities onsite or starting construction; and (2) following the completion of all.

B. Aerial photographs shall be by aerial camera with forward motion compensation.

C. Aerial photographs shall provide coverage of the complete project site in an assembled mosaic.

D. Take aerial photographs at the same altitude.

3.04 POST-CONSTRUCTION PHOTOGRAPHS

A. Upon acceptance of the Work, provide one hundred (100) photographs of the Work where directed by the Construction Manager.

B. Submit photographs as part of Contract Closeout.

END OF SECTION

SECTION 01330

SUBMITTALS

PART 1 - GENERAL

1.01 SUMMARY

A. Requirements for the submittal of information that will enable determination of whether the Contractor's proposed materials, equipment or methods of work are in general conformance to the design concept and in compliance with the Contract Documents.

B. Furnish drawings, specifications, descriptive data, certificates, samples, test results, methods, schedules, manufacturer's installation instructions and other information as indicated.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01999 – Reference Forms

1.03 CONTRACTOR'S RESPONSIBILITIES

A. Contractor shall be responsible for the accuracy and completeness of the information contained in each submittal and shall assure that the materials and equipment incorporated into the Work, or the methods of performing the Work shall be as described in the accepted submittals.

B. Verify that all features of all products conform to the specified requirements. Submittal documents shall be clearly edited to indicate only those items, models, or series of equipment that are being submitted for review. Extraneous materials shall be crossed out or otherwise obliterated.

C. Coordinate submittals among subcontractors and suppliers. Ensure that there is no conflict with other submittals and notify the Engineer in each case where his submittal may affect the work of another contractor or the Owner, including those submittals complying with unit responsibility requirements specified in applicable technical sections.

D. Coordinate submittals with the Work so that work will not be delayed. Coordinate and schedule different categories of submittals, so that one will not be delayed for lack of coordination with another. No extension of time will be allowed because of failure to properly schedule submittals.

E. Do not proceed with work related to a submittal until the submittal process is complete and the submittal has received a response "No Exceptions Taken" or "Make Corrections Noted."

F. Certify on each submittal document that the Contractor has reviewed the submittal, verified field conditions, and complied with the contract documents.

1. Include a copy of the specification section with addendum updates, all referenced and applicable sections, and each paragraph check-marked to indicate specification compliance or marked to indicate requested deviations from specification requirements.

a. Use check marks (✓) to denote full compliance with a paragraph as a whole.

b. If deviations from the specifications are indicated and, therefore requested by the Contractor, underline each deviation and denote by a number in the margin to the right of the identified paragraph.

c. The remaining portions of the paragraph not underlined will signify compliance on the part of the Contractor with the specifications.

d. Include a detailed, written justification for each deviation.

2. Failure to comply with this paragraph is sufficient cause to reject the entire submittal.

1.04 REVIEW COSTS

A. The Owner's cost for review of submittals for the same proposed materials, equipment or work will be apportioned as follows:

1. The cost of review of the initial submittal and the first revised submittal will be borne by the Owner.

2. The cost to review all additional revised submittals after the first revised submittal will be charged to the Contractor. The cost of review shall include, without limitation, administrative, design and engineering activities directly related to review of submittals.

1.05 SUBMITTAL INDEX

A. Within 30 days of the Notice to proceed, submit a list, by specification section, of all submittals to be submitted.

B. Update and resubmit the submittal index on a monthly basis where additional submittals are identified, or as necessary

1.06 CATEGORIES OF SUBMITTALS

A. General

1. Submittals fall into two general categories;

a. Submittals for review and comment require action by the Engineer.

b. Submittals that are primarily for information only do not require Engineer's approval.

B. Submittals for Review and Comment

1. Transmit submittals for review and comment to the Engineer. The Engineer will review the submittal for compliance with the Contract requirements and will provide written comments regarding acceptability.

C. Submittals for Information Only

1. Where specified, furnish submittals to the Engineer for information only. The Engineer may, at the Engineer's option, review and comment on any product data.

2. Incomplete or inadequate product data will be returned to the Contractor for resubmittal.

1.07 TRANSMITTAL PROCEDURES

A. General

1. Transmit submittals regarding material and equipment under cover of a Shop Drawing/Transmittal Form. See Section 01999.

2. Use a separate form for each specific item, class of material, equipment, and items specified in separate, discrete sections, for which the submittal is required.

3. Identify submittal documents common to more than one piece of equipment with all the appropriate equipment numbers.

4. Make submittals for various items with a single form when the items taken together constitute a manufacturer's package or are so functionally related that expediency indicates checking or review of the group or package as a whole.

5. Assign a unique sequential number on the transmittal form accompanying each item submitted.

   a. Use the following format for original submittal numbers: "XXX"; where "XXX" is the sequential number assigned by the Contractor.

   b. Use the following format for resubmittals: "XXX-Y"; where "XXX" is the originally assigned submittal number and "Y" is a sequential letter assigned for resubmittals, i.e., A, B, or C being the 1st, 2nd, and 3rd resubmittals, respectively. Submittal 25B, for example, is the second resubmittal of submittal 25.

B. Electronic Submittals

1. Electronic submittals are preferred except as otherwise indicated.

2. Prepare electronic submittals and Shop Drawings in electronic (*.pdf) format including half-sized and full-sized drawings, catalog information and other required submittal information.

3. Break down submittals that are larger than 10 megabytes into smaller sections, using logical division points to create sections.

4. Electronically bookmark electronic submittals greater than 30 pages in length by major submittal section to facilitate ease of navigation.

C. Paper copy submittals are an acceptable alternative to electronic submittals if the Contractor demonstrates, to the satisfaction of the Engineer that electronic submittals presents a hardship.

D. Deviation from Contract

1. If the Contractor proposes to provide material, equipment, or method of work that deviates from the project manual, so indicate under "Proposed Deviations" on the transmittal form accompanying the submittal copies.

E. Submittal Completeness

1. Submittals that do not have all the information required to be submitted, including deviations, are not acceptable and will be returned without review.

1.08 SUBMITTAL CONTENT

A. Prepare submittals in compliance with individual Specification Sections and as indicated herein.

B. Shop Drawings:

1. Develop project-specific, scaled drawings to fully identify materials and products that will be provided and their relationship to other products that will be furnished and installed.

2. Do not utilize reproductions of the Contract Documents as the basis for the submittal.

3. Identify products, assemblies, equipment and systems.

4. Provide equipment identification numbers or tag numbers, wiring diagrams, and setting diagrams.

5. Identify critical dimensions.

C. Product Data:

1. Provide information necessary to demonstrate conformance with the specified requirements. Include performance curves, specifications, and wiring diagrams.

2. Product data may consist of manufacturer's standard catalog information and data sheets, marked to indicate the specific products that will be provided.

3. Provide supplemental information as necessary to fully demonstrate how products will be modified from the manufacture's standard products to meet the specification requirements.

D. Manufacturer's Instructions: Written or published information that establishes the manufacturer's recommendations, guidelines and procedures for handling and installation of products, equipment and assemblies.

E. Samples: Mount, display or package samples in a manner that will facilitate review and establish workmanship and quality of materials.

1.09 SUBMITTAL REQUIREMENTS

A. When the Contract Documents require a submittal, submit the specified information as follows:

1. Submittals for Review and Comment:

a. Electronic Submittal: Submit one electronic (*.pdf) submittal.

b. Paper Copy Submittal: If paper copy submittals are acceptable to the Engineer, submit four (4) copies of submitted information plus one reproducible original for review unless otherwise specified.

2. Submittals for Information Only:

a. Electronic Submittal: Submit one electronic (*.pdf) submittal.

b. Paper Copy Submittal: If paper copy submittals are acceptable to the Engineer, submit four (4) copies of submittal information for review, unless otherwise specified.

1.10 REVIEW PROCEDURE

A. General

1. The Engineer will review submittals within the processing time identified in paragraph "Processing Time" and return:

a. Electronic Submittal – a signed submittal response document, in (*.pdf) format.

b. Paper Copy Submittal – Two marked up copies of the submitted copies. The reproducible original will be retained by the Engineer.

B. Submittals for Review and Comment

1. The returned submittal will indicate one of the following actions:

a. "NO EXCEPTIONS TAKEN" – The material, equipment or work method complies with the project manual.

b. "MAKE CORRECTIONS NOTED" – Limited corrections are required.

1) Provide a corrected copy where:

a) The information is to be included in the O&M data.

b) If requested by the Engineer.

c. "AMEND AND RESUBMIT" – The submittal is insufficient or contains incorrect data.

d. "REJECTED – SEE REMARKS" – The material, equipment, or work method does not comply with the project manual. Submittals with deviations that have not been identified clearly may be rejected.

2. For submittals marked "NO EXCEPTIONS TAKEN" or "MAKE CORRECTIONS NOTED.

a. The Contractor may begin implementing the work method or incorporating the material and equipment covered by the submittal in accordance with any noted corrections.

3. For submittals marked "AMEND AND RESUBMIT" or "REJECTED – SEE REMARKS"

a. Contractor shall provide a typed letter responding to each of the Engineer's review comments with each resubmittal.

b. Except at its own risk, the Contractor shall not undertake the work covered by such submittals until a new submittal is submitted and returned marked either "NO EXCEPTIONS TAKEN" or "MAKE CORRECTIONS NOTED."

C. Submittals for Information Only

1. The returned submittal will indicate ACCEPTED FOR RECORD" if the submittal is complete and adequate.

2. Engineer may return comments on information submittals to identify concerns with what was submitted, in such case, Contractor shall address concerns in writing and return a revised submittal.

1.11 PROCESSING TIME

A. Prepare submittals and transmit to Engineer for review in sufficient time to allow Engineer's review; manufacture, fabrication or assembly of materials and systems; and shipping of material to the site in time for installation in accordance with the Contractor's schedule.

B. Engineer's time for review will begin upon receipt of a complete and comprehensive submittal containing all required information.

C. Engineer will review submitted information and transmit a response to Contractor within 30 days after receipt, subject to the following:

1. In some instances, review times for specific submittals may be modified by the individual specification Section.

2. Resubmittals will be subject to the same review time.

D. No adjustment of Contract Time or Contract Price will be allowed due to delays in the progress of the Work that are caused by rejected submittals and subsequent resubmittals.

1.12 EFFECT OF REVIEW OF CONTRACTOR'S SUBMITTALS

A. The purpose of submittals is to demonstrate how Contractor intends to conform to the Contract Documents and design concepts. Engineer is entitled to rely upon the accuracy and completeness of designs, calculations, or certifications made by licensed professionals whether or not a stamp or seal is required by the Contract Documents.

B. The review procedure is based on the Contractor's guarantee that all features and characteristics not requiring submittals conform to the contract documents.

C. Review of contract drawings, methods of work, or information regarding materials or equipment the Contractor proposes to provide, does not relieve the Contractor of its responsibility for

1. Fulfilling the requirements of the Contract,

2. Proper operation of the equipment,

3. Correction of defective work

D. Reviews shall not be regarded as an assumption of risk or liability by the Engineer or the Owner.

E. A mark of "NO EXCEPTIONS TAKEN" or "MAKE CORRECTIONS NOTED" means that the Owner has no objection to the Contractor, upon its own responsibility, using the plan or method of work proposed, or providing the materials or equipment proposed.

F. The Engineer's review of shop drawings, samples, or test procedures will be only for conformance with design concepts and for compliance with information given in Contract Documents. The Engineer's review does not extend to:

1. Accuracy of dimensions, quantities, or performance of equipment and systems designed by Contractor.

2. Contractor's means, methods, techniques, sequences, or procedures except when specified, indicated on the Drawings, or required by Contract Documents.

3. Safety precautions or programs related to safety which shall remain the sole responsibility of the Contractor.

G. Review of a separate item does not indicate approval of the assembly in which the item functions.

1.13 SUBSTITUTIONS OR “OR EQUAL” ITEMS

A. Named or Sole Source Times

1. Whenever materials or equipment are specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the naming of the item is intended to establish the type, function, and quality required.

2. Unless the name designated a “sole source” and/or is followed by words indicating that no substitution is permitted, materials, or equipment of other Suppliers may be accepted by Engineer if sufficient information is submitted by Contractor to allow Engineer to determine that the material or equipment proposed is equivalent or equal to that named.

B. Initiating Substitution Request

1. To propose to furnish or use a substitute item of material or equipment, Contractor shall use the Proposed “Or Equal” Substitution Submittal Transmittal Form found in Section 01999.

2. Submit the Substitution Submittal form to Engineer for acceptance, certifying that the proposed substitute will perform adequately the functions and achieve the results called for by the general design, be similar and of equal substance to that specified and be suited to the same use as that specified.

3. State that the evaluation and acceptance of the proposed substitute will not prejudice Contractor’s achievement of Substantial Completion on time, whether acceptance of the substitute for use in the Work will require:

a. A change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for Work on the Project) to adapt the design to the proposed substitute.

b. Incorporation or use of the substitute in connection with the Work is subject to payment of any license fee or royalty.

4. Identify all variations of the proposed substitution from that specified

5. Identify available maintenance, repair, and replacement service

6. Provide an itemized estimate of all costs that will result directly or indirectly from acceptance of such substitute, including costs of redesign and claims of other contractors affected by the resulting change

7. The Owner or Engineer may require Contractor to furnish at Contractor's expense additional data about the proposed substitute.

8. If a specific means, method, technique, sequence or procedure of construction is indicated in or required by the Contract Documents, Contractor may propose to furnish or utilize a substitute means, method, sequence, technique or procedure of construction. Submit sufficient information to allow Engineer to determine that the proposed substitution is equivalent to that indicated or required by the Contract Documents.

C. Review Procedure

1. The procedure for review of substitutions by Engineer will be similar to that provided in this Section.

2. Requests for substitutions may only be submitted by the Contractor.

3. All requests for substitution shall be submitted within thirty (30) calendar days after the date of Notice to Proceed unless the Owner has agreed in writing to a later submittal date and the Contractor agrees to comply with all conditions of the Owner for the late submittal.

4. The Owner's agreement to a later submittal date shall not be construed as favorable review or acceptance of the proposed "or equal" substitution.

5. The Engineer will respond to all requests for substitutions within thirty (30) days following receipt of an acceptable substitution submittal, unless the Engineer notifies the Contractor within fourteen (14) days after receipt of the proposed "or equal" substitution submittal that more time is needed to complete a thorough review.

6. The Engineer and Owner will be the sole judge of acceptability, and no proposed "or equal" substitution item or service will be ordered, installed or utilized without Engineer's prior written acceptance that will be evidenced by either a Change Order or an accepted Shop Drawing.

7. As a condition of acceptance, the Owner may require Contractor to furnish, at Contractor's expense, a special performance guarantee or other surety with respect to a proposed "or equal" substitution item or service.

D. Modification due to Substitutions

1. All costs for redesign required by the implementation of the proposed substitute shall be borne by the Contractor.

2. All costs associated with incorporating a substitution into the project shall be borne by the Contractor.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01450

TESTING AND INSPECTIONS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Tests and inspections and allocation of responsibilities associated with tests and inspections.

B. The detailed tests and inspections required to be performed by the Contractor are specified in the individual Sections of Divisions 2 through 16.

1.02 OWNER'S TESTING AGENCY

A. Owner will employ and pay for testing conducted to confirm compliance with the requirements of the Contract. Testing may be on-site or off-site.

B. Owner's Testing Agency will perform tests, inspections, and sampling of the following work:

1. Earthwork, including collection and testing of representative material samples and compaction testing.

2. Concrete placement, reinforcement, ingredients and quality control.

3. Masonry placement, reinforcement, ingredients and quality control.

4. Structural steel.

5. Fire Proofing, density sampling and thickness inspection.

C. The Owner's employment of the Testing Agency does not relieve the Contractor of his obligations to perform the work in accordance with Contract requirements nor to retain their own testing firm for quality control.

1.03 QUALITY ASSURANCE

A. Qualifications of Testing Agents: Agencies, bureaus, or laboratories shall be acceptable to the Engineer and shall meet the requirements ASTM E329.

B. Failure of Materials and Equipment Tested or Inspected:

1. The Contractor shall be charged for retesting and reinspection resulting from the Contractor's noncompliance with the Contract as evidenced by tests and inspections by the Owner's Testing Agency.

2. The Owner will backcharge the Contractor for costs incurred in the event the Contractor's provides inadequate quality control or material requires excessive repeated testing by the Owner's Testing Agency.

1.04 TESTING AGENCY'S DUTIES

A. Perform required inspecting, sampling and testing of materials and methods of construction.

1. Comply with specified standards, other recognized authorities as specified.

2. Check for compliance with Contract Documents.

B. Promptly notify the Engineer and the Contractor of observed irregularities or deficiencies in the work.

C. Promptly submit written reports to the Contractor and to Engineer. Include:

1. Date of test, inspection or sampling; project title and number; testing agency's name and address; name and signature of inspector.

2. Record of temperature and weather, identification of applicable specification Section, type of inspection or test performed, and reference to applicable standards and codes.

3. Location of tests; sample locations; test results; and observation regarding compliance with Contract Documents.

D. The testing agency is not authorized to release, revoke, alter or enlarge on the requirements of the Contract Documents, approve or accept any portion of the work, or perform any of the Contractor's duties.

1.05 CONTRACTOR'S RESPONSIBILITIES

A. Initiate and coordinate tests and inspections required by Contract Documents and public authorities having jurisdiction of the work.

B. Notify the Owner's Testing Agency through the Owner's Representative a sufficient time in advance (but no less than 48 hours) of the manufacture of materials to be supplied which, by requirements of the Contract Documents, must be tested at the source of supply so that the Laboratory may arrange for testing.

C. When changes of construction schedule are necessary during construction, coordinate all such changes with the Owner's Testing Agency as required.

D. When the Owner's Testing Agency is ready to test according to the established schedule, but is prevented from testing or taking specimens due to incompleteness of the work, all extra charges for testing attributable to the delay may be backcharged to the Contractor and shall not be borne by the Owner.

E. Provide access, facilities, tools, and labor necessary for duties to be performed at the site by the Owner's Testing Agency and Inspector, including furnishing ladders, hoisting, lighting, water supply and like services.

F. Provide and maintain, for the sole use of the Owner's Testing Agency, adequate facilities for the safe storage and proper curing of concrete test cylinders on the Project site as required by ASTM C31.

G. Furnish and deliver samples of materials to be tested at no extra cost to Owner. Test samples will be selected by the Inspector or Owner's Testing Agency and not by the Contractor.

H. Reports:

1. Furnish copies of each test and inspection report, signed and certified by the Contractor's Testing Agency Supervising Engineer to the Contractor and to the Engineer.

2. Within 48 hours, process and distribute the required copies of test reports and related instructions to assure necessary retesting and replacement of materials with the least possible delay in progress of the work.

I. Records:

1. Maintain correct records on an appropriate form for all inspections and tests performed, instructions received from the Owner or testing agency, and actions taken as a result of those instructions.

2. These records shall include evidence that the required inspections or tests have been performed (including type and number of inspections or tests, nature of

defects, causes for rejection, etc.), proposed or directed remedial action, and corrective action taken.

3. Document inspections and tests as required by each Section of the Specifications.

J. If laws, ordinances, rules, regulations, or orders of public agency having jurisdiction require work to be inspected, tested or approved by some authority other than the Owner, or Contractor, the Contractor shall give required notices and make arrangements, deliver to the Owner the certificates of inspection, test, or approval of such public agency, and pay costs therefore unless otherwise provided in the Contract Documents.

K. Completed Work: Should the Owner require tests and inspections for work completed before final acceptance of entire work, furnish necessary facilities, labor, and materials to uncover or remove work in question to extent necessary.

1. If such work is found defective due to fault of the Contractor, the Contractor shall defray expense of removal, test, and inspections, and satisfactory reconstruction. Time extension may not be granted.

2. If such work is found to conform to requirements of the Contract, the Contractor shall be reimbursed by the Owner for facilities, labor and materials required for removal, and costs of satisfactory reconstruction in accordance with Contract amounts for extra work. Reasonable time extension shall be granted.

1.06 TEST PROCEDURES

A. Testing:

1. Owner's Testing Agency will perform tests according to method(s) of test specified in these Specifications.

2. If no procedure or test method is specified, testing shall conform to material specification references unless otherwise directed by the Owner.

3. The Owner's Testing Agency will tag, seal, label, record, or otherwise suitably identify the materials for testing. No materials shall be used in the work until the test reports are submitted and approved, excepting only the materials specified to be placed or installed prior to testing.

B. Retesting:

1. Repeat applicable tests at specified intervals, when:

a. The source of supply is changed.

b. The characteristics of the materials change or vary.

c. Unsatisfactory test results are received.

2. Quantity and nature of additional testing, if required, will be determined by the Owner.

3. Additional tests shall be taken in the presence of the Engineer.

4. Proof of non-compliance will make the Contractor liable for any corrective action which the Owner feels is prudent, including complete removal and replacement of defective materials.

5. Nothing contained herein is intended to imply that the Contractor does not have the right to have tests performed on any material at any time for his own information and job control so long as the Owner does not assume responsibility for costs or for giving them consideration when appraising quality of materials.

1.07 PAYMENT FOR TESTING

A. Initial Services:

1. The Owner will pay for initial testing services requested by the Owner.

2. When initial tests indicate non-compliance with the Contract Documents, the costs of initial tests associated with that non-compliance will be deducted by the Owner from the Contract Sum.

B. When initial tests indicate non-compliance with the Contract Documents, subsequent retesting occasioned by the non-compliance shall be performed by the same testing agency, and costs thereof will be deducted by the Owner from the Contract Sum.

C. Reimburse the Owner all or any part, as the Owner may deem just and proper, of the inspection costs incurred by the Owner due to:

1. Failure of materials to pass initial tests.

2. Contractor's failure to complete the work within the Contract time, and any previously authorized extensions thereof.

3. Claims between separate contractors.

4. Covering of work before the required inspections or tests are performed.

5. Additional inspections required for Contractor's correction of defective work.

6. Overtime costs for acceleration of work done for Contractor's convenience.

1.08 CONTRACTOR'S CONVENIENCE TESTING

A. Inspection and testing performed exclusively for the Contractor's convenience shall be the sole responsibility of the Contractor.

1.09 REQUEST FOR TESTING PROCEDURES

A. Testing will be performed as ordered by the Owner's Representative. Contractor shall follow the Owner's Representative's procedures for requests for tests and inspections. Procedure are as follows:

1. Fill out the Request for Testing form provided by the Owner's Representative.

2. Describe the test and the date the test is required. The request will be given to the Owner's Representative for approval.

3. Submit the Request for Test at least forty-eight (48) hours in advance of the needed date for the test.

4. The Owner's Representative will request the services from the testing agency.

5. The testing agency will be provided a copy of the testing request which will be completed by the testing firm indicating the services provided.

6. Provide a testing schedule which will be reviewed each week for the following week's work.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01500

CONSTRUCTION FACILITIES AND UTILITIES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements for Contractor's temporary facilities at the job site and for the prosecution of the Work.

1.02 EASEMENTS

A. Temporary construction easements and permanent easements have been established by the Owner.

B. Contractor shall confine equipment, materials storage and all construction activities within the temporary easements shown.

1.03 CONTRACTOR'S CONSTRUCTION OFFICE

A. Maintain a suitable office at the site.

B. Temporary office will be considered as the headquarters of the Contractor's representative whom is authorized to receive drawings, instructions, or other communication or articles. Any communication given to the representative or delivered at Contractor's temporary office at the site in his absence is deemed to have been delivered to the Contractor.

C. Maintain copies of the Drawings, Specifications, and other Contract documents at Contractor's temporary office at the site and make these available for use at all times.

1.04 STAGING AREA

A. Before starting the work, submit a proposed plan and layout for all temporary offices, sanitary facilities, storage areas, temporary water service and distribution, and temporary power service and distribution.

B. Erect temporary security fence as appropriate. Contractor is responsible for the security of the staging area. Owner and Engineer do not take any responsibility for missing or damaged equipment, tools or personal belongings.

C. Store only those materials and equipment that are related to the construction within the staging area.

1.05 FENCES

A. Erect temporary fences at the boundary of construction easements and in locations indicated on the Drawings to protect existing wetlands and other environmentally sensitive areas.

B. When existing fences require temporary removal, and these fences are required to restrain animals and stock, erect fences to prevent animals from escaping. Contractor shall be responsible for loss, injury or damage that results from failure to restrain animals and stock.

C. When working in open areas where animals and stock are maintained, provide adequate temporary fencing around open excavations to prevent injury to animals and stock.

1.06 TEMPORARY ACCESS ROADS

A. Construct temporary access roads where access to various portions of the site is otherwise unavailable.

1. Construct a point of access that will allow Contractor to gain access onto the property and within the temporary construction easement.

2. At the conclusion of the work, remove all temporary facilities, re-grade drainage ditches and return the area to its original condition.

3. Contractor is responsible for securing the property until fencing is returned to original conditions and all temporary fences, culverts and backfill material has been removed and the area returned to its original condition.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 TEMPORARY ELECTRIC POWER

A. Contractor shall make provisions to obtain temporary electric power for use during construction. The Contractor shall be responsible for obtaining a source of electric power for construction.

B. Cost of electric power shall be borne by the Contractor.

C. The temporary electric power installation shall meet the construction safety requirements of OSHA, state, and other governing agencies.

3.02 TEMPORARY TELEPHONE SERVICE

A. Provide telephone service at the construction site office. Cellular telephone service is acceptable.

B. The Contractor is not permitted to use the Owner's telephone service.

3.03 TEMPORARY SANITARY FACILITIES

A. Provide toilet and wash-up facilities for the construction work force at the site of work.

B. Facilities shall comply with applicable laws, ordinances, and regulations pertaining to the public health and sanitation of construction field offices, dwellings, and camps.

3.04 TEMPORARY WATER SUPPLY

A. Use potable water for soil moisture conditioning, pipeline pressure testing and other construction uses.

B. Obtain approvals and authorizations from the owner of the public water distribution system for use of water and pay all fees associated with consumption of the potable water.

1. Make the necessary connections to the public water supply and install all conveyance piping and truck filling facilities that are required to transport water for the work.

2. Temporarily install valves, flow meters, air gaps, backflow preventers and other appurtenances required by the owner of the public water distribution system to maintain the integrity of the existing water systems.

3. Remove temporary water facilities when no longer needed.

END OF SECTION

SECTION 01560

ENVIRONMENTAL CONTROLS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Environmental controls to be maintained during construction.

1.02 APPLICABLE LAWS AND REGULATIONS

A. Comply with applicable Federal, State and local environmental, health and safety laws and regulations.

1.03 REFERENCED SECTIONS

A. The following Section is referenced in this Section

1. Section 01330 – Submittals
2. Section 02241 – Control of Water

1.04 SUBMITTALS

A. Comply with Section 01330.

B. Copies of permits and approvals for construction as required by Laws and Regulations and governing agencies.

C. Plan for disposal of waste materials and intended haul routes.

D. Dust control plan.

E. Updated Erosion and Sediment Control Plan meeting the requirements shown on the Drawings and the permit.

1.05 SITE CLEANLINESS

A. Maintain work sites, staging areas, public roadways and private property clean and free of rubbish and debris. Remove materials and equipment from the site when they are no longer necessary for the Work.

B. Keep buildings that are occupied by the Contractor clear of refuse and debris and in a reasonably neat condition.

C. Upon completion of the work and before final acceptance, clear work areas of equipment, unused materials, and rubbish to present a clean and neat appearance.

1.06 HAZARDOUS MATERIALS

A. Handle paints, solvents, and other construction materials with care to prevent contaminants from entering into sewers, storm drains, surface waters, or soils.

B. Develop an emergency response plan for spills of sewage, paint, oil, and other hazardous materials.

C. In the event of a spill, immediately notify the ENGINEER, OWNER and jurisdictional agencies. Take proper measures to clean up spills of hazardous materials in accordance with the emergency response plan, State, Federal, and local regulations and manufacturer's recommendations.

1.07 AIR POLLUTION CONTROL

A. Contractor shall not discharge smoke, dust, and other contaminants into the atmosphere that violate the air pollution regulations for the area.

B. Do not idle internal combustion engines for prolonged periods of time.

C. Minimize dust nuisance by cleaning, sweeping and sprinkling work areas, exposed soil, and haul roads with water or by powered brushing.

1.08 NOISE CONTROL

A. Comply with local controls and noise level rules, regulations, and ordinances which apply to any work performed pursuant to the Contract. If the requirements of this Section are more restrictive than those of the local regulations, the requirements of this Section shall govern.

B. Minimize noise from construction equipment.

1. Whenever possible, utilize construction equipment powered by electric motors rather than diesel or gas driven engines.

2. Locate construction equipment such as compressors and generators as far from sensitive receptors as feasibly possible. Erect temporary sound blankets around noisy equipment to mitigate noise propagation.

3. Equip internal combustion engines with a muffler and provide a noise enclosure around stationary equipment such as engine-driven generators, welders, compressors, and pumps. Use “quiet package” and “hush” equipment.

4. Do not start-up machines or equipment prior to or after the specified construction work hours.

C. Noise Complaints: Should a specific noise impact complaint occur, Engineer has the prerogative to direct Contractor to implement one of the following noise mitigation measures at Contractor’s expense:

1. Relocate stationary construction equipment away from the affected property.

2. Shut off idling equipment.

3. Reschedule construction operations to avoid periods of noise annoyance identified in the complaint.

4. Install temporary or portable acoustic barriers around stationary construction noise sources.

5. Operate electric powered equipment using utility power.

D. Amplified sounds such as telephone, loudspeakers, and other forms of loud communication that constitute a nuisance and potential disturbance shall not be used.

1.09 DIRT AND MUD CONTROL

A. Contractor is responsible for preventing dirt, mud, and debris from accumulating on streets, sidewalks, parking areas, or other paved surfaces and for maintaining the cleanliness of these areas.

1. Track Out: Clean vehicle tires of mud and dirt before exiting the site.

2. Cover all dump truck loads and other loads that may result in debris falling from the vehicle.

3. Sweeping Paved Areas:

a. Maintain cleanliness of paved areas used by the Contractor for the duration of the project.

b. Sweep paved areas that have been used since the previous cleaning on at least a weekly basis, or more frequently when directed by the Engineer. Utilize regenerative air or vacuum pickup sweepers together with proper dust control methods to remove sediment, dust, dirt, and other matter from paved areas. Do not use excessive water resulting in mud on public streets.

1.10 TREE AND PLANT PROTECTION

A. Temporary tree protection

1. Carefully protect existing trees from damage by construction activities. Additional requirements for specific trees may be shown on the Plans or designated in the Contract Documents.

2. Every reasonable effort shall be made to avoid creating conditions adverse to the tree's health.

a. The natural ground within the dripline of protected trees shall remain undisturbed.

b. The dripline area of protected trees shall be identified on the ground by a circle with a radius measurement from the trunk of the tree to the tip of its longest limb.

c. No limb shall be cut back in order to change the dripline measurement.

d. The area within the dripline is a critical area of the tree's root zone and defines the minimum protected area of each tree.

e. No vehicles, construction equipment, temporary buildings, supplies, materials or facilities shall be driven, parked, stockpiled or located within the dripline of protected trees.

f. No trees outside the construction limits shall be removed or damaged, unless authorized by the Construction Manager.

3. If a tree is damaged or destroyed by construction (other than those designated for removal), the Contractor shall replace it in species, size and grade with a healthy tree as directed by the Construction Manager. Where it is necessary to replace a tree damaged by construction, the Contractor shall bear all expenses required to establish the replacement tree and pay any tree removal fees.

B. Cultivated areas and other surface improvements:

1. Landscaped areas and other surface improvements which are damaged by actions of the Contractor shall be restored.

2. Minimize vegetation removal.

3. Areas shall not be cleared until construction activities require the work.

4. Erosion controls shall be in place prior to clearing and grading activities.

C. Other areas to be protected:

1. Environmentally sensitive areas are indicated on the Drawings.

2. Erect a protective fence around the area to be protected.

a. The protective fence shall be 4 feet tall, international orange high density polyethylene resin (Visi-Barrier or equal).

b. Posts shall be heavy duty steel T-posts with corrosion resistant coating spaced at 5 feet on centers.

1.11 OIL SPILL PROTECTION AND CONTROL

A. Store fuel and oil in accordance with requirements of the Uniform Fire Code and applicable National Fire Protection Association standards.

B. Assume responsibility for the prevention, containment, and cleanup of spilled oil, fuel, and other petroleum products used in the Contractor's operations. Prevention, containment and cleanup costs shall be borne by the Contractor.

C. Periodically inspect fuel hoses, lubricating equipment, hydraulically operated equipment, oil drums, and other devices for drips, leaks or signs of damage. Maintain and properly store to prevent spills and vandalism.

D. Construct dikes around storage tanks, or locate tanks to prevent spills from escaping to surface waters or drainage ditches.

E. Remove oils on land using sand, clay, sawdust or other absorbent material and dispose in an acceptable manner. Store waste materials in drums or other leak proof containers after cleanup and during transport to disposal.

1.12 WATER POLLUTION CONTROL

A. Divert sanitary sewage and non-storm waste flow interfering with construction and requiring diversion to sanitary sewers. Do not cause or permit action to occur which would cause an overflow to existing waterway.

B. Prior to commencing excavation and construction, obtain Project Manager's agreement with detailed plans showing procedures intended to handle and dispose of sewage, groundwater, and stormwater flow, including dewatering pump discharges.

C. Do not dispose of volatile wastes such as mineral spirits, oil, chemicals, or paint thinner in storm or sanitary drains. Disposal of wastes into streams or waterways is prohibited. Provide acceptable containers for collection and disposal of waste materials, debris, and rubbish.

1.13 EROSION, SEDIMENT, AND FLOOD CONTROL

A. Provide, maintain, and operate temporary facilities to control erosion and sediment releases, and to protect the Work and existing facilities from flooding during construction period.

B. Comply with state and local requirements.

C. Comply with Section 02241.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01570

STORM WATER QUALITY CONTROLS

PART 1 - GENERAL

1.01 SUMMARY

A. Requirements for the compliance with the General Permit for Discharges of Storm Water Associated with Construction Activity in the State of California.

1.02 REQUIREMENTS

A. Dischargers whose projects disturb 1 or more acres of soil or whose projects disturb less than 1 acre but are part of a larger common plan of development that in total disturbs 1 or more acres, are required to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity Construction General Permit Order 2009-0009-DWQ adopted on September 2, 2009. Construction activity subject to this permit includes clearing, grading and disturbances to the ground such as stockpiling, or excavation.

B. The appropriate Regional Water Quality Control Board (RWQCB) enforces the General Permit. Coverage under a General Permit requires the electronic filing of all Permit Registration Documents (PRDs), Notices of Termination (NOT), changes of information, annual reporting and other compliance documents through the State Water Board's Storm water Multi-Application and Report Tracking System (SMARTS) website.

C. Construction activity includes, but is not limited to: clearing, grading, demolition, excavation, construction of new structures, pipelines and reconstruction of existing facilities involving removal and replacement that results in soil disturbance. This includes construction access roads, staging areas, storage areas, stockpiles, and any off-site areas which receive run-off from the construction project such as discharge points into receiving waters.

D. While the City will be responsible to the RWQCB for compliance with the permit, the City will require the Contractor to provide the detailed planning and compliance activities required insofar as they would potentially affect the Contractor's methods and means of performing the Work.

E. If a violation of the permit is due to the Contractor's actions or inactions and a fine is assessed, the Contractor shall be responsible for the fine.

F. A copy of the Fact Sheet for the General Permit is available on the SWRCB website at: http://www.swrcb.ca.gov/water_issues/programs/stormwater/ .

1.03 RESPONSIBILITIES

A. City of Ukiah's Responsibilities

1. A City staff person will be designated the Legally Responsible Person (LRP) who will electronically file Permit Registration Documents (PRDs) prior to commencement of construction activity.

2. PRDs will be filed by the City but may be prepared by others. PRDs consist of:

a. Notice of Intent (NOI)

b. Risk Assessment

c. Site Map

d. Storm Water Pollution Prevention Plan (SWPPP)

e. Annual Fee

f. Signed Certification Statement

3. A City staff person will be the Legally Responsible Person (LRP) who will electronically file the following documents which may be prepared by others:

   a. Notices of Termination (NOT)

   b. Changes of Information

   c. Annual Reporting

   d. Other Compliance Documents

4. City will pay fees associated with filing NOI and annual reports.

5. City will furnish the Contractor with base maps of a suitable scale in order to prepare required documents.

B. Contractor's Responsibilities

1. Comply with the SWRCB, RWQCB, County, City and other local agency requirements regarding stormwater management, inspection and monitoring.

2. Be responsible for meeting the requirements of the General Permit except as specifically noted otherwise herein.

3. Submit all documents and reports in electronic format suitable for the City to upload to the SMARTS website.

4. Prepare a SWPPP and submit the SWPPP for City review at least 30 days prior to any soil disturbing construction. The SWPPP shall meet the following requirements:

   a. SWPPP shall be prepared by a Qualified SWPPP Developer (QSD) as defined in Section VII of the General Permit.

   b. The SWPPP and each amendment to the SWPPP must be signed by the QSD.

   c. The Risk Level shall be determined by a QSD or QSP certified professional.

   d. SWPPP shall meet the requirements of Section XIV of the General Permit and meet the following objectives:

      1) All pollutants and their sources, including sources of sediment associated with construction, construction site erosion and all other activities associated with construction activity are controlled;

      2) Where not otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated;

      3) Site BMPs are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity to the Best Available Technology/Best Control Technology (BAT/BCT) standard;

      4) Calculations and design details as well as BMP controls for site run-on are complete and correct.

      5) Stabilization BMPs installed to reduce or eliminate pollutants after construction are completed.

      6) Identify post-construction BMPs, which are those measures to be installed during construction that are intended to reduce or eliminate pollutants after construction is completed.

7) Identify and provide methods to implement BMP inspection, visual monitoring, Rain Event Action Plan (REAP) and Construction Site Monitoring Program (CSMP) requirements to comply with the General Permit.

e. Amend and update the SWPPP whenever there is a change in construction or operations which may affect the discharge of pollutants to storm water.

5. Provide information and certification to the Engineer as necessary to complete the NOI.

6. Make the SWPPP available at the construction site during working hours, and make it available upon request by a State or Municipal worker.

7. Designate a Qualified SWPPP Practitioner (QSP)

   a. Ensure all BMPs are implemented by a QSP.

   b. QSP is responsible for non-storm water and storm water visual observations, sampling and analysis.

   c. QSP shall meet the certification requirements of Section VII of the General Permit.

8. Install, construct, implement, monitor, maintain and remove upon completion all of the BMPs and other pollution prevention measures.

9. Implement the Rain Event Action Plan identified in the SWPPP 24 hours in advance of any the predicted precipitation event.

10. Implement the Construction Site Monitoring Plan (CSMP) developed in the SWPPP for the specific Risk Level of the project. Retain records of all monitoring information and copies of all reports and submit to the City.

11. Submit to the City all Non-Compliance reporting required by the General Permit including but not limited to:

    a. Numeric Action Level (NAL) exceedances.

    b. Numeric Effluent Limitation (NEL) Violation Report.

    c. Self-reporting of any other discharge violations

    d. Discharges which contain a hazardous substance in excess of reportable quantities established in 40 CFR §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

12. Prepare the annual compliance report and submit to the City 15 days prior to September 1 of each year. Annual report shall comply with the requirements of Section XVI – Annual Reporting Requirements of the General Permit including but not limited to:

    a. Sampling and analysis results including laboratory reports, analytical methods and reporting limits and chain of custody forms (Risk Levels 2 and 3);

    b. Corrective actions and compliance activities, including those not implemented;

    c. Violations of the General Permit;

    d. Date, time, place, and name(s) of the inspector(s) for all sampling, inspections, and field measurement activities;

    e. Visual observation and sample collection exception records; and

    f. Training documentation of all personnel responsible for General Permit compliance activities.

13. Provide the Engineer the names and 24-hour phone numbers for parties responsible for implementing, monitoring, inspecting and maintaining the SWPPP.

14. Contractor shall be bound to the conditions on the Notice of Intent (NOI) that will be filed by the City and will be responsible for all costs associated with the implementation of the Plan including all fines, damages and job delays incurred due to failure to implement the requirements of the General Permit.

15. Notify the Engineer immediately following a request from any regulatory agency to enter, inspect, sample, monitor or otherwise access the Project Site or its records.

16. Take the proper actions to prevent stormwater coming into contact with contaminants and sediments from migrating offsite or entering storm sewer drainage systems. Take immediate action if directed by the Engineer or if the Contractor observes contaminants and/or sediments entering the storm drainage system, to prevent further stormwater from entering the system.

17. Provide information and certification to the Engineer as necessary to complete the NOT.

    a. Only biodegradable wattles containing no plastic can remain on a site applying for a NOT. Wattles containing plastic netting (including plastic specified as photo-degradable) are considered “construction materials and waste” by the State and must be disposed of.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01600

MATERIALS AND EQUIPMENT

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Materials, equipment and products incorporated into the work.

1.02 MATERIAL AND EQUIPMENT REQUIREMENTS

A. Specified in individual specification Sections in Divisions 2 through 16.

B. Specifications are minimum requirements and manufacturers' standard products may require modifications to meet the specified requirements.

C. Provide products and equipment with all accessories, trim, finish, safety guards and other devices needed for a complete and operational installation.

D. Products to be supplied in quantity shall be the same product from a single source to provide standardization and interchangeability.

1.03 DEFINITIONS

A. Named Products: Items identified by manufacturer's product name and model number as indicated in the manufacturer's published product data.

B. Materials: Products that are shaped, cut, worked, finished or otherwise fabricated or installed to form a part of the Work.

C. Equipment: A product with working parts, whether motorized or manually operated, that requires connections such as wiring or piping.

1.04 PACKAGING AND MARKING

A. Equipment shall be protected against damage from moisture, dust, handling, or other cause during transport from manufacturer's premises to site. Each item or package shall be marked with the number unique to the specification reference covering the item.

B. Stiffeners shall be used where necessary to maintain shapes and to give rigidity. Parts of equipment shall be delivered in assembled or subassembled units where possible.

C. Bearing housings, vents and other types of openings shall be wrapped or otherwise sealed to prevent contamination by dust and dirt.

1.05 SHIPPING AND DELIVERY

A. Plan, order, coordinate and deliver materials and equipment in accordance with the construction schedule to avoid delays and conflicts with the Work.

B. Deliver anchor bolts and bolt templates sufficiently early to permit setting and placement in structural concrete.

C. Unload products in accordance with the manufacturer's handling instructions. Promptly inspect for completeness and evidence of damage during shipment.

1.06 HANDLING AND STORAGE

A. During the interval between the delivery of equipment to the site and installation, all equipment, unless otherwise specified, shall be stored in an enclosed space affording protection from weather, dust and mechanical damage and providing favorable

temperature, humidity and ventilation conditions to ensure against equipment deterioration. Manufacturer's recommendations shall be adhered to in addition to these requirements.

B. Equipment and materials to be located outdoors may be stored outdoors if protected against moisture condensation. Equipment shall be stored at least 6 inches above ground. Temporary power shall be provided to energize space heaters or other heat sources for control of moisture condensation. Space heaters or other heat sources shall be energized without disturbing the sealed enclosure.

C. Fabricated products, pipe and pipe appurtenances shall be handled, stored off the ground on blocking or skids. Pipes with paint, tape coatings, linings or the like shall be stored to protect the coating or lining from physical damage or other deterioration. Pipes shipped with interior bracing shall have the bracing removed only when recommended by the pipe manufacturer.

D. Store loose granular products in well-drained area on a solid surface to prevent mixing with foreign matter. Cover products that are subject to erosion or deterioration with plastic sheeting.

E. Store electrical, instrumentation and control products in a water-tight enclosure to protect against damage from moisture, dust and corrosion.

1.07 PROTECTION OF EQUIPMENT AFTER INSTALLATION

A. After installation, protect equipment from damage from, including but not limited to, dust, abrasive particles, debris and dirt generated by the placement, chipping, sandblasting, cutting, finishing and grinding of new or existing concrete, terrazzo and metal; and from the fumes, particulate matter, and splatter from welding, brazing and painting of new or existing piping and equipment.

B. As a minimum, vacuum cleaning, blowers with filters, protective shielding, and other dust suppression methods will be required at all times to adequately protect all equipment.

C. When sandblasting or when finishing concrete, all equipment that may be affected by cement dust shall be completely covered. Electrical switchgear, substations and motor load centers shall not be installed until after all concrete work and sandblasting in those areas have been completed and accepted and the ventilation systems installed.

D. During painting operations, all grease fittings and similar openings shall be covered to prevent the entry of paint.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 INSPECTION

A. Prior to installation, inspect materials and equipment for signs of corrosion and other effects of storage. Do not install material or equipment showing such effects.

B. Remove damaged material from the site and expedite delivery of replacement material or equipment. Delays to the Work resulting from material or equipment damage that necessitates procurement of new products will be considered delays that are within the Contractor's control.

3.02 INSTALLATION

A. Handle, install, connect, clean and adjust products in accordance with the manufacturer's instructions.

B. Fill lubricant reservoirs and grease bearings prior to starting equipment. Use lubricants recommended by the manufacturer of the equipment.

C. Recoat painted surfaces that are damaged prior to final acceptance of the Work.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01612

SEISMIC DESIGN CRITERIA

PART 1 - GENERAL

1.01 THE REQUIREMENT

A. All products to be furnished under this contract shall be designed, constructed, and installed in conformance with the seismic requirements contained within the 2022 California Building Code (CBC), Seismic Soil Profile Type "D", and the following seismic design parameters:

1. Design Spectral Response Acceleration for Short Period (S_{DS}) = 1.492g
2. Design Spectral Response Acceleration for 1-second Period (S_{D1}) = 0.807g
3. Seismic Use Group III
4. Seismic Design Category E
5. I_E = 1.25 for entire structure
6. I_P = 1.5 for elements of structures and equipment

1.02 RELATED WORK

A. Section 01330, Submittals

B. Section 01614, Wind Design Requirements.

C. Section 05500, Miscellaneous Metals.

1.03 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. California Building Standards Commission (CBSC)

1. California Building Code

B. American Society of Civil Engineers (ASCE)

1. ASCE/SEI 7, Minimum Design Loads for Buildings and Other Structures

C. American Concrete Institute (ACI)

1. ACI 318, Building Code Requirements for Structural Concrete

D. International Code Council Evaluation Services (ICC-ES)

1. Manufacturer Evaluation Reports, as appropriate.

E. Network Equipment Building System (NEBS)

1. Bellcore TR-NWT-000063

F. Sheet Metal and Air Conditioning Contractors National Association (SMACNA)

1. Seismic Restraint Manual – Guidelines for Mechanical Systems

G. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit calculations and/or shop drawings, in accordance with Division 1, and shall include the following information.

B. Design Data:

1. Equipment Qualification – CONTRACTOR shall submit for review and approval (if required). Structural seismic qualification of the equipment to demonstrate that it is capable of withstanding forces as specified.

2. Anchorage System – CONTRACTOR shall submit for review and approval. Structural calculations, of the proposed anchorage system, certified by a Professional Civil or Structural Engineer licensed within the State of California.

C. Certification:

1. Certification from equipment manufacturer stating that equipment is either "Pre-qualified Structurally and Functionally Rugged" or "Pre-qualified Structurally Rugged," as applicable.

1.05 EQUIPMENT CLASSIFICATION

A. Class I – Pre-qualified Structurally and Functionally Rugged:

1. Equipment defined as Class I is expected to remain operable, or be capable of immediate restoration to service following a Design Basis Earthquake (DBE).

2. Class I equipment, which is not pre-qualified as structurally and functionally rugged shall be subject to functional seismic qualification. Functional seismic qualification shall consist of prototype shake table testing in accordance with the requirements of TR-NWT-000063.

3. Ground motion time histories used, as the basis of shake table qualification testing shall produce a response spectrum, which envelops the site-specific response spectrum for the project.

B. Class II – Pre-qualified Structurally Rugged:

1. Equipment designated as Class II need not remain functional through a Design Basis Earthquake or even be capable of immediate restoration to service. Nevertheless, such equipment shall be able to resist damage adequately to permit repair and return to service within a short period of time, following a DBE.

2. Class II equipment which is not pre-qualified as "structurally and functionally rugged" or as "structurally rugged" shall be subject to structural seismic qualification. Structural seismic qualification shall consist of submittal of specific structural engineering analysis of the design and interconnection of all parts and portions of the equipment to demonstrate that it is capable of withstanding forces as specified. Calculations shall be sealed by a Civil or Structural Engineer licensed within the State of California.

1.06 FIXTURE AND EQUIPMENT ANCHORAGE

A. Anchorage and other supports for all important equipment shall be designed to resist seismic forces occurring at each of the three principal directions separately as well as simultaneously. When combining seismic forces in the orthogonal directions simultaneously, the combination of 100-percent F_{h1}, plus 30-percent F_{h2}, plus 30-percent of F_v shall be used. Where inclusion of vertical loads results in a less conservative design, vertical effects shall be neglected. Alternatively, the orthogonal effects may be combined on a square-root-of-the-sum-of-the-squares (SRSS) basis, using 100-percent of the forces in three directions.

B. Structural design of equipment anchorage will be submitted for pre-qualified structurally rugged equipment. Calculations shall be sealed by a Civil or Structural Engineer licensed within the State of California.

C. Equipment, which is not pre-qualified as structurally rugged, will be subject to structural seismic qualification. Structural seismic qualification will consist of submittal of specific structural engineering analysis of the design and interconnection of all parts, portions and anchorage of the equipment to demonstrate that it is capable of withstanding forces resulting from a Design Basis Earthquake. Calculations shall be sealed by a Civil or Structural Engineer licensed within the State of California.

D. Architectural elements (racks, shelving, cladding, windows, doors, non-engineered partition walls, parapets, ornamentation, gutters and downspouts, etc.) mechanical and electrical components, equipment housings and their attachments, supporting structures, and anchorage:

1. Shall be designed and constructed to resist the seismic forces in accordance with Chapter 16 of the CBC. This force shall be considered acting at the center of gravity of the piece under consideration. No equipment shall be anchored to vertical structural elements without written approval of the ENGINEER.

2. Component Amplification Factor (ap) equal to 2.5 for nonbuilding structures with flexible dynamic characteristics or ap = 1.0 for nonbuilding structures with rigid dynamic characteristics.

3. Equipment shall be designed for a vertical seismic component equivalent to 2/3 the horizontal seismic component.

4. Vibration isolated equipment shall be provided with snubbers capable of retaining the equipment in its designated location without any material failure or deformation of the snubbers when exposed to a vertical or horizontal force at the contact surface equal to 100 percent of the operating weight of the equipment. Air gaps between retainer and equipment shall not exceed 1/4-inch.

5. Piping with flexible connection and/or expansion joints shall be anchored such that the intended uses of these joints are maintained in the piping system.

6. Calculations and shop drawings shall be submitted for all anchorage details. All calculations shall be made and signed by a Professional Civil or Structural Engineer licensed in the State of California. Inasmuch as all anchorage of equipment is to be made of poured-in-place concrete elements, it is imperative that types of anchorage be coordinated with the concrete contractor so that anchorage may be installed at time of concrete placement. If calculations and anchorage details are not submitted prior to placing concrete, the CONTRACTOR will become responsible for any strengthening of concrete elements because of superimposed seismic loading.

E. Cast-in anchor bolts are preferred for support of critical equipment and framing. Drilled-in expansion anchors will not be used, without approval from the ENGINEER, for critical fastening such as extreme vibratory conditions, impact loads, seismic connections, and overhead installations.

F. Expansion and adhesive anchors will have an associated research report issued by The International Code Council Evaluation Service, Inc. (ICC-ES). Design values and installation requirements for anchors will be as presented in the appropriate ICC-ES and/or Legacy report(s). Edge distance, bolt spacing, inspection requirements and operating temperatures will be considered when determining the appropriate allowable design values.

1.07 VIBRATION ISOLATION

A. In general, equipment should be rigidly mounted to supporting foundations and structures, without the aid of vibration isolation devices. Exceptions are mechanical equipment in which vibrations transmitted from the equipment would be troubling to building occupants and/or other equipment within the building.

B. If vibration isolation mountings are required for equipment. The mountings, and their attachments to the supporting structure, shall be designed as flexible mountings in accordance with governing Code. The supplier of the vibration isolation mounting hardware shall be required to submit certified calculations, sealed by a Civil or Structural Engineer licensed within the State of California. Indicating the adequacy of the hardware and attachment anchorage to meet these criteria.

1.08 ABOVE GROUND PIPING

A. Steel piping shall as a minimum, be provided with braces that satisfy the latest edition of SMACNA requirements for Seismic Hazard Level A unless demonstrated to the satisfaction of the OWNER that it is capable of resisting the required seismic forces under other support conditions. Connection Level I shall be used for all piping.

B. Plastic piping shall be braced laterally at intervals not exceeding twice that recommended by the manufacturer for vertical support.

C. Piping crossing expansion joints between adjacent structures shall be provided with expansion fittings, multiple bends, or other suitable provisions to ensure capacity to sustain expected differential movement between structures.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 GENERAL

A. All equipment designed to be fixed in position shall be securely fastened in place in conformance with the CBC, ASCE 7, or as specified herein the Technical Specifications for a specific piece of equipment under Division 2 through 16. For other equipment, the equipment manufacturer shall provide recommended anchorage information to the CONTRACTOR for use in the installation of the equipment.

B. See also Section 01614 for Wind Design Requirements.

3.02 STRUCTURAL INTEGRITY AND ANCHORAGE

A. It shall be the responsibility of the equipment manufacturer/supplier to provide the engineering anchorage calculations and figures to the CONTRACTOR for submission to the ENGINEER. As a minimum, the equipment manufacturer/supplier shall determine the number, dimensions, material, location, embedment and installation conditions of all anchor bolts to be set in concrete in accordance with Contract Specifications and Drawings. At the option of the CONTRACTOR, the CONTRACTOR or equipment manufacturer/supplier shall furnish the anchor bolts and associated hardware as specified herein and as determined by the manufacturer/supplier's engineering anchorage calculations for installation by the CONTRACTOR.

B. Engineering anchorage calculations and figures shall be prepared, stamped and signed by a Professional Civil or Structural Engineer licensed in the State of California. Calculations shall include the following steps as a minimum:

1. Determination of the operating equipment weight and centroid of the equipment.

2. Determination of the shear and overturning forces at each anchorage due to the force determined, as specified below, being applied at the equipment's centroid.

3. Determination of the shear and tension forces that must be developed by the anchorage at each support to resist the forces calculated.

4. Selection of the anchorage details based upon the maximum shear and tension forces calculated above. As a minimum, details shall include number of bolts,

materials, diameter, total length, embedded length, required edge distance and bolt dimensions. The embedded length of bolts shall be suitable to develop the ultimate tensile capacity of the anchorage for ductile failure.

C. For all equipment weighing 400 pounds or more, the minimum anchor bolt size shall be 5/8-inch diameter, with 5-inch minimum embedment. The minimum anchor bolt size for all other equipment shall be 3/8-inch diameter, with 4-inch minimum embedment. All anchor bolts securing equipment to be grouted shall be furnished with leveling nuts, the faces of which shall be tightened against the flat surfaces to not less than 10 percent of the bolts safe tensile stress.

D. Cast-in-place anchor bolts shall be set before concrete has been placed and shall be carefully held in position with suitable templates of an acceptable design.

E. No equipment shall be anchored to vertical structural elements without the written approval of the ENGINEER, with the exception of pipe hangers/supports or anchorage as specified.

3.03 SEISMIC REQUIREMENTS

A. The seismic qualification for the above equipment shall be demonstrated by structural calculation(s) or engineering shake table test(s).

3.04 PROOF OF COMPLIANCE

A. As required by other sections of these Specifications, CONTRACTOR shall submit for review and acceptance, test data or structural calculations certified by a Professional Civil or Structural Engineer, licensed in the State of California, to show compliance with the above requirements.

B. Test data for similar equipment may be used subject to the approval of the ENGINEER.

C. In addition to the above requirements, where equipment with complex component structural systems, (i.e. systems involving components with multiple degrees of freedom and higher order modes of vibration), contains low weight components (e.g. circuit boards, relays, or solenoids), an additional empirical evaluation for such low weight components shall be certified in writing by a Professional Civil or Structural Engineer, licensed in the State of California, to satisfy the requirements set forth above. At a minimum, such certification shall be based on an empirical evaluation of direct observation of such equipment as part of the factory or shop witness testing including physical “hand” shake and pull tests, and general calculations (if required to verify capacity overload) necessary to satisfy the ENGINEER of compliance with the above requirements. Certification shall be in the form of a letter from the licensed engineer incorporating the nature of the observations and/or calculations performed including the licensed engineer’s seal and signature

END OF SECTION

SECTION 01614

WIND DESIGNS REQUIREMENTS

PART 1 - GENERAL

1.01 THE REQUIREMENT

A. All products to be furnished under this contract shall be designed, constructed, and installed in conformance with the wind design requirements contained within the 2022 California Building Code (CBC), and the following design parameters:

1. Occupancy Category, III
2. Fastest Mile Wind Speed (3 Second Gust) 99 miles per hour
3. Wind Exposure Category "C"
4. Importance Factor, I_W = 1.15

1.02 RELATED WORK

A. Section 01330, Submittals

B. Section 01612, Seismic Design Requirements.

C. Section 05500, Miscellaneous Metals.

1.03 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. California Building Standards Commission (CBSC)

1. California Building Code

B. American Society of Civil Engineers (ASCE)

1. ASCE/SEI 7, Minimum Design Loads for Buildings and Other Structures

C. American Concrete Institute (ACI)

1. ACI 318, Building Code Requirements for Structural Concrete

D. International Code Council Evaluation Services (ICC-ES)

1. Manufacturer Evaluation Reports, as appropriate.

E. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit calculations and/or shop drawings, in accordance with Division 1, and shall include the following information:

B. Design Data:

1. Anchorage System – CONTRACTOR shall submit for review and approval. Structural calculations, of the proposed anchorage system, certified by a Professional Civil or Structural Engineer licensed within the State of California.

1.05 FIXTURE AND EQUIPMENT ANCHORAGE

A. Anchorage and other supports for all important equipment shall be designed to resist wind forces occurring along each of the three principal directions.

B. Architectural elements (racks, shelving, cladding, windows, doors, non-engineered partition walls, parapets, ornamentation, gutters and downspouts, etc.) mechanical and electrical components, equipment housings and their attachments, supporting structures, and anchorage:

1. Calculations and shop drawings shall be submitted for all anchorage details. All calculations shall be made and signed by a Professional Civil/Structural Engineer licensed in the State of California. Inasmuch as all anchorage of equipment is to be made of poured-in-place concrete elements, it is imperative that types of anchorage be coordinated with the concrete contractor so that anchorage may be installed at time of concrete placement. If calculations and anchorage details are not submitted prior to placing concrete, the CONTRACTOR will become responsible for any strengthening of concrete elements because of superimposed wind loading.

C. Cast-in anchor bolts are preferred for support of critical equipment and framing. Drilled-in expansion anchors will not be used, without approval from the ENGINEER

D. Expansion and adhesive anchors will have an associated research report issued by The International Code Council Evaluation Service, Inc. (ICC-ES). Design values and installation requirements for anchors will be as presented in the appropriate ICC-ES and/or Legacy report(s). Edge distance, bolt spacing, inspection requirements and operating temperatures will be considered when determining the appropriate allowable design values.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 GENERAL

A. All equipment designed to be fixed in position shall be securely fastened in place in conformance with the CBC, ASCE 7, or as specified herein the Technical Specifications for a specific piece of equipment under Division 2 through 16. For other equipment, the equipment manufacturer shall provide recommended anchorage information to the CONTRACTOR for use in the installation of the equipment.

B. See also Section 01612 for Seismic Design Requirements.

3.02 STRUCTURAL INTEGRITY AND ANCHORAGE

A. It shall be the responsibility of the equipment manufacturer/supplier to provide the engineering anchorage calculations and figures to the CONTRACTOR for submission to the ENGINEER. As a minimum, the equipment manufacturer/supplier shall determine the number, dimensions, material, location, embedment and installation conditions of all anchor bolts to be set in concrete in accordance with Contract Specifications and Drawings. At the option of the CONTRACTOR, the CONTRACTOR or equipment manufacturer/supplier shall furnish the anchor bolts and associated hardware as specified herein and as determined by the manufacturer/supplier's engineering anchorage calculations for installation by the CONTRACTOR.

B. Engineering anchorage calculations and figures shall be prepared, stamped and signed by a Professional Civil or Structural Engineer licensed in the State of California. Calculations shall include the following steps as a minimum:

1. Determination of the shear and overturning forces at each anchorage due to the force determined, as specified below, being applied.

2. Determination of the shear and tension forces that must be developed by the anchorage at each support to resist the forces calculated.

3. Selection of the anchorage details based upon the maximum shear and tension forces calculated above. As a minimum, details shall include number of bolts, materials, diameter, total length, embedded length, required edge distance and bolt dimensions. The embedded length of bolts shall be suitable to develop the ultimate tensile capacity of the anchorage for ductile failure.

C. Cast-in-place anchor bolts shall be set before concrete has been placed and shall be carefully held in position with suitable templates of an acceptable design.

D. No equipment shall be anchored to vertical structural elements without the written approval of the ENGINEER, with the exception of pipe hangers/supports or anchorage as specified.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01740

CLEANING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Intermediate and final cleaning of Work not including special cleaning of closed systems specified elsewhere.

1.02 STORAGE AND HANDLING

A. Store cleaning products and cleaning wastes in containers specifically designed for those materials.

1.03 SCHEDULING

A. Schedule cleaning operations so that dust and other contaminants disturbed by cleaning process will not fall on newly painted surfaces.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Cleaning Agents

1. Compatible with surface being cleaned.
2. New and uncontaminated.
3. For Manufactured Surfaces: Material recommended by manufacturer.

PART 3 - EXECUTION

3.01 GENERAL

A. Prevent accumulation of wastes that create hazardous conditions.

B. Conduct cleaning and disposal operations to comply with laws and safety orders of governing authorities.

C. Do not dispose of volatile wastes such as mineral spirits, oil, or paint thinner in storm or sanitary drains or sewers.

D. Dispose of degradable debris at an approved solid waste disposal site.

E. Dispose of non-degradable debris at an approved solid waste disposal site or in an alternate manner approved by Engineer and regulatory agencies.

F. Handle materials in a controlled manner with as few handlings as possible.

G. Do not drop or throw materials from heights greater than 4-feet or less if conditions warrant greater care.

H. On completion of work, leave area in a clean, natural looking condition. Remove all signs of temporary construction and activities incidental to construction of required permanent Work.

I. Do not burn on-site.

3.02 INTERIOR CLEANING

A. Cleaning During Construction

1. Keep work areas clean so as not to hinder health, safety or convenience of personnel in existing facility operations.
2. At maximum weekly intervals, dispose of waste materials, debris, and rubbish.
3. Vacuum clean interior areas when ready to receive finish painting. Continue vacuum cleaning on an as-needed basis, until final cleaning.

B. Final Cleaning

1. Complete immediately prior to Final Inspection.
2. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from sight-exposed surfaces.
3. Wipe all lighting fixture reflectors, lenses, lamps and trims clean.
4. Wash and shine glazing and mirrors.
5. Polish glossy surfaces to a clear shine.
6. Ventilating systems
    a. Clean permanent filters and replace disposable filters if units were operated during construction.
    b. Clean ducts, blowers and coils if units were operated without filters during construction.
7. Replace all burned out lamps.
8. Broom clean process area floors.
9. Mop office and control room floors.

3.03 EXTERIOR SITE CLEANING

A. Cleaning During Construction

1. Construction debris
    a. Confine in strategically located container(s):
        1) Cover to prevent blowing by wind.
        2) Haul from site minimum once a week.
    b. Remove from work area to container daily.
2. Vegetation
    a. Keep weeds and other vegetation trimmed to 3-inch maximum height.
3. Soils, sand, and gravel deposited on paved areas and walks:
    a. Remove as required to prevent muddy or dusty conditions.
    b. Do not flush into storm sewer system.

B. Final Cleaning

1. Remove trash and debris containers from site:
    a. Re-seed areas disturbed by location of trash and debris containers.
2. Clean paved roadways.

3.04 FIELD QUALITY CONTROL

A. Immediately prior to Demonstration Period, conduct an inspection with Engineer to verify condition of all work areas.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01770

CONTRACT CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Administrative and procedural requirements for contract closeout.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. General Conditions
2. Section 01780 – Record Drawings
3. Section 01782 – Operation and Maintenance Information

1.03 FINAL CLEANING

A. Immediately prior to submittal of a request for inspection for Substantial Completion, clean the project site and make ready for Owner's use and occupancy.

B. Employ experienced workers or professional cleaners for final cleaning.

C. Complete the following cleaning operations:

1. Clean the project site, yard and grounds which were disturbed by construction activities. Remove rubbish, waste material, litter and other foreign material.
2. Sweep paved areas, remove oil stains, grease, dust and dirt.
3. Remove tools, construction equipment, machinery, storage sheds, temporary fences and surplus material.
4. Broom clean sidewalks and concrete floors.
5. Vacuum carpets, spot clean or if necessary, shampoo to remove visible soil or stains.
6. Clean glass in doors and windows, remove glazing compounds, replace chipped and broken glass, clean door and window frames.
7. Patch, touch up and repair marred surfaces and finishes. Replace finishes and surfaces that cannot be satisfactorily repaired or restored.
8. Wipe surfaces of mechanical and electrical equipment, remove excess lubrication, paint splatter and mortar droppings.
9. Clean plumbing fixtures and mirrors.
10. Clean light fixtures, lamps and bulbs. Replace burned-out bulbs and defective or noisy starters in fluorescent and mercury vapor fixtures.

1.04 SUBSTANTIAL COMPLETION

A. General:

1. Comply with procedural requirements for Substantial Completion as specified in the General Conditions.

B. Complete final cleaning operations before requesting inspection for Substantial Completion.

C. Prior to requesting inspection for Substantial Completion, complete and submit the following:

1. List of items to be completed or corrected (punch list). Organize list by facility, space, system and piece of equipment.

2. Specific warranties, bonds, maintenance service agreements, final certifications and similar documents.

3. Delivery of spare parts, special tools, extra materials and similar items to designated locations.

4. Make final changeover of permanent locks and deliver keys to Owner.

D. Inspection for Substantial Completion:

1. Engineer, Owner and Contractor shall jointly walk through and inspect the project site to determine whether the Work is satisfactory and Substantially Complete.

2. The Contractor's punch list will be reviewed and additional items identified during the inspection requiring corrective actions will be added to the list as determined by the inspection.

3. Once Substantial Completion has been achieved, Engineer will prepare a Certificate of Substantial Completion.

1.05 FINAL COMPLETION

A. Final Completion Submittals:

1. Prior to submitting final Application for Payment, complete and submit the following:

a. Project Record Drawings. Refer to Section 01780.

b. Guaranty and Warranties.

c. Operation and Maintenance Information. Refer to Section 01782.

d. Punch List with all corrective actions completed and ready for Final Inspection.

e. Releases from Agreements with property owners or public agencies.

f. Releases or Waivers of Liens and Claims.

g. Evidence of final, continuing insurance coverage complying with insurance requirements.

h. Consent of Surety to Final Payment.

B. Final Inspection:

1. Submit written request for final inspection for Project Acceptance.

2. Engineer will either proceed with the inspection or advise Contractor of unfulfilled requirements.

3. Engineer will prepare a Certificate of Final Completion after satisfactory inspection of the Work.

1.06 FINAL APPLICATION FOR PAYMENT

A. Following a satisfactory Final Inspection and receipt of a signed Certificate of Final Completion from the Engineer, submit the final Application for Payment in accordance with the procedures and requirements specified in the General Conditions.

END OF SECTION

SECTION 01780

RECORD DRAWINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Record Drawings are documents maintained and annotated by the Contractor during construction to illustrate the final location of piping, equipment, electrical conduits, outlet boxes and cables.

B. Record changes or deviations that vary from the details indicated on the original Contract Documents. Identify buried or concealed construction and utility features that are revealed during the course of construction. Record the horizontal and vertical location of buried utilities that differ from the locations indicated, or which were not indicated on the Contract Documents.

C. When the configuration and arrangement of the Work is changed from that indicated on the Contract Drawings or specified in the Project Manual, the authorizing document for the change, such as a Request for Information, Change Order, Shop Drawing, or Field Order, shall be clearly referenced on the Record Drawings as a comment.

D. Supplement the Record Drawings with detailed layout sketches, schedules, installation drawings and fabrication drawings.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 RECORD DRAWINGS

A. Record Drawings shall be full-size and maintained in a clean and legible condition. Engineer will provide one set of full-size Drawings for use as a Record Drawing set.

B. Do not use the Record Drawing set for construction purposes.

C. At the completion of the work, but prior to final payment, submit the Record Drawing set to the Engineer.

D. Marking of the drawings shall be kept current and shall be done at the time the material and equipment are installed.

E. Annotations to the Record Drawings shall be legible and shall be made with an erasable colored pencil conforming to the following color code:

1. Additions and Final Dimensions – Red
2. Deletions – Green
3. Comments – Blue

F. Engineer will review the Contractor's updated Record Drawing mark-ups on a monthly basis during the evaluation of each progress payment.

1. Progress payment approval is contingent upon complete and up-to-date Record Drawing mark-ups.
2. Payment approval will be delayed if mark-up drawings are not up-to-date.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01782

OPERATION AND MAINTENANCE INFORMATION

PART 1 - GENERAL

1.01 GENERAL

A. O&M information shall be provided for each maintainable piece of equipment, equipment assembly or subassembly, and material provided or modified under this Contract.

B. Contractor shall be responsible for:

1. Compiling product data and related information appropriate for the Owner's operation and maintenance of products furnished under the Contract.

2. Preparing operating and maintenance data as specified in this Section and as referenced in other pertinent Sections of specifications for products furnished under the Contract.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals

1.03 SUBMITTALS

A. Submit in accordance with Section 01330.

B. Submit 2 manuals for review for each piece of equipment or system. Engineer and Owner will review the manuals and both will be returned to the Contractor. Make additions and revisions in accordance with the review comments and submit 4 final O&M Manuals.

C. O&M Manuals must be submitted and accepted before on-site training may start.

D. If the manufacturer's standard brochures and manuals are used to describe O&M procedures, modify or annotate these published documents to identify only the model or series of equipment installed on the project. Neatly cross out, eliminate or otherwise annotate extraneous material.

E. Submittals that are not fully indexed and tabbed with sequentially numbered pages shall be returned without review.

F. Provide two sets of CDs containing all AutoCAD as-built electrical and instrumentation drawings prepared for this project.

PART 2 - PRODUCTS

2.01 GENERAL

A. Operation and maintenance data shall be provided in the form of an instructional manual for use by Owner's personnel.

B. Format

1. Size: 8½-inch by 11-inch. (except drawings)

2. Text

a. Manufacturer's printed data properly edited for project. Cross out all data that does not apply to the equipment to be furnished.

b. All documents shall be machine typed; hand written documents are not acceptable. All documents shall be legible and original size, documents that cannot be read or have been reduced will be returned for correction.

3. Drawings

a. Provide drawings in a separate reinforced punched binder tab-bind in with text.

b. Drawings larger than 11-inch by 17-inch shall be placed in an 8½-inch by 11-inch envelopes bound in text.

c. Drawings shall be suitably identified on the Drawings binder.

d. Drawings shall be referenced in text.

4. Binders: Commercial quality, permanent, all white in color, three-ring, durable, cleanable plastic covers with inserts, insertable full height and width, front, back, and spine, with full-page sheet lifters. Size of binder shall be appropriate for the quantity of material it will contain.

5. Indexing: The manuals shall be fully indexed by use of side tabs.

6. All of these sets of O & M manuals shall be made up of "original" (no copies or reproductions) documents. No photo or fax copies are allowed of standard published manuals available from manufacturers.

2.02 CONTENTS OF MANUAL

A. Presentation of Data

1. Include only those sheets that are pertinent to the specific product.

2. Annotate each sheet to:

a. Clearly identify the specific project or part installed.

b. Clearly identify the data applicable to the installation.

c. Cross-out references to inapplicable information.

B. Drawings

1. Supplement product data with Drawings as necessary to clearly illustrate:

a. Relations of component parts of equipment and systems. Include individual parts list with exploded views for all equipment.

b. Control and flow diagrams.

2. Electrical/instrumentation coordinate drawings with information in project contract documents to assure correct illustration of completed installation.

3. “As Constructed” set of submittal shop documents, data sheets, and drawings, including all items in the electrical/instrumentation system as specified in Division 16. Contract documents shall not be used as “As Constructed” drawings.

C. Written text as required to supplement product data for the particular installation:

1. Organize in a consistent format under separate headings for different procedures.

2. Provide a logical sequence of instructions for each procedure.

D. Provide the index and information layout in the operation and maintenance manual for each unit of equipment, and system, including electrical, and electronic items as follows:

1. Cover sheet including the following:

a. Volume __ of X.

b. Operation and Maintenance Manual.

c. Project title.

d. Owner project number.

e. Manufacturer: Name, addresses, and telephone numbers of the manufacturer and the nearest representative of the manufacturer.

f. Date.

2. Document Index: Neatly typewritten document index for each volume, arranged as indicated in Appendix “A”. Master Table of Contents shall be placed in Volume 1 itemizing all of the information included in the O&Ms and the corresponding volume location of that information.

3. Equipment Record Sheet for Electrical/Instrumentation Equipment

   a. Equipment record sheet for electrical/instrumentation equipment as specified in Division 16.

   b. A complete list of items supplied, including serial numbers, ranges, options, and other pertinent data necessary for ordering replacement parts.

   c. Name and location of nearest parts supplier for all equipment.

4. Theory of Operation.

5. Description: Provide description of units and components parts function, normal operating characteristics, and limiting conditions.

   a. Include general descriptive bulletins, brochures, or catalog sheets to describe the equipment.

   b. Performance curves, engineering data, and tests.

6. Operating Instructions: Complete, detailed, written description of the sequence of operating sequence for all control system and operations in all modes. The description shall be specifically prepared for this work, and shall be fully referenced to control diagrams and system components:

   a. Recommended step-by-step startup, adjustment, calibration and break-in operating instructions.

   b. Routine and normal operating instructions. Include summer and winter operating instructions as applicable. Also include special operating instructions.

   c. Recommended step-by-step regulation, control, starting, and shut-down instructions.

   d. No photocopies are allowed of standard published manuals available from manufacturers.

   e. Recommended step-by-step emergency instructions. Provide emergency procedures for equipment malfunctions to permit a short period of continued operation or to shut down the equipment to prevent further damage to systems and equipment. Include emergency shutdown instructions for fire, explosion, spills, or other foreseeable contingencies. Provide guidance on emergency operations of all utility systems including valve locations and portions of systems controlled.

   f. Current and desired control settings.

7. Maintenance Instructions

   a. Provide the following lubrication data.

      1) A table showing recommended lubricants for specific temperature ranges and applications;

2) Charts with a schematic diagram of the equipment showing lubrication points, recommended types and grades of lubricants, and capacities; and

3) A lubrication schedule showing service interval frequency.

b. Detailed service, maintenance and operation instructions for each item supplied. Preventative maintenance to include routine operation, alignment, adjusting, and checking. Include illustrations, assembly drawings, and diagrams required for maintenance. Preventative maintenance procedure and schedule for all equipment over a five-year cycle.

c. Corrective maintenance to include disassembly, repair, overhaul and re-assembly.

d. Schematic diagrams of all electronic devices shall be included. A complete parts list with stock numbers shall be provided on the components that make up the assembly.

e. Special maintenance requirements particular to this system shall be clearly defined, along with special calibration and test procedures.

f. No photocopies are allowed of standard published manuals available from manufacturers.

g. Include Maintenance Program data entry forms.

8. Shipping and Installation

a. Receiving and handling.

b. Long-term storage and short-term storage.

c. Complete step-by-step installation instructions of all components.

9. Safety Procedures

a. Manufacturer's safety procedures for operating and maintaining all equipment and materials used. List personnel hazards and safety precautions.

10. Parts Identification

a. Provide identification and coverage for all parts of each component, assembly, subassembly, and accessory of the end items subject to replacement. Include special hardware requirements, such as requirement to use high-strength bolts and nuts. Identify parts by make, model, serial number, and source of supply to allow reordering without further identification. Provide clear and legible illustrations, drawings, and exploded views to enable easy identification of the items. When illustrations omit the part numbers and description, both the illustrations and separate listing shall show the index, reference, or key number which will cross-reference the illustrated part to the listed part. Parts shown in the listings shall be grouped by components, assemblies, and subassemblies.

11. List of recommended spare parts:

a. Original manufacturer's parts list with manufacturer's current prices. Include complete nomenclature and commercial numbers of replaceable parts.

b. Predicted life of parts subject to warranty.

c. Items recommended to be stocked as spare parts.

d. Complete nomenclature and commercial number of all replaceable parts.

12. Testing Equipment and Special Tool Information

    a. Provide information on test equipment required to perform specified tests and on special tools needed for the operation, maintenance, and repair of components.

13. Test Data

    a. Include all test data and forms from factory and field testing.

14. Troubleshooting instructions.

15. Equipment catalogue sheets and submittals.

    a. Include copy of all approved submittals.

16. Electrical and Instrumentation Drawings

    a. Electrical & Instrumentation Drawings shall include as-built information per Division 16 for the project. As-built drawings shall be signed and stamped by an electrical engineer registered in the State of California.

17. Complete software ladder logic printouts.

18. Record of all settings or parameters for all programmable devices.

19. At the end of the project these manuals shall be updated to show “as-built” or “as-installed” conditions.

PART 3 - EXECUTION (NOT USED)

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 01810

FACILITY START-UP AND COMMISSIONING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Project requirements for Start-up and Commissioning

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01600 – Materials and Equipment
2. Section 01820 – Training

1.03 DEFINITIONS

A. Start-up: The initial operation of the facility and/or plant, utilizing wastewater and related substances (sludge, methane, scum), or other media which the facility has been designed to process.

B. Commissioning: A confirmation that equipment, systems and facilities operate in accordance with the design intent and satisfy the detailed requirements of the technical specifications. The duration of the commissioning period shall be not less than 7 consecutive days.

1.04 SERVICES OF MANUFACTURER

A. Manufacturer's services for inspection, physical checkout, field adjustment, field testing, and start-up shall comply with the requirements of this Section, the requirements of the particular equipment or product technical specifications contained in Divisions 2 through 17, and the requirements of Section 01600.

B. Manufacturer's services for training and instruction of the Owner’s personnel shall comply with the requirements of the particular equipment or product technical specifications contained in Divisions 2 through 17 and Section 01820.

1.05 ROLES AND RESPONSIBILITIES

A. Contractor’s Responsibilities

1. Review specific start-up plan(s) provided by the Engineer in order to:
    a. Schedule and coordinate with the Engineer for start-up of equipment and systems.
    b. Review procedures for facility start-up.
2. Review preliminary punch list items with the Engineer 15 days prior to the scheduled start-up; and complete, correct, or resolve at the option of the Engineer, any items which impact or interfere with the facility start-up.
3. Attend meetings related to the review of start-up plan(s).
4. Clarify submittals, testing requirements, schedules, or other items related to the start-up of the equipment and facilities specified and indicated in the Contract Documents.

5. Provide all start-up materials and operating supplies for 30 operating days. Supplies include lubricants, chemicals, gases, and specialized fluids to maintain operation for 30 days.

6. Provide Manufacturer's authorized representatives as required to supervise placing equipment or systems in operation and to provide guidance during the start-up period.

7. Provide to the Engineer a list of 24 hour, "on call" representative supervisory persons who will monitor the facility start-up, and serve as a liaison for the Engineer.

8. Provide the necessary craft or labor assistance full time during the day shift and as required at other times in the event of an emergency requiring immediate attention. An emergency is defined as a failure which precludes the further operation of a critical segment of the Work. The response time shall be not less than four hours from the time of notification.

9. Correct all failures or equipment problems identified during start-up. Repairs deemed the responsibility of the Contractor shall be made at no additional cost to the Owner.

B. The responsibilities of the Owner’s O&M staff during the 7-day facility start-up period include the following:

1. Provide staff to operate equipment, systems, and facilities requiring start-up.

2. Provide all utilities including power, natural gas, and water.

C. The Engineer’s responsibilities for the facility start-up period include the following:

1. Coordinate the Contractor’s start-up activities with plant operations staff.

2. Verify the results of performance tests and any retesting.

3. Direct the Contractor to repair defective workmanship, materials, and equipment.

1.06 COMMISSIONING

A. The Owner’s Operations and Maintenance staff will initiate the commissioning period and will operate the facility throughout the duration of the commissioning period. All equipment must operate properly and continuously 24 hours per day for the test period. If any item malfunctions during the test, the item shall be repaired and the test restarted at day zero with no credit given for the operating time before the malfunction.

B. The purpose of this 7-day operational demonstration is to:

1. Provide the environment by which the Owner’s O&M staff can place equipment and systems into service.

2. Expose flaws or defects in workmanship, equipment, or materials, not previously discovered that are the responsibility of the Contractor to repair, correct, modify, or replace prior to Final Acceptance.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01820

TRAINING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements for training the Owner's personnel, by persons retained by the Contractor specifically for the purpose, in the proper operation and maintenance of the equipment and systems installed under this Contract.

B. Coordinate with the equipment suppliers for all training activities and provide additional labor, services, and materials as required to complete training.

1.02 REFERENCED SECTIONS

A. The following Section is referenced in this Section

1. Section 01330 – Submittals

1.03 TRAINING SESSIONS

A. Where required by the detailed specifications, provide on-the-job training of the Owner's personnel, which will include plant operations personnel, mechanics, electricians, and electronics technicians.

B. The training sessions shall be conducted by qualified, experienced (2 years minimum), manufacturer's factory-trained representatives (not sales representatives) of the various equipment manufacturers.

C. Include instruction in both equipment operation and preventive maintenance.

D. Field training sessions shall take place at the project site. Classroom training facility will be provided at the site by the Owner.

1.04 TIMING OF TRAINING SESSIONS

A. Conduct training sessions in conjunction with the operational testing and commissioning periods.

B. Operation and maintenance manuals shall be approved and ready for distribution to the Owner's personnel at least 30 days prior to the date scheduled for the individual training session.

1.05 SUBMITTALS

A. The following information shall constitute the Contractor's training plan and be submitted to the Engineer in accordance with the provisions of Section 01330.

1. Lesson plans for each training session to be conducted by the Contractor's representatives. In addition, training manuals, handouts, visual aids, and other reference materials shall be included.

2. Date, time, and subject of each training session and identity and qualifications of individuals to be conducting the training.

3. Training schedule. Concurrent classes will not be allowed.

B. Due to phased testing and start-up activities, Contractor may prepare separate submittals for individual equipment items and systems. The materials shall be reviewed and accepted by the Engineer no later than 3 weeks prior to delivery of the training.

PART 2 - PRODUCTS

2.01 LESSON PLANS

A. Formal written lesson plans shall be prepared for each training session. Lesson plans shall contain an outline of the material to be presented along with a description of visual aids to be utilized during the session.

B. Each lesson plan shall contain a time allocation for each subject.

C. Furnish ten copies of the training manuals, handouts, and reference materials and one copy of necessary visual aids at least 1 week prior to each training session. These materials shall remain the property of the Owner and shall be suitably bound for proper organization and easy reproduction.

2.02 FORMAT AND CONTENT

A. Each training session shall be comprised of time spent both in the classroom and at the specific location of the subject equipment or system.

2.03 VIDEO RECORDING

A. The City may record, or retain the services of a commercial video taping service to record, each training session. After taping, the material may be edited and supplemented with professionally produced graphics to provide a permanent record.

PART 3 - EXECUTION

3.01 SCHEDULING TRAINING SESSIONS

A. Classes shall be scheduled so that classroom sessions are interspersed with field instruction in logical sequence. Consolidate short training sessions into combined sessions so that staff time is more efficiently used.

1. The minimum combined session length should be 1.5 to 2 hours.

a. The maximum single or combined session length shall be 4 hours.

b. Arrange to have the training conducted on consecutive days, with no more than 4 hours of classes scheduled for any one day.

c. Provide two training sessions on each system, piece of equipment, or “topic”.

B. No training sessions shall be scheduled for Mondays or Fridays. Coordinate the scheduling of training sessions with the operations superintendent.

C. The following services shall be provided for each item of equipment or system. Additional services shall be provided, where specifically required in individual specification sections.

a. At a minimum, classroom equipment training for operations personnel will include:

b. Using slides and drawings, discuss the equipment’s specific location in the plant and an operational overview.

c. Purpose and plant function of the equipment.

d. A working knowledge of the operating theory of the equipment.

e. Start-up, shutdown, normal operation, and emergency operating procedures, including a discussion on system integration and electrical interlocks, if any.

f. Identify and discuss safety items and procedures.

g. Routine preventative maintenance, including specific details on lubrication and maintenance of corrosion protection of the equipment and ancillary components.

h. Operator detection, without test instruments, of specific equipment trouble symptoms.

i. Required equipment exercise procedures and intervals.

j. Routine disassembly and assembly of equipment if applicable (as judged by the City on a case-by-case basis) for purposes such as operator inspection of equipment.

2. At a minimum, hands-on equipment training for operations personnel will include:

a. Identify location of equipment and review the purpose.

b. Identifying piping and flow options.

c. Identifying valves and their purpose.

d. Identifying instrumentation:

1) Location of primary element.

2) Location of instrument readout.

3) Discuss purpose, basic operation, and information interpretation.

e. Discuss, demonstrate, and perform standard operating procedures and round checks.

f. Discuss and perform the preventative maintenance activities.

g. Discuss and perform start-up and shutdown procedures.

h. Perform the required equipment exercise procedures.

i. Perform routine disassembly and assembly of equipment if applicable.

j. Identify and review safety items and perform safety procedures, if feasible.

3. Classroom equipment training for the maintenance and repair personnel will include:

a. Theory of operation.

b. Description and function of equipment.

c. Start-up and shutdown procedures.

d. Normal and major repair procedures.

e. Equipment inspection and troubleshooting procedures including the use of applicable test instruments and the “pass” and “no pass” test instrument readings.

f. Routine and long-term calibration procedures.

g. Safety procedures.

h. Preventive maintenance such as lubrication; normal maintenance such as belt, seal, and bearing replacement; and up to major repairs such as replacement of major equipment part(s) with the use of special tools, bridge cranes, welding jigs, etc.

4. Hands-on equipment training for maintenance and repair personnel shall include:

a. Locate and identify equipment components.

b. Review the equipment function and theory of operation.

c. Review normal repair procedures.

d. Perform start-up and shutdown procedures.

e. Review and perform the safety procedures.

f. Perform City approved practice maintenance and repair job(s), including mechanical and electrical adjustments and calibration and troubleshooting equipment problems.

g. Review and use equipment manufacturers' manuals in the hands-on training.

END OF SECTION

SECTION 01825

EQUIPMENT AND SYSTEM TESTING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements for the Contractor's testing of mechanical, electrical, and instrumentation equipment and systems provided under this Contract.

B. The requirements contained in this Section supplement, but do not supersede, specific testing requirements found elsewhere in the Contract Documents.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals

2. Section 01999 – Reference Forms

1.03 COORDINATION

A. Coordinate with the equipment suppliers for functional and performance testing and facility startup. Minimum levels of on-site installation and testing assistance required of the equipment suppliers is described in separate Sections.

B. Coordinate the activities of subcontractors and equipment suppliers to implement the requirements of this Section.

1.04 SUBMITTALS

A. Prepare and submit in accordance with Section 01330.

B. Independent Testing Labs: When testing by an independent laboratory is specified, provide credentials and certifications to demonstrate capabilities.

C. Test Instruments Calibration: Certification that test instruments used in the testing procedure have been calibrated to an acceptable and recognized standard.

D. Testing Schedule: For each piece of equipment or system, provide a testing schedule and updates as appropriate. Submit at least 20 working days prior to the scheduled start of testing. Confirm the test schedule, or provide an updated schedule 4 days prior to the start of testing.

E. Testing Plan: Describe step by step procedure that will be utilized to systematically test equipment and systems.

F. Test Results:

1. Factory Test Results: Results of equipment tests performed by the equipment supplier at the point of manufacture and prior to shipping the equipment to the site.

2. Results of the Pre-Operational Test.

3. Results of the Functional Test.

4. Results of the Operational and Performance Tests.

G. Testing Form

1. Section 01999 contains a sample Instrumentation Data and Calibration Test Form showing the format and level of detail required for the documentation forms.

H. Manufacturer's Field Certification

1. Submit a Manufacturer's Installation Certification Form (Section 01999) after the manufacturer's Field Representative has completed the specified field services and testing. Submit the certification prior to Manufacturer's Representative leaving the plant site.

1.05 DOCUMENTATION REQUIREMENTS

A. Develop and implement a records keeping system to document compliance with the requirements of this Section.

B. Document date of test, equipment number or system name, nature of test (performance or operational), test objectives, test results and test instruments used during the test. Provide signature spaces for the Engineer and the Contractor.

1.06 TEST PLANS

A. Develop test plans in cooperation with the equipment suppliers detailing the coordinated, systematic testing of each item of equipment and system provided under this Contract.

B. Make test plans specific to the item of equipment or system to be tested. Identify by specific equipment or tag number each device or control station to be manipulated, observed or tested during the test procedure and the specific results to be observed or obtained.

C. Identify the responsibility of subcontractors and suppliers who will participate in the tests and list the names of manufacturers' representatives to be present during the duration of the test.

D. Provide step-by-step procedures for testing control and electrical circuits to affirm that the circuit is properly identified and connected to the proper device.

E. Undertake performance tests in a manner that will duplicate the actual operating conditions that will be encountered.

1.07 TESTING SCHEDULE

A. Prepare a testing schedule setting forth the sequence contemplated for performing the test work. Identify the contemplated start date, duration of the test and completion of each test.

1.08 TEST RESULTS

A. Test results shall be within the tolerances set forth in the detailed specification sections of the Contract Documents. If no tolerances have been specified, test results shall conform to tolerances established by recognized industry practice.

B. Retesting: If any portion of the work should fail to fulfill the Contract requirements and is adjusted, altered, renewed, or replaced, tests on that portion, together with all other portions of the work as are affected thereby, shall be repeated within reasonable time and in accordance with the specified conditions.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 GENERAL

A. The objective of the testing program is to demonstrate, to the Engineer's complete satisfaction, that the systems and equipment provided under this Contract meet the specified performance requirements.

B. Testing program also provides a base-line operating condition for the Owner to use in a preventative maintenance program.

C. Testing sequence consists of Pre-Operational Checkout, Functional Tests, Performance Testing and Operational Testing. These tests are required regardless of whether Factory Tests were conducted on the same piece of equipment or system.

D. Each item of mechanical, electrical, and instrumentation equipment installed under this Contract shall be tested by the Contractor to demonstrate compliance with the performance requirements of this project.

E. Provide labor, outside services, materials, test equipment and other items required to complete the specified testing and startup requirements. Furnish power, water chemicals, fuel, oil, grease and other materials needed to conduct the specified tests.

F. Install temporary valves, gauges, piping and other materials required to conduct the specified tests.

3.02 PRE-OPERATIONAL CHECKOUT

A. Pre-Operational Checkout shall be undertaken by the manufacturer's field representative.

B. Pre-Operational Checkout includes basic checks of the equipment installation prior to starting the equipment to determine if the equipment and related components have been correctly installed and is ready for starting.

C. Pre-Operational Checkout includes the following:

1. Alignment of equipment, shafts and shaft couplings, drives, belts and pulleys.
2. Filling and checking lubrication reservoirs.
3. Checking shaft seals, packing and seal lubrication system.
4. Manufacturer's recommendations for pre-start preparation.
5. Proper motor rotation
6. Circuit continuity testing, electrical testing, and instrumentation and control system testing in accordance with the requirements of Division 16.
7. Demonstrate operational controls function as intended.
8. Calibration and adjustment of electrical and instrumentation devices.

D. Verify tanks, pipes, conduits, vessels and equipment are clean and free of debris that may interfere with the testing or operation of the equipment. Remove debris prior to start of testing.

E. Following completion of the Pre-Operational Checkout, the manufacturer's field representative shall complete and sign a field certification form and submit to the Engineer.

3.03 FUNCTIONAL TESTS

A. After successful completion of the Pre-Operational Checkout, start individual items of equipment and systems and operate under simulated operating conditions to determine as nearly as possible whether the equipment and systems meet the requirements of these specifications.

B. Operate the equipment for a sufficient period of time to determine machine operating and characteristics, including noise, temperatures and vibration; to observe and document performance characteristics; and to permit initial adjustment of operating controls.

C. Obtain baseline operating data on all equipment with motors greater than 10 horsepower to include amperage draw, bearing temperatures, and vibration as required. This baseline data will be collected for the Owner to enter in their preventive maintenance system.

D. Post-Test Inspection: When Functional Tests have been completed, recheck equipment for proper alignment, unacceptably loose connections, unusual movement, or other indications of improper operating characteristics. Correct any deficiencies to the satisfaction of the Engineer.

E. Machines or devices which exhibit unusual or unacceptable operating characteristics shall be disassembled and inspected. Repair any defects found during the course of the inspection and identify and correct the cause of such defect. Replace specific parts, or the entire equipment item, to the complete satisfaction of the Engineer at no cost to the Owner.

3.04 OPERATIONAL AND PERFORMANCE TESTS

A. After successfully completing functional tests, conduct an operational test of each system to verify correct operation. During the operational test, conduct performance testing to verify that the system complies with the performance requirements contained in the individual equipment specifications.

B. Owner's operating personnel will fill process units and process systems with water and other process fluids to allow the Contractor to conduct the operational tests.

C. Upon completion of the filling operations, operate all parts of each system for a continuous, uninterrupted period of not less than 8 hours. During this period, the Contractor and shall undertake performance testing and shall monitor the characteristics of each machine according to manufacturer information and specifications and report any unusual conditions to the Engineer.

D. Undertake performance tests of mechanical, electrical, HVAC, and instrumentation equipment and systems to demonstrate and confirm compliance with the performance requirements specified in the individual equipment specifications.

E. Should the operational testing be halted for any reason related to the facilities constructed or the equipment furnished under this Contract, the operational testing program shall be repeated until the specified continuous period has been accomplished without interruption.

F. Following successful completion of the Operational Test, commissioning of the system may begin.

END OF SECTION

SECTION 01890

RESTORATION OF IMPROVEMENTS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Restoration of work areas after installation and construction of new facilities.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 02740 Asphalt Paving

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 STRUCTURES

A. Take precautions to protect the integrity and usefulness of existing facilities.

B. If necessary, remove existing structures including curbs, gutters, pipelines, and utility poles, as necessary for the performance of the work.

1. Repair existing structures that are damaged as a result of the Work under this contract

2. Rebuild or replace the structures in as good a condition as originally found.

3.02 ROADS AND STREETS

A. Asphalt pavement that has been removed, broken, or damaged, or in which the ground has caved or settled during the work under this contract, shall be brought to original grade and section and resurfaced.

B. Before resurfacing material is placed, sawcut edges of pavement to provide clean solid vertical faces.

C. Complete pavement repair in accordance with Section 02740 and in accordance with the requirements of the affected agencies and parties.

3.03 CULTIVATED AREAS AND OTHER SURFACE IMPROVEMENTS

A. Restore cultivated or planted areas and other surface improvements damaged by construction as nearly as possible to their original condition.

B. Repair existing guard posts, barricades, and fences that are damaged.

C. Replace damaged plantings with new plantings of the same type or as acceptable to the Owner

3.04 PROTECTION OF EXISTING INSTALLATIONS

A. Immediately repair or replace existing equipment, controls, structures, or facilities which are damaged as part of the Work.

B. Take measures that are necessary to ensure that construction debris and materials are kept out of the wastewater system.

END OF SECTION

SECTION 01999

REFERENCE FORMS

The forms listed below and included in this section are referenced from other sections of the project manual. Contractor may submit equivalent forms for Owner's approval prior to use. If Owner does not approve substitute form, Contractor must use forms found in this Section. Owner will provide Contractor electronic files of prescribed forms upon request.

Referenced In Section	Title of Form
09960, 10520	Extended Warranty Form
01825	Instrumentation Data and Calibration Record Test Form
01825, 11000,	Manufacturer's Installation Certification Form
15996	Pipe Test Record Form
01330	Proposed "Or Equal" Substitution Transmittal
01330	Submittal Transmittal
01140	System Outage Request (SOR)
09960, 11241	Unit Responsibility Certificate

(THIS PAGE LEFT BLANK INTENTIONALLY)

EXTENDED WARRANTY FORM

(For Equipment, Material, Process)

Extended Warranty For: Product Name

Specification Section No. _____

Product Manufacturer _____

Project: _____

Location: _____

We hereby guarantee the Product Name that we have constructed for a period of # of Years (#) year(s), as specified in the Section noted above, from Date, the date of acceptance of the work/substantial completion and the assumption of occupancy and beneficial use by the Name of Owner.

The following are excluded from the provisions of this warranty:

We agree that if any of the equipment, material, or process designated for Product Name should fail due to any reason other than improper maintenance or improper operation, or should any portion of the work fail to fulfill any of the requirements of the Specifications, we will, within ten days after written notice of such defects, commence to repair or replace the same together with any other work which may be damaged or displaced in so doing.

In the event of our failure to comply with the above mentioned conditions within a reasonable time after being notified, or should exigent circumstances require repairs or replacements to be made before we can be notified or respond to notification, we do hereby authorize the Name of Owner to proceed to have the defect repaired and made good at our expense, and we will pay the cost therefor upon demand.

The warranty provided herein shall not be in lieu of, but shall be in addition to any warranties or other obligations otherwise imposed by the Contract Documents and by law.

PROPOSED "OR EQUAL" SUBSTITUTION SUBMITTAL TRANSMITTAL

Proposed "Or Equal Substitution Submittal Description

Submittal No.	
☐ 1st Submission	☐Re-Submittal
Spec Section	
Dwg/Detail No.	

Priority Level: ☐ Low ☐ Medium ☐ High ☐ **On Critical Path**

	Routing	**Date Sent**	**Date Received**
Owner:	Contractor/CM		
Project Name:	CM/Design Consultant		
	Design Consultant/CM		
Contractor:	CM/Contractor		

Proposed "Or Equal" Substitution Item or Service

A. When the first specified item is followed by a second maker's name and "or equal," the Contractor may submit Proposed Equivalent items for the Engineer's review. Proposed "Or Equal" Substitution items that are in the Engineer's judgment equal to the first specified item in quality, utility, and appearance, will be Favorably Reviewed. Where a product description and first maker's name is followed by "or equal" with no second maker's name, it means the Engineer knows of no equivalent product and the Contractor may submit Proposed Equivalent products by other makers for review. Where the term "or equal" is omitted, it means that the named item is required to meet the Owner's needs; no products or makers other than those specified will be considered.

B. This request shall include adequate technical information to fully describe the function and quality of the item. Submittals of Proposed "Or Equal" Substitution items that are not made within thirty (30) calendar days of the Notice to Proceed date will be rejected unless the Owner has agreed in writing to a later submittal date and the Contractor agrees to comply with all conditions of the Owner for the late submittal. If the Contractor's second attempt to obtain Favorable Review of a Proposed "Or Equal" Substitution item is unsuccessful, the Contractor shall submit the first specified item.

C. Inclusion of a second maker's name indicates the maker is acceptable but does not necessarily indicate the maker offers a standard product equal to the first specified item. Items by the second named maker are subject to the same conditions of review and compatibility as other Proposed "Or Equal" Substitution items. Inclusion of a maker's name and/or model number after a specification description is not a representation that the maker will furnish an item meeting the Contract requirements at bid time or at time of need. It is the Contractor's sole responsibility to furnish items meeting the Contract requirements.

D. The Engineer's review of Proposed "Or Equal" Substitution items is based solely on information provided by the Contractor and on the Contractor's warranty that the proposed item is equal in quality, utility, function and appearance to the first specified item. Favorable Review of a Proposed "Or Equal" Substitution item has the same meaning and is subject to the same limitations that apply to the Favorable Review of Product Data and Shop Drawings described in the Contract Documents.

E. Submit with proposal:

1. Description of item being proposed including the Manufacturer's model or product number.
2. Manufacturer's representation that the proposed "or equal" substitution item or service is equal to or superior to specified item in all respects.
3. Manufacturer's product data.
4. Information about several recent similar installations, including project name, owner's name, address, telephone number, and name of knowledgeable person to contact for information on performance of the product.

5. Whether a reduction in the Contract Price is being proposed. If so, provide a detailed cost breakdown substantiating the cost reduction. Consideration should be given to all extra costs and expenses necessary to make the proposed "or equal" substitution meet or exceed the all requirements found in the Contract Documents.

6. Whether a reduction in the Contract Time is being proposed. If so, provide schedule analysis substantiating the reduction in contract time and assumptions made in the schedule analysis.

7. Explain all known differences between the product specified and the Proposed "Or Equal" Substitution. Explanation to consider such items as:

   a) Does the substitution affect dimensions shown on Drawings?

   b) Are the manufacturer's guarantees and warranties on the proposed substitution items identical to those on the specified items? If there are differences, please specify each and every difference in detail.

   c) Does the proposed "or equal" substitution impact other contractors, trades or suppliers?

   d) Is the proposed "or equal" substitution compatible with all other interrelated equipment, materials and products?

   e) Any differences in Operations and Maintenance costs?

   f) Any differences in available factory authorized repair centers with regards to response times and geographic location?

   g) Will use of proposed "or equal" substitution be subject to any license fee or royalty?

   h) Are there any color or pattern differences? If so, provide color and pattern samples?

The undersigned hereby:

1. Certifies that he/she has thoroughly investigated the Proposed "Or Equal" Substitution item or service and has determined that the function/utility, appearance and quality of the Proposed "Or Equal" Substitution item or service are equivalent or superior to those of the specified item;

2. Certifies that the Proposed "Or Equal" Substitution item or service is compatible with all interrelated equipment, materials, products and services unless otherwise explained in specific detail in this submittal;

3. Agrees to coordinate installation and make all other changes that may be required for Work to be complete in all respects at no additional cost to the Owner;

4. Waives all claims for additional costs and contract time due to late ordering of the specified products or services caused by requests for "Or Equal" Substitutions that are subsequently rejected by the Engineer;

5. Represents and warrants that the Contractor is solely responsible for any extra cost or expense necessary to make the Proposed "Or Equal" Substitution item or service fully equivalent to and compatible with the Contract Documents and will meet or exceed the Engineer's design intent;

6. Agrees to compensate the Owner for all additional redesign costs associated with the Proposed "Or Equal" Substitution item or service and the cost of the Engineer's review of the Proposed "Or Equal" Substitution item or service;

7. Waives all claims for additional costs and contract time which may subsequently become apparent; and

8. Agrees to comply with all additional requirements imposed by the Owner and Engineer should the Proposed "Or Equal" Substitution item or service is approved.

END OF SECTION

SECTION 02200

SITE PREPARATION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Site preparation work, as follows:

1. Locating existing facilities.
2. Installing safety and protective barriers.
3. Constructing temporary access roads, work areas and storage areas.
4. Clearing, grubbing, stripping, top soil removal and other initial work required for earthwork and trenching operations.

1.02 REFERENCED SECTIONS

A. The following Section is referenced in this Section

1. Section 01330 – Submittals

1.03 DEFINITIONS

A. Clearing: Consists of removal of natural obstructions and man-made objects and features including foundations, buildings, fences, lumber, stumps, debris, rubbish, brush, trees, boulders, and other items that interfere with construction operations or are specifically designated for removal.

B. Stripping: Includes the removal and disposal of sod, grass, weeds, roots, and other organic material remaining after clearing has been completed.

1.04 SUBMITTALS

A. Comply with Section 01330.

B. Submit:

1. Materials used and layout of temporary fences
2. Proposed staging and stockpile locations.

PART 2 - PRODUCTS

2.01 TEMPORARY FENCES

A. Type: Heavyweight, high visibility, flat laminar mesh design.

B. Material: High-density polyethylene.

C. Height: 48 inches.

D. Posts: Wood or metal posts at 10-foot spacing. Secure fence to posts with plastic cable ties.

PART 3 - EXECUTION

3.01 LOCATING EXISTING FACILITIES

A. Review the design drawings, maps, and other sources of information and identify existing facilities at the site to determine and mark the approximate locations of underground facilities.

3.02 SAFETY AND PROTECTIVE BARRIERS

A. Provide protective concrete slabs, steel plates or encasements for existing buried facilities that may be damaged by Contractor's equipment and vehicles.

3.03 PRIMARY SITE ACCESS, WORK AND STORAGE AREAS

A. Develop primary access routes, work areas and storage areas as indicated on the Drawings.

B. Clean up areas at the conclusion of the project and return the areas to their original or better condition.

3.04 CLEARING

A. Clear construction areas of objectionable items and material, which, if left in place, would interfere with the proper performance of the work.

B. Remove loose boulders within 10 feet from the tops of cut slopes. Incorporate boulders into landscaping or remove from the site.

C. Dispose of material from clearing operations in an acceptable off-site location.

3.05 STRIPPING

A. Remove the top layer of soil containing sod, grass, weeds and other vegetation to a depth of 6 inches from areas that will be affected by construction and site grading operations.

B. Extend stripped areas at least 4 feet beyond the limits of cut and fill areas.

C. Dispose of stripped material in an acceptable off-site location.

3.06 REMOVAL OF EROSION CONTROL DEVICES

A. Remove erosion control devices when bare soils are sufficiently revegetated to prevent on-site or off-site soil erosion.

B. Straw wattles containing plastic netting, including plastic specified as phot-degradable, may not remain on site. Remove entire wattle or remove and dispose of plastic netting and spread straw from wattle across vegetated areas of site.

END OF SECTION

SECTION 02221

DEMOLITION, SALVAGE AND ABANDONMENT

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Demolition, salvage and abandonment of existing facilities.

1.02 REFERENCED SECTIONS

A. The following Section is referenced in this Section

1. Section 01330 – Submittals
2. Section 02300 – Earthwork

1.03 SUBMITTALS

A. Comply with Section 01330.

B. Description of removal procedures for careful removal of materials and equipment and the protection of facilities which are to remain undisturbed.

C. Time schedule for demolition work. Show demolition in relation to new construction, including any temporary facilities.

1.04 EXISTING CONDITIONS

A. Prior to the submittal of Bids, Contractor shall visit the site and inspect all facilities to become familiar with existing conditions and utilities.

1.05 REGULATORY REQUIREMENTS

A. Dispose of debris offsite in accordance with the requirements of agencies having jurisdiction.

B. Comply with applicable air quality control regulations.

C. Obtain necessary permits for building demolition, transportation of debris to disposal site(s) and dust control.

D. Erect appropriate safety devices to protect the general public, Owner's operations personnel, and workers from the hazards of demolition activities. Install barriers, guard rails and fences, and provide appropriate warning signs.

1.06 BURNING

A. The use of burning at the project site for the disposal of refuse, debris, and waste materials will not be permitted.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 GENERAL

A. The Drawings identify the major equipment and facilities to be demolished, salvaged or abandoned. Auxiliary utilities such as water, air, drainage, lubrication oil, electrical wiring, controls, and instrumentation are not necessarily shown. Remove auxiliary utilities, as well

as equipment and pipe supports and associated instrumentation devices pertaining to piping or equipment designated to be removed.

3.02 PROTECTION OF EXISTING FACILITIES

A. Before beginning any cutting, trenching, or demolition work, carefully survey the existing work and examine the Contract Documents to determine the extent of the Work.

B. Take precautions to prevent damage to facilities which are to remain in place or are to be salvaged, and be responsible for any damages to these facilities resulting from this work. Repair or replace damages to such work to return the facilities to its pre-existing condition at no additional cost to the Owner.

3.03 DEMOLITION

A. Demolish structures and equipment in an orderly and safe manner.

B. Dispose of material not identified for salvage or re-installation at a new location.

C. Minimize dust by sprinkling with water.

D. Backfill excavations caused by demolition in accordance with Section 02300.

3.04 SALVAGE

A. Carefully remove and salvage, for reuse by the Owner, the following items:

1. Three (3) existing air compressors

B. Remove salvage items in their largest pieces that can be easily handled and stored by Owner's personnel. Remove these items from their existing location and deliver them to a location designated by the Owner.

C. Remove items to be salvaged in a workmanlike manner and take the necessary precautions to prevent damage to the materials and equipment.

3.05 BURIED PIPELINES

A. Where buried pipelines are shown to be removed on the Drawings, they may be abandoned in place if there is no conflict with proposed construction and they are not located under or within 10 feet of any proposed structure.

3.06 ASBESTOS CEMENT PIPE

A. Remove and dispose of asbestos cement pipe disturbed during the performance of the Work. Remove and dispose in accordance with all Federal, State and local laws, regulations, requirements and guidelines.

B. Notify all appropriate authorities prior to performing work related to removal and disposal of asbestos cement pipe.

C. Provide landfill disposal weight records to Engineer for use as the basis of unit price payment.

D. Where necessary to connect into existing City asbestos cement potable water lines, perform work in accordance with all Federal, State and local laws, codes, requirements and guidelines.

3.07 DISPOSAL OF DEMOLISHED MATERIALS

A. Concrete, site debris, rubbish, and other materials resulting from demolition operations, as well as mechanical and electrical equipment designated to be demolished, shall be the property of the Contractor and shall be legally disposed of at the Contractor's expense.

3.08 CLEANING

A. During and upon completion of the demolition operations, promptly remove unused tools and equipment, surplus materials, rubbish, debris, and dust and shall leave work areas in a clean condition.

B. Do not sweep, grade, or flush surplus materials, rubbish, or debris into storm drains, channels, lakes, or streams.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 02241

CONTROL OF WATER

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Control of surface water and excavation drainage.

B. Protection of the work against surface runoff, and exfiltration from existing pipes and structures.

C. Collection, treatment, and disposal of removed water.

1.02 DEFINITIONS

A. Excavation drainage includes keeping excavations free of surface water, seepage water, and exfiltration from existing pipes and structures.

B. Surface drainage includes use of temporary drainage ditches and dikes and installation of temporary culverts and sump pumps with discharge lines as required to protect the work from any source of surface water.

C. Construction Water: surface or groundwater that is subject to removal by the Contractor as necessary to complete the work.

1.03 PERMITS

A. Obtain and comply with all permits for the control and disposal of surface and groundwater

B. Pay all associated fees.

C. Obtain coverage under the North Coast Regional Water Quality Control Board Dewatering and other Low Threat Discharges to Surface Waters General Permit (Order No. R5-2013-074, NPDES No. CAG995001, if appropriate, for any dewatering activity, including removal and discharge of groundwater, accumulated rainwater and removal of water from cofferdams or diversions.

D. Comply with the conditions of the General Permit for Dewatering Activities and Caltrans BMP# NS-2 Dewatering Operations.

PART 2 - PRODUCTS

2.01 FACILITIES AND EQUIPMENT

A. Provide necessary facilities and equipment for controlling surface water and excavation drainage as necessary to complete the Work.

PART 3 - EXECUTION

3.01 SURFACE AND EXCAVATION DRAINAGE WATER CONTROL

A. Perform surface and excavation drainage water control in conformance with regulatory requirements as modified herein.

B. Have available, on hand at all times during excavation activities,

1. Sufficient pumping equipment and labor necessary to keep excavations clear of water as necessary to complete Work as specified

2. Adequate standby equipment as may be necessary to keep the control of water operation in full effect due to equipment or power failure.

C. Commence control of water at an appropriate time during excavation and continue until facilities and structures are installed and backfilled and are sufficiently protected from the effects of hydrostatic uplift or floatation.

D. Intercept surface and excavation water and divert it away from excavations through use of dikes, ditches, curb walls, pipes, sumps or other approved means. The requirement includes temporary works required to protect adjoining properties from surface drainage caused by construction operations

E. Excavations extending below groundwater levels or encountering perched groundwater.

1. Where possible, direct inflow to a sump where water can be removed by a pump within narrow trench excavations that penetrate less than a few feet below the groundwater level and do not encounter loose or cohesionless soils.

2. Provide well points, perimeter trench drains, or deep sumps as necessary to control of water within wider, deeper, and/or more extensive excavations.

3. To maintain bottom stability of wider, deeper, or more extensive excavations, draw down groundwater levels a minimum of 5 feet below the lowest portion of the excavation.

F. Control water in such a manner as to preserve the undisturbed bearing capacity of the subgrade soils at proposed bottom of excavation and protect temporary excavation slope stability during construction.

1. If foundation soils are disturbed or loosened by the upward seepage of water or an uncontrolled flow of water, excavate and replace the affected areas with drain rock on geotextile fabric at no additional cost to the Owner.

3.02 DISPOSAL OF WATER

A. Construction water may be disposed into existing sewer, subject to prior approval from the City.

B. Design and control the dewatering operations such that disposal of water does not cause erosion or other damage and such that water to be disposed of is free from silt and other objectionable materials.

C. Use settling basins and/or other means to control groundwater quality prior to discharge as necessary.

D. Follow the applicable construction activity Best Management Practices (BMP) for the project.

E. Refer to "Caltrans Storm Quality Handbooks, Construction Site Best Management Procedures Manual", May 2017 or latest edition.

3.03 TERMINATION OF DEWATERING

A. Terminate control of dewatering operations in such a manner as to maintain the undisturbed state of the natural foundation soils, prevent disturbance of compacted backfill and prevent flotation or movement of structures, pipelines, and sewers.

B. If damage occurs due to improper termination of dewatering, repair the damage to the satisfaction of the Engineer and at no additional cost to the Owner.

C. Remove control of water devices following completion of the Work requiring control of water.

END OF SECTION

SECTION 02260

EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Temporary excavation support systems.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 02300 – Earthwork

1.03 DEFINITIONS

A. Protection Systems:

1. Sloping or benching systems for excavated slopes.
2. Structural support systems, shield systems, and other systems for preventing excavation wall failure.

1.04 SUBMITTALS

A. Prepare and submit in accordance with Section 01330.

B. Submit information as a complete package. Include all items required by the Contract Documents. Incomplete submittals will not be reviewed and will be returned for resubmittal as a complete package.

C. Shop Drawings

1. Prepared, signed and sealed by a professional engineer who is registered to practice in the state of California.
2. Clearly indicate structural sections of shoring members, welding details, bolting details and bracing details.
3. Indicate existing and new structures, pipelines and other improvements located in the vicinity and impacting the design of the shoring system.
4. Provide details for bracing, reinforcement and sealing around penetrations.

D. Calculations: Structural calculations verifying and demonstrating the structural safety and adequacy of the sheeting, shoring and bracing to be used.

1. Prepared, signed and sealed by a registered Professional Civil or Structural Engineer who is registered to practice in the State of California
2. Provide calculations for the different load, support and other conditions that occur during the sequence of installation, construction of facilities protected by the shoring and the sequence of removal of the internal bracing and shoring.

1.05 INSTALLER QUALIFICATIONS

A. Shoring installer must have a minimum of five successful past installations of shoring systems of comparable overall heights and comparable penetration of soils similar to those found on the project site.

1.06 PERFORMANCE REQUIREMENTS

A. Design and install excavation support and protection systems that are capable of:

1. Supporting excavation sidewalls and bottom to maintain the required excavation or trench section.

2. Resisting soil and hydrostatic pressure and superimposed construction loads and other live loads.

3. Protecting existing facilities in the vicinity of the excavation from damage due to settlement or movement of soil

B. Provide professional engineering services necessary to assume engineering responsibility, including preparation of Shop Drawings and a comprehensive engineering analysis by a qualified professional engineer registered in the State of California.

C. Install and remove excavation support and protection systems without damaging existing buildings, pavements, utilities, railroad facilities and other improvements adjacent to excavation.

D. Excavations

1. Protect workers from hazard of caving ground and other hazards.

2. Install excavation protection system in locations where:

a. Protection system is specifically indicated on the Drawings.

b. Excavations are equal to, or greater than, 5 feet deep.

c. Excavations are less than 5 feet deep, but there is a potential for cave-in.

d. When engineering analyses prepared by the Contractor indicate the stability of existing structures and facilities may be jeopardized by settlement or movement of soil.

1.07 GENERAL DESIGN REQUIREMENTS

A. Design excavation support systems to meet requirements and standards of the Occupational Safety and Health Administration (OSHA).

B. Design excavation support systems to meet the requirements of California Code of Regulations, Title 8 – Construction Safety Orders and California Labor Code Sections 6705 to 6707.

C. Design structural steel members in accordance with the American Institute of Steel Construction (AISC) Manual of Steel Construction Allowable Stress Design and the Uniform Building Code.

D. Excavation support systems for trench excavations shall be selected by the Contractor based on the soil conditions, depths of trench excavations, groundwater conditions and other site conditions. No attempt has been made by Engineer to define acceptable trench shoring options.

1.08 GEOTECHNICAL REPORT

A. A geotechnical report has not been prepared for this Project. Previous geotechnical reports are included for information.

1.09 JOB SITE POSTINGS

A. Maintain at least one copy of the protection system design at the job site while the excavation is open in accordance with the requirements of California Code of Regulations, Title 8 Construction Safety Orders and the California Labor Code.

1.10 SEQUENCE AND SCHEDULING

A. Do not begin excavations or installation of excavation supports until submittals for excavation support systems have been accepted by the Engineer and until materials necessary for installation are on site.

B. Allow a minimum of 15 calendar days for Engineer's review of submittals for excavation support systems.

C. Do not begin excavations or installation of excavation supports until initial survey measurements on control points on existing structures and other improvements are obtained to document initial elevations and locations.

PART 2 - PRODUCTS

2.01 MATERIALS

A. General: Provide materials that are either new or in serviceable condition.

B. Structural Steel Soldier Beams: ASTM A36, ASTM A690 or ASTM A992.

C. Steel Sheet Piling: ASTM A328, ASTM A572 or ASTM A690; with continuous interlocks.

PART 3 - EXECUTION

3.01 PREPARATION

A. Prior to beginning installation of the excavation support system, pothole to locate existing buried utilities in the vicinity of the excavation. Survey utilities and compare actual locations to those locations indicated on the Drawings and the Shop Drawings. Determine any areas of conflict and revise the design and layout of the excavation support system to eliminate these conflicts.

3.02 SLOPING AND BENCHING OF EXCAVATED FACES

A. Where structural excavation support systems are not specifically indicated on the Drawings, sloping and benching systems for exposed faces of excavations may be utilized.

B. Construct sloping and benching systems in accordance with Section 02300.

3.03 TRENCHING SUPPORT SYSTEMS

A. Where structural excavation support systems are not specifically indicated on the Drawings, trench support systems consisting of hydraulic jacks and plates, trench shield systems, and other trench protection systems may be utilized.

3.04 INSPECTION

A. Designer of the shoring system is responsible for confirming proper installation of the shoring system. Shoring system designer, or a representative of the designer, shall make site visits to confirm installation is in accordance with the accepted shoring design.

B. Submit letter of proper installation confirming installation is in accordance with the shoring design.

3.05 REMOVAL

A. Remove excavation support and protection systems when backfill can support the remaining open excavation and bear soil and hydrostatic pressures. Remove support and protection systems in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities, and utilities.

B. After removal, promptly fill voids resulting from the extraction of shoring. Repair or replace adjacent work damaged or displaced by excavation support and protection systems removal.

END OF SECTION

SECTION 02300

EARTHWORK

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Earthwork requirements for sitework, structures, roads and general earthwork, including excavation, fill, backfill, grading, and compaction; import of material; and disposal of surplus and unsuitable materials.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 02200 – Site Preparation
3. Section 02260 – Excavation Support and Protection
4. Section 02722 – Aggregate Base Course Material

1.03 DEFINITIONS

A. Backfill: Earthwork necessary to add fill between new structures and the excavation up to the sub or finish grade.

B. Borrow Area: Area identified from which to obtain earthwork materials.

C. Cut: Earthwork necessary to remove existing material to lower the existing grade in elevation to sub or finish grade.

D. Embankment: Materials placed to form the subgrade for roadways or site improvements.

E. Excavation: Earthwork necessary to remove existing material for the installation of structures.

F. Fill: Earthwork necessary to add material to bring the existing grade up in elevation to sub or finish grade.

G. Finish Grade: Final surface following placement of surfacing, if any, as indicated.

H. Subgrade: The surface of the earthwork on which pavement, surfacing, base, subbase, or a layer of any other material is placed.

1.04 SUBMITTALS

A. Prepare submittals and submit in accordance with Section 01330.

B. For imported materials, provide certification and source.

C. For excavations 5 feet or deeper: Submit detailed plan of all shoring, bracing, side sloping, or other provisions for worker protection against the hazard of caving ground during excavations in accordance with Section 02260.

1.05 QUALITY ASSURANCE

A. Materials and Compaction Testing.

1. Source testing of materials: Provided and paid for by Owner.
2. Field testing of compaction: Provided and paid for by Owner.

B. Compaction Testing Standards

1. In-place Density of Compacted Fill Material: Density determined in the field in accordance with ASTM D6938 – Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

2. Maximum Dry Density of Compacted Material: determined in the laboratory in accordance with Method C of ASTM D1557-12e1 – Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3 (2,700 kN-m/m^3)), or ASTM D4253 – Standard Test Methods for Maximum Index Density of Soils Using a Vibratory Table and D4254 – Standard Test Methods for Maximum Index Density of Soils and Calculation of Relative Density, for cohesionless, free draining soils.

C. Material Testing Standards:

1. Particle size analysis of soils and aggregates: ASTM D422 (2016 Version) – Standard Test Method for Particle-Size Analysis of Soils.

2. Determination of sand equivalent value: ASTM D2419 – Standard Test Method for Sand Equivalent Value of Soils and Fine Aggregate.

3. Liquid limit, plastic limit, and plasticity index: ASTM D4318 – Standard Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.

4. The testing for organic matter: ASTM D2974 – Standard Test methods for Moisture, Ash, and Organic Matter of Peat and Other Organic Soils.

D. References in this section to soil classification types and standards shall have the meanings and definitions indicated in ASTM D2487 – Standard Practice for Classification of Soils for Engineering Purposes. Contractor shall be bound by all applicable provisions of ASTM D2487 in the interpretation of soil classifications.

PART 2 - PRODUCTS

2.01 MATERIALS

A. General fill, backfill, and embankment materials:

1. Selected or processed clean earth, rock, or sand, free from grass, roots, brush, other vegetation, corrosive and hazardous materials, manmade objects, and debris.

2. Materials not defined as unsuitable as indicated below, except some materials listed as unsuitable may be used, if indicated on the Drawings or when acceptable to the Engineer, when thoroughly mixed with suitable materials to form a stable composite.

3. Obtain suitable materials from one or more of the following:

a. Onsite excavations and designated borrow areas.

b. Processed on-site materials.

c. Imported from offsite borrow areas and processing plants.

d. If imported materials are required by this Section, or to meet the quantity requirements of the Project, provide the imported materials at no additional expense to Owner, unless a unit price item is included for imported materials in the Bidding Schedule.

4. Large rocky material: When embankment material consists of large rocky material, or hard lumps, such as hardpan or cemented gravel which cannot be broken down readily, distribute such material evenly throughout the embankment. Place

sufficient earth or other fine material around the larger material as it is deposited so as to fill the interstices and produce a dense, compact embankment. Do not place rocks larger than 6 inches in diameter within the upper 2 feet of the embankment subgrade.

5. Further condition fill, backfill, and embedment materials as described below or as indicated on the Drawings.

B. Levee Berm Embankment Material:

1. Lean clay, silty clay, sandy clay or gravely clay soil.
2. Plasticity index of 20 or less.
3. Liquid limit of 40 or less.
4. Complying with the grading shown in the following table:

Sieve Size	Percentage Passing
6-inch	100
4-inch	85-100
No. 200	30-100

C. Structure Backfill Material (within 12” of outside face of structure)

1. Granular, low to non-expansive soil.
2. Plasticity index 12 or less.
3. Liquid limit 30 or less.
4. Complying with the grading shown in the following table:

Sieve Size	Percentage Passing
6-inch	100
3-inch	95-100
No. 200	15-50

D. Aggregate Base Course Material: In accordance with Section 02722.

E. Crushed Rock:

1. Manufactured, angular, crushed stone with a minimum sand equivalent value of 75.
2. Clean, hard, sound, durable, uniform in quality, and free of soft, friable, thin, elongated or laminated pieces, and disintegrated material.
3. Have 100 percent of its particles with at least one fractured face on a weight basis, when tested for crushed particles per ASTM D5821.
4. Complying with the grading shown in the following table:

	Percentage Passing		
Sieve Size	1-inch	3/4-inch	1/2-inch
1-1/2-inch	100	-	-
1-inch	90-100	100	-
3/4-inch	30-60	90-100	100

	Percentage Passing		
Sieve Size	1-inch	3/4-inch	1/2-inch
1/2-inch	0-20	30-60	90-100
3/8-inch	-	0-20	20-60
No. 4	0-5	0-5	0-15
No. 8	-		0-5

F. Sand:

1. Clean, coarse, natural sand free from organic material, suitable for the purpose intended.

2. Gradation: 90 percent to 100 percent will pass a No. 4 sieve and not more than 5 percent will pass a No. 200 sieve.

G. Permeable Backfill:

1. Hard, durable, clean sand, gravel or crushed stone, free from Unsuitable Material.

2. Complying with the grading shown in the following table:

Sieve Sizes, Square Openings	Percent by Weight Passing Sieve
1-inch	100
3/4-inch	90 – 100
3/8”	40 – 100
No. 4	25 – 40
No. 8	18 – 33
No. 30	5 – 15
No. 50	0 – 7
No. 200	0 – 3

3. Durability index: Not less than 40

4. Sand equivalent: Not less than 75.

H. Impervious Material:

1. Material free of organic materials, rocks, or clods greater than 4 inches in diameter.

2. Gradation: Not less than 50 percent passing the No. 200 sieve.

2.02 UNSUITABLE MATERIALS

A. Unsuitable materials include the materials listed below:

1. Soils which, when classified under ASTM D2487, fall in the classifications of Pt, OH, CH, MH, or OL, or in a classification that contains Pt, OH, CH, MH, or OL in combination with any other letter designation, such as CH/CL.

2. Soils which cannot be compacted sufficiently to achieve the density specified for the intended use, or are unstable or pump regardless of the degree of compaction.

3. Materials that contain hazardous or designated waste materials including petroleum hydrocarbons, pesticides, heavy metals, and any material which may be classified as hazardous or toxic according to applicable regulations.

4. Soils that contain greater concentrations of chloride or sulfate ions, or have a soil resistivity or pH less than the average values for existing onsite soils.

5. Topsoil, sludge and sludge-entrained soils.

6. Rocks, stones, and boulders larger than allowed for use as fill and backfill materials.

2.03 SOURCE QUALITY CONTROL

A. Materials source testing will be performed by a testing laboratory by the Contractor.

B. Minimum Frequency of sampling:

1. Fill, backfill and embankment material generated from earthwork activities:

a. Two soil samples every [500] cubic yard of material used.

b. Two soil samples whenever the character of the soil changes.

c. One soil sample when directed by the Engineer.

d. Obtain samples that represent the predominate character of the soil that is encountered.

2. Sampling of Imported Material

a. Obtain representative samples of product from supplier.

b. After initial testing demonstrated that the proposed borrow material meets the specified requirements, obtain and test one additional sample for every [500] cubic yard of imported material.

C. Testing:

1. Test all materials used in the Work to confirm they meet the requirements indicated.

2. Prepare moisture-density curves for use in determining the optimum moisture content and in-place density of the compacted backfill.

PART 3 - EXECUTION

3.01 EXCAVATION – GENERAL

A. Excavation includes the removal of all materials of whatever nature encountered, including all obstructions of any nature.

B. Excavation shall conform to the lines and grades indicated on the Drawings.

C. Clear, grub and strip and remove top soil in construction and borrow areas in accordance with Section 02200.

D. Excavation Stability

1. Slope excavated faces or otherwise support in a safe manner in accordance with applicable State safety requirements and the requirements of OSHA Safety and Health Standards for Construction (29CFR1926) and in accordance with Section 02260.

2. Furnish, place, and maintain supports and shoring required to maintain stability of the sides of excavations.

E. Notify Engineer at least 1 working day in advance of completion of any structure excavation to allow inspection of the exposed subgrade before it is covered with backfill or with any construction materials.

F. Erosion Control:

1. Maintain earthwork surfaces true and smooth and protected from erosion.

2. Construct erosion control measures identified in the Storm Water Pollution Protection Plan prior to any clearing or grading activity.

G. Existing Underground Utilities:

1. Known existing underground utilities are generally shown on the Drawings in their approximate locations based on information of varying accuracy.

2. Exercise care to avoid damage to all existing utilities whether shown or not.

3. Conduct field explorations to locate all underground utilities in the vicinity of the Earthwork activities in accordance with Section 02200.

4. Alert the Engineer of the presence of existing utilities that are not shown on the Drawings or are in locations different than those shown on the Drawings.

H. Existing Overhead Utilities: There may be existing overhead utilities in the vicinity of the Work which may or may not be shown on the Drawings. Identify existing overhead utilities, if any, and use extreme caution when working in the vicinity of overhead utilities.

3.02 EXCAVATION FOR FILLS AND EMBANKMENTS

A. Benching and Keyways:

1. Where fill is to be placed against existing subgrade or existing grade that is sloped, excavate horizontal benches a minimum of 5feet wide and located at vertical intervals of not more than 5 feet to provide for placement and compaction of the new fill on horizontal surfaces.

2. Excavate keyway along the base of the existing slope:

a. Extend the keyway at least 3 feet into competent native soil.

b. Width of Keyway: Minimum of 15 feet.

c. Keyway Side Slopes: Inclined at approximately 0.75:1.

d. Keyway Subgrade: Scarify the upper 8-inches of the exposed surface, moisture condition and re-compact.

B. Subgrade Preparation:

1. Subgrade Beneath Embankments:

a. Expose competent native soil within the planned new embankment footprint.

b. Scarify the exposed subgrade to a depth of 8 inches, moisture condition as necessary and re-compact.

2. Subgrade Beneath Paved Areas:

a. Excavate to the subgrade soils beneath the bottom of the aggregate base or to the subbase, if such subbase is indicated.

b. Scarify the top 12 inches of subgrade soils, moisture condition as necessary, and re-compact.

c. Finished subgrade shall be even, self-draining, and in conformance with the slope of the finished pavement.

3. Subgrade Beneath Structures:

a. Excavate to the subgrade soils beneath the bottom of the structure or bottom of crushed rock layer where indicated.

b. Scarify the top 12 inches of subgrade soils, moisture condition as necessary, and re-compact.

3.03 EXCAVATION IN VICINITY OF TREES (NOT USED)

3.04 OVER-EXCAVATION NOT ORDERED OR INDICATED

A. Backfill areas over-excavated with the materials indicated for the backfill above the over-excavation or Aggregate Base.

B. Backfill the over-excavation to restore the required subgrade elevation and compact.

C. Any over-excavation carried below the grade indicated on the Drawings will be at no additional cost to Owner.

3.05 OVER-EXCAVATION WHERE ORDERED BY ENGINEER

A. Where ordered by the Engineer, over-excavate beyond the depth of subgrade indicated to the dimensions ordered.

B. Backfill areas over-excavated with the materials indicated for the backfill above the over-excavation or Aggregate Base.

C. Backfill the over-excavation to restore the required subgrade elevation.

D. Over-excavation less than 6 inches below the limits indicated: At no increase in cost to Owner.

E. Over-excavation greater than 6 inches below the limits indicated: Payment will be made under separate unit price bid items for over-excavation if such bid items have been established. Otherwise, payment will be made in accordance with a negotiated price.

F. Measurement and Payment

1. Measurement of quantities for payment of over-excavation: By calculation by Engineer of the volume of materials removed as over-excavation based on the difference between the excavation dimensions before and after the over-excavation work. No compensation will be made for removal of materials beyond the limits of the additional excavation ordered by Engineer or for materials which may come into the excavation from outside the designated limits. No compensation will be made for removal of materials that are outside of the minimum horizontal dimensions indicated.

2. Payment for over-excavation will be made by the cubic yard. The payment shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in excavating and backfilling the over-excavation completely. Payment shall also include full compensation for the removal and disposal of the excavated materials, import and installation of backfill materials, control of water in the excavation, excavation support, and all costs associated with interruption of construction operations during the review of the foundations, over-excavation, backfill, and all other operations required for, or as a result of, over-excavation.

3.06 DISPOSAL OF UNSUITABLE, EXCESS EXCAVATED AND OTHER MATERIALS

A. Dispose unsuitable or excess excavated materials at an appropriate site selected by Contractor unless otherwise indicated.

B. Obtain required permits, landowner, and agency approvals for disposal of unsuitable and excess excavated materials and pay costs associated with the removal and disposal of the materials.

3.07 FILL AND EMBANKMENT CONSTRUCTION

A. Scarify foundation soils for fills and embankments bring to optimum moisture content, and re-compact with heavy compaction equipment to obtain compaction indicated.

B. Place and compact fill and embankments in horizontal layers so that when compacted layers to not exceed thickness indicated.

C. Provide keyways or benches where an embankment or fill is to be placed against slopes, hillsides, or fill slopes.

D. Slopes: Construct slopes as indicated except construct no permanent fill or embankment slopes with slope inclinations that exceed 2:1 (horizontal:vertical) unless specifically indicated otherwise

E. Over-construct fills and embankments to greater horizontal dimensions than indicated. Cut back slope following placement and compaction to expose well compacted fill.

F. Construct the first 3 feet of embankment or fills over pipelines using placement and compaction equipment that do not damage the pipe. Keep heavy construction equipment a minimum distance of the edge of the trench equal to the depth of the trench until at least 3 feet of fill over the pipe has been completed.

3.08 STRUCTURE BACKFILL

A. Provide Structure Backfill material within 12-inches of all structures to be backfilled unless otherwise indicated.

B. Place a 6-inch layer of 3/4-inch or 1-inch Crushed Rock below all structures, unless otherwise indicated.

C. Do not drop backfill upon any structure or pipe.

D. Confirm concrete structures have attained sufficient strength to withstand the backfill loads imposed.

E. Do not place backfill around water retaining structures until structures have been tested and approved for backfill. Fill structures with water during backfill operations.

F. Place backfill after all water has been removed from the excavation and the excavation sidewalls and subgrade soils have dried to a moisture content suitable for compaction.

G. Remove all loose, sloughing, or caving soils and rock materials prior to placement of backfill.

H. Place geotextile fabric as indicated.

I. Promptly after removal, fill voids created by the extraction of sheetpile or shoring indicated in Section 02260.

J. Place backfill and spread evenly in layers so that when compacted layers do not exceed thickness indicated.

K. Thoroughly mix layers as necessary to promote uniformity of material in each layer.

L. Add water to backfill material where moisture content is below the optimum moisture content and mix with the soil until the proper moisture content is achieved throughout the soil layer.

M. Where backfill material moisture content is too high to permit the specified degree of compaction, dry backfill material until moisture content is satisfactory.

3.09 COMPACTION OF FILL, BACKFILL, AND EMBANKMENT MATERIALS

A. Adjust moisture condition of soils to achieve a water content of 3 percent, plus or minus 0.5 percent, above the optimum moisture content as determined through laboratory testing of the soil.

B. Compact each layer in a uniform and systematic manner.

C. For materials with less than 10 percent passing the No. 4 sieve, compact by means of at least 2 passes from a flat plate vibratory compactor.

D. For materials with 10 percent or more passing the No. 4 sieve, mechanically compact to the indicated percentage of density each layer of backfill materials.

1. Use equipment that is consistently capable of achieving the required degree of compaction.

2. Compact each layer over its entire area while the material is at the required moisture content.

E. Do not use flooding, ponding, or jetting as a method of compaction.

F. Do not use equipment weighing more than 10,000 lbs closer to structure walls than a horizontal distance equal to the depth of the fill at the time. Use hand operated power compaction equipment where use of heavier equipment is impractical or restricted due to weight limitations.

G. Compaction Requirements:

1. Where agency or utility company requirements govern, the highest compaction standards shall apply.

2. Compact finish and subgrades in compliance with the following table:

Location or Use of Fill	Limit/Layer Thickness	Percentage of Maximum Dry Density of Compacted Material per ASTM D1557
Backfill around structures	8 in. Layers	90
Embankment Fill	12 in. Layers	90
Subgrade beneath embankments or fill areas (upper 8 inches)	Upper 12 in.	95
Subgrade beneath paved areas (upper 12 inches)	Upper 12 in.	95
Subgrade beneath structures (upper 12 inches)	Upper 12 in.	95
Subgrade beneath keyway (upper 8 inches)	Upper 8 in.	95
Finish grade in unimproved or landscape areas	Upper 12 in.	85

3.10 FIELD QUALITY CONTROL AND TESTING

A. Field quality control testing for compaction confirmation will be done by a testing laboratory of the Owner's choice at the Owner's expense except as indicated below.

B. If requested by the Owner, remove soil above the level at which the Owner wishes to test. Backfill and re-compact material after testing is completed.

C. If compaction fails to meet specified requirements, perform remedial work by one of the following methods:

1. Remove and replace backfill at proper density.

2. Bring density up to specified level by other means acceptable to Owner.

3. Retesting:

a. Costs for conducting additional tests to confirm and verify that remedial work has brought compaction within specified requirements shall be borne by the Contractor.

b. Conduct compaction tests at twice as frequently specified for the initial confirmation tests.

D. Where soil compaction is specified as a percentage of maximum dry density, determine the maximum dry density at optimum moisture content by laboratory testing in accordance with Method C of ASTM D1557.

E. Where compaction of cohesionless, free draining soil is specified as a percentage of relative density, determine relative density by laboratory testing in accordance with ASTM D4253 and D4254.

F. Determine In-Place Density of Compacted Fill Material by performing field tests of soil density in accordance with ASTM D6938.

G. Frequency of Compaction Confirmation Testing at intervals not less than as follows:

1. Embankments and Fills: 2 tests every 500 cubic yards.

2. Structure Backfill: 1 test every 5 feet in elevation per 100 horizontal feet of backfill.

3.11 FINISH GRADES

A. Surface: Reasonably smooth and free of grade breaks, irregular surface changes, protrusions and other defects.

B. Restore un-improved areas back to pre-construction grades.

C. Backfill topsoil in all areas where the topsoil was removed as part of the site preparation.

D. Restore drainage swales and water courses to their pre-construction alignments and grades unless otherwise modified by the Work. Grade surface to drain away from structures. Direct drainage to collection points.

E. Provide smooth transitions to existing grades.

F. Repair and reestablish grades to required elevations and slopes due to any settlement or erosion that may occur prior to final acceptance.

G. Vertical Tolerance:

1. Subgrade under paved areas: 0.0 feet above and 0.08 feet below.

2. Subgrade under structures: 0.0 feet above and 0.08 feet below.

3. Landscaped areas: 0.1 feet above and 0.1 feet below.

4. Unimproved areas: 0.1 feet above and 0.1 feet below.

END OF SECTION

SECTION 02722

AGGREGATE BASE COURSE MATERIAL

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Aggregate base course material and placement.

1.02 DEFINITIONS

A. Completed Course: Compacted, unyielding, free from irregularities, with smooth, tight, even surface, true to grade, line, and cross-section.

B. Completed Lift: Compacted with uniform surface reasonably true to cross-section.

1.03 STANDARD SPECIFICATION

A. State of California Department of Transportation Standard Specifications (Caltrans).

1.04 SUBMITTALS

A. Product Data: Source, gradation, and testing data records for aggregate base course material previously produced by the supplier, which demonstrates compliance with the specified gradation and physical requirements.

1.05 DELIVERY, STORAGE AND HANDLING

A. Storage and Protection: Protect from segregation and excessive moisture during delivery, storage, and handling.

1.06 QUALITY ASSURANCE

A. Material and Compaction Testing

1. Source Testing of Materials: Provided and paid for by the Contractor

2. Field Testing for Compaction: Provided and paid for by the Owner

B. Compaction Testing

1. In-place Density: Density of aggregate base course material that has been placed and compacted in the field, then tested in conformance with ASTM D6938 to determine density relative to the maximum density.

2. Maximum Density: Density obtained in the laboratory when tested in accordance with ASTM D1557.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Aggregate: Clean, hard, durable particles consisting of the any combination of the following:

1. Broken stone

2. Crushed gravel

3. Natural rough surfaced gravel

4. Sand

5. Processed reclaimed asphalt concrete, portland cement concrete (PCC), lean concrete base (LCB), or cement treated base (CTB).

B. Use either 1-1/2-inch or 3/4-inch aggregate grading unless otherwise indicated. Do not change grading without authorization from the Engineer.

C. Conform to the following gradation when tested in accordance with ASTM C136:

Sieve Sizes (Square Openings)	Percent by Weight Passing Sieve 3/4" Maximum	Percent by Weight Passing Sieve 1-1/2" Maximum
2"	-	100
1-1/2"	-	90-100
1-inch	100	-
3/4-inch	90-100	50-85
No. 4	35-60	25-45
No. 30	10—30	10-25
No. 200	2-9	2-9

A. Durability Index (ASTM D3744): 35 minimum.

B. Sand Equivalent (ASTM D2419): 25 minimum.

C. R-Value (ASTM D2844): 78 minimum.

PART 3 - EXECUTION

3.01 PLACEMENT

A. Obtain Engineer's acceptance of subgrade before placement of base course.

B. Do not place aggregate base material on soft, muddy or frozen subgrade.

C. Moisture condition, spread and compact aggregate base course material to the lines, grades and dimensions indicated on the Drawings and in accordance with applicable sections of Caltrans Section 26.

1. Do not haul material over surfacing in process of construction.

2. Spread and distribute material to provide the required density, depth, grade and dimensions with allowance for subsequent lifts.

3. Produce an even distribution of material without segregation. Should segregation occur, modify or change the spreading procedure to correct segregation problems and to result in uniformity in grading.

3.02 COMPACTION REQUIREMENTS

A. Compact aggregate base course material to obtain an In-Place Density of 95 percent of maximum density unless otherwise indicated.

B. Commence compaction effort by starting at the outer edges of the layer and continue toward the center.

C. Apply water as needed to obtain required In-Place Density.

D. Place and compact each lift to required density before succeeding lift is placed.

E. Blade or otherwise work surfacing as necessary to maintain grade and cross-section at all times, and to keep surface smooth and thoroughly compacted.

3.03 TOLERANCES

A. Structure subgrade: Plus or minus 0.05-foot of the design elevation.

B. Pavement subgrade: Plus or minus 0.05-foot of the design elevation.

C. Aggregate Base surface grade: Plus or minus 0.05-foot of the design elevation.

3.04 FIELD QUALITY CONTROL

A. Contractor's compaction testing responsibilities:

1. Accomplish specified degree of compaction.

2. Undertake and control compaction effort by confirmation tests to verify that the compaction work complies with the specified degree of compaction.

3. Pay for compaction testing services and submit compaction test reports to the Engineer.

B. Frequency of Compaction Testing

1. Structures: Make one compaction test for each 50 cubic yards of aggregate base course material placed, with a minimum of one compaction test per structure.

2. Roadway and Paved Areas: Make one test every 1000 square feet of pavement.

C. Owner's Compaction Compliance Testing

1. Owner may periodically make compliance tests to independently verify that compaction is meeting the specified requirements.

2. If necessary, remove overburden above the test location and backfill and re-compact as necessary after the testing has been completed.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 02740

ASPHALT PAVING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements for constructing asphalt paving shown.

B. Work includes, but is not necessarily limited to, earthwork, scarifying and preparing the subgrade, placing and compacting aggregate base, applying prime coat and tack coat, placing and compacting asphalt concrete, and all related work.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 02300 – Earthwork
3. Section 02722 – Aggregate Base Course material

1.03 REFERENCED STANDARDS

A. State of California Department of Transportation Standard Specifications (Caltrans) 2018.

B. City of Ukiah

1.04 SUBMITTALS

A. Comply with Section 01330.

B. Manufacturer's Data or Certificate of Compliance

1. Aggregate base
2. Tack coat
3. Asphalt design mix
4. Independent test laboratory name

C. Furnish a certificate of compliance signed by the manufacturer prior to the use of any asphalt materials.

1. The certificate shall state that the material complies with the requirements of these Specifications.
2. Furnish a certificate with each lot of material delivered to the site with the lot certified clearly identified in the certificate.
3. Provide certificates of compliance for each type of asphalt product used.

PART 2 - PRODUCTS

2.01 GENERAL

A. Provide materials in accordance with:

1. Caltrans Specifications, as modified by this Section.
2. City of Ukiah, as modified by this Section.

2.02 CLASS 2 AGGREGATE BASE

A. Class 2 aggregate base: As specified in Section 02722.

2.03 TACK COAT

A. Caltrans Specification, Section 39 and 94

B. Grade SS-1h asphalt emulsion.

2.04 ASPHALT CONCRETE

A. Hot Mixed Asphalt Concrete Job Mix Formula: Caltrans Specifications, Section 39 for Type A, Asphalt Concrete (1/2-inch maximum aggregate, medium grading).

B. Asphalt Binder: Caltrans paving asphalt, Caltrans Specifications, Section 92

1. PG 64-16 for North Coast and Low Mountain South Mountain

2.05 SEAL COAT

A. Caltrans Specification, Section 37 and 94

B. Grade SS-1, SS-1h or CSS-1h asphalt emulsion.

2.06 HEADER BOARD

A. 100% post-consumer recycled HDPE plastic.

1. UV stabilized formula resistant to fading from sunlight.
2. Size as shown on Drawings
3. Color: Brown
4. Textured, wood-grained surface
5. Furnish with minimum 1 (one) stake every three feet.

B. Redwood

1. Construction grade redwood conforming to the requirements of Caltrans Specification, Section 57.
2. Size as shown on Drawings
3. Furnish with minimum 1 (one) redwood stake every four feet.

PART 3 - EXECUTION

3.01 PAVEMENT

A. Construct to the line, grade, and section indicated and in accordance with referenced State Specifications.

B. Sawcut existing asphalt paving that is adjacent to new pavement.

C. Prepare subgrade material per Section 02300.

D. Prepare aggregate base course in accordance with Section 02722.

E. Apply tack coat at a minimum residual rate specified for the underlying surface condition as shown in Caltrans Specifications, Section 39-2. Apply tack coat to all adjoin vertical surfaces no more than 8 hours prior to paving.

F. Place asphalt concrete to the requirements of Caltrans Specifications, Section 39, and Section 22.

1. Install in lifts a minimum of 2-inches thick unless otherwise indicated.

2. Install final lift at a maximum thickness of 2 inches.

G. Density of finished paving: not less than 91% nor greater than 97% of maximum theoretical density as determined by California Test 309 (CTM 309)

H. Tolerance of final grade

1. Not more than 0.05 foot from the elevations indicated on the drawings

2. All areas graded to drain

3.02 FOG SEAL

A. Apply asphaltic emulsion for fog seal coat to the requirements of Caltrans Specifications, Section 37 and Section 22.

3.03 HEADER BOARD

A. Place at all limits of paving not abutting a concrete structure.

B. Attached to 12- inch plastic stakes, at three feet on center, with metal screws.

3.04 TRAFFIC STRIPES AND PAVEMENT MARKINGS

A. Apply thermoplastic traffic stripes and pavement markings to the requirements of Caltrans Specifications, Section 84-2.

3.05 TESTING

A. Contractor to provide the following Quality Control Testing

1. Aggregate Gradation

a. Test Method: California Test 202

b. Minimum sampling and testing frequency: 1 per 500 tons but no less than per day.

c. Point of Sampling: California Test 125

2. Asphalt binder content %

a. Test Method: California Test 379 or 382

b. Minimum sampling and testing frequency: 1 per 1000 tons but no less than per day.

c. Point of Sampling: Loose mix behind paver, see California Test 125.

B. Smoothness

1. Contractor to test in conformance to the requirements of Caltrans Specifications, Section 39-2.01.

2. Owner may conduct parallel smoothness testing.

3. If the top layer of pavement does not comply with the smoothness specifications, Contractor to correct in conformance with Caltrans Specifications, Section 39-2.01. No compensation will be made for smoothness correction.

C. Pavement Density Nuclear gage method

1. Contractor to provide quality control testing at locations based on a random sampling plan with not less than one test per five hundred (500) tons.

2. If the density does not fall within the density range, the Contractor may test at two additional locations within the same 500 tons and average the results of the three tests. This averaged result shall fall within the above-specified range.

3. Contractor shall notify the Owner prior to paving and provide contact information for Contractor's testing personnel.

4. Owner may conduct parallel quality assurance testing at its discretion in accordance with Caltrans test methods, 308, 309, and 375.

END OF SECTION

SECTION 03100

CONCRETE FORMWORK

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor, materials, equipment, and incidentals required, and design, install, and remove formwork for cast-in-place concrete as shown on the Drawings and as specified herein.

B. Secure to forms as required or set for embedment as required, all miscellaneous metal items, sleeves, reglets, anchor bolts, inserts, and other items furnished under other Sections and required to be cast into concrete.

1.02 RELATED WORK

A. Related Work Specified Elsewhere

1. Section 03150 - Concrete Joints and Joint Accessories
2. Section 03200 - Concrete Reinforcement
3. Section 03300 - Cast-in-Place Concrete
4. Section 03600 - Grout
5. Section 03740 - Modifications and Repair to Concrete

1.03 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. American Concrete Institute (ACI)

1. ACI 117 - Standard Specifications for Tolerances for Concrete Construction and Materials
2. ACI 301 - Specifications for Structural Concrete
3. ACI 318 - Building Code Requirements for Structural Concrete
4. ACI 347 - Guide to Formwork for Concrete

B. American Plywood Association (APA)

1. APA - Material Grades and Designations as Specified

C. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit to the ENGINEER, in accordance with Division 1, shop drawings and product data showing materials of construction and details of installation for the following:

1. Form release agent
2. Form ties
3. Void forms

B. Falsework and Drawings - The CONTRACTOR will adhere to the provisions of Section 1717 of the Division of Industrial Safety, Construction Safety Orders, which require that all falsework or vertical shoring installations where the height of the falsework or vertical shoring, as measured from the top of the sills to the soffit of the superstructure, exceeds

14 feet, or where individual horizontal span lengths exceed 16 feet, or provision for vehicular or railroad traffic through falsework or vertical shoring is made, shall be approved and signed by a Professional Civil Engineer, registered in the State of California. A copy of the falsework plan or shoring layout shall be available on the job site at all times.

C. The CONTRACTOR shall, in accordance with the requirements in Division 1, submit detailed plans of falsework proposed to be used. Such plans shall be in sufficient detail to indicate the general layout, sizes of members, anticipated stresses, grade of materials to be used in the falsework, and typical soil conditions.

D. Location and sequence of the concrete placement - Indicate locations of form joints, form-tie layout, panel sizes, and patterns. Show location of form ties on architectural surfaces.

E. Review of pour sequence, form system, and panel layout shall be for appearance and conformance to design concept only. ENGINEER's review of the forming plans or procedures shall not relieve the CONTRACTOR of responsibility for the strength, safety, or correctness of methods used, the adequacy of equipment, or from carrying out the work in full compliance with the requirements of the Drawings and as specified herein.

1.05 QUALITY ASSURANCE

A. The form liner manufacturer's representative shall be on-site during initial installation of the form liner to instruct the CONTRACTOR on the proper methods of application and use of the liner. S/He shall be available to answer any questions on the liner that the ENGINEER may have.

1.06 SYSTEM DESCRIPTION

A. General - Architectural Concrete is wall, slab, beam, or column concrete that will have surfaces exposed to view in the finished work.

B. Structural Design Responsibility - All forms and shoring shall be designed at the CONTRACTOR's expense by a Professional Civil Engineer, registered in the State of California. Formwork shall be designed and erected in accordance with the requirements of ACI 301 and ACI 318 and as recommended in ACI 347 and shall comply with all applicable regulations and codes. The design shall consider any special requirements due to the use of plasticized and/or retarded set concrete.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The use of a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configurations desired.

2.02 MATERIALS

A. Forms for cast-in-place concrete shall be made of wood, metal, or other approved material. Wood forms for the project shall be new and unused. Construct wood forms of sound lumber or plywood of suitable dimensions and free from knotholes and loose knots. Where used for exposed surfaces, dress and match boards. Sand plywood smooth and fit adjacent panels with tight joints. Metal forms may be used when approved by the ENGINEER and shall be of an appropriate type for the class of work involved. All forms shall be designed and constructed to provide a flat, uniform concrete surface requiring minimal finishing or repairs.

B. Wall Forms:

1. Forms for all exposed exterior and interior concrete walls shall be new and unused "Plyform" exterior grade plywood panels manufactured in compliance with APA

and bearing the trademark of that group, or equal acceptable to the ENGINEER. Provide B grade or better veneer on all faces to be placed against concrete during forming. The class of material and grades of interior plies shall be of sufficient strength and stiffness to provide a flat, uniform concrete surface requiring minimal finishing and grinding.

2. All joints or gaps in forms shall be taped, gasketed, plugged, and/or caulked with an approved material so that the joint will remain watertight and will withstand placing pressures without bulging outward or creating surface patterns.

C. Form Release Agent - Coat all forming surfaces in contact with concrete using an effective, nonstaining, non-residual, water-based, bond-breaking form coating, unless otherwise noted. [Form release agents used in potable water containment structures shall be suitable for use in contact with potable water and shall be nontoxic and free of taste or odor.]

D. Form Ties:

1. Form ties encased in concrete other than those specified in the following paragraphs shall be designed so that, after removal of the projecting part, no metal shall remain within 1 1/2 inches of the face of the concrete. The part of the tie to be removed shall be at least 1/2 inch in diameter or be provided with a wood or metal cone at least 1/2 inch in diameter and 1 1/2 inches long. Form ties in concrete exposed to view shall be the cone-washer type.

2. Form ties for exposed exterior and interior walls shall be as specified in the preceding paragraph except that the cones shall be approved wood or plastic.

3. Flat bar ties for panel forms shall have plastic or rubber inserts having a minimum depth of 1 1/2 inches and sufficient dimensions to permit proper patching of the tie-hole.

4. Common wire shall not be used for form ties.

5. Alternate form ties, consisting of tapered through-bolts at least 1 inch in diameter at the smallest end or through-bolts that utilize a removable tapered sleeve of the same minimum size, may be used at the CONTRACTOR's option. Obtain ENGINEER's acceptance of system and spacing of ties before ordering or purchasing of forming. Clean, fill, and seal form tie hole with nonshrink cement grout. The CONTRACTOR shall be responsible for watertightness of the form ties and any repairs needed.

PART 3 - EXECUTION

3.01 GENERAL

A. Forms shall be used for all cast-in-place concrete including sides of footings. Forms shall be constructed and placed so that the resulting concrete will be of the shape, lines, dimensions, and appearance indicated on the Drawings.

B. Forms for walls shall have removable panels at the bottom for cleaning, inspection, and joint surface preparation. Forms for wall heights in excess of 16 feet shall have closable intermediate inspection ports. Tremies and hoppers for placing concrete shall be used to allow concrete inspection, prevent segregation, and prevent the accumulation of hardened concrete on the forms above the fresh concrete.

C. Molding, bevels, or other types of chamfer strips shall be placed to produce blockouts or chamfers as shown on the Drawings or as specified herein. Chamfer strips shall be provided at horizontal and vertical projecting corners to produce a 3/4-inch chamfer. Rectangular or trapezoidal moldings shall be placed in locations requiring sealants where specified or shown on the drawings. Size of moldings shall conform to the sealant manufacturer's recommendations.

D. Forms shall be sufficiently rigid to withstand construction loads and vibration and to prevent displacement or sagging between supports. Construct forms such that the concrete and/or exposed rebar (dowels) will not be damaged by their removal. The CONTRACTOR shall be entirely responsible for the adequacy of the forming system.

E. Before form material is reused, all surfaces to be in contact with concrete shall be thoroughly cleaned, all damaged places repaired, all projecting nails withdrawn, and all protrusions smoothed. Reuse of wooden forms for other than rough finish will be permitted only if a "like-new" condition of the form is maintained.

F. Metal items, such as rebar, wire, or plates used to support pipe penetrations and pipe embedment shall have a minimum clearance of 2 inches from reinforcing bars.

G. Tolerances in concrete construction shall be in accordance with ACI 117, unless otherwise noted.

3.02 FORM TOLERANCE

A. Forms shall be surfaced, designed, and constructed in accordance with the recommendations of ACI 347 and shall meet the following additional requirements for specified finishes.

B. Formed Surfaces Exposed to View - Edges of all form panels in contact with concrete shall be flush within 1/32 inch and forms for plane surfaces shall be such that the concrete will be plane within 1/16 inch in 4 feet. Forms shall be tight to prevent the passage of mortar, water, and grout. The maximum deviation of the finish wall surface at any point shall not exceed 1/4 inch from the intended surface as shown on the Drawings. Form panels shall be arranged symmetrically and in an orderly manner to minimize the number of seams.

C. Formed surfaces not exposed to view or buried shall meet the requirements of Class "C" Surface in ACI 347.

D. Formed rough surfaces including mass concrete, pipe encasement, electrical duct encasement, and other similar installations shall have no minimum requirements for surface smoothness and surface deflections. The overall dimensions of the concrete shall be plus or minus 1 inch.

3.03 FORM PREPARATION

A. Wood forms in contact with concrete shall be coated with an effective release agent before form installation.

B. Steel forms shall be thoroughly cleaned and mill scale and other ferrous deposits shall be sandblasted or otherwise removed from the contact surface for all forms except those utilized for surfaces receiving a rough finish. All forms shall have the contact surfaces coated with a release agent.

3.04 REMOVAL OF FORMS

A. The CONTRACTOR shall be responsible for all damage resulting from removal of forms. Form removal shall conform to the requirements specified in Section 03300.

3.05 INSPECTION

A. The ENGINEER shall be notified when the forms are complete and ready for inspection at least 24 hours before the proposed concrete placement.

B. Failure of the forms to comply with the requirements specified herein, or to produce concrete complying with the requirements of this Section, shall be grounds for rejection of that portion of the form/concrete work. Rejected work shall be repaired or replaced as directed by the ENGINEER at no additional cost to the OWNER. Such repair or

replacement shall be subject to the requirements of this Section and approval of the ENGINEER.

3.06 FALSEWORK

A. The CONTRACTOR shall be responsible for the design, engineering, construction, maintenance, and safety of all falsework, including staging, walkways, forms, ladders, and similar appurtenances, which shall equal or exceed the applicable requirements of the provisions of the OSHA Safety and Health Standards for Construction, the requirements of the Construction Safety Orders of the California Division of Industrial Safety, and the requirements specified herein.

B. All falsework shall be designed and constructed to provide the necessary rigidity and to support the loads. Falsework for the support of a superstructure shall be designed to support the loads that would be imposed if the entire superstructure were placed at one time.

C. Falsework shall be placed upon a solid footing, safe against undermining, and protected from softening. When the falsework is supported on timber piles, the maximum calculated pile loading shall not exceed 20 tons. When falsework is supported on any portion of the structure that is already constructed, the loading imposed by the falsework shall be spread, distributed, and braced in such a way as to avoid any possibility of damage to the structure.

SECTION 03150

CONCRETE JOINTS AND JOINT ACCESSORIES

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor, materials, equipment, and incidentals required and install accessories for concrete joints as shown on the Drawings and as specified herein.

1.02 RELATED WORK

A. Related Work Specified Elsewhere

1. Section 03100 - Concrete Formwork
2. Section 03200 - Concrete Reinforcement
3. Section 03300 - Cast-in-Place Concrete
4. Section 03366 - Tooled Concrete Finishes.
5. Section 03600 - Grout
6. Section 03740 - Modifications and Repair to Concrete.
7. Section 05500 - Miscellaneous Metals

1.03 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. Federal Specifications

1. SS-S-210A - Sealing Compound, Preformed Plastic, for Expansion Joints and Pipe Joints

B. American Society for Testing and Materials (ASTM)

1. ASTM A675 - Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality, Mechanical Properties
2. ASTM C881 - Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete
3. ASTM C1059 - Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete
4. ASTM D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types)
5. ASTM D1752 - Standard Specification for Preformed Sponge Rubber and Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction

C. US Army Corps of Engineers (CRD)

1. CRD-C 94 Specification for Surface Retarders

D. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit to the ENGINEER, in accordance with Division 1, submittals including the following:

1. Premolded Joint Fillers - Product data including catalogue cut, technical data, storage requirements, installation requirements, location of use, and conformity to ASTM standards.

2. Bond Breaker - Product data including catalogue cut, technical data, storage requirements, installation requirements, location of use, and conformity to ASTM standards.

3. Expansion Joint Dowels - Product data on the complete assembly including dowels, coatings, lubricants, spacers, sleeves, expansion caps, installation requirements, and conformity to ASTM standards.

4. Compressible Joint Filler - Product data including catalogue cut, technical data, storage requirements, installation requirements, location of use, and conformity to ASTM standards.

5. Bonding Agents - Product data including catalogue cut, technical data, storage requirements, product life, application requirements, and conformity to ASTM standards.

6. In-Form Surface Retarders – Product data, including catalogue cut, technical data, storage requirements, product life, application requirements, and conformity to governing standards.

7. Samples - Two samples of each type of waterstop fitting(s).

B. Certifications:

1. Certify that all materials used within the joint system are compatible with each other.

2. [Certify that materials used in the construction of joints are suitable for use in contact with potable water 30 days after installation.]

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The use of a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

B. All materials used together in a given joint (bond breakers, backer rods, joint fillers, sealants, etc.) shall be compatible with one another. Coordinate selection of suppliers and products to ensure compatibility. Under no circumstances shall asphaltic bond breakers or joint fillers be used in joints receiving sealant.

C. All chemical sealant type waterstops shall be products specifically manufactured for the purpose for which they will be used and the products shall have been successfully used on similar structures for more than five years.

2.02 MATERIALS

A. Premolded Joint Filler:

1. Premolded joint filler for structures shall be self-expanding, cork, premolded joint filler conforming to ASTM D1752, Type III. The thickness shall be 3/4 inch unless shown otherwise on the Drawings.

2. Premolded joint filler for sidewalk and roadway concrete pavements, or where fiber joint filler is specifically noted on the Drawings, shall be asphalt-impregnated

fiberboard conforming to ASTM D1751. The thickness shall be 3/4 inch unless otherwise shown on the Drawings.

B. Bond Breaker:

1. Bond breaker tape shall be an adhesive-backed, glazed butyl or polyethylene tape that will satisfactorily adhere to the premolded joint filler or concrete surface as required. The tape shall be the same width as the joint.

2. Except where tape is specifically called for on the Drawings, bond breaker for concrete shall be either bond breaker tape or a nonstaining type bond prevention coating such as Silcoseal Select, by Nox-Crete, Omaha, Nebraska; or equal.

C. Expansion Joint Dowels:

1. Dowels shall be smooth steel conforming to ASTM A675, Grade 70. Dowels must be straight and clean, free of loose, flaky rust and loose scale. Dowels may be sheared to length provided deformation from true shape caused by shearing does not exceed 0.04 inch on the diameter of the dowel and extends no more than 0.04 inch from the end. Bars shall be coated with a bond breaker on the expansion end of the dowel. Expansion caps shall be provided on the expansion end.

2. Expansion dowel caps shall be K-11 plastic dowel caps as manufactured by the Dayton Superior; or equal.

D. Bonding Agent:

1. Epoxy bonding agent shall be two-component, solvent-free, moisture insensitive, epoxy resin material conforming to ASTM C881, Type V. The bonding agent shall be Sikadur 32 Hi-Mod by Sika Corporation; Concresive Liquid LPL by BASF Building Systems; or equal.

2. Latex bonding agent shall be non-reemulsifiable acrylic-polymer latex conforming to ASTM C1059, Type II.

E. Compressible Joint Filler:

1. The joint filler shall be a non-extruded, watertight strip material used to fill expansion joints between structures. The material shall be capable of being compressed at least 40 percent for 70 hours at 68 degrees Fahrenheit and subsequently recovering at least 20 percent of its original thickness in the first 1/2 hour after unloading. Compressible joint filler shall be Phyzite/Evazote 380 as manufactured by Chase Construction Products; Wabo Evazote UV as manufactured by BASF Chemical Company; or equal.]

PART 3 - EXECUTION

3.01 INSTALLATION

A. Construction Joints:

1. Make construction joints only at locations shown on the Drawings or as approved by the ENGINEER. Any additional or relocation of construction joints proposed by the CONTRACTOR must be submitted to the ENGINEER for written approval.

2. All joints shall be perpendicular to main reinforcement. Continue reinforcing steel through the joint as indicated on the Drawings.

3. Provide sealant grooves for joint sealant where indicated on the Drawings.

4. At all construction joints, and at concrete joints designated on the Drawings to be "roughened," uniformly roughen the surface of the concrete to a full amplitude (distance between high and low points or side to side) of not less than 1/4 inch to

expose a fresh face. Thoroughly clean joint surfaces of loose or weakened materials by water blasting or sandblasting and prepare for bonding. At least 2 hours before, and again shortly before the new concrete is deposited, saturate the joints and adjacent concrete surfaces to at least 12 inches past the joint with water.

5. In-Form Surface Retarders:

   a. In lieu of manually roughening the concrete surface, roughened surface may be achieved by means of an in-form surface retarder.

   b. Product catalogue cut-sheet shall clearly indicate the product's suitability for use in horizontal and/or vertical construction joints. Use of product(s) whose cut-sheets do not explicitly indicate their use in construction joints is not permissible.

   c. Surface retarder shall result in a uniformly roughened surface with a full amplitude of not less than 1/4 inch.

   d. Contractor shall provide test panel of appropriate size for evaluating the effectiveness of the treatment. Test Panel shall represent a minimum of four mixtures representing four depths of etch. Test panel shall remain on-site for the duration of concrete work and shall be the standard against which all future construction joint roughened surfaces shall be compared.

   e. Construction joints with a surface roughness that do not meet the minimum amplitude, in the opinion of the Engineer, shall require supplemental manual roughening, at the Contractor's expense.

6. In lieu of the above method for bonding plastic concrete to hardened concrete, the following optional method may be used. Concrete must be allowed to set a minimum of 28 days. Use a latex-bonding agent applied to roughened and cleaned surfaces of set concrete in strict accordance with manufacturer's recommendations.

7. Provide waterstops in all wall and slab construction joints in liquid containment structures and at other locations shown on the Drawings.

8. Keyways shall not be used in construction joints unless specifically shown on the Drawings or approved by the ENGINEER.

B. Control Joints:

1. Provide sealant grooves, sealants, and waterstops at control joints in slabs on grade or walls as detailed. Provide waterstops at all wall and slab control joints in water containment structures and at other locations shown on the Drawings.

2. Control joints may be sawed if specifically approved by the ENGINEER. If control joint grooves are sawed, properly time the saw cutting with the time of the concrete set. Start cutting as soon as concrete has hardened sufficiently to prevent aggregates from being dislodged by the saw. Complete cutting before shrinkage stresses have developed sufficiently to induce cracking. No reinforcing shall be cut during sawcutting.

3. Extend every other bar of reinforcing steel through control joints or as indicated on the Drawings. Where specifically noted on the Drawings, coat the concrete surface of the joint with a bond breaker before placing new concrete against the joint. Avoid coating reinforcement or waterstops with bond breaker at these locations.

C. Expansion Joints:

1. Do not extend through expansion joints, reinforcement, or other embedded metal items that are continuously bonded to concrete on each side of the joint.

2. Position premolded joint filler material accurately. Secure the joint filler against displacement during concrete placement and compaction. Place joint filler over the

face of the joint, allowing for sealant grooves as detailed on the Drawings. Tape all joint filler splices to prevent intrusion of mortar. Seal expansion joints as shown on the Drawings.

3. Expansion joints shall be 3/4 inch in thickness unless otherwise noted on the Drawings.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 03200

CONCRETE REINFORCEMENT

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor, materials, equipment and incidentals required and install all concrete reinforcement complete as shown on the Drawings and as specified herein.

1.02 RELATED WORK

A. Related Work Specified Elsewhere

1. Section 03100 - Concrete Formwork
2. Section 03150 - Concrete Joints and Joint Accessories
3. Section 03300 - Cast-in-Place Concrete
4. Section 03600 - Grout
5. Section 03740 - Modifications and Repair to Concrete

1.03 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. Federal Specifications

1. QQ-W-461H - Wire, Steel, and Carbon (round, bare and coated)

B. American Concrete Institute (ACI)

1. ACI 301 - Specifications for Structural Concrete
2. ACI 315 - Details and Detailing of Concrete Reinforcement
3. ACI 318 - Building Code Requirements for Structural Concrete
4. ACI SP-66 - ACI Detailing Manual

C. American Society for Testing and Materials (ASTM)

1. ASTM A615 - Standard Specification for Deformed and Plain Carbon Steel - Bars for Concrete Reinforcement
2. ASTM A706 - Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement
3. ASTM A1064 - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete

D. American Welding Society (AWS)

1. AWS D1.4 - Structural Welding Code - Reinforcing Steel

E. Concrete Reinforcing Steel Institute (CRSI)

1. CRSI - Manual of Standard Practice

F. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Reinforcing Steel - Submit to the ENGINEER, in accordance with Division 1, placement drawings conforming to the recommendations of ACI 315. All reinforcement in a concrete placement shall be included in a single placement drawing or cross-referenced to the pertinent main placement drawing. The main drawing shall include the additional reinforcement (around openings, at corners, etc.) shown on the standard details sheets. Bars to have special coatings and/or to be of special steel or special yield strength are to be clearly identified. Shop drawings shall not be prepared by reproducing the plans and details indicated on the Contract drawings but shall consist of completely redrawn plans and details as necessary to indicate complete fabrication and installation of reinforcing steel. Including, but not limited to, large scale drawings at joints, detailing bar placement in congested areas.

B. Bar Bending Details - The bars shall be referenced to the same identification marks shown on the placement drawings. Bars to have special coatings and/or to be of special steel or special yield strength shall be clearly identified.

C. Mechanical Connectors - Submit two samples of each type of mechanical reinforcing steel connectors.

D. Test Reports - Submit test reports for each of the following items:

1. Mill Test - Submit a certified copy of a mill test on each steel proposed for use showing the physical properties of the steel and the chemical analysis.

2. Foreign Manufactured Steel - Submit a certified copy of test reports for each foreign manufactured steel proposed for use in the fabrication of reinforcement. The tests shall be specifically made for this project at the expense of the CONTRACTOR by a domestic independent testing laboratory certified to perform the tests. The testing shall be for conformity to the applicable ASTM standard(s).

E. Certification

1. Submit certification that welders are qualified in accordance with AWS D1.4 when welding of reinforcement is required.

1.05 QUALITY ASSURANCE

A. In no case shall any reinforcing steel be covered with concrete until the installation of the reinforcement, including the size, spacing, and position of the reinforcement has been observed by the ENGINEER and the ENGINEER's release to proceed with concreting has been obtained. The ENGINEER shall be given ample prior notice of the readiness of placed reinforcement for observation. The forms shall be kept open until the ENGINEER has completed observations of the reinforcing steel.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Reinforcing steel shall be substantially free from mill scale, rust, dirt, grease, or other foreign matter.

B. Reinforcing steel shall be shipped and stored with bars of the same size and shape, fastened in bundles with durable tags, marked in a legible manner with waterproof markings showing the same "mark" designations as those shown on the submitted Placement Drawings.

C. Reinforcing steel shall be stored off the ground, protected from moisture, and kept free from dirt, oil, or other injurious contaminants.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The use of a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configurations desired.

2.02 MATERIALS

A. Materials shall be new and shall comply with the following material specifications.

B. Deformed concrete reinforcing bars are to be ASTM A615, Grade 60 deformed bars.

C. Concrete Reinforcing Bars required on the Drawings are to be Field Bent or Welded - ASTM A706.

D. [Spiral Reinforcement shall comply with the following:

1. ASTM A615, Grade 60 for hot-rolled plain or deformed bars

2. ASTM A1064 for cold-drawn wire]

E. The following alternative materials are allowed:

1. ASTM A706, Grade 60 shall be used. The following requirements shall be satisfied:

a. The actual yield strength of the reinforcing steel based on mill tests shall not exceed the specified yield strength by more than 18,000 pounds per square inch (psi). Retests shall not exceed this value by more than an additional 3,000 psi.

b. The ratio of the actual ultimate tensile strength to the actual tensile yield strength of the reinforcement shall not be less than 1.25.

c. The carbon equivalency of the bars shall be 0.55 or less.

F. Reinforcing Steel Accessories:

1. Plastic protected bar supports shall comply with CRSI Bar Support Specifications, Class 1 - Maximum Protection.

2. Stainless steel protected bar supports shall comply with CRSI Bar Support Specifications, Class 2 - Moderate Protection.

3. Precast concrete block bar supports (dobies) shall comply with CRSI Bar Support Specifications, Precast Block. Block shall have equal or greater compressive strength than the surrounding concrete.

G. Tie Wire:

1. Tie wires for Reinforcement shall be 16-gauge or heavier, black annealed wire, conforming to Federal Specification QQ-W-461H.

2.03 FABRICATION

A. Fabrication of reinforcement shall be in compliance with the CRSI Manual of Standard Practice.

B. Bars shall be cold bent. Bars shall not be straightened or re-bent.

C. Bars shall be bent around a revolving collar having a diameter of not less than that recommended by ACI 318.

D. Bar ends that are to be butt-spliced, placed through limited diameter holes in metal, or threaded shall have the applicable end(s) saw-cut. Such ends shall terminate in flat surfaces within 1.5 degrees of a right angle to the axis of the bar.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Surface condition, bending, spacing, and tolerances of placement of reinforcement shall comply with CRSI Manual of Standard Practice. The CONTRACTOR shall be solely responsible for providing an adequate number of bars and maintaining the spacing and clearances shown on the Drawings.

B. Except as otherwise noted on the Drawings, the minimum concrete cover for reinforcement shall be as follows:

1. Concrete cast against and permanently exposed to earth - 3 inches
2. Concrete exposed to soil, water, sewage, sludge, and/or weather (including bottom cover of slabs over water or sewage) - 2 inches
3. Concrete not exposed to soil, water, sewage, sludge, and/or weather:
    a. Slabs (top and bottom cover), walls, joists, shells and folded plate members - 1.5 inches
    b. Beams and columns, primary reinforcement - 2 inches
    c. Ties, spirals, and stirrups - 1.5 inches
4. Tie wires in all concrete – 1.5 inches

C. Reinforcement that will be exposed for a considerable length of time after being placed shall be coated with a heavy coat of neat cement slurry.

D. No reinforcing steel bars shall be welded either during fabrication or erection unless specifically shown on the Drawings or specified herein, or unless prior written approval has been obtained from the ENGINEER. All bars that have been welded, including tack welds, without such approval shall be immediately removed from the work. If welding of reinforcement is approved or specifically called for, it shall comply with AWS D1.4.

E. Reinforcing steel interfering with the location of other reinforcing steel, conduits, or embedded items may be moved within the specified tolerances or one bar diameter, whichever is greater. Greater displacements of bars to avoid interference shall only be made with the approval of the ENGINEER. Do not cut reinforcement to install inserts, conduits, mechanical openings, or other items without the prior approval of the ENGINEER.

F. Securely support and tie reinforcing steel to prevent movement during concrete placement. Secure dowels in place before placing concrete.

G. Reinforcing steel bars shall not be field bent except where shown on the Drawings or specifically authorized in writing by the ENGINEER. If authorized, bars shall be cold-bent around a standard diameter spool as specified within CRSI. Do not heat bars. Closely inspect the reinforcing steel for breaks. If the reinforcing steel is damaged, replace, Cadweld, or otherwise repair as directed by the ENGINEER. Do not bend reinforcement after it is embedded in concrete unless specifically permitted on the Drawings.

3.02 REINFORCEMENT AROUND OPENINGS

A. Unless specific additional reinforcement around openings is shown on the Drawings, provide additional reinforcing steel on each side of the opening equivalent to one-half of the cross-sectional area of the reinforcing steel interrupted by the opening. The bars shall have sufficient length to develop bond at each end beyond the opening or penetration.

3.03 SPLICING OF REINFORCEMENT

A. Splices designated as compression splices on the Drawings shall be 30 bar diameters, but not less than 12 inches, unless otherwise noted.

B. Tension lap splices shall be provided at all laps in compliance with ACI 318. The length of splices shall conform to the Contract Drawings. Splices in adjacent bars shall be staggered. Class A splices may be used when 50 percent or less of the bars are spliced within the required lap length. Class B splices shall be used at all other locations.

3.04 ACCESSORIES

A. Determine, provide, and install accessories such as chairs, chair-bars, and the like in sufficient quantities and strength to adequately support the reinforcement and prevent its displacement during the erection of the reinforcement and the placement of concrete.

B. Use precast concrete blocks (dobies) where the reinforcing steel is to be supported over soil. In no case shall such supports be continuous.

C. Stainless steel bar supports or steel chairs with stainless steel tips shall be used where the chairs are set on forms for a concrete surface that will be exposed to weather, high humidity, or liquid (including bottom of slabs over liquid-containing areas). Use of galvanized or plastic-tipped metal chairs is permissible in all other locations unless otherwise noted on the Drawings or specified herein.

D. Alternate methods of supporting top steel in slabs, such as steel channels supported on the bottom steel or vertical reinforcing steel fasteners to the bottom and top mats may be used if approved by the ENGINEER.

3.05 INSPECTION

A. In no case shall any reinforcing steel be covered with concrete until the installation of the reinforcement, including the size, spacing, and position of the reinforcement, has been observed by the ENGINEER and the ENGINEER's release to proceed with the concreting has been obtained. The ENGINEER shall be given a minimum of 24 hours prior notice of the readiness of placed reinforcement for observation. The forms shall be kept open until the ENGINEER has completed observations of the reinforcing steel.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 03300

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor and materials required and install all cast-in-place concrete complete as shown on the Drawings and as specified herein.

1.02 RELATED WORK

A. Related Work Specified Elsewhere

1. Section 03100 – Concrete Forming and Accessories
2. Section 03150 – Concrete Joints and Accessories
3. Section 03210 – Concrete Reinforcement
4. Section 03350 – Concrete Finishing
5. Section 05500 – Metal Fabrications

1.03 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. American Concrete Institute (ACI)

1. ACI 304R – Guide for Measuring, Mixing, Transporting, and Placing Concrete
2. ACI 305R – Hot Weather Concreting
3. ACI 306.1 – Standard Specification for Cold Weather Concreting
4. ACI 315 – Details and Detailing of Concrete Reinforcement
5. ACI 318 – Building Code Requirements for Structural Concrete

B. American Society for Testing and Materials (ASTM)

1. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field
2. ASTM C33 – Standard Specification for Concrete Aggregates
3. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens
4. ASTM C42 – Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete
5. ASTM C94 – Standard Specification for Ready-Mixed Concrete
6. ASTM C143 – Standard Test Method for Slump of Hydraulic Cement Concrete
7. ASTM C150 – Standard Specification for Portland Cement
8. ASTM C157 – Standard Test Method for Length Change of Hardened Hydraulic Cement Mortar and Concrete
9. ASTM C171 – Standard Specification for Sheet Materials for Curing Concrete
10. ASTM C173 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method

11. ASTM C231 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method

12. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete

13. ASTM C309 – Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete

14. ASTM C311 – Standard Test Methods for Sampling and Testing Fly Ash or Natural Pozzolans for Use in Portland-Cement Concrete

15. ASTM C494 – Standard Specification for Chemical Admixtures for Concrete

16. ASTM C596 – Standard Test Method for Drying Shrinkage of Mortar Containing Hydraulic Cement

17. ASTM C618 – Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for use in Concrete

18. ASTM C1017 – Standard Specification for Chemical Admixtures for use in Producing Flowing Concrete

C. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit to the ENGINEER, submittals including the following:

1. Sources of cement, pozzolan, and aggregates.

2. Material Safety Data Sheets (SDS) for all concrete components and admixtures.

3. Air-entraining admixture – Product data including catalogue cut, technical data, storage requirements, product life, recommended dosage, temperature considerations, and conformity to ASTM standards.

4. Water-reducing admixture – Product data including catalogue cut, technical data, storage requirements, product life, recommended dosage, temperature considerations, and conformity to ASTM standards.

5. High range, water-reducing admixture – Product data including catalogue cut, technical data, storage requirements, product life, recommended dosage, temperature considerations, retarding effect, slump range, and conformity to ASTM standards. Identify proposed locations for use.

6. Concrete mix design for each formulation of concrete proposed for use including constituent quantities per cubic yard, water-cementitious materials ratio, type, and manufacturer of cement, compressive strength, concrete slump, shrinkage, and air content. Provide with (a) or (b) below for each mix proposed.

   a. Standard deviation data for each proposed concrete mix based on statistical records,

   b. OR

   c. The curve of water-cementitious materials ratio versus concrete cylinder strength for each formulation of concrete proposed based on laboratory tests. The cylinder strength shall be the average of the 28-day cylinder strength test results for each mix. Provide results of 7- and 14-day tests if available.

7. Sheet curing material – Product data including catalogue cut, technical data, and conformity to ASTM standards.

8. Liquid curing compound – Product data including catalogue cut, technical data, storage requirements, product life, application rate, and conformity to ASTM standards. Identify proposed locations of use.

9. Samples – Fine and coarse aggregates if requested by the ENGNEER.

10. Test Reports - Submit test reports for each of the following items:

    a. Fine aggregates – Sieve analysis, physical properties, and deleterious substances

    b. Coarse aggregates – Sieve analysis, physical properties, and deleterious substances

    c. Cements – Chemical analysis and physical properties for each type

    d. Pozzolans – Chemical analysis and physical properties

11. Certifications:

    a. Certify that admixtures used in the same concrete mix are compatible with each other and the aggregates.

    b. Certify that the Contractor is not associated with the independent testing laboratory nor does the Contractor or its officers have a beneficial interest in the laboratory.

12. Work Plans:

    a. Hot weather concreting

    b. Cold weather concreting

1.05 QUALITY ASSURANCE

A. Reinforced concrete shall comply with ACI 318, and other stated requirements, codes, and standards. The most stringent requirement of the codes, standards, and this Section shall apply when conflicts arise.

B. Only one source of cement and aggregate shall be used on any one structure. Concrete shall be uniform in color and appearance.

C. Well in advance of placing concrete, discuss with the ENGINEER the sources of individual materials and batched concrete proposed for use. Discuss placement methods and curing. Propose methods of hot and cold weather concreting as required.

D. A meeting shall be held before placement of plasticized concrete. The plasticizer (high-range water-reducer) manufacturer’s representative and the Contractor shall be available to discuss the properties and techniques of batching and placing plasticized concrete.

E. If, during the progress of the work, it is impossible to secure concrete of the required workability and strength with the materials being furnished, the ENGINEER may order such changes in proportions or materials, or both, as may be necessary to secure the desired properties. All changes so ordered shall be made at the CONTRACTOR's expense.

F. If, during the progress of work, the materials from the sources originally accepted change in characteristics, the CONTRACTOR shall, at their expense, make new acceptance tests of aggregates and establish new design mixes.

G. Testing of the following materials shall be furnished by the CONTRACTOR to verify conformity with this Specification Section and the stated ASTM Standard(s).

    1. Fine aggregates for conformity to ASTM C33 – sieve analysis, physical properties, and deleterious substances

    2. Coarse aggregates for conformity to ASTM C33 – sieve analysis, physical properties, and deleterious substances

3. Cements for conformity to ASTM C150 – chemical analysis and physical properties

4. Pozzolans for conformity to ASTM C618 – chemical analysis and physical properties

5. Proposed concrete mix design(s) – compressive strength, slump, shrinkage, and air content

H. All materials incorporated in the work shall conform to accepted samples.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Cement – Store cement in weathertight buildings, bins, or silos to provide protection from dampness and contamination and to minimize warehouse set.

B. Aggregate – Arrange and use stockpiles to avoid excessive segregation or contamination with other materials or with other sizes of like aggregates. Build stockpiles in successive horizontal layers not exceeding 3 feet in thickness. Complete each layer before the next is started. Do not use frozen or partially frozen aggregate.

C. Sand – Arrange and use stockpiles to avoid contamination. Allow sand to drain to uniform moisture content before using. Do not use frozen or partially frozen sands.

D. Admixtures – Store in closed containers to avoid contamination, evaporation, or damage. Provide suitable agitating equipment to assure uniform dispersion of ingredients in admixture solutions that tend to separate. Protect liquid admixtures from freezing and other temperature changes that could adversely affect their characteristics.

E. Pozzolan – Store in weathertight buildings, bins, or silos to provide protection from dampness and contamination.

F. Sheet Curing Materials – Store in weathertight buildings or off the ground and under cover.

G. Liquid curing compounds – Store in closed containers.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The use of a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

B. Like items of materials shall be the end products of one manufacturer in order to provide standardization for appearance, maintenance, and manufacturer's services.

2.02 MATERIALS

A. Materials shall comply with this Section and any applicable state or local requirements.

B. Cement – Domestic Portland cement shall comply with ASTM C150 Type II. Air-entraining cement shall not be used. The cement brand shall be subject to approval by the ENGINEER and one brand shall be used throughout the work.

C. Fine Aggregates – Fine aggregates shall be washed inert natural sand conforming to the requirements of ASTM C33.

D. Coarse Aggregates – Coarse aggregates shall be well-graded crushed stone or washed gravel conforming to the requirements of ASTM C33. Grading requirements shall be as listed in ASTM C33 Table 2 for the specified coarse aggregate size number. Limits of deleterious substances and physical property requirements shall be as listed in ASTM C33 Table 3 for severe weathering regions. Size numbers for concrete mixes shall be as shown in Table 1 herein.

E. Water – Water shall be potable and free from injurious amounts of oil, acids, alkalis, salts, organic matter, or other deleterious substances.

F. Admixtures – Admixtures shall be free of chlorides and alkalis (except for those attributable to water). When it is required to use more than one admixture in a concrete mix, the admixtures shall be from the same manufacturer. Admixtures shall be compatible with the concrete mix including other admixtures [and shall be suitable for use in contact with potable water after 30 days of concrete curing].

1. Air-Entraining Admixture – The admixture shall comply with ASTM C260. Proportioning and mixing shall be in accordance with manufacturer's recommendations.

2. Admixtures causing retarded or accelerated setting of concrete shall not be used without written approval from the ENGINEER. When allowed, the admixtures shall be retarding or accelerating water-reducing or high-range water-reducing admixtures.

3. Water-Reducing Admixture – The admixture shall comply with ASTM C494, Type A. Proportioning and mixing shall be in accordance with manufacturer's recommendations.

4. High-Range Water-Reducer (Plasticizer) – The admixture shall comply with ASTM C494, Type F and shall result in nonsegregating plasticized concrete with little bleeding and with the physical properties of low water/cement ratio concrete. The treated concrete shall be capable of maintaining its plastic state in excess of 2 hours. Proportioning and mixing shall be in accordance with manufacturer's recommendations.

G. Pozzolan (Fly Ash) – Pozzolan shall be Class F fly ash complying with ASTM C618, except the Loss On Ignition (LOI) shall be limited to 3 percent maximum.

H. Sheet Curing Material – Sheet curing material shall be waterproof paper, polyethylene film, or white burlap-polyethylene sheeting, all of which must comply with ASTM C171.

I. Liquid Curing Compound – Liquid membrane-forming curing compound shall comply with the requirements of ASTM C309, Type 1-D (clear or translucent with fugitive dye) and shall contain no wax, paraffin, or oil.

2.03 CONCRETE MIXES

A. Development of mix designs and testing shall be by an independent testing laboratory acceptable to the ENGINEER but engaged by and at the expense of the CONTRACTOR.

B. Select proportions of ingredients to meet the design strength and materials limits specified in Table 1 and to produce concrete having proper placability, durability, strength, appearance, and other required properties. Proportion ingredients to produce a homogenous mixture that will readily work into corners and angles of forms and around reinforcement without permitting materials to segregate or allowing excessive free water to collect on the surface.

1. The design mix shall be based on standard deviation data of prior mixes with essentially the same proportions of the same constituents or, if such data is not available, be developed by a testing laboratory, acceptable to the ENGINEER, engaged by and at the expense of the CONTRACTOR. Acceptance of mixes based on standard deviation shall be based on the modification factors for standard deviation tests contained in ACI 318. The water content of the concrete mix, determined by laboratory testing, shall be based on a curve showing the relation between the water-cementitious ratio and 7- and 28-day compressive strengths of concrete made using the proposed materials. The curves shall be determined by four or more points, each representing an average value of at least

three test specimens at each age. The curves shall have a range of values sufficient to yield the desired data, including the specified design strengths as modified below, without extrapolation. The water content of the concrete mixes to be used, as determined from the curve, shall correspond to strengths 16 percent greater than the specified design strengths. The resulting mix shall not conflict with the limiting values for maximum water-cementitious ratio and net minimum cementitious content as specified in Table 1.

C. Compression Tests – Provide testing of the proposed concrete mix or mixes to demonstrate compliance with the specified design strength requirements in conformity with the above paragraph.

D. Entrained air, as measured by ASTM C231, shall be as shown in Table 1.

1. If the air-entraining agent proposed for use in the mix requires testing methods other than ASTM C231 to accurately determine air content, make special note of this requirement in the admixture submittal.

E. Slump of the concrete as measured by ASTM C143, shall be as shown in Table 1. If a high-range water-reducer (plasticizer) is used, the slump indicated shall be that measured before plasticizer is added. Plasticized concrete shall have a slump ranging from 7 to 10 inches.

F. Proportion admixtures according to the manufacturer's recommendations. Two or more admixtures specified may be used in the same mix provided that the admixtures in combination retain full efficiency and have no deleterious effect on the concrete or on the properties of each other.

Table 1
Concrete Mix Requirements

Class	Design Strength (1)	Cement (2)	Fine Aggregate (2)	Coarse Aggregate (3)	Cementitious Content lbs./cu. yd. (min) (4)
A	2500	C150 Type II	C33	57	440
B	3000	C150 Type II	C33	57	480
D	4000	C150 Type II	C33	57	560

Class	W/C Ratio (Max.) (5)	Fly Ash (6)	AE Range (7)	WR (8)	HRWR (9)	Slump Range Inches
A	0.62	--	3.5 to 5	Yes	No	1–4
B	0.54	--	3.5 to 5	Yes	No	1–3
D	0.40-0.42	15–25%	3.5 to 5	Yes	No	3–5

NOTES:
(1) Minimum compressive strength in pounds per square inch at 28 days
(2) ASTM designation
(3) Size Number in ASTM C33
(4) Cementitious content in pounds per cubic yard
(5) W/C is water-cementitious ratio by weight
(6) Percent content of total cementitious material
(7) AE is percent air entrainment
(8) WR is water-reducer admixture
(9) HRWR is high-range water-reducer admixture

PART 3 - EXECUTION

3.01 MEASURING MATERIALS

A. Concrete shall be composed of Portland cement, fine aggregate, coarse aggregate, water, and admixtures as specified and shall be produced by a plant acceptable to the ENGINEER. All constituents, including admixtures, shall be batched at the plant except a high-range water-reducer may be added in the field.

B. Measure materials for batching concrete by weighing in conformity with and within the tolerances given in ASTM C94 except as otherwise specified. Scales shall have been certified by the local Sealer of Weights and Measures within one year of use.

C. Measure the amount of free water in fine aggregates within 0.3 percent with a moisture meter. Compensate for varying moisture contents of fine aggregates. Record the number of gallons of water as batched on printed batching tickets.

D. Admixtures shall be dispensed either manually using calibrated containers or measuring tanks, or by means of an automatic dispenser approved by the manufacturer of the specific admixture.

1. Charge air-entraining and chemical admixtures into the mixer as a solution using an automatic dispenser or similar metering device.

2. Inject multiple admixtures separately during the batching sequence.

3.02 MIXING AND TRANSPORTATION

A. Concrete shall be ready-mixed concrete. No hand mixing will be permitted. Clean each transit mix truck drum and reverse drum rotation before the truck proceeds under the batching plant. Equip each transit-mix truck with a continuous, nonreversible, revolution counter showing the number of revolutions at mixing speeds.

B. Ready-mix concrete shall be transported to the site in watertight agitator or mixer trucks loaded not in excess of their rated capacities as stated on the nameplate.

C. Keep the water tank valve on each transit truck locked at all times. Any addition of water must be approved by the ENGINEER. Added water shall be incorporated by additional mixing of at least 35 revolutions. All added water shall be metered and the amount of water added shall be shown on each delivery ticket.

D. All central plant and rolling stock equipment and methods shall comply with ACI 318 and ASTM C94.

E. Select equipment of size and design to ensure continuous flow of concrete at the delivery end. Metal or metal-lined non-aluminum discharge chutes shall be used and shall have slopes not exceeding 1 vertical to 2 horizontal and not less than 1 vertical to 3 horizontal. Chutes more than 20 feet long and chutes not meeting slope requirements may be used if concrete is discharged into a hopper before distribution.

F. Retempering (mixing with or without additional cement, aggregate, or water) of concrete or mortar that has reached initial set will not be permitted.

G. Handle concrete from mixer to placement as quickly as practicable while providing concrete of required quality in the placement area. Dispatch trucks from the batching plant so they arrive at the work site just before the concrete is required, thus avoiding excessive mixing of concrete while waiting, or delays in placing successive layers of concrete in the forms.

H. Furnish a delivery ticket for ready-mixed concrete to the ENGINEER as each truck arrives. Each ticket shall provide a printed record of the weight of cement and each aggregate as batched individually. Use the type of indicator that returns for zero punch or returns to zero after a batch is discharged. Clearly indicate the weight of fine and coarse aggregate,

cement, and water in each batch, the quantity delivered, the time any water is added, and the numerical sequence of the delivery. Show the time of day batched and time of discharge from the truck. Indicate the number of revolutions of the truck mixer.

3.03 TEMPERATURE AND MIXING TIME CONTROL

A. In cold weather, do not allow the as-mixed temperature of the concrete and concrete temperatures at the time of placement in the forms to drop below 40 degrees Fahrenheit (F).

B. If water or aggregate has been heated, combine water with aggregate in the mixer before cement is added. Do not add cement to mixtures of water and aggregate when the temperature of the mixture is greater than 90 degrees F.

C. In hot weather, cool ingredients before mixing to maintain temperature of the concrete below the maximum placing temperature of 90 degrees F. If necessary, substitute well-crushed ice for all or part of the mixing water.

D. The maximum time interval between the addition of mixing water and/or cement to the batch and the placing of concrete in the forms shall not exceed the values shown in Table 2.

E. If an approved high-range water-reducer (plasticizer) is used to produce plasticized concrete, the maximum time interval shall not exceed 90 minutes.

Table 2
Maximum Time to Discharge of Concrete

Air or Concrete Temperature (Whichever is higher)	Maximum Time (Minutes)
70 to 90 Degrees F (21 to 32 Degrees C)	60
40 to 69 Degrees F (5 to 20 Degrees C)	90

F = Fahrenheit, C = Celsius

3.04 CONCRETE APPEARANCE

A. Concrete mix showing either poor cohesion or poor coating of the coarse aggregate with paste shall be remixed. If this does not correct the condition, the concrete shall be rejected. If the slump is within the allowable limit, but excessive bleeding, poor workability, or poor finishability are observed, changes in the concrete mix shall be obtained only by adjusting one or more of the following:

1. The gradation of the aggregate
2. The proportion of fine and coarse aggregate
3. The percentage of entrained air, within the allowable limits

B. Concrete for the work shall provide a homogeneous structure that, when hardened, will have the required strength, durability, and appearance. Mixtures and workmanship shall be such that concrete surfaces, when exposed, will require no finishing. After concrete surfaces are stripped, the concrete, when viewed in good lighting from 10 feet away, shall be pleasing in appearance, and at 20 feet shall show no visible defects.

3.05 PLACING AND COMPACTING

A. Placing:

1. Placing of all concrete shall be in accordance with the recommendations contained in ACI 304R.

2. Verify that all formwork completely encloses concrete to be placed and is securely braced before concrete placement. Remove ice, excess water, dirt, and other foreign materials from forms. Confirm that reinforcement and other embedded items are securely in place. Have a competent worker at the location of the placement that can assure that reinforcing steel and embedded items remain in designated locations while concrete is being placed. Sprinkle semi-porous sub grades or forms to eliminate suction of water from the mix. Seal extremely porous sub grades in an approved manner.

3. Deposit concrete as near to its final position as possible to avoid segregation due to rehandling or flowing. Place concrete continuously at a rate that ensures the concrete is being integrated with fresh plastic concrete. Do not deposit concrete that has partially hardened or has been contaminated by foreign materials or on concrete that has hardened sufficiently to cause formation of seams or planes of weakness within the section. If the section cannot be placed continuously, place construction joints as specified or as approved.

4. Pumping of concrete will be permitted. Use a mix design and aggregate sizes suitable for pumping and submit for approval.

5. Remove temporary spreaders from forms when the spreader is no longer useful. Temporary spreaders may remain embedded in concrete only when made of galvanized metal or concrete and if prior approval has been obtained.

6. Do not place concrete for supported elements until concrete previously placed in the supporting element (columns, slabs, and/or walls) has reached adequate strength.

B. Slabs:

1. After suitable bulkheads, screeds, and jointing materials have been positioned, the concrete shall be placed continuously between construction joints beginning at a bulkhead, edge form, or corner. Each batch shall be placed into the edge of the previously placed concrete to avoid stone pockets and segregation.

2. Avoid delays in casting. If there is a delay in casting, the concrete placed after the delay shall be thoroughly spaded and consolidated at the edge of that previously placed to avoid cold joints. Concrete shall then be brought to correct level and struck off with a straightedge. Bullfloats or darbies shall be used to smooth the surface, leaving it free of humps or hollows.

3. "Jitterbugs" shall not be used on slab surfaces to aid in finishing.

4. Where slabs are to be placed integrally with the walls below them, place the walls and compact as specified. Allow 1 hour to pass between placement of the wall and the overlying slab to permit consolidation of the wall concrete. Keep the top surface of the wall moist so as to prevent cold joints.

C. Formed Concrete:

1. Place concrete in forms using tremie tubes and taking care to prevent segregation. Bottom of tremie tubes shall preferably be in contact with the concrete already placed. Do not permit concrete to drop freely more than 4 feet. Place concrete for walls in 12- to 24-inch lifts, keeping the surface horizontal. If plasticized concrete is used, the maximum lift thickness may be increased to 7 feet and the maximum free fall of concrete shall not exceed 15 feet.

D. Compacting:

1. Consolidate concrete by vibration, puddling, spading, rodding, or forking so that concrete is thoroughly worked around reinforcement, embedded items, and openings, and into corners of forms. Puddling, spading, etc. shall be continuously performed along with vibration of the placement to eliminate air or stone pockets that may cause honeycombing, pitting, or planes of weakness.

2. All concrete shall be placed and compacted with mechanical vibrators. The number, type, and size of the units shall be approved by the ENGINEER in advance of placing operations. No concrete shall be ordered until sufficient approved vibrators (including standby units in working order) are on the job site.

3. A minimum frequency of 7,000 revolutions per minute is required for mechanical vibrators. Insert and withdraw vibrators vertically at points from 18 to 30 inches apart. At each insertion, vibrate sufficiently to consolidate concrete, generally from 5 to 15 seconds. Do not over-vibrate so as to segregate. Keep a spare vibrator on the site during concrete placing operations.

4. Concrete Slabs - Concrete for slabs less than 8 inches thick shall be consolidated with vibrating screeds; slabs 8 to 12 inches thick shall be compacted with internal vibrators and (optionally) with vibrating screeds. Vibrators shall always be placed into concrete vertically and shall not be laid horizontally or laid over.

5. Walls - Internal vibrators (rather than form vibrators) shall be used unless otherwise approved by the ENGINEER. In general, for each vibrator needed to melt down the batch at the point of discharge, one or more additional vibrators must be used to densify, homogenize, and perfect the surface. The vibrators shall be inserted vertically at regular intervals, through the fresh concrete and slightly into the previous lift, if any.

6. Amount of Vibration - Vibrators are to be used to consolidate properly placed concrete but shall not be used to move or transport concrete in the forms. Vibration shall continue until the following conditions are met:

a. The frequency returns to normal.

b. The surface appears liquefied, flattened, and glistening.

c. Trapped air ceases to rise.

d. Coarse aggregate has blended into the surface, but has not disappeared.

3.06 CURING AND PROTECTION

A. Protect all concrete work against injury from the elements and defacements of any nature during construction operations.

B. Curing Methods:

1. Curing Methods for Concrete Surfaces - Cure concrete to retain moisture and maintain specified temperature at the surface for a minimum of 7 days after placement. Curing methods to be used are as follows:

a. Water Curing – Keep entire concrete surface wet by ponding, continuous sprinkling, or covering with saturated burlap. Begin wet cure as soon as concrete attains an initial set and maintain wet cure 24 hours a day.

b. Sheet Material Curing – Cover entire surface with sheet material. Securely anchor sheeting to prevent wind and air from lifting the sheeting or entrapping air under the sheet. Place and secure sheet as soon as initial concrete set occurs.

c. Liquid Membrane Curing – Apply curing compound over the entire concrete surface except for surfaces to receive additional concrete. Curing

compound shall NOT be placed on any concrete surface where additional concrete is to be placed, where concrete sealers or surface coatings are to be used, or where the concrete finish requires an integral floor product. Curing compound shall be applied as soon as the free water on the surface has disappeared and no water sheen is visible, but not after the concrete is dry or when the curing compound can be absorbed into the concrete. Application shall be in compliance with the manufacturer's recommendations.

C. Specified Applications of Curing Methods:

1. Slabs on Grade and Footings – Water curing, sheet material curing, or liquid membrane curing shall be used.

2. Structural Slabs – Water curing or liquid membrane curing shall be used.

3. Horizontal Surfaces that will Receive Additional Concrete, Coatings, Grout or Other Material that Requires Bond to the substrate – Water curing shall be used.

4. Formed Surfaces – No curing shall be used if nonabsorbent forms are left in place 7 days. Water curing shall be used if absorbent forms are used. Sheet curing or liquid membrane curing shall be used if forms are removed before 7 days. Exposed horizontal surfaces of formed walls or columns shall be water cured for 7 days or until next placement of concrete is made.

5. Concrete Joints – Water curing or sheet material curing shall be used.

D. Finished surfaces and slabs shall be protected from the direct rays of the sun to prevent checking and crazing.

3.07 REMOVAL OF FORMS

A. Except as otherwise specifically approved by the ENGINEER, forms shall not be removed before the concrete has attained a strength of at least 30 percent of its specified design strength, nor before reaching 100 degree days of curing for walls and vertical surfaces, and 500 degree days of curing for beams and slabs, (whichever is the longer). Degree days are defined as the total number of 24-hour periods multiplied by the weighted average daily air temperature at the surface of the concrete (e.g., 5 days at an average 70 degrees F = 350 degree days).

B. Shores shall not be removed until the concrete has attained at least 60 percent of its specified design strength and also sufficient strength to support safely its own weight and construction live loads.

3.08 INSPECTION AND FIELD TESTING

A. The batching, mixing, transporting, placing, and curing of concrete shall be subject to the inspection of the ENGINEER at all times. The CONTRACTOR shall advise the ENGINEER of their readiness to proceed at least 24 hours before each concrete placement. The ENGINEER will inspect the preparations for concreting including the preparation of previously placed concrete, the reinforcing steel and the alignment, and the cleanliness and tightness of formwork. No placement shall be made without the inspection and acceptance of the ENGINEER.

B. Sets of field control cylinder specimens will be taken by an independent entity paid for by the DISTRICT during the progress of the work, in compliance with ASTM C31. The number of sets of concrete test cylinders taken of each class of concrete placed each day shall not be less than one set per day, nor less than one set for each 150 cubic yards of concrete, nor less than one set for each 3,000 square feet of surface area for slabs or walls. If the total volume of concrete were such that the frequency of testing required for a given class of concrete would provide less than five strength tests, tests shall be made from at least

five randomly selected batches or from each batch if fewer than five batches are anticipated.

C. A "set" of test cylinders consists of six 6”x12” cylinders: two to be tested at 7 days and two to be tested and their strengths averaged at 28 days. The final two may be used for a special test at 3 days or to verify strength after 28 days if 28-day test results are low. A copy of all concrete test results shall be provided to the DISTRICT for review.

D. When the average 28-day compressive strength of the cylinders in any set falls below the specified design strength or below proportional minimum 7-day strengths (where the proper relationships between 7- and 28-day strengths have been established by tests), proportions, water content, or temperature conditions shall be changed to achieve the required strengths.

E. The CONTRACTOR shall cooperate in the making of tests by allowing free access to the work for the selection of samples; providing an insulated, closed curing box for specimens; affording protection to the specimens against injury or loss through the operations; and furnishing material and labor required for the purpose of taking concrete cylinder samples. All shipping of specimens will be paid for by the DISTRICT. Curing boxes shall be acceptable to the ENGINEER.

F. Concrete Slump:

1. Slump tests will be made in the field immediately before placing the concrete by an independent entity paid for by the DISTRICT. Such tests shall be made in accordance with ASTM C143. If the slump is greater than the specified range, the concrete shall be rejected.

2. At a minimum the first three trucks shall be tested to establish consistency. Additionally, testing will be performed with each strength test (cylinders) and each air content test.

3. The ENGINEER reserves the right to increase the frequency of testing when deemed necessary.

G. Air Content:

1. Testing for air content shall be performed on a fresh concrete sample by an independent entity paid for by the DISTRICT. Air content testing for concrete made of ordinary aggregates having low absorption shall be performed in compliance with either the pressure method complying with ASTM C231 or by the volumetric method complying with ASTM C173. If lightweight aggregates or aggregates with high absorptions are used, the latter test method shall be used. If air content is below the specified air-entrainment range listed in Table 1, air-entraining admixture may be added on-site to bring the concrete within specifications. If air content is above the specified air-entrainment range, the concrete shall be rejected.

2. At a minimum, the first three trucks shall be tested to establish consistency, then every third truck thereafter. Additionally, an air content test shall be performed with each strength test (cylinders). Concrete samples for the testing of air content shall be taken at the point of placement and not at the truck chute/hopper.

3. The ENGINEER reserves the right to increase the frequency of testing when deemed necessary.

H. The ENGINEER may have cores taken from any questionable area in the concrete work such as construction joints and other locations as required for determination of concrete quality. The results of tests on such cores shall be the basis for acceptance, rejection, or determining the continuation of concrete work.

I. The CONTRACTOR shall cooperate in obtaining cores by allowing free access to the work and permitting the use of ladders, scaffolding, and such incidental equipment as may be required. Repair all core holes. The work of cutting and testing the cores will be at the expense of the DISTRICT.

3.09 FAILURE TO MEET REQUIREMENTS

A. Should the strengths shown by test specimens made and tested in compliance with the previous provisions fall below the values given in Table 1, the ENGINEER shall have the right to require changes in proportions outlined to apply to the remainder of the work. Furthermore, the ENGINEER shall have the right to require additional curing on those portions of the structure represented by the test specimens that failed. The cost of such additional curing shall be at the CONTRACTOR's expense. In the event that such additional curing does not give the strength required, as evidenced by core and/or load tests, the ENGINEER shall have the right to require strengthening or replacement of those portions of the structure that fail to develop the required strength. The cost of all such core borings and/or load tests, and any strengthening or concrete replacement required because strengths of test specimens are below that specified, shall be entirely at the expense of the CONTRACTOR. In such cases of failure to meet strength requirements, the CONTRACTOR and ENGINEER shall confer to determine what adjustment, if any, can be made in compliance with Sections titled "Strength" and "Failure to Meet Strength Requirements" of ASTM C94. The "purchaser" referred to in ASTM C94 is the CONTRACTOR in this Section.

B. When the tests on field control specimens of concrete fall below the specified strength, the ENGINEER will permit check tests for strengths to be made by means of typical cores drilled from the structure in compliance with ASTM C42 and C39. In the case of cores not indicating adequate strength, the ENGINEER, in addition to other recourses, may require, at the CONTRACTOR's expense, load tests on any one of the elements in which such concrete was used. Tests need not be made until concrete has aged 60 days.

C. Should the strength of test cylinders fall below 60 percent of the required minimum 28-day strength, the concrete shall be rejected and shall be removed and replaced.

3.10 PATCHING AND REPAIRING

A. It is the intent of this Section to require quality work including adequate forming, proper mixture and placement of concrete, and curing, so completed concrete surfaces will require no patching.

B. Defective concrete and honeycombed areas shall be repaired as directed by the ENGINEER.

C. As soon as forms have been removed and the concrete surfaces exposed, fins and other projections shall be removed. All exposed surfaces shall be carefully examined and any irregularities shall be immediately rubbed or ground in a satisfactory manner in order to secure a smooth, uniform, and continuous surface. Plastering or coating of surfaces to be smoothed will not be permitted. No repairs shall be made until after inspection by the ENGINEER. In no case will extensive patching of honeycombed concrete be permitted. Concrete containing minor voids, holes, honeycombing, or similar depression defects shall be repaired as specified herein. Concrete containing extensive voids, holes, honeycombing, or similar depression defects shall be completely removed and replaced. The CONTRACTOR, at their own expense, shall promptly execute all repairs and replacements herein specified.

D. Defective surfaces to be repaired as specified in Paragraph C shall be cut back from true line a minimum depth of 1/2 inch over the entire area. Feathered edges will not be permitted. Where chipping or cutting tools are not required in order to deepen the area properly, the surface shall be prepared for bonding by the removal of all laitance or soft

material and not less than 1/32-inch depth of the surface film from all hard portions, by means of an efficient sandblast. After cutting and sandblasting, the surface shall be wetted sufficiently in advance of shooting with shotcrete or with cement mortar so that while the repair material is being applied, the surfaces under repair will remain moist, but not so wet as to overcome the suction upon which a good bond depends. The material used for the repair proposed shall contain such proportion of Atlas White Portland Cement as is required to make the color of the patch match the color of the surrounding concrete.

E. Recesses left by the removal of form ties shall be filled. Immediately after removal of forms, remove plugs and break off metal ties as required by Section 03 10 00. Promptly fill holes upon stripping as follows: moisten the hole with water, followed by a 1/16-inch brush coat of neat cement slurry mixed to the consistency of a heavy paste. Immediately plug the hole with a 1 to 1.5 mixture of cement and concrete sand mixed slightly damp to the touch (just short of "balling"). Hammer the grout into the hole until dense and an excess of paste appears on the surface in the form of a spider web. Trowel smooth with heavy pressure. Avoid burnishing.

F. Surface defects that do not impair structural strength shall be repaired. When patching exposed surfaces the same source of cement and sand as used in the parent concrete shall be employed. Adjust color if necessary by addition of proper amounts of white cement. Rub lightly with fine Carborundum stone at an age of 1 to 5 days if necessary to bring the surface down to flush with the parent concrete. Exercise care to avoid damaging or staining the virgin skin of the surrounding parent concrete. Wash thoroughly to remove all rubbed matter.

G. Clean all exposed concrete surfaces and adjoining work stained by leakage of concrete.

3.11 EMBEDMENT OF CONDUIT AND PIPES IN CONCRETE

A. Conduit, pipes, and sleeves of any material not harmful to concrete and within limitations of the Contract Drawings and Specifications and ACI 318 shall be permitted to be embedded in concrete with the prior approval of the ENGINEER, provided they are not considered by the ENGINEER to displace structural concrete, except as provided herein.

B. Conduit and pipes of aluminum shall not be embedded in structural concrete.

C. Conduit and pipes, with their fittings, embedded within a column shall not displace more than four percent of the area of the cross section on which the strength is calculated or which is required for fire protection. The ENGINEER shall determine whether the strength of the construction has been significantly impaired.

D. Conduits and pipes embedded within a slab, wall, or beam shall satisfy the following:

1. They shall not be larger in outside dimension than 2 inches.

2. Minimum center-to-center spacing between conduit and/or pipe runs shall be 3 times outside diameter or width.

3. They shall be located in such a manner as to maintain a minimum of 1 inch of clear space between the embedded item and primary reinforcing.

4. They shall not significantly impair the strength of the construction. The ENGINEER shall determine whether the strength of the construction has been significantly impaired.

E. No liquids, gas, or vapor, except water not exceeding 90 degrees Fahrenheit or 50-psi pressure, shall be placed in the pipes until the concrete has attained its design strength.

F. In solid slabs, conduits and/or pipes shall be placed between the top and bottom reinforcement at the centerline of the slab. At a minimum, they shall be located in such a manner as to maintain a minimum of 1 inch of clear space between the embedded item and primary reinforcing.

G. Concrete cover for pipes shall be not less than 1 1/2 inches for concrete exposed to earth or weather, nor less than 3/4 inch for concrete not exposed to weather or in contact with the ground.

H. Additional reinforcement with an area not less than 0.002 times the area of concrete section shall be provided normal to the conduit and/or pipe.

I. Conduits and/or piping shall be so fabricated and installed that cutting, bending, or displacement of reinforcement from its proper location will not be required.

3.12 SCHEDULE

A. Table 3 lists the general applications for the various concrete classes and design strengths.

Table 3
Concrete Schedule

Class	Design Compressive Strength at 28 days (psi)	Description
A	2,500	Concrete fill and duct encasement
B	3,000	Concrete overlay slabs and pavements
C	N/A	Not used
D	4,500	Walls, slabs on grade, suspended slab and beam systems, columns, grade beams, pile caps and all other structural concrete

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 03366

TOOLED CONCRETE FINISHES

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor, materials, equipment and incidentals required to finish cast-in-place concrete surfaces as shown on the Drawings and as specified herein.

1.02 RELATED WORK

A. Related Work Specified Elsewhere

1. Section 03100 - Concrete Formwork
2. Section 03150 - Concrete Joints and Joint Accessories
3. Section 03300 - Cast-in-Place Concrete
4. Section 03600 - Grout
5. Section 03740 - Modifications and Repair to Concrete
6. Moisture Protection is included in Division 7.

1.03 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM C33 - Standard Specification for Concrete Aggregates
2. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete
3. ASTM C779 - Standard Test Method for Abrasion Resistance of Horizontal Concrete

B. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit to the ENGINEER, in accordance with Division 1, product data showing materials of construction and details of application for the following:

1. Concrete Sealer - Submit product data including catalogue cuts, technical data, storage requirements, product life, working time after mixing, temperature considerations, conformity to required ASTM standards, and Material Safety Data Sheet. Confirmation that the sealer is compatible with additionally applied coatings shall also be submitted.
2. Concrete Hardener - Submit product data including catalogue cuts, technical data, storage requirements, product life, application requirements, conformity to required ASTM standards, and Material Safety Data Sheet.

1.05 QUALITY ASSURANCE

A. Finish:

1. For concrete that will receive additional applied finishes or materials, the surface finish specified is required for the proper application of the specified manufacturer's

products. Where alternate products are approved for use, determine if changes in finish are required and provide the proper finish to receive these products.

2. Changes in finish made to accommodate products different from those specified shall be performed at no additional cost to the OWNER. Submit the proposed new finish and their construction methods to the ENGINEER for approval.

B. Services of Manufacturer's Representative:

1. The CONTRACTOR shall make available, at no additional cost to the OWNER, upon 72 hours notification, the services of a qualified field representative of the manufacturer of the curing compound, sealer, or hardener to instruct the user on the proper application of the product under the prevailing job conditions.

PART 2 - PRODUCTS

2.01 GENERAL

A. The use of a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

2.02 MATERIALS

A. Concrete sealer shall comply with ASTM C309, Type 1, Class A or B. Concrete sealer must also be compliant with State of California VOC regulations. Concrete sealer shall be Spartan Cote WB II by Edoco (Burke), Kure-N-Seal WB by BASF Building Systems (Sonneborn), or equal.

B. Concrete Hardener must be compliant with State of California VOC regulations. Concrete hardener shall be Mastertop 100 by BASF Building Systems, Burke Nonmetallic Hardener by Edoco (Burke), or equal.

PART 3 - EXECUTION

3.01 FORMED SURFACES

A. Forms shall not be removed before the requirements of Section 03300 have been satisfied.

B. Exercise care to prevent damaging edges or obliterating the lines of chamfers, rustications, or corners when removing the forms or performing any other work adjacent thereto.

C. Clean all exposed concrete surfaces and adjoining work stained by leakage of concrete.

D. Rough-Formed Surfaces:

1. Immediately after stripping forms and before concrete has changed color, carefully remove all fins and projections.

2. Promptly fill holes left by tie cones and defects as specified in Section 03300.

E. Rubbed Finish:

1. Immediately upon stripping forms and before concrete has changed color, carefully remove all fins. While the wall is still damp apply a thin coat of medium-consistency neat cement slurry by means of bristle brushes to provide a bonding coat within all pits, air holes, or blemishes in the parent concrete. Avoid coating large areas with slurry at one time.

2. Before slurry has dried or changed color, apply a dry (almost crumbly) grout proportioned by volume and consisting of 1 part cement to 1 1/2 parts of clean masonry sand having a fineness modulus of approximately 2.3 and complying with the gradation requirements of ASTM C33 for such a material. Grout shall be uniformly applied by means of damp pads of coarse burlap approximately 6 inches

square used as a float. Scrub grout into the pits and air holes to provide dense mortar in all imperfections.

3. Allow the mortar to partially harden for 1 or 2 hours depending upon the weather and ambient temperature. If the air is hot and dry, keep the wall damp during this period using a fine fog spray. When the grout is hardened sufficiently so it can be scraped from the surface with the edge of a steel trowel without damaging the grout in the small pits or holes, cut off all that can be removed with a trowel. (Caution: Grout allowed to remain on the wall too long will harden and will be difficult to remove).

4. Allow the surface to dry thoroughly and rub it vigorously with clean, dry burlap to completely remove any dried grout. No visible film of grout shall remain after this rubbing. The entire cleaning operation for any area must be completed the day it is started. Do not leave grout on surfaces overnight. Allow sufficient time for grout to dry after it has been cut off with the trowel so it can be wiped off clean with the burlap.

5. On the day following the repair of pits, air holes, and blemishes, the walls shall again be wiped clean with dry, used pieces of burlap containing old, hardened mortar, which will act as a mild abrasive. After this treatment, there shall be no built-up film remaining in the parent surface. If, however, such a film is present, a fine abrasive stone shall be used to remove all such material without breaking through the surface film of the original concrete. Such scrubbing shall be light and sufficient only to remove excess material without changing the texture of the concrete.

6. A thorough wash-down with stiff bristle brushes shall follow the final bagging or stoning operations. No extraneous materials shall remain on the surface of the wall. The wall shall be sprayed with a fine fog spray periodically to maintain a continually damp condition for at least 3 days after application of the repair grout.

F. Abrasive Blast Finish:

1. Coordinate with Rubbed Finish application. Do not begin until Rubbed Finish operation is complete or before concrete has reached minimum 7-day strength. The Rubbed Finish application may be deleted by the ENGINEER if the unfinished concrete surface is of superior quality. Apply the abrasive blast finish only where indicated on Drawings.

2. Prepare a sample area of minimum 4 feet high by 16 feet wide and blast Finish as directed by ENGINEER on a portion of new wall construction that will not be exposed in the final work. The sample area shall contain a variety of finishes obtained with different nozzles, nozzle pressures, grit materials, and blasting techniques for selection by ENGINEER. The final accepted sample shall remain exposed until completion of all blast finish operations.

3. The blast finish operation shall meet all regulatory agency requirements. The blast finish CONTRACTOR shall be responsible for obtaining all required permits and/or licenses.

4. Perform abrasive blast finishing in as continuous an operation as possible, utilizing the same work crew to maintain continuity of finish on each surface or area of work. Maintain patterns or variances in depths of blast as present on the accepted sample.

5. Use an abrasive grit of proper type and gradation as well as equipment and technique to expose aggregate and surrounding matrix surfaces as follows:

a. Medium: Generally expose coarse aggregate - 1/4-inch to 3/8-inch reveal.

6. Abrasive blast corners and edge of patterns carefully, using back-up boards, to maintain uniform corner or edge line. Determine type of nozzle, nozzle pressure, and blasting techniques required to match Architect's samples.

7. Upon completion of the blast finish operation, thoroughly flush finished surfaces with clean, clear water to remove residual dust and grit. Allow to air dry until curing of concrete is complete.

3.02 FLOORS AND SLABS

A. Machine Float:

1. Screed floors and slabs with straightedges to the established grades shown on the Drawings. Immediately after final screeding, a dry cement/sand shake in proportion of two sacks of Portland cement to 350 pounds of coarse natural concrete sand shall be broadcast evenly over the surface at a rate approximately equal to 500 pounds per 1,000 square feet of floor area. Do not sprinkle neat, dry, cement on the surface.

2. The application of the cement/sand shake may be eliminated at the discretion of the ENGINEER if the base slab concrete exhibits adequate fattiness and homogeneity and the need is not indicated.

3. When the concrete has hardened sufficiently to support the weight of a power float without it digging into or disrupting the level surface, thoroughly float the shake into the surface with a heavy revolving disc type power compacting machine capable of providing 200-pound compaction force distributed over a 24-inch-diameter disc.

4. Start floating along the walls and around columns and then move systematically across the surface, leaving a matte finish.

5. The compacting machine shall be a "Kelley Power Float with Compaction Control" as manufactured by Kelly Industries, or equal. Troweling machines equipped with float (shoes) blades that are slipped over the trowel blades may be used for floating. Floating with a troweling machine equipped with normal trowel blades will not be permitted. The use of any floating or troweling machine that has water attachments for wetting the concrete surface during finishing will not be permitted.

B. Hand Float:

1. In lieu of power floating, small areas may be compacted by hand floating. The dry cement/sand shake previously specified shall be used unless specifically eliminated by the ENGINEER. Screed the floors and slabs with straightedge to the established grades shown on the Drawings. While the concrete is still green, but sufficiently hardened as to support a finisher and kneeboards with no more than 1/4-inch indentation, float to a true, even plane with no coarse aggregate visible. Use sufficient pressure on the floats to bring moisture to the surface.

C. Finishing Tolerances:

1. Level floors and slabs to a tolerance of plus or minus 1/8 inch when checked with a 10-foot straightedge placed anywhere on the slab in any direction. Where drains occur, pitch floors to drains such that there are no low spots left undrained. Failure to meet either of the above requirements shall be cause for removal, grinding, or other corrective measure as directed by the ENGINEER.

D. Broomed Finish:

1. Finish concrete as specified in Paragraph 3.2A. When the concrete has stiffened sufficiently to maintain small surface indentations, draw a bristle broom lightly across the surface in the direction of drainage, or in the case of walks and stairs, perpendicular to the direction of traffic to provide a nonslip surface.

E. Steel Trowel Finish:

1. Finish concrete as specified in Paragraph 3.2A, then hand steel trowel to a perfectly smooth hard even finish free from high or low spots or other defects.

2. Where concrete is greater than 15 feet in each direction, the CONTRACTOR may use a power steel trowel provided a minimum of three troweling passes are made of the entire surface.

3.03 CONCRETE SEALER

A. Prepare and seal floor surfaces indicated on the Drawings as follows:

1. Finish the concrete as specified in the preceding paragraphs and in accordance with the Schedule of Finishing in Paragraph 3.6.

B. Newly Placed Concrete:

1. Surface must be sound and properly finished. Surface is application-ready when it is damp, but not wet and can no longer be marred by a walking worker.

C. Newly Cured Bare Concrete:

1. Level any spots gouged out by trades. Remove all dirt, dust, droppage, oil, grease, asphalt, and foreign matter. Cleanse with caustics and detergents as required. Rinse thoroughly and allow to dry so that surface is no more than damp, and not wet.

D. Aged Concrete:

1. Restore surface soundness by patching, grouting, filling cracks, and holes, etc. Surface must also be free of any dust, dirt, and other foreign matter. Use power tools and/or strippers to remove any incompatible sealers or coatings. Cleanse as required, following the procedure indicated under cured concrete.

E. Methods:

1. Comply with the manufacturer's recommendations to apply sealer so as to form a continuous, uniform film by spray, soft-bristle push broom, long-nap roller, or lamb’s wool applicator.

F. Applications:

1. Two coats are required for curing concrete. Apply the first coat evenly and uniformly as soon as possible after final finishing at the rate of 200 to 400 square feet per gallon. Apply the second coat when all trades are completed and the structure is ready for occupancy, at the rate of 400 to 600 square feet per gallon.

2. For sealing new concrete, both coats shall be applied full strength.

3. For sealing aged concrete, when renovating, dust proofing, and sealing, the first coat should be thinned 10 to 15 percent with reducer per manufacturer's directions.

3.04 CONCRETE HARDENER

A. Prepare and apply hardener to floor surfaces indicated on the Drawings as follows:

1. Finish the concrete as specified in the preceding paragraphs and in accordance with the Schedule of Finishing in Paragraph 3.6.

2. Concrete floor hardener shall be applied to green (newly placed) concrete surfaces only.

B. Methods:

1. Comply with the manufacturer's recommendations in the application of the product.

2. Do not apply dry shake into the bleed water.

C. Applications:

1. The product shall be applied using a two-pass process ("shakes"). Using a mechanical spreader, spread approximately 1/2 to 2/3 of the required floor hardener evenly over the concrete surface.

2. If the CONTRACTOR chooses to broadcast the floor hardener by hand, in lieu of a mechanical spreader, apply each pass perpendicular to the previous application to better ensure complete coverage.

3. Apply the product in quantities prescribed for "medium duty," but not less than 100 pounds per 100 square feet.

4. Approval of Finishing

D. All concrete surfaces, when finished, will be inspected by the ENGINEER.

E. Surfaces that do not meet the requirements in this Specification shall be refinished or reworked.

F. After finishing horizontal surfaces, regardless of the finishing procedure specified, the concrete shall be cured in compliance with Section 03300, unless otherwise directed by the ENGINEER.

3.05 SCHEDULE OF FINISHING

A. Concrete shall be finished as specified either to remain as natural concrete or to receive an additional applied finish or material under another Section.

B. Concrete for the following conditions shall be finished as noted on the Drawings and as further specified herein:

1. Concrete to receive dampproofing and waterproofing: Rough-Formed Finish

2. Concrete not exposed to view and not scheduled to receive an additional applied finish or material: Rough-Formed Finish

3. Exterior vertical concrete above grade, exposed to view (except surfaces formed with a form liner): Rubbed Finish

4. Interior vertical concrete exposed to view except in water containment areas: Rubbed Finish

5. Interior and exterior underside of concrete exposed to view: Rubbed Finish]

6. Exterior surfaces exposed to view and indicated to have an abrasive blast finish: Abrasive Blast Finish

7. Interior or exterior horizontal concrete requiring floor hardener or sealer: See Paragraphs 3.3 and 3.4, and prepare floor in accordance with manufacturer's recommendations

8. Concrete for exterior walks, interior and exterior stairs: Broomed Finish perpendicular to direction of traffic

9. Concrete slabs on which process liquids flow or in contact with sludge: Steel Trowel Finish

END OF SECTION

SECTION 03600

GROUT

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor, materials, equipment and incidentals required and install grout complete as shown on the Drawings and as specified herein.

B. Perform all sampling and furnish all testing of materials and products by an independent testing laboratory acceptable to the ENGINEER but engaged by and at the expense of the CONTRACTOR.

1.02 RELATED WORK

A. Related Work Specified Elsewhere:

1. Section 03100 - Concrete Formwork
2. Section 03150 - Concrete Joints and Joint Accessories
3. Section 03200 - Concrete Reinforcement
4. Section 03300 - Cast-in-Place Concrete
5. Section 03740 - Modifications and Repair to Concrete
6. Section 05500 - Miscellaneous Metals

1.03 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM C531 - Standard Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical Resistant Mortars, Grouts and Monolithic Surfacing and Polymer Concretes
2. ASTM C579 - Standard Test Method for Compressive Strength of Chemical Resistant Mortars, Grouts and Monolithic Surfacing and Polymer Concretes
3. ASTM C827 - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures
4. ASTM C1107 - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink)
5. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics

B. US Army Corps of Engineers (CRD)

1. CRD-C 621 - Corps of Engineers Specification for Nonshrink Grout

C. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Submit to the ENGINEER, in accordance with Division 1, submittals including the following:

1. Commercially Manufactured Nonshrink Cementitious Grout - Submit product data including catalogue cuts, technical data, storage requirements, product life,

working time after mixing, temperature considerations, conformity to required ASTM standards, and Material Safety Data Sheet.

2. Commercially Manufactured Nonshrink Epoxy Grout– Submit product data including catalogue cuts, technical data, storage requirements, product life, working time after mixing, temperature considerations, conformity to required ASTM standards, and Material Safety Data Sheet.

3. Cement Grout - The submittal shall include the type and brand of the cement, the gradation of the fine aggregate, product data on any proposed admixtures, and the proposed mix of the grout.

B. Samples:

1. Submit samples of commercially manufactured grout products when requested by the ENGINEER.

2. Submit aggregates for use in concrete grout when requested by the ENGINEER.

C. Laboratory Test Reports:

1. Submit laboratory test data as required under Section 03300 for concrete to be used as concrete grout.

D. Certifications:

1. Certify that commercially manufactured grout products and concrete grout admixtures are suitable for use in contact with potable water after 30 days of curing.

2. Certify that the CONTRACTOR is not associated with the independent testing laboratory, nor does the CONTRACTOR or its officers have a beneficial interest in the laboratory.

1.05 QUALITY ASSURANCE

A. Qualifications - Grout manufacturer shall have a minimum of 10 years experience in the production and use of the type of grout proposed for the work.

B. Preinstallation Conference - Well in advance of grouting, hold a preinstallation meeting to review the requirements for surface preparation, mixing, placing, and curing procedures for each product proposed for use. Parties concerned with grouting shall be notified of the meeting at least 10 days before its scheduled date.

C. Services of Manufacturer's Representative - A qualified field technician of the nonshrink grout manufacturer, specifically trained in the installation of the products, shall attend the preinstallation conference and shall be present for the initial installation of each type of nonshrink grout. Additional services shall also be provided, as required, to correct installation problems.

D. Field Testing - The field testing of Concrete Grout shall be as specified for concrete in Section 03300.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the jobsite in original, unopened packages, clearly labeled with the manufacturer's name, product identification, batch numbers, and printed instructions.

B. Store materials in full compliance with the manufacturer's recommendations. Total storage time from date of manufacture to date of installation shall be limited to 6 months or the manufacturer's recommended storage time, whichever is less.

C. Material that becomes damp or otherwise unacceptable shall be immediately removed from the site and replaced with acceptable material at no additional expense to the OWNER.

D. Nonshrink, cement-based grouts shall be delivered as pre-blended, prepackaged mixes requiring only the addition of water.

E. Nonshrink epoxy grouts shall be delivered as pre-measured, prepackaged, three-component systems requiring only blending as directed by the manufacturer.

1.07 DEFINITIONS

A. Nonshrink Grout - A commercially manufactured product that does not shrink in either the plastic or hardened state, is dimensionally stable in the hardened state, and bonds to a clean baseplate.

PART 2 - PRODUCTS

2.01 GENERAL

A. The use of a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

B. All like materials shall be the products of one manufacturer or supplier in order to provide standardization of appearance.

2.02 MATERIALS

A. Nonshrink Cementitious Grout:

1. Nonshrink cementitious grouts shall meet or exceed the requirements of ASTM C1107, Grades B or C and CRD-C 621. Grouts shall be Portland cement-based, contain a pre-proportioned blend of selected aggregates and shrinkage-compensating agents and shall require only the addition of water. Nonshrink cementitious grouts shall not contain expansive cement or metallic particles. The grouts shall exhibit no shrinkage when tested in conformity with ASTM C827. The minimum 28-day compressive strength of 5,000 pounds per square inch (psi) is required for all nonshrink cementitious grout.

2. General purpose nonshrink cementitious grout shall conform to the standards stated above and shall be SikaGrout 212 by Sika Corp.; NS Grout by The Euclid Chemical Co.; FSP Construction Grout by Five Star Products Inc.; or equal.

3. Flowable (Precision) nonshrink cementitious grout shall conform to the standards stated above and shall be Masterflow 928 by BASF Building Systems; Hi-Flow Grout by the Euclid Chemical Co.; SikaGrout 212 by Sika Corp.; Five Star Grout, by Five Star Products Inc.; or equal.

B. Nonshrink Epoxy Grout:

1. Nonshrink epoxy-based grout shall be a pre-proportioned, three-component, 100 percent solids system consisting of epoxy resin, hardener, and blended aggregate. It shall have a minimum compressive strength of 10,000 psi in 7 days when tested in accordance with ASTM C579, Method B, and have a maximum thermal expansion of $30x10^{-6}$ when tested in accordance with ASTM C531. The grout shall be Masterflow 648 CP by BASF Building Systems; Five Star HP Epoxy Grout by Five Star Products, Inc.; Sikadur 42 Grout-Pak by Sika Corp.; E^3-HP by the Euclid Chemical Co.; or equal.

C. Cement Grout:

1. Cement grouts shall be a mixture of one part Portland cement conforming to ASTM C150 Types I, II, or III and one to two parts sand conforming to ASTM C33 with sufficient water to place the grout. The water content shall be sufficient to impart workability to the grout but not to the degree that it will allow the grout to flow.

D. Concrete Grout:

1. Concrete grout shall conform to the requirements of Section 03300 except as specified herein. It shall be proportioned with cement, pozzolan, coarse and fine aggregates, water, water reducer, and air-entraining agent to produce a mix having an average strength of 2,900 psi at 28 days, or 2,500 psi nominal strength. Coarse aggregate size shall be 3/8-in maximum. Slump should not exceed 5 inches and should be low as practical yet still retain sufficient workability.

E. Water:

1. Water shall be potable, free from injurious amounts of oil, acid, alkali, organic matter, or other deleterious substances.

PART 3 - EXECUTION

3.01 PREPARATION

A. Grout shall be placed over cured concrete that has attained its full design strength unless otherwise approved by the ENGINEER.

B. Concrete surfaces to receive grout shall be clean and sound; free of ice, frost, dirt, grease, oil, curing compounds, laitance, and paints; and free of all loose material or foreign matter that may affect the bond or performance of the grout.

C. Roughen hardened concrete surfaces by chipping, sandblasting, or other mechanical means to ensure bond of the grout to the concrete. Remove loose or broken concrete. Irregular voids or projecting coarse aggregate need not be removed if they are sound, free of laitance, and firmly embedded into the parent concrete.

1. Air compressors used to clean surfaces in contact with grout shall be the oilless type or equipped with an oil trap in the airline to prevent oil from being blown onto the surface.

D. Remove all loose rust, oil, or other deleterious substances from metal embedments or bottom of baseplates before the installation of the grout.

E. Concrete surfaces shall be washed clean and then kept moist for at least 24 hours before the placement of cementitious or cement grout. Saturation may be achieved by covering the concrete with saturated burlap bags, use of a soaker hose, flooding the surface, or other method acceptable to the ENGINEER. Upon completion of the 24-hour period, visible water shall be removed from the surface before grouting. The use of an adhesive bonding agent in lieu of surface saturation shall only be used when approved by the ENGINEER for each specific location of grout installation.

F. Epoxy-based grouts do not require the saturation of the concrete substrate. Surfaces in contact with epoxy grout shall be completely dry before grouting.

G. Construct grout forms or other leak proof containment as required. Forms shall be lined or coated with release agents recommended by the grout manufacturer. Forms shall be of adequate strength, securely anchored in place and shored to resist the forces imposed by the grout and its placement.

1. Forms for epoxy grout shall be designed to allow the formation of a hydraulic head and shall have chamfer strips built into forms.

H. Level and align the structural elements or equipment bearing plates in accordance with the structural requirements and the recommendations of the equipment manufacturer.

I. Equipment shall be supported during alignment and installation of grout by shims, wedges, blocks, or other approved means. The shims, wedges, and blocking devices shall be

prevented from bonding to the grout by appropriate bond breaking coatings and removed after grouting unless otherwise approved by the ENGINEER.

3.02 INSTALLATION - GENERAL

A. Mix, apply, and cure products in strict compliance with the manufacturer's recommendations and this Section.

B. Have sufficient manpower and equipment available for rapid and continuous mixing and placing. Keep all necessary tools and materials ready and close at hand.

C. Maintain temperatures of the foundation plate, supporting concrete, and grout between 40 and 90 degrees Fahrenheit (F) during grouting and until grout compressive strength reaches 1,000 psi or as recommended by the grout manufacturer, whichever is longer. Take precautions to minimize differential heating or cooling of baseplates and grout during the curing period.

D. Take special precautions for hot weather or cold weather grouting as recommended by the manufacturer when ambient temperatures and/or the temperature of the materials in contact with the grout are outside of the 60–90 degrees F range.

E. Install grout in a manner that will preserve the isolation between the elements on either side of the joint where grout is placed in the vicinity of an expansion or control joint.

F. Reflect all existing underlying expansion, control, and construction joints through the grout.

3.03 INSTALLATION - CEMENT GROUTS AND NONSHRINK CEMENTITIOUS GROUTS

A. Mix in accordance with manufacturer's recommendations. Do not add cement, sand, pea gravel, or admixtures without prior approval by the ENGINEER.

B. Avoid mixing by hand. Mixing in a mortar mixer (with moving blades) is recommended. Pre-wet the mixer and empty excess water. Add pre-measured amount of water for mixing, followed by the grout. Begin with the minimum amount of water recommended by the manufacturer and then add the minimum additional water required to obtain workability. Do not exceed the manufacturer's maximum recommended water content.

C. Placements greater than 3 inches in depth shall include the addition of clean, washed pea gravel to the grout mix when approved by the manufacturer. Comply with the manufacturer's recommendations for the size and amount of aggregate to be added. Place grout into the designated areas in a manner that will avoid segregation or entrapment of air. Do not vibrate grout to release air or to consolidate the material. Placement should proceed in a manner that will ensure the filling of all spaces and provide full contact between the grout and adjoining surfaces. Provide grout holes as necessary.

D. Place grout rapidly and continuously to avoid cold joints. Do not place cement grouts in layers. Do not add additional water to the mix (retemper) after initial stiffening.

E. Just before the grout reaches its final set, cut back the grout to the substrate at a 45 degree angle from the lower edge of the bearing plate unless otherwise approved by the ENGINEER. Finish this surface with a wood float (brush) finish.

F. Begin curing immediately after form removal, cutback, and finishing. Keep grout moist and within its recommended placement temperature range for at least 24 hours after placement or longer if recommended by the manufacturer. Saturate the grout surface by use of wet burlap, soaker hoses, ponding, or other approved means. Provide sunshades as necessary. If drying winds inhibit the ability of a given curing method to keep grout moist, erect wind breaks until wind is no longer a problem or curing is finished.

3.04 INSTALLATION - NONSHRINK EPOXY GROUTS

A. Mix in accordance with the procedures recommended by the manufacturer. Do not vary the ratio of components or add solvent to change the consistency of the grout mix. Do not over mix. Mix full batches only to maintain proper proportions of resin, hardener, and aggregate.

B. Monitor ambient weather conditions and contact the grout manufacturer for special placement procedures to be used for temperatures below 60 or above 90 degrees F.

C. Place grout into the designated areas in a manner that will avoid trapping air. Placement methods shall ensure the filling of all spaces and provide full contact between the grout and adjoining surfaces. Provide grout holes as necessary.

D. Minimize "shoulder" length (extension of grout horizontally beyond baseplate). In no case shall the shoulder length of the grout be greater than the grout thickness.

E. Finish grout by puddling to cover all aggregate and provide a smooth finish. Break bubbles and smooth the top surface of the grout in conformity with the manufacturer's recommendations.

F. Epoxy grouts are self-curing and do not require the application of water. Maintain the formed grout within its recommended placement temperature range for at least 24 hours after placing, or longer if recommended by the manufacturer.

3.05 INSTALLATION - CONCRETE GROUT

A. Screed underlying concrete to the grade shown on the Drawings. Provide the surface with a broomed finish, aligned to drain. Protect and keep the surface clean until placement of the concrete grout.

B. Remove the debris and clean the surface by sweeping and vacuuming all dirt and other foreign materials. Wash the tank slab using a strong jet of water. Flushing of debris into tank drain lines will not be permitted.

C. Saturate the concrete surface for at least 24 hours before placement of the concrete grout. Saturation may be maintained by ponding, by the use of soaker hoses, or by other methods acceptable to the ENGINEER. Remove excess water just before placement of the concrete grout. Place a cement slurry immediately ahead of the concrete grout so that the slurry is moist when the grout is placed. Work the slurry over the surface with a broom until it is coated with an approximately 1/16 to 1/8-inch-thick cement paste. [(A bonding agent composed of 1 part Portland cement, 1.5 parts fine sand, an approved bonding admixture, and water, mixed to achieve the consistency of thick paint, may be substituted for the cement slurry.)]

D. Place concrete grout to final grade using the scraper mechanism as a guide for surface elevation and to ensure high and low spots are eliminated. Unless specifically approved by the equipment manufacturer, mechanical scraper mechanisms shall not be used as a finishing machine or screed.

E. Provide grout control joints as indicated on the Drawings.

F. Finish and cure the concrete grout as specified for cast-in-place concrete.

3.06 SCHEDULE

A. General Purpose Nonshrink Cementitious Grout - Use at all locations where nonshrink grout is called for on the Drawings except for baseplates greater in area than 3 feet wide by 3 feet long and except for the setting of anchor rods, anchor bolts, or reinforcing steel in concrete.

B. Flowable Nonshrink Cementitious Grout - Use under all baseplates greater in area than 3 feet by 3 feet. Use at all locations indicated to receive flowable nonshrink grout on the Drawings. The CONTRACTOR, at his/her option and convenience, may substitute flowable nonshrink grout for general purpose nonshrink cementitious grout.

C. Nonshrink Epoxy Grout - Use for the setting of anchor rods, anchor bolts, and reinforcing steel in concrete and for all locations specifically indicated to receive epoxy grout.

D. Cement Grout - Cement grout may be used for grouting of incidental baseplates for structural and miscellaneous steel such as post baseplates for platforms, baseplates for beams, etc. It shall not be used when nonshrink grout is specifically called for on the Drawings or for grouting of primary structural steel members such as columns and girders.

E. Concrete Grout - Use at all locations indicated on the Drawings to receive Concrete grout.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 03740

MODIFICATIONS AND REPAIR TO CONCRETE

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Furnish all labor, materials, equipment, and incidentals required to cut, remove, repair or otherwise modify parts of existing concrete structures as shown on the Drawings and as specified herein as necessary to complete the Work. Work under this Section shall also include bonding new concrete to existing concrete.

1.02 RELATED WORK

A. Related Work Specified Elsewhere:

1. Section 03100, Concrete Formwork.
2. Section 03150, Concrete Joints, and Joint Accessories.
3. Section 03200, Concrete Reinforcement.
4. Section 03300, Cast-in-Place Concrete.
5. Section 03600, Grout.

1.03 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM C881 – Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.
2. ASTM C882 - Test Method for Bond Strength of Epoxy-Resin Systems Used with Concrete.
3. ASTM C883 - Test Method for Effective Shrinkage of Epoxy-Resin Systems Used with Concrete.
4. ASTM D570 - Test Method for Water Absorption of Plastics.
5. ASTM D638 - Standard Test Method for Tensile Properties of Plastic.
6. ASTM D695 - Test Method for Compressive Properties of Rigid Plastic.
7. ASTM D732 - Standard Test Method for Shear Strength of Plastics by Punch Tool.
8. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced Plastic and Electrical Insulating Materials.

B. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. All submittals shall be in accordance with Division 1.

B. Submit manufacturer's technical literature on all product brands proposed for use by the CONTRACTOR, to the ENGINEER for review. The submittal shall include the manufacturer's installation and/or application instructions.

C. When substitutions for acceptable brands of materials specified herein are proposed by the CONTRACTOR, submit brochures and technical data of the proposed substitutions to the ENGINEER for approval before delivery to the jobsite.

1.05 QUALITY ASSURANCE

A. No existing structure or concrete shall be shifted, cut, removed, or otherwise altered until authorization is given by the ENGINEER.

B. When removing materials or portions of existing structures and when making openings in existing structures, all precautions shall be taken and all necessary barriers, shoring and bracing and other protective devices shall be erected to prevent damage to the structures beyond the limits necessary for the new work, protect personnel, control dust and to prevent damage to the structures or contents by falling or flying debris. Unless otherwise permitted, shown or specified, line drilling will be required in cutting existing concrete.

C. Manufacturer qualifications: The manufacturer of the specified products shall have a minimum of ten years experience in the manufacture of such products and shall have an ongoing program of training, certifying and technically supporting the CONTRACTOR's personnel.

D. Contractor qualifications: Contractors shall complete a program of instruction in the application of the approved manufacturer's material specified in this Section and provide certification from the manufacturer attesting to their training and status as an approved applicator.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to the jobsite in original, unopened packages, clearly labeled with the manufacturer's name, product identification, batch numbers and printed instructions.

B. Store materials in full compliance with the manufacturer’s recommendations.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The use of a manufacturer’s name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

B. Materials shall comply with this Section and any applicable State or Local requirements.

2.02 MATERIALS

A. Epoxy Bonding Agent:

1. Epoxy bonding agent shall be a two-component, solvent-free, moisture insensitive epoxy resin material used to bond plastic concrete to hardened concrete complying with the requirements of ASTM C881, Type II.

2. Color shall be concrete gray.

3. Product shall be Sikadur 32 Hi-Mod by Sika Corporation; MasterEmaco ADH 326 by Master Builders Solutions; or approved equal.

B. Epoxy Paste:

1. Epoxy paste shall be a two-component, solvent-free, moisture insensitive epoxy resin material used to bond dissimilar materials to concrete such as setting railing posts, dowels, anchor bolts, and all-thread rods into hardened concrete and shall comply with the requirements of ASTM C881, Type I, Grade 3. It may also be used to patch existing surfaces where the glue line is 1/8-in or less.

2. Color shall be concrete gray.

3. Product shall be Sikadur 31 Hi-Mod Gel by Sika Corporation; Concresive Paste LPL by BASF Building Systems; or approved equal.

C. Nonshrink Grout and Nonshrink Epoxy Grout shall be as specified in Section 03600.

D. Adhesive anchors shall be as specified in Section 05500.

E. Crack Repair Epoxy Adhesive:

1. Unless otherwise directed by the ENGINEER, crack repair products and methodolgies shall meet the minimum standards delineated in ACI SPEC-548.15, *Specification for Crack Repair by Epoxy Injection*.

2. Crack Repair Epoxy Adhesive shall be a two-component, solvent-free moisture insensitive epoxy resin material suitable for crack grouting by injection or gravity feed. It shall be formulated for the specific size of opening or crack being injected.

3. For standard applications, product shall be Sikadur 35 Hi-Mod LV by Sika Corporation; SCB Concresive 1380 by BASF Building Systems; or approved equal.

PART 3 - EXECUTION

3.01 GENERAL

A. Cut, repair, reuse, demolish, excavate or otherwise modify parts of the existing structures, as indicated on the Drawings, specified, or necessary to permit completion of the Work. Finishes, joints, reinforcements, sealants, etc. are specified in other Sections of this Specification. All work shall comply with other requirements of this Section and as shown on the Drawings.

B. All commercial products specified in this Section shall be stored, mixed, and applied in strict compliance with the manufacturer's recommendations.

C. In all cases where concrete is repaired in the vicinity of an expansion joint or control joint the repairs shall be made to preserve the isolation between components on either side of the joint.

D. When drilling holes for dowels/bolts at new or existing concrete, drilling shall stop if rebar is encountered. As approved by the ENGINEER, the hole location shall be relocated to avoid rebar. The CONTRACTOR shall not cut rebar without prior approval. Where possible, rebar locations shall be identified prior to drilling using "rebar locators" so that drilled hole locations may be adjusted to avoid rebar interference.

E. When coring new openings at new or existing concrete, the CONTRACTOR shall identify existing rebar locations using “rebar locators”. Where possible and as approved by the ENGINEER, the CONTRACTOR shall locate the new hole to avoid and/or minimize rebar interference. The CONTRACTOR shall not cut existing rebar without prior approval from the ENGINEER.

3.02 CONCRETE REMOVAL

A. Concrete designated to be removed to specific limits as shown on the Drawings or directed by the ENGINEER, shall be done by line drilling at limits followed by chipping or jack-hammering as appropriate in areas where concrete is to be taken out. Remove concrete in such a manner that surrounding concrete or existing reinforcing to be left in place and existing in place equipment is not damaged. Sawcutting at limits of concrete to be removed shall only be done if indicated on the Drawings, or after obtaining written approval from the ENGINEER.

B. Where existing reinforcing is exposed due to saw cutting/core drilling and no new material is to be placed on the saw cut surface, a coating or surface treatment of epoxy paste shall be applied to the entire cut surface to a thickness of 1/4-in.

C. In all cases where the joint between new concrete or grout and existing concrete will be exposed in the finished work, except as otherwise shown or specified, the edge of concrete removal shall be a 1-in deep saw cut on each exposed surface of the existing concrete.

D. Concrete specified to be left in place that is damaged by the CONTRACTOR shall be repaired by approved means to the satisfaction of the ENGINEER and at no additional cost to the OWNER.

E. The ENGINEER may from time to time direct the CONTRACTOR to make additional repairs to existing concrete. These repairs shall be made as specified or by such other methods as may be appropriate.

3.03 CONNECTION SURFACE PREPARATION

A. Connection surfaces shall be prepared as specified below for concrete areas requiring patching, repairs or modifications as shown on the Drawings, specified, or as directed by the ENGINEER.

B. Remove all deteriorated materials, dirt, oil, grease, and all other bond inhibiting materials from the surface by dry mechanical means, i.e. - sandblasting, grinding, etc., as approved by the ENGINEER. Surfaces shall be roughened to a full amplitude of at least 1/2-in in depth. Irregular voids or surface stones need not be removed if they are sound, free of laitance, and firmly embedded into parent concrete, subject to the ENGINEER's final inspection.

C. If reinforcing steel is exposed, it must be mechanically cleaned to remove all contaminants, rust, etc., as approved by the ENGINEER. If half of the diameter of the reinforcing steel is exposed, chip out behind the steel. The distance chipped behind the steel shall be a minimum of 1/2-in. Reinforcing to be saved shall not be damaged during the demolition operation.

D. Reinforcing from existing demolished concrete that is shown to be incorporated in new concrete shall be cleaned by mechanical means to remove all loose material and products of corrosion before proceeding with the repair. It shall be cut, bent or lapped to new reinforcing as shown on the Drawings and provided with one-inch minimum cover all around.

E. The following are specific concrete surface preparation and connection "methods" to be used where called for on the Drawings, specified or as directed by the ENGINEER.

1. Method A - After the existing concrete surface at the connection has been roughened and cleaned, thoroughly saturate and maintain saturation for a period of at least 12 hours. Brush on a 1/16-in layer of cement and water mixed to the consistency of a heavy paste. Immediately after application of cement paste, place new concrete or grout mixture as detailed on the Drawings.

2. Method B – After the existing concrete surface has been roughened and cleaned, apply epoxy-bonding agent at connection surface. The field preparation and application of the epoxy-bonding agent shall comply strictly with the manufacturer's recommendations. Place new concrete or grout mixture to limits shown on the Drawings within time constraints recommended by the manufacturer to ensure bond.

3. Method C - Adhesive anchors shall be set in existing concrete by drilling holes to the required depth to develop the full tensile and shear strengths of the anchor material being used. The adhesive anchor system shall be installed per the manufacturer's recommendation in holes sized as required. Unless otherwise shown on the Drawings, deformed bars shall be drilled and set to a depth of ten bar diameters and smooth bars shall be drilled and set to a depth of 15 bar diameters. The anchor may be installed in horizontal, vertical and overhead positions as indicated on the Drawings. The allowable tensile value for anchors installed in overhead positions shall be limited to 50% of the ICC ES published allowable value.

4. Method D - Combination of Method B and C.

3.04 GROUTING

A. Grouting shall be as specified in Section 03600.

3.05 CRACK REPAIR

A. Cracks on horizontal surfaces shall be repaired by gravity feeding crack repair adhesive into cracks per manufacturer's recommendations. If cracks are less than 1/16-in in thickness they shall be pressure injected.

B. Cracks on vertical surfaces shall be repaired by pressure injecting crack repair adhesive through valves sealed to the surface with crack repair epoxy adhesive per manufacturer's recommendations.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 05500

MISCELLANEOUS METALS

PART 1 - GENERAL

1.01 THE REQUIREMENT

A. Furnish all labor, materials, equipment and incidentals required and install all miscellaneous metal complete as shown on the Drawings and as specified herein.

1.02 RELATED WORK SPECIFIED ELSEWHERE

A. Section 03100 - Concrete Formwork

B. Section 03150 - Concrete Joints and Joint Accessories

C. Section 03200 - Concrete Reinforcement

D. Section 03300 - Cast-in-Place Concrete

E. Section 03600 - Grout

F. Section 03740 - Modifications and Repair to Concrete

G. Section 09960 - High Performance Coatings

H. Section 09970 - Mechanical Zinc Coating

I. Section 09972 - Hot-Dip Zinc Coating

1.03 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. Federal Specifications:

1. DOD-P-21035 - Paint, High Zinc Dust Content, Galvanizing Repair
2. FF-B-575C - Bolts, Hexagonal and Square
3. MIL-G-18015 A (3) - (Ships) Aluminum Planks (6063-T6)
4. MIL-A-907E - Antiseize Thread Compound, High Temperature
5. MIL-P-26915 - Primer Coating, Zinc Dust Pigment

B. Aluminum Association (AA):

1. AA-M32C22A41 - M31 - Mechanical Finish, Fine Satin; C22 - Finish, Medium Matte; A41 - Clear Anodic Coating, Class I

C. American Association of State Highway and Transportation Officials (AASHTO):

1. Standard Specifications for Highway Bridges - HS20 Truck Loading

D. American Concrete Institute (ACI):

F. American Iron and Steel Institute (AISI):

1. Design of Light Gauge, Cold-Formed Steel Structural Members

G. American Society for Testing and Materials (ASTM):

1. ASTM-A6 - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling
2. ASTM A36 - Standard Specification for Carbon Structural Steel
3. ASTM A48 - Standard Specification for Gray Iron Castings
4. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless
5. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold Finished
6. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
7. ASTM A125 - Standard Specification Steel Springs, Helical, Heat Treated
8. ASTM A153 - Standard Specification Zinc Coating (Hot-Dip) on Iron and Steel Hardware
9. ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet and Strip
10. ASTM A193 - Standard Specification for Alloy Steel and Stainless Steel Bolting Materials for High Temperature or High Pressure Service and other Special Purpose Applications
11. ASTM A194 - Standard Specification for Carbon and Alloy Steel Nuts for Bolts for High Pressure or High Temperature Service, or Both
12. ASTM A276 - Standard Specification for Stainless Steel Bars and Shapes
13. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60,000 PSI Tensile Strength
14. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 KSI Minimum Tensile Strength
15. ASTM A384 Standard Practice for Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies
16. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
17. ASTM A501 - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing
18. ASTM A536 - Standard Specification for Ductile Iron Castings
19. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts
20. ASTM A575 - Standard Specification for Steel Bars, Carbon, Merchant Quality, M-Grades
21. ASTM A780 - Standard Practice for Repair of Damage and Uncoated Areas of Hot-Dipped Galvanized Coatings
22. ASTM A786 - Standard Specification for Hot-Rolled Carbon, Low Alloy, High Strength Low Alloy and Alloy Steel Floor Plates
23. ASTM A992 - Standard Specification for Structural Steel Shapes

24. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, Bake Hardenable

25. ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled Carbon, Structural, High-Strength Low-Alloy and Ultra-High Strength, and High-Strength Low-Alloy with Improved Formability

26. ASTM B98 - Standard Specification for Copper-Silicon Alloy Rod, Bar, and Shapes

27. ASTM B201 - Standard Practice for Testing Chromate Coatings on Zinc and Cadmium Surfaces

28. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate

29. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles and Tubes

30. ASTM B429 - Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube

31. ASTM B695 - Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel

32. ASTM C633 - Standard Test Method for Adhesion or Cohesion Strength of Thermal Spray Coatings

33. ASTM D6386 - Standard Practice for Preparation of Zinc (Hot-Dipped Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting

34. ASTM E140 - Hardness Conversion Tables for Metals

35. ASTM E376 Standard Practice for Measuring Coat Thicknesses by Magnetic-Field or Eddy-Current (Electromagnetic) Examination Methods

36. ASTM E384 - Micro Hardness of Materials

37. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs

38. ASTM F594 - Standard Specification for Stainless Steel Nuts

39. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength

H. American Welding Society (AWS)

1. ANSI/AWS D1.1- Structural Welding Code - Steel

2. ANSI/AWS D1.2 - Structural Welding Code - Aluminum

3. ANSI/AWS QC1 - Qualification and Certification of Welding Inspectors

I. National Fire Protection Association (NAFP):

1. NFPA 101 - Life Safety Code

J. National Association of Corrosion Engineers (NACE)

1. Coating Inspector Program (CIP)

K. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.04 SUBMITTALS

A. Shop Drawings - Shop drawings of all miscellaneous metalwork shall be submitted to the ENGINEER for review in accordance with Division 1.

B. An International Code Council Evaluation Services (ICC-ES) report listing the ultimate load capacity in tension and shear for each size and type of concrete anchor used shall be submitted to the ENGINEER for review. The CONTRACTOR shall submit manufacturer's recommended installation instructions and procedures for all adhesive anchors for ENGINEER's review. Upon review, by ENGINEER, these instructions shall be followed explicitly.

C. No substitution for the indicated adhesive anchors will be considered unless accompanied with ICC-ES report verifying strength and material equivalency, including temperature at which load capacity is reduced to 90 percent of that determined at 75 degrees Fahrenheit (F).

D. Samples:

1. Submit samples for verification of each type of mechanical equipment stanchions/rails, pipe frame supports, and FRP metal platform systems for verification of each type of exposed finish required, prepared in components of the same thickness and metal indicated for the final Work. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

E. Design Data:

1. Mechanical equipment stanchions/rails, pipe frame supports, and FRP metal platform systems:

a. Submit design calculations, signed and sealed by a Civil or Structural Engineer, licensed in the State of California.

b. Submit data showing the location, magnitude, and direction of all dead, live, wind and seismic load reactions imposed on the anchoring surfaces.

F. Test Reports:

1. Submit a certified copy of mill test reports on each steel proposed for use showing the physical properties and chemical analysis.

G. Certificates:

1. Submit a certified copy of mill test reports on each steel proposed for use showing the physical properties and chemical analysis.

2. Submit coating applicator’s Certificate of Compliance that the prepared, hot-dipped, galvanized coating surface meets or exceeds the requirements for successful painting of the surface.

1.05 QUALITY ASSURANCE

A. The work of this Section shall be completely coordinated with the work of other Sections. Verify, at the site, both the dimensions and work of other trades adjoining items of work in this Section before fabrication and installation of items herein specified.

B. Furnish to the pertinent trades all items included under this Section that are to be built into the work of other Sections.

C. All welding shall be performed by qualified welders and shall conform to the applicable AWS welding code. Welding of steel shall conform to AWS D1.1 and welding of aluminum shall conform to AWS D1.2.

D. All welding procedures and welder qualification shall be available in the CONTRACTOR's field office for ENGINEER's review.

E. All welding shall be inspected by an OWNER-provided inspector qualified in accordance with AWS requirements and approved by the ENGINEER.

F. Unless otherwise directed by the ENGINEER, the CONTRACTOR shall provide the services of an independent, NACE-certified coating inspector. The cost of such work, except as specifically stated otherwise, shall be paid by the CONTRACTOR. All shop-applied coatings shall be inspected by an inspector, qualified in accordance with NACE requirements and approved by the ENGINEER.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver items to be incorporated into the work of other trades in sufficient time to be checked before installation.

B. Items damaged during transit, inadequate storage, improper handling, or corroded shall be repaired, at the CONTRACTOR's expense, to the satisfaction of the ENGINEER before incorporating them into the work.

1.07 PROJECT/SITE REQUIREMENTS

A. Field measurements shall be taken at the site, before fabrication of items, to verify or supplement indicated dimensions and to ensure proper fitting of all items.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The use of manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

B. Like items of materials shall be the end products of one manufacturer in order to provide standardization for appearance, maintenance, and manufacturer's service.

C. Steel shall be as listed below, unless otherwise noted:

1. Shapes, Plates, Bars: ASTM A36, unless otherwise noted.

2. Wide-flange structural steel shapes: ASTM A992.

3. Pipe, Pipe Columns, Bollards: ASTM A53, Type E or S, Grade B Standard weight unless noted otherwise.

4. Tubes: ASTM A500 Grade B.

5. Corrosion Protection - Unless otherwise indicated, miscellaneous metalwork of fabricated steel that will be used in a corrosive environment and/or will be submerged in water/wastewater shall be coated with protective coating. All other miscellaneous steel metalwork shall be hot-dip galvanized after fabrication as specified herein, if applicable.

D. Stainless steel shall be as listed below, unless otherwise noted:

1. Exterior - Stainless steel plates, sheets, and structural shapes ASTM A167, Type 316 (Type 316L for welding) stainless steel and shall not be galvanized. Where anaerobic conditions are noted, Type 304 stainless steel shall be used.

2. Interior - Stainless steel plates, sheets, and structural shapes ASTM A167, Type 316.

E. Aluminum shall be as listed below, unless otherwise noted:

1. Extruded Pipe ASTM B429, Alloy 6063-T6.

2. Extruded Shapes ASTM B221, Alloy 6061-T6.

3. Sheet and Plate ASTM B209, Alloy 6061-T6.

F. Cast iron shall be as listed below, unless otherwise noted:

1. Iron castings shall conform to the requirements of ASTM A48, Class 50B or better.

G. Bolts, nuts, and washers shall be as listed below, unless otherwise noted:

1. Carbon Steel Bolts and Studs ASTM A307, Grade A (hot-dip galvanized nuts and washers where noted).

2. Carbon Steel Anchor Bolts for Building Anchorage, ASTM F1554 Grade 36, unless otherwise noted (hot-dip galvanized nuts and washers where noted).

3. Stainless Steel Bolts, Nuts, and Washers, ASTM F593 and ASTM F594, Type 316.

4. High-Strength Steel Bolts, Nuts, and Washers, ASTM A325 (mechanically galvanized per ASTM B695, Class 50, where noted).

a. Elevated Temperature, Exposure Type I.

b. General Application, Type I or Type II.

H. Galvanizing shall be ASTM A123, Zinc with 0.04 percent to 0.07 percent nickel added for steels with silicone content between 0.03 percent and 0.22 percent.

I. Galvanizing shall be Hardware ASTM A153, Zinc with 0.04 percent to 0.07 percent nickel added for steels with silicone content between 0.03 percent and 0.22 percent.

J. Duplex System - Galvanizing shall satisfy the requirements of ASTM A123 or A153, as applicable. Water quenching or chromate conversion coating shall be avoided as these processes may interfere with paint adhesion and surface preparation.

2.02 MISCELLANEOUS STEEL

A. All miscellaneous metal work shall be formed true to detail, with clean, straight, sharply defined profiles and smooth surfaces of uniform color and texture and free from defects impairing strength or durability. Holes shall be drilled or punched. Edges shall be smooth and without burrs. Fabricate supplementary pieces necessary to complete each item even if such pieces are not definitively shown or specified.

B. Connections and accessories shall be of sufficient strength to safely withstand the stresses and strains to which they will be subjected. Exposed joints shall be close-fitting and jointed where least conspicuous. Threaded connections shall have the threads concealed where practical. Welded connections shall have continuous welds or intermittent welds as specified or shown. The face of welds shall be dressed flush and smooth. Provide holes for temporary field connections and for attachment of the work of other trades.

C. Miscellaneous steel items shall include beams, angles, lintels, metal stairs, support brackets, baseplates for other than structural steel or equipment, closure angles, bridge crane rails, monorail hoist beams, hold-down straps and lugs, door frames, splice plates, sub-framing at roof openings and any other miscellaneous steel called for on the Drawings and not otherwise specified.

D. Steel pipe pieces for sleeves, lifting attachments, and other functions shall be Schedule 40 pipe unless otherwise shown on the Drawings. Wall and floor sleeves of steel pipe shall have welded circumferential steel waterstops at mid-length.

E. All steel finish work shall be thoroughly cleaned, by effective means, of all loose mill scale, rust, and foreign matter and shall be given one shop coat of primer compatible with the finish coat after fabrication but before shipment. Paint shall be omitted within 3 inches of

proposed field welds. Paint shall be applied to dry surfaces and shall be thoroughly and evenly spread and well worked into joints and other open spaces.

F. Galvanizing, where required, shall be the hot-dip zinc process after fabrication. Coating shall be not less than 2 ounces per square foot of surface.

2.03 MISCELLANEOUS STAINLESS STEEL

A. All miscellaneous metal work shall be formed true to detail, with clean, straight, sharply defined profiles and smooth surfaces of uniform color and texture and free from defects impairing strength or durability. Holes shall be drilled or punched. Edges shall be smooth and without burrs. Fabricate supplementary pieces necessary to complete each item even if such pieces are not definitively shown or specified.

B. Connections and accessories shall be of sufficient strength to safely withstand the stresses and strains to which they will be subjected. Exposed joints shall be close-fitting and jointed where least conspicuous. Threaded connections shall have the threads concealed where practical. Welded connections shall have continuous welds or intermittent welds as specified or shown. The face of welds shall be dressed flush and smooth. Provide holes for temporary field connections and for attachment of the work of other trades.

C. Miscellaneous stainless steel items shall include beams, angles, bar racks, and any other miscellaneous stainless steel called for on the Drawings and not otherwise specified.

2.04 MISCELLANEOUS FRAMING AND SUPPORTS

A. Fabricate miscellaneous units to the sizes, shapes, and profiles shown or, if not shown, of the required dimensions to receive adjacent grating, plates, tanks, doors, or other work to be retained by the framing. Except as otherwise shown, fabricate from structural shapes, plates, and bars, of all welded construction using mitered corners, welded brackets, and splice plates and a minimum number of joints for field connection. Cut, drill, and tap units to receive hardware and similar items to be anchored to the Work.

B. Equipment units with integrally welded anchors for casting into concrete. Furnished inserts for units must be installed after concrete is placed.

C. Except as otherwise shown, space anchors, 24 inches on-center, and provide units equivalent of 1 1/4-inch by 1 1/4-inch by 8-inch strips.

D. Galvanize all miscellaneous framing and supports, unless otherwise specified on the project documents.

2.05 FRAMING SUPPORT SYSTEMS FOR PIPE ASSEMBLIES, ANALYZERS, AND APPURTENANCES

A. Provide framing support systems for pipe assemblies shown on the Contract Drawings.

B. Furnish and install all anchoring and connecting hardware required for assembly and installation of the framing support system(s).

C. All anchoring and connecting hardware shall be Type 316 Stainless Steel.

D. All exterior framing support systems, and all systems within sub-grade vaults, for pipe assemblies and appurtenances shall be fabricated of Type 316 Stainless Steel.

E. All framing support systems that are used in interior, non-submerged applications shall be fabricated of low-carbon steel and furnished with a factory-applied, hot-dipped, galvanized coating.

F. Where framing support systems are shown in locations with no adjacent wall, the framing support system shall be free-standing and designed to withstand a point load of 200 pounds applied at the top of the framing system such that the maximum deflection shall

not exceed 1/4 inch. Base support members shall be a minimum of 2 feet long and shall use Unistrut P2348 connectors, or approved equal.

G. Manufacturer - Unless otherwise shown, all members shall be P1000, manufactured by Unistrut, or approved equal, with type "HS" hole pattern.

2.06 BOLTS AND ANCHORS

A. Standard Service (Non-Corrosive Application): Unless otherwise indicated, bolts, anchor bolts, washers, and nuts shall be steel, galvanized after fabrication as indicated herein. Threads on galvanized bolts and nuts shall be formed with suitable taps and dies such that they retain their normal clearance after hot-dip galvanizing. Except as otherwise indicated, steel for bolts, anchor bolts, and cap screws shall be in accordance with the requirements of ASTM A307, Grade A.

B. Corrosive Service: All bolts, nuts, and washers in the locations listed below shall be stainless steel as indicated below.

1. All buried locations
2. All submerged locations
3. All locations subject to seasonal or occasional flooding
4. Inside hydraulic structures below the top of the structure
5. Inside buried vaults, manholes, and structures that do not drain through a gravity sewer or to a sump with a pump
6. All chemical handling areas
7. Inside trenches, containment walls, and curbed areas
8. All post-installed anchors NOT installed in dry, interior locations
9. Locations indicated on the Contract Documents or designated by the ENGINEER to be provided with stainless steel bolts

C. All bolted connections for aluminum members shall be stainless steel.

D. Unless otherwise indicated, stainless steel bolts, anchor bolts, nuts, and washers shall be Type 316 stainless steel, class 2, conforming to ASTM A276. All threads on stainless steel bolts shall be protected with an antiseize lubricant suitable for submerged stainless steel bolts, to meet government specification MIL-A-907E. Buried bolts in poorly drained soil shall be coated the same as the buried pipe.

1. Antiseize lubricant shall be classified as acceptable for potable water use by the NSF.
2. Antiseize lubricant shall be "PURE WHITE" by Anti-Seize Technology, Franklin Park, IL; or approved equal.

E. Bolt Requirements:

1. The bolt and nut material shall be free-cutting steel.
2. The nuts shall be capable of developing the full strength of the bolts. Threads shall be Coarse Thread Series conforming to the requirements of the American Standard for Screw Threads. All bolts and cap screws shall have hexagon heads and nuts shall be Heavy Hexagon Series.
3. All bolts and nuts shall be installed with washers fabricated of material matching the base material of bolts, except that hardened washers for high strength bolts shall conform to the requirements of the AISC Specification. Lock washers shall

be installed with washers where indicated and shall be fabricated of material matching the bolts.

4. The length of all bolts shall be such that after joints are made up, each bolt shall extend through the entire nut, but in no case more than 1/2 inch beyond the nut.

F. Cast-in-Place Anchor Bolts - Unless otherwise indicated, the embedded end of the anchor bolt shall be either headed or with nut and washer. Threaded dimensions for cast-in headed studs and/or headed bolts, before zinc coating, shall conform to the requirements of ANSI/ASME B1.1 having Class 2A tolerances (ANSI/ASME Standard B1.13M Grade 6g). Use of hooked bolts (J-bolts and L-bolts) in lieu of headed studs/bolts is not permissible.

1. Equipment subject to vibration (e.g., pumps, motors, generators, etc.) shall be anchored by means of cast-in-place anchor bolts. Anchor bolt layout shall be by means of a template obtained from the equipment manufacturer or supplier.

G. Adhesive Anchors in Concrete - Unless otherwise indicated, all adhesive anchors for installation in concrete shall have satisfied the requirements of the Simulated Seismic Tests of ACI 355.4. No substitutions will be considered unless accompanied with ICC-ES report verifying strength and material equivalency and compliance with ACI 355.4.

1. Adhesive anchors shall be Hilti HIT-RE 500-V3 adhesive anchors, Simpson SET-3G epoxy adhesive anchors, Dewalt Pure 110+ adhesive anchors or approved equal.

2. Use of adhesive anchors within enclosed areas subject to hydrogen sulfide build up shall be approved for use in sulfuric acid environments.

3. Adhesive anchors shall not be used for overhead installations (i.e. installations at the underside of concrete slabs).

H. Expansion (Wedge) Anchors - Unless otherwise indicated all expansion anchors for installation in concrete shall have satisfied the requirements of the Simulated Seismic Tests of ACI 355.2. Expansion Anchors shall be zinc-plated carbon steel wedge-type anchors complete with nuts and washers. Type 316 stainless steel, wedge type anchors shall be used where they will be submerged or exposed to the weather or where stainless steel wedge type anchors are required. When the length or embedment of the bolt is not noted on the Drawings, provide length sufficient to place the wedge and expansion sleeve portion of the bolt at least 1 inch behind the concrete reinforcing steel.

1. Design and installation of the expansion anchors in concrete shall comply with ACI 318 Appendix D.

2. Expansion anchors shall be Hilti Kwik Bolt TZ anchors, Simpson Strong-Tie Strong-Bolt 2 Wedge anchors, Dewalt Power-Stud+SD2 anchors, or approved equal.

3. Lead caulking anchors will not be permitted.

4. Expansion type anchors shall not be used with equipment subject to vibration (e.g., pumps, motors, etc.).

PART 3 - EXECUTION

3.01 FABRICATION AND INSTALLATION REQUIREMENTS

A. Fabrication and Erection: Except as otherwise indicated, the fabrication and erection of structural steel shall conform to the requirements of the AISC "Manual of Steel Construction."

B. All steel surfaces that come into contact with exposed concrete shall receive a protective coating of an approved heavy bitumastic troweling mastic applied in accordance with the manufacturer's instructions before installation.

C. Where aluminum contacts a dissimilar metal, apply a heavy brush coat of zinc-chromate primer followed by two coats of aluminum metal and masonry paint to the dissimilar metal.

D. Where aluminum contacts concrete/masonry, apply one coat of TT-P-645B zinc-molybdate primer or a heavy coat of approved alkali resistant bituminous paint to the aluminum or concrete/masonry.

3.02 WELDING

A. Method - All welding shall be by the metal-arc method or gas-shielded arc method as described in the AWS 's "Welding Handbook" as supplemented by other pertinent standards of the AWS. Qualification of welders shall be in accordance with the AWS Standards governing same.

B. Welding electrodes shall meet the minimum requirements of E70XX. Filler metal for welds in moment connections shall have a minimum CVN value of 20 foot-pounds at 0 degrees F.

C. Quality - In assembly and during welding, the component parts shall be adequately clamped, supported, and restrained to minimize distortion and for control of dimensions. Weld reinforcement shall be as indicated by the AWS Code. Upon completion of welding, all weld splatter, flux, slag, and burrs left by attachments shall be removed. Welds shall be repaired to produce a workmanlike appearance, with uniform weld contours and dimensions. All sharp corners of material that is to be painted or coated shall be ground to a minimum of 1/32 inch on the flat.

3.03 GALVANIZING

A. All structural steel plates shapes, bars, and fabricated assemblies required to be galvanized shall, after the steel has been thoroughly cleaned of rust and scale, be galvanized in accordance with the requirements of ASTM A123, except that the weight of zinc coating shall average not less than 1.2 ounce per-square-foot of actual surface area with no individual specimen having a coating weight less than 1.0 ounce per-square-foot. The galvanizing process shall be performed in strict accordance with the requirements of ASTM A384, any galvanized part(s) that become warped as a result of the galvanizing process and/or handling shall be straightened or replaced at no additional expense to the OWNER.

B. Bolts, anchor bolts, nuts, and similar threaded fasteners, after being properly cleaned, shall be galvanized in accordance with the requirements of ASTM A153.

C. Repair of Damaged Coating:

1. The maximum area that shall be repaired shall comply with applicable sections of ASTM A123.

2. Repair areas by one of the approved methods in accordance with ASTM A780 whenever damage width exceeds 3/16 inch. Minimum thickness requirements for the repair shall be as described in ASTM A123.

3. Field repairs to galvanizing shall be made using “Galvinox”, “Galvo-Weld”, or approved equal.

3.04 POST-INSTALLED CONCRETE ANCHORS

A. Drilled anchors and reinforcing bars shall be installed in strict accordance with the manufacturer's instructions.

B. Post-installed concrete anchors and reinforcing bars (dowels) shall be installed in strict accordance with the Manufacturer's Printed Installation Instructions (MPII).

C. Holes shall be roughened with a brush on a power drill, cleaned, and dry.

D. Drilled anchors shall not be installed until the concrete has reached the specified 28-day compressive strength.

E. Adhesive anchors and dowels shall not be installed until the concrete has a minimum age of 21 days and has reached the specified 28-day compressive strength.

F. Adhesive anchors shall not be loaded until the adhesive has reached its indicated strength in accordance with the manufacturer's instructions.

G. Adhesive anchors and dowels installed in a horizontal or upwardly inclined position shall have the following additional requirements:

1. Installation shall be performed by personal certified in accordance with the ACI/CRSI Adhesive Anchor Certification program.

2. Installation shall be inspected by a certified special inspector who is continuously present when the installation is performed.

H. Expansion anchors shall be checked for tightness a minimum of 24 hours after initial installation. Install anchors using the manufacturer's recommended drive units and adapters and in compliance with the manufacturer's recommendations.

I. Post-installed mechanical anchors shall be checked for tightness a minimum of 24-hours after initial installation. Install anchors using the manufacturer's recommended drive units and adapters, in compliance with the manufacturer's recommendations.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 09960

HIGH PERFORMANCE COATINGS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Materials, surface preparation, application, curing and inspection on interior and exterior surfaces for industrial, high-performance coatings.

B. Furnish all labor, materials, tools and equipment required to perform surface preparation, coating work and inspection as specified. Perform all subsidiary and incidental work necessary to complete the work in conformance with the project requirements, to accomplish the approved end result of a totally protected and usable structure, including all attachments, accessories and appurtenances.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 01999 – Referenced Sections

1.03 GOVERNING STANDARDS AND RECOMMENDED PRACTICES

A. Standards and recommended practices listed (including the most recent update or version) shall govern the work unless otherwise specified in these specifications.

B. ASTM – American Society for Testing and Materials

1. ASTM C308, Standard Test Methods for Working, Initial Setting, and Service Strength Setting Times of Chemical-Resistant Resin Mortars
2. ASTM C496, Standard Test Method for Splitting Tensile Strength of Cylindrical Concrete Specimens
3. ASTM C531, Standard Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes
4. ASTM C579, Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes
5. ASTM C580, Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes
6. ASTM C596, Standard Test Method for Drying Shrinkage of Mortar Containing Hydraulic Cement
7. ASTM C868, Standard Test Method for Chemical Resistance of Protective Linings
8. ASTM C882, Standard Test Method for Bond Strength of Epoxy-Resin Systems Used with Concrete By Slant Shear
9. ASTM D638, Standard Test Method for Tensile Properties of Plastics
10. ASTM D790, Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials

11. ASTM D1653, Standard Test Methods for Water Vapor Transmission of Organic Coating Films
12. ASTM D4417, Standard Test Methods for Field Measurement of Surface Profile of Blast Cleaned Steel
13. ASTM D4541, Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers
14. ASTM D4585, Standard Practice for Testing Water Resistance of Coatings Using Controlled Condensation
15. ASTM D4940, Detecting Contamination on Abrasive
16. ASTM D5402, Standard Practice for Assessing the Solvent Resistance of Organic Coatings Using Solvent Rubs
17. ASTM D6386, Standard Practice for Preparation of Zinc (Hot-Dip Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting

C. AWWA – American Water Works Association

1. AWWA D102, Standard for Painting Steel Water-Storage Tanks.
2. AWWA C652, Disinfections of Water Storage Facilities.

D. SSPC – The Society for Protective Coatings

1. SSPC- Vol. 1, Steel Structures Painting Manual, Good Painting Practice
2. SSPC- Vol. 2, Steel Structures Painting Manual, Systems and Specifications
3. SSPC-SP1, Solvent Cleaning
4. SSPC-SP2, Hand Tool Cleaning
5. SSPC-SP3, Power Tool Cleaning
6. SSPC-SP11, Power Tool Cleaning to Bare Metal
7. SSPC-SP15, Commercial Grade Power Tool Cleaning
8. SSPC-Guide 12, Illumination of Industrial Painting Projects
9. SSPC-PA 1, Shop, Field and Maintenance Painting
10. SSPC-PA 2, Measurement of Dry Coating Thickness with Magnetic Gauges
11. SSPC-PA, Guide 3 Guide to Safety in Paint Application
12. SSPC-AB1, Mineral and Slag Abrasives
13. SSPC-VIS 1, 02-12 Reference Photographs, Dry Abrasive Blast Cleaning
14. SSPC-VIS 3, 93-04 Visual Standards for Power and Hand-Tool Cleaned Steel

E. NACE International – National Association of Corrosion Engineers International

1. Joint NACE/SSPC-SP5/5 NACE #1 White Metal Blast
2. Joint NACE/SSPC-SP6/NACE #3 Commercial Blast
3. Joint NACE/SSPC-SP7/NACE #4 Brush-off Blast
4. Joint NACE/SSPC-SP10/NACE #2 Near White Metal Blast
5. Joint NACE/SSPC-SP12/NACE #5 Surface Preparation and Cleaning of Metals by Water Jetting Prior to Recoating
6. Joint NACE/SSPC-SP13/NACE #6 Surface Preparation of Concrete

7. NACE RPO178 Appendix C - Degrees of Surface Finishing of Welds

8. NACE RPO287 Field Measurement of Surface Profile

9. NACE SPO188 Discontinuity (Holiday) Testing of Protective Coatings

1.04 SUBMITTALS

A. Comply with Section 01330.

B. Include the following items:

1. Coating manufacturer’s technical data on product and recommended use. Include the brand name and series number of all coatings to be used.

2. Coating manufacturer's surface preparation criteria, including recommended surface profile range after abrasive blasting.

3. Coating manufacturer's application instructions, equipment recommendation, temperature and humidity limitations, pot life and induction requirements, drying and curing times, and recoat cycle times. List recoat times and final cure at 35° F., 45° F., 55° F., 65° F. and 75° F. substrate temperatures. Provide manufacturer’s maximum and minimum material and substrate temperatures for proper application.

4. Contractor’s written program for over spray prevention.

5. Coating manufacturer’s Material Safety Data Sheets (MSDS) for Product to be used on the project, including solvents, additives, cleaners and thinners.

6. Abrasive supplier's certification that the abrasive blast material to be provided complies with the State of California Environmental Protection Agency, Air Resources Board (CARB) and local AQMD requirements for dry outdoor blasting (See Section 2.06 Abrasives for Blast Cleaning)

7. Abrasive blast cleaning and application equipment list and complete procedures for its use.

8. Contractor’s safety program to be employed on this project which complies with the current requirements of CAL/OSHA, OSHA and this Specification.

1.05 QUALITY ASSURANCE

A. Unit Responsibility

1. Assign unit responsibility for the materials, surface preparation, and coatings application to the Coatings Application Subcontractor.

2. Provide a certificate of Unit Responsibility. See Section 01999.

B. Qualifications

1. Coatings Applicator Requirements

a. Hold a valid State of California Contractor's Class C 33 Painting and Decorating Contractors license for performing abrasive blast cleaning and coating work.

b. Minimum of five (5) years practical experience and successful history in the application of similar products on comparable projects. Substantiate this requirement by furnishing a written list of references with the bid package that includes a list of projects with verifiable coating inspection reports.

2. Coatings Applicator Personnel

a. Provide a supervisor at the work site during cleaning and coating operations.

b. Provide skilled personnel qualified to perform work to industry standards of practice and safety, maintain continuity of personnel, and coordinate transfer of personnel with the Construction Manager.

C. Pre-Construction Conference

1. Schedule pre-construction conference with the Construction Manager.

2. Do not proceed without holding a pre-construction conference with the Construction Manager, Contractor, Inspector, Fabricator, Coating Applicator and Manufacturer.

3. Topics for discussion include:

a. Site conditions

b. Coating materials and manufacturer's application recommendations.

c. Surface preparation prior to abrasive blast cleaning.

d. Specification compliance of blast abrasives and surface profile requirements.

e. Schedule of field surface preparation and coating application, and order of the work.

f. List of equipment and procedures for cleaning, blasting, coating application, ventilation and dehumidification (if required).

g. Safety programs and the enforcement to be used during the course of the work.

h. Weather limitations for acceptable work.

i. Inspection facilities and equipment to be provided.

j. Hold points and inspector’s authority.

k. Establish non-conformance procedures, and chain of command and who signs off on completion of bringing the job back into compliance.

l. Procedures for over-spray prevention.

1.06 PRODUCT SHIPMENT, PROTECTION, AND STORAGE

A. Delivery

1. Deliver in original sealed containers identified with labels indicating manufacturer; product name and number; color, batch or lot number; and date of manufacture.

2. Note the date of manufacture and apply coatings prior to the expiration of the guaranteed storage life.

3. Coating materials exceeding storage life will be rejected.

B. Storage

1. Store coating materials in enclosed structures to protect from weather and excessive heat or cold.

2. Coatings stored at above or below manufacturers recommendations will be rejected.

3. Comply with state and local requirements for flammable materials.

1.07 WARRANTY

A. Provide material and workmanship warranty for coatings of 18 months from date of final acceptance by the City

B. Complete the Extended Warranty Form in Section 01999.

C. See also Paragraph 3.17.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. A. Specified products of the following manufacturers have been approved:

1. Tnemec Company Inc.

2. International Protective Coatings (IPC)

3. Dunn-Edwards Paints (D-E)

B. Products of other manufacturers demonstrating equivalence to performance requirements specified in Paragraph 2.02 will be allowed, subject to compliance with Section 01330.

2.02 COATING SYSTEMS

A. General Requirements

1. For all materials of a specified system including primer, touch-up, intermediate, and finish coats, provide products by the same manufacturer. Use thinners, cleaners and other additives as recommended in writing by the coating manufacturer for the specified system.

2. Coating materials, including additives, for interior potable water contact surfaces.

a. Must appear in the current ANSI/NSF Standard 61 "Listing of Certified Drinking Water System Components Health Effects", as published by NSF International (NSF).

b. Comply with regulations and applicable requirements of local, State and federal air quality and health regulatory agencies.

3. Use only coatings which are free of asbestos, lead, cadmium, and chromate.

4. Comply with local AQMD rules and regulations.

5. No request for product substitution will be considered which decreases the dry-film thickness designated, the number of coats to be applied, or which changes the generic type of coating specified.

6. Requests for Substitution

a. Include the full name of each product, descriptive literature, test data, data on past performance, manufacturer's instruction for use, generic type, and its nonvolatile content by volume.

b. Demonstrate product and performance is equivalent to the specified materials and complete systems.

c. Comply with Section 01330.

7. Demonstrate that the coatings manufacturer has local representation which will provide onsite technical support to resolve field problems with the manufacturer's products, materials or application for the duration of the project.

8. Do not purchase or deliver coating materials to the site before the review and written acceptance of the proposed materials by the Construction Manager.

B. Coating Systems for Steel – Severe Service, Exposed or Immersed (Non-Potable).

1. System E-2 High Solids Epoxy – One Prime/Two Finish.

   a. Steel surfaces shall be abrasive blasted in compliance with SSPC-SP 10/NACE No. 2 Near White Metal Blast Cleaning. Obtain an anchor pattern between 1.5 and 2.0 mils. See Paragraph 2.02.C.4 for surface preparation of ductile iron pipe or cast iron surfaces.

   b. Primer: Shop or Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-1211, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

   c. Intermediate: Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

   d. Stripe Coat: Field-applied, two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied, or equal applied at 1.0 to 2.0 dry mils to all welds and sharp edges per SSPC-PA 1, 6.6 Striping, 7.4.6 Application Method (Brush).

   e. Finish: Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

2. System E-3 High Solids Epoxy – One Prime/One Finish.

   a. Steel surfaces shall be abrasive blasted in compliance with SSPC-SP 10/NACE No. 2 Near White Metal Blast Cleaning. Obtain an anchor pattern between 1.5 and 2.0 mils. See Paragraph 2.02.C.4 for surface preparation of ductile iron pipe or cast iron surfaces.

   b. Primer: Shop or Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-1211, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

   c. Stripe Coat: Field-applied, two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied, or equal applied at 1.0 to 2.0 dry mils to all welds and sharp edges per SSPC-PA 1, 6.6 Striping.

   d. Finish: Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

3. System E-4 - 100% Solids Epoxy (High H2S Exposure).

   a. Steel surfaces shall be abrasive blasted in compliance with SSPC-SP 5/NACE No. 1 White Metal Blast Cleaning. Obtain an anchor pattern between 3.0 and 4.0 mils. Do not use this coating for ductile iron pipe or cast iron surfaces.

   b. Stripe Coat: Field-applied, two-component polyamine epoxy. Product: Tnemec Series 435 Perma-Glaze, no known equal, applied at 8.0 to 12.0 dry mils to all welds and sharp edges per SSPC-PA 1, 6.6 Striping, 7.4.6 Application Method (Brush). Stripe Coat shall be followed immediately by Finish Coat application; “wet on wet”.

   c. Finish: Field applied two-component polyamine epoxy. Product: Tnemec Series 435 Perma-Glaze, no known equal applied pinhole free at 30.0 to 40.0 dry mils in one or two coats.

4. Surface Preparation for Ductile Iron Pipe or Cast Iron surfaces

a. Solvent Cleaning

1) Surfaces shall first be inspected and precleaned with appropriate solvents to remove grease, oil and other soluble contaminants.

2) The preferred method of precleaning is through scrubbing of the surface with still bristle brushes soaked in solvent.

3) Prior to evaporation remove solvent by wiping with clean, lint-free cloth rags.

4) Remove rag residue (if any) with dry, oil-free compressed air.

b. Surface Profile

1) Measure surface profile (anchor pattern) in accordance with ASTM D4417, Method C.

2) If surface profile is less than 1.5 mils then proceed with brush-off blast cleaning in accordance with No. 4.c below.

3) If surface profile is 1.5 mils or greater then proceed with hand or power tool cleaning in accordance with No. 4.d.

c. Brush-Off Blast Cleaning

1) Remove all loose annealing oxides, loose rust, dirt and other foreign matter by compressed air nozzle abrasive blast cleaning using a fine abrasive.

2) Remove any dust or other contaminants remaining after blasting with dry, oil-free compressed air or by vacuum cleaning.

3) Recheck surface profile prior to painting.

4) A profile depth of at least 1.5 mils is required.

d. Hand or Power Tool Cleaning

1) Remove all loose annealing oxides, loose rust, dirt and other foreign matter with the use of hand or power tools.

2) Do not use cleaning tools that burnish or smooth the natural roughness (profile) of the cast iron surface.

3) Remove any dust or other contaminants remaining after hand or power tool cleaning with dry, oil-free compressed air or by vacuum cleaning.

C. Coating Systems for Steel-Exterior Exposure.

1. System U-1 Bare Steel - Acrylic Urethane.

a. Steel surfaces shall be abrasive blasted in compliance with SSPC-SP6/NACE No. 3 Commercial Blast Cleaning. See Paragraph 2.02.D.3 for surface preparation of ductile iron pipe.

b. Prime: Shop or Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-1211, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

c. Intermediate: Field applied two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied at 4.0 to 6.0 dry mils.

d. Stripe Coat: Field-applied, two-component polyamidoamine epoxy. Product: Tnemec Series V69F-Color, IPC Interseal 670 or equal applied, or equal applied at 1.0 to 2.0 dry mils to all welds and sharp edges per SSPC-PA 1, 6.6 Striping, 7.4.6 Application Method (Brush).

e. Finish: Field-applied, semi-gloss polyurethane. Product: Tnemec Series 1075-Color Endura-Shield II applied at 3.0 to 5.0 dry mils in one to two coats, IPC Interthane 990 applied at 3.0 to 5.0 dry mils in two or more coats, or equal.

2. System U-2 Overcoat - Acrylic Urethane.

a. Previously painted steel surfaces shall be cleaned in compliance with SSPC-SP 12/NACE No. 5 Surface Preparation of Metals by Water Jetting Prior to Recoating (HP WC) at pressures of 5,000 to 7,000 psi using a zero degree revolving tip.

1) Coatings remaining after being subjected to above shall be uniformly and thoroughly scarified to create a profile using 80 to 100 grit sandpaper.

b. Hot-dipped galvanized components shall be cleaned per SSPC-SP1 Solvent Cleaning followed by SSPC-SP7/NACE No. 4 Brush-Off Blast Cleaning in compliance with ASTM D6386-99(2005) Section 5.4.1, providing a surface profile of 1.5 to 2.0 mils for interior surfaces and a surface profile of 1.0 to 1.5 mils for exterior surfaces.

c. See Paragraph 2.02.D.3 for surface preparation of ductile iron pipe.

d. Spot Prime: Field-applied, two-component epoxy. Product: Tnemec Series 135 Chembuild, IPC Interseal 670 HS or equal at 4.0 to 6.0 dry mils to all bare steel, overlapping adjacent coating by 2 to 4 inches.

e. Full Prime: Field-applied, two-component epoxy. Product: Tnemec Series 135 Chembuild-32GR Light Gray, IPC Interseal 670 HS or equal at 4.0 to 6.0 dry mils.

f. Finish: Field-applied, semi-gloss polyurethane. Product: Tnemec Series 1075-Color Endura-Shield II, IPC Interthane 990 or equal applied at 2.0 to 3.0 dry mils.

3. Surface Preparation for Ductile Iron Pipe

a. Solvent Cleaning

1) Surfaces shall first be inspected and precleaned with appropriate solvents to remove grease, oil and other soluble contaminants.

2) The preferred method of precleaning is through scrubbing of the surface with still bristle brushes soaked in solvent.

3) Prior to evaporation remove solvent by wiping with clean, lint-free cloth rags.

4) Remove rag residue (if any) with dry, oil-free compressed air.

b. Surface Profile

1) Measure surface profile (anchor pattern) in accordance with ASTM D4417, Method C.

2) If surface profile is less than 1.5 mils then proceed with brush-off blast cleaning in accordance with No. 3.c below.

3) If surface profile is 1.5 mils or greater then proceed with hand or power tool cleaning in accordance with No. 3.d.

c. Brush-Off Blast Cleaning

1) Remove all loose annealing oxides, loose rust, dirt and other foreign matter by compressed air nozzle abrasive blast cleaning using a fine abrasive.

2) Remove any dust or other contaminants remaining after blasting with dry, oil-free compressed air or by vacuum cleaning.

3) Recheck surface profile prior to painting.

4) A profile depth of at least 1.5 mils is required.

d. Hand or Power Tool Cleaning

1) Remove all loose annealing oxides, loose rust, dirt and other foreign matter with the use of hand or power tools.

2) Do not use cleaning tools that burnish or smooth the natural roughness (profile) of the cast iron surface.

3) Remove any dust or other contaminants remaining after hand or power tool cleaning with dry, oil-free compressed air or by vacuum cleaning.

D. Coating Systems for New Concrete in Severe Service (High H2S Exposure).

1. System E-5 100% Solids Fiber Reinforced Epoxy.

a. All vertical and overhead concrete surfaces shall be abrasive blasted in compliance with SSPC-SP13/NACE No. 6 Surface Preparation of Concrete, ICRI CSP5. All concrete floor surfaces shall be abrasive blasted in compliance with SSPC-SP13/NACE No. 6 Surface Preparation of Concrete, ICRI CSP3.

b. Surfacer: Field applied three-component epoxy mortar. Product: Tnemec Series 218 MortarClad, or equal applied void-free at 1/16" to all vertical and overhead concrete surfaces. Patch and fill voids on floor as required.

c. Primer (Floor Only): Field applied two-component 100% solids epoxy. Product: Tnemec Series 201 Epoxoprime, or equal applied at 6.0 to 12.0 dry mils.

d. Finish: Field applied two-component fiber reinforced polyamine epoxy. Product: Tnemec Series 436 Perma-Glaze FR, no known equal, applied pinhole free at 60.0 to 70.0 dry mils in one coat to all concrete surfaces.

e. For areas inaccessible by spray, use Tnemec Series 435 Perma Shield (E-4), no known equal, applied pinhole free at 30.0 to 40.0 dry mils in two coats or more to all concrete surfaces.

E. Coating Systems for New Concrete, Interior – Non-Immersion.

1. System E-6 Aliphatic Amine Epoxy for Interior PIP Concrete.

a. All concrete surfaces shall be prepared in compliance with SSPC SP13/NACE No. 6 Surface Preparation of Concrete, ICRI CSP 3.

b. Filler: Field applied three-component epoxy mortar. Product: Tnemec Series 218 MortarClad, or equal. Patch and fill voids as required.

c. Prime: Field applied two-component aliphatic amine epoxy. Product: Tnemec Series 84 Ceramlon ENV, IPC Interseal 670 HS or equal applied at 3.0 to 8.0 dry mils.

d. Finish: Field applied two-component aliphatic amine epoxy. Product: Tnemec Series 84 Ceramlon ENV, IPC Interseal 670 HS or equal applied at 6.0 to 8.0 dry mils.

2. System S-1 Clear Silicate Sealer / Densifyer for Interior Concrete Floors.

a. Surfaces shall be power-wash cleaned per SSPC-SP12/NACE No. 5 (LPWC).

b. Sealer: Field applied one-component clear silicate sealer. Product: Tnemec Series 629 CT Densifyer or equal, applied in one coat by low pressure spray at a spread rate of 300 to 350 square feet per gallon. Do not allow puddles to remain on surface.

F. Coating System for Buried Ferrous Metal

1. System M-1 Petrolatum Based Wrapping Tape

a. Comply with AWWA C-217, as modified by this specification.

b. Clean surfaces per SSPC-SP2 Hand Tool and/or SP3 Power Tool Clean.

c. Prime Paste

1) Field apply as recommended by tape manufacturer.

2) Hand rub or brush all surfaces with priming paste.

3) Liberally apply priming paste to sharp projects such as threads, irregular contours, or badly pitted areas to ensure maximum protection of metal throughout.

d. Treat irregularly shaped surfaces such as nuts, bolts, flanges and valves per one of the following two methods:

1) Apply recommended mastic by hand in sufficient quantity to build an even contour over entire surface. Ensure that all folds and air pockets within the mastic layer are thoroughly pressed out prior to subsequent application of tape.

or

2) Cut and carefully mold an extra layer of tape around all sharp projections, nuts, bolts, etc., before final application of tape to meet specified system thickness.

e. Tape

1) Spirally wrap with a 55% overlap and sufficient tension and pressure to provide continuous adhesion without stretching the tape.

2) Continuously smooth and seal by hand the edges of tape by hand during wrapping.

3) On vertical applications, begin at bottom and proceed upward, creating a weather board overlap.

f. Minimum Finished Thickness

1) Smooth contours: 50 mils.

2) Irregular shaped surfaces: 100 mils.

G. Coating System for Concrete Surfaces in Chemical Storage Areas

1. System E-8 Polyamine Novolac Epoxy for Interior Walls and Floors

a. Applicability: Reinforced concrete floors; exposed surfaces of tank housekeeping pads; interior faces of containment walls including integral column bases, full height; drainage groove and sump; and grout pads.

b. Surface Preparation: Abrasive blast or equivalent all specified surfaces to remove laitance, form release agents, curing compounds, sealers and other contaminants and to provide surface profile in accordance with SSPC SP12/NACE 6, ICRI CSP3-5 and with Tnemec recommendations.

c. Patch & fill: MortarClad Series 218; apply a full parge coat to all specified surfaces at a thickness of 1/32", filling voids up to ¼" deep.

d. First Coat: Tneme-Glaze Series 282-Color; apply 6.0 to 12.0 mils DFT (Horizontal) 4.0 to 8.0 mils DFT (Vertical) to all specified surfaces per Tnemec recommendations.

e. Second Coat: Tneme-Glaze Series 282-Color; apply 6.0 to 12.0 mils DFT (Horizontal) 4.0 to 8.0 mils DFT (Vertical) to all specified surfaces per Tnemec recommendations.

2.03 ABRASIVES FOR BLAST CLEANING

A. Use only new materials that are clean and free of contaminants.

B. Certified by the California Air Resources Board (CARB) for use in dry, open air abrasive blasting.

C. Comply with all applicable requirements of the local Air Quality Management District.

D. Purchase only from firms which can accept spent abrasives, then process spent abrasives for recycle or proper disposal.

2.04 DISINFECTION MATERIALS

A. Comply with AWWA Standards.

PART 3 - EXECUTION

3.01 PROTECTION OF THE WORK

A. Techniques

1. Use coverings or drop cloths to protect floors, concrete, appurtenances, equipment, prepared surfaces and applied coatings or paints.

2. Take precautions to prevent damage or contamination of coated surfaces from personnel entering containment areas or walking near coated surfaces.

3. Exercise care to prevent coating from being spattered onto surfaces that are not to be coated.

4. Recoat surfaces from which such material cannot be removed satisfactorily to produce a finish satisfactory to the Construction Manager.

B. Where protection is required or provided for coated surfaces, maintain protection until the coating film has properly cured.

C. Do not handle, work on or otherwise disturb coated areas until the coating has cured to “dry to handle”.

3.02 SAFETY AND HEALTH REQUIREMENTS

A. General

1. Comply with the applicable health and safety requirements of CAL/OSHA, State of California Construction Safety Orders, and the recommendations of the product manufacturer.

2. Provide and require the use of proper personal protective and life saving equipment for all persons visiting or working in or about the project site.

B. Ventilate work areas to control potential exposure and hazard to workers and employees of the plant.

1. Ventilation System

a. Furnish and install in accordance with these specifications.

b. Modify as directed by the supplier of the equipment, to insure a safe working environment and provide complete removal of all solvent vapors.

c. Equipment: Explosion proof, of industrial design, and of adequate capacity to reduce the concentration of air contaminants to the degree that a hazard to workers or employees of the plant does not exist.

d. Size ventilation system to maintain air changes within the confined space per CAL/OSHA regulations.

2. Remove contaminated air, vapors, and other potential hazardous substances from the confined space.

3. Forced air ventilation during blast cleaning, abrasive removal, coating application, and curing is mandatory in confined spaces.

C. Confine blasting debris and paint over spray to within the bounds of the site.

1. Prevent adverse offsite consequences from the blasting and coating operations.

2. Complaints received by the Construction Manager regarding potential off site problems will be immediately referred to the Contractor for resolution.

a. Immediately halt work and take corrective action required to mitigate such problems.

b. Protect site properties and/or correct damage to property caused by blasting or coating operations at no additional cost to the Owner.

D. Abrasive Blasting

1. Provide and require workers to use approved supplied air protective abrasive blasting hoods.

2. Require workers to wear protective hoods while in the immediate vicinity of the blasting work.

3. During abrasive blasting operations, require the nozzle person(s) to wear U.S. Bureau of Mines approved blasting hoods at all times.

4. Require other personnel in the vicinity of the blasting work, who may be exposed to blasting dust, to wear approved renewable cartridge filter type respirators and plastic safety goggles.

5. Paper dust masks or standard glasses are not acceptable protection.

E. Coating Application

1. When coatings are applied in confined areas, require all personnel directly exposed to coating vapors to wear OSHA approved air supplied hoods.

2. Paper dust masks or standard glasses are not acceptable protection.

3. During the mixing and application of coatings and paints, prohibit all flames, welding and smoking within fifty (50) feet of the work area.

4. Post "No Smoking" signs in appropriate places to warn visitors and workers of the no smoking area.

F. Illumination

1. Provide spark proof artificial lighting for all work in confined spaces.

2. Equip light bulbs with a protective cage to prevent breakage.

3. For lighting fixtures and bulbs, comply with the requirements of Section 70 of the National Fire Protection Association (NFPA), "National Electric Code", for the applicable atmosphere.

4. For lighting and other electrical systems, provide ground fault type, complying with NFPA 70.

5. As directed by the Construction Manager, provide additional illumination: to fully illuminate all areas to be inspected. Level of illumination: As determined by the Construction Manager and as specified.

6. Provide a minimum of 50 foot candles of illumination during all surface preparation and coatings application. Comply with SSPC – Guide 12.

G. Ground all blasting, spray and air hoses to prevent accumulation of static electric charges. Use heavy duty industrial insulated electrical cords with twist lock type connectors.

H. Abrasive Blasting Nozzles

1. Equip with "deadman" emergency shut off switches. Keep switches properly maintained and in working order whenever abrasive blasting is in progress.

2. Wrap all abrasive blast hose connections with duct tape prior to pressurizing.

a. Visually inspect taped connections for leaks at the start and at the conclusion of blast cleaning operations.

b. Immediately repair leaking connections to prevent further damage to the equipment or injury to personnel.

I. Solvents

1. The solvents used with the specified protective coatings are explosive at low concentrations and are highly toxic to humans.

2. Because of toxicity, keep the maximum allowable concentration of vapor below the maximum safe concentration level as defined by CAL/OSHA.

3. In addition, never exceed Lower Explosive Limit in the confined space.

4. Comply with all regulations, manufacturer's recommendations, and directives from the Owner, related to safety of personnel and the handling of the coating materials.

J. Fire Extinguishers

1. Keep a minimum of two (2) ten pound (10lb) ABC type fire extinguishers present in the work area whenever work is proceeding.

2. Train all personnel in the use of this type of fire extinguisher.

K. Noise

1. Whenever the occupational noise exposure exceeds the maximum allowable sound level as set forth by CAL/OSHA regulations or the regional Air Pollution Control District, provide and require the use of approved ear protection devices.

2. General maximum sound levels for the project are defined as those which will not affect routine facility or neighborhood activities.

3. Whenever levels are objectionable, or exceed these limits, adjust operations to reduce noise levels, as directed by the Construction Manager or the local agency of jurisdiction.

L. Ladders, Scaffolding and Rigging

1. Design for their intended use.

2. Comply with all requirements of CAL/OSHA regulations.

3. Erect where requested by the Construction Manager to facilitate inspection and move to the locations requested by the Construction Manager.

4. Equip scaffolding with proper "outriggers", cross bracing, handrails, ladders, and CAL/OSHA approved and tested planking.

M. Follow carefully the manufacturer's recommendations, precautions, and warnings regarding the handling and use of specified cleaning and coating materials.

1. Coating materials may be irritating to the skin and eyes, and may cause an allergic reaction in certain persons.

2. When handling and mixing coatings and paints, require workers to wear proper protective clothing and equipment, including gloves, respirators and eye protection.

3. Identify flammability, toxicity, allergenic properties, and any other characteristic requiring field precautions and follow specific safety practices recommended by manufacturer.

N. Remove spent abrasives and other debris.

1. Comply with requirements of all regulatory agencies for handling and disposing of such wastes.

3.03 CONDITION OF EQUIPMENT

A. Use coating equipment designed for application of the material specified and maintain in good working condition at all times.

1. Equip compressors with suitable traps and filters to remove water, dust and oils from the air.

2. Conduct blotter or white cloth tests in the presence of the Construction Manager at each start-up period or as deemed necessary by the Construction Manager.

3. Verify cleanliness of compressed air supply daily, or as deemed necessary by the Construction Manager.

a. Direct a stream of air, without abrasive, from the blast nozzle onto a white blotter or cloth for twenty (20) seconds.

b. If oil or water appears on the blotter or cloth, blow down all traps and separators until two (2) subsequent twenty (20) second tests show no further oil or water.

c. Use a compressed air system capable of delivering a continuous nozzle pressure to achieve the required surface cleanliness and profile, typically 90 pounds per square inch (psi) minimum to each nozzle in operation.

B. Compressed Supplied Breathing Air

1. For respiratory protection devices, meet Compressed Gas Association, Inc. Specification G-7 for Grade D breathing air.

2. Design and locate breathing air compressors to prevent avoid entry of contaminated air into the air supply system.

3. Equip oil lubricated compressors with an in line air purification system that includes air-purifying absorbent beds and filters that remove water, dust particles, odors, oil, and other hydrocarbons. Also include carbon monoxide sensor and alarm.

4. Provide written certification that the breathing air supplied by the compressors has been tested and the air complies with Specification G-7 Grade D.

3.04 LIMITATIONS ON ABRASIVE BLAST CLEANING

A. Do not blast clean when conditions would not permit the subsequent application of coating.

B. Prepare surfaces to acceptable limits of good painting practice, after completion of surface preparation and before corrosion or recontamination occurs.

C. Surfaces prepared under temperature and humidity control may use an extended recoat window but only after surface preparation re inspection confirms the specified cleanliness.

D. In the event that a cleaned surface colors, oxidizes, or becomes moist, blast clean again and secure inspection/approval from Construction Manager before applying the coating.

3.05 ABRASIVE BLAST CLEANING

A. Use dry method field abrasive blast cleaning for all steel surfaces. Maintain dust emissions below the legal limit and below a level which would create a nuisance.

B. Prior to abrasive blasting, remove all weld splatter by mechanical means. Comply with NACE Weld Designation D, per RP0178-95.

C. Pre-clean per SSPC-SP1 and as approved by Construction Manager prior to abrasive blasting.

1. Clean surfaces until free of dirt, mildew, grinding/welding/cutting debris and visible contaminants.

2. Keep surface clean and dry prior to the abrasive blasting operation.

3. Keep surface temperature 5 degrees above the dew point.

D. After completion of blast cleaning work, sweep, collect, and remove all debris and waste materials from the work area as specified. Keep the area of the work in a clean condition and do not permit blasting particles to accumulate and create a nuisance or hazard.

E. Use the maximum particle size recommended by the manufacturer to produce the specified surface profile, as recommended by the manufacturer, subject to approval of the Construction Manager.

F. Evaluation of surface preparation will be based upon comparison with the latest revisions of the "Visual Standard for Abrasive Blast Cleaned Steel Surfaces", Steel Structures Painting Council (SSPC) VIS 1 02 -12.

G. Perform blast cleaning from rolling scaffolds only within confines of interior perimeter of scaffold.

1. Reaching beyond limits of perimeter will be allowed only if blast nozzle is maintained in a position, which will produce a profile acceptable to the Construction Manager.

2. Proper position for the blast nozzle is a perpendicular angle to the flat surface of the work to be blasted.

H. During abrasive blasting and cleaning operations, do not expose existing and new, previously placed coatings to abrasion from blast cleaning operations.

1. Program and coordinate cleaning and coating operations so that dust, dirt, grit, etc., will not damage or fall upon wet or newly coated surfaces.

2. Restore any damaged coatings to their specified condition.

I. Interior Remedial Work

1. Perform by spot blast cleaning the defective areas.

2. Thoroughly abrade or scarify coating adjacent to the defective area to ensure the repair coating being applied will have satisfactory adhesion to the completely cured existing coating.

3. Upon completion of the repair work, check repaired areas within holiday detector and perform additional repair work as required.

J. Do not distribute spent abrasives on the job site or surrounding properties.

1. Clean, remove from site, and dispose of spent abrasives and other debris.

2. Comply with the requirements of all regulatory agencies for handling and disposing of such wastes.

K. After blast cleaning and prior to application of coating, dry clean surfaces to be coated by dusting, sweeping, and/or vacuuming to remove residue from blasting.

3.06 LIMITATIONS ON THE APPLICATION OF COATINGS

A. Do not apply any coating outside the limits recommended by the manufacturer without written approval by the Construction Manager.

B. Weather Condition Restrictions

1. Do not apply any coating when the surrounding air temperature or the temperature of the surface to be painted is below forty five (45) degrees F or in excess of one hundred and twenty (120) degrees F.

2. Do not apply any coating when the temperature of the material to be applied is less than fifty (50) degrees F or more than one hundred (100) degrees F.

3. Do not apply any coating to wet, moist, or damp surfaces, or during snowy, rainy, foggy, or misty conditions, or when the relative humidity exceeds eighty five (85) percent, or when the ambient air temperature is less than five (5) degrees F above the dew point.

4. Do not apply any coating when it is expected that the relative humidity will exceed eighty five (85) percent or that the ambient air temperature will drop below forty five (45) degrees F within eight (8) hours after the application of the coating.

5. Do not apply any coating when the surface temperature is expected to drop to less than 5 degrees F above the dew point within eight hours after application of coating.

6. Do not apply any coating when wind speed exceeds fifteen (15) miles per hour in the immediate coating area.

C. The Construction Manager may require the Contractor to roll the coatings if high winds create the potential for damage to surrounding property by airborne paint particles. This does not reduce the Contractor’s responsibility for any damage to property caused by blast cleaning or painting operations.

1. If above conditions are prevalent, delay or postpone the coating application work until conditions are favorable.

2. Anticipate dew or moisture condensation and if such conditions are prevalent, delay coating work until midmorning to be certain that the surfaces are dry.

3. Complete each day's coating work in time to permit the film sufficient drying time, per manufacturer’s recommendations, and prior to subjecting coatings to potentially damaging climatic conditions.

D. The Construction Manager may utilize psychrometers and other measuring gauges at the work site to monitor climatic conditions. Repair coatings damaged by a change in climatic conditions. As directed by the Construction Manager, restore coating to specified requirements at no cost to the Owner.

3.07 PROCEDURES FOR THE APPLICATION OF COATINGS

A. Contact the Construction Manager to schedule inspection and approval of prepared surfaces prior to each application of coating materials.

1. The Construction Manager may order the removal of any coatings applied by the Contractor prior to inspection and approval.

2. If so ordered by the Construction Manager, remove coatings, prepare surfaces, schedule inspection, obtain approval, and reapply coating. Perform work at no additional cost to the Owner.

B. After blast cleaning and prior to application of coatings and paintings, clean the surfaces to be coated by air blowing with clean dry air, dusting, sweeping, or vacuuming to remove any residue from blasting as directed by the Owner.

C. Remove and reapply any coating applied to an improperly prepared surface. Perform this work to the satisfaction of the Construction Manager and at no additional cost to the Owner.

D. Follow the recommendations of the coating material manufacturer including the selection of application equipment, thinners, mixing, drying time, temperature and humidity of application, and safety precautions. Address any conflicts between coating manufacturer's recommendations and requirements in this specification at the Pre-Construction Conference meeting and resolve at that time.

E. Properly cure and clean any surface which will receive subsequent coating layers. Remove over spray from previous coats, dirt or dust accumulation, or scuff marks from worker traffic.

F. Comply with SSPC PA 1 for all coating and painting application work.

G. Stir and strain as required, and keep coating materials at a uniform consistency during application.

H. Use a different shade or tint (or as selected by Construction Manager) on succeeding coating or painting applications to indicate coverage.

1. Apply each coating evenly, free of sags, runs, and other evidence of poor workmanship.

2. Produce finished surfaces free from holidays, defects, or blemishes.

I. Difficult Surfaces

1. Includes all interior steel surfaces, all welds, sharp edges, nuts, bolts irregular surfaces.

2. Other difficult surfaces include, but are not limited to, welds, roof lap seams, nuts, bolts, ends and flanges of rafters, or other irregular shapes.

3. To insure complete coverage, brush coat the specified material per SSPC-PA 1, 6.6 Striping, 7.4.6 Application Method (Brush).

4. Brush coating in multiple directions to insure penetration and coverage.

J. Thinners

1. Do not use thinners unless recommended by the coating manufacturer.

2. If thinning is allowed, do not exceed the maximum allowable amount of thinner per gallon of coating material.

3. Do not reduce coating materials more than is absolutely necessary to obtain the proper application characteristics.

4. Materials thinned to achieve proper application characteristics must still meet the specified minimum dry film thickness.

5. Do not use any coatings which have been so severely modified or thinned that their application would cause established VOC limits to be exceeded. Contractor is responsible for any fines, costs, required remedies, or legal action and costs which may result from exceeding VOC limits.

K. Spraying

1. Hold the spray nozzle perpendicular and sufficiently close to surfaces being coated to avoid excessive evaporation of volatile constituent and loss of material into the air or the bridging of cracks and crevices.

2. Use a spray technique that will result in a film free of fog, spatter or over spray.

3. Reaching beyond limits of scaffold perimeter will not be permitted.

4. Remove all over spray as directed by the Construction Manager.

5. Approval of Contractor's over spray prevention procedures and Construction Manager's presence on project site does not free Contractor from responsibility for over spray.

6. Obtain Construction Manager's approval of procedures will be required prior to start of spray operations.

L. Drying Time

1. Strictly observe manufacturer's printed instructions for drying time between coats and time between applications of coats.

2. If the recommended minimum or maximum recoat time is violated, prepare the surface as directed by the coating manufacturer.

M. Dry Film Thickness

1. Apply coating systems within the specified minimum/maximum range dry-film thickness as measured from above the peaks of the surface profile.

2. Measure per SSPC-PA 2 and correct for the magnetic effect of the surface profile.

N. Cleaning Cast Iron

1. Clean per SSPC-SP1 by thorough scrubbing with stiff bristle brushes soaked in solvent.

2. Brush-off blast cleaning may be necessary in order to provide a minimum surface profile of 1.5 mils.

3. Once a 1.5 mil profile (or greater) is verified, hand or power tool clean (reference SSPC-SP2/SP3) but do not use cleaning tools that burnish or smooth the natural roughness (profile) of the cast iron surface.

4. Remove any dust or other contaminants remaining after hand or power tool cleaning with dry, oil free compressed air or by vacuum cleaning.

5. It is not the intent to remove the annealing.

6. If the cast iron has bituminous coating, trace amounts may remain in the pours of the cast iron.

O. Do not break down kits. Do not mix partial kits.

P. Produce coating termination and transition details per manufacturer's recommendations.

3.08 FIELD QUALITY CONTROL

A. Inspection

1. All materials and work are subject to inspection by the Construction Manager. Unless otherwise noted herein, the Owner will pay the cost of 3rd party inspection.

2. The Construction Manager may perform inspection on all phases of the surface preparation, abrasive blast cleaning, and application of the coating and painting systems.

3. Provide all inspection equipment including that which may be operated by the Construction Manager. The Construction Manager may elect to use his own equipment.

4. Use quality assurance procedures and practices to monitor all phases of surface preparation, application and inspection throughout the duration of the project. Procedures or practices not specified may be utilized if they meet appropriate professional standards and are approved by the Construction Manager.

5. Comply strictly to specified quality of materials, workmanship, and diligent execution of the contract. Contractor's use of a consultant to inspect the work does not reduce or alter Contractor's responsibility for the quality control, and quality assurance, or other requirements of the contract.

6. Work performed in the absence of the Construction Manger's inspection is at the risk of the Contractor.

   a. After written notice from the Construction Manager, the Contractor may be required to remove and replace the uninspected work.

   b. The entire cost of removal and replacement of uninspected work, including the cost of any materials furnished by the Owner and used in the work thus removed, is the responsibility of the Contractor, regardless of whether or not the work removed is found to be defective.

7. Provide, as a minimum, 200 foot candles of illumination for all inspection. Comply with SSPC – Guide 12.

3.09 FINISH SCHEDULE

A. Specific coating systems, colors and finishes for rooms, galleries, piping, equipment, and other items which are painted or have other finishes are specified in the following coating systems schedule. After approval of coatings, submit draw downs of all the specified colors to the Construction Manager for final color approval using the appropriate finish coating.

B. Unless otherwise specified in the coating system schedule, the word "interior" means the inside of a building or structure and the word "exterior" means outside exposure to weather elements.

C. If surfaces are not specified in the LOCATION SPECIFIC FINISH SCHEDULE, finish according to the following GENERAL FINISH SCHEDULE:

3.10 GENERAL FINISH SCHEDULE

SURFACE	SYSTEM	COLOR
A. Equipment and Metal Appurtenances		
1. Equipment, equipment supports, mounting stands, utility stations, non-immersed, non-stainless, non-ferrous metals, unless otherwise specified.	—	—
a. Interior	U-1	Match adjacent piping
b. Exterior	U-1	See Note 1

SURFACE			SYSTEM	COLOR
2.	Equipment, immersed or high spray, unless otherwise specified.		—	—
	a.	Potable (NSF)	E-1	See Note 1
	b.	Non-potable	UI-5	See Note 1
3.	Existing equipment not damaged or modified by work in this contract		Uncoated	—
4.	Existing equipment damaged or modified by work in this contract		—	—
	a.	Interior	E-3	Match existing
	b.	Exterior	U-1	Match existing
5.	Electrical switchgear panels, unit substations, motor control centers, power transformers, distribution centers and relay panels; interior and exterior		See Division 16	See Division 16
6.	Instrumentation panels, graphic indicating panels, indicating and transmitting field panels, unless stainless steel; interior or exterior		See Division 16	See Division 16
7.	Existing electrical and instrumentation panels not damaged by work in this contract		Uncoated	—
8.	Existing electrical and instrumentation panels damaged by work in this contract		—	—
	a.	Interior	E-3	Match Existing
	b.	Exterior	U-1	Match Existing
B.	Process Piping			
1.	Submerged iron or steel piping, appurtenant hangers and supports, including galvanized (except stainless steel and non-ferrous)		E-2	Match Existing
2.	Ferrous, non-ferrous and galvanized piping, appurtenant hangers and supports, non-immersed, non-stainless steel		—	—
	a.	Interior	E-3	See Note 1
	b.	Exterior	U-1	See Note 1
3.	Plastic PVC and CPVC Piping		—	—
	a.	Interior	E-3	See Note 1
	b.	Exterior	U-2	See Note 1
4.	Flexible Tubing		Uncoated	—
C.	Miscellaneous Electrical			
1.	Conduit, outlet and junction boxes, lighting transformers, lighting communication and small power panels, control stations, appurtenant hangers, trays, clamps and supports; interior and exterior		See Division 16	See Division 16

SURFACE	SYSTEM	COLOR
2. Existing conduit, outlet and junction boxes, lighting transformers, lighting, communication and small power panels, control stations, lagged ductwork, appurtenant hangers, clamps and supports on uncoated surfaces, unless otherwise specified	—	—
a. Not damaged or modified by work in this contract	Uncoated	—
b. Damaged or modified by work in this contract	—	—
1) Interior	E-3	See Note 1
2) Exterior	U-2	See Note 1
D. Ductwork (Except as specified)	Uncoated	—
E. Concrete, Grout, Masonry, and Plaster		
1. Structural concrete, exposed	Uncoated	—
2. Structural concrete, buried, immersed, non-corrosive environment, unless otherwise specified	Uncoated	—
3. Concrete equipment pads	E-6	See Note 1
4. Concrete Floors	S-1	See Note 1
F. Existing Doors, Door Frames and Louvers damaged by work in this contract; interior and exterior	U-2	See Note 1
1. FRP	Uncoated	—
G. Existing Handrails, Gratings, Floor Plates, Manhole Covers, and Hatches		
1. Not damaged by work in this contract	Uncoated	—
2. Damaged by work in this contract	—	—
a. Interior	E-3	See Note 1
b. Exterior (non-walking surfaces)	U-2	See Note 1
H. Aluminum Flashing, Light Standards, and Supports; interior and exterior	Uncoated	—
I. Other		
1. Equipment and appurtenances which are made of fiberglass, plastic, rubber, including flexible hose, conduit, and plastic coated tubing, expect as specified	Uncoated	—
2. Buried, sleeve-type couplings, flanged pipe, couplings, valves, mechanical and electrical penetrations not encased in concrete, except as specified	M-1	See Note 1
J. Aluminum surfaces in contact with concrete.	E-2	See Note 1
Notes: 1. Owner to select from manufacturer's color charts		

3.11 LOCATION SPECIFIC FINISH SCHEDULE

SURFACE			SYSTEM	COLOR
A.	New Dewatering and Thickening Mechanical Facility (See Drawing Series M000)			
	1.	Concrete floor seal	S-1	clear
	2.	Stainless steel items and exposed anodized aluminum	Uncoated	—
	3.	Aluminum surfaces in direct contact with concrete	E-2	—
	4.	Structural steel columns, beams, and base plates	U-1	See Note 1
	5.	Metal roof panels, metal wall panels, roll-up door	FF	See Notes 2
	6.	Screw press dewatering system items which are not stainless steel (ferrous metal)	U-2	—
	7.	Stainless steel conveyor	Uncoated	—
	8.	Polymer blending unit and air compressor	FF	—
	9.	Screw press and conveyor drive motors and gear reducers	U-2	See Note 1
	10.	Exposed piping, fittings, and valves	U-1	See Note 1
	11.	Flocculation tank or chamber exposed exterior surfaces which are not stainless steel (ferrous metal)	U-1	See Note 1
	12.	Concrete floor and walls beneath trench drain and polymer spill containment grating	E-8	—
	13.	Emergency shower	FF	See Note 2
	14.	Metal doors and frames	See Note 4	See Note1
B.	Covered Equipment Storage (See Drawing Series S1300)			
	1.	Concrete floor seal	S-1	Clear
	2.	Structural steel columns, roof beams, purlins, girts, etc	U-1	See Note 1
	3.	Architectural trim	See Note 4	See Note1
	4.	Building Roof Panels	FF	See Notes 1, 2
	5.	Preformed metal wall panels	FF	See Notes 1, 2

Notes:
1. Owner to select colors from manufacturer’s color charts
2. FF = Factory Finish.

3.12 EXCLUSIONS

A. Do not prepare or coat the following items or surfaces:

1. Mortar coated pipe and fittings
2. Sacrificial anodes and support wires

3. Copper, brass

4. Name Plates

5. Fiberglass items

6. Piping insulation, insulation covers, or insulation jackets.

B. Where surfaces specified as "not to be coated" are damaged, coated or otherwise do not comply with these Specifications, clean, repair or otherwise restore such surfaces to the satisfaction of the Construction Manager, at no additional cost to the Owner.

3.13 VENTILATION

A. General Requirements

1. Use forced air ventilation at all times to effectively remove solvents for proper drying of coats on the interior containment structures.

2. Remove solvent vapors released during application and from the deposited film using explosion proof exhaust blowers, suction fans, or as an integral part of the dehumidification equipment.

3. Duct exhaust blowers or suction fans should be ducted to or from the bottom of the structure.

B. Requirements for Potable Water Structures (Not Used)

3.14 FINAL CURE (INTERIOR LININGS)

A. Follow manufacturer’s recommendations, as approved by the Construction Manager.

1. Minimum Cure Time: Seven (7) days (168 hours) at a temperature of 70 degrees F at a relative humidity of 50%.

2. Do not provide less than minimum cure time, unless recommended in writing by the manufacturer and approved by the Construction Manager.

B. After completion of curing cycle, test the applied coating via a “solvent” or “hardness test”.

1. Verify to the Construction Manager that adequate curing has been achieved.

2. Perform “solvent” tests or “hardness” tests, including the solvent and number of double-rubs, recommended by coating manufacturer.

C. Solvent Wipe Test

1. Verify completion of the final cure.

2. Use a rubbing a cloth saturated with solvent as recommended by manufacturer on the area to be tested.

3. If the area tested becomes tacky, the coating is not fully cured.

a. Extend the curing period until the coating is fully cured to the satisfaction of the Construction Manager.

b. Test per ASTM D5402.

D. If final cure has not been attained, based on tests described above, extend the curing time until applied coating passes the “double rub solvent test” per manufacturer’s instructions.

3.15 INSPECTION AND TESTING

A. Perform inspection and testing as specified. Include additional inspection, sampling and testing work that the Construction Manager may require to verify compliance with these Specifications.

B. Notify the Construction Manager three (3) working days in advance of any field operations involving abrasive blast cleaning or coating applications.

C. Assistance to Construction Manager

1. Coordinate work with the inspection, sampling and testing requirements of the Construction Manager

2. Assist the Construction Manager as required for the performance of duties.

3. Provide all lighting and scaffolding to enable the Construction Manager to perform inspection and testing.

4. Provide the level of illumination and scaffolding locations for inspection purposes as directed by the Construction Manager.

5. Furnish Construction Manager with safety equipment and devices during abrasive blast cleaning, coating and painting operations. Provide a helmet with continuous fresh air supply for observation during cleaning operations and coating application.

D. The Construction Manager will perform such tests as are required to help ensure compliance with all phases of the surface preparation, and application of the coating systems. Provide test equipment including, but not be limited to the following: SSPC surface preparation standards; surface profile test tape; micrometer; abrasive sieve test; ultraviolet lamp; sling psychrometer; mirror; certified thickness calibration plates; magnetic type dry film thickness gage; and a nondestructive holiday detector.

E. Inspection by the Construction Manager does not relieve the Contractor of the responsibility of compliance with all the requirements of these specifications.

1. In cases of dispute concerning surface profiles, film thickness, film continuity (holidays), etc., the Construction Manager's measurements and tests shall be final. Abide by the Construction Manager's decisions and directives.

2. Correct deficiencies in the continuity of the coating, or painting film or in the dry film thickness by applying additional coats as required, at the sole expense of the Contractor.

F. The Construction Manager will determine the degree and surface profile of the field blast cleaned surface per test method NACE RP0287. Perform additional blast cleaning over areas not conforming to the specified degree of surface preparation and surface profile.

G. Perform tests on surfaces of abrasively blast-cleaned steel to detect oil and other contaminants which might be deposited on surfaces as a result of abrasive blasting operations. This may include chemical tests or ultraviolet (black light) tests, as required.

H. Perform all mixing, thinning, application and holiday detection of coatings in the presence of the Construction Manager.

I. The Construction Manager may completely inspect each application of coating to determine thickness and integrity.

1. Each coating application will be checked and deficiencies marked.

2. After observing specified recoat time apply additional coating materials over areas not having the specified minimum dry film thickness and areas having any holidays or pinholes.

3. After correction of deficiencies, the Construction Manager will re inspect those areas to determine the acceptability of the additional coating.

4. Each coating application must be one hundred (100) percent to the satisfaction of the Construction Manager prior to proceeding with successive coating applications.

J. Dry Film Thickness Measurement

1. Use an approved magnetic type non-destructive dry film thickness gauge.
2. Determine that the specified dry film thickness has been obtained.
3. Measure specified dry film thickness' above the peaks of the surface profile.
4. Perform as many dry film thickness measurements, as described in SSPC – PA2, as required to verify compliance with this specification. Use a Type II Constant Pressure Probe Dry Film Thickness Gauge.

K. Furnish calibrated inspection devices in good working condition for detection of holidays and measurement of dry film thickness.

1. Calibrate and operated per manufacturer's instructions.
2. Furnish U.S. Department of Commerce; National Bureau of Standards certified thickness calibrated plates to test the accuracy of dry film thickness gauges and certified instrumentation to test the accuracy of holiday detectors.
3. Keep dry film thickness gauges and holiday detectors available onsite at all times until final acceptance of the application.

L. Construction Manager may elect to furnish inspection devices and render decisions based solely upon test results from these devices.

M. For coating film continuity detection tests on interior structure coated surfaces with 20 mils or less dry film thickness, use a non destructive holiday detector.

1. Provide personnel to operate coating film continuity detection devices under the direction of the Construction Manager.
2. Operate inspection devices per the manufacture’s recommendations in accordance with NACE RPO188.

N. Test the coating integrity of the interior surfaces below the overflow line.

1. Mark all pinholes and repair manufacturer's written recommendations, or as directed by the Construction Manager; and then retest.
2. Holidays or other irregularities are not permitted in the completed coating system.
3. During the testing, keep the detecting blade in continuous contact with the coated surface.
4. Do not proceed with holiday detection until the completed coating system has been cured per the manufacturer's recommendations.

O. Upon completion of the epoxy application to the interior structure surfaces, retest for holidays those areas of the lower shell which may have been subjected to abrasive blast rebound from the floor, repaired as noted herein. Repair areas as required and retest.

P. Dew Point

1. Measure using a sling psychrometer in conjunction with U.S. Department of Commerce Weather Bureau Psychrometric Tables, a digital sling psychrometer thermo hygrometer, or equivalent.
2. Comply with specified temperature and dew point for all surface preparation and coating operations.

Q. Measure anchor profile for prepared surfaces using a non-destructive instrument such as a Testex Press O Film System.

R. The Construction Manager will verify completion of the final cure of the interior lining using a solvent wipe test.

1. Solvent wipe test: Consists of rubbing a solvent saturated rag on the area to be tested per ASTM D5402, using solvent recommended by manufacturer.

2. If any coating material is removed or the surface being tested becomes tacky, the coating is not fully cured. Extend curing time and if required continue dehumidification until the coating is fully cured.

S. The Construction Manager may suspend the work if the cleaning and coating operations of the Contractor are creating a localized condition detrimental to facility operation, personnel or adjacent property. In the event of an intermittent or emergency suspension of the work by the Construction Manager, correct deficiencies immediately.

T. Prepare, sign, and submit to the Construction Manager daily inspection reports.

U. Nonconformance Reports

1. When a nonconformance report is required, prepare, sign, and submit to the Construction Manager within one working day from the time that it is written.

2. After confirming that all non-conforming work has been corrected and/or the coating work is in compliance with this specification, prepare and submit a conformance verification report shall be completed for the specific item or area.

3. This report must be signed by the inspector.

3.16 FINAL CLEANUP

A. Leave all areas in a neat and presentable condition.

B. Remove rubbish, construction debris and waste, surplus construction materials, scaffolding, tools, equipment, and coating, and thinner containers, and excess coating, and thinners, and other objectionable materials.

C. Dispose of such materials away from the site of work and in conformance with all applicable codes, ordinances and regulations.

D. Remove coating spots upon adjacent surfaces.

E. Clean, repair or refinish all damage to surfaces resulting from the work.

3.17 WARRANTY INSPECTION

A. Warranty: See Paragraph 1.08.

B. Conduct a warranty inspection of all coating and painting work between the period of eleventh (11th) month through eighteenth (18th) month following final acceptance of the Contract work.

C. The Construction Manager will establish the date for the inspection and will notify the Contractor at least 30 days in advance. The Construction Manager may, by written notice to the Contractor, reschedule the warranty inspection to another date within the eleventh through eighteenth month inspection period, or may cancel the warranty period altogether.

D. Attendance

1. Attend the warranty inspection.

2. Notifying all directly involved parties of the date and time of the inspection.

3. The Construction Manager suggests all personnel present at the pre-construction conference be present at this inspection.

E. Preparation

1. The Owner will completely drain each vessel and hose clean the interior sufficiently for inspection.

2. Provide (Contractor) suitable lighting, ventilation and scaffolding for the structure inspection.

3. Use SSPC – Guide 12 for Illumination, and provide a minimum of 200 candle foot illumination for inspection.

F. Inspect visually the entire interior and exterior coating systems to determine whether any repair work is necessary or if a more detailed inspection will be needed.

G. The Construction Manager will prepare and deliver to the Contractor an Inspection Report:

1. The report will cover the warranty inspection, setting forth the number and types of failures observed, the percentage of the surface area where failure has occurred, and the names of the persons making the inspections.

2. Color photographs illustrating each type of failure will be included in the report.

3. A coating system failure is defined as any location where coatings have peeled off, bubbled, or cracked, and any location where rusting is evident.

4. Upon completion of inspection and receipt of Inspection Report, the Construction Manager will establish a date for the Contractor to proceed with remedial work.

H. Commence repairs on the date established by the Construction Manager and completed within one month (thirty days).

1. Repair all coating system failures.

a. Remove the deteriorated coating, clean the surface and recoat with the same coating system in strict accordance with the specification and manufacturer's recommendations, to the satisfaction of the Construction Manager.

b. If the area of failure exceeds twenty five (25) percent of the area of a portion of the structures surface, then remove the entire coating system and recoat that surface

I. All costs for warranty inspection are the responsibility of the Contractor, exclusive of the costs of the coatings inspection firm retained by the Owner for the warranty inspection. All costs for repair of defective work discovered during the warranty inspection, and the additional cost for re-inspection of repaired work by the coatings inspection firm, are the responsibility of the Contractor. .

J. If the contractor fails to complete the remedial work to the satisfaction of the Construction Manager, the Owner may elect to perform the remedial work. The Contractor is liable for actual cost of all such remedial work, plus 20% for Owner’s administrative cost.

K. Perform final cleanup in accordance with this Section.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 09970

MECHANICAL ZINC COATING

PART 1 - GENERAL

1.01 DESCRIPTION

A. Mechanically applied zinc coating for steel fasteners including bolts, screws, nuts and washers. Electroplated corrosion protection is not an acceptable substitute for mechanical zinc coating.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittal Procedures
2. Section 09972 – Hot-Dip Zinc Coating

1.03 SUBMITTALS

A. Submit product data that describes materials and method of coating used in accordance with Section 01330.

1.04 REFERENCES

Reference	Title
ASTM A153	Zinc Coating (Hot-Dip) on Iron and Steel Hardware
ASTM B695	Coatings of Zinc Mechanically Deposited on Iron and Steel

PART 2 - PRODUCTS

2.01 MATERIALS

A. Zinc coating material: As specified in ASTM A153.

B. Zinc coating thickness: Class 50 as specified in ASTM B695.

PART 3 - EXECUTION

3.01 FIELD REPAIR

A. Repair damaged surfaces of zinc-coated metals as specified in Section 09972.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 09972

HOT-DIP ZINC COATING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Application of zinc coating to steel using the hot-dip method.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 09970 – Mechanical Zinc Coating

1.03 SUBMITTALS

A. Comply with Section 01330.

B. Manufacturer's product data showing conformance to the specified product.

C. Narrative description of method for application of zinc coating.

D. Coating applicator's Certificate of Compliance that the hot-dip galvanized coating meets or exceeds the specified requirements of ASTM A123 or A153, as applicable.

E. Source quality control procedures.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Zinc Coating Material: In accordance with ASTM A153.

B. Zinc Dust-Zinc Oxide Coating: Conform to MILSPEC DOD-P-21035. Manufactured by Z.R.C. Chemical Products Co., Galvicon Co., or equal.

2.02 FABRICATION REQUIREMENTS

A. Fabrication practices for products to be galvanized: In accordance with applicable portions of ASTM A143, A384 and A385.

PART 3 - EXECUTION

3.01 APPLICATION

A. Galvanize steel members, fabrications and assemblies after fabrication and in accordance with ASTM A123.

B. Unless otherwise specified, steel items weighing 100 pounds or less shall be hot-dip zinc coated.

C. Galvanized Bolts and Nuts:

1. Bolts and nuts 5/8-inch in diameter and larger: hot-dip zinc coated in accordance with ASTM A153.
2. Bolts and nuts smaller than 5/8-inch and all other bolts, screws, nuts, washers and other minor steel fasteners: Mechanically zinc coated as specified in Section 09970.

3.02 COATING REQUIREMENTS

A. Coating Thickness: Coating Grade 35 in accordance with ASTM A123, Table 2.

3.03 REPAIR OF DEFECTIVE GALVANIZED COATING

A. Damaged Zinc Coating:

1. Clean substrate surface, then repaired with zinc dust-zinc oxide coating in accordance with ASTM A780. Apply in accordance with instructions published by the manufacturer of the zinc dust-zinc oxide coating.

2. Coating Thickness: Apply multiple coats to achieve a dry film thickness of 8 mils.

B. Items not physically damaged, but which have insufficient or deteriorating zinc coatings, and items damaged in shipment or prior to installation, shall be removed from the project site for repair by the hot-dip zinc coating method.

END OF SECTION

SECTION 10020

WARNING SIGNS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Informational and accident prevention signs.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 11000 – General Requirements for Equipment

1.03 DESIGN REQUIREMENTS

A. Regulatory Compliance

1. Accident Prevention Signs: Conform to design required by OSHA Section 1910.145 of Subpart J, Part 1910, Chapter XVII, Title 29 of the Code of Federal Regulations.
2. Exit Signs: Conform with Section 1910.37(g) of the OSHA Safety and Health Standard for General Industry, Article 10, Section 10.113 of the Uniform Fire Code, and where applicable with local fire regulations.

B. Size Requirements

1. Sign sizes shall be as follows:
   a. Size A: 14” x 20”
   b. Size B: 10” x 14”
   c. Size C: 7” x 10”
   d. Size D: 24” x 24”

C. Color Requirements

1. Danger Signs:
   a. Background: White.
   b. Heading: White lettering in a red oval with a white border around the oval. Position oval in a black rectangular field in the upper portion of the sign.
   c. Message: Black lettering.
2. Caution Signs:
   a. Background: Yellow.
   b. Heading: Yellow lettering in a black rectangle. Position black rectangle in the upper portion of the sign.
   c. Message: Black lettering on the yellow background.
3. Safety Signs:
   a. Background: White.
   b. Heading: White lettering in a green rectangle. Position green rectangle in the upper portion of the sign.
   c. Message: Black lettering on the white background.

4. Warning Signs:

a. Background: Orange.

b. Heading: Black lettering in an orange diamond with black border forming the diamond. Position orange diamond in the upper portion of the sign.

c. Message: Black lettering.

1.04 SIGN TYPES

A. Sign Types and Messages

Type	Message
DANGER SIGNS	
I	DANGER—HIGH VOLTAGE
II	DANGER—480 VOLTS
III	DANGER—CONFINED SPACE ENTRY
IV	DANGER—CONFINED SPACE—HAZARDOUS ATMOSPHERE
CAUTION SIGNS	
V	NON-POTABLE WATER—DO NOT DRINK
VI	CAUTION—CORROSIVE CHEMICALS
VII	CAUTION—HIGH TEMPERATURE
SAFETY SIGNS	
VIII	EAR PROTECTION REQUIRED BEYOND THIS POINT
IX	EMERGENCY EYEWASH AND SAFETY SHOWER
X	EMERGENCY EYE WASH
XI	NOT AN EXIT
WARNING SIGNS	
XII	WARNING—AUTOMATIC EQUIPMENT MAY START AT ANY TIME
XIII	WARNING—FOREIGN VOLTAGE
XIV	(NFPA hazardous material sign with appropriate chemical ratings)

1.05 SUBMITTALS

A. Comply with Section 01330.

B. Samples: Submit 2 sets, typical of sign type. One set of samples will be retained by the CM, other returned to Contractor.

C. Color samples of each color, 150 mm x 150 mm (6”x 6”). Show anticipated range of color and texture.

D. Sample of typeface, arrow, and symbols in a typical full size layout.

E. Manufacturer’s Literature: Manufacturer’s printed specifications, anchorage details, installation and maintenance instructions.

PART 2 - PRODUCTS

2.01 GENERAL

A. Sign Lettering: Single stroke and contrasting in color with the background.

B. Use standard and commonly accepted international symbols on signs with messages that include such symbols.

C. Chain Mounted Signs: Provide signs with lettering on both sides.

2.02 MATERIALS

A. Signs shall be 0.100” thick fiberglass with embedded fade-proof legends.

2.03 SIGN SCHEDULE

A. Provide signs in accordance with the following schedule:

Location	Size	Type	Mount
Hose Bibs	B	V	48” above floor
Automatic Equipment	B	XI	See also Section 11000
Electrical Equipment	B	II	48” above floor

PART 3 - EXECUTION

3.01 INSTALLATION

A. Mount signs using round head stainless steel bolts or screws.

B. Securely mount signs level, plumb and true to plane positions.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 10520

FIRE EXTINGUISHERS AND CABINETS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Multi-purpose dry chemical fire extinguishers.

B. Fire extinguisher cabinets.

C. Mounting brackets.

D. Equipment List

Structures	Location	Mount	Quantity	UL Rating	Capacity, pounds
Dewatering Building	Owner Chosen	Wall	One	B	10
DAFT Building	Owner Chosen	Wall	One	B	10

1.02 REFERENCED SECTIONS

A. The following Section is referenced in this Section

1. Section 01330 – Submittals
2. Section 01999 – Reference Forms

1.03 DESIGN CRITERIA

A. Comply with applicable standards:

1. National Fire Protection Association (NFPA) 10
2. Underwriters Laboratories (UL) 299

B. Comply with applicable code:

1. California Code of Regulations Title 8, Section 6151

C. Meet the requirements of the City of Galt Fire Marshal.

1.04 SUBMITTALS

A. Comply with section 01330.

B. Manufacturer's catalog information ("cut sheets") for extinguishers, mounting brackets and cabinets. Demonstrate compliance with specified UL rating and NFPA standard.

C. Material Safety Data Sheets for chemical supplied.

D. Provide written instructions describing operation, charging, and maintenance of fire extinguishers furnished.

1.05 QUALITY ASSURANCE

A. Extinguishers shall:

1. Be listed in the current edition of the U.L. Fire Protection Equipment Directory
2. Be supplied by a single manufacturer.

3. Bear Factory Mutual Certification and Underwriters Laboratories Certification, and be listed by the state fire marshal.

1.06 WARRANTY

A. All fire extinguishers shall be warranted against defects in materials and workmanship for 6 years from date of final project acceptance.

B. Complete the Extended Warranty Form in Section 01999.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Larsen Manufacturing MP-10

B. Amerex

C. Approved equivalent

2.02 EXTINGUISHERS

A. Type: Multipurpose dry chemical (Class A, B, C)

B. Tamper seals: Breakable metal type.

C. Pressure gauges: Dial type.

D. Mounting brackets:

1. As furnished by the manufacturer, for the equipment specified.

2. Quick-release design, not subject to release by bumping.

E. Bracket anchors: Furnished with each bracket, suitable for specified mounting surface.

2.03 FIRE EXTINGUISHER CABINETS

A. Larsen Architectural Series, or equal.

1. Doors and frames: 0.062-inch extruded aluminum, etched to a satin finish and anodized to prevent corrosion.

2. Doors:

a. Tubular construction with an aluminum continuous hinge and a positive cam catch.

b. Door lite: Full wire glass

B. Provide where indicated:

1. Recessed.

2. Semi-Recessed.

3. Surface mounted.

C. Fire Rated Cabinets: Provide for rated walls.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Codes:

1. Conform to NFPA 10.
2. Conform to CCR Title 8, Section 6151
3. Conform to ADA requirements for mounting height

B. Place the indicated number and type of fire extinguishers, freshly charged, in cabinets or on mounting brackets as specified, just prior to completion of the project.

C. Prepare recesses in walls for cabinets as required by type and size of cabinet and style of trim, and in compliance with manufacturer's instructions.

D. Bracket mounts:

1. Location: As shown on drawings. Where location of bracket-mounted units is not specified, locate as directed by Architect or Engineer.
2. Mount wall hanger brackets securely to studs or blocking using two (2) No. 10 screws with 1 ½-inch penetration into studs or blocking.
3. Mount in clean dry area, accessible to possible fire hazards and near exit.
4. Withstand a vertical force of five (5) times the weight of the charged extinguisher but not less than 100 pounds.

E. Place top of extinguisher 42 inches above floor unless otherwise noted.

F. Installation of specified fire extinguishers does not relieve Contractor of the responsibility to provide adequate fire protection in the course of his or her work.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 11000

GENERAL REQUIREMENTS FOR EQUIPMENT

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. General requirements applicable to mechanical equipment and systems.

B. Ensure mechanical equipment meets the requirements of this Section in addition to the specific requirements of the individual equipment specification Sections.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 01782 – Operation and Maintenance Information
3. Section 01825 – Equipment and System Testing
4. Section 01999 – Reference Forms
5. Section 05500 – Miscellaneous Metals
6. Section 09960 – High Performance Coatings
7. Section 10020 – Warning Signs

1.03 GENERAL REQUIREMENTS

A. Equipment shall be of new construction and comply with the following requirements:

1. Designed for stresses that may occur during fabrication, transportation, erection, and during continuous or intermittent operations.
2. Anchored, leveled, aligned, and ready for operation without binding or overloading of critical components or motors.
3. Installed with necessary appurtenances required for proper operation and installation in a neat and workmanlike manner.
4. Tested by factory trained service mechanics or engineers.

1.04 UNIT RESPONSIBILITY

A. Equipment systems shall be assembled as a unit by a single manufacturer responsible for the entire unit.

1. Responsibility extends to selecting components of the system to assure compatibility, proper operation, and compliance with specified performance requirements.
2. Unit responsibility does not relieve Contractor of responsibility to Owner for performance of the Work.

1.05 QUALITY ASSURANCE

A. Arrangement

1. The arrangement of equipment shown on the Drawings is based upon information available at the time of design and is not intended to show exact dimensions peculiar to a specific manufacturer.

2. Some features of the illustrated equipment installation may require revision to meet actual equipment installation requirements.

3. Structural supports, foundations, connected piping, and valves shown may have to be altered to accommodate the equipment provided. Additional payment will not be made for such revisions and alterations.

B. Balance: Fully assemble rotating elements in motors, pumps, blowers and centrifugal compressors before performing static and dynamic balance. Where specified, submit balancing reports, demonstrating compliance with this requirement.

1.06 SUBMITTALS

A. Comply with Section 01330.

B. General: Provide separate submittals for each equipment item or group of related equipment items.

C. Equipment Anchorage: Submit anchor bolt sizing calculations.

D. Bearing Life Calculations: Submit bearing L-10 life calculations in accordance with ABMA requirements.

1.07 OPERATION AND MAINTENANCE MANUALS

A. Furnish operation and maintenance manuals for each equipment system in accordance with the Section 01782 requirements.

1.08 PROTECTION DURING SHIPMENT

A. Shipping: Ship equipment in sealed, weather-tight, enclosed conveyances, and protected against damaging stresses during transport and handling.

B. Bearing Housings: Wrap or otherwise seal to prevent contamination by grit and dirt, and tape closed ventilation and other types of openings.

C. Repair any damaged materials to conform to the requirements of the Contract before the assembly is incorporated into the Work. The Contractor shall bear the costs arising out of dismantling, inspection, repair, and reassembly.

PART 2 - PRODUCTS

2.01 PIPING CONNECTIONS ON EQUIPMENT

A. Flanges on Equipment: Conform to dimensions and drilling specified in ANSI B16.1, Class 125 unless otherwise required by Division 15 pipe specifications or the Drawings.

B. Pipe Flanges: Conform to dimensions and drilling specified in AWWA C207, Class D, 125 lb flanges provided on connection pipe.

C. Threaded Flanges: Flat faced with standard taper pipe thread conforming to ANSI B1.20.1.

D. Pipe Threads: Conform in dimension and limits of size to ANSI B1.1, coarse thread series, Class 2 fit.

E. Flange Assembly Bolts and Nuts

1. Heavy pattern, hexagonal head, carbon steel machine bolts with heavy pattern, hot pressed, hexagonal nuts conforming to ANSI B18.2.1 and B18.2.2.

2. Threads: Unified Screw Threads, Standard Coarse Thread Series, Class 2A and 2B, ANSI B1.1.

2.02 BEARINGS

A. Service: Unless otherwise specified, equipment bearings shall be oil or grease lubricated, ball or roller type, designed to withstand the stresses of the service specified.

B. Rating

1. L-10 Rating Life: Minimum 50,000 hours unless otherwise specified. Determine rating life using the maximum equipment operating speed.

2. Determine rating in accordance with the latest revisions of AFBMA Methods of Evaluating Load Ratings of Ball and Roller Bearings.

3. Where individual equipment Sections specify higher bearing life ratings, those requirements supersede the minimum bearing life specified above.

C. Grease Lubricated Bearings

1. Fit with easily accessible grease supply, flush, drain and relief fittings, except those bearings specified to be factory sealed and lubricated.

2. Extend non-accessible grease fittings to an easily accessible location using 1/4-inch diameter stainless steel tubing as an extension tube.

3. Grease supply fittings: Standard hydraulic Alemite or Zerk type.

D. Oil Lubricated Bearings

1. Equip with either a pressure lubricating system or a separate oil reservoir type system.

2. Size oil lubrication systems to safely absorb the heat energy normally generated in the bearing under a maximum ambient temperature of 60°C.

3. Equip with a filler pipe and an external level indicator gage.

E. Incorporate bearing housings with sufficient cooling to maintain surface temperature at 65 degrees C or less for continuous operation at bearing rated load and a 50 degrees C ambient temperature, or install appropriate shielding on bearings that are accessible to touch.

F. Bearing Isolators

1. Provide for bearing where the shaft exits the bearing housing.

2. Motor Bearings: Provide Inpro/Seal style VBX vapor blocking isolators.

3. Gears: Provide Inpro/Seal “Double Runner” bearing isolator for shafts exiting the gear casing.

4. Pumps, Blowers and Compressors: Provide Inpro/Seal style VBX blocking bearing isolators where shafts exit casings/housings.

5. Pillow Block Bearings: Provide Inpro/Seal “Pop-In” style bearing isolators.

2.03 DRIVE COMPONENTS

A. V-Belt Drives

1. Design with sliding base or other suitable tension adjustment.

2. Design with service factor of at least 1.6 at maximum speed.

3. Statically balance sheaves. In addition, dynamically balance sheaves that will operate at peripheral speed of more than 5,500 feet per minute.

4. Belts: Provide anti-static belts when explosion-proof equipment or environment is specified.

B. Gear Reducers

1. Provide drives with nominal input horsepower rating equal to or greater than the nameplate horsepower of the drive motor.

2. Provide gear drives manufactured in accordance with AGMA Class II service requirements.

2.04 SHAFT COUPLINGS

A. Type and Rating: Non-lubricated, designed for a minimum of 50,000 hours operating life.

B. Equipment with a driver greater than 1/2 horsepower, and where the input shaft of a driven unit is directly connected to the output shaft of the driver, shall have its two shafts connected by a flexible coupling which can accommodate angular misalignment, parallel misalignment and end float, and which cushions shock loads and dampens torsional vibrations.

C. Provide couplings recommended by the coupling manufacturer for the specific application, considering horsepower, speed of rotation, and type of service.

D. Install couplings in conformance to the manufacturer's instructions.

2.05 GUARDS AND CAUTION SIGNS

A. Guards

1. Enclose exposed moving parts with guards that meet the requirements of federal and state OSHA requirements.

2. Enclose drive shafts to at least 7 feet above floors or operating platforms.

B. Materials

1. Fabricate guards of 14 gauge steel and expanded metal screen to provide visual inspection of moving parts without removal of the guard.

2. Galvanize after fabrication and paint with the equipment.

3. Fasteners: Type 304 stainless steel.

C. Warning Sign

1. Provide warning signs near equipment with moving parts that operate automatically or by remote control.

2. Provide warning signs with wording, size and colors specified in Section 10020.

2.06 PRESSURE TAPS AND GAUGES

A. Pressure Taps and Gauges: Unless otherwise indicated, provide on the discharge and suction sides of pumps, blowers and compressors.

B. Pressure Gauges: 4-1/2-inch size, range as specified, stainless steel case, liquid filled, safety glass, weather proof, bronze tube and brass socket, industrial grade stainless steel movement with brass hairspring, 1.5% accuracy, and 1/2-inch NPT lower connection. Supply with 1/2-inch brass gauge cock.

2.07 NAMEPLATES AND LIFTING EYES

A. Nameplates

1. Provide on each item of equipment with the specified equipment name or abbreviation and equipment number.

2. Engrave or stamp (not painted) on stainless steel and fastened to the equipment in an accessible location with stainless steel screws or drive pins.

B. Lifting Eyes

1. Provide on equipment weighing over 80 lbs.

2.08 SPARE PARTS AND LUBRICANTS

A. Spare Parts: Provide for each item of mechanical, electrical, and instrumentation equipment a supply of spare parts and special tools required for the starting, testing, adjustments, and initial operation. Pack spare parts required by individual equipment specifications:

1. Pack spare parts with individual weights less than 50 pounds in a heavily constructed painted wood box with hinged cover and a locking clasp.

2. Provide a typed inventory of spare parts stapled to the underside of the cover.

3. Tag and wrap each part in a waterproof container. Spare bearings shall be encapsulated in an airtight plastic film.

B. Lubricants: Provide for each item of mechanical equipment of the type recommended by the equipment manufacturer a supply of the lubricant for startup, testing, and initial operation.

1. Provide a list showing the required lubricants for each item of mechanical equipment. List estimated quantity of lubricant needed for a full year's operation, assuming the equipment will operate continuously.

2. Lubricants shall be products of the Owner's current lubricant supplier.

3. Limit the various types of lubricants by consolidating them, with the equipment manufacturer's approval, into the least number of different types.

2.09 ANCHOR BOLTS

A. Size anchor bolts and concrete anchors for equipment in accordance with Section 05500.

2.10 FACTORY APPLIED COATINGS

A. Ship each item of equipment to the site of the work with a shop applied prime coating prepared in accordance with the requirements of Section 09960 and compatible with the finish coatings.

B. Finish Painting of Motors: Factory-apply finish coats using manufacturer's standard coating, unless otherwise specified in Section 09960.

2.11 SPECIAL TOOLS AND ACCESSORIES

A. Furnish with each piece of equipment all tools, instruments, or accessories of a special nature that are required to assemble, disassemble, maintain, or repair any item of equipment.

1. Tag and mark each piece indicating their service and the piece of equipment for which their use is intended.

2. Include a list and description or pictorial representation of all special tools required for a given piece of equipment for insertion into the equipment operation and maintenance manual.

2.12 FASTENERS AND DIELECTRIC ISOLATION

A. Fasteners for Aluminum: Stainless steel.

B. Isolate steel surfaces, other than stainless steel, from aluminum with stainless steel, neoprene, non-metallic washers or other acceptable material.

C. Dissimilar Metals: Protect from galvanic corrosion by means of pressure tapes, coatings, or isolators.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install, align and test each item of equipment within the tolerances recommended by the equipment manufacturer.

B. When specified in individual Sections, install and test equipment under the direction of installation engineers who have been factory trained by the equipment manufacturer.

C. Perform all work in accordance with manufacturer's recommendations.

3.02 QUALITY CONTROL

A. Test equipment in accordance with Section 01825 and the individual equipment Section.

B. Furnish written certification from the equipment manufacturers that each item has been installed, aligned, and tested correctly and that the installation meets the manufacturer's requirements for efficient, trouble-free operation. Utilize Manufacturer’s Installation Certification Form provided in Section 01999.

C. Equipment manufacturer’s certification shall not be construed as relieving the Contractor of his overall responsibility for this portion of the work.

END OF SECTION

SECTION 11002

EQUIPMENT MOUNTING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Equipment mounting requirements, including fabricated steel equipment bases, concrete equipment pads, supports, anchorage, and accessories.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 05500 – Miscellaneous Metals
3. Section 09960 – High Performance Coatings

1.03 QUALITY ASSURANCE

A. Provide supports, anchorage, and equipment mounts that are sized and designed to resist the calculated forces and that are in accordance with the manufacturer's recommendations, the current International Building Code (IBC), and industry standards requirements.

1.04 DESIGN REQUIREMENTS

A. Design equipment mounts and anchorages to resist the minimum lateral force required by the latest edition of the IBC, the manufacturer of the equipment, or a lateral seismic force of 60% of the operating weight of the equipment, whichever is greater.

B. Equipment anchor bolt sizes shown on the Drawings are the minimum required size.

C. Equipment anchorage design and calculations shall be prepared and signed by a civil or structural engineer currently registered in the state where equipment is installed.

1.05 MOUNTING REQUIREMENTS

A. Mount equipment and driver on a common fabricated steel baseplate with ample rigidity to support equipment and maintain shaft alignment without excessive deflection.

B. Mount equipment baseplates on concrete equipment pads.

1.06 SUBMITTALS

A. Comply with Section 01330.

B. Shop Drawings: Provide drawings of equipment bases and anchorage details.

C. Anchorage Calculations: Submit stamped and signed anchor bolt sizing calculations.

PART 2 - PRODUCTS

2.01 ANCHOR BOLTS AND CONCRETE ANCHORS

A. Provide anchor bolts and concrete anchors in accordance with Section 05500.

2.02 CONCRETE EQUIPMENT PADS

A. Construct concrete pedestals at least 6 inches wider and longer than the steel or cast base so that the distance between the anchor bolts and the edge of concrete is at least 3 inches.

B. Unless otherwise shown or specified, all conduits, piping connections, drains, etc. shall be enclosed by the concrete base.

C. Shape concrete pedestals to drain away from the base.

D. Allow concrete to cure 14 days or until the concrete has cured to 75 percent of its specified compressive strength before placing equipment on the concrete pedestal.

E. Do not start equipment placed on the concrete pedestal until the concrete has cured for 28 days or to 100 percent of its specified compressive strength.

2.03 STRUCTURAL STEEL EQUIPMENT BASES

A. Provide structural steel bases with thickened steel pads for doweling.

1. Fabricate equipment base using continuous welds to seal seams and contact edges between steel members.

2. Grind welds smooth.

B. Design equipment bases with perimeter steel beams, intermediate stiffeners and baseplate.

1. Provide perimeter steel beams with minimum depth equal to 1/10th of the longest dimension of the base.

2. Beam depth need not exceed 14 inches provided that the baseplate deflection is kept within acceptable limits to minimize misalignment, as determined by the manufacturer.

C. Provide grout holes for the bases of equipment where vibration isolation is not specified.

D. Provide minimum 1-inch thick steel mounting baseplate for equipment with drivers 20 horsepower and larger.

E. Shop-apply prime coat prepared in accordance with the requirements of Section 09960 and compatible with the finish coatings

PART 3 - EXECUTION

3.01 GENERAL

A. Connect piping to equipment with flexible connections and/or expansion joints such that the intended use of these joints is maintained in the piping system.

B. Coordinate the location of electrical conduit and piping penetrations within the concrete pad and equipment base.

1. Stub-up penetrations on the same side of the equipment as required for connection to the equipment.

2. Locate equipment drains for proper drainage away from equipment.

3.02 EQUIPMENT MOUNTING

A. Mount equipment on equipment baseplates using stainless steel shims so that equipment and driver are level in both directions and mounted within machined areas on baseplate. Do not use wedges to obtain level and alignment.

B. Utilize templates for placement of anchor bolts prior to placing concrete for equipment pad.

C. Apply a non-seize or non-galling compound on the threads of anchor bolts and concrete anchors.

3.03 SHAFT ALIGNMENT

A. After the complete unit has been installed on the equipment pad and leveled, check the factory shaft alignment by disassembling coupling and measuring angular and parallel orientations.

B. Use reverse-indicator dial or laser type alignment equipment to align shafts to within the manufacturer's required tolerance. Allow for thermal expansion, spacer coupling length and other factors that affect proper shaft alignment.

3.04 GROUTING EQUIPMENT BASED

A. After alignment has been completed, tighten anchor bolts and grout between equipment base and equipment pad. Use non-shrink and non-ferrous grout no less than 7/8 inch and no more than 1-5/8-inches thick.

B. Allow 48 hours for grout to harden and then remove jacking screws. Re-check torque on anchor bolts and re-check shaft alignment, making corrections as necessary.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 11241

EMULSION POLYMER FEED SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Skid-mounted polymer system with interconnecting piping and wiring complete within skid limits.

B. Equipment included with the polymer system includes:

1. Motor-driven mixing chamber
2. Primary and post-dilution water controls
3. Neat polymer pump
4. System Controls

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section:

1. Section 01330 – Submittals
2. Section 01600 – Materials and Equipment
3. Section 01612 – Seismic Design Criteria
4. Section 01999 – Reference Forms
5. Section 11000 – General Requirements for Equipment
6. Section 11002 – Equipment Mounting

1.03 QUALITY ASSURANCE

A. References:

1. This section contains references to the following documents. They are a part of this section as specified and modified. Where a referenced document contains references to other standards, those documents are included as references under this section as if referenced directly. In the event of conflict between the requirements of this section and those of the listed documents, the requirements of this section shall prevail.
2. Unless otherwise specified, references to documents shall mean the documents in effect at the time of Advertisement for Bids or Invitation to Bid (or on the effective date of the Agreement if there were no Bids). If referenced documents have been discontinued by the issuing organization, references to those documents shall mean the replacement documents issued or otherwise identified by that organization or, if there are no replacement documents, the last version of the document before it was discontinued. Where document dates are given in the following listing, references to those documents shall mean the specific document version associated with that date, regardless of whether the document has been superseded by a version with a later date, discontinued or replaced.

Reference	Title
ASTM A276	Stainless Steel Bars and Shapes
ASTM A320/A320M	Alloy/Steel Bolting Materials for Low-Temperature Service
NEMA 250	Enclosures for Electrical Equipment (1,000 Volts Maximum)
NFPA 70	National Electrical Code (NEC)

B. Unit Responsibility:

1. Assign unit responsibility, as specified in Section 11000 1.04 Unit Responsibility, to the manufacturer of the Polymer Feed System provided under this section. Provide a completed, signed, and notarized Certificate of Unit Responsibility (Section 01999) shall be provided.

C. Factory Tests:

1. The specified equipment with all mechanical and electrical components shall be completely assembled as a skid at the manufacturer's facility. Pump casings shall be hydrostatically tested to twice the discharge head. The skid shall be non-witnessed tested for desired functionality and operation at the manufacturer's facility prior to the shipment.

D. Shipment, Protection, and Storage:

1. Equipment shipment, protection, and storage shall conform to the requirements specified in Section 01600.

E. Manufacturer's Experience:

1. Equipment furnished under this section shall be of a design and manufacture that has been successfully used in similar applications. The manufacturer shall have furnished equipment for a minimum of five similar applications that have been in successful operation for at least five years. A list of these installations complete with installation description, contact names, addresses, and telephone numbers shall be provided.

F. Warranty And Performance Affidavit:

1. The packaged aqueous polymer blending unit shall be warranted against defects in materials and workmanship of a period of five years.

1.04 SUBMITTALS

A. The following submittals shall be provided in accordance with Section 01330:

1. A copy of this specification section, with addendum updates included, and all referenced and applicable sections, with addendum updates included, with each paragraph check-marked to indicate specification compliance or marked to indicate requested deviations from specification requirements. A check mark (✓) shall denote full compliance with a paragraph as a whole. If deviations from the specifications are indicated, and therefore requested by the Contractor, each deviation shall be underlined and denoted by a number in the margin to the right of the identified paragraph, referenced to a detailed written explanation of the reasons for requesting the deviation. The City shall be the final authority for determining acceptability of requested deviations. The remaining portions of the paragraph not underlined will signify compliance on the part of the Contractor with the specifications. Failure to include a copy of the marked-up specification sections, along with justification(s) for any requested deviations to the specification requirements, with the submittal shall be sufficient cause for rejection of the entire submittal with no further consideration.

2. A copy of the contract document control diagrams and process and instrumentation diagrams relating to the submitted equipment, with addendum updates that apply to the equipment in this section, marked to show specific changes necessary for the equipment proposed in the submittal. If no changes are required, the drawing or drawings shall be marked "no changes required". Failure to include copies of the relevant drawings with the submittal shall be cause for rejection of the entire submittal with no further review.

3. Completed Certificate of Unit Responsibility attesting that the Contractor has assigned, and that the manufacturer accepts, unit responsibility in accordance with the requirements of this Section and Section 11000 1.04 Unit Responsibility. No other submittal material will be reviewed until the certificate has been received and found to be in conformance with these requirements.

4. Motor Data Sheets.

5. Manufacturer’s specifications verifying the equipment performance. Motor data sheet.

6. Dimensional drawings, showing required access and clearances, including any layout requirements of the equipment.

7. Equipment mounting information as specified in Section 11002.

8. Manufacturer's catalog data and shop drawings confirming dimensions, weight, construction, materials, and installation details.

9. Descriptive control sequences of the Polymer Feed System manual and automatic operation.

10. Equipment control panels:

    a. Schematic diagrams, including connections to remote equipment.

    b. Drawings showing scaled front and interior views.

    c. Bill of materials of components.

    d. Marked product literature for all components.

11. Marked product literature for all instruments and controls.

12. Installation reference list including contact information as specified in this section.

13. Manufacturer’s written certification that the polymer blending unit is suitable for the required polymer. The certification shall state that no additional equipment, such as aging tanks, is necessary.

14. Predicted performance curves developed for the specific application. Performance curves shall plot speed, capacity, head, horsepower, efficiency, and NPSH required for the specified operating range for the pumps provided on the skid.

15. Shop drawings including location of all piping, electrical, instrumentation, and structural connections.

16. Descriptive control sequences of the polymer blending unit’s manual and automatic operation.

17. PLC program listing printout and Input/Output List

18. HMI screen printouts.

19. Bracing and anchoring design calculations per the requirements of Section 01612.

1.05 ANCHORING AND BRACING

A. Mechanical, instrumentation and control, electrical, nonstructural systems, components, and elements permanently attached to the structure shall be anchored and braced to resist seismic forces. Contractor shall design the structural components, seismic attachment, braces, and anchors to the structure for all parts or elements of the mechanical and electrical systems in accordance with Section 01612.

PART 2 - PRODUCTS

2.01 SYSTEM DESCRIPTION

A. Multi-Zone Mixing Chamber

1. Polymer and water shall be mixed in a chamber designed to create sufficient mixing energy.
    a. High shear zone of the mixing chamber shall have a mechanical mixing impeller for successful initial activation and the low shear zone shall not have a mixing impeller to avoid damaging polymer molecules.
    b. Solution shall undergo a tapered mixing intensity slope as it exits the initial high sheer zone and passes through a second low shear zone, isolated by a baffle.
    c. The design shall have primary mixing and post-dilution to expedite the polymer activation process by maximizing the value of breaker surfactant present in emulsion polymer, as per the AWWA Standard for Polyacrylamide (ANSI/AWWA B453-06).
    d. Polymer activation efficiency shall be consistent over the dilution water range.
    e. The volume of the mixing chamber shall be a minimum of 1.0 gallon to provide sufficient residence time for activating and disentangling polymer molecules.
2. Mixing chamber shall be transparent with acrylic barrel to allow viewing of mixing intensity. Opaque mixing chambers shall be unacceptable.
3. Impeller shall be driven by a 1 HP maximum washdown duty motor.
    a. Motor shall be TEFC.
    b. Impeller speed shall be 3450 rpm, minimum.
    c. Motor shall be direct-coupled to impeller shaft.
4. Mixing chamber shall include a stainless steel injection check valve.
5. Mixing impeller shall be cast brass construction with holes drilled on the backside of the impeller. The impeller, when rotating, shall pull fluid from around the mechanical seal pocket to eliminate the need for a separate mechanical seal flushing system.
6. In order to quantify the mixing intensity in the mix chamber, the applied horsepower shall be defined by measuring the difference in torque when the mix chamber is empty versus being full of water. This value shall be the basis of determining the mixing intensity defined as "G" value.
7. The G-value in the high shear mixing zone shall exceed 14,000 sec-1 to effectively disperse polymer gels to prevent fisheye formation.
8. The G-value in the low shear mixing zone shall be lower than 3,500 sec-1 to avoid damaging polymer chains.

B. Dilution Water Control

1. Dilution water shall be split into two streams.
    a. Primary water flow shall supply the mixing chamber.
    b. Secondary water flow shall be used to post dilute the activated polymer stream.
    c. These two streams shall be completely blended by a static mixer prior to exiting the unit.
2. Unit shall have an electric solenoid valve for on/off control of total dilution water flow. Valve shall have brass body with NBR seals and NEMA 4X rated coil enclosure.
3. Flow indicators and flow control valves shall be provided for each dilution water stream.
4. Dilution water and solution output connections shall include 304 stainless steel unions connected to the chassis.

C. Pump

1. Unit shall have a neat polymer metering pump.
    a. Pump shall be positive displacement, progressing cavity type.
    b. Rotor shall be 316 stainless steel.
    c. Stator shall be Viton.
    d. Pump shall have mechanical seal. Pumps supplied with packing seals shall not be considered equal.
    e. Rotor speed shall not exceed 500 rpm.
2. Pump shall be driven by a 1/2 HP, TEFC, AC motor.
    a. Variable speed shall be provided by a VFD controller.
    b. Motor shall be direct-coupled to a gear reducer.
    c. Pump shall be direct-coupled to gear reducer.
3. Pump shall include a pressure relief valve and pressure gauge located on the discharge side of the pump and piped to the pump suction. Pressure relief valve shall be PVC construction with Viton seals. Systems utilizing pressure relief on the mix chamber discharge and requiring a connection to drain shall not be considered equal.
4. A suitably-sized calibration cylinder shall be mounted to the frame with PVC isolation ball valves. Cylinder shall be calibrated in mL, and be constructed of clear PVC with slip on cap and 1/2 inch NPT vent connection.

D. Controls

1. System shall be supplied with waterproof control enclosure. Unit shall be powered through an on-off-remote circuit controlled by a three position switch.
    a. In the remote switch position, the unit shall accept a run signal.
    b. Unit is manually powered in the on position.
2. A VFD shall be supplied to vary pump speed. A keypad shall be mounted on the motor control enclosure for VFD control and display.
    a. VFD shall accept single phase power and convert it to three phase output.
    b. Up/Down arrows shall control motor speed in manual mode.
    c. VFD shall accept 4-20 mA input signal to vary pump speed in automatic mode.

3. Unit shall accept a 4-20 mA analog signal to pace the polymer metering pump.

   a. The controller shall also have manual motor speed control via a potentiometer for touchpad for VFD.

4. Unit shall detect loss of water flow, sensing that water flow has been interrupted for any reason, will place the polymer pump and mix chamber on standby and will restart it automatically when flow is restored.

5. An integral timer shall monitor loss of flow and energize contacts indicating alarm after 15 seconds of continuous loss.

6. The following status and alarm signals shall be provided as dry-contacts.

   a. In Remote status

   b. Running status

   c. Fail Alarm status

7. Unit shall provide a 4-20 mA analog output signal proportional to pump speed for remote monitoring.

2.02 TECHNICAL DATA

A. Connections – Plumbing

1. Dilution water inlet, 1-1/2” FNPT

2. Neat polymer inlet, 1/2” FNPT

3. Solution discharge, 1-1/2” FNPT

B. Connections – Electrical

1. Standard, grounded male plug – 120 / 1 / 60, 17 amps

2. Terminal blocks – 4-20 mA signal input

3. Terminal blocks – dry contact input for remote start

4. Terminal blocks – dry contact alarm output

5. Terminal blocks – dry contact run output

C. Dimensions

1. Frame – 37” wide x 28” deep x 47” high (94x71x120 cm)

D. Materials of Construction

1. Structural frame – 304 stainless steel

2. Plumbing – PVC, nylon, stainless steel

3. Mixing chamber – PVC, acrylic

E. Performance

1. Dilution water – 120-1200 GPH primary mixing (454-4542 LPH)
   120-1200 GPH post dilution (454-4542 LPH)

2. Metering pump – 0.15-3.0 GPH neat polymer

2.03 MANUFACTURERS

A. The CITY and ENGINEER require the following candidate manufacturer to provide the equipment and/or products to be furnished under this section. The CITY and ENGINEER believe the manufacturer is capable of producing equipment and/or products that will satisfy the requirements of this section. This statement, however, shall not be construed to

mean that the named manufacturer's standard product will comply with the requirements of this section. For the purpose of standardization for operations, maintenance, spare parts, and services, the manufacturer shall be PolyBlend® MM2400- P3AA Polymer Feed System as manufactured by UGSI Chemical Feed, Inc., 1901 W. Garden Rd., Vineland, NJ 08360, Phone: 856.896.2160.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install equipment per the contract documents and manufacturer's recommendations.

3.02 WARRANTY

A. The standard warranty extends for a minimum period of twelve (12) months from the date of start-up by an authorized manufacturer technician or eighteen (18) months from the date of shipment, whichever occurs first.

B. Damage due to makeup water particulates will not be considered as a warranty defect and will be the responsibility of the owner.

3.03 ACCESSORIES

A. Pressure reducing valve: A suitably sized pressure reducing valve shall be supplied for installation in the dilution water line. Pressure reducing valve shall be constructed of bronze with adjustable output pressure of 25-75 psig to reduce incoming line pressure variations. Pressure reducing valve shall be as manufactured by Watts.

B. Drumstick: A rigid drumstick suitable for mounting in the neat polymer drum bung or vent connection shall be supplied to completely evacuate the drums contents. The drumstick shall be supplied with 2 inch NPT and 3/4 inch NPT connections for connection to either port. Drumstick construction shall be PVC.

C. Drum Mixer: A bayonet mount drum mixer shall be supplied for mixing neat polymer drum contents. Mixer shall include a 1/2 hp, 1725 rpm TEFC motor with 28 inch long mixer shaft, two 4 inch long collapsible mixing blades, 8 foot power cord and on/off switch. Mounting plate shall include 2 inch bung mount and shall be constructed of mild steel with powder epoxy coating. Electrical requirements shall be 120 VAC/ 1 phase/ 60 Hz.

D. Tote Suction Hose: A tote suction hose with isolation ball valve, quick disconnect and 10 feet of 1 inch braided PVC hose shall be supplied for connection to neat polymer tote.

E. A neat polymer thermal loss of flow switch shall be supplied on the discharge of the neat polymer metering pump to detect absence of polymer flow. Thermal flow switch assembly shall include sensor, flow block and controls. Alarm output contacts shall be supplied for the plant control system after adjustable time delay. Neat polymer flow must be greater than 0.25 gph for switch to function.

F. Spare parts kit: Spare parts kit shall include mechanical seal, mixing chamber o-rings, injection check valve, and pump stator.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 15050

PIPING SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Systems of process piping and general requirements for piping systems.

B. Detailed specifications for the components listed on the Piping System Specification Sheets (PIPE SPEC) are found in Division 15 and other technical specifications.

C. Use this section in conjunction with those sections.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 01600 – Materials and Equipment
3. Section 02300 – Earthwork
4. Section 09960 – High Performance Coatings
5. Section 15060 – Pipe Hangers and Supports
6. Section 15076 – Piping and Valve Identification Systems
7. Section 15097 – Seismic Restraints for Piping
8. Section 15110.5 – Valves and Appurtenances
9. Section 15115.1 – Eccentric Plug Valves
10. Section 15122 – Piping Connections
11. Section 15141 – Steel Pipe
12. Section 15143 – Ductile Iron Pipe
13. Section 15145 – Polyvinyl Chloride (PVC) Pressure Pipe
14. Section 15201 – Stainless Steel Piping
15. Section 15250 – Insulation for Exposed Piping and Equipment
16. Section 15996 – Testing Pressure Pipe

1.03 DEFINITIONS

A. Pressure terms used in Division 15 are defined as follows:

1. Maximum: The greatest continuous pressure at which the piping system operates.
2. Test: The hydrostatic pressure used to determine system acceptance.

B. Hazardous Gas Systems

1. Propane
2. Natural gas
3. Sludge gas
4. Hydrogen

5. Other flammable gases

1.04 SUBMITTALS

A. Comply with Section 01330.

B. Equipment and Piping Coordination and Installation Drawings

1. The drawings show only the general arrangements of the project equipment, piping and appurtenances.

2. Prepare and submit coordination and installation drawings.

a. Show the specific locations and dimensions of equipment, tanks, control panels, piping, pipe hangers and supports, seismic restraints for piping, trench and rack mounted piping, valves, appurtenances, platform gratings, and related items.

b. Base upon dimensions for the actual equipment to be furnished from the accepted shop drawings.

3. The coordination and installation drawings are required for the following systems:

a. Chemical storage, feed, and piping systems.

b. Equipment and associated piping in Division 11.

c. HVAC and plumbing piping systems.

d. Exposed and buried piping in Division 15, Sections 14143, 15145 and 15201.

4. Drawing Requirements

a. Prepared with AutoCAD 2010 or later software.

b. Use PC compatible hardware platform using Microsoft Windows XP operating system.

c. Submit drawing files with each piping system print.

d. Submit drawing files on rewritable CDROM disks.

e. Print at a minimum scale of 3/8" = 1', on a minimum sheet size of 11" x 17".

f. Show piping in plan and section views, or alternatively, as isometric piping spool drawings.

1) Piping of nominal size less than 8" may be single line with scaled lay lengths and fittings.

2) Show piping of size 8" and greater double line with scaled flanges, lay lengths, and fittings. Each pipe run shall be dimensioned.

3) Show all pipe supports, thrust restraints, and seismic bracing.

4) Show all devices indicated on the mechanical layout and schematic drawings and the P&ID drawings.

5. During preparation of the drawings, provide interface and coordination between all equipment suppliers and subcontractors, and, including as a minimum, the structural, architectural, mechanical, electrical, and instrumentation and control elements of the work, including the process and instrumentation diagrams.

6. Include load and sizing calculations for pipe supports, thrust restraints, seismic bracing and related items which have been prepared, stamped, and signed by a professional civil, mechanical, or structural engineer licensed by the State of California. See also Sections 15060 and 15097.

7. Complete submittal and review of the coordination and installation drawings at least 30 days prior to commencement of piping fabrication for each system.

8. For piping systems that are field-fabricated, complete submittal and review at least 30 days prior to construction of each system.

1.05 QUALITY ASSURANCE

A. Fittings and coupling compatibility: To assure uniformity and compatibility of piping components, fittings and couplings for grooved end piping systems and plastic piping systems shall be furnished by the same manufacturers.

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Comply with Section 01600.

PART 2 - PRODUCTS

2.01 PIPING MATERIALS

A. Unless otherwise specified, select piping materials, including pipe, gaskets, fittings, connection and joint assemblies, linings and coatings, from those listed on the piping system specification sheets.

B. Comply with detailed specifications for each type of pipe and piping appurtenance specified in Division 2 and the other sections of Division 15.

C. If, in addition to the pipe service symbol, the Drawings contain specific callouts for pipe materials, the information on the Drawings governs on an exception basis.

D. Gasket Material: As specified for individual piping systems and as specified in Section 15122.

2.02 VALVES

A. For same size and service provide from a single valve manufacturer.

B. Provide packing made from non-asbestos material.

C. Ensure actual lengths of valves are within 1/16” (plus or minus) of the manufacturer’s specified length.

D. Flanges: meet the requirement of ANSI B16.5.

E. Push-on and mechanical joints: meet the requirements of AWWA C111.

F. Valve operators are specified in Sections 15110.5.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Location

1. Provide as specified except for adjustments to avoid architectural and structural features and coordinate with electrical construction.

B. Piping Sizes

1. Where the size of piping is not specified, provide piping of the sizes required by UPC.

C. Pipe Support, Anchorage, and Seismic Bracing

1. Support by anchor brackets, guides, saddles or hangers.

2. See Drawings and specifications for acceptable types of supports, guides, saddles, hangers and structure attachments for general pipe support, expansion/ contraction and for seismic bracing, as well as anchorage details.

3. Minimum spacing: as shown or specified.

4. Vertically support piping by anchor brackets, guides, saddles or hangers and seismically brace where indicated to resist lateral load.

5. Provide support on each run at each change of direction.

6. Material: Type 316 stainless steel as indicated on the mechanical detail drawings and in Sections 15060 and 15097.

7. Unless otherwise specified do not use existing pipes and supports to support new piping.

D. Anchorage for Buried Piping

1. Anchor all plugs, caps, tees and bends in buried pressure piping systems using restrained joints as specified.

2. Unless specified otherwise, reaction backing consisting of concrete thrust blocks is not an acceptable substitute for restrained joints and will not be permitted.

E. Bedding and Backfill

1. Bedding and backfill for buried piping: as specified in Section 02300.

F. Pipe Identification

1. Place plastic tracer tape and magnetic tracer tape as specified in Section 15076 above the centerline of each buried pipe.

2. Identify exposed interior and exterior piping, as specified in section 15076.

G. Pipe Insulation

1. Unless otherwise noted on the drawings or specified, insulate all exposed piping of size 4” and less installed outdoors and in areas and locations subject to freezing.

2. Insulate exposed piping in unheated ceiling or attic space areas.

3. Insulate exposed piping in areas above suspended or other type ceilings or above electrical equipment for condensation control.

4. Comply with Section 15250.

3.02 TESTING

A. General

1. Upon completion of piping, but prior to application of insulation on exposed piping, test the piping systems.

a. Pressures, media and test durations: as specified in the pipespec.

b. Isolate equipment which may be damaged by the specified test conditions.

c. Use calibrated test gages and calibrated volumetric measuring equipment to determine leakage rates.

d. Select each test gage so that the specified test pressure falls within the upper half of the gage’s range.

e. Unless otherwise specified, notify the Construction Manager 24 hours prior to each test.

f. Test in accordance with Sections 15996 .

2. Unless otherwise specified, tests include existing piping systems which connect with new pipe systems.

   a. Test existing pipe to the nearest existing valve.

   b. Repair any piping which fails the test.

   c. Repair of existing piping will be considered and paid for as extra work.

B. Gas, Air, and Vapor Systems

1. Unless otherwise specified, comply with the following:

Pipeline Size	Specified Test Pressure	Testing Medium
2-inch and smaller	75 psi or less	Air or water
2-inch and smaller	Greater than 75 psi	Water
Greater than 2-inch	3 psi or less	Air or water
Greater than 2-inch	Greater than 3 psi	Water

2. Allowable leakage rate for hazardous gas systems, insulated systems, and systems tested with water is zero at the specified test pressure throughout the specified test period.

3. Allowable leakage rate for other systems tested with air is a maximum pressure drop of 5% of the specified test pressure for the duration of the period. Prior to starting a test interval using air, set air at ambient temperature and specified test pressure.

C. Liquid Systems

1. Allowable leakage rate is zero at the specified test pressure throughout the specified duration for the following systems:

   a. Exposed piping, buried insulated piping, and buried or exposed piping carrying liquid chemicals.

D. Drains

1. Building and structure drain systems, other than pumped drain systems, shall be tested in accordance with UPC.

3.03 CLEANING AND FLUSHING

A. General

1. Clean piping systems following completion of testing and prior to connection to operating, control, regulating, or instrumentation equipment.

2. The Contractor may clean and test sections of buried or exposed piping systems. Use of this procedure, however, will not waive the requirement for a full pressure test of the completed system.

3. Unless specified otherwise, first clean piping 24” in diameter and smaller by pulling a tightly fitting cleaning ball or swab through the system.

4. Piping larger than 24” in diameter may be cleaned manually or with a cleaning ball or swab.

B. Temporary Screens

1. Upon completion of the cleaning, connect the piping systems to related process equipment.

2. Provide with locator tabs that remain visible from the outside when the screens are in place.

3. Insert in pipelines at the suction of pumps and compressors in accordance with the following table:

Equipment suction or piping size, inches	Maximum screen opening, inches
0 –1	1/16
1-1/4 – 3	1/4
3-1/2 – 6	1/2
Over 6	1

4. Maintain the screens during testing, initial start-up, and initial operating phases of the commissioning process.

   a. In special cases, screens may be removed as required for performance tests.

   b. Remove temporary screens and make the final connections after the screens have remained clean for at least 24 consecutive hours of operation. Systems handling solids are exempted.

C. Gas and Air Systems (Not Used)

D. Liquid Systems

1. After completion of cleaning, unless otherwise specified, flush with clean water.

2. With temporary screens in place, circulate the liquid through the piping system using connected equipment for a minimum period of 15 minutes and until no debris is collected on the screens.

3.04 PIPING SPECIFICATION (PIPESPEC)

A. Piping and valves for groupings of similar plant processes or types of service lines are specified on individual piping specifications (PIPESPECS).

B. Piping services are grouped according to the chemical and physical properties of the fluid conveyed and/or by the temperature or pressure requirements.

C. Each grouping of services (PIPESPEC) is identified by a piping system number.

D. Piping services specified in the PIPESPECS and on the Plans are alphabetically arranged by designated service symbols as shown in Table A.

E. Table A also indicates the system number, fluid category, and pipe marker background color of each service.

Table A. Piping Services

Symbol	Service	System	Fluid Category	Pipe Marker Background
D	Drain, Process	14	Drain	Green
FTH	Frothing	19	Chemical	Yellow
MS	Mixed Sludge	16	Sludge	Green
POL	Polymer	19	Chemical	Yellow
PSC	Primary Scum	16	Scum	Green

Symbol	Service	System	Fluid Category	Pipe Marker Background
SL	Sludge	16	Sludge	Green
WW	Wash Water	11	Water	White
RCW	Reclaimed Water	11	Reclaimed Wastewater	Purple

Notes:
1. This table contains only those pipe services which require work under this contract.

3.05 PIPING SPECIFICATION SHEET—PIPESPEC – SYSTEM 11

A. Piping Symbol/Service:

1. WW – Wash Water
2. RCW – Reclaimed Water

B. Test Requirements:

1. Medium: Water
2. Pressure:
   a. WW: 150 psi
3. Duration: 120 minutes

C. Gasket Requirements:

1. Flange: Compressed gasketing consisting of organic fibers (Kevlar) and neoprene binder
2. Push-on/Mech Cpl: Nitrile or Neoprene

D. Exposed Pipe and Valves (See Remarks): (See drawings for pipe size and valve type.)

1. (3” and smaller)
   a. Pipe:
      1) Steel; ASTM A53, galvanized.
      2) Conn; taper threaded, ANSI B1.20.1. See Remarks.
      3) Ftgs; malleable iron, ASTM A197, ANSI B16.3, Class 150, galvanized.
      4) PVC, Sch 80, where shown on Drawings. Ref. Section 15145.
   b. Valves:
      1) Ball
         a) Jamesbury Fig. 351,
         b) Nibco T-580,
         c) or equal.
      2) Globe
         a) Crane 7TF or 17TF,
         b) Lunkenheimer 123 or 214,
         c) or equal.
      3) Swing check
         a) Crane 137,
         b) Lunkenheimer 230,

c) or equal.

2. (4” thru 12” Pipe)

a. Pipe

1) DIP; AWWA C151, per Section 15143.

2) Connections; Flanged. See Remarks.

3) Fittings; DIP per AWWA C110 or AWWA C153

4) Linings and coatings

a) All pipe and fittings shall be double thickness cement mortar lined per AWWA C104 and coated per Section 09960.

b. Valves:

1) Butterfly: Ref. Section 15110.5.

2) Check

a) Ref. Section 15110.5.

E. Buried and Encased Pipe and Valves (See Remarks): (See drawings for pipe size and valve type. Omit coating on encased pipe.)

1. (3” and smaller)

a. Pipe

1) PVC; ASTM D1784, Class 12454-B, ASTM D1785, Sch 80.

2) Ref. Section 15145.

3) Provide plastic and magnetic tracer tape.

4) Conn; plain end; solvent weld with threaded or flanged adapters for valves.

5) Ftgs; PVC, Sch. 80, socket weld.

b. Valves

1) Gate

a) Ref. Section 15110.5, with extension stem and valve box.

b) Coating to be cement mortar.

2. (4” and Larger)

a. Pipe

1) DIP; AWWA C151, per Section 15143.

2) Connections; Restraint joint per Section 15143.

3) Fittings; DIP per AWWA C110 or AWWA C153.

4) Lining and Coating; All pipe and fittings: double thickness cement mortar lined per AWWA C104 and

5) Polyethylene encapsulated per AWWA C105.

b. Valves

1) Eccentric Plug; per Section 15115.1

F. Remarks: Concrete encase all piping beneath structures.

3.06 PIPING SPECIFICATION SHEET—PIPESPEC – SYSTEM 14

A. Piping Symbol/Service

1. D—Process Drain

B. Test Requirements

1. Medium: Water
2. Pressure: 50 psig
3. Duration: 120 minutes

C. Gasket Requirements

1. Flange: Compressed gasketing consisting of organic fibers
2. (Kevlar) and neoprene binder
3. Push-on/Mech Cpl: Nitrile or Neoprene

D. Exposed Pipe and Valves: (See drawings for pipe size and valve type.)

1. (1" thru 3")
   a. Pipe
      1) Steel; ASTM A53, galvanized. Ref. Section 15141.
      2) Conn; taper threaded, ANSI B1.20.1
      3) Ftgs; malleable iron, ASTM A197, ANSI B16.3, Class 150, galvanized.
   b. Valves
      1) Eccentric Plug; per Section 15115.1
2. (4" and Larger)
   a. Pipe
      1) DIP; AWWA C151, per Section 15143.
      2) Connections; Flanged.
      3) Fittings; DIP per AWWA C110 or AWWA C153
      4) Linings and coatings; All pipe and fittings shall be double thickness cement mortar lined per AWWA C104 and coated per Section 09960.
   b. Valves
      1) Eccentric plug; per Section 15115.1

E. Buried and Encased Pipe and Valves: (See drawings for pipe size and valve type. Omit coating on encased pipe.)

1. (3" and smaller)
   a. Pipe
      1) PVC; ASTM D1784, Class 12454-B, ASTM D1785,
      2) Sch 80. Ref. spec Section 15145.
      3) Provide plastic and magnetic tracer tape.
      4) Conn; plain end; solvent weld with threaded or flanged adapters for valves.
      5) Ftgs; PVC, Sch. 80, socket weld.
   b. Valves: Not applicable
2. (4" and Larger)
   a. Pipe
      1) DIP; AWWA C151, per Section 15143.
      2) Connections; Restraint joint per Section 15143.

3) Fittings; DIP per AWWA C110 or AWWA C153.

4) Lining and Coating: All pipe and fittings: double thickness cement mortar lined per AWWA C104 and Polyethylene encapsulated per AWWA C105.

b. Valves

1) Eccentric Plug; per Section 15115.1.

F. Remarks:

1. Concrete encase all piping beneath structures.

2. Omit polyethylene encasement on concrete encased pipes.

3.07 PIPING SPECIFICATION SHEET—PIPESPEC – SYSTEM 16

A. Piping Symbol/Service

1. MS – Mixed Sludge

2. PSC – Primary Scum

3. SL – Sludge

B. Test Requirements

1. Medium: Water

2. Pressure: 150 psig

3. Duration: 120 minutes

C. Gasket Requirements

1. Flange: Compressed gasketing consisting of organic fibers (Kevlar)and neoprene binder

2. Push-on/Mech Cpl: Nitrile or Neoprene

D. Exposed Pipe and Valves (See drawings for pipe size and valve type.)

1. Pipe all sizes

a. DIP; AWWA C151, per Section 15143.

b. Connections; Flanged.

c. Fittings; DIP per AWWA C110 only. AWWA C153 not permitted.

d. Linings and Coatings

1) All pipe and fittings: glass-lined per Section 15143 and coated per Section 09960.

2. Valves

a. Eccentric Plug; per spec Section 15115.1, glass-lined to match pipe lining.

E. Buried and Encased Pipe and Valves: (See drawings for pipe size and valve type. Omit coating on encased pipe.)

1. Pipe all size

a. DIP; AWWA C151, per Section 15143.

b. Connections; Restraint joint per Section 15143.

c. Fittings; DIP per AWWA C110 only. AWWA C153 not permitted.

d. Provide plastic and magnetic tracer tape.

e. Lining and Coating

1) All pipe and fittings: glass-lined per Section 15143 and Polyethylene encapsulated per AWWA C105.

2. Valves

a. Eccentric Plug

1) Per Section 15115.1, glass-lined to match pipe lining.

2) Coating: M-1 per Section 09960

F. Remarks:

1. Concrete encase all piping beneath structures.

2. Omit polyethylene encasement on concrete encased pipes.

3.08 PIPING SPECIFICATION SHEET—PIPESPEC – SYSTEM 19

A. Piping Symbol/Service

1. FTH – Froth

2. FTH - Frothing

3. POL - Polymer

B. Test Requirements

1. Medium: Water

2. Pressure: 150 psig

3. Duration: 120 minutes

C. Gasket Requirements

1. Flange: PTFE bonded EPDM, full-face gaskets, ANSI B16.1, Garlock, Gylon 3504, or equal

2. Push-on/Mech Cpl: N/A

D. Exposed Pipe and Valves: (See drawings for pipe size and valve type.)

1. Pipe: FTH and POL (All sizes)

a. PVC; ASTM D1784, Class 12454-B, NSF certified, ASTM D1785, Sch. 80.

b. Pipe and fittings exposed: Painted. Ref. Section 15145.

c. Conn; plain end, solvent weld, flanged for valves 3” and larger.

d. Ftgs; PVC, Sch. 80, solvent weld.

2. Valves (4” and less): (Unless otherwise shown on Contract Drawings)

a. Ball

1) FTH and POL service: PVC body, Chemtrol Tru Bloc TU Series, Asahi/America DuoBloc TU Series, GSR TU Series, or equal, with Teflon seats and EPDM O-rings. (See Remark 1.)

2) PAS service: Passivated Type 316 SS flanged with vented ball; Apollo 87A, Nibco F-510-S6-R-66-FS, or approved equal.

E. Buried Pipe and Valves: (See drawings for pipe size and valve type.)

1. (All sizes) Pipe

a. PVC; same as exposed. Provide plastic and magnetic tracer tape.

b. Conn; same as exposed.

c. Ftgs; same as exposed.

2. (2” and less)

a. Valves: Ball; same as exposed with extension stem and valve box.

3. (2 1/2” and larger)

a. Valves: Diaphragm; same as exposed with extension stem and valve box.

4. PAS service: not applicable

F. Unless otherwise specified, all exposed Frothing piping shall be heat traced with self-regulating Tyco Thermal Controls Raychem 5BTV1-CT, Chromalox, Thermo, or equal. All heat traced pipe shall be insulated with ½ inch thick Accessible Products model 351, prejacketed techlite foam insulation or equal.

END OF SECTION

SECTION 15060

PIPE HANGERS AND SUPPORTS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Hangers and supports for all piping systems specified in Sections 15050.

B. This section does not include pipe supports for fire sprinkler systems, pipe anchors, guides or seismic restraints.

C. For seismic restraint requirements for piping, see Section 15097.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this section

1. Section 01330 – Submittals
2. Section 01612 – Seismic Design Requirements
3. Section 05500 – Miscellaneous Metals
4. Section 15050 – Piping Systems
5. Section 15097 – Seismic Restraints for Piping
6. Section 15250 – Insulation for Exposed Piping and Equipment

1.03 QUALITY CONTROL

A. Operating Conditions

1. The hangers and supports specified in this section are provided to resist pipe loads occurring primarily in the downward (gravity) direction. For the purpose of pipe hanger and support selection, this section establishes pipe support classifications based on the operating temperatures of the piping contents. Pipe support classifications are as follows:

a. Hot Systems: A. 120°F to 450°F.

b. Ambient Systems: B. 60°F to 119°F.

c. Cold Systems: C-1. 33°F to 59° F, C-2. -20°F to 32°F.

B. Hanger and Support Selection

1. Select pipe hangers and supports as specified. Base selections upon the pipe support classifications specified in this section, the piping insulation thickness specified in Section 15250, and any special requirements which may be specified in the contract documents.

2. Review the piping layout in relation to the surrounding structure and adjacent piping and equipment before selecting the type of support to be used at each hanger point.

3. Design and select hangers and supports to withstand all static and specified dynamic conditions of loading to which the piping and associated equipment may be subjected. As a minimum, consider the following conditions:

a. Weights of pipe, valves, fittings, insulating materials, suspended hanger components, and normal fluid contents.

b. Weight of hydrostatic test fluid or cleaning fluid if normal operating fluid contents are lighter.

c. Reaction forces due to the operation of safety or relief valves.

d. Wind, snow, or ice loadings on outdoor piping.

4. Size hangers and supports to fit the outside diameter of pipe, tubing, or, where specified, the outside diameter of insulation.

5. Where negligible movement occurs at hanger locations, use rod hangers for suspended lines, wherever practical. For piping supported from below, use bases, brackets or structural cross members.

6. For the suspension of size 2-1/2" and larger pipe and tubing, use hangers capable of vertical hanger component adjustment under load.

7. Provide supporting systems which provide for and control the free or intended movement of the piping including its movement in relation to that of connected equipment.

8. Where there is horizontal movement at a suspended hanger location, select hanger components to allow for swing. Do not permit the vertical angle of the hanger rod to exceed 4º at any time.

9. Do not permit contact between a pipe and hanger or support component, constructed of dissimilar metals. Prevent contact between dissimilar metals when supporting copper tubing by using copper-plated, rubber, plastic or vinyl coated, or stainless steel hanger and support components.

10. Unless otherwise specified, existing pipes and supports shall not be used to support new piping.

11. Unless otherwise specified, pipe support components shall not be attached to pressure vessels.

12. Stock hanger and support components shall be used wherever practical.

1.04 INDUSTRY STANDARDS

A. This section contains references to the following documents. They are a part of this section as specified and modified. In case of conflict between this section and the listed documents, the requirements of this section shall prevail.

B. Unless otherwise specified, references to documents shall mean the documents in effect at the time of Advertisement for Bids or Invitation to Bid (or on the effective date of the Agreement if there were no Bids).

C. If referenced documents have been discontinued by the issuing organization, references to those documents shall mean the replacement documents issued or otherwise identified by the organization or, if there are no replacement documents, the last version of the document before it was discontinued.

D. Where document dates are given in the following listing, reference to those documents shall mean the specific document version associated with that date, whether or not the document has been superseded by a version with a later date, discontinued, or replaced.

1.05 SUBMITTALS

A. Provide hanger and support locations, load calculations, and manufacturer layout and detail drawings as part of the submittals for equipment and piping coordination and installation drawings required in Section 15050.

B. The load and support design calculations shall be stamped and signed by a licensed Civil or Structural Engineer in the State of California. Comply with Section 01612 and 05500. Coordinate calculations with those required by Section 15097.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. B-Line

B. Carpenter & Paterson

C. Kin-Line

D. Anvil International

E. Michigan

F. Pipe Shields Incorporated

G. Superstrut

H. Unistrut

I. Or equal as specified in Section 01330

J. Comply with MSS SP-69 and FEDSPEC WW-H-171e for pipe support components and MFMA-4 for framing systems

2.02 PRODUCTS

A. Material

1. Pipe hangers and supports, structural attachments, rack and trapeze supports, fittings and accessories: 316 stainless steel.

2. Nuts, bolts, washers, and other fasteners: Type 316 stainless steel.

3. Safety end caps on all framing channels.

4. Comply with MSS SP-58 for supports and MFMA-4 for framing systems.

B. Pipe Hangers and Supports

1. Type 1 – Clevis Pipe Hanger, configuration and components equivalent to MSS and FEDSPEC Type 1.

a. Steel pipe (insulated): B-Line B3100, Anvil International 260, or equal, with insulation shield.

b. Steel pipe (uninsulated): B-Line B3100, Anvil International 260, or equal.

c. Cast and ductile iron pipe: B-Line B3102, Anvil International 590, or equal.

d. Copper pipe (uninsulated): B-Line B3104 CT, Anvil International CT-65, or equal.

e. Copper pipe (insulated): B-Line B3100, Anvil International 260, or equal, with insulation shield.

f. Plastic pipe: B-Line B3100 C, Carpenter & Paterson Fig. 100PVC, or equal.

2. Type 2 – J Pipe Hanger, configuration and components equivalent to MSS Type 5

a. Steel pipe: B-Line B3690, Anvil International 67, Michigan model 418, or equal.

b. Copper and plastic pipe: Michigan model 419, Unistrut J 1205N series, or equal.

3. Type 3 – Double Bolt Pipe Clamp, configuration and components equivalent to MSS and FEDSPEC Type 3.

a. Steel pipe (insulated): B-Line B3144, Anvil International 295, or equal, with insulation shield. Insulation shield is optional for hot and ambient systems.

b. Steel pipe (uninsulated): B-Line B3144, Anvil International 295, or equal.

c. Copper pipe (insulated only): B-Line B3144, Anvil International 295, or equal, with insulation shield.

4. Type 4 – Adjustable Roller Hanger, configuration and components equivalent to MSS Type 43 and FEDSPEC Type 44.

a. Steel pipe (insulated): B-Line B3110, Anvil International 181, or equal, with insulation shield.

b. Steel pipe (uninsulated): B-Line B3110, Anvil International 181, or equal.

c. Copper pipe (insulated only): B-Line B3110, Anvil International 181, or equal, with insulation shield.

d. Plastic pipe: B-Line B3110, Anvil International 181, or equal.

5. Type 5 – Single Pipe Roll, configuration and components shall be equivalent to MSS Type 41 and FEDSPEC Type 42.

a. Steel pipe (insulated): B-Line B3114, Anvil International 171, or equal, with insulation shield.

b. Steel pipe (uninsulated): B-Line B3114, Anvil International 171, or equal.

c. Plastic pipe: B-Line B3114, Anvil International 171, or equal.

6. Type 6 – Framing Channel Pipe Clamp

a. Steel pipe (uninsulated):

1) Pipe size 3/8” and 1/2”: 16-gage;

2) 3/4” through 1 1/4”: 14 gage;

3) 1-1/2” through 3”: 12-gage;

4) 3 1/2” through 5”: 11- gage;

5) 6 and 8”: 10-gage;

b. Michigan Model 431, Powerstrut PS 1100, Unistrut P 1109 series, or equal.

c. Steel pipe (insulated): Pipe clamp as described in Paragraph 2.02 B.6.a with insulation shield.

d. Copper (uninsulated) and plastic pipe:
   1) Pipe size 3/8” and 1”: 16-gage;
   2) 1-1/4” and 1-1/2”: 14-gage;
   3) 2” through 3”: 12-gage;
   4) 4”: 11-gage;
   5) Clamp: copper-plated, plastic coated or lined with dielectric material;
   6) Michigan model 432, Powerstrut PS 1200, Unistrut P 2024C and P 2024PC series, or equal.

e. Copper pipe (insulated): Pipe clamp shall be as described in Paragraph 2.02 B.6.a with insulation shield.

7. Type 7 – U-Bolt Configuration equivalent to MSS and FEDSPEC Type 24.
   a. Steel pipe (uninsulated): Anvil International. 137, B-Line B3188, or equal.
   b. Steel pipe (insulated): Anvil International. 137, B-Line B3188, or equal, with insulation shield.
   c. Cast and ductile iron pipe: Anvil International. 137, B-Line B3188, or equal.
   d. Copper pipe (uninsulated): Carpenter & Paterson Fig. 222 CT, B-Line B3501 CT, Anvil International. 137C, or equal.
   e. Copper pipe (insulated): Anvil International. 137, B-Line B3188, or equal, with insulation shield.
   f. Plastic pipe: Anvil International. 137C, Michigan model 151, B-Line B3188 C, or equal.

8. Type 8 – Adjustable Pipe Roll Support
   a. Steel pipe (insulated): B-Line B3122, Anvil International. 177, or equal, with insulation shield.
   b. Steel pipe (uninsulated): B-Line B3122, Anvil International. 177, or equal.
   c. Copper pipe (insulated only): B-Line B3122, Anvil International. 177, or equal, with insulation shield.
   d. Plastic pipe: B-Line B3122, Anvil International. 177, or equal.

9. Type 9 – Welded Pipe Stanchion
   a. Minimum material thickness: standard schedule pipe, cut to match contour of the pipe elbow.
   b. Limit use of this support to ambient systems only.

10. Type 10 – Pipe Stanchion Saddle and Yoke, comply with MSS Type 37 and FEDSPEC Type 38.
   a. Steel pipe (insulated): Carpenter & Paterson Fig. 125, B-Line B3090, or equal, with insulation shield.
   b. Steel pipe (uninsulated): Carpenter & Paterson Fig. 125, B-Line B3090, or equal.
   c. Cast and ductile iron pipe: Carpenter & Paterson Fig. 125, B-Line B3090 NS, or equal.
   d. Copper pipe (uninsulated): Carpenter & Paterson Fig. 125, B-Line B3090, or equal, with insulation shield or lined with dielectric material.
   e. Copper pipe (insulated): Carpenter & Paterson Fig. 125, B-Line B3090, or equal, with insulation shield.
   f. Plastic pipe: Carpenter & Paterson Fig. 125, B-Line B3090, or equal.

11. Type 11 – Offset Pipe Clamp, Provided with configuration and components specified using standard designs offered by a pipe hanger component manufacturer.

    a. Steel pipe (insulated): B-Line B3148, Anvil International 103, or equal, with insulation shield.

    b. Steel pipe (uninsulated): B-Line B3148, Anvil International 103, or equal.

    c. Cast and ductile iron pipe: B-Line B3148 NS, Anvil International 103, or equal.

    d. Copper pipe (insulated): B-Line B3148, Anvil International. 103, or equal, with insulation shield.

    e. Copper pipe (uninsulated): B-Line B3148, Anvil International. 103, or equal, lined with dielectric material.

    f. Plastic pipe: B-Line B3148, Anvil International. 103, or equal.

    g. Vertical pipe support applications: as specified above except do not use insulation shields for insulated pipe.

12. Type 12 – Riser Clamp, configuration and components equivalent to MSS and FEDSPEC Type 8.

    a. Steel pipe (insulated): B-Line B3373, Anvil International 261, or equal.

    b. Steel pipe (uninsulated): B-Line B3373, Anvil International 261, or equal.

    c. Cast and ductile iron pipe: B-Line B3373, Anvil International 261, or equal.

    d. Copper pipe (insulated): B-Line B3373 CT, Anvil International CT-121, Michigan model 511, or equal.

    e. Copper pipe (uninsulated): B-Line B3373 CT, Anvil International CT-121, Michigan model 511, or equal.

    f. Plastic pipe: B-Line B3373, Anvil International. 261c, or equal.

13. Type 13 – Framing Channel Pipe Strap, configuration equivalent to MSS Type 26.

    a. Steel pipe (uninsulated): Superstrut No. C-708-U, Powerstrut PS 3126, Kin-Line No. 477, or equal.

    b. Steel pipe (insulated): Superstrut No. C-708-U, Powerstrut PS 3126, Kin-Line No. 477, or equal, with insulation shield.

    c. Copper pipe (uninsulated): Superstrut No. C-708-U, Powerstrut PS 3126, Kin-Line No. 477, or equal, with insulation shield or lined with dielectric material.

    d. Copper pipe (insulated): Superstrut No. C-708-U, Powerstrut PS 3126, Kin-Line No. 477, or equal, with insulation shield.

    e. Plastic pipe: Superstrut No. C-708-U, Powerstrut PS 3126, Kin-Line No. 477, or equal.

C. Rack and Trapeze Supports

1. General

    a. Unless otherwise specified, provide trapeze and pipe rack components minimum thickness of 12 gage, with a maximum deflection 1/240 of the span.

2. Type 20 – Trapeze Pipe Support

    a. For trapeze pipe support cross members, use framing channel as specified in Paragraph 2.02 E.5. For flat plate fittings, 1-5/8” square standard design manufactured by framing channel manufacturer, Unistrut P2471, B-Line B202-2, or equal.

3. Type 21 – Pipe Rack Support

   a. For post and cross members, use framing channel as specified in Paragraph 2.02 E.5. For pipe rack fittings, use standard design manufactured by framing channel manufacturer. For 90º fittings, use gusseted Unistrut P2484, B-Line B844, or equal. Provide post base fittings as specified in Paragraph 2.02 D.5.

D. Structural Attachments

1. Type A –Insert for Concrete:

   a. Concrete inserts: Comply with MSS and FEDSPEC Type 18.

   b. Anvil International 282, Carpenter & Paterson Fig. 108, or equal.

2. Type B – Side Beam Bracket

   a. Comply with MSS Type 34 and FEDSPEC Type 35.

   b. Anvil International. 202, B-Line B3062, or equal.

3. Type C –Beam Clamp with Extension Piece

   a. Comply with MSS and FEDSPEC Type 30.

   b. Anvil International. 218 with Fig. 157 extension piece, B-Line B3054, or equal.

4. Type D – Beam Clamp with Eye Nut

   a. Beam clamp and eye nut: forged stainless steel.

   b. For configuration and components, comply with MSS and FEDSPEC Type 28.

   c. Anvil International. 292, Carpenter & Paterson Fig. 297, or equal.

5. Type E – Framing Channel Post Base

   a. Standard design offered by framing channel manufacturer.

   b. Single channel: Unistrut P2072A, B-Line B280, or equal.

   c. Double channel: Unistrut P2073A, B-Line B281, or equal.

6. Type F – Welded Beam Attachment

   a. Comply with MSS and FEDSPEC Type 22. B-Line B3083, Anvil International. 66, or equal.

7. Type G – Welded Steel Bracket

   a. Comply with MSS Type 32 and FEDSPEC Type 33 for medium welded bracket.

   b. Comply with MSS Type 33 and FEDSPEC Type 34 for heavy welded bracket.

8. Type H –Bracket

   a. Carpenter & Paterson Fig. 340, or equal.

9. Type J – Adjustable Beam Attachment

   a. Carpenter & Paterson Fig. 151, B-Line B3082, or equal.

10. Type K – Double Channel Bracket

   a. Wall channel: single channel framing channel as specified in Paragraph 2.02 E.5.

   b. Cantilever bracket: double framing channel assembly, Unistrut P2542 through P2546, B-Line B297-12 through B297-36, or equal.

11. Type L – Single Channel Bracket

a. Wall channel: single channel framing channel as specified in Paragraph 2.02 E.5.

b. Cantilever bracket: a single framing channel assembly, Unistrut P2231 through P2234, B-Line B198-6, B198-12, B196-18 and B196-24, or equal.

12. Type M – Wall Mounted Channel

a. Wall channel: single channel framing channel as specified in Paragraph 2.02 E.5.

13. Type N – Pipe Stanchion Floor Attachment

a. Base plate: 1/2” minimum thickness.

b. Make anchor bolt holes 1/16” larger than the anchor bolt diameter.

c. Fill space between the base plate and the floor with nonshrink grout.

E. Accessories

1. Hanger Rods

a. Rods: threaded on both ends or continuous threaded and sized as specified.

2. Weldless Eye Nut

a. Eye nut: forged stainless steel and complying with MSS and FEDSPEC Type 17.

b. Manufacturer: Anvil International. 290, B-Line B3200, or equal.

3. Welded Eye Rod

a. Weld-eye rod closed. Make inside diameter of eye a bolt diameter 1/8” larger than the rod diameter.

b. Manufacturer: Anvil International. 278, B-Line B3211, or equal.

4. Turnbuckle

a. Turnbuckle: forged stainless steel and complying with MSS and FEDSPEC Type 13.

b. Manufacturer: Anvil International. 230, B-Line B3202, or equal.

5. Framing Channel

a. Framing channel: 1-5/8” square, roll formed, 12-gage.

b. Provide channel with a continuous slot along one side with in-turned clamping ridges.

c. Single channel: Unistrut P1000, B-Line B22, or equal.

d. Double channel: Unistrut P1001, B-Line B22A, or equal.

e. Triple channel: Unistrut P1004A, B-Line B22X, or equal.

2.03 THERMAL PIPE HANGER SHIELD

A. Provide thermal shields at hanger, support, and guide locations on pipe requiring insulation.

B. The shield shall consist of an insulation layer encircling the entire circumference of the pipe and a steel jacket encircling the insulation layer.

C. Make the thermal shield the same thickness as the piping system insulation specified in Section 15250.

D. Use the standard shield for hot systems and the vapor barrier shield for cold systems.

E. Use stainless steel band clamps where specified to ensure against slippage between the pipe wall and the thermal shield.

F. Standard Shield

1. Insulation

a. Hydrous calcium silicate, high density, waterproof.

b. Compressive strength: 100 psi average.

c. Flexural strength: 75 psi average.

d. K factor: 0.38 at 100ºF mean.

e. Temperature range: 20ºF to 500ºF.

2. Steel Jacket

a. Stainless steel. Manufacturer's standard gauge supplied for the given pipe size.

3. Connection

a. Butt connect to pipe insulation. Install with steel jacket and insulation flush with end.

G. Vapor Barrier Shield:

1. Insulation

a. Hydrous calcium silicate, high density, waterproof.

b. Compressive strength: 100 psi average.

c. Flexural strength: 75 psi average.

d. K factor: 0.38 at 100ºF mean.

e. Temperature range: 20ºF to 500ºF.

2. Steel Jacket

a. Stainless steel. Manufacturer's standard gauge supplied for the given pipe size.

3. Connection

a. Butt connect shield to pipe insulation.

b. Extend insulation 1" each side of steel jacket for vaportight connection to pipe insulation vapor barrier.

PART 3 - EXECUTION

3.01 HANGER AND SUPPORT LOCATIONS

A. Locate hangers and supports as near as possible to concentrated loads such as valves, flanges, etc.

B. Locate hangers, supports and accessories within the maximum span lengths specified in the contract documents to support continuous pipeline runs unaffected by concentrated loads. Indicate hanger and support locations and components on the piping layout drawings required by Paragraph 1.05. For pipe support submittals, provide a complete cross reference of each support by mark number, including the page number on which each mark number can be found. Set up the cross reference to permit review from the mark numbers to the drawings, not the other way around.

C. Locate at least one hanger or support within 2' from a pipe change in direction.

D. Locate hangers and supports to ensure that connections to equipment, tanks, etc., are substantially free from loads transmitted by the piping.

E. Where piping is connected to equipment, a valve, piping assembly, etc., that will require removal for maintenance, support piping so temporary supports are not necessary.

F. Locate pipe supports to prevent "pockets" from forming in pipe between supports due to excessive deflection under load from weight of pipe, medium in the pipe, insulation, valves and fittings.

3.02 INSTALLATION

A. Construct welded and bolted attachments to the building structural steel which comply with the AISC Manual of Steel Construction. Unless otherwise specified, do not drill or burn holes in the building structural steel.

B. Do not use hanger components for purposes other than for which they were designed. Do not use components for rigging and erection purposes.

C. Install items to be embedded before concrete is poured. Fasten embedded items securely to prevent movement when concrete is poured.

D. Use embedded anchor bolts that satisfy the 2010 CBC provisions instead of concrete inserts for supports in areas below water surface or normally subject to submergence.

E. Install thermal pipe hanger shields on insulated piping at required locations during hanger and support installation. Make butt joint connections to pipe insulation at the time of insulation installation per manufacturer’s recommendations.

F. When hanger and support components are in contact with plastic pipe, make sure the components are free of burrs and sharp edges.

G. Ensure rollers roll freely without binding.

H. Roughen finished floor to a 1/4 inch amplitude beneath structural attachments and framing channel post bases prior to grouting. Place grout, free of voids and foreign material, between base plate and floor.

I. Cut and drill base plates to specified dimensions prior to welding stanchions or other attachments and prior to setting anchor bolts.

J. Provide plastic or rubber end caps at the exposed ends of all framing channels that are located up to 7’ above the floor.

3.03 ADJUSTMENTS

A. Adjust hangers and supports to obtain required pipe slope and elevation.

B. Use shims made of material that is compatible with the piping material.

C. Adjust stanchions prior to grouting their base plates.

END OF SECTION

SECTION 15076

PIPING AND VALVE IDENTIFICATION SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Identification systems for buried and exposed piping and valves.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals
2. Section 09960 – High Performance Coatings
3. Section 15050 – Piping Systems

1.03 SUBMITTALS

A. Comply with Section 01330.

B. Include the following items:

1. Manufacturer's catalog information demonstrating compliance with the materials requirements of this Section.
2. Samples of the materials to be used for piping and valve identification.
3. A schedule of piping services and description of identification systems.

PART 2 - PRODUCTS

2.01 PIPE CODING MARKERS

A. Manufacturers

1. One of the following or equal:
   a. Brady Company.
   b. Seton Name Plate Corporation.
   c. Industrial Safety Supply Corporation.

B. Comply with ANSI A13.1.

C. Type

1. Mechanically attached type that is easily removable.
2. Do not use adhesive applied type.
3. Pressure sensitive legends applied to plastic backing which is strapped or otherwise mechanically attached to the pipe.

D. Legend and Backing

1. Resistant to petroleum based oils and grease.
2. Meet criteria for humidity, solar radiation, rain, salt, fog and leakage fungus, as specified by MIL-STD-810C.

E. Withstand a continuous operating temperature range of -40ºF to 180ºF.

F. Manufactured and applied in one continuous length of plastic. Do not provide individual letter type.

G. Provide in the following letter heights: For markers bearing the legends on the background colors specified in Section 15050 (PIPESPEC).

Outside pipe diameter,[(a)] inches	Letter height, inches
Less than 1-1/2	1/2
1-1/2 through 3	1 1/8
Greater than 3	2-1/4
[(a)] Outside pipe diameter shall include insulation and jacketing.	

H. Include uni- and bi-directional arrows in the same sizes as the legend. Provide legends and arrows in white on blue or red backgrounds, and black on other specified backgrounds.

2.02 PLASTIC TRACER TAPE

A. Manufacturers

1. One of the following or equal:

a. Brady Company.

b. Seton Name Plate Corporation.

c. Industrial Safety Supply Corporation.

B. 6” wide, colored the same as the background colors as specified in Section 15050.

C. Material: inert plastic material suitable for direct burial.

D. Capable of stretching to twice its original length.

E. Print two messages on the tape, both messages at maximum intervals of 2 feet.

1. First message: **“CAUTION CAUTION CAUTION PIPE BURIED BELOW”** with bold letters approximately 2” high.

2. Second message:

a. The blank in the first message shall contain the words **“NON-POTABLE WATER”** when used for W2 and IRR piping.

b. The blank in the first message shall contain the words **“RECLAIMED WASTEWATER”** when used for W3 piping.

c. The blank in the first message shall contain the words **“STORM DRAIN”** when used for SD piping.

d. The blank in the first message shall contain the word **“SEWER”** for all other piping systems.

2.03 MAGNETIC TRACER TAPE

A. Manufacturers

1. One of the following or equal:

a. Brady Co.

b. Seton Name Plate Corporation

c. Industrial Safety Supply Corporation.

B. Material

1. Acid and alkali-resistant polyethylene.
2. 3” wide.
3. 0.005” thick.
4. 1,500 psi strength and 140% elongation value.

C. Color the same as the background colors as specified in Section 15050 and inscribe with the words **“CAUTION—PIPE BURIED BELOW”.**

2.04 VALVE IDENTIFICATION

A. Fabricate of stainless steel and inscribed with the specified valve number stamped in 1/4” high letters.

B. The label shall be of 1/16-inch thick stainless steel with a minimum size of 2 inches.

C. See Drawings for valve designation system.

PART 3 - EXECUTION

3.01 PIPING IDENTIFICATION

A. Pipe Coding

1. After application of the specified coating and insulation systems to new or existing piping, as specified in Section 09960, identify exposed piping, interior and exterior, and piping in ceiling spaces, pipe trenches, pipe chases and valve boxes identified with plastic markers.
2. Locate legend markers and directional arrows at each side of walls, floors and ceilings, at one side of each piece of equipment, at piping intersections, and at approximately 50’ centers.

B. Plastic Tracer Tape

1. Provide a single line of plastic tracer tape as specified in this Section, 2.5 feet above the centerline of each buried pipe.
2. Spread tape flat with message side up before backfilling.

C. Polyethylene Magnetic Tracer Tape

1. Install 12-18” below ground and parallel to all buried pipes.

3.02 VALVE IDENTIFICATION

A. Label all valves designated with a valve number where valve numbers are indicated on the Drawings.

B. Each label shall be permanently attached to the valve using stainless steel screws, stainless steel wire and connectors, or another method subject to approval.

C. Install tags on valve flanges in a position visible from floor level.

D. For flangeless valves 8” in diameter and larger, attach tags to the valve body by self-tapping corrosion resistant metal screws.

E. For flangeless valves 6” in diameter and smaller, attach tags to the valve stem by stainless steel wire. Use 0.063” wire minimum.

END OF SECTION

SECTION 15095

PIPING APPURTENANCES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Level gauges and pressure gauges.

B. Exclusions

1. Temperature, pressure, and flow measuring devices used for instrumentation are specified in Division 16.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittals

1.03 SUBMITTALS

A. Comply with Section 01330.

PART 2 - PRODUCTS

2.01 PRESSURE DEVICES

A. Analog dial-type pressure gauges and accessories to be furnished and installed at the locations indicated on the drawings and in the Gauge Schedule included herein.

B. Provide in accordance with the schedule, whether or not indicated in the drawings.

C. Gauges to be furnished by an equipment supplier, either with an item of equipment or as a component of an equipment package, are covered in the applicable equipment section.

D. Gauge piping and fittings:

1. Tubing

a. Material:

1) ASTM A269, Grade TP 316, annealed, max hardness Rockwell B80

b. Min wall thickness:

Tube OD, inches	Wall Thickness, inches
1/4 - 3/8	0.065
1/2 - 7/8	0.083
1 - 2	0.109

2. Fittings

a. Compression type

b. Material:

1) AISI Type 316 stainless steel.

c. Manufacturers:

1) Crawford “Swagelok”,

2) Parker Hannifin “CPI”, “Ferulok”,

3) or equal.

E. Pressure Gauges

1. Provide where shown on the Drawings and as specified. Contractor shall be responsible for all gauges shown on the drawings, even if a gauge is not scheduled herein.

2. Select so that the normal operating pressure falls between 50 and 80% of full scale.

3. Components

a. Face: 4-inch with white background and black markings, 270º movement, indicate units of measurement.

b. Accuracy: 1.0% accuracy, full scale.

c. Bottom stem mounting.

d. Type 316 stainless steel bourdon tube.

e. Case

1) 300 series stainless steel case, shatterproof glass, and a 1/2” NPT bottom connection.

2) For gauges installed outdoors, provide weather-proofed cases.

4. For air, gas, and low pressure services (0–10’), provide premium grade, heavy-duty bourdon-tube units (bellow type for vacuum) with Delrin bushings and pinion, and stainless steel sector.

5. For liquid service, comply with above, except provide with an internal pulsation dampening system consisting of either a glycerin fill or a silicone fluid fill. Do not use snubbers or orifices.

6. Manufacturers, one of the following or equal:

a. Ashcroft Duragauge Fig. 1009.

b. Ametek 1535.

F. Gauge Accessories:

1. Isolating Valves

a. Provide each gauge with an isolating, threaded-end eccentric plug valve. Furnish valve with Type 316 stainless steel body, plug, bearings and stem. Packing: Buna-N or PTFE. Manufacturers: Dezurik Model PEC, Clow or equal.

2. Gauge Isolators

a. Provide a suitable isolator shall be provided for each gauge, as indicated in the Gauge Schedule included herein, and for all gauges located on chemical lines and all gauges located on wastewater or other solids bearing liquids.

b. Unless otherwise specified, provide a diaphragm seal (DS).

1) Type: Thread-attached type with removable AISI Type 316 stainless steel diaphragm, zinc or cadmium plated carbon steel upper housing, and bronze lower housing.

2) Upper housing: Contour to fit. Provide a seat and seal for the diaphragm. Design to permit removal of the gauge with the system under pressure.

3) Lower housing: Provide with a tapped and plugged 1/4-inch NPT flushing connection.

c. Provide an inline, flow-thru, annular seal, flange type gauge isolator at the locations indicated on the drawings or in the Gauge Schedule included herein, designation AS.

1) Components: Carbon steel housing, carbon steel assembly flanges, and Buna-N flexible cylinder, filled with silicone oil.

2) Furnish suitable for installation between two flat faced ANSI B16.1, Class 125 cast iron pipe flanges, and tapped for a 1/2-inch NPT gauge connection.

d. Manufacturers, one of the following or equal:

1) Ronningen-Petter “Iso-Ring”.

2) Red Valve “Series 40 Flanged Sensor”.

e. Assemble, fill with a suitable fluid, and calibrate as a unit at the factory each isolator, diaphragm seal, and gauge served.

PART 3 - EXECUTION

3.01 INSTALLATION OF PRESSURE GAUGES

A. Install at the locations indicated on the drawings. Configure to the requirements indicated on the drawings and the Gauge Schedule located herein.

B. Unless otherwise specified herein, do not direct tap pipe walls for installation of gauge connections.

C. Install all gauges and diaphragm in the vertical upright position.

1. Use Teflon thread tape or Teflon thread sealer to assemble threaded connections.

2. Make all connections free from leaks.

D. Purge lines of trapped air at gauge location prior to installation of the gauge or diaphragm seal.

3.02 GAUGE TAPS

A. Provide on the suction and discharge of pumps, fans, compressors, vacuum pumps and blowers.

B. Type: 1/2” gauge valve attached by a threaded nipple to the pipeline, duct, or equipment.

END OF SECTION

(THIS PAGE LEFT BLANK INTENTIONALLY)

SECTION 15097

SEISMIC RESTRAINTS FOR PIPING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Seismic restraints for bracing all piping systems specified in Section 15050.

1.02 REFERENCED SECTIONS

A. The following Sections are referenced in this Section

1. Section 01330 – Submittal Procedures
2. Section 01612 – Seismic Design Criteria
3. Section 05500 – Miscellaneous Metals
4. Section 15050 – Piping Systems

1.03 DEFINITIONS

A. Longitudinal Direction: Direction parallel to the pipe axis.

B. Lateral Direction: Direction perpendicular to the pipe axis.

1.04 OPERATING CONDITIONS

A. Provide seismic restraints, specified in this section, to resist pipe movements and loads occurring as a result of an earthquake or other seismic event.

B. Unless otherwise specified, brace all piping to resist seismic loading caused by forces applied at the individual pipe's center of gravity. For seismic loading see Section 01612.

1.05 RESTRAINT SELECTION

A. Unless otherwise specified, select, locate and provide seismic restraints for piping in accordance with the contract documents.

B. Review the piping layout in relation to the surrounding structure and adjacent piping and equipment before selecting the restraint to be used at each point.

C. Seismic restraints may be omitted from the following installations:

1. Gas piping less than 1" inside diameter.
2. Piping in boiler and mechanical rooms less than 1-1/4" inside diameter.
3. All other piping less than 2-1/2" inside diameter.
4. All piping suspended by individual hangers 12" or less in length from the top of the pipe to the bottom of the support for the hanger.

D. Do not brace piping systems to dissimilar parts of a building or to dissimilar building systems that may respond in a different mode during an earthquake. Examples: wall and a roof; solid concrete wall and a metal deck with lightweight concrete fill.

E. Size restraints to fit the outside diameter of the pipe, tubing, or, where specified, the outside diameter of insulation.

F. Do not permit contact between a pipe and restraint component of dissimilar metals. Prevent contact between dissimilar metals when restraining copper tubing by the use of copper-plated, rubber, plastic or vinyl coated, or stainless steel restraint components.

G. Do not use branch lines to brace main lines.

H. Do not permit seismic bracing to limit the expansion and contraction of the piping system.

1.06 SUBMITTALS

A. Provide seismic restraint locations, load calculations, and manufacturer's drawings as specified in Paragraph 3.01 as part of the submittals for equipment and piping coordination and installation drawings required in Section 15050.

B. Provide seismic restraint load calculations for each seismically restrained pipe system prepared and signed by a civil or structural engineer currently registered in the State of California. See Section 01612 for seismic loading required.

PART 2 - MANUFACTURERS

2.01 MANUFACTURERS

A. Carpenter & Patterson.

B. B-Line.

C. Kin-Line.

D. Anvil International.

E. Michigan.

F. Pipe Shields Incorporated.

G. Superstrut.

H. Unistrut.

I. Or equal as specified in Section 01330.

2.02 PRODUCTS

A. Materials

1. Restraints, including braces and fittings, pipe and structural attachments, trapeze restraints, and accessories: Type 316 stainless steel.

2. Nuts, bolts and washers, fittings and accessories: Type 316 stainless steel.

3. Comply with MSS SP-58

B. Pipe Attachments

1. Type 1s - Clevis Restraint Attachment

a. Provide Type 1, clevis pipe hanger, as specified in Section 15060, 2.02.B.

2. Type 3s - Double Bolt Restraint Clamp:

a. Provide Type 3, double bolt pipe clamp, as specified in Section 15060, 2.02.B.

3. Type 4s - Roller Restraint Attachment

a. Provide Type 4, adjustable roller hanger, as specified in Section 15060, 2.02.B.

b. Size hold down strap as follows:

1) 1” through 2” Pipe: 1” by 1/8” thick
2) 2-1/2” through 4” Pipe: 1-1/4” by 3/l6” thick
3) 6” Pipe: 2” by 3/l6” thick
4) 8” Pipe: 2-1/2” by 3/16” thick
5) 10” through 16” Pipe: 2-1/2” by 1/4” thick
6) 20” Pipe: 3” by 1/4” thick
7) 24” Pipe: 3” by 3/8” thick.

4. TypeE 7s - U-Bolt Restraint

a. Provide Type 7, U-bolt, as specified in Paragraph 15060, 2.02.B.

5. Type 13s - Framing Channel Strap Restraint

a. Provide Type 13, framing channel pipe strap, as specified in Paragraph 15060, 2.02.B.

6. Type 14s - Pipe Clamp Restraint

a. Provide with configuration and components equivalent to MSS and FEDSPEC Type 4.

b. Rod attachment and longitudinal brace connection stud shall be fabricated and welded by the manufacturer.

c. Steel pipe (insulated): Superstrut No. S-720, Kin-Line No. S475, or equal, with insulation shield.

d. Steel pipe (uninsulated): Superstrut No. S-720, Kin-Line No. S475, or equal.

e. Cast and ductile iron pipe: Superstrut No. S-720, Kin-Line No. S475, or equal.

f. Copper pipe (insulated): Superstrut No. S-720, Kin-Line No. S475, or equal, with insulation shield.

g. Copper pipe (uninsulated): Superstrut No. S-720, Kin-Line No. S475, or equal, with insulation shield or dielectric lining.

h. Plastic pipe: Superstrut No. S-720, Kin-Line No. S475, or equal.

C. Trapeze Restraints

1. General

a. Unless otherwise specified, provide trapeze members with a minimum steel thickness of 12-gage, with a maximum deflection 1/240 of the span.

2. Type 20s - Single Channel Lateral Restraint

a. Trapeze restraint cross member

1) 1-5/8” square framing channel, Unistrut P1000, B-Line B22, Superstrut A-1200, or equal.

b. Pipe attachments

1) Type 13s or Type 7s specified in Paragraph 2.02.B.

c. Rod stiffeners and lateral brace

1) As specified in Paragraph 2.02.D.

3. Type 21s - Double Channel Lateral Restraint

a. Trapeze restraint cross member

1) a double channel manufactured assembly such as Unistrut P1001, B-Line B22A, Superstrut A-1202, or equal.

2) Pipe attachments

a) Type 13s or Type 7s specified in Paragraph 2.02.B.

b. Rod stiffeners and lateral brace

1) As specified in Paragraph 2.02.D.

4. Type 22s - Double Channel Longitudinal Restraint

a. Trapeze restraint cross member: a double channel manufactured assembly such as Unistrut P1001, B-Line B22A, Superstrut A-1202, or equal.

b. Pipe attachments

1) Type 13s or Type 7s specified in Paragraph 2.02.B.

c. Rod stiffeners, longitudinal and lateral braces

1) As specified in Paragraph 2.02.D.

D. Braces and Fittings

1. Seismic Brace Fitting

a. Provided for use with industry standard framing channel.

b. Provide welded construction, two-piece linked fitting.

c. Provide means to reduce noise and vibration transmission between the linked fitting parts.

d. Manufacturers

1) Superstrut C-749N series seismic brace,

2) Kin-Line No. 633 seismic connector fitting,

3) or equal as defined in Section 01330.

2. Hanger Rod Stiffener Assembly

a. Rod stiffener channel

1) 1-5/8” square framing channel, Unistrut P1000, B-Line B22, Superstrut A-1200, or equal.

b. Rod stiffener clamps, complete with channel nut

1) Superstrut ES-142, Kin-Line No. 635, or equal as defined in Section 01330.

3. Type A1 Seismic Brace

a. Provide 1-5/8” square framing channel, Unistrut P1000, B-Line B22, Superstrut A-1200, Kin-Line No. 4112, or equal as defined in Section 01330.

4. Type A2 Seismic Brace

a. Provide 1-5/8” wide by 3-3/4” deep framing channel, Unistrut P5000, B-Line B11, Superstrut H-1200, Kin-Line No. 8212, or equal as defined in Section 01330.

E. Structural Attachments

1. General

a. Unless otherwise specified, provide hanger rod structural attachments as specified in Section 15060.

b. Structural attachments for longitudinal and lateral seismic braces: as specified in Paragraph 2.02.D.

2. Type SA-1 Attachment

   a. Brace fitting: as specified in Paragraph 2.02.D.

   b. Concrete anchors

      1) As specified in Section 05500 with embedment and location dimensions as specified.

3. Type SA-2 Attachment

   a. Brace fitting: as specified in Paragraph 2.02.D.

   b. Concrete anchors

      1) As specified in Section 05500 with embedment and location dimensions as specified.

   c. Framing channel

      1) As specified in Paragraph 2.02.F.

4. Type SA-3 Attachment

   a. Brace fitting

      1) As specified in Paragraph 2.02.D.

   b. Cap screw, lockwasher and hex nut materials and finish: compatible with structural steel material.

5. Type SA-4 Attachment

   a. Brace fitting

      1) As specified in Paragraph 2.02.D.

6. Type SA-5 Attachment

   a. Brace fitting

      1) As specified in Paragraph 2.02.D.

      2) Angle: 4” x 3” x 3/8”.

F. Accessories

1. Hanger Rods

   a. Threaded on both ends or continuous threaded and sized as specified.

2. Framing Channel

   a. Roll formed, 12-gage.

   b. Provide channel with a continuous slot along one side with in-turned clamping ridges.

   c. Manufacturers

      1) Unistrut P1000 series,

      2) B-Line B22 series,

      3) Superstrut A-1200 series,

      4) or equal as specified in Section 01330.

3. Rod Coupling

   a. Provide with sight hole in center of coupling body.

   b. Manufacturers

      1) Anvil International. 135,

      2) Superstrut H-119,

      3) or equal as specified in Section 01330.

2.03 THERMAL PIPE HANGER SHIELD

A. Provide thermal shields at seismic restraint locations on pipe requiring insulation.

B. Provide thermal pipe hanger shields as specified in Section 15060, 2.03.

C. Provide Type 316 stainless steel band clamps on thermal shields at longitudinal pipe restraint locations.

PART 3 - EXECUTION

3.01 PIPE RESTRAINT LOCATIONS

A. Locate the first seismic restraint on a piping system not more than 10’ from the main riser, entrance to a building or piece of equipment.

B. Brace cast iron pipe on each side of a change in direction of 90º or more. Brace or stabilize joints in risers between floors.

C. Brace no-hub and bell and spigot cast iron soil pipe longitudinally every 20’ and laterally every 10’.

D. Lateral bracing for one pipe section may also act as longitudinal bracing for the pipe section connected perpendicular to it, if the bracing is installed within 24” of the elbow or tee of the same size.

E. Indicate seismic restraint locations and components on the piping layout drawings required by Section 15050.

F. Provide a legend giving load information and restraint component selection at each restraint location.

G. Provide seismic restraint load calculations conforming to the requirements specified in Paragraph 1.06.

3.02 INSTALLATION

A. Use rod stiffener assemblies at seismic restraints for hanger rods over 6” in length. Provide a minimum of two rod stiffener clamps on any rod stiffener assembly.

B. Install lateral and longitudinal bracing between 45º above and 45º below horizontal, inclusive, relative to the horizontal centerline of the pipe.

C. Construct welded and bolted attachments to the building structural steel which comply with the AISC Manual of Steel Construction. Do not drill or burn holes in the building structural steel without approval of the Construction Manager

D. Use embedded anchor bolts instead of concrete inserts for seismic brace installations in areas below water surface or normally subject to submerging.

E. Install thermal pipe hanger shields on insulated piping at required locations during restraint installation. Make butt joint connections to pipe insulation at the time of insulation installation per the manufacturer’s recommendations.

F. Provide restraint components in contact with plastic pipe which are free of burrs and sharp edges.

G. Ensure rollers roll freely without binding.

H. Provide plastic or rubber end caps at the exposed ends of all framing channels that are located up to 7’ above the floor.

END OF SECTION

SECTION 15110.5

VALVES AND APPURTENANCES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Miscellaneous valves and accessories for water service. Valves shall be installed in accordance with the manufacturer's recommendations. Valves shall be suitable for pressures up to 150 psi. Valves shall be complete with all necessary operating hand wheels, extension stems, valve boxes, floor stands, worm and gear operators, operating nuts, hardware and fasteners, and wrenches which are required for the proper completion of the work included under this section.

1.02 SECTION INCLUDES

A. The following Sections are referenced in this Section:
