Pace ANALYTICAL SERVICES	DC#_Title: ENV-FRM-SACR-0030 CA Regulated Soil Notification
	Effective Date: 09/30/2022 22-25679

USDA / APHIS regulates material with organic matter, including soil, from specific counties that have invasive species, pests, or plant diseases present in the county. In order to process your project, we need to determine if special handling applies to your project.

Any soils received without this completed form cannot be received or processed until the site address is confirmed.

Receipt of Soils from California:

Are samples soil or other regulated material?

☒ Yes ☐ No If no, matrix description: _____

County

☐ Alameda ☐ Contra Costa ☐ Del Norte ☐ Humboldt ☐ Lake Los Angeles [1]
☐ Marin ☒ Mendocino ☐ Monterey ☐ Napa Orange [1,2] Riverside [1]
☐ San Diego [2] ☐ San Francisco ☐ San Mateo Santa Clara Santa Cruz
☐ Solano ☐ Sonoma ☐ Trinity

Other (specify): _____

(If soils are from one of the counties specified above, the site address is required.)

Site Address: 391 Plant Road, Ukiah, CA

Fire Ant [1] and Fruit Fly [2] quarantines may be partial county quarantines. The site address must be checked against APHIS interactive maps to determine if the site is within the quarantine area.

To be completed by Pace National: Client: Crawford

Lab ID (if applicable): _____

Are Samples Regulated? ☐ No ☒ Yes

Regulated for? ☒ Phytophthora Ramorum ☐ Fire Ants ☐ Fruit Flies*

Amount of soil received: ~ 6500 grams. Received on: 10/25/22

Will any analysis be done at another lab? ☐ Yes ☐ No

If yes, complete the following for each lab that will receive the regulated samples:

Receiving Lab	Amount Shipped	Shipment sent with the receiving lab's Soil Permit / Compliance Agreement.
Pace Bakersfield	~ 6500 g	☐ Yes MMS 10/25/22 (initial / date)
	~ g	☐ Yes _____ (initial / date)
	~ g	☐ Yes _____ (initial / date)
	~ g	☐ Yes _____ (initial / date)

* Soils cannot be transferred to another destination without either a PPQ 530 or PPQ 540 form. Contact APHIS before proceeding.

Initial / date after a copy of form has been sent to Luis Oquendo, USDA APHIS PPQ MMS 10/25/22

Qualtrax ID: 71192

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A10	Detection and quantitation limits were raised due to matrix interference.
A20	Surrogate is low due to matrix interference. Interference verified through second extraction/analysis.
A26	Sample received past holding time.
Q03	Matrix spike recovery(s) was(were) not within the control limits.
S05	The sample holding time was exceeded.
S09	The surrogate recovery for this compound was not within the control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.
All results listed in this report are for the exclusive use of the submitting party. Pace Analytical assumes no responsibility for report alteration, separation, detachment or third party interpretation.

APPENDIX IV
DRAFT SITE-SPECIFIC GROUND MOTION HAZARD MEMORANDUM
CITY OF UKIAH RECYCLED WATER PIPELINE – PHASE 4 DESIGN PROJECT
SLUDGE BASIN
UKIAH, CALIFORNIA

1 INTRODUCTION

Crawford completed two borings in 2022 at the City of Ukiah Wastewater Treatment Plant to supplement the two Crawford borings completed in 2017 and a site-specific ground motion hazard analysis for compliancy with ASCE 7-16 (with Supplement 1) and 2019 CBC.

2 SITE SPECIFIC ANALYSIS

The following sections describe the site-specific ground motion analysis.

2.1 INITIAL SEISMIC HAZARD ANALYSIS

2.1.1 SEISMIC DESIGN CRITERIA

Seismic design criteria are included in Section 11 of ASCE 7-16 (Sections referenced hereafter refer to ASCE 7-16), including mapped acceleration parameters. These mapped parameters are available online through the SEAOC/OSHPD[1] Seismic Design website, which interpolates values from the ASCE 7-16 maps using the site location.

2.1.2 SITE CLASS AND RISK CATEGORY

The site was classified as Site Class D according to Section 20.3.13. Boring A-22-001 and B-1 (2017) shows discontinuous potentially liquefiable layers from 28 to 33 feet below ground surface (bgs); based on the discontinuous layers of loose and we consider the liquefaction risk to be low and classify the site as Site Class D.

The shear wave velocity of 210 meters per second (m/s) in the upper 30 meters or 100 feet (V_{S30}) used for the site was developed from 2017 boring data. Crawford used correlations with SPT blow count N-values corrected for hammer efficiency to determine V_S values in soil per Caltrans correlations[2]. The Risk Category for the structure was assumed to be III.

2.1.3 MAPPED ACCELERATION PARAMETERS

Crawford accessed the SEAOC/OSHPD Seismic Design Map website considering the site location latitude 37.1117°N and longitude 123.1900°W, Site Class D, and Risk Category III to determine the Mapped Maximum Considered Earthquake (MCE) Spectral Response Short Period (S_S), Mapped MCE Spectral Response at 1 second period (S_1), Long Period (T_L), and mapped risked coefficients (C_{RS} and C_{R1}). The S_S, S_1, T_L, C_{RS}, and C_{R1} are coordinate specific and are taken from ASCE 7-16 figures independently of site class. The mapped acceleration parameters are based on an MCE which is roughly equivalent to an earthquake with a 2% chance of

[1] https://seismicmaps.org
[2] Caltrans "Methodology for Developing Design Response Spectrum for Use in Seismic Design Recommendations", Appendix A, pgs 15-18, November 2012.

exceedance in 50 years (2,475-year return period). Table 1 summarizes the mapped acceleration parameters.

Table 1: Mapped Acceleration Parameters

Mapped Acceleration Parameter	Value	Source
Mapped MCE_R Spectral Response Short Period (S_S)	1.88	Figure 21-1
Mapped MCE_R Spectral Response at 1 Second Period (S_1)	0.719	Figure 21-2
Long Period (T_L)	8	Figure 21-14
Mapped Risk Coefficient at Short Period (C_{RS})	0.887	Figure 22-17
Mapped Risk Coefficient at 1 Second Period (C_{R1})	0.881	Figure 22-18

2.2 HORIZONTAL GROUND MOTION HAZARD ANALYSIS

A ground motion hazard analysis accounts for the regional tectonic setting, geology, and seismicity of a specific site as well as the expected recurrence of the maximum magnitudes of the earthquakes on known faults and source zones, considering ground motion attenuation and near source effects. The methodology included in ASCE 7-16 was used to determine the site-specific ground motions of the project site, generally consisting of the following steps:

- Determine the probabilistic MCE ground motions
- Determine the deterministic MCE ground motions
- Adjust MCE ground motions to maximum horizontal response
- Adjust probabilistic MCE ground motions to risk-targeted maximum considered earthquake ground motions (MCE_R)
- Compare and scale the site-specific deterministic MCE ground motion with minimum spectral responses to ASCE 7-16 Supplement 1 Section 21.2.2
- Calculate design spectral response ground motion (2/3 of MCE_R)
- Compare the Section 21.2 design spectral response ground motion to the Section 11.4.6 design spectral response ground motion (cannot be lower than 80% Section 11.4.6 design spectral response ground motion)
- Determine the design spectral response spectrum and design acceleration parameters
- Calculate peak ground acceleration (PGA_M)

2.2.1 GROUND MOTION HAZARD ANALYSIS

Crawford performed a seismic hazard analyses and site response analyses using EZ-FRISK software Version 8.07. Crawford used the following next generation attenuation relationships (NGA) all equally weighted for the nearby strike-slip and reverse faults:

- Boore-et al (2014)
- Campbell and Bozorgnia (2014)
- Chiou and Youngs (2014)

Table 2: Summary of Seismic Sources

Attenuation Relationship Type	Source	Distance (km)	Maximum Magnitude	Mechanism	Dip Angle (degree)	Dips Direction	Site Lies
NGA	California Gridded	0	7	SS|R	90	--	Above
	Great Valley 2	11.16	6.501	Reverse	15	W	E
	Great Valley 3, Mysterious Ridge	11.25	7.1	Reverse	20	SW	NE
	Great Valley 1	22.01	6.8	Reverse	15	W	S
	Hunting Creek-Berryessa	33.58	7.1	Strike Slip	90	--	NE
	Bartlett Springs	33.76	7.3	Strike Slip	90	--	NE
	Great Valley 4a, Trout Creek	48.67	6.6	Reverse	20	SW	N
	Collayomi	55.80	6.7	Strike Slip	90	--	NE
	Shear 1 Gridded	61.34	7.6	Strike Slip	90	--	SW
	Great Valley 4b, Gordon Valley	66.59	6.8	Reverse	20	W	N
	Maacama-Gerberville	71.53	7.4	Strike Slip	90	--	NE
	Hayward-Rodgers Creek	78.97	7.334	Strike Slip	90	--	NE
	West Napa	79.32	6.7	Strike Slip	90	--	N
	Great Valley Connected	81.12	6.8	Strike Slip	90	--	N
	Great Valley 5, Pittsburg Kirby Hills	94.36	6.7	Strike Slip	90	--	N
	Northern San Andreas	110.96	8.05	Strike Slip	90	--	NE
	Shear 3 Gridded	121.95	7.6	Strike Slip	90	--	SW
	Shear 2 Gridded	124.76	7.6	Strike Slip	90	--	SW
	Point Reyes	130.47	6.9	Reverse	50	NE	NE

Attenuation Relationship Type	Source	Distance (km)	Maximum Magnitude	Mechanism	Dip Angle (degree)	Dips Direction	Site Lies
	Mount Diablo Thrust	131.91	6.7	Reverse	38	NE	N
	Greenville Connected	139.94	7	Strike Slip	90	--	N
	Greenville Connected U	139.94	7	Strike Slip	90	--	N
	Shear 4 Gridded	140.52	7.6	Strike Slip	90	--	W
	Battle Creek	141.30	6.7	Normal	75	S	S
	Calaveras	144.71	7.025	Strike Slip	90	--	N
	Mendocino Gridded, Reverse	150.45	7.3	Reverse	90	--	SE
	Mendocino Gridded, Strike Slip	150.45	7.3	Reverse	90	--	SE
	San Gregorio Connected	153.85	7.5	Strike Slip	90	--	N
	Great Valley 7	163.82	6.9	Reverse	15	SW	N
	Hat Creek-McArthur-Mayfield	178.61	7.2	Normal	60	W	S
	West Tahoe	179.06	7.1	Normal	50	E	W
	North Tahoe	184.55	6.7	Normal	50	E	W
	Monte Vista-Shannon	186.13	6.501	Reverse	45	SW	N
	Honey Lake	194.33	7	Strike Slip	90	--	SW

The following parameters were common to all analyses for each of the attenuation relationships:

The V_{S30} of the site of 210 m/s

Depth to soil with a V_S of 1,000 m/s was calculated to be 336 meters based on the methodology proposed by Chiou and Youngs (2008)

Depth to soil with a V_S of 2,500 m/s was calculated to be 1.72 kilometers based on the methodology proposed by Campbell and Bozorgnia (2008)

2.2.2 PROBABILISTIC MCER GROUND MOTION

Seismic sources within 200 kilometers were used to determine the site-specific ground motions. The NGA analyses considered the following faults in Table 2.

EZ-FRISK software was used to determine geometric mean spectral response acceleration predicted using NGA from a 5% damped response spectrum with a 2% in 50-year exceedance

probability. Crawford scaled the NGA geometric mean spectral response to the maximum rotated spectral using the scale factors in Section 21.1.

A. RISK COEFFICIENTS

Method 1 of Section 21.2 was used to determine the probabilistic MCE_R ground motion

Mapped risk coefficients (C_{RS} and C_{R1}) were used to adjust the response accelerations to a 1% chance of collapse in 50 years per Section 21.2.1.1. The risk coefficients are summarized in Table 1, along with the source figure from ASCE 7-16.

C_{RS} was applied to accelerations at spectral periods less than or equal to 0.2 seconds. C_{R1} was applied accelerations at spectral periods greater than or equal to 1 second. For spectral periods between 0.2 and 1 seconds, the C_R value was linearly interpolated.

B. PROBABILISTIC MCE_R GROUND MOTION

Figure IV-1 shows the geometric mean spectral response for the 2% in 50-year event developed using EZ-FRISK for each of the attenuation relationships described above. Also shown is the risk-adjusted response spectrum adjusting the response to a 1% in 50-year probability of collapse, which is equivalent to the site-specific probabilistic ground motion MCE_R.

2.2.3 DETERMINISTIC MCER GROUND MOTION

The deterministic spectral response acceleration is defined as the 84th-percentile 5% damped spectral response in the direction of maximum horizontal response for the characteristic earthquake on all known active faults within the region. EZ-FRISK was used to calculate the deterministic ground motion per Section 21.2.2. The NGA controlled deterministic spectral response was taken as the largest amplitude of ground motion considering all sources using the weighted mean of NGA attenuation relationships stated in Section 2.2.1 of this memorandum. Crawford scaled the deterministic 84th-percentile 5% damped spectral response to the maximum rotated spectral using the scale factors in Section 21.1. The controlling seismic source for the project site is the California Gridded fault from periods 0 through 10 seconds. Figure IV-2 shows the 84th-percentile 5% damped spectral response for the NGA attenuation relationships.

DETERMINISTIC MCE_R GROUND MOTION SCALING

Per the Exception within ASCE 7-16 Supplement 1 Section 21.2.2, the deterministic ground motion response spectrum need not be calculated when the largest spectral response acceleration of the probabilistic ground motion response spectrum of 21.2.1 is less than 1.2Fa. Fa was taken as 1.0 using Table 11.4.1 with a S_S of 1.5 according to Supplement 1 Section 21.2.2. Figure 3 in Appendix IV compares the 1.2 Fa with the probabilistic ground motion from 21.2.1 (MCE_R ground motion). The largest response acceleration of the probabilistic ground motion (1.15g) is less than the 1.2Fa (1.2g), therefore, the deterministic ground motion response spectrum was not further calculated.

2.2.4 SITE-SPECIFIC SPECTRAL RESPONSE ACCELERATION MCER

The site-specific spectral response acceleration is defined as the lower of the probabilistic and deterministic ground motions in Section 21.2.3, however, per the Exemption within Supplement 1

Section 21.2.3, the site-specific MCRR ground motion response spectrum was taken as the probabilistic ground motion response spectrum of 21.2.1.

2.2.5 DESIGN RESPONSE SPECTRUM

The design response spectrum is defined in Section 21.3 as the higher of two values:

- Two-thirds of the site-specific design spectral response acceleration per Section 21.2
- 80% of the design spectral response acceleration per Section 11.4.6 where F_a is calculated in Table 11.4-1 and $F_v = 2.5$ for $S_1 > 0.2$ for Site Class D

Crawford first calculated the design spectral response acceleration by taking 2/3 of the site-specific response acceleration MCE_R as shown in Figure IV-4.

Crawford then calculated the design response accelerations per Section 11.4.6 with $F_a = 1.0$ and $F_v = 2.5$ and reduced the spectral accelerations by 80% to adjust for the minimum design spectral accelerations for Site Class D. We then compared Section 11.4.6 design spectral accelerations for Site Class D with our site-specific design spectral response accelerations (Figure IV-6). The reduced design spectral response accelerations based on Chapter 11.4 controlled at all periods.

The design response spectrum is shown on Figure IV-5 and Table 3.

Table 3: Design Response Spectrum

Period, s	Sa, g
0.005	0.42
0.05	0.56
0.1	0.72
0.19	1
0.2	1
0.3	1
0.4	1
0.5	1
0.75	1
0.96	1
1.0	0.96
2.0	0.48
3.0	0.32
4.0	0.24
5.0	0.19
6.0	0.16
7.0	0.14
8.0	0.12
9.0	0.1
10.0	0.08

2.2.6 DESIGN ACCELERATION PARAMETERS

Design acceleration parameters were calculated in accordance with Section 21.4. The S_{DS} value was taken as 90% the peak spectral acceleration value from periods 0.2 to 5 seconds. The S_{D1} value was taken as the maximum product of $T*S_a$ (period * spectral acceleration) from periods 1 to 5 seconds. Per Section 21.4, the S_{DS} and S_{D1} values cannot be less than 80% of the S_{DS} and S_{D1} calculated from Section 11.4.5. The S_{DS} and S_{D1} values in Section 11.4.5 were calculated from using $F_a = 1.0$ and $F_v = 2.5$ for a Site Class D, as given in Section 21.3.

S_{MS} and S_{M1} were calculated as 1.5 times S_{DS} and S_{D1}, respectively. Per Section 21.4, the S_{MS} and S_{M1} values cannot be less than 80% of the S_{MS} and S_{M1} calculated from Section 11.4.3. The S_{MS} and S_{M1} values in Section 11.4.3 was calculated from using $F_a = 1.0$ and $F_v = 2.5$ for a Site Class D, as given in Section 21.3.

The design acceleration parameters are summarized in Table 4.

Table 4: Preliminary Horizontal Site-Specific Spectral Accelerations

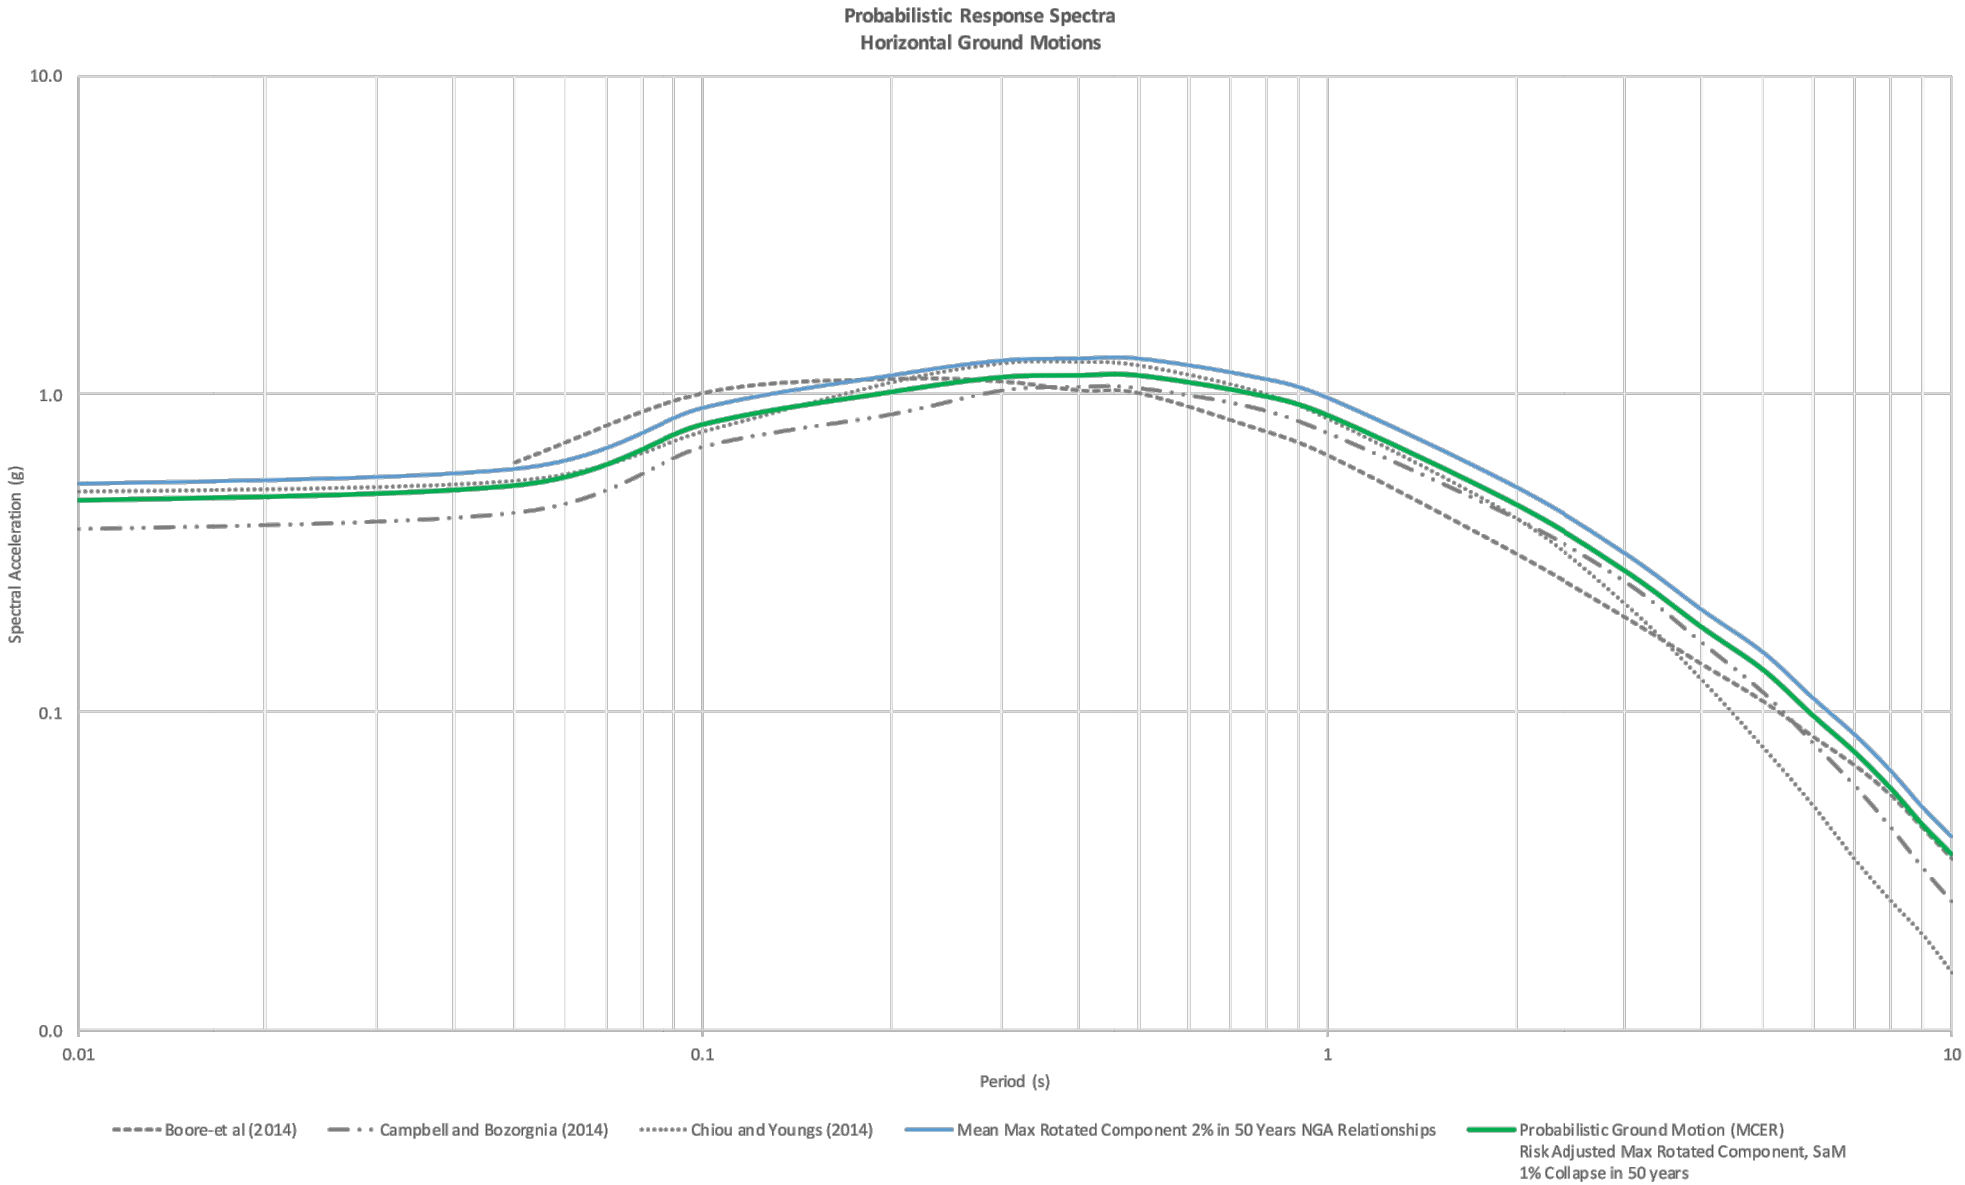
Design Acceleration Parameter	Value (g)
Design Spectral Acceleration for Short Period (S_{DS})	1.004
Design Spectral Acceleration for 1 Second Period (S_{D1})	0.959
MCE Spectral Response Acceleration for Short Period (S_{MS})	1.506
MCE Spectral Response Acceleration for 1 Second Period (S_{M1})	1.438

2.2.7 MAXIMUM CONSIDERED EARTHQUAKE MCEG PEAK GROUND ACCELERATION (PGA)

A. PROBABILISTIC MCEG PGA

Per Section 21.5.1, the probabilistic geometric mean PGA shall be taken as geometric mean peak ground acceleration with a 2% probability of exceedance within a 50-year period. The probabilistic MCE_G PGA is 0.46g.

B. DETERMINISTIC MCEG PGA



Per Section 21.5.2, the deterministic geometric mean PGA shall be taken as the largest 84th-percentile geometric mean peak PGA but not lower than $0.5*F_{PGA}$ where F_{PGA} is determined using ASCE 7-16 Table 11.8-1 and PGA is taken as 0.5g. The deterministic MCE_G PGA was taken as 0.55g.

C. SITE-SPECIFIC MCEG PGA

The site-specific MCE_G PGA (PGA_M) taken as the lesser of the probabilistic MCE_G PGA and deterministic MCE_G PGA but not less than 80% of the PGA_M determined from Equation 11.8-1 in ASCE 7-16. The site-specific PGA_M was taken as 0.7g.

City of Ukiah Recycled Water Pipeline – Phase 4 Design Project
Ukiah, California

Dear Mr. Lonergan,

Attached is our DRAFT Geotechnical Report for the City of Ukiah Recycled Water Pipeline – Phase 4 Design Project in Ukiah, California. We prepared this report to provide geotechnical data, conclusions, and recommendations for advancing the project to final design. Crawford & Associates, Inc. (Crawford) completed this report in accordance with our agreement dated January 18, 2019. This Draft Geotechnical Report supersedes our January 29, 2020 Draft Geotechnical Report. We will issue a final report after receiving your comments on this draft.

Please call if you have questions or require additional information.

1 INTRODUCTION

1.1 PURPOSE

Crawford & Associates, Inc. (Crawford) prepared this **DRAFT** Geotechnical Report for the City of Ukiah Recycled Water Pipeline – Phase 4 Design Project in Ukiah, California. This report is to provide geotechnical and geologic data and provide conclusions and recommendations for design aspects of the project. This report supersedes our January 29, 2020 Draft Geotechnical Report. We will issue a final report after receiving comment on this draft report.

1.2 SCOPE OF SERVICES

To prepare this report, Crawford:

- Reviewed geologic, soils, and seismic maps pertaining to the alignment corridor;
- Discussed the project with Carollo engineers Mike Lonergan, P.E., and Jason Benson, P.E.;
- Reviewed available historical subsurface data;
- Drilled, logged, and sampled 24 exploratory borings in 2019 along the proposed pipeline alignment, trenchless crossings, and structure locations to a maximum depth of about 51.5 feet below ground surface (bgs) in Borings R-19-004 and R-19-017;
- Drilled, logged, and sampled three exploratory borings in 2020 at proposed structure locations to a maximum depth of about 81.5 feet bgs in Boring R-20-002;
- Performed laboratory testing on soil samples recovered from the field explorations in 2019 and 2020;
- Reviewed “City of Ukiah Improvement Plans for Recycled Water Project Phase 4,” prepared by Carollo dated June 2019;
- Reviewed preliminary “Pump Station and Storage Site Plan” for the proposed water tank prepared by Carollo (undated);
- Performed geotechnical engineering analysis for design and construction of the pipeline alignments, site specific analysis for the proposed storage tank, and foundation elements for the proposed storage tank, and pedestrian bridge at Orr Creek; and
- Developed conclusions and recommendations based on the data and test results.

2 PROJECT DESCRIPTION

The City of Ukiah plans to construct a recycled water system pipeline to serve agricultural and urban irrigation and frost protection demand throughout the city. The project will convey recycled water from local municipal treatment plants to the surrounding areas of Ukiah. The project vicinity and approximate alignment is shown on Figure 1 in Appendix I.

Currently, the overall recycled water pipeline project has been separated into four phases for design and construction. At the time of this report the first 3 phases have been designed. Phase 4 of the project – the focus of this report – will collect (in a new storage tank) and convey recycled water from the City water treatment plant to the surrounding areas of Ukiah, west of Highway (Hwy) 101.

More specifically, the Phase 4 portion of the project will tie into existing pipeline at the City Water Treatment Plant located about 1,000 feet east of Hwy 101. The pipeline alignment will:

- Travel west from the treatment plant, with a trenchless crossing underneath Hwy 101, towards Brush Street;
- Travel west along Brush Street for another 2,000 feet undergoing a second trenchless crossing along underneath a railroad crossing between Mazzoni Street and Orr Street;
- Brush Street transitions into Low Gap Road after Mazzoni Street and the alignment heads west following Low Gap Road until Despina Drive;
- At Despina Drive, the pipeline travels north approximately 1,000 feet and terminates at the Ukiah High School;
- At the intersection of Low Gap Road and North Bush Street, the pipeline breaks away into two segments heading north and south along North Brush Street. The north segment turns east onto Arlington Drive to terminate at the Ukiah Fairgrounds Park. The south segment turns west through Pomolita Field and crosses over Orr Creek supported on a new single-span pedestrian bridge; and
- Travel through sections of the Ukiah Valley Golf Course and terminates near the Anton Stadium.

The pipeline will be about 20,000 linear feet of PVC pipe with the diameters below in Table 1 and constructed with a minimum of 4 feet of cover. Figure 2 in Appendix I shows the pipeline alignment with stationing.

Table 1: Recycled Water Pipeline Diameters

Pipeline Location	Pipeline Stationing	Pipeline Outer Diameter (in)
Bush St and Low Gap Rd	A10+00 to A58+00	18
Low Gap Rd and Despina Dr	A58+00 to A90+20	10
N Bush St, Arlington Dr and N Pine St	B10+00 to B25+90	4
N Bush St, and the Golf Course	C10+00 to C31+20	12
The Golf Course, Maple Ave and Club House Dr	C31+20 to C52+40	6
Club House Dr and Park Blvd	C52+40 to C66+50	4
N Bush St	D10+00 to D15+40	4
The Golf Course	E10+00 to E22+28	10

Key project components include:

- About 20,000 lineal feet of open-cut trench along Brush Street, Low Gap Road, North Bush Street, Arlington Drive, North Pine Street, Despina Drive, Maple Avenue, Clubhouse Drive, Park Boulevard, Pomolita Field, and through sections of the Ukiah Valley Golf Course;

- Trenchless crossings at Hwy 101 and the railroad crossing along Brush Street, east of Mazzoni Street;
- 2 MG domed roof concrete reservoir tank (approximately 120 feet in diameter with a height of ±25 feet), partially buried, supported on a ring foundation located at the City water treatment plant;
- Pump station, partially buried, supported on mat foundation;
- New single-span pedestrian bridge supported on cast-in-drilled-hole (CIDH) piles crossing over Orr Creek.

The new pedestrian bridge across Orr Creek is proposed to be 78 feet long by 12 feet wide, pre-manufactured rail car bridge along a similar alignment to the existing bridge. The new pedestrian bridge will clear span the channel with abutments set around 5 feet behind the existing bridge abutments and be supported on pile foundations. Each abutment will be supported on two 36-inch diameter cast-in-drilled-holes (CIDH) pile foundations spaced 9 feet. The new bridge deck grade is planned to be 6-inches above the top of the existing bridge foundations. The new bridge approaches are anticipated to require only nominal new fill (1±foot). The new pedestrian bridge will carry the proposed pipeline over Orr Creek

3 SITE GEOLOGY

The project is within the Coast Ranges Geomorphic Province of California[1], which is characterized by a series of northwest trending mountain ranges sub-parallel to the San Andres Fault. The Coast Ranges are composed of thick Mesozoic and Cenozoic sedimentary strata. The northern Coast Ranges are dominated by the irregular, knobby, landslide-topography of the Franciscan Complex. The project site is located within the Ukiah Valley, an alluvial valley situated within the Coast Ranges.

Published regional geologic mapping[2] shows surface materials as three distinct geologic units in the region that includes the project. These consist of:

- Quaternary age Alluvium,
- Quaternary (Pleistocene) age Non-marine Terrace Deposits, and
- Undivided Cretaceous age Marine Sedimentary Rock.

Quaternary age Alluvium are the youngest deposits and are mapped to occur along the eastern portion of the project alignment (from the railroad crossing at Brush Street to the treatment plant) as well as the southeast portion of the Ukiah Municipal Golf Course. The alluvium consists of predominately unconsolidated gravel, sand, silt, and clay deposited in channels and on floodplains of the Russian River (located approximately 600 feet east of the project alignment). Recent alluvium is thickest in the central portion of the Ukiah basin and extends from the surface to depths of 50 to 80 feet.[3]

[1] California Geologic Survey (2002), *California Geomorphic Province*, Note 36

[3] California Department of Water Resources (2004), Ukiah Valley Ground Water Basin, California Groundwater Bulletin 118

Quaternary (Pleistocene) age non-marine terrace deposits are the predominant surficial deposits mapped along the project alignment (west of the Railroad crossing on Brush Street). These deposits generally consist of gravelly clay to sandy/silty gravel up to 200 feet thick[4]. Terrace deposits generally overlie older (Pliocene and Pleistocene-age) alluvium and occur discontinuously along the Ukiah Valley.

Undivided Cretaceous aged Marine Sedimentary Rock is mapped west of the project alignments. This unit is comprised predominantly of sandstone, shale, and conglomerate deposits.

We present a Geologic Map as Figure 3 in Appendix I.

4 EXPLORATION

Crawford retained Geo-Ex Subsurface Exploration (Geo-Ex) to drill twenty-four exploratory borings in 2019 and three exploratory borings in 2020 along the proposed pipeline alignment, trenchless crossings, and structure locations. Table 2 provides a subsurface exploration summary.

Table 2: Subsurface Exploration Summary

CAInc Exploratory Borings (2019)						
Boring Number	**Completion Date**	**Drill Rig Type/ Drilling Equipment Type**	**Hammer Type**	**Hammer Efficiency (%)**	**Approx. Ground Surface Elevation (ft)**	**Boring Depth (ft)**

1. A hammer energy calibration test was not performed specifically for this project/site; however, a previous hammer energy testing result provided by Geo-Ex found the hammer to have an energy efficiency of 70.1%.
2. A hammer energy calibration test was not performed specifically for this project/site; however, a previous hammer energy testing result provided by Geo-Ex found the hammer to have an energy efficiency of 77.0%.
3. A hammer energy calibration test was not performed specifically for this project/site; however, a previous hammer energy testing result provided by Geo-Ex found the hammer to have an energy efficiency of 89.1%.

Soil samples were recovered by means of a 2.0-inch O.D. “Standard Penetration” split-spoon sampler with 1.4-inch stainless steel liners and a 3.0-inch O.D. “Modified California” split-spoon sampler with 2.4-inch stainless steel liners. Both samplers were advanced with standard 350 ft-lb striking force using a 140 lb. automatic hammer and a drop height of 30 inches. Sampler penetration resistance was recorded to provide a field measure of relative densities and can be correlated to soils strength and bearing characteristics. Consistency of cohesive soils were obtained in the field by means of pocket penetrometer. The field-recorded (uncorrected) blow counts are shown on our boring logs in Appendix II.

Crawford’s project engineers and geologists logged the exploratory borings consistent with the Unified Soil Classification System (USCS) and the 2010 Caltrans Logging Manual. Crawford retained samples from the borings in sealed constrainers for laboratory testing and reference. Groundwater observations were recorded during drilling operations when encountered. At completion, the exploratory borings were backfilled following Mendocino County Environmental Health requirements.

The exploration boring locations were measured in the field with respect to existing site features. The boring elevations are referenced to project datum provided by Carollo. See Figure 1 in Appendix I for exploratory boring locations. The details of the borings are shown on the boring logs in Appendix II.

5 SURFACE AND SUBSURFACE CONDITIONS

5.1 EXISTING PAVEMENT THICKNESSES

Crawford measured the pavement sections at various locations along the pipeline alignment. We present pavement section data below.

Table 3: Existing Pavement Conditions

DRAFT

5.2 SOIL CONDITIONS

Based on our subsurface investigation, the soils encountered along the alignment seem to generally agree with published geologic maps. We summarize soil descriptions for sections of the project alignment below. Refer to the Boring Logs in Appendix II for more detailed soil conditions.

5.2.1 OPEN CUT PIPELINE ALIGNMENT

The table below describes the soil conditions encountered at the surface down to the total depths of the borings with exception to the Undivided Cretaceous Marine deposit which was encountered at 7 feet bgs in A-19-019.

Table 4: Soil Conditions

Approximate Station[1]	Geologic Deposit	Description
A12+00 to A42+00	Quaternary age Alluvium	Gravel, sand, silt and clays
A42+00 to A90+00; B10+00 to B25+00; C10+00 to C57+00; D10+00 to D15+00; and E10+00 to E27+00	Quaternary age non-marine terrace	Gravelly clay to sandy/silty gravel
C57+00 to C66+00	Undivided Cretaceous Marine	Sedimentary rock (Claystone)

[1]Stations correlate with Figure 2 attached.

5.2.2 TRENCHLESS CROSSINGS

In this portion of the alignment, we encountered Quaternary age alluvium that consists of unconsolidated gravel, sand, silt and clay. In general, soil conditions were as follows:

- At the trenchless crossing for Hwy 101, we encountered approximately 30 feet of stiff to very stiff lean clay. The clay is underlain by very dense, poorly graded gravel with clay and sand to the maximum depth of our borings (50.5 feet).
- At the trenchless crossing for the railroad, we encountered approximately 19 feet of soft to hard, sandy, lean clay and lean clay with sand. In Boring R-19-024, we encountered a loose, poorly graded sand with clay and gravel at a depth of approximately 8 to 13 feet. This correlates with a soft, sandy, lean clay in our other boring for the crossing (R-19-004) at a similar depth. Below a depth of approximately 19 feet, we encountered predominately dense to very dense, poorly graded gravel with sand to a depth of 38 to 41 feet. The gravel is underlain by stiff to very stiff, sandy, lean clay and dense, clayey sand to the maximum depth of our borings (51.5 feet).

5.2.3 WATER TANK AND PUMP STATION

Soils at the concrete tank and pump station at the City water treatment plant are variable. In general, we encountered a soil profile that consists of 28 to 30 feet of medium dense to dense, sand, silty sand, and gravel that is underlain by very dense, gravel, clayey sand, and sand to the maximum depth of our borings (51.5 feet). The water tank and pump station site have existing basins, with unknown depths, that fall within the footprint of the improvements. Fill material may be required to provide level pads around the proposed structures.

5.2.4 PEDESTRIAN BRIDGE

Based on the exploratory boring data, subsurface soils at the proposed pedestrian bridge crossing over Orr Creek can be divided into three general soil units, as follows in Table 5.

DRAFT

Table 5: Subsurface Soils

Soil Unit	Depth (ft)	Elevation (ft)	Soil Description
1	0.0 – 10.0	636 – 627	Hard, brown, moist, lean clay (CL) and dense silty sand (SM)
2	10.0 – 38.0	627 – 598	Loose to very dense, yellowish brown to reddish brown, dry to wet, silty / clayey gravel (GC), silty / clayey sand (SC), and hard gravelly lean clay (CL)
3	38.0 – 81.5	598 – 553	Medium stiff to hard, yellowish brown to reddish brown, moist, lean clay to gravelly lean clay (CL) and very dense clayey gravel (GC)

5.3 GROUNDWATER

Table 6 depicts the groundwater conditions observed in the field. We also include data from California Department of Water Resources (DWR) wells in the vicinity below. DWR elevations reference NAVD88.

Table 6: Groundwater Conditions

Consultant/ Source	Boring/Well Number	Date Measured	Approximate Location	Groundwater Depth (ft)	Groundwater Elevation (ft) [1]

DRAFT

The above groundwater conditions are based on field observations during our exploration and published data. The water treatment plant is located adjacent to (west of) the Russian River with Orrs Creek located just south of the water treatment plant and nearby portions of the alignment. The southernmost portion of the pipeline alignment is in the vicinity of Gibson Creek (south of Anton Stadium). Due to the close proximity of the pipeline to these features, groundwater elevation will likely be influenced by the water levels in the Russian River, Orrs Creek and Gibson Creek. Groundwater conditions will also fluctuate with seasonal precipitation and land use. The above data indicates that groundwater likely will not adversely impact the majority of pipeline construction but may adversely impact pump station construction and trenchless crossings. Dewatering is discussed in Section 8 of this report.

We recognize that the high groundwater levels encountered in our field exploration reflect groundwater conditions after a "heavy" wet season. Groundwater levels will drop during the dry season. Published data on DWR's Water Data Library[5] indicate groundwater readings historically fluctuate approximately 5 feet between wet and dry seasons.

6 SCOUR CONSIDERATIONS

A study was not conducted to evaluate the potential for scour within the limits of the bridge crossing at Orr Creek. For the purpose of this study, we assumed a scour elevation of 621 feet (approximately 2 feet below the bottom of the creek channel) at the proposed abutment locations for foundation analysis.

7 LABORATORY TESTING

7.1 GEOTECHNICAL SOILS TESTING

We completed the following laboratory tests on representative soil samples obtained from the exploratory borings:

- Moisture Content / Dry Density (ASTM D2216 / D2937)
- Particle Size Analysis (ASTM D422)
- No. 200 Sieve Wash (ASTM D1140)
- Atterberg Limits (ASTM D4318)
- Unconfined Compressive Strength (ASTM D2166)
- Direct Shear Strength (ASTM D3080)
- Sulfate/Chloride Content (CTM 417/422)
- pH/Minimum Resistivity (CTM 643)
- R-value (CTM 301)

We show test results on the logs of the borings and in Appendix III.

[5] http://www.water.ca.gov/waterdatalibrary/index.cfm

7.2 CORROSION TESTING RESULTS

The USDA Web Soil Survey[6] estimates the project alignment to be moderately to highly corrosive to ferrous elements and low to moderately corrosive to cementitious elements. Table 7 summarizes the results of soil corrosivity tests on samples from our exploratory borings.

Table 7: Soil Corrosion Test Summary

Boring / Sample Number	Depth (ft)	Approximate Station	pH	Minimum Resistivity (Ohm-cm)	Chloride Content (ppm)	Sulfate Content (ppm)
R-19-002 / 2	11.0	A13+98.8 Rt 35.8	6.14	2,650	1.5	5.7
R-19-004 Bulk	0-5.0	A34+37.6 Lt 1.3	6.89	3,480	1.4	15.0
A-19-008 / 1	6.0	A74+10.6 Lt 12.0	5.71	10,990	0.5	5.9
A-19-018 / 1	3.5	C58+94.6 Lt 10.4	4.90	2,950	1.7	17.6
A-20-001 / 1	3.5	TBD	4.52	4,820	4.3	1.0
R-20-003 / 3	8.5	TBD	6.06	780	120.1	169.7

According to Caltrans Corrosion Guidelines[7], a site is considered corrosive to foundation elements if one or more of the following conditions exist:

- pH is 5.5 or less
- Chloride concentration is greater than or equal to 500 parts per million (ppm),
- Sulfate concentration is greater than or equal to 1500 ppm

Based on the soil types we encountered, test results, Caltrans guidelines, and USDA mapping, the soils in A-19-018-1A and A-21-001-1A are considered “corrosive” to ferrous materials. The soils along the project alignment are considered “non-corrosive” to cementitious materials.

According to Caltrans guidelines, with the exception to MSE wall design, minimum resistivity is not included as a parameter to define a corrosive environment for structures. MSE walls do include the resistivity parameter in defining a potentially corrosive backfill material. Resistivity can serve as an indicator parameter of the possible presence of soluble salts (chlorides and sulfates), with a minimum resistivity value of 1,100 ohm-cm or less indicating the potential presence of high quantities of soluble salts (higher propensity for corrosion), and thus requiring additional testing.

These tests are only an indicator of soil corrosion potential. Section 12 of the Caltrans Corrosion Guidelines provided information regarding corrosion mitigation measures for structural elements and lists additional Caltrans guidelines documents regarding corrosion mitigation if deemed appropriate by the designer. The designer should also consult with a corrosion engineer if these values are considered significant.

[7] California Department of Transportation, *Corrosion Guidelines, Version 3.0*, March 2018

8 SITE SEISMICITY

8.1 FAULT RUPTURE

The site does not lie within an Alquist–Priolo Earthquake Fault Zone and no known active faults are mapped within or through the project area. The California Geologic Survey (CGS) considers a fault to be active if it has shown movement one or more times during the Holocene period, defined as the last 11,700 years. According to the CGS, the closest active fault is the Maacama Fault Zone north section (Maacama fault) located about one mile northeast of the eastern-most point of the project area in the water treatment plant where the tank and pump stations will be.

8.2 SHEAR WAVE VELOCITY AND CLASSIFICATION OF SOILS

For this site/project, a correlated shear wave velocity (V_{S30}) in the upper 100 ft of the soil profile equal to 290 meters per second (about 950 ft/sec) is considered appropriate for use in design. This value corresponds to a "soft/loose soil profile" with 180 m/s < Vs < 360 m/s (Soil Profile Type F) for the upper 100 feet of the soil profile.

The V_{S30} value was determined for this site based on the soil data obtained from our 2019 test boring data and correlations with SPT N-values (or equivalent SPT N-values) corrected for hammer efficiency using the equations outlined in Appendix A of Caltrans' *Methodology for Developing Design Response Spectrum for Use in Seismic Design Recommendations*, November 2012.

8.3 SEISMIC DESIGN PARAMETERS

Crawford completed a site-specific hazard analysis according to ASCE 7-16 Section 11.4.8. We recommending using the following site-specific hazard values provided in Tables 8.

Table 8: Horizontal Site-Specific Spectral Accelerations

Design Acceleration Parameter	Value (g)
Design Spectral Acceleration for Short Period (S_{DS})	1.48
Design Spectral Acceleration for 1 Second Period (S_{D1})	1.58
MCE Spectral Response Acceleration for Short Period (S_{MS})	2.22
MCE Spectral Response Acceleration for 1 Second Period (S_{M1})	2.37

See Appendix IV for the detailed site-specific hazard analysis.

8.4 LIQUEFACTION

Soil liquefaction can occur when saturated, relatively loose sand and specific soft, fine-grained saturated soils are subject to ground shaking strong enough to create soil particle separation that results from increased pore pressure. This separation and subsequent pore pressure dissipation can lead to decreased soil shear strength and settlement. Liquefaction is known to

occur in soils ranging from low plasticity silts to gravels. However, soils most susceptible to liquefaction are clean sands to silty sands and non-plastic silts.

To evaluate the potential for soil liquefaction to occur at the site, Crawford used the simplified procedure outlined by Youd et al. (2001)[8] and guidelines consistent with liquefaction evaluation outlined in the Caltrans Geotechnical Manual (December 2014), the 2019 and 2020 boring data, laboratory test results, a Magnitude (M) of 7.2, and a Peak Ground Acceleration (PGA) of 0.90g. In our analysis, we modeled the groundwater elevation in each boring at the depth where we encountered it respectively. The maximum moment magnitude was determined using the USGS Deaggregation Unified Hazard Tool[9].

8.4.1 PIPELINE ALIGNMENT

Based on soil and groundwater conditions encountered and current industry accepted liquefaction evaluation methods the potential for liquefaction along the pipeline alignment is low.

8.4.2 CONCRETE TANK AND PUMP STATION

Based on the soil and groundwater conditions encountered, the potential for liquefaction exists within the upper 50 feet of soils at the site in borings R-19-009, R-19-017 and R-19-021 in the saturated gravels and sands. Based on our boring data, there is a trend that shows reduced liquefaction potential and less liquefaction induced settlement towards the south end of the site. Our analysis shows that liquefaction induced settlement on the order of 1 to 2 inches can be expected at the tank location; with differential settlement on the order of ½ to 1 inch across the tank.

8.4.3 PEDESTRIAN BRIDGE OVER ORR CREEK

Based on the soil and groundwater conditions encountered the potential for liquefaction exists within the upper 50 feet of soils at the site in Boring R-20-002 and R-20-003 in the saturated gravels. Our analysis shows that liquefaction induced settlement on the order of 1 to 1.5 inches can be expected at this location; with differential settlement on the order of ½ to ¾-inches across the bridge. We account for the potential liquefaction settlement and associated downdrag in our pile analysis.

9 CONCLUSIONS AND RECOMMENDATIONS

We conclude that the alignment is suitable for construction of the proposed tank, pump station, pipeline, and pedestrian bridge crossing provided the recommendations presented below are included in design and construction. Based on the above information and our analysis, the key geotechnical considerations associated with design and construction of this project included presence of clayey sands and gravels along the alignment which may cause caving, heavy tank loads and potential for settlement, and the potential for liquefaction settlement at the concrete storage tank, pump station, and pedestrian bridge crossing over Orr Creek.

9.1 FOUNDATION RECOMMENDATIONS

9.1.1 CONCRETE TANK

We understand the tank will be supported by perimeter ring foundations, and concrete slab-on-grade floor. Based on the information provided by DN Tanks (loading distribution dated July 14, 2021), we understand tank loading will result in design bearing capacities of 2,000 psf uniformly distributed along the belly of the tank and a bearing capacity ranging from 4,400 psf to 1,200 psf along the inner and outer perimeter ring foundation; respectively. We also understand the tank will be partially buried, likely to at least the elevation of the bottom of the existing basin (elevation 597 feet). In addition, Crawford recommends a five-foot overexcavation and compaction (down to elevation 592 feet) to provide firm, uniform support to the tank (recommendations for the overexcavation and compaction is provided in Section 9.3.3 of this report). In general, the site is capable of supporting the tank design loads provided.

Crawford performed settlement analysis using RocScience 3D Settlement computer program and the provided bearing capacities, a tank diameter of 120-foot (based on "AWWA D110 Type I Cast In Place Concrete Storage Tank Plans," undated), tank bottom installed near an elevation of 597 feet (existing grade at R-19-021), perimeter foundations embedded a minimum of 18 inches below lowest adjacent grade and 5 ft wide. The tank was analyzed using both borings R-19-017 and R-19-021. We provide results of our settlement analysis in Appendix V. In general, consolidation settlement will be negligible due the presence of coarse-grained materials. We expect about 2 inches of immediate settlement below the tank with a differential settlement of about 1 inch from the center of the tank to the perimeter (about 60 feet). Based on the nature of the onsite soils, we expect 50% to 65% of the immediate settlement to occur during construction. However, with liquefaction we expect approximately 1 to 2 inches of additional liquefaction settlement below the tank with a differential settlement of about ½ to 1 inch.

Lateral forces may be resisted by friction developed between the base of the footing and the underlying soil. Use a coefficient of friction of 0.70 for concrete cast against cohesionless soil to resist sliding. Additional lateral resistance may be provided by assuming a passive pressure based on an equivalent fluid weight of 210 pcf. The passive capacity reduces to an equivalent fluid weight of 170 pcf during a seismic event. In designing the structure to resist lateral loads, the upper 12 inches of soil should be ignored.

9.1.2 PUMP STATION

We understand that the pump station foundation dimensions and loads are still being determined, however support of the new pump station is available using a mat foundation provided they are 12 inches wide and extend a minimum of 18 inches below lowest adjacent grade. Provided that the mat foundation is designed to evenly distribute the pump station contents, equipment, and structure, an allowable bearing capacity of 3,000 psf may be used for design. The bearing capacity value may be increased by one-third if wind and/or seismic loads are included. Total and differential foundation settlement is expected to be less than 1 inch and ½ inch, respectively.

Lateral forces may be resisted by friction developed between the base of the footing and the underlying soil. Use a coefficient of friction of 0.70 for concrete cast against cohesionless soil to

resist sliding. Additional lateral resistance may be provided by assuming a passive pressure based on an equivalent fluid weight of 210 pcf. The passive capacity reduces to an equivalent fluid weight of 170 pcf during a seismic event. In designing the structure to resist lateral loads, the upper 12 inches of soil should be ignored.

9.1.3 BRIDGE FOUNDATIONS

Based on the boring data generated for this study, site conditions are considered suitable for structure support by means of CIDH piles for the abutments established within competent soils. Foundation support for the proposed bridge is available withing the underlying very dense and hard soil layers (Unit 2 and 3). CIDH piles can provide adequate axial capacity and minimize construction noise and vibrations.

Spread footing foundations for the bridge abutments is considered feasible, but would not be as secure as pile foundations due to the potential for liquefaction from medium dense, saturated gravels (Unit 2 materials), the potential for scour/erosion along the creek banks, and large excavations required near the creek channel. Due to the presence of dense to very dense gravel layers above specified design tip elevations, driven displacement-type concrete and steel pipe piles are likely not suitable for this site. Such piles would be expected to experience very hard driving that could result in short piles and/or pile damage. Therefore, we recommend the use of CIDH piles to support the proposed bridge structure.

The proposed bridge over Orr Creek will be supported at each abutment by two 36-inch diameter CIDH piles spaced 9 feet center-to-center (CTC). Such piles would require special installation measures due to the presence of groundwater and on-site gravely soils, including temporary casing, slurry drilling methods (with inspection tubes) and the use of minimum 24-inch diameter CIDH piles for tremie concrete placement. The foundation data and pile capacities for the 36-inch CIDH pile foundation were provided by Carollo and are presented in Table 9 below.

Table 9: Foundation Design Data

Support No.	Design Method	Pile Type	Cut-off Elev. (ft)	Pile Cap Size (ft)		Number of Piles per Support	Lateral (kips)	Compression (kips)	
				B	L			Per Support	Per Pile
Abut 1	LRFD	36” CIDH Pile	633.75	6	12	2	27.7	85	42.5
Abut 2	LRFD	36” CIDH Pile	633.75	6	12	2	27.7	85	42.5

Our evaluation identifies the presence of local/isolated soil layers that are in the range of soil texture and consistency considered susceptible to liquefaction during a design earthquake event. The pile analysis and tip elevations presented below addresses the effects of liquefaction.

When using LRFD loading, we recommend applying a geotechnical resistance factor of 0.7 to the above compression loads when selecting the pile length. The foundation design recommendations for 36-inch diameter CIDH piles are summarized in Table 10 below.

Table 10: Pile Data Table

Support No.	Pile Type	Cut-off Elevation (ft)	Nominal Resistance (kips)		Design Tip Elev. (ft)	Specified Tip Elev. (ft)
			Compression	Tension		
Abut 1	36" CIDH Pile	633.75	70	NA	(a) 579 (b) 588	579
Abut 2	36" CIDH Pile	633.75	70	NA	(a) 579 (b) 588	579

1) Design Tip Elevations are controlled by: (a) Compression, (b) Lateral Load.
2) The Specified Tip Elevation shall not be raised above the design tip elevation.
3) The piles will be founded in competent dense/hard soils

9.1.3.1 COMPRESSIVE RESISTANCE

The side (compressive) resistance for the 36-inch CIDH pile foundations was evaluated using LRFD methods and factors from AASHTO LRFD Bridge Design Specifications[10] (BDS) with Caltrans amendments to determine the design pile tip elevation. End bearing contributions to axial resistance were neglected, consistent with current Caltrans guidelines for CIDH pile design. Actual contributions to skin friction vary depending on load transfer along the pile shaft. A geotechnical resistance factor (φ) of 0.7 was used to evaluate compressive resistance consistent with Caltrans amendments to AASHTO LRFD method for the CIDH piles.

Consistent with AASHTO LRFD BDS 10.8.3.5.1b and C10.8.3.5.1b (Side Resistance), the top 5 feet of the pile is excluded from contributing to geotechnical capacity. For our analysis, the bottom 5 feet of the pile is also excluded from contributing to geotechnical capacity.

We present the CIDH Pile Nominal Resistance (Axial Compression) graphs in Appendix V.

9.1.3.2 LATERAL RESISTANCE

The LPILE Version 2018.10.09 computer program was used to estimate lateral pile design loads for vertical piles which would produce approximately ¼-inch and ½-inch pile head deflection at the provided cut-off elevation assuming a fixed-head condition. For the proposed bridge, pile response in the longitudinal and transverse bridge directions was computed using elastic pile stiffness (basic modeling) with an axial compression value of 17.5 kips, approximately 1.6% steel, and a pile diameter of 36 inches. The idealized geotechnical parameters that were used in the lateral pile analysis are shown below in Table 11.

[10] American Association of State Highway and Transportation Officials, AASHTO LRFD Bridge Design Specifications, 8th Edition, November 2017.

Table 11: Bridge Idealized Geotechnical Parameters

Elevation (ft)	LPILE Soil Type	Unit Weight (lb/ft^3)	Friction Angle (degrees)	Cohesion / Residual Strength (psf)	Strain Factor, E50 (dim.)	p-y Modulus, k (lb/in^3)
636 to 627	Stiff Clay w/o Free Water	115	--	4,000	0.004	--
627 to 618	Sand (Reese)	115	36	--	--	225
618 to 613	Sand (Reese)	53	36	--	--	125
613 to 608	Soft Clay (Matlock)	68	--	1,000	0.02	--
608 to 598	Sand (Reese)	68	38	--	--	125
598 to 553	Stiff Clay w/o Free Water	63	--	3,000	0.005	--

Notes:
1. Elevations are based on project datum.
2. Design groundwater at elev. 618 feet).
3. Unit Weight equals Total Unit Weight above the groundwater and the Buoyant Unit Weight below the groundwater.
4. Buoyant Unit Weight = Total Unit Weight - 62.4 pcf.
5. Liquefied layer modeled as soft clay with residual strength.

The results of our lateral pile analysis for both the longitudinal and transverse bridge directions for the abutments are presented in Table 12.

Table 12: Abutment Pile Head Deflection vs. Lateral Load – Abut 1 & 2

Condition	Spacing	Pile Row	P-multiplier	Deflection, in	Shear, kips
Longitudinal	3.0B	1	0.90	0.25	28.7
				0.50	38.2
Transverse	3.0B	1	0.75	0.25	27.1
				0.50	36.2
		2	0.55	0.25	24.4
				0.50	33.1

Note: B = pile diameter

The LPILE output graphs are presented in Appendix IV.

9.1.3.3 TENSION RESISTANCE

No tension demands are indicated for the pile foundations.

9.1.3.4 SETTLEMENT

For this project, the nominal resistance of the CIDH piles is designed to be derived through side resistance with no end-bearing contributions. All piles will be founded in competent materials

that consist of dense to very dense granular and medium stiff to hard cohesive layers. Theoretically, the vertical load on the CIDH piles for this structure will not exceed the nominal side resistance of the pile shaft. Therefore, pile settlement is expected to be less than 1.0-inch for the CIDH piles. Since the piles will be embedded adequately into dense/hard soils, a detailed assessment of the pile group settlement is not considered warranted.

9.1.3.5 NEGATIVE SKIN FRICTION

We anticipate negative skin friction (downdrag) at the abutments as a result of the settlement due to liquified, saturated, medium dense granular soil layers encountered at the site.

9.1.3.6 GROUP EFFECTS

The foundation soils predominately consist of dense to very dense granular layers and medium stiff to hard cohesive layers. The pile center-to-center spacing is greater than 2.5 times the pile diameter.

According to AASHTO LRFD BDS (Section 10.7.3.9 – Resistance of Pile Groups in Compression) with California amendments:

- For Cohesive Soil – If the pile cap is in firm contact with the ground, no reduction in efficiency shall be required. If the pile cap is not in firm contact with the ground and if the soil is stiff, no reduction in efficiency shall be required.
- For Granular Soil – The efficiency factor, η, shall be 1.0 where the pile cap is or is not in contact with the ground for a center-to-center pile spacing of 2.5 diameters or greater.

Therefore, no reduction in efficiency is required and a group efficiency factor (η) of 1.0 was used in our compressive resistance pile analysis.

9.1.3.7 CONSTRUCTION CONSIDERATIONS

Consideration for CIDH pile installation/excavation for this site/project includes:

- Potential for caving soils due to presence of loose to medium dense soil layers within pile foundation depths,
- Presence of gravel layers withing pile foundation depths, and
- Presence of groundwater within pile foundation depths.

Due to the anticipated presence of groundwater around elev. 618 feet, we recommend installing CIDH piles by the “wet” method, including slurry drilling and concrete placed under slurry using tremie pipe. We recommend constructing CIDH piles in conformance with Section 49-3 of the Caltrans Standard Specifications[11], Revised Standard Specifications, and Standard Special Provisions. The slurry construction method (“wet” method) requires placement of inspection tubes to permit Gamma-Gamma Logging (GGL) and Cross-hole Sonic Logging (CSL) of the CIDH pile.

For CIDH piles with center-to-center spacing less than 4.0 diameters, the sequence of shaft installation should be specified in the contract documents (Section 10.8.1.2, California Amendments to AASHTO LRFD BDS).

[11] California Department of Transportation, *Standard Specifications*, 2018.

The contractor should anticipate variable drilling conditions in all CIDH pile excavations due to the presence of medium stiff to hard cohesive soils (lean clay) and loose to very dense non-cohesive soils (sand and gravel) . Variable drilling conditions may include alternating between soft and hard drilling techniques.

To reduce the magnitude of downdrag, permanent casing for CIDH pile can be installed to/below the bottom of the liquefiable layer. At the abutment locations, permanent steel casing is permissible no lower than elev. 608 feet. The permanent steel casing may be specified as either a permanent smooth-wall casing or a Corrugated Metal Pipe (CMP). The permanent steel casing should be at least 8-inches greater than the CIDH pile to help prevent binding of the drilling tool. The permanent steel casing may be placed in drilled hole, and annual space backfilled with grout (Standard Specifications Section 49-3.02B(5), 49-3.02C(6). It is also permissible to drill/oscillate/rotate the permanent casing into place. Installation by driving or vibration is not recommended.

The contractor is responsible for the design and installation of temporary casing (if used), including actual length(s) and diameter(s), to install CIDH piles according to the above specifications without defects or damage to existing utilities/facilities.

Temporary casing (if used), should be noncorrugated steel with smooth surfaces and the casing diameter should be at least 8-inches greater than the CIDH pile to help prevent binding of the drilling tool. Install temporary casing below the specified pile tip elevation is not permissible. Temporary casing should be removed during placement of concrete.

The project specifications should explicitly exclude vibration and impact installations methods if noise or vibrations are of concern or otherwise not allowed due to environmental constraints, proximity of nearby residences or to protect existing facilities (e.g., underground utilities potentially susceptible to vibration damage).

If an oscillator or rotator is used to construct the CIDH piles:

- The contractor should be prepared for subsurface conditions that include layers of clays and coarse granular materials (e.g., sand, gravel).
- The contractor should maintain a positive fluid head within the drill road at all times. The fluid should be mineral or polymer slurry; water is not permitted.
- The contractor is to maintain a minimum 10-foot soil plug within the drill rod. The 10-foot plug is to be maintained until the drill rod reaches the specified tip elevation. It may be necessary to extend the casing below the bottom of the pile tip to maintain a soil plug to help maintain stability at the base.
- The contractor must provide access to the top of the oscillator/rotator drill rod, as requested by the Engineer, to verify the positive head and minimum soil plug are being maintained.
- It is important to maintain continuous rotation/oscillation and place rebar/concrete expeditiously to avoid lockup. The contractor should take into account the work window allowed by the project specifications to install foundations when proposing oscillator/ rotator method installation.

The CIDH piles are designed to obtain their geotechnical capacity through side resistance. Nonetheless, the bottom of drilled holes must be cleaned in accordance with Section 49-3.02C(2), "Drilled Holes," of Caltrans 2018 Standard Specifications. Prior to approval, the Engineer must verify the bottom of the drilled holes are cleaned before placement of the concrete.

Excavation of the CIDH piles, placement of the rebar cage, and concrete pour should be completed in one continuous operation.

Prior to mobilization to the site, the foundation contractor should prepare a Pile Installation Plan in accordance with Section 49-3.02A(3)(b) of the Caltrans Standard Specifications. The drilled shaft installation plane to be submitted by the contractor should include a description of the tools and equipment planned to be used by the contractor for CIDH pile installation. The actual tools and equipment used during CIDH pile excavation/installation should be documented in the construction records. If oscillator/rotator method is used, the contractor's workplan should include/outline measures to extract a seized casing without compromising the integrity of the CIDH excavation.

9.2 LATERAL EARTH PRESSURES

We present equivalent fluid weights (EFWs) in the table below for the buried structures and bridge abutments. These values assume fully drained and level backfill conditions.

Table 13: Recommended Equivalent Fluid Weight (EFW)

Condition	Static		Incremental Seismic	
	Coefficient k (dim.)	EFW (pcf)	Coefficient Δk (dim.)	ΔEFW_{EQ} (pcf)
Active	0.28	34	0.22	27
At-Rest	0.44	53	NA	43

The EFW values shown above assume:

- Level backfill condition;
- Structure Backfill with soil unit weight (γ) = 120 pcf and minimum angle of internal friction (ϕ) = 34°. This is considered to be achievable from the native silty sands;
- Horizontal seismic acceleration coefficient (k_h) ≤ 0.2; and
- Vertical seismic acceleration coefficient (k_v) = 0.0.

The passive fluid weight is only applicable if the retained earth is allowed to strain at least 0.02H.

For *static design*, apply the resultant of the static earth pressure at a depth of 0.33H from the base of the wall where H equals the wall height. At-rest and Active earth pressures do not

include a factor of safety. Use a static passive earth pressure of 210 pcf which has been reduced by a factor of safety of 2.0 and a coefficient of friction of 0.70 for lateral restraint.

For *seismic design*, calculate the resultant of incremental/additional lateral soil pressure due to seismic loading based on the equivalent fluid weights above and apply the magnitude of the resultant at 0.66H from the base of the wall where H equals the wall height. Add the resultant of the seismic earth pressure to the resultant of the static active or "at-rest" earth pressure. Reduce the static passive pressure to 170 pcf for a seismic event.

For permanent surcharge loads, apply a uniform load to the wall equal to 0.45-times the surcharge load. Apply an additional 200 psf to accommodate transient and construction surcharge loading (comparable with AASHTO H-20).

9.3 GRADING

9.3.1 CLEARING

Prior to grading, demolish and clear the site to remove structures, fences, vegetation, tree roots, debris, abandoned utilities, soft or unstable areas, and other deleterious materials.

9.3.2 SUBGRADE

Scarify and compact the upper 10 inches of soil in areas to receive fill (outside of the tank pad) to at least 90 percent relative compaction with at least optimum moisture content per ASTM D1557. The excavation bottom must be firm and unyielding prior to placing concrete.

Place fill in maximum 8-inch-thick loose lifts, moisture condition to within 2% of optimum moisture content and compact to a minimum 90% relative compaction per ASTM D1557. Increase the relative compaction to 95% in the upper 6-inches beneath the pavement areas.

Native materials, minus organics, debris, and other deleterious materials, are suitable for engineered fill with a maximum particle size of 4 inches. Excavated materials unsuitable for use as structural fill should be placed outside the structure limits.

9.3.3 OVEREXCAVATION – TANK PAD

To reduce the amount of settlement to within the required tolerances provided by DN Tanks, the near surface soils are recommended to be removed, processed and recompacted below the planned tank. Our analysis shows that an overexcavation to a depth of 5 feet below existing grade (to an elevation of approximately 592 feet) is recommended. In addition to the area below the tank, extend the overexcavation to a minimum of 5 feet laterally beyond the tank and foundation footprint in all directions.

Scarify the exposed subgrade to a depth of 10 inches and compact to at least 95% percent relative compaction with at least optimum moisture content per ASTM D1557. The excavation bottom is recommended to be firm and unyielding prior to placing concrete. Place and compact fill per Section 9.2.5 below.

9.3.4 OVER-OPTIMUM SOIL MOISTURE

Excessively over-optimum (wet) soil conditions can make proper compaction difficult or impossible.

In general, wet soil can be mitigated by:

- Discing the soil during prolonged periods of dry weather,
- Over-excavating and replacing with drier material,
- Stabilization using aggregate and stabilization fabric or grid.

Crawford should be consulted for further recommendations if these conditions are encountered during grading.

9.3.5 BACKFILL

Native silty sands or select import can be used as backfill. Moisture condition backfill to within 2 percent of optimum and place in maximum 8-inch thick, horizontal, loose lifts. Compact backfill to a minimum 95 percent relative compaction based on the ASTM D 1557 test procedure.

In order to minimize the residual lateral earth pressures on structure walls, compaction equipment used behind the walls must be restricted (by load and distance from wall) so that wall design values are not exceeded. For this reason, we recommend compaction within a horizontal distance equal to one-half of the wall height, up to a distance of 5 feet, to be completed with hand-operated equipment (i.e., jumping jack). To minimize the potential for significant settlement around deep walls, controlled low strength material (CLSM) can be used to backfill to the surface or to a manageable depth (e.g. 5 to 10 feet below grade).

9.3.6 IMPORT MATERIAL

Import fill shall be granular soil, free of organic material and debris, have an Expansion Index (per ASTM D4829) of less than 25, an R-value greater than XX, and conform to the following gradation:

Sieve Size	Percentage Passing
2-inch	100
No. 4	35 – 100
No. 30	20 – 100
No. 200	10 – 45

Caltrans Class 2 aggregate base is considered acceptable and does not need to meet these gradation requirements. Import fill must be observed and tested by Crawford prior to its approval.

9.4 OPEN-CUT PIPELINE RECOMMENDATIONS

Generally, the open-cut portions of the pipeline will have a minimum of 4 feet of cover along the all the segments of the pipeline.

9.4.1 SOIL LOADS ON RIGID BURIED PIPES

Due to the lack of ductility of rigid pipelines, the dead loads and associated strain are important to analyze. The soil deadload (W_D) on the rigid pipeline in a trench may be evaluated by Marston's Formula:

$$W_D = C_d \gamma {B_d}^2$$

Where:
C_d = load coefficient based on ${K_\mu}'$
γ = moist unit weight of backfill material (pcf)
B_d = width of trench at top of pipe (ft)

Use a moist unit weight of 135 pcf for the above calculation.

Similar to Composite Modulus of Soil Reaction, the backfill material and compaction, trench width, and installation depth are components to designing the pipeline. For an open cut installation with a ratio of the backfill depth to trench width at the top of the pipe (H/B_d) of at least 1 (i.e. backfill depth is greater than the trench width) and for a trench width at top of pipe no greater than 3 times the pipe diameter, C_d[12] may be calculated by:

$$C_d = \frac{1 - e^{-2K\mu' \frac{H}{B}}}{2K\mu'}$$

Where:
K = rankine's lateral earth pressure coefficient
μ' = friction coefficient between fill material and sides of trench
H = backfill height above the pipe crown (feet)

The combined $K\mu'$ value is dependent on backfill type, compaction, and moisture content. Using the backfill recommendations in this report, the estimated $K\mu'$ values are 0.120 for clay, 0.130 for silt, and 0.150 for sands and aggregate base.

9.4.2 SOIL LOADS ON FLEXIBLE BURIED PIPES

Soil loads on flexible buried pipes should be analyzed as well. Based on AWWA M11, if the flexible pipe is buried in a trench less than two times the width of the pipe, the load is computed as:

$$W_c = C_d \gamma {B_d}^2 (\frac{B_c}{B_d})$$

Where:
W_c = dead load on the conduit (lb/lin ft)
C_d = load coefficient based on ${K_\mu}'$ (presented in Section 9.4.1)
γ = moist unit weight of backfill material (pcf)
B_d = width of trench at top of pipe (ft)

[12] American Concrete Pipe Association (2000)

B_c = diameter of pipe (ft)

If the flexible pipe is installed with trenchless techniques or a wide trench (i.e. trench width is greater than two times the width of the pipe):

$$W_c = \gamma H B_c$$

Where:

W_c = dead load on the conduit (lb/lin ft)
γ = moist unit weight of backfill material (pcf)
H = height of fill above top of pipe (ft)
B_c = diameter of pipe (ft)

9.4.3 THRUST RESTRAINT

Unbalanced thrust forces develop in a pipeline due to internal pressures, particularly around change of direction in the pipeline alignment. For large diameter pipelines, these thrust forces are typically counteracted by frictional resistance along the pipe and restrained joints.

Restrained joints resist thrust forces through friction between the pipe and the soil surrounding it. Per AWWA M11, the length of pipeline required to restrain each side of an alignment bend is:

$$L = \frac{PA(cos\Delta)}{\mu(W_e + W_w + W_p)}$$

Where:

L = length of restrained or harnessed joints on each side of the bend or elbow (ft)
P = internal pressure (psi)
A = cross-sectional area of the pipe (in^2)
Δ = bend or elbow deflection (degrees), 0° to 90°
μ = coefficient of friction between the pipe and the soil
W_e = horizontal bends: two times the weight of the prism of soil over the pipe (lb/ft of pipe length)
= vertical bends: weight of the prism of soil over the pipe (lb/ft of pipe length)
W_p = weight of the pipe (lb/ft)
W_w = weight of the contained water (lb/ft)

The coefficient of friction between a steel pipe and the surrounding soil is modeled as: $\mu = tan\,(0.6\phi)$, where ϕ is the soil friction angle. Assuming a soil friction angle of 36° for compacted coarse grained, angular backfill soil, we recommend using a coefficient of friction of 0.40.

Although likely unnecessary for the majority of this project, thrust blocks may also be used if additional thrust resistance is needed. Thrust block design is governed by two factors – the total thrust force and the allowable passive pressure of the soil. Allowable passive pressure will be variable throughout the alignment due to varying soil conditions. We calculated passive pressures at each of our boring locations to assess trending values along the alignment. Based on this trend, we recommend a passive pressure of 205 pcf for borings classified with clayey and 250 pcf for the borings classified with sandy materials for thrust block design; see the table

below for the recommended passive pressures associated with each boring. The upper 12 inches of soils should be ignored.

Table 14: Recommended Passive Pressure Values

9.4.4 COMPOSITE MODULUS OF SOIL REACTION

Semi-rigid and flexible pipes are designed to withstand a certain amount of deflection from applied earth loads. One of the input parameters to pipe deflection equations is the Composite Modulus of Soil Reaction (CMSR). The CMSR value is influenced by native soil properties, backfill soil properties, and trench/pipe geometry. We calculated composite modulus of soil reaction values using the Howard (2011) and AWWA M11 and M45 method. This approach multiplies the modulus of soil reaction for the embedment soil (i.e. trench backfill) by a soil support combining factor, S. Using the above parameters, we selected our S values from Table 1 of "Amster Howard, TECH NOTE, A supplement to Pipeline Installation," dated October 3, 2011. For these calculations, we assume the trench specifications provided by Carollo Engineers in the June 2019 plans page TP01. We provide a brief summary of the specifications below:

- Trench Geometry
  - For pipe diameters, less than 24-inches, the trench width will be between 18 and 24-inches greater than the pipe diameter. We calculated the CMSR using a minimum trench width equal to 18-inches wider (9-inches per side) than the pipe diameter.

- Backfill Material
  - Sand or aggregate base course
- Compaction
  - Pipe bedding will have a relative compaction (per ASTM D1557) greater than or equal to 90%
  - Trench backfill will have a relative compaction (per ASTM D1557) greater than or equal to 95%

Below is the pipe trench profile geometry as provided by Carollo.

Using these assumptions, pipe depth, size, installation type, and the geotechnical information presented herein, we calculated Composite Modulus of Soil Reaction values at each exploration location. We present our CMSR values in Table 15.

Table 15: Composite Modulus of Soil Reaction Values

Boring Number	Pipe Outer Diameter (in)	Approximate Station[1]	CMSR (psi)
R-19-001	18	A10+95.2 Rt 21.9	4,000
R-19-002	18	A13+98.8 Rt 35.8	4,000

Boring Number	Pipe Outer Diameter (in)	Approximate Station[1]	CMSR (psi)

R-19-024	18	A32+87.8 Lt 34.4	4,000

[1]Stations correlate with Figure 2 attached.

To calculate the above results, we assumed a sand backfill and applied an E_b' (trench backfill Modulus of Soil Reaction) value of 1,600 psi. Native Moduli of Soil Reaction varied from 800 in loose clayey sands to 5,000 in hard clays and dense gravels with silt. Final design values should be calculated based on actual backfill Modulus of Soil Reaction and trench/pipe dimensions.

9.5 TRENCHLESS PIPELINE RECOMMENDATIONS

There are two locations along the alignment where trenchless technology will be used to install the 18-inch OD pipeline where traditional open-cut trenching methods are not feasible. Many trenchless technologies are feasible for construction at these locations. The contractor is responsible for selecting appropriate trenchless installation methods. The chosen trenchless method should not cause differential settlement, surface soil heaving, or damage to existing facilities and utilities. The method and approach must maintain pipeline vertical and horizontal alignment within design tolerances.

Crawford completed four explorations at the following trenchless crossing locations:

- Trenchless Crossing 1 at Highway 101 (Borings R-19-001 and R-19-002)
- Trenchless Crossing 2 at Bush Street (Borings R-19-004 and R-19-024)

Trenchless crossing locations are presented on Figure 2.

At each trenchless crossing, launching and receiving shafts (pits) will need to be excavated to house the trenchless installation equipment if direct access trenchless methods (e.g., horizontal auger bore, jack-and-bore, micro tunneling, etc.) are used instead of Horizontal Direction Drilling (HDD). Although the contractor would likely have launching and receiving pits for HDD to control hydraulic fracture of the drilling mud, the pits would be less significant and likely not require shoring. With the advantage of less expensive pits, HDD comes with the disadvantage of needing substantial staging area to lay out the pipe prior to installation.

9.5.1 SHAFTS

Shoring should be designed to prevent material from entering the shaft during all construction operations. Dewatering will likely be necessary during excavation of the launching and receiving shafts.

Based on our understanding of the project, the bottom of pipe elevation at Trenchless Crossing 1 will be about 592 feet. The bottom of pipe elevation at Trenchless Crossings 2 will be about 598 feet. We assume entry and receiving pit bottoms will be at elevation 590 feet at Trenchless Crossing 1 and 596 feet at Trenchless Crossing 2 to provide space for the installation equipment.

We provide the following bearing capacities and shallowest groundwater condition we anticipate at each crossing. The shallowest groundwater level was encountered in boring R-19-004 during our March 21, 2019 field exploration. We estimate approximately 1 inch of immediate and less than ¾ inches of differential settlement. The following bearing capacities are for the support of drilling/driving equipment at the base of the pit.

Table 16: Trenchless Locations Bearing Capacity

Trenchless Location	Allowable Bearing Capacity, psf	Static Groundwater Elevation, ft
Crossing 1	2,500	600
Crossing 2	2,000	600

With proper shoring in place, the base of the shafts should be reviewed to see if the in-situ soil is suitable for the stability of the trenchless installation equipment. If the soil is found to be unstable, (excavate one foot of in-situ soil) place a 12” layer of aggregate base course compacted to at least 85% relative compaction on top of a nonwoven geotextile fabric layer (Mirafi S1000 or similar product).

We present the following passive pressure for the walls of the trenchless shafts assuming fully drained conditions.

Table 17: Trenchless Passive Pressures

Trenchless Crossing 1	
Passive Pressure	195 psf
Trenchless Crossing 2	
Passive Pressure	200 psf

Once the trenchless portion of the pipe is installed, the launching and receiving shafts must be backfilled per Mendocino County or City of Ukiah requirements.

9.6 PAVEMENT

We completed two R-Value tests (CTM 301) on bulk samples of near surface soil. Test results indicate R-values of 21 to 35 by stabilometer. Therefore, we recommend using R-Value 21 for project pavement design.

Using varying Traffic Indices and Chapter 600 of the Caltrans Highway Design Manual (CHDM), 6th Edition, we recommend the sections shown in Table 18 below for pavement design.

Table 18: Pavement Sections

Traffic Index	Pavement Sections R-Value 21	
	Hot Mix Asphalt (ft)	Aggregate Base (ft)
5.0	0.20	0.70
5.5	0.25	0.75
6.0	0.25	0.90
6.5	0.30	0.90
7.0	0.30	1.05
7.5	0.35	1.10
8.0	0.40	1.15
8.5	0.40	1.25
9.0	0.45	1.30

*The upper 0.2 feet of HMA may be replaced with rubberized hot mix asphalt.

Design by the Caltrans method presumes materials and construction in accordance with Caltrans “Standard Specifications”, including 95% relative compaction on all materials within 30-inches of finished grade. Inability to achieve the required compaction on the scarified materials may be used as a field criterion to identify areas requiring additional removal and/or re-compaction.

DRAFT

The subgrade soils should be field reviewed with respect to uniformity and suitability by the soils engineer. Any loose, disturbed or otherwise unsuitable materials should be removed to full depth and replaced with imported fill meeting the requirements of the Standard Specifications or Class 2 Aggregate Base compacted to at least 90% relative compaction.

The above pavement design assumes that free water will be absent from the structural section. Suitable surface drainage is of particular importance to limit subgrade saturation and excess free water.

9.7 CONSTRUCTION CONSIDERATIONS

9.7.1 DEWATERING

Based on our observed groundwater levels in Spring 2019, we encountered groundwater within trench excavation limits in boring A-19-020 as well as at the Trenchless Crossing location in boring R-19-004. Groundwater will adversely affect construction of portions of the pipeline and trenchless crossings located near these borings. In addition, we encountered groundwater at an approximate elevation of 575 feet in R-19-009, potentially impacting the pump station and tank constructions. Isolated areas of groundwater seepage are likely to be encountered along other portions of the alignment.

The contractor will be responsible for designing and implementing a dewatering system to meet the requirements of the project. Dewatering operations will need to draw down the groundwater down to a minimum of 3 feet below the planned excavation during construction. Dewatering operations may enter into layers of clean sands that may yield significant water.

9.7.2 EXCAVATABILITY

Based on the conditions observed in our subsurface explorations and our experience, the on-site soil should be excavatable with typical equipment such as backhoes and excavators. Depending on county easement dimensions and pavement configurations, the contractor may need to shore the existing roadway to accommodate traffic if there is insufficient room to properly slope the trench excavation.

9.7.3 SHORING AND TEMPORARY CONSTRUCTION SLOPES

At a minimum, all shoring and temporary construction slopes should be in accordance with current OSHA requirements. Our data indicates Cal OSHA Soil Type C will be encountered throughout the project alignment with the exception of the stiff fine-grained soil layers we encountered. Isolated locations of unstable soils can be encountered, particularly where the trench is adjacent to existing utilities or other improvements. Traffic and construction vibrations need to be considered in shoring applications.

The contractor is responsible for all shoring and temporary slope design based on actual excavation conditions encountered during construction. Shoring will need to be conducive to the contractor's approach to managing groundwater (where needed) and the excavation.

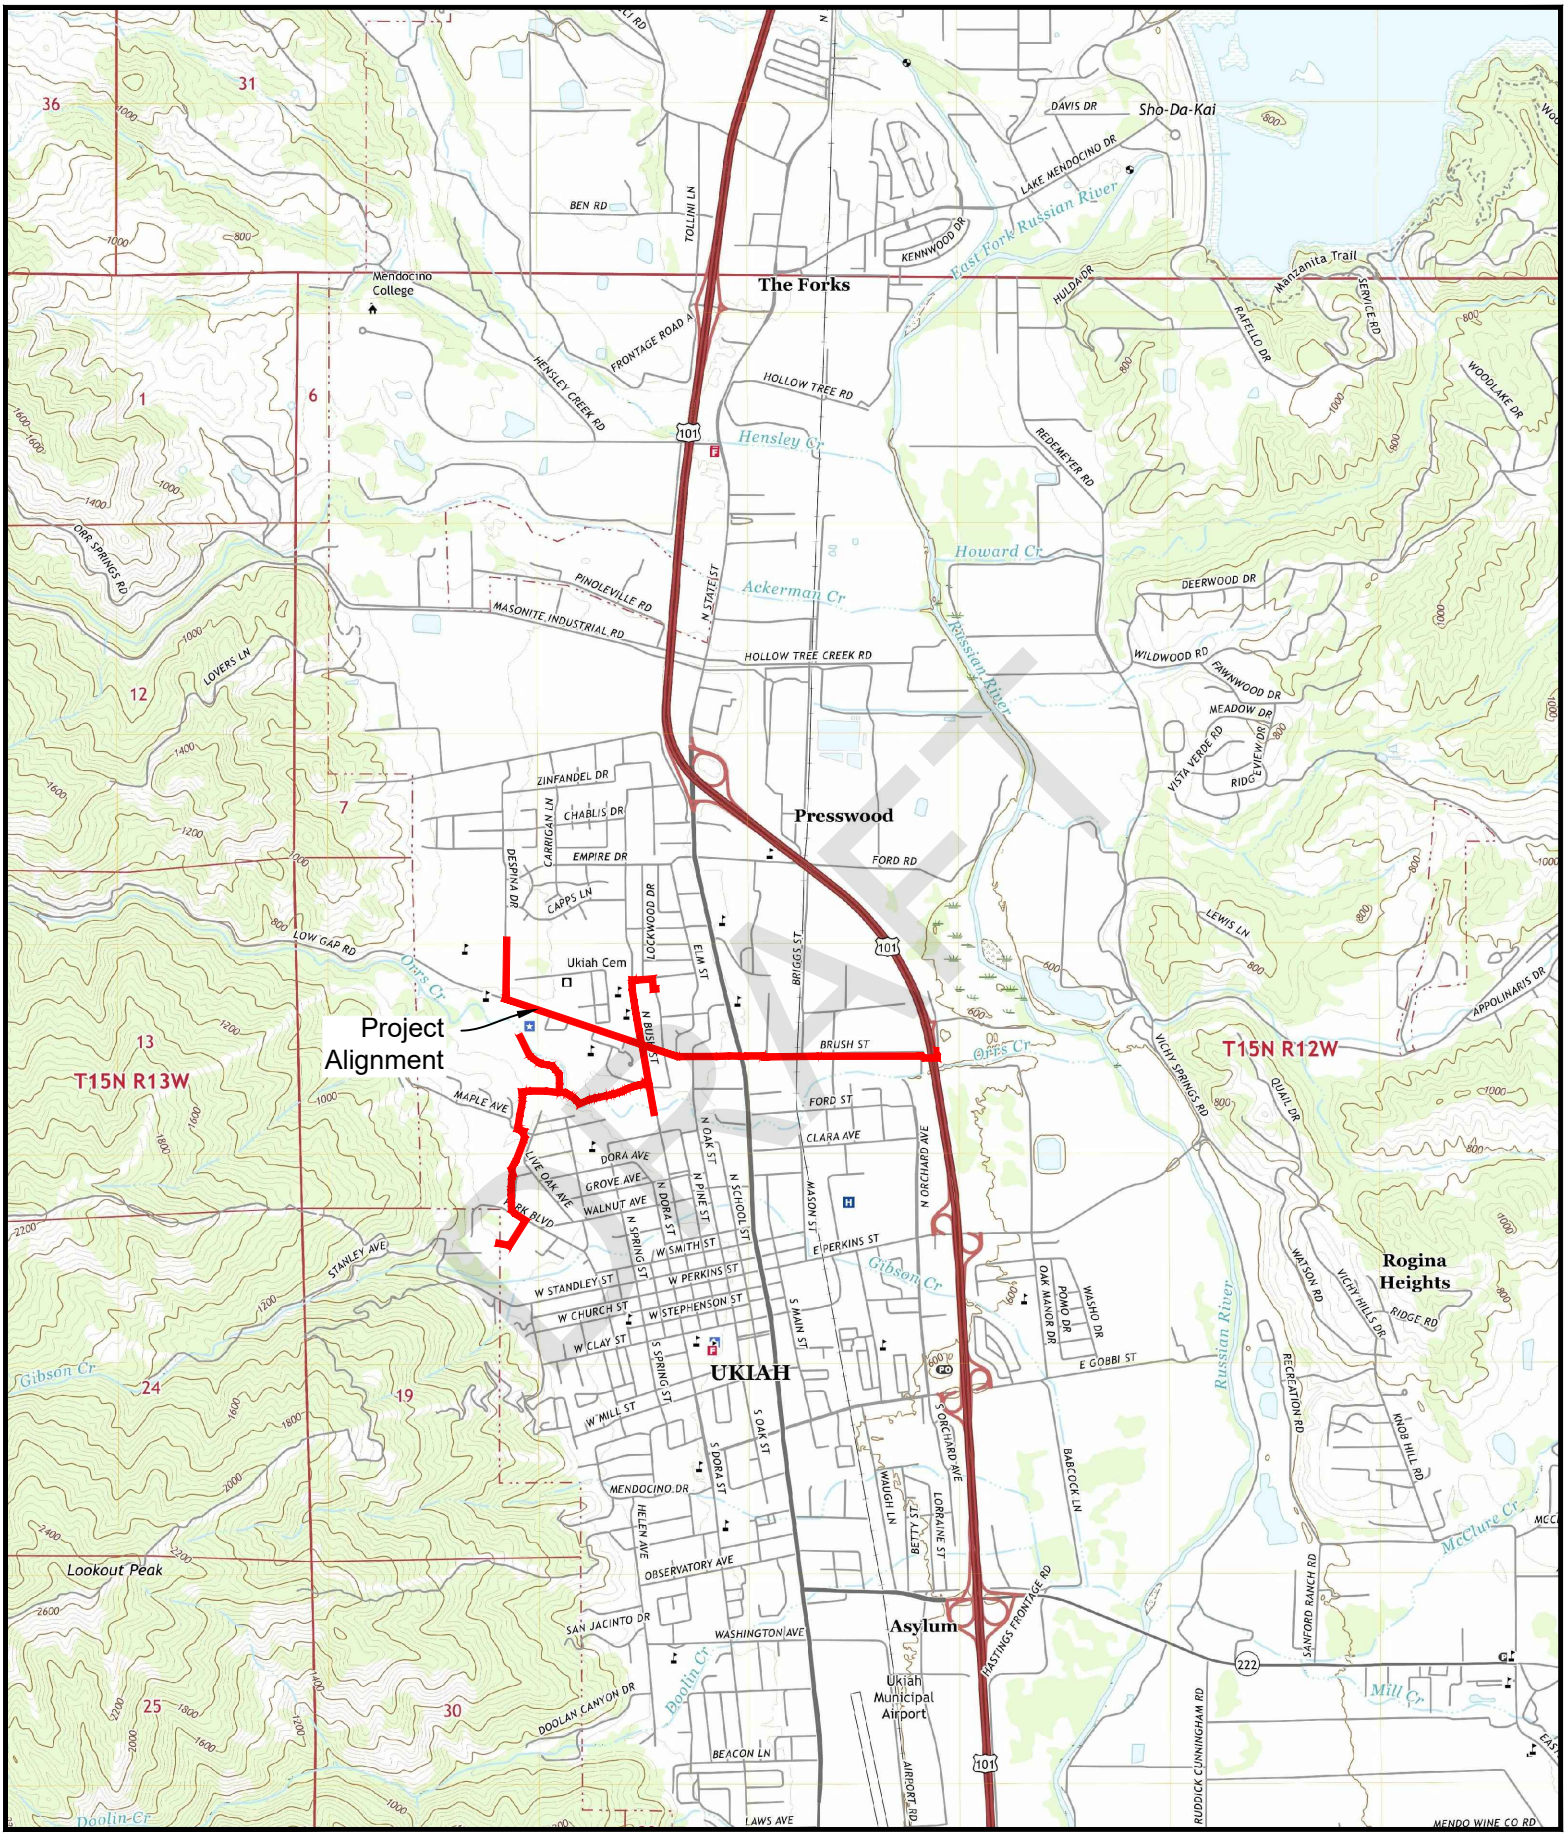
DRAFT

10 LIMITATIONS

Crawford performed services in accordance with generally accepted geotechnical engineering principles and practices currently used in this area. Do not use this report for different locations and/or projects without the written consent of Crawford. Where referenced, we used ASTM or Caltrans standards as a general (not strict) *guideline* only.

Crawford based this report on the current site conditions. We assumed the soil and groundwater conditions are representative of the subsurface conditions on the site. Actual conditions between explorations will vary along the project alignment.

Our scope did not include evaluation of on-site hazardous materials.



Logs of our explorations are presented as Appendix II. The lines designating the interface between soil types are approximate. The transition between soil types may be abrupt or gradual. Our recommendations are based on the final logs, which represent our interpretation of the field logs and general knowledge of the site and geological conditions

CONSISTENCY OF COHESIVE SOILS				
Descriptor	**Unconfined Compressive Strength (tsf)**	**Pocket Penetrometer (tsf)**	**Torvane (tsf)**	**Field Approximation**
Very Soft	< 0.25	< 0.25	< 0.12	Easily penetrated several inches by fist
Soft	0.25 - 0.50	0.25 - 0.50	0.12 - 0.25	Easily penetrated several inches by thumb
Medium Stiff	0.50 - 1.0	0.50 - 1.0	0.25 - 0.50	Can be penetrated several inches by thumb with moderate effort
Stiff	1.0 - 2.0	1.0 - 2.0	0.50 - 1.0	Readily indented by thumb but penetrated only with great effort
Very Stiff	2.0 - 4.0	2.0 - 4.0	1.0 - 2.0	Readily indented by thumbnail
Hard	> 4.0	> 4.0	> 2.0	Indented by thumbnail with difficulty

APPARENT DENSITY OF COHESIONLESS SOILS	
Descriptor	**SPT N_{60} (blows / 12 inches)**
Very Loose	0 - 5
Loose	5 - 10
Medium Dense	10 - 30
Dense	30 - 50
Very Dense	> 50

MOISTURE	
Descriptor	**Criteria**
Dry	No discernable moisture
Moist	Moisture present, but no free water
Wet	Visible free water

PERCENT OR PROPORTION OF SOILS	
Descriptor	**Criteria**
Trace	Particles are present but estimated to be less than 5%
Few	5 to 10%
Little	15 to 25%
Some	30 to 45%
Mostly	50 to 100%

SOIL PARTICLE SIZE		
Descriptor		**Size**
Boulder		> 12 inches
Cobble		3 to 12 inches
Gravel	Coarse	3/4 inch to 3 inches
	Fine	No. 4 Sieve to 3/4 inch
Sand	Coarse	No. 10 Sieve to No. 4 Sieve
	Medium	No. 40 Sieve to No. 10 Sieve
	Fine	No. 200 Sieve to No. 40 Sieve
Silt and Clay		Passing No. 200 Sieve

PLASTICITY OF FINE-GRAINED SOILS	
Descriptor	**Criteria**
Nonplastic	A 1/8-inch thread cannot be rolled at any water content.
Low	The thread can barely be rolled, and the lump cannot be formed when drier than the plastic limit.
Medium	The thread is easy to roll, and not much time is required to reach the plastic limit; it cannot be rerolled after reaching the plastic limit. The lump crumbles when drier than the plastic limit.
High	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump can be formed without crumbling when drier than the plastic limit.

CEMENTATION	
Descriptor	**Criteria**
Weak	Crumbles or breaks with handling or little finger pressure.
Moderate	Crumbles or breaks with considerable finger pressure.
Strong	Will not crumble or break with finger pressure.

REFERENCE: Caltrans Soil and Rock Logging, Classification, and Presentation Manual (2010).

LOG OF BORING R-20-003

PROJECT NO: 19-503.1
PROJECT: Ukiah Recycled Water Pipeline-Phase 4
LOCATION: Ukiah, CA
COUNTY: Mendocino
CLIENT: Carollo Engineers, Inc.
LOGGED BY: MEA
DEPTH OF BORING: 76.50 (ft)

BEGIN DATE: 12/03/2020
COMPLETION DATE: 12/03/2020
SURFACE ELEVATION: 636.20 (ft)
SURFACE CONDITION: Soil
WATER DEPTH: 18.5 ft
READING TAKEN: 12/03/20
HAMMER EFFICIENCY: 89.1 (%)

DRILLING CONTRACTOR: GeoEx Subsurface Exploration
DRILLING METHOD: SS Augers (4"), Rotary (4")
DRILL RIG: CME 75 (Track Mounted)
HAMMER TYPE: Automatic; 140 lbs; 30 in. drop
SAMPLER TYPE & SIZE: Bulk, MCAL (2.4" ID)
BOREHOLE DIAMETER: 4.0 in.
BACKFILL METHOD: Neat Cement Grout

APPENDIX IV

Site-Specific Hazard Analysis

DRAFT

APPENDIX IV
DRAFT SITE-SPECIFIC HAZARD MEMORANDUM CITY OF UKIAH RECYCLED WATER PIPELINE UKIAH, CALIFORNIA

1 INTRODUCTION

Crawford drilled three boring (R-19-009, R-19-017 and R-19-021) in 2019 in the vicinity of the proposed tank and pump station in the Ukiah water treatment plant. Crawford completed a site-specific hazard analysis for compliancy with ASCE 7-16 and 2019 CBC.

2 SITE SPECIFIC ANALYSIS

The following sections describe the site-specific ground motion analysis performed in accordance with ASCE 7-16 (with Supplement 1) and 2019 CBC.

2.1 INITIAL SEISMIC HAZARD ANALYSIS

2.1.1 SEISMIC DESIGN CRITERIA

Seismic design criteria are included in Section 11 of ASCE 7-16 (Sections referenced hereafter refer to ASCE 7-16), including mapped acceleration parameters. These mapped parameters are available online through the SEAOC/OSHPD[1] Seismic Design website, which interpolates values from the ASCE 7-16 maps using the site location.

2.1.2 SITE CLASS AND RISK CATEGORY

The site was classified as Site Class F according to Section 20.3.13 due to the potentially liquefiable soils. The shear wave velocity of 290 meters per second (m/s) in the upper 30 meters or 100 feet (V_{S30}) used for the site was developed from 2019 boring data. Crawford used correlations with SPT blow count N-values corrected for hammer efficiency. The Risk Category for the structure was assumed to be IV.

2.1.3 MAPPED ACCELERATION PARAMETERS

Crawford accessed the SEAOC/OSHPD Seismic Design Map website considering the site location latitude 39.1595°N and longitude 123.1949°W, Site Class F, and Risk Category IV to determine the Mapped Maximum Considered Earthquake (MCE) Spectral Response Short Period (S_S), Mapped MCE Spectral Response at 1 second period (S_1), Long Period (T_L), and mapped risked coefficients (C_{RS} and C_{R1}). The S_S, S_1, T_L, C_{RS}, and C_{R1} are coordinate specific and are taken from ASCE 7-16 figures independently of site class. The mapped acceleration parameters are based on an MCE which is roughly equivalent to an earthquake with a 2% chance of exceedance in 50 years (2,475-year return period). Due to the site class F designation and a S_1, > 0.2, a site-specific analysis is required according to Section 11.4.8 for the acceleration parameters. Table 1 summarizes the mapped acceleration parameters.

[1] https://seismicmaps.org

Table 1: Mapped Acceleration Parameters

Mapped Acceleration Parameter	Value	Source
Mapped MCE_R Spectral Response Short Period (S_S)	2.129	Figure 21-1
Mapped MCE_R Spectral Response at 1 Second Period (S_1)	0.821	Figure 21-2
Long Period (T_L)	8	Figure 21-14
Mapped Risk Coefficient at Short Period (C_{RS})	0.881	Figure 22-17
Mapped Risk Coefficient at 1 Second Period (C_{R1})	0.875	Figure 22-18

2.2 HORIZONTAL GROUND MOTION HAZARD ANALYSIS

A ground motion hazard analysis accounts for the regional tectonic setting, geology, and seismicity of a specific site as well as the expected recurrence of the maximum magnitudes of the earthquakes on known faults and source zones, considering ground motion attenuation and near source effects. The methodology included in ASCE 7-16 was used to determine the site-specific ground motions of the project site, generally consisting of the following steps:

- Determine the probabilistic MCE ground motions
- Determine the deterministic MCE ground motions
- Adjust MCE ground motions to maximum horizontal response
- Adjust probabilistic MCE ground motions to risk-targeted maximum considered earthquake ground motions (MCE_R)
- Compare and scale the site-specific deterministic MCE ground motion with minimum spectral responses to ASCE 7-16 Supplement 1 Section 21.2.2
- Compare the deterministic ground motion to the probabilistic ground motion to determine the site-specific MCE_R ground motion (lower of the two at each period)
- Calculate design spectral response ground motion (2/3 of MCE_R)
- Compare the Section 21.2 design spectral response ground motion to the Section 11.4.6 design spectral response ground motion (cannot be lower than 80% Section 11.4.6 design spectral response ground motion)
- Determine the design spectral response spectrum and design acceleration parameters
- Calculate peak ground acceleration (PGA_M)

2.2.1 GROUND MOTION HAZARD ANALYSIS

Crawford performed a seismic hazard analyses and site response analyses using EZ-FRISK software Version 8.07. Crawford used the following next generation attenuation relationships (NGA) all equally weighted for the nearby strike-slip and reverse faults:

- Boore-et al (2014)
- Campbell and Bozorgnia (2014)
- Chiou and Youngs (2014)

DRAFT

The following parameters were common to all analyses for each of the attenuation relationships:

- The V_{S30} of the site of 290 m/s
- Depth to soil with a V_S of 1,000 m/s was calculated to be 320 meters based on the methodology proposed by Chiou and Youngs (2008)
- Depth to soil with a V_S of 2,500 m/s was calculated to be 1.7 kilometers based on the methodology proposed by Campbell and Bozorgnia (2008)

2.2.2 PROBABILISTIC MCER GROUND MOTION

Seismic sources within 200 kilometers were used to determine the site-specific ground motions. The NGA analyses considered the following faults in Table 2.

Table 2: Summary of Seismic Sources

Attenuation Relationship Type	Source	Distance (km)	Maximum Magnitude	Mechanism	Dip Angle (degree)	Dips Direction	Site Lies
NGA	California Gridded	0.00	7.0	SS|R	90	--	Above

DRAFT

EZ-FRISK software was used to determine geometric mean spectral response acceleration predicted using NGA from a 5% damped response spectrum with a 2% in 50-year exceedance probability. Crawford scaled the NGA geometric mean spectral response to the maximum rotated spectral using the scale factors in Section 21.1.

A. RISK COEFFICIENTS

Method 1 of Section 21.2 was used to determine the probabilistic MCE_R ground motion

Mapped risk coefficients (C_{RS} and C_{R1}) were used to adjust the response accelerations to a 1% chance of collapse in 50 years per Section 21.2.1.1. The risk coefficients are summarized in Table 1, along with the source figure from ASCE 7-16.

C_{RS} was applied to accelerations at spectral periods less than or equal to 0.2 seconds. C_{R1} was applied accelerations at spectral periods greater than or equal to 1 second. For spectral periods between 0.2 and 1 seconds, the C_R value was linearly interpolated.

B. PROBABILISTIC MCER GROUND MOTION

Figure 1 shows the geometric mean spectral response for the 2% in 50-year event developed using EZ-FRISK for each of the attenuation relationships described above. Also shown is the risk-adjusted response spectrum adjusting the response to a 1% in 50-year probability of collapse, which is equivalent to the site-specific probabilistic ground motion MCE_R.

2.2.3 DETERMINISTIC MCER GROUND MOTION

The deterministic spectral response acceleration is defined as the 84th-percentile 5% damped spectral response in the direction of maximum horizontal response for the characteristic earthquake on all known active faults within the region. EZ-FRISK was used to calculate the deterministic ground motion per Section 21.2.2. The NGA controlled deterministic spectral response was taken as the largest amplitude of ground motion considering all sources using the weighted mean of NGA attenuation relationships stated in Section 2.2.1 of this memorandum. Crawford scaled the deterministic 84th-percentile 5% damped spectral response to the maximum rotated spectral using the scale factors in Section 21.1. The controlling seismic source for the project site is the Maacama-Garberville fault. Figure 2 shows the 84th-percentile 5% damped spectral response for the NGA attenuation relationships.

DETERMINISTIC MCE_R GROUND MOTION SCALING

Per ASCE 7-16 Supplement 1 Section 21.2.2, the maximum deterministic spectral response was compared with the minimum peak acceleration of 1.5Fa with Fa = 1 for Site Class E. Our maximum spectral response was 2.5g, therefore, no scaling of the deterministic curve was required. Figure 3 shows our deterministic ground motions compared to the minimum peak spectral accelerations.

2.2.4 SITE-SPECIFIC SPECTRAL RESPONSE ACCELERATION MCER

The site-specific spectral response acceleration is defined as the lower of the probabilistic and deterministic ground motions in Section 21.2.3. For the project site, the deterministic ground motion was lower for periods (0 to 3 seconds) and the probabilistic ground motion was lower for all periods (4 to 10 seconds). The site-specific spectral response acceleration (MCE_R) is shown on Figure 4.

2.2.5 DESIGN RESPONSE SPECTRUM

The design response spectrum is defined in Section 21.3 as the higher of two values:

- Two-thirds of the site-specific design spectral response acceleration per Section 21.2
- 80% of the design spectral response acceleration per Section 11.4.6 where F_a is calculated in Table 11.4-1 and $F_v = 4$ for $S_1 > 0.2$ for Site Class E

Crawford first calculated the design spectral response acceleration by taking 2/3 of the site-specific response acceleration MCE_R as shown in Figure 5.

Crawford then calculated the design response accelerations per Section 11.4.6 with F_a = 1.0 and F_v = 4 and reduced the spectral accelerations by 80% to adjust for the minimum design spectral accelerations for Site Class E. We reduced the spectral accelerations by 80% again to adjust for the minimum design spectral accelerations for a Site Class F per Section 21.3. We then compared Section 11.4.6 design spectral accelerations for Site Class F with our site-specific design spectral response accelerations (Figure 6). The site-specific design spectral response accelerations controlled at periods below approximately 3.5 seconds and the minimum design spectral accelerations for Site Class F controlled from approximately 3.5 to 10 seconds.

The design response spectrum is shown on Figure 6 and Table 3.

Table 3: Design Response Spectrum

Period, s	Sa, g
0.05	0.78
0.1	1.04
0.2	1.31

2.0	0.74
3.0	0.49
4.0	0.35
5.0	0.28
6.0	0.23
7.0	0.20
8.0	0.18
10.0	0.11

DRAFT

2.2.6 DESIGN ACCELERATION PARAMETERS

Design acceleration parameters were calculated in accordance with Section 21.4. The S_{DS} value was taken as 90% the peak spectral acceleration value from periods 0.2 to 5 seconds. The S_{D1} value was taken as the maximum product of $T*S_a$ (period * spectral acceleration) from periods 1 to 5 seconds. Per Section 21.4, the S_{DS} and S_{D1} values cannot be less than 80% of the S_{DS} and S_{D1} calculated from Section 11.4.5. The S_{DS} and S_{D1} values in Section 11.4.5 were calculated from using F_a = 1.0 and F_v = 4.0 for a Site Class E, as given in Section 21.3. The Section 11.4.5

S_{DS} and S_{D1} values were reduced by 80% again to convert to Site Class F values for comparison per Section 21.3.

S_{MS} and S_{M1} were calculated as 1.5 times S_{DS} and S_{D1}, respectively. Per Section 21.4, the S_{MS} and S_{M1} values cannot be less than 80% of the S_{MS} and S_{M1} calculated from Section 11.4.3. The S_{MS} and S_{M1} values in Section 11.4.3 was calculated from using F_a = 1.0 and F_v = 4.0 for a Site Class E, as given in Section 21.3. The Section 11.4.3 S_{MS} and S_{M1} were reduced by 80% again to convert to Site Class F values per Section 21.3.

The design acceleration parameters are summarized in Table 4.

Table 4: Preliminary Horizontal Site-Specific Spectral Accelerations

Design Acceleration Parameter	Value (g)
Design Spectral Acceleration for Short Period (S_{DS})	1.48
Design Spectral Acceleration for 1 Second Period (S_{D1})	1.58
MCE Spectral Response Acceleration for Short Period (S_{MS})	2.22
MCE Spectral Response Acceleration for 1 Second Period (S_{M1})	2.37

DRAFT

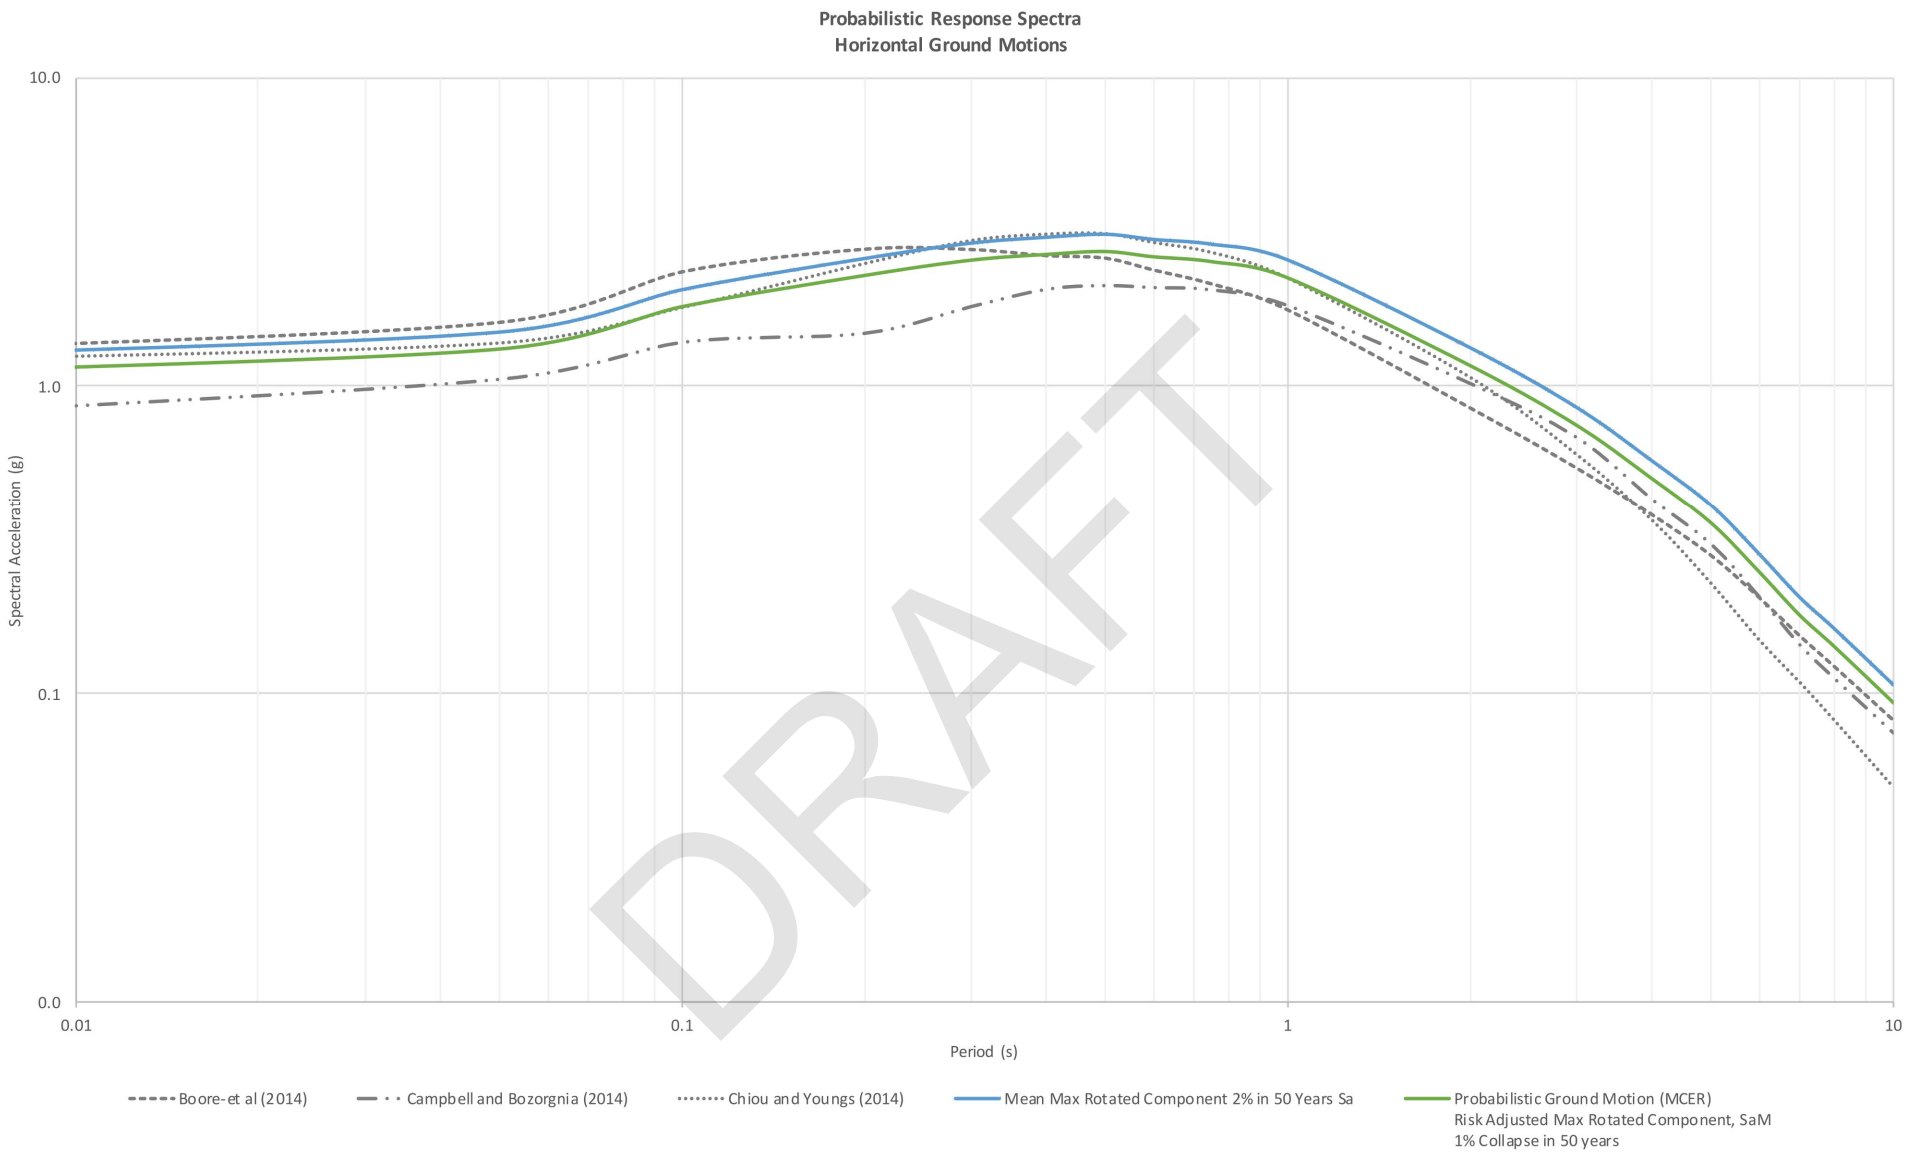
2.2.7 MAXIMUM CONSIDERED EARTHQUAKE MCEG PEAK GROUND ACCELERATION (PGA)

A. PROBABILISTIC MCEG PGA

Per Section 21.5.1, the probabilistic geometric mean PGA shall be taken as geometric mean peak ground acceleration with a 2% probability of exceedance within a 50-year period. The probabilistic MCE_G PGA is 1.14g.

B. DETERMINISTIC MCEG PGA

Per Section 21.5.2, the deterministic geometric mean PGA shall be taken as the largest 84th-percentile geometric mean peak PGA but not lower than 0.5*F_{PGA} where F_{PGA} is determined using ASCE 7-16 Table 11.8-1 and PGA is taken as 0.5g. Table 11.8-1 does not include F_{PGA} values for Site Class F, therefore, the deterministic MCE_G PGA was taken as the 84th percentile geometric mean PGA., therefore, the deterministic MCE_G PGA was taken as 0.90g.



C. SITE-SPECIFIC MCEG PGA

The site-specific MCE_G PGA (PGA_M) taken as the lesser of the probabilistic MCE_G PGA and deterministic MCE_G PGA but not less than 80% of the PGA_M determined from Equation 11.8-1 in ASCE 7-16. Since there are no F_{PGA} values for Site Class F, the site-specific PGA_M was taken as 0.90g.

GENERAL NOTES

1. FOLLOWING NOTES ARE GENERAL AND APPLY TO ALL SHEETS OF THESE CONTRACT DOCUMENTS AS IF THEY WERE WRITTEN IN THEIR ENTIRETY ON EACH SHEET.
2. CONTRACTOR SHALL VERIFY ALL DIMENSIONS BEFORE STARTING WORK AND SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES. CONTRACTOR SHALL BE RESPONSIBLE FOR FIELD VERIFYING ALL EXISTING CONDITIONS INCLUDING LOCATION AND DIMENSIONS OF ALL EXISTING CONSTRUCTION AND UTILITIES. CONTRACTOR SHALL NOTIFY ENGINEER IF THERE IS A CONFLICT BETWEEN THE CONTRACT DOCUMENTS AND EXISTING CONSTRUCTION BEFORE PROCEEDING WITH WORK.
3. UNLESS DETAILED, SPECIFIED, OR OTHERWISE INDICATED ON THE DRAWINGS, CONSTRUCTION SHALL BE AS INDICATED IN THE APPLICABLE TYPICAL DETAILS AND GENERAL NOTES. TYPICAL DETAILS SHALL APPLY EVEN THOUGH NOT REFERENCED AT SPECIFIC LOCATIONS ON DRAWINGS.
4. WHERE NO CONSTRUCTION DETAILS ARE SHOWN OR NOTED FOR ANY PART OF WORK. DETAILS SHALL BE IN THE SAME AS FOR OTHER SIMILIAR WORK.
5. CONTRACTOR SHALL COMPLY WITH LOCAL CONSTRUCTION STORM WATER DISCHARGE REGULATIONS AND REQUIREMENTS.
6. PRIOR TO EXCAVATION FOR NEW STRUCTURES, ELECTRICAL CONDUIT, FABRICATION OF NEW PIPING AND/OR OTHER PROPOSED UTILITIES, CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL EXISTING PIPING AND UTILITIES IN THE CONSTRUCTION AREA. THE CONTRACTOR SHALL TEMPORARILY RELOCATE CONFLICTING EXISTING UTILITIES AT TIE-IN/CONNECTION LOCATIONS AND REINSTALL THEM AS REQUIRED TO ELIMINATE THE CONFLICT AT NO ADDITIONAL COST TO THE OWNER.
7. ALL PIPELINES 12" AND LARGER SHALL HAVE A MINIMUM COVER OF 48" UNLESS THE COVER DEPTH IS SPECIFICALLY INDICATED ON THE DRAWINGS. PIPE SMALLER THAN 12" SHALL HAVE A MINIMUM COVER OF 36" UNLESS NOTED OTHERWISE. PIPES SHALL BE ROUTED AS SHOWN UNLESS MINOR REVISIONS ARE NECESSARY TO MISS EXISTING PIPES, STRUCTURES, ETC. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL FITTINGS AND ADAPTERS REQUIRED TO MAKE THE ROUTING CHANGES AT NO ADDITIONAL COST TO THE OWNER. CONTRACTOR SHALL INCLUDE COST FOR THIS IN THE BID.
8. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS OR ELECTRONIC FILES. NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIAL TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF NEW CONSTRUCTION PRIOR TO START OF CONSTRUCTION.
9. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONARY MEASURES NECESSARY TO PROTECT FROM DAMAGE EXISTING FACILITIES AND UTILITIES SHOWN OR NOT SHOWN THAT ARE TO REMAIN IN PLACE. ALL FACILITIES DAMAGED BY THE CONTRACTOR'S OPERATIONS SHALL BE EXPEDITIOUSLY REPAIRED OR RECONSTRUCTED TO THE ORIGINAL OR BETTER CONDITION AT THE CONTRACTOR'S EXPENSE WITHOUT ADDITIONAL COMPENSATION.
10. CONTRACTOR SHALL MAKE CONNECTIONS TO EXISTING PIPE, EQUIPMENT, ETC. AS REQUIRED AND SHALL PROVIDE ALL FITTINGS, ADAPTERS, AND APPURTENANCES REQUIRED TO MAKE THE CONNECTIONS. PROVIDE ALL SUPPORTS REQUIRED FOR A RIGIDLY SUPPORTED COMPLETE AND WORKING SYSTEM.
11. ADJUST ALL VALVE BOXES, VAULTS, PULL BOXES, AND MANHOLES TO FINISHED GRADE UNLESS OTHERWISE SHOWN OR DIRECTED. MANHOLES IN OPEN FIELDS SHALL BE SET TWELVE INCHES ABOVE FINISHED GRADE AND VAULTS SHALL BE SIX INCHES ABOVE FINISHED GRADE.
12. THE CONTRACTOR SHALL CONTACT THE PROPER UTILITY REPRESENTATIVE AS FOLLOWS FOR QUESTIONS OR COORDINATION OF CONSTRUCTION RELATED TO EXISTING UTILITIES. THE CONTACT INFORMATION IS PROVIDED BELOW:

UTILITY NAME	UTILITY TYPE	CONTACT PERSON	CONTACT NUMBER

13. CONTRACTOR SHALL VERIFY THAT PIPING SHOWN TO BE ABANDONED OR AS ABANDONED PREVIOUSLY IS NO LONGER IN SERVICE. LINES IN SERVICE SHALL BE MAINTAINED UNTIL NO LONGER REQUIRED.
14. ALL EXISTING PIPES THAT ARE TO BE ABANDONED IN PLACE OR REMOVED MAY NOT BE SHOWN. WHERE PIPING IS TO BE ABANDONED AND MUST REMAIN IN SERVICE UNTIL COMPLETION OF OTHER PHASES OF WORK, AND IT CONFLICTS WITH NEW PIPING, TEMPORARILY RELOCATE PIPING AS REQUIRED TO MAINTAIN SERVICE.
15. CONTRACTOR SHALL REROUTE THE EXISTING PIPING IF REQUIRED TO MISS THE PROPOSED STRUCTURES. THE EXISTING PIPE SHALL REMAIN IN SERVICE UNTIL NEW PIPING IS READY TO BE PLACED INTO SERVICE. DOWNTIME SHALL BE A MAXIMUM OF 2 HOURS, UNLESS SPECIFIED OR SHOWN OTHERWISE.
16. THE CONTRACTOR SHALL TAKE SPECIAL PRECAUTIONS IN THE VICINITY OF ANY OVERHEAD ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE NATIONAL ELECTRIC CODE AND ANY REQUIREMENT BY THE OWNER OF THE ELECTRIC LINES.
17. PROVIDE ALL SHEETING/SHORING REQUIRED TO PROTECT EXISTING STRUCTURES, PIPES AND FACILITIES.
18. CONTRACTOR SHALL VERIFY LOCATION OF ALL ARCHITECTURAL, MECHANICAL, AND ELECTRICAL ITEMS BEFORE PLACING ANY STRUCTURAL STEEL OR CONCRETE. ALSO, STRUCTURAL DIMENSIONS AND OPENINGS CONTROLLED BY ARCHITECTURAL, MECHANICAL, OR ELECTRICAL EQUIPMENT SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO CONSTRUCTION.
19. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES, AND REVEALS NOT SHOWN ON THE STRUCTURAL DRAWINGS, THAT ARE REQUIRED BY OTHER CONTRACT DRAWINGS, SHALL BE PROVIDED PRIOR TO CASTING CONCRETE.
20. THE CONTRACTOR SHALL POTHOLE EXISTING UTILITIES THAT MAY BE AFFECTED BY CONSTRUCTION UNDER THIS CONTRACT PRIOR TO SUBMITTING PIPE LAY DRAWINGS TO CONSTRUCTION MANAGER WITHIN NINETY (90) DAYS OF NOTICE TO PROCEED BUT NOT LESS THAN THIRTY (30) DAYS PRIOR TO EXCAVATION IN THE VACINITY OF THOSE UTILITIES. UTILITIES TO BE POTHOLED INCLUDE ALL THAT CROSS THE PIPELINE ALIGNMENTS TO CONFIRM CLEARANCE BETWEEN THE EXISTING UTILITY AND THE NEW RECYCLED WATER PIPELINE AND PARALLEL UTILITIES WITHIN TEN (10) FEET OF THE ALIGNMENT CENTERLINES. THE CONTRACTOR SHALL REPORT POTENTIAL UTILITY CONFLICTS TO THE CONSTRUCTION MANAGER IMMEDIATELY AFTER THEY ARE DISCOVERED. NO DELAY CLAIMS WILL BE ACCEPTED IF THE APPARENT CONFLICT IS RESOLVED BY THE CONSTRUCTION MANAGER WITHIN 30 DAYS AFTER IT IS REPORTED. NOT ALL EXISTING ELECTRIC UTILITY POLES AND OVERHEAD WIRES ARE SHOWN ON THE DRAWINGS. THE CONTRACTOR SHALL LOCATE THESE FACILITIES IN THE FIELD AND MAKE PROVISIONS AS NEEDED TO PERFORM CONSTRUCTION WORK WITHOUT DAMAGE TO EXISTING FACILITIES.

GENERAL NOTES CONTINUED

21. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (USA) AT LEAST 48 HOURS IN ADVANCE OF ANY EXCAVATION (1-800-277-2600). THE CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE REGULATIONS PRIOR TO AND DURING EXCAVATIONS.
22. CONTRACTOR SHALL BE RESPONSIBLE FOR FIELD VERIFYING ALL EXISTING CONDITIONS INCLUDING LOCATION AND DIMENSIONS OF ALL EXISTING CONSTRUCTION AND UTILITIES. CONTRACTOR SHALL NOTIFY ENGINEER IF THERE IS A CONFLICT BETWEEN THE CONTRACT DOCUMENTS AND EXISTING CONSTRUCTION BEFORE PROCEEDING WITH WORK.
23. CONTRACTOR SHALL COMPLY WITH TRAFFIC RESTRICTIONS DETAILED IN THE SPECIFICATIONS, INCLUDING SECTION 01140. AT THE CLOSE OF EACH WORKING DAY, EXCAVATIONS MUST BE COVERED WITH STEEL PLATES (NON-SKID SURFACE TYPE) AND TWO WAY TRAFFIC SHALL BE RESUMED. FOR CONSTRUCTION OUTSIDE OF CITY LIMITS, THE CONTRACTOR SHALL SUBMIT A TRAFFIC CONTROL PLAN TO MENDOCINO COUNTY, AND SHALL IMPLEMENT TRAFFIC CONTROL COORDINATED WITH THE TRAFFIC CONTROL PLAN AND IN ACCORDANCE WITH THE SPECIFICATIONS AND THE COUNTY ENCROACHMENT PERMIT REQUIREMENTS.
24. CONTRACTOR SHALL USE CAUTION WHILE WORKING AROUND EXISTING OVERHEAD ELECTRIC UTILITIES AND POLES. ELECTRIC UTILITY POLES SHALL BE SUPPORTED PER UTILITY OWNERS SPECIFICATIONS DURING EXCAVATION.
25. CONTRACTOR SHALL ASSUME THAT EACH PROPERTY HAS AN EXISTING GAS, WATER, SEWER, ELECTRIC, AND CABLE LATERAL WHICH MAY NOT BE SHOWN ON THE PLANS.

JOB NO. 8660F.10
DRAWING NO. 00G04
SHEET NO. 4 OF 200

BENCHMARK INFORMATION

HPGN- D CA 01 CG
THE STATION IS LOCATED ON U.S. HIGHWAY 101, ABOUT 9 MI (14.5 KM) NORTH OF HOPLAND AND ABOUT 4 MI (6.4 KM) SOUTH OF UKIAH. TO REACH THE STATION FROM THE COUNTY COURTHOUSE AT THE CORNER OF NORTH STATE STREET AND PERKINS STREET IN UKIAH, GO EAST ON PERKINS STREET FOR 0.52 MI (0.84 KM) TO THE SOUTHBOUND ENTRANCE TO HIGHWAY 101. GO SOUTH ON THE ON RAMP AND ALONG HIGHWAY 101 FOR 3.74 MI (6.02 KM) TO THE COX-SCHRADER ROAD EXIT TO THE RIGHT. PROCEED ALONG THE OFF RAMP FOR 0.14 MI (0.23 KM) TO THE SOUTH SIDE
OF ROBINSON OVERCROSSING(BRIDGE NO. 10-86) AND THE STATION ON THE LEFT AT POST MILE 20.70. THE STATION IS A SURVEY DISK ENCASED IN PVC PIPE WITH ACCESS COVER SET IN CONCRETE FLUSH WITH THE GROUND, 43 FT (13.1 M) SOUTHWEST OF THE WEST END OF THE SOUTH RAIL OF THE OVERCROSSING, 40 FT (12.2 M) SOUTH OF THE EXTENDED CENTERLINE OF THE BRIDGE, 15 FT (4.6 M) EAST OF THE CENTERLINE OF THE RAMP, 12.6 FT (3.8 M) SOUTH OF A FREEWAY ENTRANCE SIGN, 3.7 FT (1.1 M) EAST OF THE BACK OF THE EAST RAMP CURB AND 3.0 FT (0.9 M) NORTHEAST OF A WITNESS

HPGN- UKIAH AIRPORT RESET
THE STATION IS LOCATED AT THE NORTH END OF UKIAH MUNI AIRPORT NEAR THE RUNWAY END OF 15. THE STATION IS 141.8 FT (43.2 M) EAST OF THE AIRPORT PERIMETER FENCE, 93.8 FT (28.6 M) NORTHWEST OF RM NO 3, 88.6 FT (27.0 M) WEST OF THE WESTERLY EDGE OF THE TAXIWAY, 2.0 FT (0.6 M) EAST OF A 4 INCH X 4 INCH WOODEN WITNESS POST, AND 2.9 FT (0.9 M) WEST OF A 4 INCH X 4 INCH WOODEN WITNESS POST. THE STATION IS USCGS TRIANGULATION DISK SET IN THE TOP OF A SQUARE 10 INCH CONCRETE MONUMENT SET FLUSH WITH THE GROUND AND STAMPED UKIAH AIRPORT 1949 1963.

NOTES:

1. BEARINGS AND DISTANCES ARE IN GRID.
2. HORIZONTAL DATUM-BETWEEN FOUND HPGN POINTS DESIGNATED AS UKIAH AIRPORT RESET AND HPGN D CA 01 CG. USE COMBINED SCALE FACTOR 0.99988998 WITH EPOCH DATE 2007.00. USE RECIPROCAL 1.000110032 TO ACHIEVE GROUND DISTANCES.
3. VERTICAL DATUM BASED ON NGS BENCH MARK DESIGNATES AS UKIAH RESET NAVD 1988=622.50.

EXISTING STRUCTURES:

- (A) SLUDGE LAGOONS
- (B) CAROUSEL PUMP STATION
- (C) DECHLORINATION STRUCTURE
- (D) CHLORINE CONTACT BASINS
- (E) DISSOLVED AIR FLOTATION THICKENERS
- (F) DAFT EQUIPMENT BUILDING
- (G) DISINFECTION CHEMICAL STORAGE FACILITIES
- (H) AWT FACILITY
- (I) CHLORINATION FACILITY
- (J) SLUDGE DRYING BED
- (K) DIGESTER
- (L) SLUDGE DEWATERING FACILITY
- (M) STORM DRAIN PUMP STATION
- (N) BACKWASH PUMP STATION
- (O) PRIMARY CLARIFIERS
- (P) MAINTENANCE BUILDING
- (Q) MECHANICAL EQUIPMENT BUILDING
- (R) SOLIDS CONTACT TANKS
- (S) TRICKLING FILTER
- (T) SECONDARY CLARIFIER
- (U) WASHWATER RECOVERY POND
- (V) POWER GENERATION BUILDING
- (W) RECYCLED WATER STORAGE PONDS
- (X) PERCOLATION PONDS
- (Y) AWT PUMP STATION

A PLAN
SCALE: NO SCALE
FILE: 8660F1000D01A

GENERAL NOTES:

1. THE DEMOLITION DRAWINGS HEREIN ARE PROVIDED TO THE CONTRACTOR FOR REFERENCE IN DETERMINING THE SCOPE OF DEMOLITION REQUIRED. THE CONTRACTOR SHALL MAKE SUCH FIELD INVESTIGATIONS AS NECESSARY TO SATISFY THEMSELVES AS TO THE FIELD CONDITIONS. THE USE OF THESE DRAWINGS SHALL BE AT THE CONTRACTOR'S DISCRETION. THE CONTRACTOR IS CAUTIONED TO REVIEW EXISTING REFERENCE DRAWINGS AVAILABLE FROM THE CITY.
2. THE DEMOLITION DRAWINGS HEREIN HAVE BEEN PRODUCED BY SCANNING DESIGN DRAWINGS OF THE EXISTING ELEMENT(S) TO BE DEMOLISHED. WHERE POSSIBLE, A FIELD VERIFICATION WAS PERFORMED AND MAJOR DEVIATIONS HAVE BEEN NOTED. CONTRACTOR SHALL FIELD VERIFY SITE CONDITIONS TO SATISFY THEMSELVES PER NOTE 1. ORIGINAL DRAWINGS ARE AVAILABLE FROM OWNER FOR CONTRACTOR'S REFERENCE.
3. NOT ALL DEMOLITION WORK REQUIRED ON THIS PROJECT IS SHOWN ON THE DEMOLITION DRAWINGS. SEE OTHER CONTRACT DRAWINGS FOR ADDITIONAL DEMOLITION WORK REQUIRED. SEE YARD PIPING DRAWINGS FOR ADDITIONAL BELOW GRADE PIPING DEMOLITION.
4. COORDINATE DEMOLITION WORK WITH ALL APPLICABLE REQUIREMENTS OF THE CONTRACT DOCUMENTS.
5. SALVAGE EQUIPMENT PER SPECIFICATION SECTION 01738.
6. REFER TO SPECIFICATION SECTION 01140 FOR WORK RESTRICTIONS PRIOR TO DEMOLITION.
7. EXISTING CONDITIONS:
   a. FIELD VERIFY ALL EXISTING DIMENSIONS, ELEVATIONS, AND CONDITIONS RELATED TO WORK PRIOR TO DEMOLITION, SHOP DRAWING PREPARATION, AND FABRICATION.
   b. NOTIFY ENGINEER IMMEDIATELY IF CONDITIONS NOT COVERED BY THESE DRAWINGS ARE EXPOSED DURING CONSTRUCTION INCLUDING BUT NOT LIMITED TO:
      I. SIZES OR DIMENSIONS DIFFERING FROM THE CONTRACT DOCUMENTS.
      II. DAMAGE OR DETERIORATION TO MATERIALS AND COMPONENTS.
      III. CONDITIONS OR DETAILS DIFFERENT FROM THOSE SHOWN ON THE DRAWINGS.
8. RESTORE TO ITS PRECONSTRUCTION CONDITION ANY EXISTING CONSTRUCTION THAT IS DAMAGED AS A RESULT OF DEMOLITION.
9. SITE DEMOLITION WILL IMPACT EXISTING DRAINAGE PATTERNS. MAINTAIN SITE DRAINAGE PATTERNS DURING CONSTRUCTION. REROUTE EARTHEN SWALES AND PROVIDE TEMPORARY FACILITIES AS NECESSARY.
10. UNLESS OTHERWISE INDICATED, WHERE EQUIPMENT, BRACKETS, PIPE SUPPORTS, BASE PLATES, CLAMPS, ETC ARE REMOVED, FASTENER SHALL BE CUT OFF 1-INCH BELOW SURFACE. PATCH HOLE WITH NON-SHRINK GROUT.
11. WHERE ANY EQUIPMENT OR PIPING IS CALLED OUT TO BE DEMOLISHED OR REMOVED, THE ASSOCIATED SUPPORTS FOR THAT EQUIPMENT OR PIPE SHALL ALSO REMOVED.
12. DISCONNECT AND DEMOLISH POWER AND CONTROL WIRING BETWEEN THE DEMOLISHED EQUIPMENT AND ITS ASSOCIATED MCC OR CONTROL PANEL.
13. PROTECT EXISTING RECEPTACLES AND LIGHT SWITCHES. PROTECT EXISTING CONDUITS TO SWITCHES, LIGHTS, AND RECEPTACLES.
14. REMOVE CABLES FROM ABANDONED IN-SLAB OR BURIED CONDUITS. GRIND ABANDONED CONDUITS DOWN AND FILL CONDUIT PENETRATION WITH DRY-PACK MORTAR PER SPECIFICATION SECTION 03600. PLACE DRY-PACK MORTAR IN HOLES IN LAYERS WITH THICKNESS NOT EXCEEDING TIE HOLE DIAMETER AND HEAVILY COMPACT EACH LAYER.
15. FOR EQUIPMENT BEING DEMOLISHED OR HAVING ITS ELECTRICAL AND CONTROL CONDUITS AND WIRES BEING REPLACED, DEMOLISH ALL ASSOCIATED CONDUITS AND WIRE BETWEEN EQUIPMENT AND ITS ASSOCIATED MCC OR CONTROL PANEL UNLESS OTHERWISE NOTED.

A PLAN

SCALE: 3/16"=1'-0"
FILE: 8660F085D01.jpg

GENERAL NOTES:

1. REFER TO GENERAL NOTES ON 00D01.

KEY NOTES:

1. DEMOLISH VALVES.
2. DEMOLISH AIR BLOWER.
3. DEMOLISH PRIMARY COAGULANT FEED PUMP.
4. DEMOLISH AIR PIPING AND SUPPORTS.
5. REMOVE FILTER MEDIA AND FILTER GRAVEL SUPPORT.
6. DEMOLISH EXISTING PNEUMATIC WASTE GATE ACTUATOR ON EACH AWT CLARIFIER/FILTER UNIT. REFER TO PHOTO 6/85D03. OTHER WASTE GATES NOT SHOWN FOR CLARITY.
7. REMOVE ADSORPTION CLARIFIER MEDIA.
8. DEMOLISH THE SURFACE WASH SWEEPS (TYPICAL OF 12) AND ASSOCIATED PIPING AND SUPPORTS.
9. EXISTING 4" SW PIPE TO BE ABANDONED N PLACE. CUT PIPE FLUSH WITH EXISTING GRADE AND PROVIDE PERMANENT BLIND FLANGE.
10. REPLACE EXISTING 6-INCH ELBOW WITH A TEE AS INDICATED ON 85M02.
11. TEMPORARILY RELOCATE AIR COMPRESSOR AND ASSOCIATED PIPING TO FACILITATE INSTALLATION OF NEW BLOWERS PER 85M02. AIR COMPRESSOR SHALL REMAIN IN SERVICE UNTIL THE PNEUMATIC WASTE GATE ACTUATORS HAVE BEEN REPLACED FOR ALL FOUR OF THE AWT CLARIFIER/FILTER UNITS.
12. CONTRACTOR SHALL STORE ONE EXISTING BLOWER ONSITE UNTIL ALL THE NEW BLOWERS HAVE BEEN INSTALLED AND ARE FULLY OPERABLE.
13. DEMOLISH 6-INCH AIR PIPING AFTER ALL EXISTING BLOWERS HAVE BEEN DEMOLISHED. REFER TO SPECIFICATION SECTION 01140 FOR POSSIBLE WORK SEQUENCING AND 85M02.
14. RESTORE EXISTING PENETRATION TO MATCH EXISTING WALL.

NOTES

GENERAL NOTES:

1. FOLLOWING NOTES ARE GENERAL AND APPLY TO ALL SHEETS OF THESE CONTRACT DOCUMENTS AS IF THEY WERE WRITTEN IN THEIR ENTIRETY ON EACH SHEET.
2. CONTRACTOR SHALL VERIFY ALL DIMENSIONS BEFORE STARTING WORK AND SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES. CONTRACTOR SHALL BE RESPONSIBLE FOR FIELD VERIFYING ALL EXISTING CONDITIONS INCLUDING LOCATION AND DIMENSIONS OF ALL EXISTING CONSTRUCTION AND UTILITIES. CONTRACTOR SHALL NOTIFY ENGINEER IF THERE IS A CONFLICT BETWEEN THE CONTRACT DOCUMENTS AND EXISTING CONSTRUCTION BEFORE PROCEEDING WITH WORK.
3. UNLESS DETAILED, SPECIFIED, OR OTHERWISE INDICATED ON THE DRAWINGS, CONSTRUCTION SHALL BE AS INDICATED IN THE APPLICABLE TYPICAL DETAILS AND GENERAL NOTES. TYPICAL DETAILS SHALL APPLY EVEN THOUGH NOT REFERENCED AT SPECIFIC LOCATIONS ON DRAWINGS.
4. WHERE NO CONSTRUCTION DETAILS ARE SHOWN OR NOTED FOR ANY PART OF WORK. DETAILS SHALL BE IN THE SAME AS FOR OTHER SIMILAR WORK.
5. CONTRACTOR SHALL COMPLY WITH LOCAL CONSTRUCTION STORM WATER DISCHARGE REGULATIONS AND REQUIREMENTS.
6. PRIOR TO EXCAVATION FOR NEW STRUCTURES, ELECTRICAL CONDUIT, FABRICATION OF NEW PIPING AND/OR OTHER PROPOSED UTILITIES, CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL EXISTING PIPING AND UTILITIES IN THE CONSTRUCTION AREA. THE CONTRACTOR SHALL TEMPORARILY RELOCATE CONFLICTING EXISTING UTILITIES AT TIE-IN/CONNECTION LOCATIONS AND REINSTALL THEM AS REQUIRED TO ELIMINATE THE CONFLICT AT NO ADDITIONAL COST TO THE OWNER.
7. ALL PIPELINES 12" AND LARGER SHALL HAVE A MINIMUM COVER OF 36" UNLESS THE COVER DEPTH IS SPECIFICALLY INDICATED ON THE DRAWINGS. PIPE SMALLER THAN 12" SHALL HAVE A MINIMUM COVER OF 30" UNLESS NOTED OTHERWISE. PIPES SHALL BE ROUTED AS SHOWN UNLESS MINOR REVISIONS ARE NECESSARY TO MISS EXISTING PIPES, STRUCTURES, ETC. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL FITTINGS AND ADAPTERS REQUIRED TO MAKE THE ROUTING CHANGES AT NO ADDITIONAL COST TO THE OWNER. CONTRACTOR SHALL INCLUDE COST FOR THIS IN THE BID.
8. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS OR ELECTRONIC FILES. NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIAL TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF NEW CONSTRUCTION PRIOR TO START OF CONSTRUCTION.
9. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONARY MEASURES NECESSARY TO PROTECT FROM DAMAGE EXISTING FACILITIES AND UTILITIES SHOWN OR NOT SHOWN THAT ARE TO REMAIN IN PLACE. ALL FACILITIES DAMAGED BY THE CONTRACTOR'S OPERATIONS SHALL BE EXPEDITIOUSLY REPAIRED OR RECONSTRUCTED TO THE ORIGINAL OR BETTER CONDITION AT THE CONTRACTOR'S EXPENSE WITHOUT ADDITIONAL COMPENSATION.
10. CONTRACTOR SHALL MAKE CONNECTIONS TO EXISTING PIPE, EQUIPMENT, ETC. AS REQUIRED AND SHALL PROVIDE ALL FITTINGS, ADAPTERS, AND APPURTENANCES REQUIRED TO MAKE THE CONNECTIONS. PROVIDE ALL SUPPORTS REQUIRED FOR A RIGIDLY SUPPORTED COMPLETE AND WORKING SYSTEM.
11. ADJUST ALL VALVE BOXES, VAULTS, PULL BOXES, AND MANHOLES TO FINISHED GRADE UNLESS OTHERWISE SHOWN OR DIRECTED. MANHOLES IN OPEN FIELDS SHALL BE SET TWELVE INCHES ABOVE FINISHED GRADE AND VAULTS SHALL BE SIX INCHES ABOVE FINISHED GRADE.
12. THE CONTRACTOR SHALL CONTACT THE PROPER UTILITY REPRESENTATIVE AS FOLLOWS FOR QUESTIONS OR COORDINATION OF CONSTRUCTION RELATED TO EXISTING UTILITIES.

    SEE SCHEDULE ON SHEET 00G03
13. CONTRACTOR SHALL VERIFY THAT PIPING SHOWN TO BE ABANDONED OR AS ABANDONED PREVIOUSLY IS NO LONGER IN SERVICE. LINES IN SERVICE SHALL BE MAINTAINED UNTIL NO LONGER REQUIRED BY THE PLANT.
14. ALL EXISTING PIPES THAT ARE TO BE ABANDONED IN PLACE OR REMOVED MAY NOT BE SHOWN. WHERE PIPING IS TO BE ABANDONED AND MUST REMAIN IN SERVICE UNTIL COMPLETION OF OTHER PHASES OF WORK, AND IT CONFLICTS WITH NEW PIPING, TEMPORARILY RELOCATE PIPING AS REQUIRED TO MAINTAIN SERVICE BY THE PLANT.
15. CONTRACTOR SHALL REROUTE THE EXISTING PIPING IF REQUIRED TO MISS THE PROPOSED STRUCTURES. THE EXISTING PIPE SHALL REMAIN IN SERVICE UNTIL NEW PIPING IS READY TO BE PLACED INTO SERVICE. DOWNTIME SHALL BE A MAXIMUM OF 2 HOURS, UNLESS SPECIFIED OR SHOWN OTHERWISE.
16. ALL SIDEWALKS TO BE 3'-0" WIDE UNLESS SHOWN OTHERWISE.
17. THE CONTRACTOR SHALL TAKE SPECIAL PRECAUTIONS IN THE VICINITY OF ANY OVERHEAD ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE NATIONAL ELECTRIC CODE AND ANY REQUIREMENT BY THE OWNER OF THE ELECTRIC LINES.
18. PROVIDE ALL SHEETING/SHORING REQUIRED TO PROTECT EXISTING STRUCTURES, PIPES AND FACILITIES.
19. CONTRACTOR SHALL VERIFY LOCATION OF ALL ARCHITECTURAL, MECHANICAL, AND ELECTRICAL ITEMS BEFORE PLACING ANY STRUCTURAL STEEL OR CONCRETE. ALSO, STRUCTURAL DIMENSIONS AND OPENINGS CONTROLLED BY ARCHITECTURAL, MECHANICAL, OR ELECTRICAL EQUIPMENT SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO CONSTRUCTION.
20. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES, AND REVEALS NOT SHOWN ON THE STRUCTURAL DRAWINGS, THAT ARE REQUIRED BY OTHER CONTRACT DRAWINGS, SHALL BE PROVIDED PRIOR TO CASTING CONCRETE.

GENERAL PIPELINE NOTES:

1. DIMENSIONS TO STRUCTURES, REFERENCED PIPING, PAVING, AND OTHER IMPROVEMENTS IS APPROXIMATE. THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS AND CONDITIONS 14 DAYS IN ADVANCE OF THE CONSTRUCTION PROGRESS. THE CONTRACTOR SHALL REPORT ANY DISCREPANCIES TO THE ENGINEER.
2. CONTRACTOR SHALL MAINTAIN A MINIMUM CLEARANCE OF 10 FEET HORIZONTAL AND 3 FEET VERTICAL BETWEEN THE SEWER LINES AND EXISTING WATER LINES.
3. REFER TO THE GEOTECHNICAL REPORT LOCATED IN THE APPENDIX OF THE SPECIFICATIONS FOR ADDITIONAL INFORMATION ON THE GEOTECHNICAL CONDITIONS AND BORING INFORMATION.
4. IN ALL LOCATIONS WHERE TRENCH PLATE IS USED FOR VEHICULAR OR PEDESTRIAN TRAFFIC, THE CONTRACTOR SHALL APPLY SKID RESISTANT COATING ON THE TRENCH PLATES AND COLD MIX ASPHALT CONCRETE AT THE EDGES. THE TRENCH PLATES SHALL BE NOTCHED INTO THE ASPHALT, CONCRETE, OR TRAVELED SURFACE TO PREVENT SLIPPAGE AND ROCKING UNDER TRAFFIC.
5. THE CONTRACTOR SHALL MAINTAIN ACCESS TO ALL PROPERTIES ADJACENT TO THE WORK, THROUGHOUT THE CONSTRUCTION PERIOD.
6. ALL OPEN TRENCHES, WORK AREAS AND SHAFTS SHALL HAVE A SHORING SYSTEM IN ACCORDANCE WITH OSHA, STATE AND LOCAL REQUIREMENTS.
7. THE CONTRACTOR SHALL COMPLY WITH ALL FEDERAL, STATE, COUNTY, AND LOCAL LAWS AND ORDINANCES RELATING TO THE SAFETY AND CHARACTER OF WORK, EQUIPMENT AND PERSONNEL. THIS INCLUDES BUT IS NOT LIMITED TO SHEETING, SHORING, BRACING, VENTILATION, CONFORMANCE WITH TRAFFIC CONTROL AND MAINTENANCE OF BARRICADES AND WARNING DEVICES.
8. LAYOUT DRAWINGS ARE REQUIRED FOR PIPING INSTALLED.
9. ALL ROAD DITCHES, FENCE LINES, PASTURES AND SIMILAR AREAS SHALL BE RESTORED PER SPECIFICATION 02952.
10. ALL CROPPED AREAS DISTURBED SHALL HAVE THE TOPSOIL REPLACED AND THE ENTIRE AREA DISTURBED SHALL BE RIPPED 2 FT DEEP PER THE LAND OWNERS REQUIREMENTS.
11. CONTRACTOR SHALL TAKE ALL PRACTICAL PRECAUTIONS TO MINIMIZE DISTURBANCES TO STREAMS, VEGETATION, TREES AND CROP LANDS. WHEREVER PRACTICAL LEAVE EXISTING TREES AND VEGETATED AREAS UNDISTURBED.

UTILITY NOTES:

1. EXISTING UTILITIES IN THE PROJECT MAY BE IN A FRAGILE CONDITION. THE CONTRACTOR SHALL EXERCISE NECESSARY CAUTION WHEN WORKING NEAR EXISTING UTILITIES.
2. PLAN LOCATIONS AND ELEVATIONS OF EXISTING UTILITIES ARE BASED ON RECORD DRAWINGS, POTHOLING AND SURVEY INFORMATION AND ARE CONSIDERED APPROXIMATE ONLY. WHERE NO ELEVATIONS ARE SHOWN, NO INFORMATION WAS AVAILABLE DURING THE DESIGN PERIOD.
3. SOME UTILITY SERVICES MAY NOT BE SHOWN ON THESE DRAWINGS. THE CONTRACTOR SHALL TAKE NECESSARY MEASURES TO LOCATE AND PROTECT SERVICE DURING CONSTRUCTION.
4. CONTRACTOR SHALL CALL THE "LOCAL UTILITY LOCATOR" AT 1-800-277-2600 PRIOR TO ANY EXCAVATION ACTIVITIES.
5. THE LOCATION, SIZE, AND MATERIALS OF EXISTING UNDERGROUND UTILITIES SHOWN ON THESE DRAWINGS ARE APPROXIMATE AND IS SHOWN FOR BIDDING PURPOSES. THE CONTRACTOR SHALL BE RESPONSIBLE TO CONTACT THE UTILITY OWNERS SO THAT THOSE UTILITIES MAY MARK THE LOCATION OF THEIR UTILITIES PRIOR TO ANY EXCAVATION ACTIVITIES. THE CONTRACTOR SHALL BE RESPONSIBLE TO LOCATE AND PROTECT EXISTING UTILITIES.

EARTHWORK NOTES:

1. CLEAR THE CONSTRUCTION AREA OF NATURAL OBSTRUCTIONS EXISTING FOUNDATIONS, BUILDINGS, FENCES, LUMBER, WALLS, STUMPS, BRUSH, WEEDS, RUBBISH, TREES, BOULDERS, AND ANY OTHER ITEMS WHICH INTERFERES WITH CONSTRUCTION OPERATIONS OR ARE DESIGNATED FOR REMOVAL.
2. GRUB OUT AND DISPOSE OF TREE TRUNKS AND ROOT MATERIAL BELOW THE GROUND SURFACE REMAINING AFTER CLEARING.
3. DISPOSE OF THE UNACCEPTABLE BACKFILL MATERIAL FROM THE CLEARING AND GRUBBING OPERATIONS AT NO ADDITIONAL COST TO THE OWNER.
4. STRIP AND STOCKPILE THE TOPSOIL. THE DEPTH OF STRIPPING SHALL BE ESTIMATED TO BE 12-INCHES BUT WILL BE DETERMINED IN THE FIELD AS SOIL CONDITIONS DICTATE.
5. REPLACE STOCKPILED SOIL AND RESTORE SITE AS SPECIFIED.
6. ROCK AND AGGREGATE STORAGE AREAS SHALL BE RESTORED BY EXCAVATING ANY SOILS CONTAINING ROCK OR AGGREGATE AND BACKFILLING WITH TOPSOIL. SOIL REMOVED MAY BE USED FOR TRENCH BACKFILL ABOVE THE PIPE ZONE AND 3 FEET BELOW FINISHED GRADE.

GENERAL NOTES:

1. THE LOCATIONS OF UTILITIES SHOWN ARE APPROXIMATE. CONTRACTOR IS RESPONSIBLE FOR FIELD VERIFICATION OF ALL RELEVANT EXISTING UTILITIES.

KEY NOTES:

1. PRIOR TO INSTALLING THE NEW 6" SLUDGE PIPE, CONTRACTOR SHALL FIELD VERIFY THE LOCATION, CONDITION, MATERIAL, OUTSIDE DIAMETER OF THE EXISTING 6" SLUDGE LINE (APPROXIMATELY 4 FEET BELOW GRADE), AND NOTIFY THE ENGINEER. USE FITTINGS/COUPLINGS AS REQUIRED.
2. PRIOR TO INSTALLING THE NEW 6" SLUDGE PIPE, CONTRACTOR SHALL FIELD VERIFY THE LOCATION, CONDITION, MATERIAL, OUTSIDE DIAMETER OF THE EXISTING 12" SLUDGE LINE (APPROXIMATELY 4 FEET BELOW GRADE), AND NOTIFY THE ENGINEER. USE FITTINGS/COUPLINGS AS REQUIRED.

PLAN

FILE: 8660F10C04

CUT: 31974 CUBIC YARDS
FILL: 2747 CUBIC YARDS

GENERAL NOTES:

1. CONTRACTOR TO VERIFY THE HORIZONTAL AND VERTICAL LOCATIONS OF ALL EXISTING UTILITIES PRIOR TO THE START OF CONSTRUCTION AND NOTIFY THE ENGINEER OF ANY DISCREPANCIES OR CONFLICTS.
2. CLEAR, GRUB, AND STRIP CONSTRUCTION AREAS PRIOR TO EARTHWORK ACTIVITIES PER SPECIFICATION SECTION 02200.
3. REFER TO SPECIFICATION SECTION 02300 AND 02301 FOR EARTHWORK AND BACKFILL REQUIREMENTS.
4. THE CONTRACTOR SHALL REMOVE ALL EXISTING SLUDGE MATERIAL. THE SLUDGE MATERIALS SHALL BE REMOVED TO AN APPROXIMATE ELEVATION OF 567 FEET.

KEY NOTES:

1. FINISHED GRADE OF THE BOTTOM OF THE PAU SHALL BE SLOPED FROM THE TOE OF THE SLOPE TO THE PUMP STATION INLET.
2. RECYCLED WATER INFRASTRUCTURE SHALL REMAIN IN SERVICE DURING CONSTRUCTION. PROTECT IN PLACE.
3. REFER TO SHEET 91C07 FOR PAU INLET PIPING ALIGNMENT AND PROFILE.
4. REFER TO SHEET 91C08 FOR PAU OUTLET PIPING ALIGNMENT AND PROFILE.
5. REFER TO SHEET 91S04 FOR PAU INLET STRUCTURE.
6. ACCESS ROAD ON TOP OF BERM SHALL CONSIST OF 6-INCHES AB OVER GEOTEXTILE FABRIC WITH 1-FOOT SUBGRADE AT 95% RC UNLESS OTHERWISE NOTED. ACCESS ROAD TO BE SEALED IN ACCORDANCE WITH SPECIFICATION SECTION 02747.
7. THE CONTRACTOR SHALL DECOMMISSION THE EXISTING BURIED ELECTRIC UTILITY BEFORE PAU CONSTRUCTION. REFER TO SPECIFICATION SECTION 01140 FOR WORK RESTRICTIONS. THE CONTRACTOR SHALL REESTABLISH THE BURIED ELECTRIC UTILITY AS SHOWN ON THE ELECTRIC SITE PLAN. REFER TO DWG 01E02.
8. 8" THICK SLAB ON GRADE WITH #5@12" O.C. EACH WAY. REFER TO DETAIL 5/91C04.
9. 8" THICK SLOPED SLAB ON GRADE (WALL) WITH #5@12" O.C. EACH WAY. REFER TO DETAIL 5/91C04 AND DETAIL 7/91C04.
10. CONSTRUCTION JOINTS IN SLAB ON GRADE SPACED AT MAXIMUM 20'-0" O.C. IN EACH DIRECTION. THE JOINTS SHALL AS PER TYPICAL DETAIL S110 WITH WATER STOP AND EXTEND THROUGH THE SLOPED SLAB ON GRADE (WALL).
11. EXPANSION JOINT PER DETAIL 6 /91C04 TYPICAL ALL AROUND THE BASIN.
12. TOP OF THE BERM CONCRETE LINER DETAIL PER DETAIL 7/91C04 TYPICAL ALL AROUND THE BASIN.
13. ADJUST CONSTRUCTION JOINT LOCATION TO ACCOMMODATE INLET STRUCTURES.

PLAN

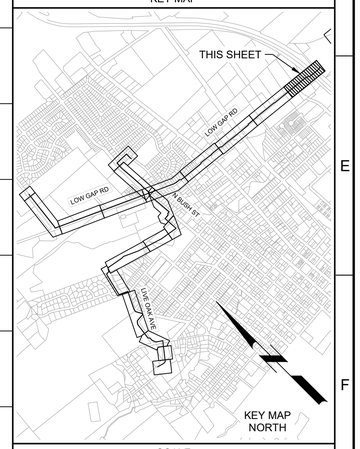
FILE: 8660F1001C102

PROFILE

FILE: 8660F1001C102

GENERAL NOTES:



1. SEE RECYCLED WATER PROJECT PHASE 1 TO 3 PLANS FOR EXISTING RW PIPE ALIGNMENT.
2. CONTRACTOR TO DETERMINE FINAL LAUNCHING AND RECEIVING PIT SIZE.
3. CONTRACTOR TO VERIFY ALL UTILITY CROSSINGS PRIOR TO CONSTRUCTION.
4. CONTRACTOR TO ASSUME THAT ANY VERTICAL BENDS SHOWN ON THE PLANS ARE ROTATED FROM THE CORRESPONDING HORIZONTAL BENDS UNLESS NOTED OTHERWISE.

KEY NOTES:

1. VERTICAL BEND ACHIEVED BY PULLING JOINTS IN PIPE. MAXIMUM ALLOWED DEFLECTION IS HALF OF THE MANUFACTURER'S SPECIFIED DEFLECTION CONTRACTOR MAY DEFLECT MORE THAN ONE JOINT TO ACHIEVE TOTAL DEFLECTION.
2. HORIZONTAL ALIGNMENT CHANGE ACHIEVED BY ROTATING VERTICAL 90 DEGREE BEND 45 DEGREES
3. EXISTING WATER METER INSTALLED AS PART OF PHASE 3 SCOPE, SHALL BE REUSED AND REINSTALLED DURING PHASE 4 CONSTRUCTION.
4. MAINTAIN MINIMUM 12 FT CLEARANCE BETWEEN GRADE AND TOP OF CASING.
5. VERTICAL BEND ACHIEVED BY ROLLING HORIZONTAL BEND 8.7 DEGREES.
6. HORIZONTAL ALIGNMENT CHANGE ACHIEVED BY ROTATING VERTICAL 90 DEGREE BEND 6.5 DEGREES.

GENERAL NOTES:

1. CONTRACTOR TO VERIFY ALL UTILITY CROSSINGS PRIOR TO CONSTRUCTION.
2. CONTRACTOR TO REPLACE ALL ROAD STRIPING DAMAGED BY PIPELINE REPLACEMENT PER SECTION 02762. CONTRACTOR SHALL REPLACE ENTIRETY OF DAMAGED STRIPING.

KEY NOTES:

1. VERTICAL BEND TO BE ACHIEVED BY PULLED PIPE. MAXIMUM ALLOWED DEFLECTION IS HALF OF THE MANUFACTURER'S SPECIFIED DEFLECTION. CONTRACTOR MAY DEFLECT MORE THAN ONE JOINT TO ACHIEVE TOTAL DEFLECTION.

GENERAL NOTES:

1. USE STRUCTURAL DRAWINGS IN CONJUNCTION WITH PROJECT DRAWINGS BY OTHER DISCIPLINES AND WITH THE SPECIFICATIONS.

2. UNLESS DETAILED, SPECIFIED, OR INDICATED OTHERWISE, CONSTRUCTION SHALL BE AS INDICATED IN THE GENERAL NOTES AND TYPICAL DETAILS.

3. PRESENTATION CONVENTIONS FOR STRUCTURAL DRAWINGS:

   A. SCREENED LINE WORK INDICATES EXISTING CONDITIONS.
   B. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALED SIZES.
   C. PLANS ARE TREATED AS HORIZONTAL SECTIONS. (I.E.: "PLAN AT ELEVATION 110" SHOWS CONSTRUCTION AT AND BELOW ELEVATION 110.)

4. VERIFY DIMENSIONS AND CONDITIONS BEFORE BEGINNING WORK. ADVISE ENGINEER IMMEDIATELY OF DISCREPANCIES BETWEEN EXISTING CONDITIONS AND DIMENSIONS, AND INFORMATION SHOWN ON THESE DRAWINGS. CONFIRM THE FOLLOWING BEFORE PREPARATION AND SUBMITTAL OF SHOP DRAWINGS:

   A. DIMENSIONS AND WEIGHTS FOR EQUIPMENT SELECTED.
   B. SIZES AND LOCATIONS OF EQUIPMENT PADS FOR EQUIPMENT SELECTED.

5. TYPICAL DETAILS ARE INCLUDED ON THE "TS" DRAWINGS.

   A. TYPICAL DETAILS ARE INTENDED TO APPLY AT LOCATIONS DESCRIBED BY THEIR TITLES, EVEN WHEN NOT SPECIFICALLY REFERENCED ON THE DRAWINGS.
   B. IN STRUCTURAL TYPICAL DETAILS, ORIENTATION OF BARS IN EACH MAT OF REINFORCEMENT (WHETHER "LINES" OR "DOTS"ARE CLOSER TO THE FACE OF THE CONCRETE) IS GENERALLY ARBITRARY. SEE DRAWINGS OF EACH STRUCTURE FOR ORIENTATION REQUIRED AT THAT STRUCTURE.

6. SEE CIVIL DRAWINGS FOR STRUCTURE COORDINATES. POINTS ON THE STRUCTURES TO WHICH SITE COORDINATES REFER ARE SHOWN ON THE STRUCTURAL PLANS.

7. DRAWINGS PREPARED BY OTHER DISCIPLINES INCLUDE OPENINGS, ANCHORS, PIPES, CONDUITS, AND OTHER ITEMS THAT ARE EMBEDDED INTO OR PASS THROUGH STRUCTURES.

   A. CONFIRM SIZE AND LOCATIONS OF OPENINGS, PENETRATIONS AND EMBEDMENT FOR ITEMS AND EQUIPMENT FURNISHED.
   B. IN GENERAL, OPENINGS, EMBEDMENTS, AND PENETRATIONS LESS THAN 12 INCHES IN DIAMETER ARE NOT SHOWN ON THE STRUCTURAL DRAWINGS.
   C. SEE MECHANICAL DRAWINGS FOR DETAILS OF PIPE PENETRATIONS, PIPE SUPPORTS, AND ASSOCIATED STRUCTURAL REQUIREMENTS.
   D. SEE MECHANICAL DRAWINGS FOR EQUIPMENT PADS AND PIPE SUPPORTS.

8. SEE STRUCTURAL DRAWINGS FOR LOCATIONS AND SIZES OF DOOR AND WINDOW OPENINGS.

STRUCTURAL DESIGN CRITERIA - GENERAL:

SEE DRAWINGS OF INDIVIDUAL STRUCTURES FOR SPECIFIC DESIGN CRITERIA BASED ON THESE OVERALL CRITERIA FOR THE SITE.

1. BUILDING CODE:

   A. 2022 CALIFORNIA BUILDING CODE ("CBC 2022") WITH ASCE 7-16.
   B. LOCAL AMENDMENTS: UKIAH CITY CODE.

2. STRUCTURE RISK CATEGORY: III EXCEPT FOR TANK AND PEDESTRIAN BRIDGE, RISK CATEGORY IV (1)

3. DEAD LOADS: CALCULATED FOR STRUCTURE SELF-WEIGHT.

4. LIVE LOADS: (REDUCTIONS NOT USED)

   A. FLOOR LIVE LOAD: SEE PLANS.
   B. GRATING AND CHECKERED PLATE: 100 PSF (UNO).
   C. ROOF LIVE LOAD: SEE PLANS (20 PSF MINIMUM).
   D. EQUIPMENT LOADS: SEE PLANS.
   E. CONCENTRATED AND IMPACT LOADS: SEE PLANS.

5. FLUID PRESSURE LOADS: 63 PSF/FT (UNO).

6. WIND DESIGN DATA:

   A. SPECIAL WIND REGION: NO
   B. WIND-BORNE DEBRIS REGION: NO
   C. BASIC WIND SPEED (3 SEC GUST, 33 FEET ABOVE GROUND): 110 MPH.

7. EARTHQUAKE DESIGN DATA:

   PEDESTRIAN BRIDGE (1)

	0.2 SECOND	*1.0 SECOND
A. SITE CLASS: F.		
B. MAPPED SPECTRAL RESPONSE ACCELERATIONS:	Ss=2.129g	S1=0.821g
C. SITE COEFFICIENTS:	Fa=1	Fv=4
D. MAXIMUM CONSIDERED ACCELERATIONS:	*Sms=2.22g	Sm1=2.37g
E. DESIGN SPECTRAL RESPONSE ACCELERATIONS:	*Sds=1.48g	Sd1=1.58g

   ALL OTHER STRUCTURES UNLESS NOTES OTHERWISE

	0.2 SECOND	*1.0 SECOND
A. SITE CLASS: D.		
B. MAPPED SPECTRAL RESPONSE ACCELERATIONS:	Ss=1.88g	S1=0.719g
C. SITE COEFFICIENTS:	Fa=1	Fv=2.5
D. MAXIMUM CONSIDERED ACCELERATIONS:	*Sms=1.506g	Sm1=1.438g
E. DESIGN SPECTRAL RESPONSE ACCELERATIONS:	*Sds=1.004g	Sd1=0.959g

8. CONSTRUCTION LOADS:

   A. STRUCTURES HAVE BEEN DESIGNED FOR OPERATING LOADS ON COMPLETED FACILITIES. UNTIL CONSTRUCTION IS COMPLETE AND MEMBERS HAVE ACHIEVED THEIR DESIGN STRENGTH, PROTECT STRUCTURES AS REQUIRED BY SHORING, BRACING, AND BALANCING.

9. FLOOD LOADS:

   A. FLOOD HAZARD AREA : NO

10. RAIN LOADS:

    A. DESIGN RAINFALL INTENSITY: i = 1.35 INCHES / HOUR. (100 YEAR / 1 HOUR EVENT)

11. ICE LOADS: (1)

    A. NOMINAL UNIFORM ICE THICKNESS W/ 3-SECOND WIND GUST: 0 INCH / 30 MPH
    B. ICE DENSITY FOR CALCULATING ICE WEIGHT: 56 PCF (MIN)

GEOTECHNICAL REPORT / FOUNDATION DESIGN CRITERIA:

1. GEOTECHNICAL INVESTIGATION REPORT:

   TITLE: GEOTECHNICAL REPORT CITY OF UKIAH RECYCLED WATER PIPELINE PHASE 4 DESIGN PROJECT
   PREPARED BY: CRAWFORD AND ASSOCIATES.
   REPORT NO: CRAWFORD FILE NO. 19-503.1 DATED: FEBRUARY 2023.

2. FOUNDATION DESIGNS ARE BASED ON RECOMMENDATIONS IN THE GEOTECHNICAL INVESTIGATION REPORT.

   A. NET ALLOWABLE BEARING PRESSURE
      TANK: 2000 PSF
      PUMP STATION: 3000 PSF (1)

   B. LATERAL EARTH PRESSURE (UNO):
      SURCHARGE: EQUIVALENT TO 2 FEET OF SOIL ABOVE FINISHED GRADE.

	STATIC	SEISMIC
ACTIVE (PSF/FT):	50	50
AT REST (PSF/FT):	65	65
SLIDING COEFFICIENT OF FRICTION:	0.3	0.3

TYPICAL STRUCTURAL MATERIALS:

1. MATERIALS SHALL CONFORM TO THE FOLLOWING REQUIREMENTS UNLESS OTHERWISE INDICATED ON THE DRAWINGS.

2. SEE PROJECT SPECIFICATIONS AND NOTES ON DRAWINGS OF SPECIFIC STRUCTURES FOR DETAILED AND LOCATION-SPECIFIC REQUIREMENTS.

REINFORCING STEEL (FOR CONCRETE AND MASONRY):

1. DEFORMED BARS:
   A. TYPICAL: ASTM A 615, GRADE 60.
   B. WHERE INDICATED ON THE DRAWINGS: ASTM A 706.
   C. ASTM A615 GRADE 80 SPIRALS FOR PILES AS INDICATED ON DRAWINGS.

2. WELDED WIRE FABRIC: ASTM A 1064.

CONCRETE:

1. NORMAL DENSITY.

2. MINIMUM SPECIFIED CONCRETE COMPRESSIVE STRENGTH, f'c (AT 28 DAYS UNO).

   A. STRUCTURES: "CLASS A"& DRILLED PIERS f'c = 4500 PSI.
   B. FILL AND THRUST BLOCKS: "CLASS C" f'c = 2500 PSI.
   C. PIPE ENCASEMENT: "CLASS A" f'c = 4500 PSI.
   D. ELECTRICAL DUCT ENCASEMENT: "CLASS CE" f'c = 3000 PSI.
   E. STORAGE POND: "CLASS A" f'c = 5000 PSI.

STRUCTURAL STEEL:

1. SECTIONS

   A. SHAPES W, WT: ASTM A 992 (Fy = 50 KSI)
   B. SHAPES S, ST, M, MT, HP, C, MC, L: ASTM A 36 (Fy = 36 KSI)
   C. PLATES AND BARS: ASTM A 36 (Fy = 36 KSI)
   D. PIPES: ASTM A 53, GRADE B (Fy = 35 KSI)
   E. HOLLOW STRUCTURAL SECTIONS:
      ROUND: ASTM A 500, GRADE B (Fy = 42 KSI)
      SQUARE AND RECTANGULAR: ASTM A 500, GRADE B (Fy = 46 KSI)

2. CONNECTIONS:

   A. BOLTS - STEEL TO STEEL:
      ASTM A 325 HIGH-STRENGTH BOLTS, WITH LOAD INDICATOR WASHERS.
   B. BOLTS - STEEL TO CONCRETE OR MASONRY:
      ANCHOR BOLTS WITH HEX FORGED HEAD.
      ASTM F 593, STAINLESS TYPE 316
      ASTM F 1554, GRADE 36 GALVANIZED.
   C. WELDS - SHIELDED METAL ARC PROCESS USING E70-XX ELECTRODES.

STAINLESS STEEL:

1. ANSI TYPE 316/316L EXCEPT WHERE TYPE 304/304L IS INDICATED ON THE DRAWINGS.

2. SECTIONS: SHAPES AND BARS: ASTM A 276.

3. BOLTED CONNECTIONS - BOLTS AND ANCHOR BOLTS:

   A. MATCH ALLOY OF THE STRUCTURAL MEMBERS CONNECTED.
   B. TYPE 316/316L: ASTM F 593, GRADE B8M, CLASS 1, HEAVY HEX.
   C. TYPE 304/304L: ASTM F 593, GRADE B8, CLASS 1, HEAVY HEX.

4. WELDED CONNECTIONS:

   A. TYPE 316L: E316L-15 ELECTRODES.
   B. TYPE 304L: E304L-15 ELECTRODES.

STRUCTURAL ALUMINUM:

1. SECTIONS

   A. SHAPES: ASTM B 308, ALLOY 6061-T6.
   B. SHEET AND PLATE: ASTM B 209, ALLOY 6061-T6.

2. BOLTED CONNECTIONS - BOLTS AND ANCHOR BOLTS:

   A. STAINLESS STEEL - TYPE 316, ASTM F 593, GRADE B8M, CLASS 1, HEAVY HEX.

3. WELDED CONNECTIONS:

   A. GAS METAL ARC (MIG) OR GAS TUNGSTEN ARC (TIG) PROCESS USING FILLER ALLOY 4043 ELECTRODES.

CONSTRUCTION:

CONFORM TO THE FOLLOWING REQUIREMENTS UNLESS OTHERWISE INDICATED ON THE DRAWINGS.

EXCAVATION AND BACKFILLING:

1. EXPOSE AND PREPARE SUBGRADE AS SHOWN ON THE DRAWINGS AND SPECIFIED. OBTAIN ENGINEER'S OBSERVATION OF SUBGRADE SURFACES, AS EXPOSED AND AS PREPARED, BEFORE PROCEEDING WITH FOUNDATION CONSTRUCTION.

2. DO NOT PLACE BACKFILL AGAINST WALLS UNTIL STRUCTURES SUPPORTING THE TOP OF THE WALL ARE IN PLACE, ARE COMPLETE, AND (IN THE CASE OF CONCRETE) HAVE CURED TO THEIR MINIMUM SPECIFIED 28-DAY COMPRESSIVE STRENGTH.

3. WHERE BACKFILL MUST BE PLACED AGAINST WALLS BEFORE STRUCTURES ABOVE ARE COMPLETE, PROVIDE BRACING FOR WALLS. KEEP BRACING IN PLACE UNTIL THE STRUCTURE ABOVE IS COMPLETE AND (IN THE CASE OF CONCRETE) HAS CURED TO ITS MINIMUM SPECIFIED 28-DAY COMPRESSIVE STRENGTH.

CONCRETE:

1. SEE S101/TYP FOR CONCRETE NOTES, INCLUDING CLEAR COVER AND LAP SPLICE LENGTH REQUIREMENTS FOR REINFORCING.

2. SUBMIT LOCATIONS OF CONSTRUCTION JOINTS NOT SHOWN ON THE DRAWINGS FOR ACCEPTANCE BY THE ENGINEER BEFORE FORM LAYOUT.

3. PROVIDE CHAMFER AT EXPOSED EDGES OF CAST-IN-PLACE CONCRETE. SEE SPECIFICATION 03102 FOR CHAMFERS.

4. PROVIDE REINFORCING:

   A. AT CORNERS AND JUNCTIONS - AS INDICATED IN S144/TYP, SUPPLEMENT WITH ADDED BARS WHERE INDICATED ON THE DRAWINGS.
   B. AT OPENINGS - AS INDICATED IN S180/TYP.

5. WELDING OF REINFORCING IS NOT PERMITTED UNLESS DETAILED ON THE DRAWINGS OR ACCEPTED IN ADVANCE BY THE ENGINEER.

6. MAINTAIN MINIMUM 3 INCHES CLEAR CONCRETE COVER BETWEEN REINFORCING AND EMBEDMENTS.

7. FINISH CONCRETE AS SPECIFIED IN SECTION 03366.

8. CONCRETE PADS

   A. (E) EQUIPMENT PAD SEE S302/TYP.
   B. (H) HOUSEKEEPING PAD FOR ELECTRICAL EQUIPMENT SEE S350/TYP.

MASONRY:

1. SEE S400/TYP FOR MASONRY NOTES, INCLUDING LAP SPLICE LENGTHS.

2. PROVIDE REINFORCING:

   A. AT CORNERS AND JUNCTIONS AS INDICATED IN S412/TYP.
   B. AT OPENINGS AS INDICATED IN S410/TYP.

3. WELDING OF REINFORCING IS NOT PERMITTED UNLESS DETAILED ON THE DRAWINGS OR ACCEPTED IN ADVANCE BY THE ENGINEER.

4. GROUTING:

   A. FULLY GROUTED.

STEEL, STAINLESS STEEL, AND ALUMINUM - CONNECTIONS:

1. BOLTED:

   A. MADE USING 3/4-INCH DIAMETER BOLTS.
   B. HAVING A MINIMUM OF 2 BOLTS, SPACED NOT CLOSER THAN 3 INCHES ON CENTER.
   C. WITH A DISTANCE OF AT LEAST 1 1/2 INCHES FROM CENTER OF BOLT TO ANY EDGE OF A PLATE OR STRUCTURAL ELEMENT.

2. WELDED:

   A. FILLET WELDS: PER AWS CODE BASED ON THE THICKNESS OF THE MATERIALS BEING JOINED, AND FULL LENGTH OF THE JOINT.

3. INTERFACE BETWEEN MATERIALS:

   A. AT BOLTED CONNECTIONS THAT INCLUDE DIFFERENT METALS (E.G.: STEEL AND STAINLESS STEEL, OR ALUMINUM AND STEEL) PROVIDE ISOLATING SLEEVES AND WASHERS AS SPECIFIED IN SECTION 05190.
   B. WHERE ALUMINUM IS IN CONTACT WITH MASONRY OR CONCRETE, COAT ALUMINUM SURFACES AS SPECIFIED IN SECTION 09960.

4. POST-INSTALLED ANCHORS IN CONCRETE AND MASONRY:

   A. INSTALL IN FULL COMPLIANCE WITH ACCEPTED BUILDING CODE EVALUATION REPORT AND MANUFACTURER'S INSTRUCTIONS.
   B. DO NOT CUT, DAMAGE, OR INTERRUPT EXISTING REINFORCEMENT TO INSTALL ANCHORS. USE NON-DESTRUCTIVE TESTING EQUIPMENT TO IDENTIFY LOCATIONS OF REINFORCEMENT IN MEMBERS BEFORE DRILLING HOLES FOR ANCHORS.

METAL FABRICATIONS:

1. HANDRAILS AND GUARDRAILS:

   A. ALUMINUM, EXCEPT WHERE OTHER MATERIALS ARE NOTED.

2. GRATING:

   A. ALUMINUM WITH TYPE 316 STAINLESS STEEL FASTENERS, UNLESS OTHERWISE NOTED.
   B. GRATING AND ITS SEATS OR SUPPORTS SHALL BE OF THE SAME MATERIAL.
   C. UNLESS INDICATED ON THE DRAWINGS AS "REMOVABLE GRATING", SECURELY FASTEN GRATING TO SUPPORTS AS INDICATED IN S559/TYP.

3. COVER PLATES:

   A. ALUMINUM WITH TYPE 316 STAINLESS STEEL FASTENERS, UNLESS OTHERWISE NOTED.
   B. COVER PLATE AND ITS SEATS OR SUPPORTS SHALL BE OF THE SAME MATERIAL.

SPECIAL INSPECTION

1. SPECIAL INSPECTION IS REQUIRED FOR THE FOLLOWING STRUCTURAL MATERIALS AND CONSTRUCTION. SEE SPECIFICATION SECTION 01455 FOR DETAILS.

2. DIVISION 2 SITE CONSTRUCTION (EARTHWORK)

   A. EXCAVATION DEPTH.
   B. ADEQUACY OF EXPOSED SURFACE TO PROVIDE REQUIRED SUPPORT.
   C. PREPARATION OF SOILS/SURFACES SUPPORTING CONSTRUCTION.
   D. FILL AND BACKFILL.

3. DIVISION 3 CONCRETE:

   A. LOCATIONS.
   B. FORMWORK AND MEMBER SIZES.
   C. REINFORCING STEEL.
   D. ANCHORS: CAST-IN AND POST-INSTALLED.
   E. CONCRETE MIX AND PLACEMENT.
   F. PROTECTION AND CURING PROCEDURES.

4. DIVISION 4 MASONRY

   A. LOCATIONS.
   B. MEMBER SIZES.
   C. REINFORCING STEEL.
   D. ANCHORS: BUILT-IN AND POST-INSTALLED.
   E. MORTAR AND JOINTS.
   F. GROUT AND GROUTING.
   G. PROTECTION AND CURING PROCEDURES.

5. DIVISION 5 METALS

   A. GENERAL ALL METALS:
      1) MEMBER LOCATIONS.
      2) MEMBER SIZES/TYPES.
      3) ANCHORS - CAST-IN AND BUILT-IN ANCHOR BOLTS.
      4) ANCHORS - POST-INSTALLED MECHANICAL AND ADHESIVE.

   B. STRUCTURAL STEEL (CARBON AND STAINLESS).
      1) HIGH-STRENGTH BOLTING.
      2) WELDING.

   C. STRUCTURAL ALUMINUM.
      1) BOLTING.
      2) WELDING.

STRUCTURAL OBSERVATION:

1. STRUCTURAL OBSERVATION IS REQUIRED DURING AND AT SPECIFIC STAGES OF CONSTRUCTION WHILE CORRECTIONS CAN BE MADE.

2. ALL STRUCTURAL IN ALL AREAS:

   A. FOUNDATIONS
      1. AFTER REINFORCING STEEL AND STRUCTURAL EMBEDS ARE IN PLACE, BUT PRIOR TO CASTING OF CONCRETE.
   B. CONCRETE WALLS
      1. AFTER REINFORCING STEEL AND STRUCTURAL EMBEDS ARE IN PLACE, BUT PRIOR TO CASTING OF CONCRETE.
   C. ELEVATED SLABS
      1. AFTER REINFORCING STEEL AND STRUCTURAL EMBEDS ARE IN PLACE, BUT PRIOR TO CASTING OF CONCRETE.

STRUCTURAL SYMBOLS:

1. SEE DRAWING 00G03 FOR KEY TO DRAWING TITLES AND SECTION CUTS, AND FOR DEFINITION OF MATERIALS SHADING PATTERNS.

2. WELDING: SYMBOLS: IN ACCORDANCE WITH AMERICAN WELDING SOCIETY (AWS) A2.4.

STRUCTURAL ABBREVIATIONS:

1. SEE DRAWING 00G03 FOR GENERAL LIST OF ABBREVIATIONS USED ON DRAWINGS.

2. ABBREVIATIONS FOR NAMES OF TECHNICAL GROUPS MAY BE FOUND IN THE PROJECT SPECIFICATIONS.

3. STRUCTURAL MEMBERS:

A. STEEL: ABBREVIATIONS AND DESIGNATIONS ARE IN ACCORDANCE WITH THE AMERICAN INSTITUTE OF STEEL CONSTRUCTION'S STEEL CONSTRUCTION MANUAL, CURRENT EDITION.

B. ALUMINUM: ABBREVIATIONS AND DESIGNATIONS ARE IN ACCORDANCE WITH THE ALUMINUM ASSOCIATION'S ALUMINUM DESIGN MANUAL, CURRENT EDITION.

4. ABBREVIATIONS FOR STRUCTURAL DRAWINGS:
   WHEN USED ON THE STRUCTURAL DRAWINGS, THE FOLLOWING ABBREVIATIONS HAVE THE MEANINGS LISTED.

REINFORCEMENT:		OTHER:	
BO	BOTTOM OF	L	ANGLE
EF	EACH FACE	PL	PLATE
I.F.	INSIDE FACE		
O.F.	OUTSIDE FACE		
T.O.	TOP OF		
#	NUMBER (REINFORCING BAR SIZE)		

DEFERRED DESIGN SUBMITTALS

AS DEFINED IN THE BUILDING CODE, DEFERRED DESIGN SUBMITTALS ARE PORTIONS OF THE DESIGN THAT ARE NOT SUBMITTED AT THE TIME OF PERMIT APPLICATION, AND THAT ARE TO BE REVIEWED BY THE REGISTERED DESIGN PROFESSIONAL AND SUBSEQUENTLY SUBMITTED TO THE BUILDING OFFICIAL.

DEFERRED DESIGN SUBMITTALS FOR THIS PROJECT INCLUDE:

1. DIVISION 2 EARTHWORK
   A. 2300 EARTHWORK
   B. 02460 PILE LOAD TESTS

2. DIVISION 2 METALS
   A. 05500 TRASH RACK GRATING

3. DIVISION 8 DOORS AND WINDOWS (1)
   A. 08320 ACCESS HATCH

4. DIVISION 15 MECHANICAL
   A. 15050 MECHANICAL EQUIPMENT SUPPORTS
   B. 15500 HVAC SUPPORTS

4. DIVISION 16 ELECTRICAL
   A. 16050 ELECTRICAL EQUIPMENT SUPPORTS

GENERAL NOTES:

1. BACKGROUND IS BASED ON THE 1994 RECORD DRAWINGS. CONTRACTOR TO FIELD VERIFY EXISTING DIMENSIONS.
2. ACCESSING ALL OF THE SURFACE REQUIRES THIS WORK TO BE DONE DURING THE MEDIA REPLACEMENT PROCESS (REFER TO SPECIFICATION SECTION 01140 FOR CONSTRAINTS AND POSSIBLE WORK SEQUENCING).

◇# KEY NOTES:

1. CONTRACTOR TO FULLY RECOAT INTERIOR AND EXTERIOR SURFACES OF THE CLARIFIER/FILTER TANKS PER SPECIFICATION SECTION 09960 DURING THE MEDIA REPLACEMENT PROCESS.
2. CONTRACTOR TO FULLY RECOAT THE INTERIOR AND EXTERIOR SURFACES OF THE COLLECTION TROUGHS PER SPECIFICATION SECTION 09960.
3. EXISTING TANK CORROSION; CONTRACTOR TO ALLOW FOR 3 TYPES OF CORROSION REMEDIATION AS PART OF THE DEMOLITION , PREPARATION AND COATING OF THE EXISTING TANK AS FOLLOWS:

   TYPE **I** - UNIFORM SURFACE CORROSION TREATMENT: REMOVE WITH ABRASIVE BLAST ALL SURFACES IN ACCORDANCE WITH SECTION 09960. BID QUANTITY = 10000 SF.

   TYPE **II** - LOCALIZED SURFACE PITTING GREATER THAN 1/16" DEEP OVER AN AREA LESS THAN OR EQUAL TO 1 SQ FT TREATMENT: FILL WITH WELD METAL. BID QUANTITY = 200 SF.

△1 TYPE **III** - WIDE SPREAD SURFACE PITTING GREATER THAN 1/16" DEEP OVER GREATER THAN 1 SQ FT TREATMENT: FILLET WELD USING 1/4" WELDS, 1/4" PLATE OVER CORROSION AREA, EXTEND PLATE 3" BEYOND CORROSION LIMITS. BID QUANTITY = 200 SF.

FILE: 8660F1001S100

GENERAL NOTES:

1. FOR GENERAL STRUCTURAL NOTES, REFER TO DRAWING 00S01.
2. FOR DOOR SCHEDULES, REFER TO DRAWING 99A01.
3. SEE TYPICAL MASONRY WALL DETAILS ON SHEETS 00TS04, 00TS05, 00TS06 AND 00TS07. SEE TYPICAL DETAIL S410 FOR REINFORCEMENT AT OPENINGS IN MASONRY WALL, S412 FOR TYPICAL REINFORCEMENT AT MASONRY WALL INTERSECTIONS, S430 FOR MASONRY CONTROL JOINTS, S440 FOR ANCHOR BOLTS IN MASONRY WALL, S451 FOR STEEL BEAM TO MASONRY WALL CONNECTION AND S461 FOR METAL DECK TO MASONRY WALL CONNECTIONS. (1)
4. EXTERIOR CONCRETE MASONRY UNITS TO BE FINISHED WITH WATER REPELLANT.
5. COORDINATE LOCATION AND DIMENSIONS OF ALL EQUIPMENT PADS WITH ELECTRICAL AND MECHANICAL DRAWINGS AND EQUIPMENT MANUFACTURER'S ANCHORAGE REQUIREMENTS.
6. COORDINATE OPENING SIZE AND LOCATION WITH MECHANICAL EQUIPMENT.

KEY NOTES:

1. 12"x8"x16" STANDARD CONCRETE MASONRY UNIT. REFER TO SPECIFICATION SECTION 04220. PROVIDE #5@16" EACH WAY EACH FACE REBAR IN FULLY GROUTED CMU WALL.
2. HOLLOW METAL DOOR AND FRAME REFER TO SPECIFICATION SECTION 08110.
3. FIRE EXTINGUISHER PER DETAIL AN400/TYPE. REFER TO SPECIFICATION SECTION 10520.
4. REFERENCE ELECTRICAL DRAWINGS FOR EQUIPMENT REQUIREMENTS.

GENERAL NOTES:

1. ROOF LOADING:

   ROOF DESIGN LIVE LOAD = 20 PSF
   ROOF DESIGN DEAD LOAD = 20 PSF

2. FOR GENERAL ARCHITECTURAL NOTES, REFER TO DRAWING 98A01.
3. FOR GENERAL STRUCTURAL NOTES SEE DRAWING 00S01.
4. INDICATES METAL DECK SPAN DIRECTION.
5. COORDINATE ROOF OPENING SIZE AND LOCATION AS REQUIRED WITH MECHANICAL EQUIPMENT AND APPROVED HVAC MANUFACTURER. MAXIMUM ROOF OPENING SHALL BE LIMITED TO 12" IN DIAMETER OR WIDTH. PROVIDE ROOF OPENING AS PER DETAIL S720/TYP.

KEY NOTES:

1. 1 1/2" DEEP 18 GAUGE METAL DECK.
2. ALUMINUM COPING OVER PARAPET PER DETAIL AG220/TYP IN ACCORDANCE WITH SPECIFICATION SECTION 07700.
3. TPO MEMBRANE ROOFING SYSTEM OVER PROTECTIVE BOARD AND RIGID INSULATION PER DETAIL AG160/TYP.
4. CRICKET AS RECOMMENDED BY MANUFACTURER.
5. REFERENCE HVAC DRAWINGS FOR EQUIPMENT REQUIREMENTS AND PLACEMENT. FCU SUSPENDED FROM ROOF PER MFR DETAIL. PROVIDE SEISMIC BRACING AS REQUIRED BY STRUCTURAL CALCULATIONS. SECONDARY FRAMING AND ATTACHMENTS ANCHORED TO MEET APPLICABLE BUILDING CODES SHALL BE PROVIDED BY THE CONTRACTOR.
6. CONTRACTOR SHALL COORDINATE WITH EXISTING CONDITIONS AND PROVIDE FOR ENGINEERS REVIEW A WATERPROOF AND WEATHERTIGHT CONDUIT PENETRATION SEAL. SEAL SHALL INCLUDE CAULKING AND PLATE AS RECOMMENDED BY MANUFACTURER.
7. SLOPE OF THE ROOF SHALL BE ACHIEVED BY TAPERED RIGID INSULATION.

NOTES

1. SIZES OF EQUIPMENT PADS INDICATED ON THE DRAWINGS ARE APPROXIMATE. EXACT DIMENSIONS SHALL BE DETERMINED BY THE CONTRACTOR FOR THE EQUIPMENT FURNISHED. ALL FLOOR MOUNTED EQUIPMENT SHALL BE SET ON CONCRETE PADS CONFORMING TO DETAILS SHOWN ON THE TYPICAL STRUCTURAL DRAWINGS.
2. DIELECTRIC COUPLINGS, FLANGES OR UNIONS SHALL BE INSTALLED AT ALL CONNECTIONS OF COPPER PIPE TO OTHER TYPES OF METALLIC PIPING.
3. HVAC PIPING AND DUCTWORK DRAWINGS DO NOT SHOW ALL DRAINS, VENTS, OFFSETS AND FITTINGS ETC. REQUIRED FOR THE COMPLETE SYSTEM. SMALL PIPING IS SHOWN APPROXIMATELY TO SCALE BUT NOT EVERY FITTING AND OFFSET IS SHOWN. THE CONTRACTOR SHALL FURNISH, INSTALL AND TEST ALL HVAC SYSTEMS TO PROVIDE THE COMPLETE SYSTEM.
4. UNLESS OTHERWISE SHOWN ON THE DRAWINGS ALL FLOOR SLAB AND WALL PENETRATIONS SHALL BE AS SHOWN ON THE TYPICAL DETAILS.
5. NOT ALL AND ONLY CERTAIN TYPES OF SUPPORTS ARE SHOWN ON THE HVAC DRAWINGS. UNLESS OTHERWISE DETAILED ON THE DRAWINGS ALL PIPE AND DUCT SUPPORTS SHALL BE DESIGNED, FURNISHED AND INSTALLED BY THE CONTRACTOR AS SPECIFIED.
6. THIS IS A GENERAL LIST OF SYMBOLS. NOT ALL ITEMS SHOWN HERE APPEAR ON CONTRACT DRAWINGS.
7. TYPICAL DETAILS SHALL BE USED FOR ALL PERMANENT WORK EVEN THOUGH THEY ARE NOT CALLED OUT AT ALL LOCATIONS WHERE THEY APPLY.
8. COORDINATE FINAL LOUVER SIZE AND LOCATION WITH ARCHITECTURAL AND STRUCTURAL DRAWINGS.
9. PROVIDE TURNING VANES IN ALL ELBOWS. (SHOWN OR NOT)

SCHEMATIC

C ENLARGED PLAN
SCALE: NOT TO SCALE
FILE: 8660F1060M9101

GENERAL NOTES:

1. CONTRACTOR SHALL PROVIDE NEW NUTS, BOLTS, AND GASKETS FOR ALL CONNECTIONS, INCLUDING REINSTALLATION OF ANY EXISTING PIPING COMPONENTS. DO NOT REUSE THE OLD NUTS, BOLTS, AND GASKETS.
2. CONTRACTOR SHALL COORDINATE WITH THE CITY, THE LOCATION, AND ORIENTATION OF VALVES AND VALVE ACTUATORS.
3. SEE CIVIL DRAWINGS FOR YARD PIPING CONTINUATION.

KEY NOTES:

1. EXISTING VALVE ABANDONED IN PLACE.
2. VALVE IS 20 +/- FT DEEP. REFER TO SPECIFICATION SECTION 15112 AND SPECIFICATION SECTION 13447.
3. AREA IS A DIAGRAMMATIC VIEW OF PAD EAST OF DECHLORINATION STRUCTURE. CONTRACTOR TO FIELD VERIFY AREA.
4. REPLACE CHLORINE ANALYZER 4 PER SPECIFICATION SECTION 17505. THE EXISTING ENCLOSURE IS TO REMAIN IN USE. PROTECT EXISTING ENCLOSURE IN PLACE. REFER TO ELECTRICAL (60E01) AND INSTRUMENTATION (60N01) DRAWINGS FOR ADDITIONAL INFORMATION.
5. SAMPLE PUMP 5 IS A SUBMERSIBLE PUMP THAT IS USED FOR DECHLORINATED SAMPLES. PUMP SENDS FLOW TO A THREE-WAY AUTOMATED ACTUATION VALVE.
6. SAMPLE PUMP 4 IS A ROTARY PUMP THAT IS USED FOR CHLORINATED SAMPLES. PUMP SENDS FLOW TO A THREE-WAY AUTOMATED ACTUATION VALVE.
7. EXISTING CONCRETE PAD. CONTRACTOR TO FIELD VERIFY DIMENSIONS.
8. TIE INTO EXISTING THREE-WAY VALVE.
9. CONTRACTOR SHALL PROVIDE A DRAIN CONFIGURATION THAT MATCHES THE EXISTING CONFIGURATION.

DRAWING NO. 85M01
SHEET NO. 75 OF 200

A PLAN

SCALE: 3/16"=1'-0"
FILE: 8660F1085M0101

GENERAL NOTES:

1. BACKGROUND IS BASED ON THE 1994 RECORD DRAWINGS. CONTRACTOR TO FIELD VERIFY EXISTING DIMENSIONS.
2. CONTRACTOR SHALL PROVIDE NEW NUTS, BOLTS, AND GASKESTS FOR ALL CONNECTIONS, INCLUDING REINSTALLATION OF ANY EXISTING PIPING COMPONENTS. DO NOT REUSE THE OLD NUTS, BOLTS, AND GASKETS.
3. CONTRACTOR SHALL COORDINATE WITH THE CITY THE LOCATION AND ORIENTATION OF VALVES AND VALVE ACTUATORS.
4. SEE CIVIL DRAWINGS FOR YARD PIPING CONTINUATION.
5. REFER TO SPECIFICATION SECTION 11802 FOR WORK ON THE FOUR AWT CLARIFIER/FILTER UNITS.

KEY NOTES:

1. PROVIDE BUTTERFLY VALVE PER SPECIFICATION SECTION 15112 AND ACTUATORS PER SPECIFICATION SECTION 13447.
2. REPLACE FILTER MEDIA AND FILTER GRAVEL SUPPORT.
3. REPLACE ADSORPTION CLARIFIER MEDIA.
4. REPLACE EXISTING PNEUMATIC WASTE GATE ACTUATOR ON EACH AWT CLARIFIER/FILTER UNIT WITH A LINEAR ACTUATOR. REFER TO PHOTO 6/85D03. OTHER WASTE GATES NOT SHOWN FOR CLARITY.
5. CONTRACTOR TO FULLY RECOAT THE CLARIFIER/FILTER TANKS PER SPECIFICATION SECTION 09960 DURING THE MEDIA REPLACEMENT PROCESS.
6. ABANDON LINE IN PLACE. REFER TO 85D01 AND 85D02.
7. PROVIDE A TEE TO TIE INTO THE EXISTING AERATION AIR LINE. REFER TO PHOTO 6/85D03 FOR THE TIE-IN LOCATION.
8. PROVIDE A COAGULANT PUMP PER SEPCIFICATION SECTION 11242. REFER TO PHOTO 4/85D03 FOR THE PUMP THAT WILL BE REPLACED.
9. PROVIDE A RAPID MIX PUMP PER SPECIFICATION SPECIFICATION SECTION 11242.
10. BLIND FLANGE TEE ONCE EXISTING 6-INCH PIPING HAS BEEN REMOVED. REFER TO 85D01 AND SPECIFICATION SECTION 01140.
11. PENETRATE WALL AS REQUIRED FOR NEW 8-INCH AIR PIPING.
12. REINSTALL EXISTING VENTURI FLOW METER.

SCALE: 1/2" = 1'-0"
FILE: 8660F1089M0301

GENERAL NOTES:

1. CONTRACTOR SHALL PROVIDE NEW NUTS, BOLTS, AND GASKETS FOR ALL CONNECTIONS, INCLUDING REINSTALLATION OF ANY EXISTING PIPING COMPONENTS. DO NOT REUSE THE OLD NUTS, BOLTS, AND GASKETS.
2. CONTRACTOR SHALL COORDINATE WITH THE CITY, THE LOCATION, AND ORIENTATION OF VALVES AND VALVE ACTUATORS.
3. SEE CIVIL DRAWINGS FOR YARD PIPING CONTINUATION.

(#) KEY NOTES:

1. FOR PIPING ELEVATION REFER TO DWG 91C07.
2. PROVIDE NEW MOTOR FOR PUMP.
3. WATER LEVEL PER THE 1994 RECORD DRAWINGS.

(#) KEY TAGS:

1.	PMP-89100	CAROUSEL PUMP NO. 1
2.	PMP-89101	CAROUSEL PUMP NO. 2
3.	PMP-89102	CAROUSEL PUMP NO. 3

F PLAN

SCALE: 1/2" = 1'-0"
FILE: 8660F1000H0101

GENERAL NOTES:

1. MOUNT THERMOSTATS AT 48" AFF AND LABEL WITH ITS CONTROLLING DEVICE.
2. REFRIGERANT AND CONDENSATE DRAIN PIPING SHALL NOT BE ROUTED ABOVE ELECTRICAL EQUIPMENT. REFRIGERANT PIPING SHALL BE INSULATED PER SPECIFICATION 15000.
3. PIPE SUPPORTS SHALL BE INSTALLED PER DETAIL MP132/TYP, MP218/TYP, AND MP215/TYP. INSTALL WALL PENETRATIONS PER DETAIL MP302/TYP.

KEY NOTES:

1 MINI-SPLIT FAN COIL UNIT SUSPENDED FROM CEILING. BOTTOM OF UNIT AT 10'-0 AFF.

2 OUTDOOR CONDENSER UNIT. MOUNT UNIT ON EQUIPMENT PAD PER S300/TYP.

3 1" SCHEDULE 40 PVC CONDENSATE DRAIN ROUTED TO 18" DRYWELL. SLOPE LINES AT A MINIMUM OF 2% SLOPE.

4 ROUTE REFRIGERANT LINES DOWN INTERIOR SIDE OF WALL.

AIR CONDITIONING / CONDENSER UNIT SCHEDULE

GENERAL NOTES:

1. EXISTING UNDERGROUND DUCT BANK AND CONDUIT ROUTING MAY NOT REFLECT ACTUAL FIELD CONDITION. CONTRACTOR SHALL VERIFY BEFORE EXCAVATION FOR NEW INSTALLATION.

KEY NOTES:

1. AFTER EXISTING 12KV CONDUCTORS BETWEEN TRANSFORMER TRF-3E AND PEDESTAL PD-983 ARE REMOVED BY COUED, DEMOLISH EXISTING UNDERGROUND 12KV CONDUITS WHERE NEEDED TO ACCOMMODATE CONSTRUCTION OF NEW STRUCTURES OR UNDERGROUND EQUIPEMENT.
2. INSTALL UNDERGROUND 12KV CONDUITS ACCORDING TO TRENCH SECTION. NEW 12KV ROUTING PROVIDED HERE IS APPROXIMATE. CONTRACTOR SHALL MEET ON SITE AND COORDINATE EXACT UNDERGROUND 12KV CONDUIT ROUTING WITH CITY OF UKIAH ELECTRIC DEPARTMENT (COUED).
3. CONTRACTOR TO PROVIDE MV VAULT ACCORDING TO CITY OF UKIAH ELECTRIC DEPARTMENT (COUED) MV VAULT CONSTRUCTION DETAIL. REFER TO SPECIFICATION SETCTION 16210 FOR UTILITY CONSTRUCTION DETAILS. COORDINATE THE EXACT VAULT LOCATION WITH COUED.
4. INSTALL CONDUITS ADJACENT TO HAND RAILS ACCORDING TO TYPICAL DETAIL EM104/TYP.
5. INSTALL CONDUITS UNDERGROUND ACCORDING TO TYPICAL DETAIL EM015/TYP.

GENERAL NOTES:

1. EXISTING MCC IS WESTINGHOUSE, SERIES 2100.
2. EXISTING MCC OVERALL DIMENSIONS MAY NOT REFLECT THE ACTUAL EQUIPMENT DIMENSIONS IN THE FIELD.
3. PROVIDE COVERS FOR MCC AS NEEDED WHERE NEW UNITS DO NOT COMPLETELY FILL SPACE OF REMOVED UNIT.

(#) KEY NOTES:

1. PROVIDE NEW BREAKER, MOTOR STARTERS AND ALL THE NECESSARY EQUIPMENT ACCORDING TO ONE-LINE DIAGRAMS, CONTROL SCHEMATICS, AND SPECIFICATIONS.
2. PROVIDE NEW COVER.
3. RELABEL EXISTING MCC BUCKET ACCORDING TO MCC ELEVATION TABLE.

STATE OF CALIFORNIA
Outdoor Lighting CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE		NRCC-LTO-E
Project Name:	Ukiah WTP - 2023	Report Page: (Page 1 of 8)
Project Address:		Date Prepared: 2023-03-22T19:54:39-04:00

This document is used to demonstrate compliance with requirements in 110.9, 130.0, 130.2, 140.7, and 141.0(b)2L for outdoor lighting scopes using the prescriptive path for nonresidential and hotel/motel occupancies. It is also used to document compliance with requirements in 160.5, 170.2(e)6, 180.1(a) and 180.2(b)4Bv for outdoor lighting scopes using the prescriptive path for multifamily and mixed-use occupancies. Multifamily includes dormitory and senior living facilities.

A. GENERAL INFORMATION

01	Project Location (city)	935 River St, Ukiah, CA	04	Total Illuminated Hardscape Area (ft²)	12500
02	Climate Zone	2			
03	Outdoor Lighting Zone per Title 24 Part 1 10.114 or as designated by Authority Having Jurisdiction (AHJ):				
☐	LZ-0: Very Low - Undeveloped Parkland	☐ LZ-2: Moderate - Urban Clusters	☐	LZ-4: High - Must be reviewed by CA Energy Commission for Approval	
☐	LZ-1: Low - Rural Areas	☒ LZ-3: Moderately High - Urban Areas			
05	Occupancy Types within Project				
•	All Other Occupancies				

B. PROJECT SCOPE

This table includes outdoor lighting systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive path outlined in 140.7 / 170.2(e)6 or 141.0(b)2I, / 180.2(b)4Bv for alterations.

My Project Consists of:

01	02
☒ New Lighting System	Must Comply with Allowances from 140.7 / 170.2(e)6
☐ Altered Lighting System	Is your alteration increasing the connected lighting load (Watts)? ◯ Yes ◯ No

03	04	05
% of Existing Luminaires Being Altered[1]	Sum Total of Luminaires Being Added or Altered	Calculation Method
☐ < 10% ☐ >= 10% and < 50% ☐ >= 50%		

Please proceed to Table F. Outdoor Lighting Fixture Schedule to define the project's luminaires.

[1] *FOOTNOTES: % of Existing Luminaires Being Altered = (Sum Total of Luminaires Being Added or Altered / Existing Luminaires within the Scope of the Permit Application) x 100.*

F. OUTDOOR LIGHTING FIXTURE SCHEDULE

For new or altered lighting systems demonstrating compliance with 140.7 / 170.2(e)6 all new luminaires being installed and any existing luminaires remaining or being moved within the spaces covered by the permit application are included in the Table below. For altered lighting systems using the Existing Power method per 141.0(b)2L only new luminaires being installed and replacement luminaires being installed as part of the project scope are included (ie, existing luminaires remaining or existing luminaires being moved are not included). Outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit are included in Table H. and are not included here. All other multifamily outdoor lighting is included here.

Designed Wattage:

01	02	03	04	05	06	07	08	09	10	
Name or Item Tag	Complete Luminaire Description	Watts per luminaire[1, 2]	How is Wattage determined	Total Number Luminaires [2]	Luminaire Status[3]	Excluded per 140.7(a) / 170.2(e)6A	Design Watts	Cutoff Req. > 6,200 initial lumen output - 130.2(b) / 160.5(c)1[4]	Field Inspector	
									Pass	Fail
A	AMERICAN ELECTRIC LIGHTING - ATBM P10 ☐ Linear	85	Mfr. Spec	6	New	☐	510	Provided	☐	☐
						Total Design Watts:	510			

* NOTES: Selections with a * require a note in the space below explaining how compliance is achieved.
EX: Luminaire is lighting a statue; EXCEPTION 2 to 130.2(b)

[1] *FOOTNOTES: Authority Having Jurisdiction may ask for Luminaire cut sheets to confirm wattage used for compliance per 130.0(c) / 160.5(b)*
[2] *For linear luminaires, wattage should be indicated as W/ft instead of Watts/luminaire. Total linear feet should be indicated in column 05 instead of number of luminaires.*
[3] *Select "New" for new luminaires in a new outdoor lighting project, or for added luminaires in an alteration. Select "Altered" for replacement luminaires in an alteration. Select "Existing to Remain" for existing luminaires within the project scope that are not being altered and are remaining. Select "Existing Reinstalled" for existing luminaires which are being removed and reinstalled as part of the project scope.*
[4] *Compliance with mandatory shielding requirements is required for luminaires with initial lumen output >= 6,200 unless exempted by 130.2(b)/ 160.5(c)*

H. OUTDOOR LIGHTING CONTROLS

This table demonstrates compliance with controls requirements for all new or altered luminaires installed as part of the permit application. For alteration projects, luminaires which are existing to remain (ie untouched) and luminaires which are removed and reinstalled (wiring only) do not need to be included in this table even if they are within the spaces covered by the permit application.
Outdoor lighting for nonresidential buildings, parking garages and common service areas in multifamily buildings must be documented separately from outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit

Mandatory Controls for Nonresidential Occupancies, Parking Garages & Common Areas in Multifamily Buildings

01	02	03	04	05	
Area Description	Shut-Off 130.2(c)1 / 160.5(c)	Auto-Schedule 130.2(c)2 / 160.5(c)	Motion Sensor 130.2(c)3 / 160.5(c)	Field Inspector	
				Pass	Fail
Pump Station and Recycled Water Storage: "A"	Astronomical Timer	NA: Not permitted by H&LS	NA: Industrial Sites Lighting	☐	☐

[1] *FOOTNOTE: Text has been abbreviated, please refer to Table 160.5-A to confirm compliance with the specific light source technologies listed.*
[2] *Authority having jurisdiction may ask for cutsheets or other documentation to confirm compliance of light source.*
[3] *Recessed luminaires marked for use in fire-rated installations, and recessed luminaires installed in non-insulated ceilings are excepted from ii and iii.*

I. LIGHTING POWER ALLOWANCE (per 140.7 / 170.2(e))

This table includes areas using allowance calculations per 140.7 / 170.2(e). General Hardscape Allowance is per Table 140.7-A/Table 170.2-A while "Use it or lose it" Allowances are per Table 140.7-B /Table 170.2-S. Indicate which allowances are being used to expand sections for user input. Luminaires that qualify for one of the "Use it or lose it" allowances shall not qualify for another "Use it or lose it" allowance.
Outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit are included in Table H. and are not included here. All other multifamily outdoor lighting is included here.

DOCUMENTATION AUTHOR'S DECLARATION STATEMENT

I certify that this Certificate of Compliance documentation is accurate and complete.

Documentation Author Name: Hadi Rismanchi	Documentation Author Signature:
Company: Carollo Engineers	Signature Date: March 22, 2023
Address: 2795 Mitchell Drive	CEA/ HERS Certification Identification (if applicable):
City/State/Zip: Walnut Creek, CA 94598	Phone: 925-977-3112

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:
1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

This document is used to demonstrate compliance with requirements in 110.9, 110.12(c), 130.0, 130.1, 140.6 and 141.0(b)2 for indoor lighting scopes using the prescriptive path for nonresidential and hotel/motel occupancies. It is also used to document compliance with requirements in 160.5, 170.2(e) and 180.2(b)4 for indoor lighting scopes using the prescriptive path for multifamily occupancies. Multifamily includes dormitory and senior living facilities.

F. INDOOR LIGHTING FIXTURE SCHEDULE

This table includes all planned permanent and portable lighting other than dwelling unit/ hotel/ motel room lighting. Multifamily dwelling unit and hotel/motel room lighting is documented in Table T. If using Table T to document lighting in multifamily common use areas providing shared provisions for living, eating, cooking or sanitation, those luminaires are not included here.

Designed Wattage: Conditioned Spaces

01	02	03	04	05	06	07	08	09	10

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

• All Other Occupancies					

B. PROJECT SCOPE

This table includes outdoor lighting systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive path outlined in 140.7 / 170.2(e)6i or 141.0(b)2i. / 180.2(b)4iBv for alterations.

My Project Consists of:

01	07		
☒ New Lighting System	Must Comply with Allowances from 140.7 / 170.2(e)6		
☐ Altered Lighting System	Is your alteration increasing the connected lighting load (Watts)?	Yes	No
03	04	05	
% of Existing Luminaires Being Altered[1]	Sum Total of Luminaires Being Added or Altered	Calculation Method	
☐ < 10% ☐ >= 10% and < 50% ☐ >= 50%			

Please proceed to Table F. Outdoor Lighting Fixture Schedule to define the project's luminaires.

[1] *FOOTNOTES: % of Existing Luminaires Being Altered = (Sum Total of Luminaires Being Added or Altered / Existing Luminaires within the Scope of the Permit Application) x 100.*

C. COMPLIANCE RESULTS

Results in this table are automatically calculated from data input and calculations in Tables F through N. Note: If any cell on this table says "COMPLIES with Exceptional Conditions" refer to Table D. Exceptional Conditions for guidance or see applicable Table referenced below.

Calculations of Total Allowed Lighting Power (Watts) 140.7 / 170.2(e)6 or 141.0(b)2L / 180.2(b)4Bv											Compliance Results		
01		02		03		04		05		06	07	08	09
General Hardscape Allowance 140.7(d)1 / 170.2(e)6i (See Table I)	+	Per Application 140.7(d)2 / 170.2(e)6i (See Table J)	+	Sales Frontage 140.7(d)2 (See Table K)	+	Ornamental 140.7(d)2 / 170.2(e)6i (See Table L)	+	Per Specific Area 140.7(d)2 / 170.2(e)6i (See Table M)	OR	Existing Power Allowance 141.0(b)2L / 180.2(b)4Bv (See Table N)	= **Total Allowed** (Watts)	≥ **Total Actual** (Watts)	**07 must be >= 08**
524.85	+	----	+	----	+	----	+	----	OR	----	= 524.85	≥ 0	COMPLIES
Shielding Compliance (See Table G for Details)													COMPLIES
Controls Compliance (See Table H for Details)													COMPLIES

D. EXCEPTIONAL CONDITIONS

This table is auto-filled with uneditable comments because of selections made or data entered in tables throughout the form.

E. ADDITIONAL REMARKS

This table includes remarks made by the permit applicant to the Authority Having Jurisdiction.

		Date Prepared: 2023-03-22T19:27:20-04:00

F. OUTDOOR LIGHTING FIXTURE SCHEDULE

For new or altered lighting systems demonstrating compliance with 140.7 / 170.2(e)6 all new luminaires being installed and any existing luminaires remaining or being moved within the spaces covered by the permit application are included in the Table below. For altered lighting systems using the Existing Power method per 141.0(b)2L only new luminaires being installed and replacement luminaires being installed as part of the project scope are included (ie, existing luminaires remaining or existing luminaires being moved are not included). Outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit are included in Table H. and are not included here. All other multifamily outdoor lighting is included here.

Designed Wattage:

01	02		03	04	05	06	07	08	09	10	
Name or Item Tag	Complete Luminaire Description		Watts per luminaire[1, 2]	How is Wattage determined	Total Number Luminaires[2]	Luminaire Status[3]	Excluded per 140.7(a) / 170.2(e)6iA	Design Watts	Cutoff Req. > 6,200 initial lumen output 130.2(b) / 160.5(c)1[4]	Field Inspector	
										Pass	Fail
A	AMERICAN ELECTRIC LIGHTING - ATBM P10	☐ Linear	85	Mfr. Spec	4	New	☒	---	Provided	☐	☐
							Total Design Watts:	0			

* NOTES: Selections with a * require a note in the space below explaining how compliance is achieved.
EX: Luminaire is lighting a statue; EXCEPTION 2 to 130.2(b)

[1] *FOOTNOTES: Authority Having Jurisdiction may ask for Luminaire cut sheets to confirm wattage used for compliance per 130.0(c) / 160.5(b)*
[2] *For linear luminaires, wattage should be indicated as W/ft instead of Watts/luminaire. Total linear feet should be indicated in column 05 instead of number of luminaires.*
[3] *Select "New" for new luminaires in a new outdoor lighting project, or for added luminaires in an alteration. Select "Altered" for replacement luminaires in an alteration. Select "Existing to Remain" for existing luminaires within the project scope that are not being altered and are remaining. Select "Existing Reinstalled" for existing luminaires which are being removed and reinstalled as part of the project scope.*
[4] *Compliance with mandatory shielding requirements is required for luminaires with initial lumen output >= 6,200 unless exempted by 130.2(b)/ 160.5(c)*

G. SHIELDING REQUIREMENTS (BUG)

This section does not apply to this project.

H. OUTDOOR LIGHTING CONTROLS

This table demonstrates compliance with controls requirements for all new or altered luminaires installed as part of the permit application. For alteration projects, luminaires which are existing to remain (ie untouched) and luminaires which are removed and reinstalled (wiring only) do not need to be included in this table even if they are within the spaces covered by the permit application.
Outdoor lighting for nonresidential buildings, parking garages and common service areas in multifamily buildings must be documented separately from outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit

Mandatory Controls for Nonresidential Occupancies, Parking Garages & Common Areas in Multifamily Buildings

01	02	03	04	05

I. LIGHTING POWER ALLOWANCE (per 140.7 / 170.2(e))

This table includes areas using allowance calculations per 140.7 / 170.2(e). General Hardscape Allowance is per Table 140.7-A/Table 170.2-R while "Use it or lose it" Allowances are per Table 140.7-B /Table 170.2-S. Indicate which allowances are being used to expand sections for user input. Luminaires that qualify for one of the "Use it or lose it" allowances shall not qualify for another "Use it or lose it" allowance. Outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit are included in Table H. and are not included here. All other multifamily outdoor lighting is included here.

01

DOCUMENTATION AUTHOR'S DECLARATION STATEMENT

I certify that this Certificate of Compliance documentation is accurate and complete.

Documentation Author Name:	Documentation Author Signature:
Hadi Rismanchi	
Company: Carollo Engineers	Signature Date: March 22, 2023
Address: 2795 Mitchell Drive	CEA/ HERS Certification Identification (if applicable):
City/State/Zip: Walnut Creek, CA 94598	Phone: 925-977-3152

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

GENERAL NOTES:

1. EXISTING EQUIPMENT AND SIZES ARE FROM OWNER RECORD DRAWINGS, AND MAY NOT REFLECT EXACT LOCATIONS AND SIZES FOR EXISTING EQUIPMENT IN FIELD. CONTRACTOR SHALL FIELD VERIFY WHERE NEEDED.

KEY NOTES:

1. MOUNT NEW ANALYZER UNIT ON THE EXISTING ANALYZER EQUIPMENT MOUNTING STAND, AND RECONNECT EXISTING POWER CIRCUITS TO THE NEW UNIT. EXTEND POWER CONDUITS AND CONDUCTORS AS LONG AS NEEDED TO REACH EQUIPMENT CONDUCTOR TERMINATION POINT.
2. PROVIDE EXPANSION FITTINGS FOR ALL CONDUITS TRANSITIONING BETWEEN DUCT BANK TO EXPOSED ROUTING ACCORDING TO DETAIL EM219/TYP.
3. GROUND NEW DUCT BANK TO EXISTING GROUND RING.

GENERAL NOTES:

1. EXISTING EQUIPMENT LOCATIONS AND SIZES ARE FROM OWNER RECORD DRAWINGS, AND MAY NOT REFLECT EXACT LOCATIONS AND SIZES FOR EXISTING EQUIPMENT IN FIELD. CONTRACTOR SHALL FIELD VERIFY WHERE NEEDED.
2. REFER TO DRAWING 89D01 FOR LOCATION OF FOLLOWING ELECTRICAL EQUIPMENT TO BE DEMOLISHED:
   - MAIN DISCONNECT SWITCH, 200 A, 3-POLE
   - MOTOR CONTROL CABINET
   -1 KVA TRANSFORMER

KEY NOTES:

1. POWER, CONTROL, SIGNAL AND COMMUNICATION PULL BOX. SIZE PULL BOX ACCORDING TO NEC. PULL BOX MINIMUM DIMENSIONS SHALL BE 30"W X 20"D X 30" H. PROVIDE A DIVIDER INSIDE THE PULL BOX WITH SEPARATE ACCESS DOORS AND SEPARATE THE CABLE PULLING SPACE BETWEEN SIGNAL/COMMUNICATION AND POWER/CONTROL CIRCUITS. ACCESS DOORS SHALL BE FACING EAST.
2. PROVIDE EXPANSION FITTINGS FOR ALL CONDUITS TRANSITIONING BETWEEN DUCT BANK TO EXPOSED ROUTING ACCORDING TO DETAIL EM219/TYP.
3. REPLACE EXISTING PUMP MOTOR WITH NEW MOTOR.
4. DISCONNECT SWITCH IS FOR 480V POWER SOURCE TO FLOW DIVERSION METERING VAULT ACTUATED VALVES. TERMINATE CONDUCTORS ON LINE SIDE OF DISCONNECT SWITCH.
5. DISCONNECT SWITCH IS FOR 120V POWER SOURCE TO FLOW DIVERSION METERING VAULT FLOW METER FIT-99105. TERMINATE CONDUCTORS ON LINE SIDE OF DISCONNECT SWITCH.
6. TO LIGHTING FIXTURES AND RECEPTACLES.

FILE: 8660F1099E01C

GENERAL NOTES:

1. EXISTING EQUIPMENT LOCATION AND SIZES ARE FROM OWNER RECORD DRAWINGS, AND MAY NOT REFLECT EXACT LOCATIONS AND SIZES FOR EXISTING EQUIPMENT IN FIELD. CONTRACTOR SHALL FIELD VERIFY WHERE NEEDED.

KEY NOTES:

1. PROVIDE MCC TOP HAT ENCLOSURE TO HOUSE PNL-RWPS POWER. ACCOMMODATE NEW TAP OF EXISTING MCC-E BUS WITH PNL-RWPS POWER CABLES. ENCLOSURE MANUFACTURER AND MODEL SHALL BE THE SAME AS EXISTING MCC-E. PROVIDE ALL THE NECESSARY PARTS AND ACCESSORIES TO COMPLETE CABLE TERMINATION IN MCC-E. CONTRACTOR TO PROVIDE MANUFACTURER FIELD SERVICES TO COMPLETE TOP HAT INSTALLATION. CONTRACTOR SHALL SUBMIT TOP HAT AND TAP DESIGN FOE ENGINEER REVIEW.
2. RELOCATE SPD ENCLOSURE IF NEEDED TO PROVIDE ADEQUATE SPACE FOR PNL-RWPS INSTALLATION.
3. CONDUITS RISE FROM DUCT BANK PER DETAIL EM020/TYP AND EM219/TYP, AND ENTER TO THE BUILDING'S ATTIC SPACE, ABOVE ELECTRICAL BUILDING.
4. SUPPORT CONDUITS ON BUILDING SIDE WALL WITH PREFORMED CHANNELS ACCORDING TO DETAIL EM903/TYP.
5. ROUTE CONDUITS THROUGH ATTIC SPACE ABOVE ELECTRICAL ROOM. SUPPORT CONDUITS IN ATTIC SPACE PER DETAIL EM901/TYP.
6. HEAD SPACE ABOVE MCC IS APPROXIMATELY 8". TOP HAT HIGHER THAN 8" MAY NEED TO BE PARTIALLY PLACED IN CEILING, BETWEEN JOISTS. COORDINATE NEW TOP HAT ENCLOSURE ACTUAL SIZE, CONDUIT ENTRY, AND ACCESS LOCATION WITH EATON. IF IT IS DETERMINED DURING FIELD VERIFICATION THAT ENCLOSURE MOUNTING SPACE IS OBSTRUCTED BY CEILING JOISTS, AND MODIFICATION TO CEILING JOISTS IS NEEDED, CONTACT STRUCTURAL ENGINEER OF RECORD FOR DIRECTION.
7. IF NEEDED FOR TOP HAT CONSTRUCTION, RELOCATE EXISTING CONDUITS. PROTECT EXISTING CABLES AND RE-TERMINATE AFTER CONDUIT WORK. REFER TO SPECIFICATION SECTION 01140 FOR WORK RESTRICTIONS.

GENERAL NOTES:

1. EMBEDDED CONDUIT IN SLAB SHALL BE INSTALLED PER DETAILS EM115/TYP, EM116/TYP, AND EM117/TYP. EMBEDDED CONDUITS WITH DIAMETER LARGER THAN TWO INCHES SHALL NOT STACK OR CROSS IN CONCRETE SLAB.
2. COORDINATE CONDUIT STUB UP LOCATIONS INSIDE ELECTRICAL ROOM WITH ELECTRICAL EQUIPMENT CONDUIT ENTRY OPENING AT BOTTOM OF ENCLOSURE.
3. SUPPORT EXPOSED CONDUITS AS NEEDED ACCORDING TO DETAILS EM102/TYP AND EA030/TYP.

KEY NOTES:

1. SPACE IS RESERVED FOR FUTURE RECYCLED PUMP VFD.
2. CONDUITS SHALL REMAIN ENCASED IN DUCT BANK TO STUB UP LOCATION.
3. PROVIDE MINIMUM OF 6" SPACE BETWEEN BOTTOM OF THE BUILDING SLAB AND TOP OF THE DUCT BANK.
4. CONTRACTOR SHALL INSTALL THERMOSTAT, AND PROVIDE NECESSARY CONDUITS AND CABLES ACCORDING TO MANUFACTURER INSTALLATION REQUIREMENTS.
5. CONTRACTOR SHALL VERIFY MAXIMUM OVER CURRENT PROTECTION RATING FOR HVAC UNIT, AND CHANGE CIRCUIT BREAKER RATING AND CABLE SIZE ACCORDINGLY PER NEC. SUBMIT ANY CHANGES TO ENGINEER FOR REVIEW.
6. SIZE RADIO PANEL ACCORDING TO RADIO EQUIPMENT DIMENSIONS AND MANUFACTURER RECOMMENDATIONS. RADIO PANEL MINIMUM DIMENSIONS SHALL BE 20" H x 20" W x 12" D.

GENERAL NOTES:

1. ENCLOSURE DRAWING REPRESENTS DESIGN INTENT. CONTRACTOR TO SUPPLY AS-BUILT DRAWINGS SHOWING FINAL ENCLOSURE LAYOUT WITH ALL EQUIPMENT, MANUFACTURERS, AND PART NUMBERS.
2. REFER TO ELECTRICAL PLANS FOR LOCATION OF ALL ENCLOSURES.
3. CONSTRUCT PANEL TO MEET THE FULL INTENT OF ARTICLE 409 OF THE NATIONAL ELECTRIC CODE.
4. FOLLOW ALL UL 508 AND 508 SUPPLEMENT 5B TO DETERMINE SHORT CIRCUIT RATINGS.
5. NO 480VAC CIRCUITS SHALL TERMINATE IN OR PASS THROUGH CONTROL CABINETS.
6. ALL CONDUIT PENETRATIONS SHALL BE LOCATED AT THE TOP OR BOTTOM OF THE ENCLOSURE. NO SIDE, FRONT, OR REAR PENETRATIONS ALLOWED.
7. QUANTITY OF COMPONENTS VARY AS REQUIRED FOR EACH CABINET.

PCM-4 PANEL ELEVATION INTERIOR

PCM-4 PANEL ELEVATION EXTERIOR

EXISTING PLC-3 PANEL ELEVATION INTERIOR (NOT SHOWING THE COMPLETE INTERIOR)

KEY NOTES:

1. REMOVE EXISTING PLC RACK AND MODULES AND RETURN TO THE OWNER. PROVIDE AND INSTALL NEW PLC AS SPECIFIED IN CONTRACT DRAWINGS AND SPECIFICATION 17720. TRACE AND FIELD VERIFY ALL EXISTING IO WIRING AND NETWORK CONNECTIONS BEFORE REMOVING WIRES FROM THE EXISTING PLC. WHERE POSSIBLE, TERMINATE EXISTING IO WIRES TO THE NEW PLC IN THE SAME SLOT NUMBER AND IO POINT AS THEY WERE PREVIOUSLY CONNECTED TO THE EXISTING PLC.
2. REMOVE PLC PROCESSOR AND RETURN TO THE OWNER. PROVIDE AND INSTALL ETHERNET SWITCH IN THE SPACE WHERE THE OLD PROCESSOR WAS PREVIOUSLY INSTALLED AS SPECIFIED IN CONTRACT DRAWINGS AND SPECIFICATION 17733. CONNECT NETWORK CONNECTIONS AS SHOWN ON CONTRACT DRAWING 04N02.
3. PROVIDE AND INSTALL NEW FIBER PATCH PANEL IN PLC-4 AS SPECIFIED IN CONTRACT DRAWING AND SPECIFICATION 17733. TRACE AND FIELD VERIFY EXISTING FIBER CONNECTIONS. THE TWO EXISTING FIBER CONNECTIONS COMING FROM PLC-70299 AND PLC-12199 PANELS SHALL BE DISCONNECTED FROM THE EXISTING FIBER PATCH PANEL LOCATED IN PLC-3 AND SHALL BE CONNECTED TO THESE NEW PATCH PANELS AS SHOWN ON 04N02.
4. UTILIZE THE IDENTIFIED EMPTY SPACES AS NEEDED FOR ANY NEW RELAYS, TERMINAL BLOCKS, FUSES AND CIRCUIT BREAKERS THAT MAY BE REQUIRED PER CONTRACT DRAWINGS AND SPECIFICATIONS.
5. REMOVE EXISTING CHART RECORDER, REDIPANEL KEYPAD MODULE, ANNUNCIATOR, PUSH BUTTONS, PILOT LIGHTS, AND SELECTOR SWITCHES AND RETURN TO THE OWNER. EXISTING CHART RECORDER, REDIPANEL KEYPAD MODULE, ANNUNCIATOR, PUSH BUTTONS, PILOT LIGHTS, AND SELECTOR SWITCHES FUNCTIONALITY SHALL BE REPLICATED ON THE NEW LOI AND SCADA AS NEEDED.
6. CUT ONE LARGE SQUARE HOLE IN THE AREA SHOWN. GASKET AND BOLT A PLATE TO COVER THE HOLE. THIS PLATE SHALL BE UTILIZED TO INSTALL THE NEW LOI.
7. USE APPROPRIATE PLUGS TO INDIVIDUALLY COVER THE PILOT LIGHTS, SELECTOR SWITCHES, AND PUSH BUTTONS TO MAINTAIN THE PANEL'S NEMA RATING.
8. PROVIDE AND INSTALL NEW LOCAL OPERATOR INTERFACE AS SPECIFIED IN CONTRACT DRAWINGS AND SPECIFICATION 17721. LOI SHALL BE INSTALLED ON THE PLATE SPECIFIED IN KEY NOTE 6.
9. ALL EXISTING PROGRAMMING SHALL BE REPROGRAMMED IN THE NEW PLC. ADDITIONALLY, THE NEW PLC AND LOI SHALL PROVIDE THE SAME FUNCTIONALITY AS WAS PRESENT INCLUDING THE ITEMS REMOVED PER KEY NOTE 5.

PLC-70299 PANEL ELEVATION INTERIOR

KEY NOTES:

1. REMOVE EXISTING EMPTY PLC RACK AND RETURN TO THE OWNER. PROVIDE AND INSTALL ETHERNET SWITCH AND FIBER PATCH PANEL AS SHOWN ON CONTRACT DRAWING 04N03 AND SPECIFICATION. PROVIDE AND INSTALL DIN RAIL, TERMINAL BLOCKS, FUSES AND RELAYS TO TERMINATE NEW IO POINTS AS REQUIRED. UTILIZE HORIZONTAL SPACE CREATED BY THE SMALLER PLC CHASSIS FOR NEW TERMINAL BLOCKS AND FUSES AS NEEDED.
2. UTILIZE EMPTY AREAS IF ADDITIONAL SPACE IS REQUIRED FOR NEW TERMINAL BLOCKS, FUSES AND RELAYS.

   HARDWIRED INTERLOCKS/OVERLOAD PROGRAMMED INTERLOCKS:
   - A. IN A HIGH MOTOR TEMPERATURE CONDITION, THE EQUIPMENT SHALL SHUT OFF AND A HIGH TEMPERATURE ALARM SIGNAL SHALL BE SENT TO THE PLANT PLC.
   - B. IN A LOW DISCHARGE FLOW CONDITION, THE EQUIPMENT SHALL SHUT OFF AFTER AN OPERATOR ADJUSTABLE TIMER AND A LOW FLOW ALARM SIGNAL SHALL BE SENT TO THE PLANT PLC. FLOW SWITCH SHALL BE RESET THROUGH THE PCS.
   - C. IN LOW LEVEL CONDITION, THE EQUIPMENT SHALL SHUT OFF AND A LEVEL LOW SIGNAL SHALL BE SENT TO THE PLC.
   - D. IN HIGH HIGH LEVEL CONDITION, A HIGH HIGH LEVEL ALARM SIGNAL SHALL BE SENT TO THE PLANT PLC TO SHUT DOWN CAROUSEL PUMP NO. 3.

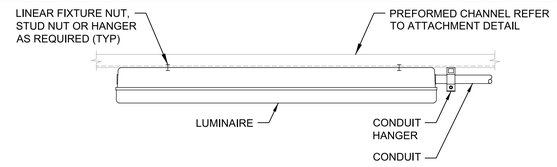
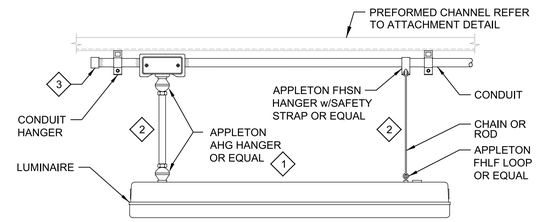
EG205 TYP S ENCLOSURE GROUNDING DETAILS



KEY NOTES:

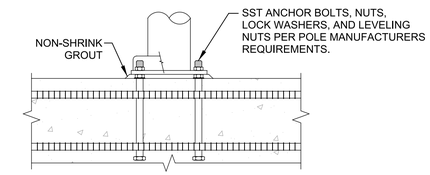
1. GROUND GRID CONDUCTOR TO BE FULLY ENCASED IN CONCRETE. PROVIDE MIN 1 1/2" CLEAR BETWEEN CONDUCTOR & REINFORCEMENT, OR BETWEEN CONDUCTOR AND FACE OF CONCRETE.



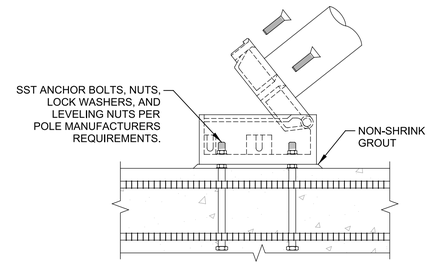
EG304 TYP S GROUNDING CONNECTION TO FOOTING (UFER)

EG511 TYP S TRANSFORMER (NON-UTILITY) 3-PHASE, 4-WIRE SECONDARY POWER GROUNDING DETAIL

FLUSH MOUNTED



SUSPENDED



KEY NOTES:

1. USE MEYERS HUB IN WET AND/OR CORROSIVE AREAS.
2. LENGTH AS REQUIRED FOR INDICATED MOUNTING HEIGHT.
3. CAP END CONDUIT AS REQUIRED.

EL200 TYP S LINEAR LUMINAIRE MOUNTING

ONE-PIECE POLE

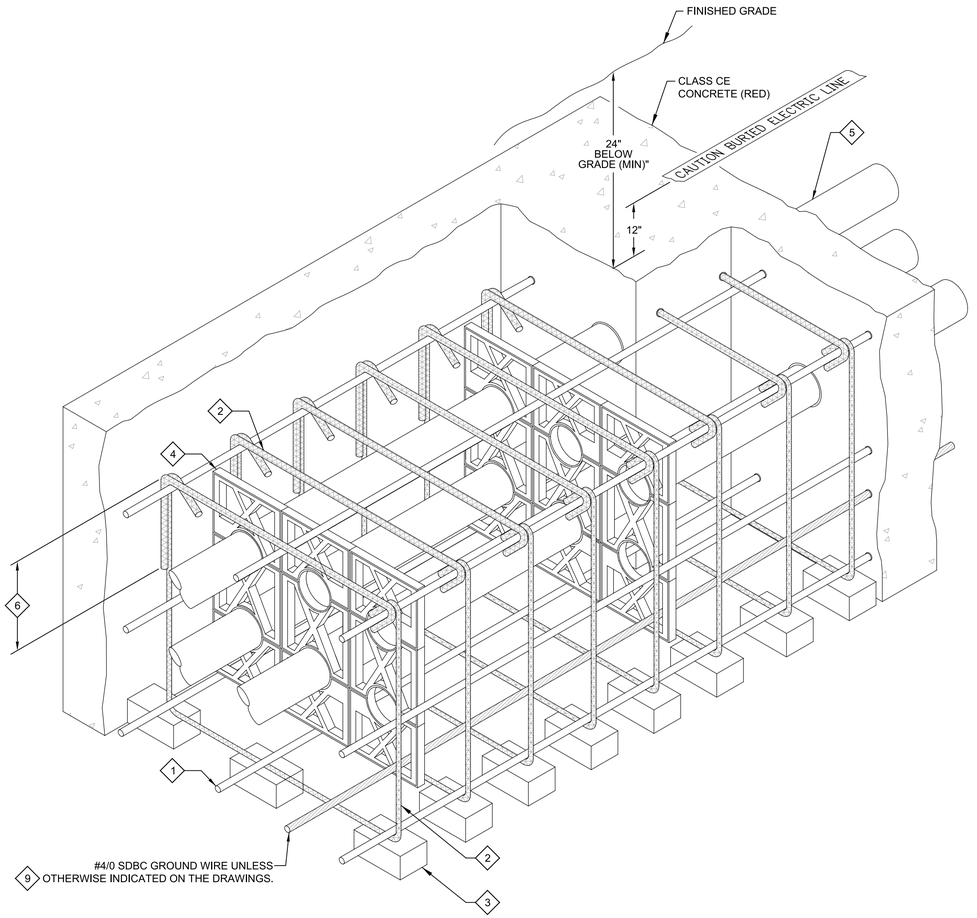
SHEET NO. 176 OF 200

GENERAL NOTES:

1. USE MINIMUM DIMENSIONS AND REINFORCEMENT SHOWN UNLESS OTHERWISE NOTED. PROVIDE WIND LOAD CALCULATIONS AND INCREASE DIMENSIONS AND INCREASE DIMENSIONS AS REQUIRED.

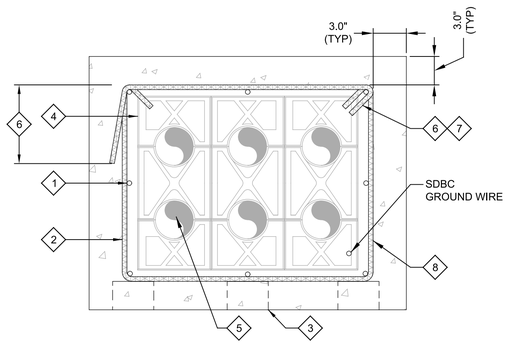


EL506 TYP S POLE FOUNDATION
TRAFFIC AREAS

GENERAL NOTES:

1. USE MINIMUM DIMENSIONS AND REINFORCEMENT SHOWN UNLESS OTHERWISE NOTED. PROVIDE WIND LOAD CALCULATIONS AND INCREASE DIMENSIONS AS REQUIRED.

EL507 TYP S POLE FOUNDATION
NON-TRAFFIC AREAS



NOTES:

1. DIMENSIONS SHOWN ARE MINIMUM.
2. ADJUST SIZE OF DUCT BANK BASED UPON THESE GUIDELINES AND THE DUCT BANK SPECIFICATION TO ACCOMMODATE ACTUAL NUMBER OF CONDUITS WITHIN DUCT BANK. REFER TO DUCT BANK SECTIONS, AND CONDUIT SCHEDULE FOR NUMBER AND SIZE OF CONDUITS.
3. MAKE PROVISIONS TO PREVENT CONDUIT FLOTATION DURING CONCRETE PLACEMENT & CURING.

KEY NOTES:

1. #4 REINFORCING STEEL 12" MAXIMUM ON CENTER AROUND ENTIRE PERIMETER OF DUCT BANK.
2. #4 REINFORCING STEEL TIES MAXIMUM 24" ON CENTER ALONG LENGTH OF DUCT BANK.
3. MINIMUM OF TWO PRECAST CONCRETE BAR SUPPORTS PLACED UNDER A TIE AT EACH PVC CONDUIT SPACER ALONG LENGTH OF DUCT BANK. PROVIDE PRECAST BAR SUPPORTS AT INTERVALS OF 24" TO REDUCE DEFLECTION.
4. PVC CONDUIT SPACERS ON 8'-0" CENTERS (MAXIMUM). LOCATE 12" FROM TIES.
5. REFER TO DUCT BANK SECTIONS AND SPECIFICATIONS FOR CONDUIT REQUIREMENTS.
6. 1'-4" OR 135 DEGREE HOOK FOR SHALLOW DUCT BANKS SHALLOWER THAN 21"
7. CONTRACTOR'S OPTION TO PROVIDE 1'-4" LAP LENGTH EACH SIDE OF HORIZONTAL TIE.
8. LOWER PORTION OF TIES COULD BE U-BARS IF UPPER PORTIONS PROVIDES 1'-4" VERTICAL LEGS EACH SIDE.
9. BOND THE DUCT BANK GROUND WIRE TO THE GROUNDING SYSTEM AT BOTH ENDS OF THE DUCT BANK.

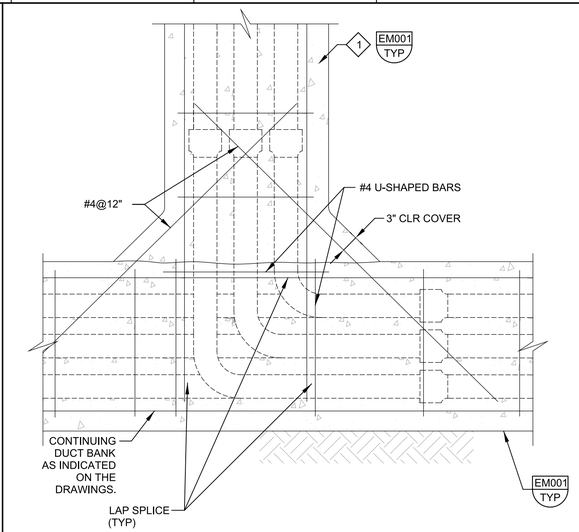
NOTES:

1. DIMENSIONS SHOWN ARE MINIMUM.
2. ADJUST SIZE OF DUCT BANK BASED UPON THESE GUIDELINES AND SPECIFICATION SECTION 16133 TO ACCOMMODATE ACTUAL NUMBER OF CONDUITS WITHIN DUCT BANK. REFER TO DUCT BANK SECTIONS, AND CONDUIT SCHEDULE FOR NUMBER AND SIZE OF CONDUITS.
3. MAKE PROVISIONS TO PREVENT CONDUIT FLOTATION DURING CONCRETE PLACEMENT & CURING.

KEY NOTES:

1. #4 REINFORCING STEEL 12" MAXIMUM ON CENTER AROUND ENTIRE PERIMETER OF DUCT BANK.
2. #4 REINFORCING STEEL STIRRUPS 6" MAXIMUM ON CENTER ALONG LENGTH OF DUCT BANK.
3. MINIMUM OF THREE PRECAST CONCRETE BAR SUPPORTS PLACED UNDER STIRRUPS AT MIN 4'-0" ON CENTER ALONG LENGTH OF DUCT BANK OR CLOSER SPACING AS NECESSARY TO PREVENT SAGGING OR MOVEMENT OF THE REBAR.
4. REFER TO DUCTBANK SECTIONS AND CONDUIT SCHEDULES FOR CONDUIT REQUIREMENTS.
5. TIE CONDUIT TO BOTTOM REINFORCING STEEL AT MIN 2'-0" ON CENTER OR CLOSER SPACING ALONG THE LENGTH AS REQUIRED TO MAINTAIN CONDUIT LOCATION AND TO PREVENT IT FROM FLOATING DURING CONCRETE POUR.

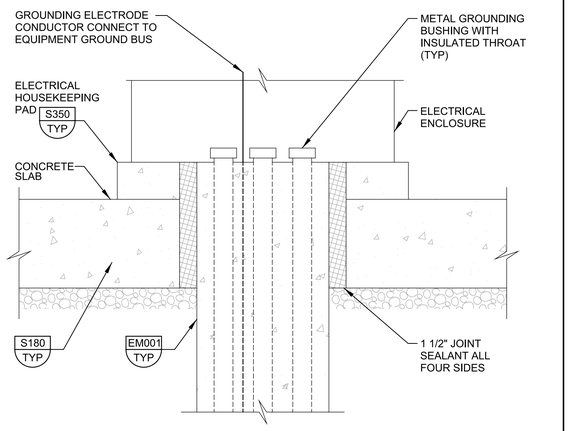


EM002 TYP R REDUCED DEPTH REINFORCED CONCRETE DUCT BANK

NOTES:

1. ALL DIMENSIONS ARE MINIMUM UNLESS OTHERWISE INDICATED ON THE DRAWINGS.
2. REFER TO THE SPECIFICATIONS FOR TRENCH BACKFILL REQUIREMENTS.

EM015 TYP S DIRECT BURIED CONDUIT OR CABLE

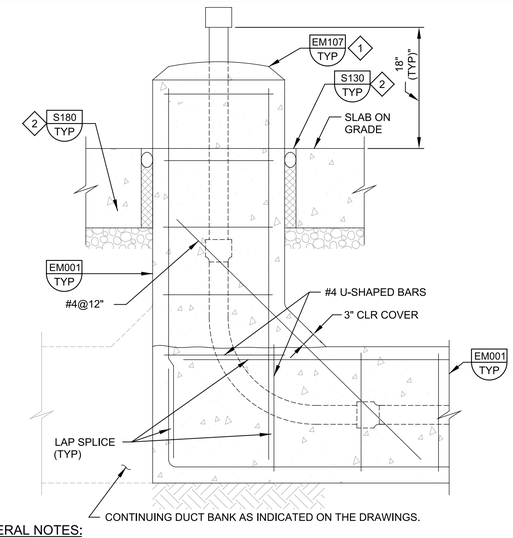


GENERAL NOTES:

1. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.

KEY NOTES:

1. ADJUST DUCT SPACING TO FIT OPENING IN THE SLAB AND EQUIPMENT ABOVE.



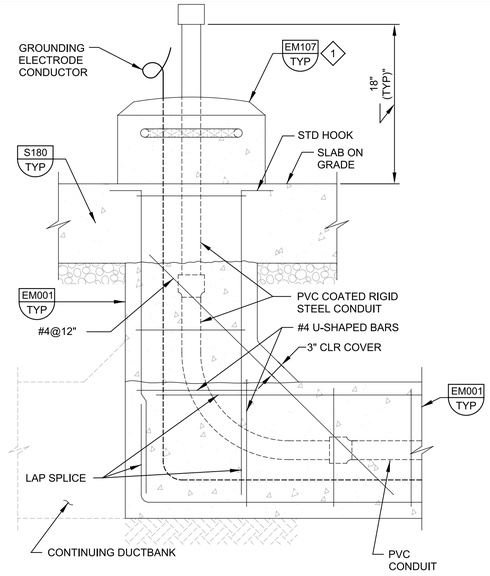
EM020 TYP S DUCT BANK RISER

GENERAL NOTES:

1. OPENING SIZE IN CONCRETE HOUSE KEEPING PAD IS SET BY CONDUIT SIZE AND NUMBER OF CONDUITS. CONDUITS AT TOP OF HOUSE KEEPING PAD MUST FIT IN MANUFACTURER PROVIDED WINDOW IN BOTTOM OF ELECTRICAL ENCLOSURE.

EM022 TYP S DUCT BANK ENTRY INTO ELECTRICAL EQUIPMENT

GENERAL NOTES:



1. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.

KEY NOTES:

1. PROVIDE CONDUIT HOUSE KEEPING CURB AT ALL LOCATIONS WHERE THE CONDUIT IS NOT PROTECTED BY AN EQUIPMENT PAD.
2. SHALL ONLY BE PROVIDED FOR DUCT BANK RISER THROUGH NEW CONCRETE SLAB.

EM032 TYP R RISER FROM DUCT BANK SLAB ON GRADE

12-06-21

KEY NOTES:

1. PROVIDE CONDUIT HOUSE KEEPING CURB AT ALL LOCATIONS WHERE THE CONDUIT IS NOT PROTECTED BY AN EQUIPMENT PAD.

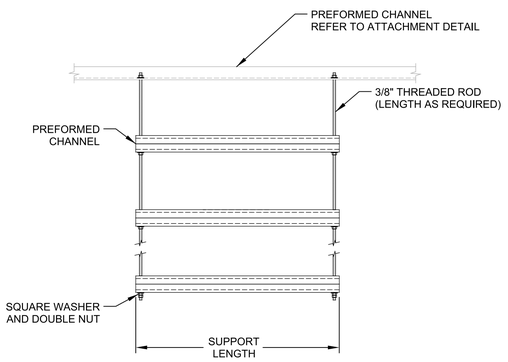
EM056 TYP J — ELECTRICAL HANDHOLE PRECAST CONCRETE W/HATCH

GENERAL NOTES:

1. PROVIDE MINIMUM INTERIOR DIMENSIONS AS SHOWN IN THE ELECTRICAL HANDHOLE AND MANHOLE SCHEDULE (MAXIMUM INTERIOR DIMENSIONS: 60"WIDE x 60"LONG x 60"DEEP)
2. BOND ALL METALLIC ITEMS INSIDE HANDHOLE TO GROUND ROD USING #4 AWG BARE COPPER CABLE.
3. SEE DRAWINGS FOR ORIENTATION, NUMBER, AND SIZE OF DUCT BANKS AT EACH HANDHOLE.

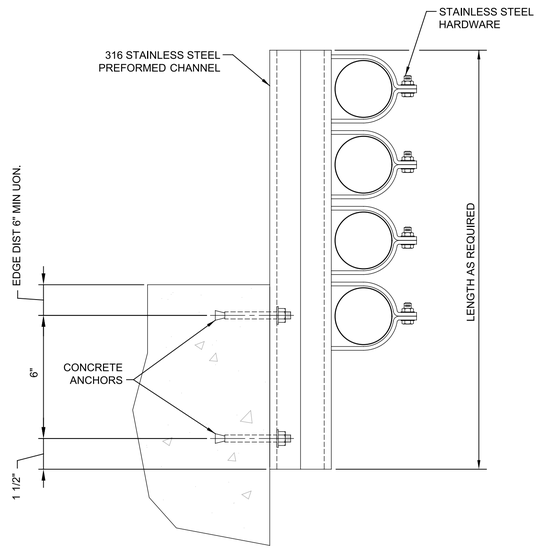
KEY NOTES:



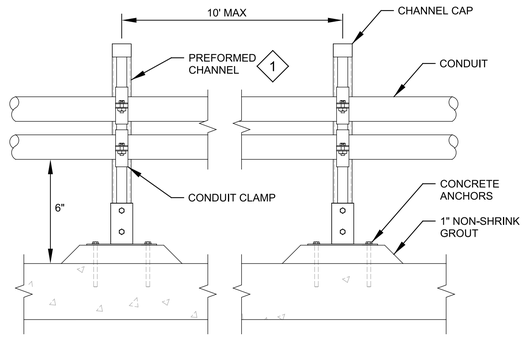
1. SEE THE MANHOLE AND HANDHOLE SCHEDULE FOR REQUIRED LOAD RATING OF HATCH.
2. BOND DUCT BANK GROUND CABLE TO GROUND ROD. REFER TO THE SPECIFICATIONS FOR CONNECTION REQUIREMENTS.
3. INSTALL DUCT BANKS ONLY THROUGH CAST-IN OPENINGS OR PREFORMED KNOCKOUT PANELS. PROVIDE KNOCKOUTS ON EACH WALL AROUND HANDHOLE.
4. PROVIDE MINIMUM 4 INCH DIAMETER, GRAVEL FILLED PENETRATION THROUGH FLOOR OF HANDHOLE. SET SUMP OPENING OVER MINIMUM 18" SQUARE FILTER FABRIC TO ISOLATE GRAVEL FROM BASE MATERIAL BELOW.
5. COAT EXTERIOR WALLS BELOW GRADE WITH BITUMINOUS DAMP PROOFING.
6. MAXIMUM TOP SLAB OVERHANG IS TYPICAL AROUND 4 SIDES OF HANDHOLE.
7. GROUNDING CABLE CONNECTION. REFER TO THE SPECIFICATIONS FOR CONNECTION REQUIREMENTS.
8. PROVIDE ONE PULLING IRON ON EACH WALL OF HANDHOLE.
9. BASE MATERIAL: PROVIDE MIN 12" COMPACTED AGGREGATE BASE COURSE.

KEY NOTES:

1. PROVIDE GROUNDING FITTING FOR METALLIC CONDUITS ENTERING MANHOLE. BOND GROUNDING FITTING TO DUCTBANK GROUNDING CONDUCTOR.
2. FOR FIRST 12'-0" FROM INSIDE FACE OF STRUCTURE, STIRRUP SPACING IN INCHES = (H-4)/2 WHERE H = CONCRETE ENCASEMENT HEIGHT IN INCHES.
3. ADDITIONAL #4 x 12'-0" @ 12" ON ALL FOUR FACES OF ENCASEMENT. ALTERNATE WITH TYPICAL REINFORCEMENT FOR 6" SPACING.
4. PROVIDE ADDITIONAL REINFORCEMENT AROUND OPENING AS REQUIRED. FOR CAST-IN-PLACE STRUCTURES, PROVIDE REINFORCEMENT PER S180 TYP



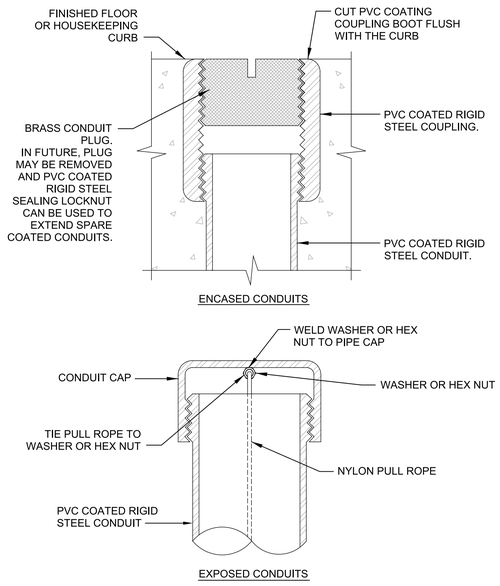
EM070 TYP S — ENCASED CONDUITS AT MANHOLES OR STRUCTURES - W/O WATERSTOP



GENERAL NOTES:

1. PROVIDE NUMBER AND LENGTH OF PREFORMED CHANNEL SUPPORTS AS REQUIRED BY EQUIPMENT AND MATERIALS TO BE INSTALLED.
2. PROVIDE SEISMIC BRACING PER THE SPECIFICATIONS.
3. REFER TO SPECIFICATIONS FOR MATERIAL REQUIREMENTS.

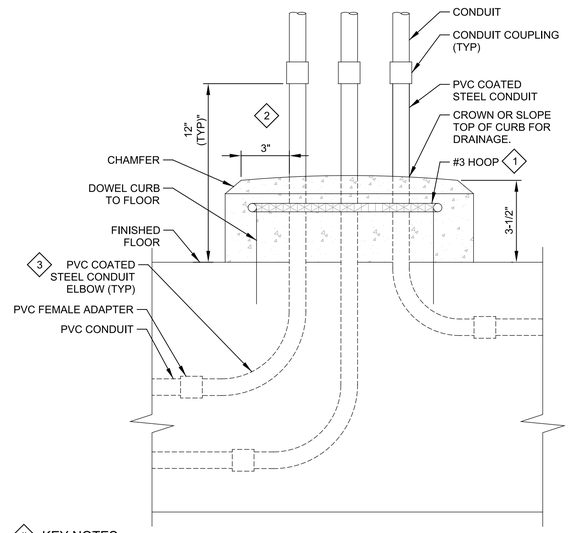
EM102 TYP S — TRAPEZE SUPPORT



EM103 TYP S — CONDUIT SUPPORT

KEY NOTES:

1. SIZE PREFORMED CHANNEL FOR CONDUITS INDICATED ON THE DRAWINGS.



EM104 TYP S — CONDUIT FLOOR SUPPORT FOR ELECTRICAL CONDUITS

GENERAL NOTES:

1. PROVIDE 2" MIN CLEAR BETWEEN ADJACENT CONDUITS

EM105 TYP S — SPARE CONDUIT DETAIL

KEY NOTES:

1. COORDINATE REINFORCING STEEL REQUIREMENTS WITH THE GENERAL CONTRACTOR.
2. TYPICAL BOTH SIDES, FRONT AND REAR.
3. FIELD BEND 1" CONDUITS. PROVIDE MANUFACTURED PCS ELBOWS FOR CONDUITS 1.25" AND LARGER.

EM107 TYP S — CONDUIT HOUSEKEEPING CURB

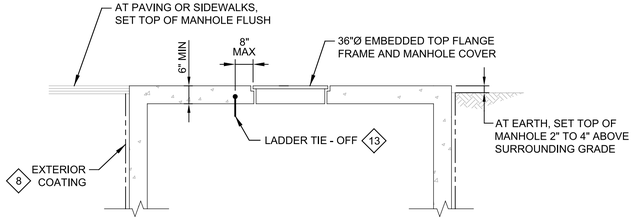
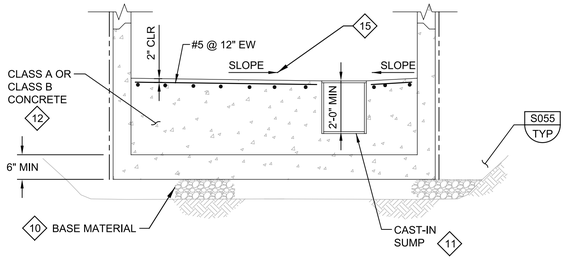
JOB NO. 8660F.10
DRAWING NO. 00TE05
SHEET NO. 179 OF 200

GENERAL NOTES:



1. PROVIDE MINIMUM INTERIOR DIMENSIONS AS SHOWN IN THE ELECTRICAL HANDHOLE AND MANHOLE SCHEDULE.
2. PROVIDE MANHOLE ALTERNATES (TOP OR BASE) AS SHOWN IN THE HANDHOLE AND MANHOLE SCHEDULE.
3. BOND ALL METALLIC ITEMS INSIDE MANHOLE TO GROUND ROD USING #4 AWG BARE COPPER CABLE.
4. SEE DRAWINGS FOR ORIENTATION, NUMBER, AND SIZE OF DUCT BANKS AND PENETRATIONS AT EACH MANHOLE.
5. RACK MEDIUM VOLTAGE CABLES USING PORCELAIN INSULATOR CLAMPS PER TYPICAL DETAIL EM076.

KEY NOTES:



1. MANHOLE ACCESS FOR BURIED MANHOLE SHOWN IN SECTION B. FOR MANHOLES WITH EXPOSED TOP SLAB, SEE SECTION C (ALTERNATE 1).
2. STANDARD MANHOLE BASE SHOWN. FOR MANHOLES WITH DEEPER SUMP OR CONCRETE BALLAST TO RESIST FLOTATION, SEE SECTION D (ALTERNATE 2).
3. SPACE EMBEDDED CHANNELS TO CLEAR DUCT BANK KNOCKOUTS AND MAXIMUM 24" ON CENTER AROUND PERIMETER OF MANHOLE.
4. MINIMUM 12" DIAMETER x MIN 2" DEEP SUMP WITH REMOVABLE SLOTTED COVER. LOCATE SUMP OUTSIDE VERTICAL ACCESS CORRIDOR BELOW MANHOLE COVER.
5. BOND DUCT BANK AND INTERIOR GROUND CABLE TO GROUND ROD. SEE SPECIFICATIONS FOR CONNECTION REQUIREMENTS.
6. INSTALL DUCT BANKS ONLY THROUGH BLOCKOUTS, WINDOWS OR PREFORMED KNOCKOUT PANELS. PROVIDE KNOCKOUTS ON EACH WALL AROUND MANHOLE.
7. COAT EXTERIOR WALLS AND BURIED TOP SLAB OF MANHOLE WITH BITUMINOUS DAMP PROOFING.
8. COAT EXTERIOR WALLS OF MANHOLE WITH BITUMINOUS DAMP PROOFING. LEAVE EXPOSED TOP SLAB UNCOATED.
9. PROVIDE ONE PULLING IRON ON EACH WALL ABOVE OR BELOW EACH DUCT BANK PENETRATION.
10. PROVIDE MIN 12" COMPACTED AGGREGATE BASE COURSE.
11. MINIMUM 12" DIAMETER SUMP WITH REMOVABLE SLOTTED COVER. LOCATE SUMP OUTSIDE VERTICAL CORRIDOR BELOW MANHOLE COVER.
12. SEE SPECIFICATIONS FOR CAST-IN-PLACE CONCRETE FULL MIXING, PLACING, FINISHING AND CURING REQUIREMENTS.
13. AT ONE SIDE OF MANHOLE ACCESS, PROVIDE LADDER TIE - OFF PER DETAIL E.
14. USE OF PREFORMED AND EMBEDDED CHANNELS FOR CABLE RACKS MAY NOT BE REQUIRED FOR PRODUCTS WHICH SECURE DIRECTLY INTO CONCRETE SEE SECTION 16070 - HANGERS & SUPPORTS.
15. SLOPE TO BE COMPLETED BY CONTRACTOR.

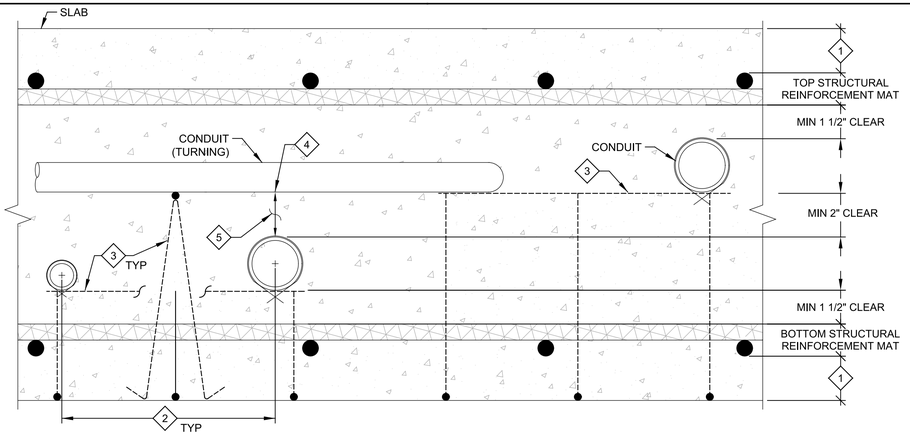
NOTES:

1. MOVE CONDUITS TO AVOID CONFLICTS WITH WATERSTOPS. WHERE HORIZONTAL & VERTICAL CLEARANCES CANNOT BE MAINTAINED, CONTACT ENGINEER FOR INSTRUCTION'S BEFORE PLACING CONCRETE.

KEY NOTES:

1. FOR REQUIRED TOP AND BOTTOM COVER OVER REINFORCEMENT SEE DETAIL. S101 TYP
2. MINIMUM ON CENTER HORIZONTAL SPACING OF PARALLEL CONDUITS = 4X OUTSIDE DIAMETER OF THE LARGER CONDUIT.
3. SUPPORT CONDUITS ON ADDED REINFORCEMENT CHAIRS OR BOLSTERS. TIE CONDUITS TO SUPPORTS & ANCHOR TO PREVENT FLOTATION.
4. CENTER LARGEST DIAMETER CONDUIT BETWEEN TOP AND BOTTOM REINFORCEMENT MATS.

EM115 TYP S — EMBEDDED CONDUIT IN CONCRETE SLAB SINGLE RUN



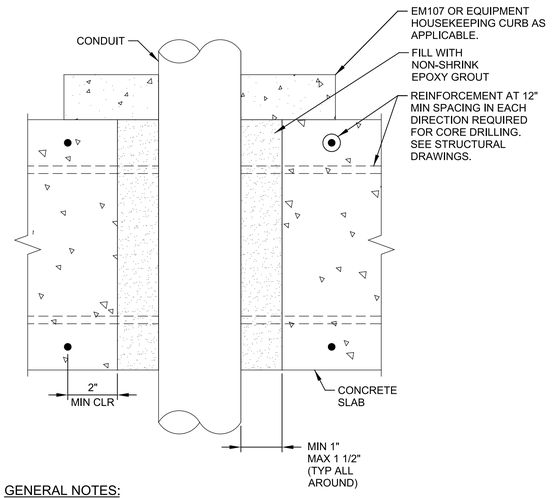
NOTES:

1. MOVE CONDUITS TO AVOID CONFLICTS WITH WATERSTOPS. WHERE HORIZONTAL & VERTICAL CLEARANCES CANNOT BE MAINTAINED, CONTACT ENGINEER FOR INSTRUCTION'S BEFORE PLACING CONCRETE.

KEY NOTES:

1. FOR REQUIRED TOP AND BOTTOM COVER OVER REINFORCEMENT SEE DETAIL. S101 TYP
2. MINIMUM ON CENTER HORIZONTAL SPACING OF PARALLEL CONDUITS = 4X OUTSIDE DIAMETER OF THE LARGER CONDUIT.
3. SUPPORT CONDUITS ON ADDED REINFORCEMENT CHAIRS OR BOLSTERS. TIE CONDUITS TO SUPPORTS & ANCHOR TO PREVENT FLOTATION.
4. WHERE MORE THAN 2 RUNS ARE STACKED, PROVIDE HORIZONTAL & VERTICAL SPACING SHOWN BETWEEN EACH PAIR.

EM116 TYP S — EMBEDDED CONDUIT IN CONCRETE SLAB STACKED RUNS

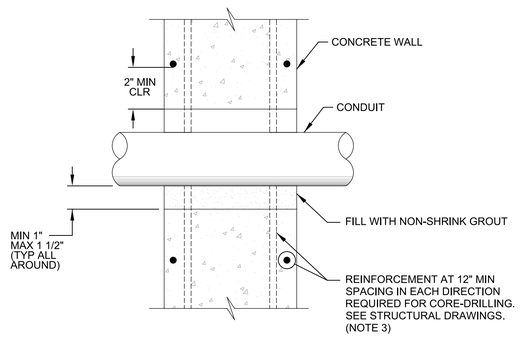


NOTES:

1. MOVE CONDUITS TO AVOID CONFLICTS WITH WATERSTOPS. WHERE HORIZONTAL & VERTICAL CLEARANCES CANNOT BE MAINTAINED, CONTACT ENGINEER FOR INSTRUCTION'S BEFORE PLACING CONCRETE.

KEY NOTES:

1. FOR REQUIRED TOP AND BOTTOM COVER OVER REINFORCEMENT SEE DETAIL. S101 TYP
2. MINIMUM ON CENTER HORIZONTAL SPACING OF PARALLEL CONDUITS = 4X OUTSIDE DIAMETER OF THE LARGER CONDUIT.
3. SUPPORT CONDUITS ON ADDED REINFORCEMENT BOLSTERS, OCM METAL BAR SUPPORT PRODUCT TYPE OR EQUAL. TIE CONDUITS TO SUPPORTS & ANCHOR TO PREVENT FLOTATION.
4. WHERE CONDUITS CROSS, PROVIDE MIN HORIZONTAL SPACING BETWEEN PARALLEL CONDUITS NOT LESS THAN DIAMETER OF THE LARGER CONDUIT IN THE SAME HORIZONTAL PLAN.
5. SUPPORT CONDUITS AT CROSSING TO PREVENT SAG & MAINTAIN CLEARANCE SHOWN.
6. WHERE MORE THAN 2 RUNS ARE STACKED, PROVIDE HORIZONTAL & VERTICAL SPACING SHOWN BETWEEN EACH PAIR.



EM117 TYP S — EMBEDDED CONDUIT IN CONCRETE SLAB CROSSING RUNS

GENERAL NOTES:

1. PROVIDE NON-DESTRUCTIVE TESTING TO DETERMINE LOCATIONS OF REINFORCEMENT. MAINTAIN MIN 2" CLEAR BETWEEN CORE DRILLED OPENING AND REINFORCEMENT.
2. APPLY EPOXY CEMENT BONDING AGENT PRIOR TO GROUTING.

EM139 TYP S — CORE DRILLED PENETRATION CONCRETE SLAB

GENERAL NOTES:

1. PROVIDE NON-DESTRUCTIVE TESTING TO DETERMINE LOCATIONS OF REINFORCEMENT. MAINTAIN MIN 2" CLEAR BETWEEN CORE DRILLED OPENING AND REINFORCEMENT.
2. APPLY EPOXY CEMENT BONDING AGENT OR ROUGHEN CONCRETE SURFACE PRIOR TO GROUTING.
3. PROVIDE CAST-IN SLEEVE FOR PENETRATIONS IN WALLS WITH REINFORCEMENT SPACING LESS THAN 2" IN EACH DIRECTION. REFER TO STRUCTURAL DRAWINGS.

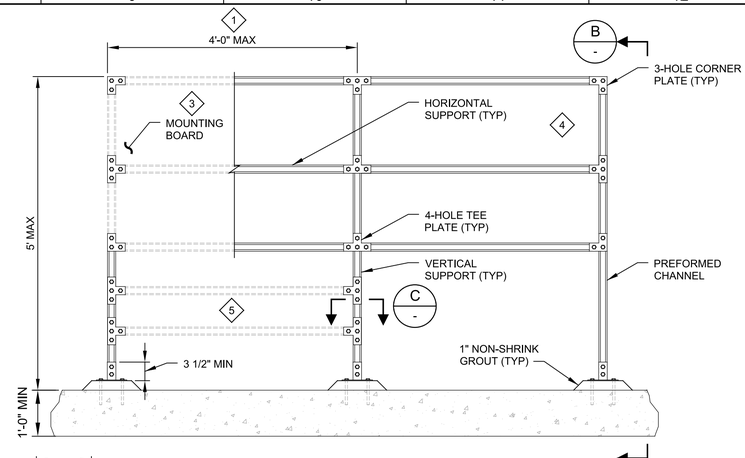
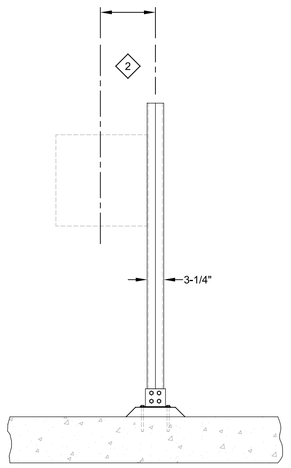
NOTES:

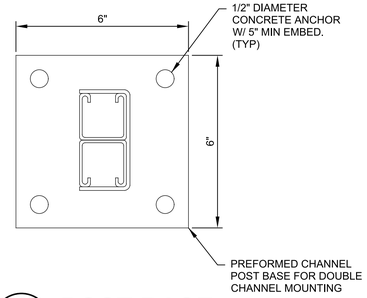
1. PROVIDE NON-DESTRUCTIVE TESTING TO DETERMINE LOCATIONS OF REINFORCEMENT. MAINTAIN MIN 2" CLEAR BETWEEN CORE DRILLED OPENING AND REINFORCEMENT.
2. ROUGHEN SURFACE OF OPENING TO A 1/4" AMPLITUDE AND APPLY EPOXY CEMENT BONDING AGENT IMMEDIATELY PRIOR TO GROUTING.
3. PROVIDE 8" MINIMUM CENTER-TO-CENTER SPACING FOR CONDUITS.



EM173 TYP S — CORE HOLE PENETRATION FULLY GROUTED CMU WALL



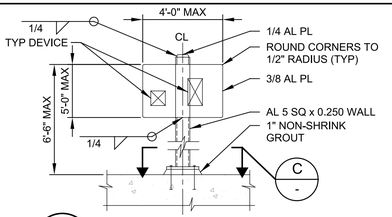
NOTES:



1. WHERE SEPARATE FOUNDATION IS REQUIRED, SEE SECTION B.
2. COAT ALUMINUM SURFACES IN CONTACT WITH CONCRETE PER SPECIFICATIONS.
3. USE STAINLESS STEEL FASTENERS FOR MOUNTING DEVICES.
4. WEIGHT OF DEVICE(S) SHALL NOT EXCEED 100 POUNDS.

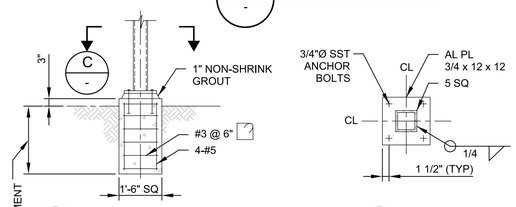
EM201 TYP S — DEVICE SUPPORT AND MOUNTING

B SECTION



C POST BASE

GENERAL NOTES:



1. AS SHOWN, THE MOUNTING STAND IS SUITABLE FOR THE FOLLOWING DESIGN CRITERIA.
   - STAINLESS STEEL OR HOT-DIPPED GALVANIZED PREFORMED CHANNEL
   - BASIC WIND SPEED (3 SECOND GUST. 33 FEET ABOVE GROUND) : 120 MPH
   - WIND EXPOSURE CATEGORY: C
   - NON -SPECIAL WIND REGIONS
   - SEISMIC DESIGN CATEGORY: A THROUGH D
   - RISK CATEGORY: III AND IV
   - MAXIMUM EQUIPMENT LOAD OF 100 LBS PER VERTICAL SUPPORT

   SUBMIT DESIGN CALCULATIONS FOR EACH INSTALLATION THAT EXCEEDS THE SPECIFIED DESIGN CRITERIA OR DIMENSIONAL LIMITATIONS IN THIS DETAIL. REFER TO THE SPECIFICATIONS FOR DESIGN CALCULATION SUBMITTAL REQUIREMENTS.
2. THE TOTAL SURFACE AREA OF ALL EQUIPMENT AND MOUNTING BOARDS SHALL NOT EXCEED 12 SQUARE FEET PER VERTICAL SUPPORT.
3. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.
4. WHERE CONCRETE ANCHORS COME IN CONTACT WITH DISSIMILAR METALS, ISOLATE DISSIMILAR METALS AS SPECIFIED IN THE SPECIFICATIONS.
5. VERTICAL SUPPORTS SHALL CONSIST OF PREFORMED DOUBLE CHANNELS. HORIZONTAL SUPPORTS SHALL CONSIST OF PREFORMED SINGLE CHANNELS.

EM211 TYP S — OUTDOOR EQUIPMENT MOUNTING STAND

A ELEVATION

B ELEVATION — C SECTION

GENERAL NOTES:

1. USE ELEVATION B WHERE A SEPARATE FOUNDATION IS REQUIRED.
2. COAT ALUMINUM SURFACES IN CONTACT W/ CONCRETE PER SPECIFICATIONS.
3. USE STAINLESS STEEL FASTENERS FOR MOUNTING DEVICES.
4. WEIGHT OF DEVICE(S) SHALL NOT EXCEED 300 POUNDS.

EM202 TYP S — DEVICE SUPPORT AND MOUNTING

◇# KEY NOTES:

1. FOR MOUNTING STANDS WIDER THAN 4 FEET PROVIDE EQUALLY SPACED VERTICAL SUPPORTS AT 4 FOOT MAXIMUM SPACING.
2. MAXIMUM OFFSET TO THE CENTERLINE OF EQUIPMENT OR ENCLOSURES IS 1'-6".
3. PROVIDE A MOUNTING BOARD FOR INSTRUMENTS AND DEVICES WEIGHING LESS THAN 20 POUNDS THAT CANNOT BE MOUNTED DIRECTLY TO PREFORMED CHANNEL. EQUIPMENT ANCHORAGE TO THE MOUNTING BOARD SHALL BE DESIGNED BY THE CONTRACTOR.
4. PROVIDE ADDITIONAL PREFORMED CHANNEL SUPPORTS FOR ENCLOSURES THAT CAN BE MOUNTED DIRECTLY TO THE PREFORMED CHANNEL.
5. OPTIONAL HORIZONTAL SUPPORTS AND AVAILABLE SPACE FOR JUNCTION BOXES.

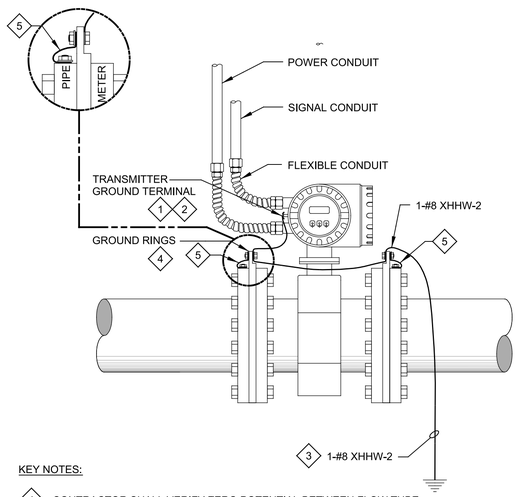
TYP J — 03/8/2023

NF111 THERMAL FLOW SWITCH MOUNTING DETAIL

TYP S

GENERAL NOTES:



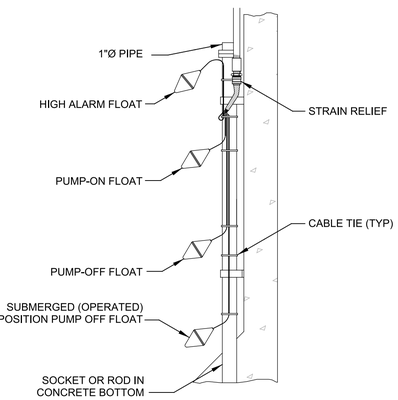
1. FOLLOW MANUFACTURER'S RECOMMENDED MAXIMUM TORQUE SETTINGS. DO NOT OVER-TORQUE FLANGE BOLTS. OVERTIGHTENING THE FASTENERS WILL DEFORM SEALING FACES OR DAMAGE THE LINE.
2. ALWAYS TIGHTEN FLANGE BOLTS UNIFORMLY AND IN DIAGONALLY OPPOSITE SEQUENCE.
3. MOUNT METER SO THAT IT REMAINS FULLY FLOODED.
4. FOR METERS SPECIFIED WITH ZERO DIAMETER FEATURE, REFER TO THE MECHANICAL DRAWINGS FOR INSTALLATION.

KEY NOTES:

1. PIPE SUPPORTS BY MECHANICAL CONTRACTOR. NO SUPPORTS SHALL BE INSTALLED AT THE METER HOUSING.
2. INSTALL METER SUCH THAT THERE ARE NO PIPE BENDS FOR 5 PIPE DIAMETERS UPSTREAM AND 3 PIPE DIAMETERS DOWNSTREAM OF THE METER.

NF130 MAGNETIC FLOWMETER MOUNTING DETAIL

TYP S



KEY NOTES:

1. CONTRACTOR SHALL VERIFY ZERO POTENTIAL BETWEEN FLOW TUBE, EARTH GROUND AND TRANSMITTER GROUND TERMINAL.
2. CONNECT TRANSMITTER GROUND TERMINAL TO GROUND RINGS.
3. CONNECT METER BODY TO EARTH GROUND POTENTIAL.
4. EQUALIZE POTENTIAL VIA GROUND RINGS BETWEEN FLUID AND MAGMETER.
5. PROVIDE BONDING JUMPER ON CONDUCTIVE PIPES.

NF136 INTEGRAL MAGNETIC FLOWMETER GROUNDING DETAIL

GENERAL NOTES:

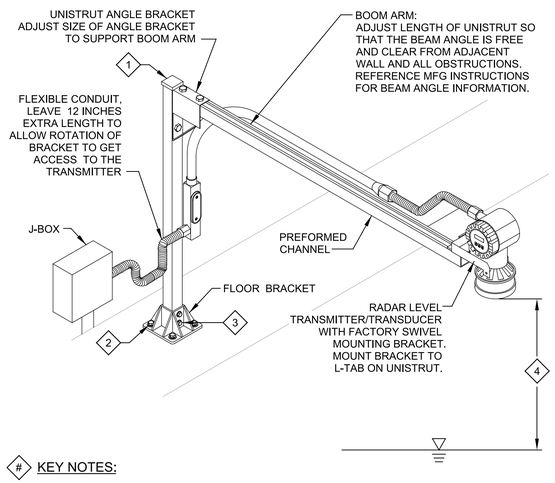
1. LENGTH OF ANTENNA EXTENSION AND SPOOL PIECE SHALL BE AS REQUIRED TO INSTALL LCD DISPLAY.
2. CONTRACTOR SHALL SCAN THE EXISTING REBAR IN THE SLAB AND CORE DRILL MAXIMUM 8" DIAMETER CONCRETE WITHOUT DAMAGING THE EXISTING STEEL REINFORCEMENT IN SLAB. THE CORE DRILL SHALL BE LOCATED SUCH THAT THERE WILL BE MINIMUM 1 1/2" CLEARANCE (CONCRETE COVER) BETWEEN EXISTING REBAR AND CORE DRILL.

KEY NOTES:

1. 1 INCH LARGER THAN DIAMETER OF RADAR HORN.
2. PROVIDE ANTENNA EXTENSION SUCH THAT THE RADAR HORN EXTENDS INTO THE STRUCTURE, PER MANUFACTURER'S RECOMMENDATION.
3. VERIFY SUITABLE ANTENNA EXTENSION IS AVAILABLE.

NL153 TYP R — RADAR INSTRUMENT MOUNTING DETAIL — 11/9/2022

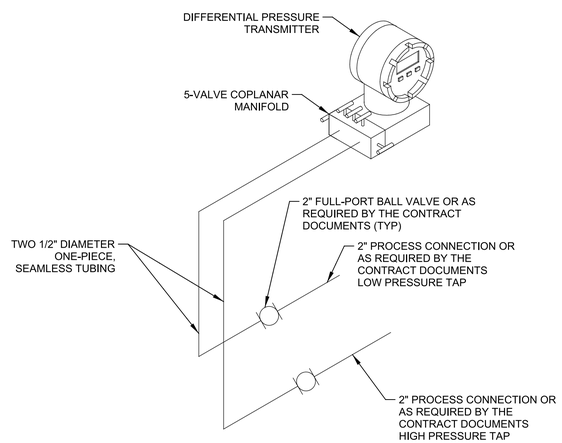


GENERAL NOTES:

1. DO NOT DAMAGE OR CUT ANY EXISTING REBAR.
2. CONTRACTOR SHALL SCAN THE EXISTING REBAR IN THE SLAB AND CORE DRILL MAXIMUM 8" DIAMETER CONCRETE WITHOUT DAMAGING THE EXISTING STEEL REINFORCEMENT IN SLAB. THE CORE DRILL SHALL BE LOCATED SUCH THAT THERE WILL BE MINIMUM 1 1/2" CLEARANCE (CONCRETE COVER) BETWEEN EXISTING REBAR AND CORE DRILL.

KEY NOTES:

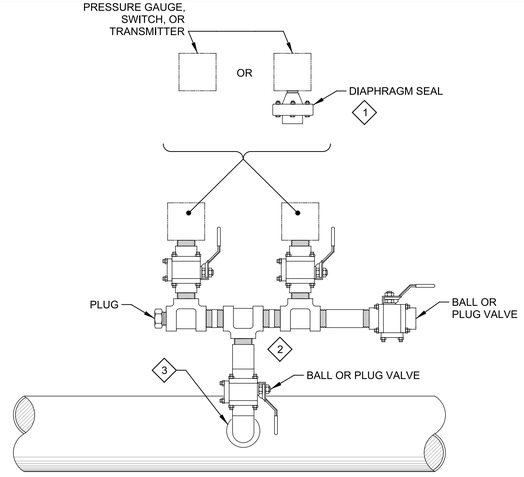
1. MINIMUM DISTANCE BETWEEN HIGHEST POSSIBLE LEVEL, INCLUDING OVERFLOW, AND PROBE FACE SHALL BE MANUFACTURER'S BLANKING ZONE PLUS 2 INCHES.
2. MINIMUM 6 INCHES DIAMETER. INCREASE DIAMETER AS REQUIRED TO ALLOW CONE ANGLE TO CLEAR BOTTOM OF THE TANK NOZZLE. MAXIMUM 8 INCHES DIAMETER OPENING.



NL175 TYP R — ULTRASONIC LEVEL TRANSMITTER MOUNTING DETAIL — 11/9/2022

KEY NOTES:

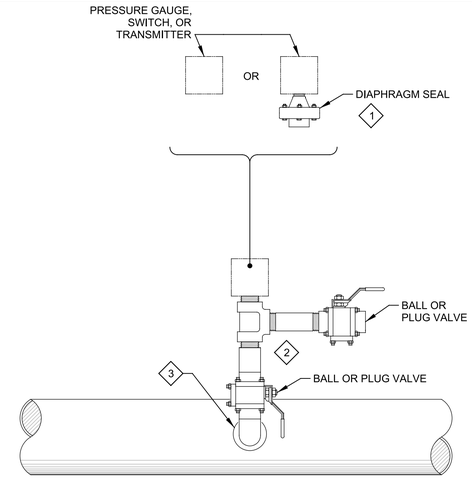
1. CONTRACTOR SHALL FURNISH END CAPS AND CHANNEL CAPS ON ALL EXPOSED PREFORMED CHANNEL.
2. USE APPROVED CONCRETE ANCHOR AND FASTENERS.
3. TO ACCESS TRANSDUCER/TRANSMITTER REMOVE BOLTS FROM FLOOR BRACKET.
4. MINIMUM DISTANCE BETWEEN HIGHEST POSSIBLE LEVEL, INCLUDING OVERFLOW, AND PROBE FACE SHALL BE MANUFACTURER'S BLANKING ZONE PLUS 2 INCHES.



NL180 TYP R — RADAR LEVEL TRANSDUCER/TRANSMITTER FLUME OR BASIN MOUNTING DETAIL

GENERAL NOTES:

1. SLOPE BOTH 1/2" IMPULSE LINES DOWN AWAY FROM THE DP TRANSMITTER TOWARDS BOTH PROCESS CONNECTIONS A MINIMUM OF 1" PER 1/2" OF HORIZONTAL RUN.
2. INSTALL TRANSMITTER USING MANUFACTURER PROVIDED PIPE MOUNTING BRACKET ATTACHED TO AN APPROVED STRUCTURE.
3. SUPPORT ALL 1/2" TUBING EVERY 48" OF RUN MAXIMUM OR AS NEEDED.



NP188 TYP S — DIFFERENTIAL PRESSURE TRANSMITTER GAS OR AIR APPLICATIONS WITH COPLANAR MANIFOLD

KEY NOTES:

1. USE THE INSTRUMENT DATA SHEETS IN DIVISION 17 OR DIVISIONS 40 SPECS TO IDENTIFY INDIVIDUAL REQUIREMENTS FOR DIAPHRAGM SEALS.
2. ALL VALVE AND PIPE MATERIAL SHALL BE COMPATIBLE WITH PROCESS FLUID.
3. THREADED TAP OR SADDLE CONNECTION FOR DUCTILE IRON PIPE. WELD-O-LET OR THREAD-O-LET FOR WELDED PIPE. TEE OR REDUCING TEE FOR NON-METALLIC PIPE.

NP501 TYP S — MULTIPLE PRESSURE INSTRUMENTS MOUNTING DETAIL

KEY NOTES:

1. USE THE INSTRUMENT DATA SHEETS IN DIVISION 17 OR DIVISIONS 40 SPECS TO IDENTIFY INDIVIDUAL REQUIREMENTS FOR DIAPHRAGM SEALS.
2. ALL VALVE AND PIPE MATERIAL SHALL BE COMPATIBLE WITH PROCESS FLUID.
3. THREADED TAP OR SADDLE CONNECTION FOR DUCTILE IRON PIPE. WELD-O-LET OR THREAD-O-LET FOR WELDED PIPE. TEE OR REDUCING TEE FOR NON-METALLIC PIPE.

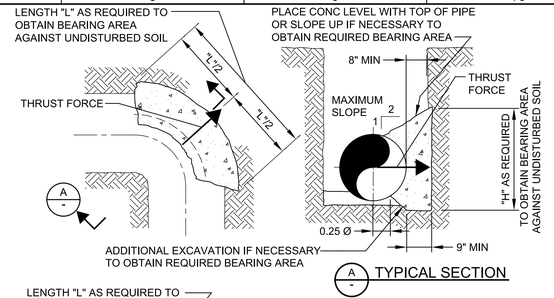
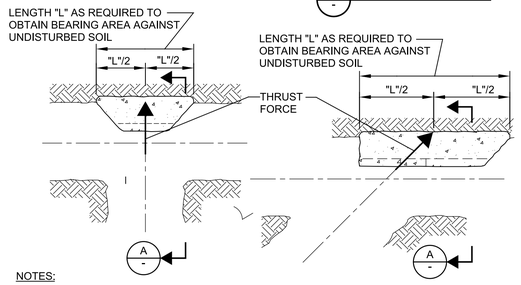
CY111 TYP J — PIPE TRENCH



SHEET 1 OF 2 08/19/22

NOTES:

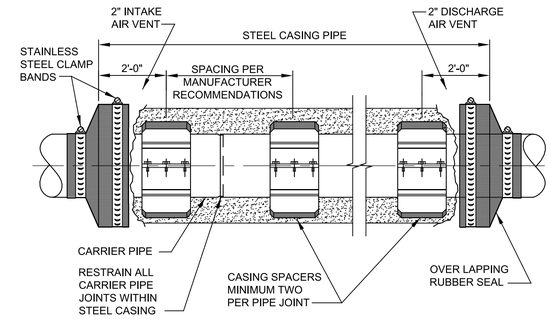


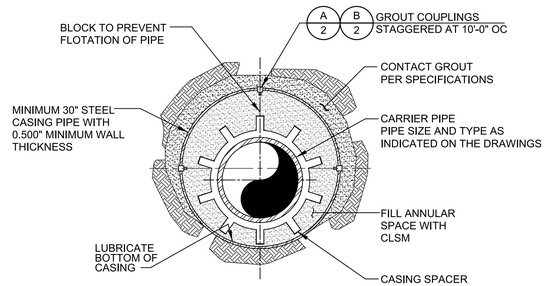
1. IN GENERAL, TRENCH WALLS SHALL BE VERTICAL. IN OPEN FIELD CONSTRUCTION, THE WALLS MAY BE SLOPE TO REMOVED THE NEED FOR SHORING, CM TO APPROVE SLOPED TRENCHING PRIOR TO SLOPED EXCAVATION.
2. WHERE MECHANICAL RESTRAINTS ARE USED, THE MINIMUM CLEARANCES SHALL BE MAINTAINED FROM TRENCH WALL TO OUTSIDE OF PIPE RESTRAINT MATERIALS. THE MINIMUM CLEARANCE SHALL NOT BE LESS THAN 9-INCH TO ENSURE ADEQUATE SPACE FOR APPLICATION OF CORROSION PROTECTION OF JOIN RESTRAINT.
3. FOR PAVED AREAS, TRENCH BACKFILL SHALL BE CLASS II AB AT 95% COMPACTION. FOR UNIMPROVED AREAS, TRENCH BACKFILL SHALL BE NATIVE MATERIAL AT 90% COMPACTION AND UPPER 30" SHALL BE NATIVE MATERIAL AT 85% COMPACTION.
4. REPLACE ALL TRAFFIC STRIPING AS REQUIRED.
5. REFER TO SECTION 02318 FOR TRENCH WIDTH.

CY111 TYP J — PIPE TRENCH

SHEET 2 OF 2 08/19/22

TYPICAL SECTION





NOTES:

1. BEARING AREA IS THE AREA REQUIRED TO OBTAIN A MAXIMUM PRESSURE NOT GREATER THAN 1500 PSF AT THE TOP OF THRUST BLOCK WHEN THE PIPE IS SUBJECTED TO ITS TEST PRESSURE. OR BEARING AREA INDICATED ON THE DRAWINGS USING A PASSIVE RESISTANCE OF 200 PSF/FT DEPTH.
2. CONCRETE SHALL BE CLASS "A" OR "C".
3. THRUST BLOCK SHALL BEAR ON UNDISTURBED SOIL.

CY131 TYP SN — THRUST RESTRAINT - BURIED THRUST BLOCK

CASING / CARRIER PIPE		
8-12" SPACER WIDTH		
CARRIER PIPE SIZE	CASING ID	MIN THICKNESS *
18"	29"	0.500"

* CASING WALL THICKNESS TO BE VERIFIED BY CONTRACTOR'S ENGINEER (LICENSED IN THE STATE WHERE PROJECT IS LOCATED) FOR MAXIMUM JACKING LOADS AND PIPE BENDING.

NOTES:

1. STEEL CASING PIPE SHALL CONFORM TO THE REQUIREMENTS OF ASTM A283, GRADE B, C, OR D. ALL JOINTS SHALL BE WELDED. INTERIOR JOINTS SHALL BE GROUND TO SMOOTH FINISH. ALL WELDING SHALL BE PERFORMED IN ACCORDANCE WITH AWWA C206, "AWWA STANDARD FOR FIELD WELDING OF STEEL WATER PIPE." COATINGS FOR STEEL CASING ARE NOT REQUIRED.
2. CASING PIPE SHALL BE LAID TRUE TO LINE AND GRADE WITH NO BENDS OR CHANGES IN GRADE FOR THE FULL LENGTH OF THE CASING.
3. ADVANCE PRODUCTS AND SYSTEMS, INC., OR EQUAL, CASING SPACERS AND END SEALS SHALL BE INSTALLED PER MANUFACTURER'S SPECIFICATIONS.
4. ALL PIPE JOINTS WITHIN THE CASING ARE TO BE FULLY RESTRAINED.
5. ANNULAR SPACE BETWEEN CARRIER PIPE AND CASING TO BE FILLED WITH CLSM PER THE SPECIFICATIONS.
6. CONTACT GROUT SHALL BE PLACED BETWEEN THE CASING PIPE AND THE GROUND PER THE SPECIFICATIONS.
7. CASINGS SHALL BE INSTALLED TO THE GRADE SHOWN ON THE DRAWINGS, WITH A MAXIMUM VERTICAL DEVIATION OF +0" AND -2", AND A MAXIMUM HORIZONTAL DEVIATION OF ±2" PROVIDED THE ALIGNMENT DOES NOT CONFLICT WITH OTHER UTILITIES AND/OR RIGHTS-OF-WAY.
8. CONTRACTOR TO PROVIDE LOCATIONS OF INTAKE AND DISCHARGE AIR VENTS.

JOB NO. 8660F.10
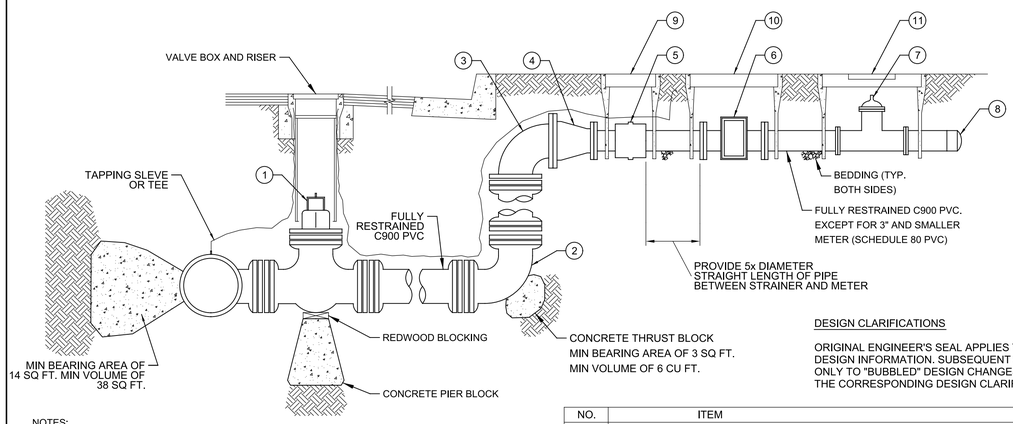
DRAWING NO. 00TP02
SHEET NO. 187 OF 200

PROJECT NO. 8660F10 FILE NAME: 8660F1000TP02.dgn

ITEM NO.	SIZE AND DESCRIPTION
1	DOUBLE STRAP DUCTILE IRON SERVICE SADDLE
2	2" CORPORATION STOP, AWWA COMPRESSION FITTING
3	2" BRONZE ANGLE BALL METER VALVE WITH LOCK WING
4	2" PURPLE PVC SCHL 80 TUBING CONTINUOUS WITH TRACER WIRE
5	METER BOX 1 (REFER TO METER SCHEDULE) W/ PURPLE LID
6	BRONZE FLANGE CONNECTION SET FROM METER MANUFACTURER.
7	REDUCING BUSHING AS REQUIRED FOR 1 1/2" METERS
8	PRV (IN ACCORDANCE WITH SECTION 15118)
9	CHECK VALVE
10	RESTRAINED END CAP
11	METER BOX 2 (REFER TO METER SCHEDULE) W/ PURPLE LID



NOTES:

1. LOCATE INSULATING BUSHING OR "D.E" COUPLING AT ALL LOCATIONS WHERE DISSIMILAR METALS JOIN.
2. S.S. BAND SERVICE SADDLE FOR ALL MAINS.
3. INSTALL CORPORATION STOP WITH KEY SIDEWAYS, IN OPEN POSITION (FOR HOT TAP).
4. THE CORPORATION STOP TAP WILL BE MADE AS SPECIFIED BY THE PIPE MANUFACTURER. ALL DRY TAPS WILL BE MADE USING MACHINE GUIDE OR PILOT TAP.
5. THE WATER SERVICE SHALL EXTEND PERPENDICULAR TO THE CENTERLINE OF THE STREET FROM THE WATER MAIN TO THE METER STOP EXCEPT WHERE NON- PERPENDICULAR INSTALLATION IS ALLOWED.
6. NO TAP TO MAIN SHALL BE WITHIN 18" OF VALVE, COUPLING, JOINT OR FITTING.
7. NO SPLICES WILL BE PERMITTED BETWEEN CORPORATION STOP AND ANGLE METER STOP. SERVICE RUN EXCEEDS 20 FEET, IN WHICH CASE A SILVER SOLDER COUPLING SHALL BE USED.
8. METER BOXES ARE NOT TO BE PLACED IN DRIVEWAYS.
9. LID SHALL BE MARKED "UKIAH RECYCLED WATER", COLOR SHALL BE PURPLE.
10. WARNING TAG SHALL BE PLACED IN THE RECYCLED WATER FACILITY.
11. #10 AWG SOLID COPPER THHN-THNN WIRE TO BE CONNECTED AT ALL SPLICES WITH SILICONE FILLED DIRECT BURIED WIRE NUTS. EXTEND TRACER WIRE TO METER BOX.
12. SEE DETAIL 4 IN DWG CP-6 FOR CORROSION PROTECTION.
13. CONTRACTOR TO CONFIRM ALL METER BOX LOCATIONS WITH CITY PRIOR TO CONSTRUCTION. LOCATION OF METER BOX AND SERVICE FROM RW MAIN AS SHOWN ON PLANS SUBJECT TO CHANGE IN FIELD ALONG EACH SERVICE PARCEL PER DIRECTION OF CONSTRUCTION MANAGER. CONTRACOR SHALL FURNISH AND INSTALL PIPE FITTINGS, VALVES, AND RELATED ITEMS SHOWN AT NO ADDITIONAL COST TO THE OWNER.

CY901 TYP R — 1 1/2" OR 2" METER ASSEMBLY

SHEET 1 OF 2 — 6/17/20

NOTES:

1. BOX PIPE KNOCKOUTS TO BE GROUTED SUFFICIENTLY TO PREVENT INTRUSION OF DIRT. PIPE OPENINGS IN BOX TO BE NEATLY CUT - DO NOT USE HAMMER.
2. RESTRAINED JOINTS ARE REQUIRED FOR ALL NEW CONSTRUCTION FROM GATE VALVE TO 90° BEND. THRUST BLOCKS ARE ONLY REQUIRED WHERE EXISTING SERVICES ARE BEING MODIFIED AND RESTRAINED JOINTS ARE NOT USED.
3. ALL BOXES AND COVERS SHALL BE RATED FOR TRAFFIC LOADING.
4. CONTRACTOR TO CONFIRM ALL METER BOX LOCATIONS WITH CITY PRIOR TO CONSTRUCTION. LOCATION OF METER BOX AND SERVICE FROM RW MAIN AS SHOWN ON PLANS SUBJECT TO CHANGE IN FIELD ALONG EACH SERVICE PARCEL PER DIRECTION OF CONSTRUCTION MANAGER. CONTRACOR SHALL FURNISH AND INSTALL PIPE FITTINGS, VALVES, AND RELATED ITEMS SHOWN AT NO ADDITIONAL COST TO THE OWNER.

NOTES:

1. SEE SPECIFICATIONS FOR ACCEPTABLE BACKFILL MATERIALS.

S055 TYP S — STRUCTURAL BACKFILL - OUTSIDE STRUCTURE

07/08/16

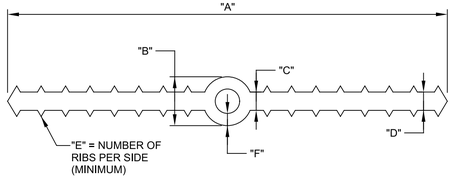
1. SEE DIVISION 03 SPECIFICATION FOR REQUIREMENTS FOR CONCRETE CONSTRUCTION.
2. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, MINIMUM REINFORCEMENT OF CONCRETE WALLS OR SLABS SHALL BE AS FOLLOWS. CONTACT ENGINEER FOR LOCATIONS INSIDE CONCRETE.
   10" THICK OR LESS: .....#5 @ 12" EACH WAY.
   MORE THAN 10" THICK: .....#5 @ 12" EACH WAY, EACH FACE.
3. WALL REINFORCEMENT AT CORNERS OR JUNCTIONS OF WALLS SHALL BE CONTINUOUS, LAP SPLICED, OR TERMINATED IN AN ACI STANDARD 90 DEGREE HOOK. SEE DETAIL S144/TYP.
4. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, DOWELS BETWEEN ADJACENT CONCRETE PLACEMENTS SHALL BE THE SAME SIZE AND SPACING AS THE REINFORCEMENT WHICH IS SPLICED TO THE DOWELS.
5. SLAB, BEAM AND COLUMN REINFORCING BARS SHALL HAVE A MINIMUM EXTENSION OR ANCHORAGE INTO SUPPORTS IN ACCORDANCE WITH ACI 318 AND ACI 350.
6. PROVIDE STIRRUP SUPPORT BARS SHALL BE TO SECURE TOP BARS AGAINST DISPLACEMENT AS REQUIRED.
7. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, CONCRETE COVER OVER #11 AND SMALLER REINFORCING BARS SHALL BE AS FOLLOWS:
   A. SLABS AND JOISTS:
      FORMED CONCRETE SURFACES AND UNFORMED TOP SURFACES FOR DRY CONDITIONS
      #7 BARS AND SMALLER.....1"
      #8 BARS AND LARGER.....1 1/2"
      FORMED CONCRETE SURFACES AND UNFORMED TOP SURFACES EXPOSED TO WEATHER, IN CONTACT WITH SOIL OR FLUIDS, OR LOCATED OVER FLUIDS.....2"
   B. BEAMS AND COLUMNS:
      FORMED CONCRETE SURFACES FOR DRY CONDITIONS:
      STIRRUPS, SPIRALS, AND TIES.....1 1/2"
      PRINCIPAL REINFORCEMENT.....2"
      FORMED CONCRETE SURFACES EXPOSED TO WEATHER, IN CONTACT WITH SOIL OR FLUIDS, OR IN BEAMS LOCATED OVER FLUIDS:
      STIRRUPS AND TIES.....2"
      PRINCIPAL REINFORCEMENT.....2 1/2"
   C. WALLS:
      FORMED CONCRETE SURFACES FOR DRY CONDITIONS:
      #7 BARS AND SMALLER.....1"
      #8 BARS AND LARGER.....1 1/2"
      FORMED CONCRETE SURFACES EXPOSED TO WEATHER, OR IN CONTACT WITH SOIL OR FLUIDS.....2"
   D. FOOTINGS AND SLABS ON GRADE:
      FORMED VERTICAL CONCRETE SURFACES.....2"
      AT UNFORMED CONCRETE SURFACES CAST AGAINST SOIL, ROCK, OR CONCRETE WORK MATS.....3"
      TOP SURFACE OF FOOTINGS AND SLABS.....SAME AS SLABS
8. WATERSTOPS:
   A. PROVIDE WATERSTOPS AT JOINTS IN SLABS AND WALLS OF LIQUID-CONTAINING STRUCTURES, AND PORTIONS OF STRUCTURES BELOW THE DESIGN GROUNDWATER LEVEL. MAKE WATERSTOPS CONTINUOUS THROUGH STRUCTURE, SPLICING WATERSTOPS IN SLABS WITH WATERSTOPS IN WALLS.
   B. END WATERSTOPS 3" BELOW TOP OF WALLS. WHERE TOP OF WALL IS COVERED BY A SLAB WITHOUT WATERSTOPS, CONTINUE WATERSTOP TO WALL/SLAB JOINT. WHERE TOP OF WALL IS COVERED BY A SLAB WITH WATERSTOPS, MAKE WATERSTOPS CONTINUOUS, SPLICING WATERSTOPS IN WALLS WITH WATERSTOPS IN SLAB.
9. CURE CONCRETE IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. WHERE WATER CURING IS SPECIFIED, MEMBRANE CURING IS NOT ALLOWED.
   A. THE CONTRACTOR IS WARNED THAT WATER CURING IS DIFFICULT AT TIMES DUE TO WIND AND DRY CONDITIONS. STUDY SPECIFICATION REQUIREMENTS AND FURNISH ADEQUATE SYSTEMS TO PROVIDE WATER CURING WHERE REQUIRED.
   B. KEEP WATER CURED SURFACES VISIBLY MOIST AT ALL TIMES. FLOOD TOPS OF WALLS NOT LESS THEN 3 TIMES DAILY.
10. DO NOT PLACE BACKFILL AGAINST WALLS UNTIL:
    A. WALLS HAVE BEEN CAST TO FULL HEIGHT OF STRUCTURE AND CONCRETE HAS REACHED THE MINIMUM SPECIFIED COMPRESSIVE STRENGTH (f'c).
    B. CONNECTING SLABS AND BEAMS HAVE BEEN CAST AND CONCRETE IN THOSE ELEMENTS HAS REACHED THE MINIMUM SPECIFIED COMPRESSIVE STRENGTH (f'c).
11. LAP SPLICES:
    A. SEE TABLE 1 OF THIS DETAIL FOR LAP SPLICE LENGTHS.
    B. WHEN MULTIPLE BARS ARE SPLICED AT THE SAME SECTION, THE "CLEAR BAR SPACING" IS DEFINED AS THE MINIMUM CLEAR DISTANCE BETWEEN THE BARS OUTSIDE THE SPLICE LENGTH MINUS ONE BAR DIAMETER.
    C. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, BARS AT A LAP SPLICE SHALL BE IN CONTACT WITH EACH OTHER.
    D. "TOP BARS" ARE HORIZONTAL REINFORCEMENT AT LOCATIONS WHERE MORE THAN 12 INCHES OF FRESH CONCRETE IS CAST IN THE MEMBER BELOW THE BAR.
12. FORM EXPOSED CONCRETE CORNERS AND EDGES WITH 3/4" CHAMFER UNLESS OTHERWISE INDICATED ON THE DRAWINGS.

S101 TYP S — REINFORCED CONCRETE NOTES

SHEET 1 OF 3 03/12/19

TABLE 1: REINFORCING BAR LAP SPLICES: f'c = 4000 PSI, Fy = 60,000 PSI				
BAR SIZE	MINIMUM COVER (BAR DIA)	MINIMUM CLEAR BAR SPACING (BAR DIA)	LAP SPLICE LENGTH (INCHES)	
			TOP BARS	OTHER BARS
#4	MORE THAN 1	MORE THAN 2	32 *	25 *
	MORE THAN 2	MORE THAN 4	20	16
#5	MORE THAN 1	MORE THAN 2	40 *	31 *
	MORE THAN 2	MORE THAN 4	26	20
#6	MORE THAN 1	MORE THAN 2	48 *	37 *
	MORE THAN 2	MORE THAN 4	30	24
#7	MORE THAN 1	MORE THAN 2	70 *	54 *
	MORE THAN 2	MORE THAN 4	43	33
#8	MORE THAN 1	MORE THAN 2	81 *	62 *
	MORE THAN 2	MORE THAN 4	50	38
#9	MORE THAN 1	MORE THAN 2	90 *	70 *
	MORE THAN 2	MORE THAN 4	56	42
#10	MORE THAN 1	MORE THAN 2	104 *	81 *
	MORE THAN 2	MORE THAN 4	62	48
#11	MORE THAN 1	MORE THAN 2	114 *	88 *
	MORE THAN 2	MORE THAN 4	69	54

REINFORCING BAR LAP SPLICE TABLE NOTES:



1. TABULATED SPLICE LENGTHS ARE APPLICABLE ONLY WHEN BOTH REQUIREMENTS FOR MINIMUM COVER AND FOR MINIMUM CLEAR BAR SPACING ARE SATISFIED.
2. * = IF THE CLEAR BAR SPACING IS LESS THAN OR EQUAL TO TWO BAR DIAMETERS, OR THE COVER IS LESS THAN OR EQUAL TO ONE BAR DIAMETER, THE LAP SPLICE LENGTH SHALL BE INCREASED BY 50 PERCENT.

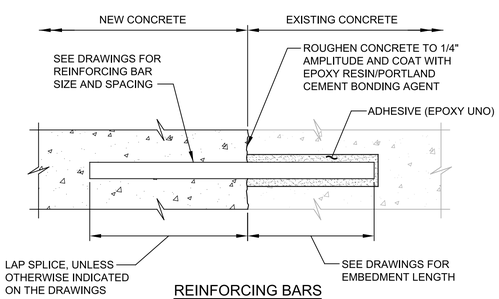
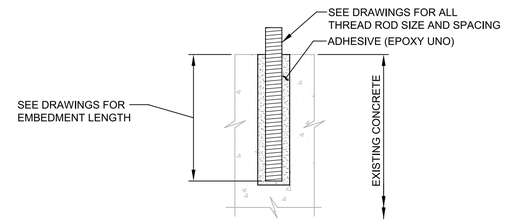
N — 07/21/16



NOTES:



1. AREA OF ADD BARS AT EACH EDGE OF OPENING IN EACH DIRECTION SHALL BE EQUAL TO OR GREATER THAN 1/2 THE CROSS SECTIONAL AREA OF THE INTERRUPTED BARS.
2. PROVIDE STANDARD ACI HOOKS ON BARS IF STRAIGHT EXTENSION PAST THE OPENING, CANNOT BE ACHIEVED.
3. PLACE ADD BARS IN SAME PLANES AS INTERRUPTED REINFORCING.
4. PLACE #5 DIAGONAL BARS ON INSIDE OF INTERRUPTED REINFORCING.
5. * DIMENSION EQUALS OPENING DIMENSION MEASURED PERPENDICULAR TO ADD BARS PLUS LAP SPLICE LENGTH.
6. 2" CLEAR TO CONCRETE OPENINGS OR OUTSIDE FACE OF PIPES AND PIPE SLEEVES. DO NOT OVERCUT REINFORCEMENT FOR EASIER PLACEMENT OF WEEP RINGS AND FLANGES.
7. ADD BARS ARE NOT REQUIRED AT SIDES OF OPENINGS PARALLEL TO AND WITHIN 6" OF A WALL OR BEAM.

S180 TYP — ADDITIONAL REINFORCING AT OPENINGS IN CONCRETE SLABS OR WALLS

S, N — 03/12/19

REINFORCING BARS

ALL-THREAD RODS

NOTE:

1. INSTALLATION OF REINFORCING BARS AND ALL THREAD RODS AS INDICATED IN THE SPECIFICATIONS.

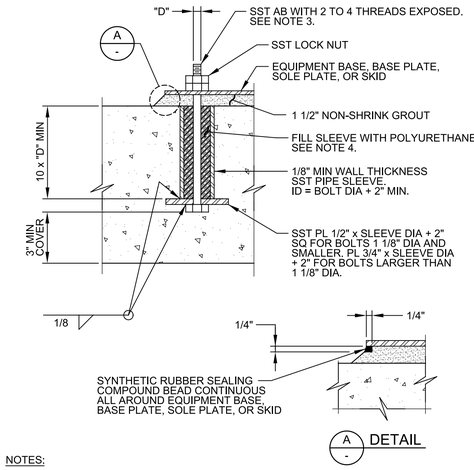
NOTE:

1. DIMENSIONS AS REQUIRED TO SUIT EQUIPMENT OR AS INDICATED ON THE DRAWINGS.

S300 TYP S — EQUIPMENT SLAB

12/15/20

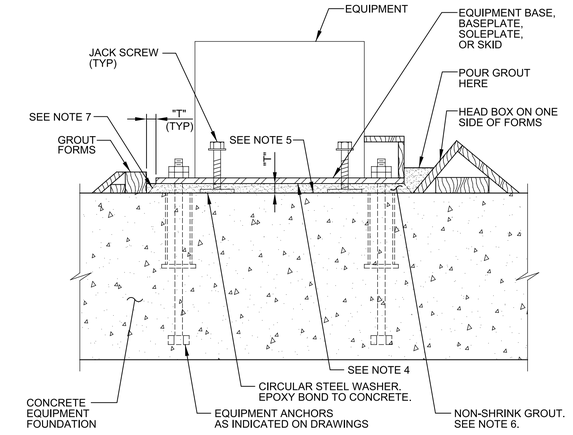


NOTES:

1. "D" = DIAMETER OF ANCHOR BOLT.
2. THE EDGE DISTANCE ON THE ANCHOR BOLTS SHALL NOT BE LESS THAN 6" OR 8 x "D".
3. PAD DIMENSIONS AND ANCHOR BOLT SIZE SHALL CONFORM TO EQUIPMENT MANUFACTURER'S REQUIREMENTS.
4. HEIGHT TO SUIT EQUIPMENT FURNISHED OR AS INDICATED ON THE DRAWINGS.
5. PROVIDE HOOPS OR CORNERS PER DETAIL S144/TYP.
6. FIELD LOCATE EXISTING REINFORCEMENT IN SLAB BEFORE DRILLING. ADJUST DOWEL LOCATIONS TO AVOID REINFORCEMENT.

S304 TYP N — EQUIPMENT BASE ON EXISTING CONCRETE

12/29/2017

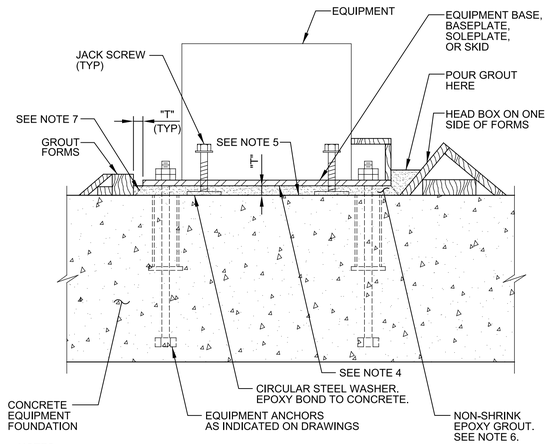


NOTES:

1. "D" = DIAMETER OF ANCHOR BOLT.
2. ANCHOR BOLT DIAMETER AS INDICATED ON THE DRAWINGS. IF NOT INDICATED ON THE DRAWINGS, THE ANCHOR BOLT SIZE SHALL BE AS RECOMMENDED BY THE EQUIPMENT MANUFACTURER.
3. DO NOT USE ALL THREAD RODS AS A SUBSTITUTE FOR BOLTS WITH A BOLT HEAD.
4. COMPLETELY REMOVE ANY POLYURETHANE FOAM FROM CONCRETE, EQUIPMENT BASE, BASE PLATE, SOLE PLATE, OR SKID, AND ANCHOR BOLTS ABOVE TOP OF CONCRETE.
5. DO NOT USE LEVELING NUTS TO SUPPORT AND LEVEL EQUIPMENT BASE, BASE PLATE, SOLE PLATE, OR SKID.

S312 TYP N — ANCHOR BOLT - IN SLEEVE

05/20/15

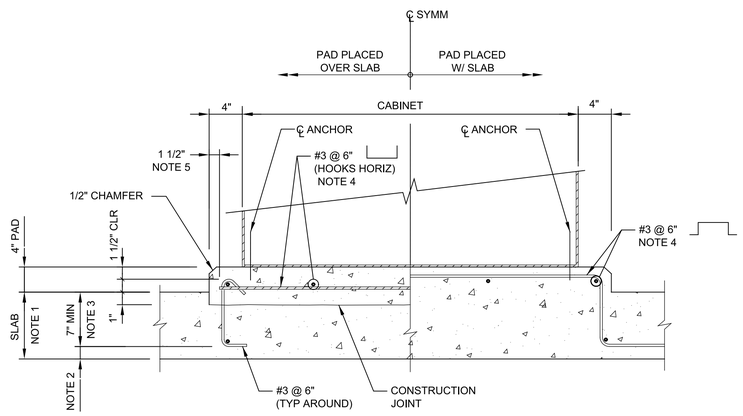


NOTES:

1. "T" = EQUALS GROUT THICKNESS INDICATED ON THE DRAWING. 1" MINIMUM GROUT THICKNESS.
2. FILL ANCHOR SLEEVES WITH POLYURETHANE FOAM BEFORE GROUTING.
3. DO NOT USE LEVELING NUTS ON EQUIPMENT ANCHORS.
4. PREPARE SURFACE OF EQUIPMENT BASES, BASE PLATES, SOLE PLATES, AND SKIDS IN CONTACT WITH GROUT AS SPECIFIED IN SECTION 15050 (46_05_10).
5. PREPARE SURFACES OF CONCRETE FOUNDATION IN CONTACT WITH GROUT AS SPECIFIED IN SECTION 15050 (46_05_10).
6. PLACE NON-SHRINK GROUT AS SPECIFIED IN SECTION 15050 (46_05_10).
7. AFTER GROUT SETS, TRIM GROUT TO 45 DEGREE CHAMFER.

S320 TYP N — EQUIPMENT GROUTING WITH NON-SHRINK GROUT

12/15/20

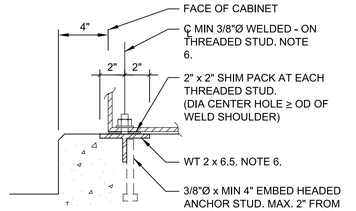


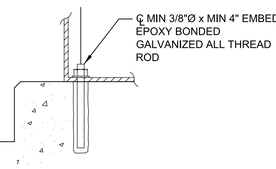
NOTES:

1. "T" = EQUALS GROUT THICKNESS INDICATED ON THE DRAWING. 1" MINIMUM GROUT THICKNESS.
2. FILL ANCHOR SLEEVES WITH POLYURETHANE FOAM BEFORE GROUTING.
3. DO NOT USE LEVELING NUTS ON EQUIPMENT ANCHORS.
4. PREPARE SURFACE OF EQUIPMENT BASES, BASE PLATES, SOLE PLATES, AND SKIDS IN CONTACT WITH GROUT AS SPECIFIED IN SECTION 15050 (46_05_10).
5. PREPARE SURFACES OF CONCRETE FOUNDATION IN CONTACT WITH GROUT AS SPECIFIED IN SECTION 15050 (46_05_10).
6. PLACE NON-SHRINK EPOXY GROUT AS SPECIFIED IN SECTION 15050 (46_05_10).
7. AFTER GROUT SETS, TRIM GROUT TO 45 DEGREE CHAMFER.

S322 TYP N — EQUIPMENT GROUTING WITH NON-SHRINK EPOXY GROUT

12/29/17





NOTES:

1. SEE STRUCTURAL DRAWINGS FOR THICKNESS OF SLAB BELOW PAD. SLAB REINFORCEMENT NOT SHOWN.
2. SEE S101/ TYP FOR MIN CONCRETE COVER REQUIREMENTS.
3. CONTACT ENGINEER FOR INSTRUCTIONS WHERE HOOK EMBEDMENT IS LESS THAN DIMENSION SHOWN.
4. FOR EQUIPMENT WITH CONDUIT WINDOWS BELOW, ADJUST BAR LOCATIONS TO FIT BETWEEN WINDOWS.
5. LOCATE VERTICAL EDGE OF PAD AND VERTICAL FACE OF #3s USING VERTICAL 2x FORM DURING SLAB PLACEMENT.
6. HOT DIP GALVANIZE WT AND HEADED ANCHOR STUD ASSEMBLY. TOUCH UP GALVANIZING AFTER FIELD WELDING THREADED STUDS.

S350 TYP S — ELECTRICAL EQUIPMENT HOUSEKEEPING PAD

02/21/14

1. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, MINIMUM WALL REINFORCEMENT SHALL BE AS FOLLOWS:

   A. VERTICAL REINFORCEMENT:
   #5 AT 1'-4" IN GROUTED CELLS. CENTERED IN 8" WALLS. EACH FACE IN 12" WALLS.
   ADDITIONAL REINFORCEMENT (SAME SIZE AS VERTICAL WALL BARS UNO):
   VERTICAL BARS AT CORNERS AND INTERSECTIONS: SEE DETAIL S412/TYP.
   VERTICAL BARS EACH SIDE AT MASONRY CONTROL JOINTS: SEE DETAIL S430/TYP.
   VERTICAL BARS IN FIRST 2 CELLS AT EACH JAMB OF WALL OPENINGS: SEE DETAIL S412/TYP.

   B. HORIZONTAL REINFORCEMENT:
   3/16" DIA LADDER JOINT REINFORCEMENT AT 16" OC VERTICAL. SEE DETAIL S414/TYP.
   HORIZONTAL BOND BEAMS AT LOCATIONS INDICATED IN DETAIL S410/TYP AND IN WALL SECTIONS FOR EACH STRUCTURE.
   BOND BEAM REINFORCEMENT: #5 AT 1'-4" IN GROUTED CELLS. CENTERED IN 8" WALLS. EACH FACE IN 12" WALLS.

2. LAP SPLICES:

   A. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, THE BARS AT A LAP SPLICE SHALL BE IN CONTACT WITH EACH OTHER.

   B. BAR LAP SPLICES NOT SPECIFIED ON THE DRAWINGS OR IN THE FOLLOWING TABLE SHALL NOT BE LESS THAN 72 BAR DIAMETERS.

   C. THE MASONRY SIDE COVER OVER THE REINFORCING BARS SHALL NOT BE LESS THAN 2 INCHES FROM FACE OF MASONRY TO THE EXTERIOR FACE OF THE BAR.

REINFORCING BAR LAP SPLICES: f'm = 1500 psi, Fy = 60,000 psi				
BAR SIZE	LAP SPLICE LENGTH (INCHES)

CERTIFICATE OF SUBSTANTIAL COMPLETION

Owner: City Of Ukiah
Engineer: Carollo Engineers

Contractor: Ghilotti Construction Company
Project: RECYCLED WATER PROJECT – PHASE 4
Contract Name: RECYCLED WATER PROJECT – PHASE 4

Owner's Project No.: 8860F10
Engineer's Project No.: 8860F10
Contractor's Project No.: 6071

This ☐ Preliminary ☑ Final Certificate of Substantial Completion applies to:

☑ All Work ☐ The following specified portions of the Work:

Date of Substantial Completion: 31 October 2025

The Work to which this Certificate applies has been inspected by authorized representatives of Owner, Contractor, and Engineer, and found to be substantially complete. The Date of Substantial Completion of the Work or portion thereof designated above is hereby established, subject to the provisions of the Contract pertaining to Substantial Completion. The date of Substantial Completion in the final Certificate of Substantial Completion marks the commencement of the contractual correction period and applicable warranties required by the Contract.

A punch list of items to be completed or corrected is attached to this Certificate. This list may not be all-inclusive, and the failure to include any items on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

Amendments of contractual responsibilities recorded in this Certificate should be the product of mutual agreement of Owner and Contractor; see the General Conditions.

The responsibilities between Owner and Contractor for security, operation, safety, maintenance, heat, utilities, insurance, and warranties upon Owner's use or occupancy of the Work must be as provided in the Contract, except as amended as follows:

Amendments to Owner's Responsibilities: ☑ None ☐ As follows:

Amendments to Contractor's Responsibilities: ☑ None ☐ As follows:

The following documents are attached to and made a part of this Certificate:

Attachment 1 - RW Phase-4 Punch List

This Certificate does not constitute an acceptance of Work not in accordance with the Contract Documents, nor is it a release of Contractor's obligation to complete the Work in accordance with the Contract Documents.

Engineer

Engineers...Working Wonders With Water®

November 14, 2025

TO: Jason Benson/City of Ukiah
FROM: Carollo Engineers
ADDRESS: 300 Seminary Ave
Ukiah, CA 95482

Subject: Recommendation for Final Acceptance: RECYCLED WATER PIPELINE PROJECT – PHASE 4

This memorandum is submitted following the final inspection of the work completed by the Contractor for the Recycled Water Pipeline Project – Phase 4 (Client Project No. 8860F10).

The Contractor submitted written notification of the completion of the work, as required by the contract. Pursuant to this notification, the Engineer performed a prompt personal inspection to satisfy himself as to the actual completion of the Work in accordance with the terms of the contract. Based on this inspection and review of project records, the project is considered complete and ready for formal acceptance by the City Council of the City of Ukiah.

1. Status of Closeout Requirements and Deliverables
All necessary requirements leading to final completion have been satisfied. This includes verification of the following critical administrative and physical requirements, which precede the final Application for Payment:

Completion of Deficiencies: The Contractor has successfully remedied all deficiencies listed in the final punch list, and the Engineer and Owner are satisfied that all corrective work is complete. A Close-Out Meeting, led by the Engineer, was held to coordinate these final activities.

Final Documentation: The Contractor will submit the following key documents required prior to final payment:

◦ **Final Statement of Accounting,** reflecting all approved adjustments to the Contract amount, including Change Orders and set-offs for liquidated damages or extended services.

◦ **Evidence of Payment and Release of Liens or Stop Payment Notices**.

◦ **Release of claims**.

◦ **Final (As-Built) Schedule (Final Schedule Update),** signed and certified by the Contractor's Project Manager and scheduler as an accurate record reflecting the exact manner and actual start/completion dates of construction. This document is required for the release of retainage.

◦ **Project Record Documents** (Contract Documents, shop drawings, and submittals marked to record field changes and detailed underground pipe locations).

◦ **Post-construction photographs and videos,** which are a condition of final payment, documenting the entire site and work areas at completion.

◦ **Federal and State Funding Records,** including copies of all books and records relative to the Project, submitted to the Owner as a condition for final payment.

◦ **Defective Material and Workmanship (Maintenance) Bond,** required to be delivered to the City before final payment, effective for one (1) year after acceptance.

Sincerely,

MEETING DATE/TIME: 11/19/2025

ITEM NO: 2025-1300

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Approval of Purchase of Multiple Fleet Vehicles and Equipment from the Willow County Water District in the Amount of $219,670 Plus Tax, and Approval of Corresponding Budget Amendment.

DEPARTMENT: Finance

PREPARED BY: Myles Fisette, Purchasing Manager

PRESENTER: Dan Buffalo, Finance Director

ATTACHMENTS:

1. 2024-02-21 Agenda Item 13a
2. Term Sheet, Willow Vehicles and Equipment, 11-13-2025
3. Exhibit A, Willow Vehicles and Equipment

Summary: Council will consider the approval of purchase of multiple fleet vehicles and equipment from the Willow County Water District in the amount of $219,670 plus tax, and approval of corresponding budget amendment.

Background: In February 2024, the City of Ukiah entered into a Joint Exercise of Powers Agreement for the Ukiah Valley Water Authority (Attachment 1), joining with Willow County Water District and other agencies to consolidate and improve regional water service delivery. This agreement established a framework for shared resources, management, and operational support among member agencies, with Ukiah providing management and operations services to the Authority. The UVWA agreement specifically contemplates the coordinated use, acquisition, and management of assets, including vehicles and equipment, to advance operational integration and maximize service capacity. Willow was the previous service provider to JPA (excluding the City of Ukiah) and MSA members (Hopland and River Estates), and used its vehicles and equipment to provide those services. Now that the City is the service provider, the Willow equipment will be used by the City.

Discussion: Acquisition of vehicles and equipment (Attachment 2) from Willow is aligned with the agreement's intent, enabling the City to efficiently manage, maintain, and expand essential municipal services. These assets are required to support City water and public works functions, enhance Staff readiness, replace aging fleet units, and ensure continued reliability in service delivery to the community. The proposed purchase consists of a variety of essential capital assets, including trucks, pickups, heavy equipment, and specialized machinery. Approval of this purchase will empower City staff to continue delivering high-quality municipal services, provide value to the ratepayers, and honor the commitments made to regional partners under the 2024 agreement.

The agreed upon price of these items was derived from various industry standard value estimation tools, such as Kelley Blue Book. It was evaluated by the City's Fleet Manager as well to judge the reasonableness of the estimates (Attachment 3).

Staff requests Council approve the purchase of multiple fleet vehicles and equipment from the Willow County Water District in the amount of $219,670 plus tax, and approve the corresponding budget amendment.

Recommended Action: Approve purchase of multiple fleet vehicles and equipment from the Willow County Water District in the amount of $219,670 plus tax, and approval of corresponding budget amendment.

BUDGET AMENDMENT REQUIRED: Yes.

1. UVWA.JPA.Final 02142024

Summary: Council will consider approving the Joint Exercise of Powers Agreement for the Ukiah Valley Water Authority and appointing two representatives to the Ukiah Valley Water Authority.

Background: There are a number of governmental water service providers in the greater Ukiah Valley. Providers include: the City of Ukiah (City), Willow County Water District (Willow), Millview County Water District (Millview), Calpella County Water District (Calpella) and Redwood Valley County Water District (Redwood). The concept of consolidating these service providers into a single entity has been a long-term community goal. Potential benefits of consolidation are numerous and include a cohesive water policy for the region, maximization of water rights, more uniform water security and availability, staffing, expanded rate base and reduced litigation. There have been a number of past attempts at accomplishing this goal, most notably the Valley-wide Task Force initiated in 1990, as well as a number of Mendocino County Grand Jury Reports.

The Upper Russian River Water Agency (URRWA) was formed in 2014 with the intent of accomplishing these goals. URRWA is a Joint Powers Authority (JPA) "working together for the voluntary consolidation of Ukiah Valley's Water Districts". The board includes a single member from Willow County Water, Calpella County Water, Redwood Valley County Water, Millview County Water, and most recently the Ukiah Valley Sanitation District. UURWA's goals include creating a more logical form of governance over our water resources, coordinating the operations of our districts into one regional water agency, sharing resources to create a unified approach to consolidation, to provide economies of scale that keep rates affordable, and to ensure a reliable long-term water supply for all land uses. URRWA has made significant progress on many of these goals, but it has not significantly improved water supply reliability or streamlined governance. The URRWA model is commonly referred to as managerial consolidation, rather than complete consolidation. In this model there is a single operator, but multiple boards and decision-making bodies remain.

Discussion: Issues related to numerous, small agencies serving a single community are not unique to the Ukiah Valley. In an attempt to address similar issues state-wide, the State Water Resources Control Board (SWRCB) started the Safe and Affordable Funding for Equity and Resilience (SAFER) program in 2019. Since that time, the SWRCB has made consolidation of water providers through the SAFER program a top priority. Districts consolidating through the SAFER program are eligible for SWRCB grants and loans to facilitate the consolidation processes well as construct and update required infrastructure.

City Staff was contacted in the summer of 2022 by SAFER about participating in the program. City Staff then reached out to the members of URRWA to see if there was interest in consolidating through the SAFER Program. An ad hoc committee with members from the City, Willow, Millview, Calpella, and Redwood has been meeting regularly since October of 2022 to discuss the opportunity and develop a Joint Powers Authority

(Attachment 1) to serve as the vehicle for consolidation through the SAFER program.

The Ukiah Valley Water Authority JPA (UVWA) is the result of many staff meetings, ad hoc meetings, as well as counsel input from each of the entities. In some ways, the UVWA is similar to URRWA. It is different, however, in that it explicitly intends to go beyond "managerial consolidation" and to eventually achieve complete consolidation over time, which is the goal of the SAFER program.

Key points of the agreement (Attachment #1) are:

- JPA is a separate legal entity from members and is separately liable for its debts.
- The Agreement creates the Ukiah Valley Water Authority, a Joint Exercise of Powers Authority.
- Other initial members are Millview County Water District and Redwood Valley County Water District.
- Other public agencies may join. (See Section 14).
- UVWA will be run by the Water Executive Committee (Sections 5 and 6).
- Two representatives from each member serve on the Water Executive Committee.
- The Water Executive Committee sets an annual budget for the Combined Water System.
- The Water Executive Committee has the power to set rates and collect levies (Section 6.A).
- The City will provide management and O&M services to the JPA under contract.
- The City will hire any District employees who wish to be.
- City may be asked to provide services to additional non-parties (Section 9).
- The Parties commit to mutual cooperation.
- City to submit Out of Areas Service Agreements to LAFCo for services outside the City and the Districts.
- Districts will support the City Annexation of the entire territory of Districts when allowed by LAFCO law.
- A Party may withdraw with an effective date of July 1st on 90 days' notice. (Section 10).
- Upon withdrawal, withdrawing Party regains control of its assets; provided, however, that to the extent any asset has been improved for the benefit of other Parties, the withdrawing Party must continue to serve benefitted customers.
- Absent agreement, assets serving more than one Party remains part of Combined Water System.
- Grant funding in excess of $1m leads to change in organization when approved by LAFCO (Section 11.C).
- Modification of Water Rights (Section 12).
- Parties will work together to modify their existing water rights to allow for the provision of water service across footprint of UVWA.
- Robust mediation and dispute resolution provisions (Section 20).

- Key Exhibits

-Each Party's Water System.
-Ukiah's Cost Allocation Plan.
-Placement of District Employees in the City.

Recommended Action: Approve the Joint Exercise of Powers Agreement for the Ukiah Valley Water Authority and authorize the City Manager to execute the agreement on behalf of the City, and to make any modifications that do not make material, substantive changes to the agreement, including approval of Exhibits A-C thereto, and if approved appoint two representatives to the Ukiah Valley Water Authority.

BUDGET AMENDMENT REQUIRED: NA

CURRENT BUDGET AMOUNT: NA

PROPOSED BUDGET AMOUNT: NA

FINANCING SOURCE: NA

PREVIOUS CONTRACT/PURCHASE ORDER NO.: NA

COORDINATED WITH: Council Ad-hoc Crane & Orozco; Sage Sangiacomo, City Manager; David Rapport, City Attorney; Phillip Williams, Legal Counsel.

DIVERSITY-EQUITY INITIATIVES (DEI): **Goal 5** – Instill diversity, equity, and inclusion as essential core elements of policy-making, accountability, and delivery of City services.

CLIMATE INITIATIVES (CI): **7a** – Expand sustainable water practices.

GENERAL PLAN ELEMENTS (GP):GP-A1 - Land Use Element, GP-A2 - Economic Development Element; GP-A4 - Public Facilities, Services, and Infrastructure Element; GP A5 - Environment and Sustainability Element

Approved: 
Sage Sangiacomo, City Manager

JOINT EXERCISE OF POWERS AGREEMENT FOR THE UKIAH VALLEY WATER AUTHORITY

THIS JOINT EXERCISE OF POWERS AGREEMENT ("Agreement") becomes effective on the date ("Effective Date") it is executed on behalf of the last of the Parties to do so in Ukiah, California, among the City of Ukiah, a general law municipal corporation (the "City"), Millview County Water District ("Millview"), and Redwood Valley County Water District ("Redwood"), both County Water Districts formed pursuant to Division 12 of the California Water Code, commencing with Section 30000) (collectively the "Districts," when referring to Millview or Redwood, and the "Parties," when referring to the Districts and the City, and individually a "Party"), all of which are organized and existing under and by virtue of the Constitution and the laws of the State of California.

RECITALS:

1. The Parties are each empowered by law to acquire real property, construct, equip, staff, maintain, operate and lease public and private improved and unimproved real and personal property and related facilities, including, but not limited to, water sources and water rights, to provide water and wastewater collection and treatment services, set and collect fees for service, including connection fees and fees for permits and other purposes, and to borrow funds for said purposes. Each of the Parties is authorized and obligated to deliver a clean, safe, and reliable water supply to its customers and constituents.

2. Each of the Parties is a public agency, as defined in the Joint Exercise of Powers Act, Government Code Section 6500, et seq. (the "JEP Act") at Government Code Section 6500, authorized and empowered to contract for the joint exercise of common powers under the JEP Act.

3. The JEP Act provides that two or more public agencies may by agreement jointly exercise any powers common to the parties to the agreement, including, but not limited to, the authority to levy a fee, assessment, or tax. Under Government Code Section 6502, it shall not be necessary that any power common to the contracting parties be exercisable by each such contracting party with respect to the geographical area in which such power is to be jointly exercised.

4. The Parties recognize the benefits to each and all of them that will result from the coordinated use of their respective water resources and water systems before or without formal annexation or consolidation of the Parties into a single agency. The Parties enter into this Agreement to immediately maximize use of their respective and collective existing resources, create cost-saving opportunities, reduce duplication, maintain local control, and continue to deliver water services at a high level of service for the benefit of their customers and constituents.

5. The Parties desire to, and by this Agreement do, create a joint powers authority pursuant to the JEP Act that is named the Ukiah Valley Water Authority ("UVWA").

6. The Parties recognize the benefits to each and all of them that will result from the immediately combined administration, operation, and maintenance of their respective water systems as a single and integrated water system before or without formal annexation or consolidation of the Parties into a single agency. The Parties intend this Agreement in part to enable UVWA's receipt of much-needed State funding to improve and integrate water system infrastructure across the Parties' respective service areas. As any such funding becomes available, the Parties recognize UVWA or another local government agency will be responsible for obtaining and allocating such funds and implementing projects and improvements and integrating the Parties' respective water systems into a Combined Water System.

7. The Parties recognize that the coordination of water resources and combination of water services as

provided for in this Agreement will require the City to seek changes in organization as provided for by the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (the "CKH Act") and which changes in organization may need to be approved by the Mendocino Local Agency Formation Commission, and other local agencies.

8. The Parties desire to accomplish the aforesaid purposes by jointly exercising their common powers in the manner set forth in this Agreement.

9. The Parties have determined that the goal of this Agreement shall be to combine and coordinate the operations of their respective water systems to obtain efficiencies not otherwise available by operation as a Combined Water System in accordance with the terms of this Agreement before or without formal annexation or consolidation of the Parties into a single agency, except as the law may otherwise require, as they may otherwise subsequently agree, or as this Agreement provides otherwise.

10. Each Party shall retain ownership of its respective system as it exists on the Effective Date or as it may be modified, added to, or enlarged in the future, unless and until a change of organization affecting such ownership is approved pursuant to the CKH Act or other law, as may be required as a condition of grant funding.

11. Among the assets the Parties bring to the Combined System are water rights. Nothing in this Agreement shall be interpreted to transfer such a water right from a Party to UVWA or to another Party; any such transfers shall occur in the manner required by law. Other than as expressly addressed herein, this Agreement shall not be interpreted to require the use of a water right other than as currently permitted by law. Similarly, some assets are subject to liens for debt and other such claims. Nothing in this Agreement shall require or authorize any act in contravention of such third-party rights. However, it is the goal of this Agreement to achieve a Combined Water System and to obtain the right to serve water throughout the combined service areas of the Parties without respect to its source.

12. The approval of this Agreement is not a project subject to the California Environmental Quality Act (CEQA) because it does not require more than the operation of the Parties' respective Water Systems to serve their existing customers and will therefore have no reasonably foreseeable impact on the environment. (State CEQA Guidelines section 15378(b)(2), (4), (5); section 15061(b)(3) [the "common sense" exemption].) However, the implementation of this Agreement will likely involve "projects" within the meaning of CEQA, such as annexations under the Cortese-Knox-Hertzberg Act, the construction of water utility infrastructure, and the amendment of water rights. It is not presently possible to accurately foresee the details of such projects and evaluation of their impacts now would be unduly speculative. Accordingly, review of the environmental impacts of such projects is therefore appropriately undertaken when those projects are proposed, and their details better known. Such review shall be informed by applicable law, including these CEQA exemptions: CEQA Guidelines sections 15301 (existing facilities), 15302 (replacement or reconstruction), 15303 (new construction or conversion of small structures), 15319 (annexations of existing facilities), and 15320 (changes in organization of local governments).

AGREEMENT:

Based on the foregoing Recitals, which are incorporated in this Agreement by this reference, and the terms and conditions set forth below, the Parties, for and in consideration of the mutual benefits, promises, and agreements set forth herein, AGREE as follows:

Section 1. DEFINITIONS

For the purposes of this Agreement, the following terms shall have the meanings indicated below unless

the context shall plainly require otherwise:

"Collaborate" is defined in Section 5.B.4 below.

"Combined Water System" means two or more Parties' Water Systems and all the components thereof as may be altered, improved, constructed, or added to after the date the respective Party executes this Agreement, which have been operationally integrated in the performance of this Agreement.

"Effective Date" is defined in the introductory paragraph above.

"Legislative Body(ies)" means each District's Board of Directors and the City Council of the City.

"Representative" means a member of a Party's Legislative Body appointed by that Legislative Body to serve on the Water Executive Committee.

"Revenues" means any and all revenues produced by the Combined Water System and other operations authorized in this Agreement, including, but not limited to, revenues from fees and charges described in Sections 6.A.3, 6.A.4 and 6.A.5.

"Services" means the City's exercise of the joint powers conferred by this Agreement pursuant to Section 6.

"Services Start Date" means the first July 1 after the Effective Date unless the City and the Water Executive Committee otherwise agree in writing.

"Water Executive Committee" means the body comprised of two Representatives from each Party and the duties, authorities, and responsibilities of which as to the Combined Water System are defined in this Agreement.

"Water System" means a Party's infrastructure, components, and parts which are owned, operated, and/or used by that Party to capture, treat, deliver, and/or manage water for any use provided for by law. A description of each Party's respective Water System as of the Effective Date is attached hereto as Exhibit A. Rolling stock and other tangibles the City uses to provide the Services do not constitute part of any other Party's Water System.

"Water System Enterprise Fund" means the fund or funds established by the City to account for receipts and expenditures, assets, and liabilities for the Combined Water System in which all such Revenues are accounted.

Section 2. UVWA's MANNER OF EXERCISE OF POWERS.

A. UVWA is a public entity separate from the Parties.

B. The City shall file with the Secretary of State, State Controller, and the Mendocino Local Agency Formation Commission a notice in accordance with Government Code Sections 6503.5 and 6503.6, and shall file notices, as appropriate, in accordance with Government Code Section 53051 promptly following the Effective Date and upon any amendment to this Agreement. The City shall file a further report under Government Code Section 53051 upon each change in the membership of the Water Executive Committee.

C. For purposes of Government Code Section 6509, UVWA shall exercise its powers subject to the restrictions upon the manner of exercising such powers as are imposed upon the City of Ukiah, a general law city.

Section 2.1. OFFICERS, EMPLOYEES AND AGENTS; IMMUNITIES.

A. Any UVWA officer, employee, or agent may also be an officer, employee, or agent of any Party with the consent of all Parties. The Water Executive Committee's approval of the appointment or employment of such a person shall constitute a determination that the two positions are compatible.

B. All privileges and immunities from liability, all exemptions from laws, ordinances and rules, and all pension, relief, disability, workers' compensation, and other benefits which apply to the activities of officers, agents, or employees of a Party when performing their respective functions shall apply to them to the same degree and extent while engaged in the performance of any of the functions and duties under this Agreement.

C. No officer, agent, or employee directly employed by UVWA, if any, shall be deemed, by reason of that employment, to be employed by any Party or to be subject to any of the requirements of any Party.

Section 2.2. LIABILITIES; PENSION LIABILITY.

A. UVWA's debts, liabilities, and obligations shall be its debts, liabilities, and obligations alone and not those of the Parties except as they may otherwise agree by written contract.

B. During the effectiveness of Government Code Section 6508.2 or other law imposing liability on the Parties for unfunded liabilities due the California Public Employees' Retirement System or another pension provider to be paid upon termination of this Agreement and dissolution of UVWA, the Parties agree that any such liability shall be apportioned among them as they shall agree in writing when a contract with Cal PERS is approved or, failing such agreement, in proportion to the rate revenue from customers within the territory of each Party in the last fiscal year for which audited financial reports exist when the determination is made.

Section 2.3. EXERCISE OF JOINT POWERS.

This Agreement is made pursuant to the JEP Act to permit the joint exercise of powers common to the Parties. The purpose of this Agreement is to exercise these powers jointly by managing, equipping, maintaining, and operating the Combined Water System. Such purpose will be accomplished, and common powers exercised, in the manner set forth in this Agreement. The Parties may use the designation "Ukiah Valley Water Authority" to identify the provision of the services provided under this Agreement, including those on equipment, uniforms, buildings, letterhead, phone, and other directories. All pre-existing obligations, rights, and privileges of the Parties shall continue hereunder, subject to the terms and conditions of this Agreement.

Section 3. SERVICE LEVEL.

Commencing on Services Start Date, the City shall provide the Services to allow efficient, coordinated operation of Combined Water System inclusive of wells, storage facilities, pump stations, treatment facilities, distribution systems, and related managerial and administrative services and water rights, to the extent and in the manner consistent with this Agreement and annual budgets approved by the Water Executive Committee.

Section 4. TERM.

This Agreement shall commence on the Effective Date and shall be binding upon the Parties, and shall

continue in full force and effect until such time as the Parties agree to terminate the Agreement as set forth in Sections 10 or 11, or only one Party to the Agreement remains due to annexations, other changes of organization under the CKH Act, or other reasons. A Party may withdraw from this Agreement as provided in Section 10 below.

Section 5. WATER EXECUTIVE COMMITTEE.

A. The Water Executive Committee shall perform the duties set forth in Section 6.

B. MEETINGS OF THE WATER EXECUTIVE COMMITTEE.

1. The Water Executive Committee shall establish a schedule for its regular meetings, which must be at least monthly. The Water Executive Committee may call special meetings, as may be needed from time to time, and/or may cancel regular meetings if deemed appropriate.
2. A majority of the Water Executive Committee's members shall constitute a quorum for the transaction of business. A majority vote of the Water Executive Committee's members is required to take action, although a lesser number may adjourn for lack of a quorum.
3. The Water Executive Committee shall comply with the Ralph M. Brown Act, Gov. Code sections 54950, *et seq*.
4. For those duties of the Water Executive Committee requiring collaboration, "collaboration," "collaborate," or "collaborative" shall mean the meaningful and timely process of the Representatives each seeking, discussing, and carefully considering the information and views of each Party in a manner that is cognizant of all Parties' values, reasonably attempting to reach agreement through cooperative efforts for the mutual benefit of the Parties. Collaboration among the Representatives shall be conducted in a way that is mutually respectful of each District's authority and responsibilities as a County Water District and the City's authority and responsibilities as a general law city, and shall consider the views of a Party as expressed by its Representatives. A Representative need not engage in dialog with Legislative Bodies other than his or her own appointing authority.

C. VOTING RIGHTS. Each Party shall have two seats on the Water Executive Committee and each member of the Water Executive Committee shall have one vote, with these exceptions:

1. If a member is the sole representative of a Party at a meeting due to an absence or vacancy, he or she may cast all votes that Party is authorized to cast.
2. If a Party merges or consolidates into another, the successor agency shall acquire the votes of the merged or consolidated agency. So, for example, if a District is merged into the City, the City shall hold its own votes and the votes previously assigned that District.

D. TIE VOTES. Any tie vote of the Water Executive Committee shall be resolved as provided in Section 20 below unless the Water Executive Committee otherwise directs at the meeting at which the tie vote occurs.

Section 6. POWERS AND DUTIES OF THE WATER EXECUTIVE COMMITTEE.

A. DUTIES. The Water Executive Committee shall be the governing body of UVWA. The Water Executive Committee shall take any and all actions within the authorities specified in this Agreement which are necessary and appropriate to implement the purposes of this Agreement, including, but not limited to, any or all of the following:

1. To prepare and adopt budgets for the Water System Enterprise Fund in accordance with all applicable

legal requirements. The budgets shall include the annual expenses for the Services, including, but not limited to, costs of administration, operation, maintenance, repair of, and capital improvements to, the Combined Water System, including those included in Capital Improvement Plans, debt service on bonds, and any other costs of providing the Services;

2. To set rates to fund the Services in accordance with all applicable legal requirements, including the procedural and substantive requirements of California Constitution, Article XIII D, Section 6 ("Proposition 218") for property-related fees charged for the services of the Combined Water System, which rates shall be adopted with the same notice and right to object or protest provided to City and District ratepayers except as the law may otherwise require. Such rates may be adopted as to zones which reflect the boundaries of one or more Parties and shall neither exceed the reasonable cost of service provided to any such zone nor require ratepayers in one zone to subsidize the cost to serve another zone. To the extent rates cannot cover the cost of service in a zone, the difference mut be covered by grants, discretionary revenues, or other non-rate revenues. In particular, and without narrowing the foregoing, the Water Executive Committee's ratemaking in compliance with Proposition 218 and other law shall account for assets each Party brings to this Agreement as depicted in Exhibit A and will not charge that Party's customers to recreate the remaining utility of those assets
3. To establish connection and/or capacity fees for the temporary or permanent connection of residential, commercial, and industrial users to the Combined Water System except as the law may otherwise require;
4. To establish any other taxes, assessments, fees, or charges reasonably necessary to provide the Services, including fees for permits or inspections, provided that all such fees shall comply with this Agreement and applicable provisions of Proposition 218 and California Constitution, Article XIII C, section 1, subdivision (e) ("Proposition 26"), and other applicable law;
5. To adopt ordinances and regulations enforceable within the jurisdictional boundaries of each Party governing the Combined Water System and service to its users as required, and to the extent authorized, by law as necessary to provide the Services. The Parties shall collaborate to avoid conflicts or inconsistencies between ordinances or regulations adopted by a Party and ordinances or regulations adopted by the Water Executive Committee pursuant to this Agreement. No Party shall have any duty to enforce an ordinance or regulation other than its own; and
6. To maximize the availability of water to meet the collective needs of the Parties within the boundaries of each Party through the use of the collective water rights and supplies of each Party, subject to the terms and conditions of Section 12 of this Agreement.
7. All customers of the Parties, including agricultural customers, either before, after or absent consolidation or merger into the Combined Water System, shall have the same right and entitlement to water supplies and service that they enjoyed before the effective date of this Agreement, without discrimination or limitation. This reflects, but is not intended to alter, the legal principle that acquisition of a water supply on which users rely is subject to a duty to continue to serve them. (E.g., *Durant v. City of Beverly Hills* (1940) 39 Cal.App.2d 133.)
8. To accept grants, loans, and subventions which the Water Executive Committee shall appropriate consistently with the terms of those grants, loans, and subventions; applicable law, and the goal of this Agreement as reflected in the Recitals above.

B. AUTHORITIES RETAINED BY THE PARTIES.

Notwithstanding the foregoing, the Parties retain all their respective authorities to the extent the exercise of those authorities does not directly conflict with the duties and authorities granted to the Water Executive Committee. No Party shall exercise its authorities in a way that directly contravenes the purposes of this Agreement.

Section 7. KEY MANAGEMENT SERVICES.

The City shall provide the Services described in this Section 7 commencing on the Services Start Date. To provide the Services described herein, the City shall hire all the Districts' respective employees with a start date of no earlier than the Service Start Date. The employees of the Districts who wish to continue employment and the bargaining unit of the City to which each will be assigned are identified in Exhibit C to this Agreement. The City hereby waives the right to subject these new employees to probationary periods. Those employees' rights vis-à-vis the City will otherwise be governed by the City's collective bargaining agreements with its bargaining units; its current policies, procedures, and ordinances; and applicable law. The management and personnel services identified in Subsections A and B below ("Key Management Services") shall be provided by the City in accordance with this Agreement.

A. OPERATION AND MAINTENANCE OF THE COMBINED WATER SYSTEM.

1. Other than duties and obligations of the Water Executive Committee, and in consultation with the Water Executive Committee, the City shall provide general administration, operation, and oversight of UVWA all in accordance with this Agreement, applicable statutes, regulations, and applicable ordinances, adopted by the Water Executive Committee consistently with this Agreement. The following are examples of activities and deliverables the City shall provide in performing under this Agreement:
   a. Read the meters in the service area;
   b. Perform all necessary sampling, including for purposes of water quality;
   c. Complete all required and routine reports;
   d. Respond to all service calls;
   e. Schedule a minimum of one on-call service personnel to respond to all after-hours and weekend calls in all service areas covered by this Agreement and/or any contract authorized under this Agreement; and
   f. Any other levels of service as requested by the Water Executive Committee and funded in the annual budget.
2. Other than duties and obligations of the Water Executive Committee, and in consultation with the Water Executive Committee, the City may exercise on behalf of the Parties the following powers, and any other powers exercised by a general law city, as needed to perform under Section 7.A.1:
   a. To manage, operate, maintain, and repair the Combined Water System, including any buildings, works or improvements comprising part of the systems and located either inside or outside the boundaries of the Parties, in accordance with sound engineering and accounting practices and with all applicable local, state, and federal laws and regulations; provided that the City and UVWA need not enforce any local ordinances but their own;
   b. To implement the budgets approved by the Water Executive Committee.
   c. The City cannot increase the total amount of the approved expenditure budget without prior approval of the Water Executive Committee, except as: (i) warranted for an urgent and/or emergency provision of water or sewer service which shall be reported to the Water Executive Committee before its next regular meeting following the expenditure of the funds; or (ii) to services within the City to be funded by rates levied for those services or other City revenues;
   d. To contract for the provision of personal or professional services in connection with providing Services;
   e. To enforce ordinances and regulations of the Combined Water System for the Parties and UVWA, including the use of the Combined Water System;
   f. To bill for and collect revenue measures established under this Agreement, including the

authority of a general law city to terminate water service or other utility services contained in the same bill for nonpayment in accordance with the Public Utilities Code;

g. To allocate and assign water rights and water supplies of each Party within the boundaries of the Parties, as necessary for the efficient and cost-effective supply of water to the customers of the Parties, subject to the terms and conditions of Section 12 of this Agreement.

h. With the approval of the Water Executive Committee and at City's sole election, to use any statutory power available to the City under the JEP Act and any other applicable laws, whether heretofore or hereinafter enacted or amended, for issuance and sale of any revenue bonds or other evidences of indebtedness necessary or desirable to finance the exercise of any Services of the City under Section 7, and to borrow from any source including, without limitation, the federal or state governments, for these purposes:

1. To contract for the provision of personal or professional services in connection with providing the Services for the Parties;
2. To contract for the installation or construction of capital improvements to the Combined Water System;
3. To acquire, lease, hold, and dispose of such equipment as may be reasonably necessary or appropriate to the proper operation, maintenance, administration, and management of the Combined Water System or the provision of Services;
4. To file reports associated with the operation, maintenance, administration and management of the Combined Water System and the provision of Services;
5. To implement all requirements of laws and ordinances, applicable to the provision of Services, including, but not limited to, permitting, inspections, monitoring, reporting, and enforcement activities; and
6. To provide City staff or contractors to support UVWA or the Parties in performing functions and responsibilities as requested by the Water Executive Committee.

B. FINANCIAL AND GENERAL SERVICES.

1. The City agrees to provide the Services to UVWA and the Parties for the term of the Agreement, including accounts payable, procurement, billing and accounts receivable, general accounting and reporting, budget development and monitoring, and other general services such as human resources and city clerk services as the City reasonably deems necessary to provide the Services at the level requested by the Water Executive Committee and as can be funded by the budget approved by the Water Executive Committee.
2. The City will perform these services pursuant to any applicable state and federal law and pursuant to City policies and regulations, unless the City and the Water Executive Committee otherwise agree in writing. The City shall perform procurement, contracting and personnel services in accordance with laws applicable to California cities, including, but not limited to, the Uniform Construction Cost Accounting Act. The City is not performing these services as the Parties' agent, but as a service provider, and the Parties agree that the City does not assume a fiduciary duty to the Parties in the performance of these financial and general services. Nor need the City provide Services beyond what can be funded by the budget approved by the Water Executive Committee.
3. The Parties shall compensate the City for the Services consistently with the annual budget approved by the Water Executive Committee. The City shall have the right to withhold performance of a particular level of service if it considers the funding in an approved budget insufficient to cover the City's cost in providing that level of service; provided, however, that nothing in this sentence detracts from the City's obligation to maintain service as provided in Section 6.A.7 of this Agreement.
4. The City's cost to provide the Services includes indirect costs, such as general administration and

overhead. Unless the City and the Water Executive Committee agree otherwise in writing, the City shall charge indirect costs of the Services consistently with Exhibit B.

Section 8. MUTUAL COOPERATION.

A. OUT OF AREA SERVICE AGREEMENT ("OASA"). The City may prepare OASAs on the recommendation of the Water Executive Committee to serve areas outside the boundaries of the Parties but within the City's sphere of influence, where development could occur with the provision of water services. The City shall submit such OASAs to the Water Executive Committee for review and approval before filing with LAFCo. This Agreement and any OASA-related tax sharing agreement with Mendocino County shall be attached to and incorporated by reference into any OASA submitted to LAFCo under this Agreement.

B. As long as this Agreement remains in effect and the Parties comply with Sections 8 and 10.B, the City agrees that it will not apply to LAFCo for detachment of District Parties' territory from the Districts' boundaries when that territory is annexed to the City unless and until all of the territory of a District is annexed to the City.

C. The Districts agree to support City Annexations and to work cooperatively with the City regarding revisions to the City's General Plan, Municipal Service Review ("MSR") and Sphere of Influence ("SOI") necessary or advisable to enable City Annexations and not to propose or seek LAFCo approval for or support proposed provisions in a District's MSR or SOI that would inhibit, conflict with, or prevent such City Annexations and/or reorganizations, as described in this Agreement.

D. Pursuant to Government Code Section 57105 or other applicable provisions of state law, the Districts will support LAFCo either designating a District as a subsidiary district of the City or merger of a District with the City at such time as 70% or more of registered voters in a District are within the City limits and 70% of the area of land within a District is within the City's jurisdictional boundaries or when those reorganizations are otherwise authorized by state law.

E. The Districts will support and cooperate with the City in seeking legislation to amend the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 ("CKH Act") to authorize merger of a District with the City or the establishment of a District as a subsidiary district of the City when 70% or more of registered voters in a District are within the City limits without regard to the area of a District's land that is within the City.

Section 9. SERVICES TO OTHER AGENCIES.

The Water Executive Committee may recommend that the City provide water services to agencies not party to this Agreement. Such services may be provided with the concurrence of all Parties and upon execution of an amendment to this Agreement by all Parties or upon execution of a contract authorized by all Parties. The charges for such services shall be determined by the Water Executive Committee in accordance with the budget provisions of this Agreement. The City retains the power to provide services to other agencies on terms of its choosing provided that its doing so does not impair its ability to provide the Services.

Section 10. WITHDRAWAL; TERMINATION.

A. A Party may withdraw from this Agreement with a July 1st effective date on 90 days' notice to the Water Executive Committee and all Parties. Such withdrawing Party shall perform all obligations under this Agreement until the agreed upon date of withdrawal. A withdrawing Party shall remain obligated to perform obligations, including financial obligations, arising before the withdrawal date, even after the date

of withdrawal.

B. Upon withdrawal from UVWA, a departing Party shall regain control of, and responsibility for, its Water System as it existed as of the Effective Date, to the extent feasible. The Parties acknowledge that a Party's Water System as of a withdrawal date may differ from that in existence on the Effective Date. Any infrastructure, such as tanks, pipes, pumps, treatment facilities, and water rights, that UVWA uses only to serve that Party shall be the withdrawing Party's property as of the withdrawal date. If any infrastructure serves more than one Party, the withdrawing Party shall recover ownership and control of that infrastructure upon agreement of the other Party or Parties it serves, but will remain obligated to serve all customers of other Parties served by such infrastructure and water supplies at the time of withdrawal, with appropriate compensation paid by UVWA or the Par(ies) benefitted by such service. Absent such agreement, infrastructure serving more than one Party shall remain part of the Combined Water System and operated by the City until the Parties served by that infrastructure reach an agreement or the dispute is resolved pursuant to Section 20 of this Agreement or otherwise.

C. In negotiating the disposition of infrastructure which serves more than one Party, these general principles shall inform discussion:

1. The primary obligation shall be to provide uninterrupted service to all customers of the Combined Water System.
2. All other things being equal, a withdrawing Party should resume possession and control of infrastructure which was part of its Water System on the Effective Date.
3. Any infrastructure acquired, constructed, or improved with grant or other funds available only by virtue of this Agreement should not be separated from the Combined Water System unless it is necessary to do so to allow a Party to withdraw and will allow both uninterrupted service to all customers of the Combined Water System and compliance with grant, loan, and other conditions on the use of the infrastructure.

Section 11. DISSOLUTION/REORGANIZATION.

A. The Agreement shall terminate if the number of parties to this Agreement becomes less than two, or if the Parties unanimously agree to terminate it. If the Parties have accumulated any assets relating to the shared management of water services before termination, such assets shall be distributed among the Parties in proportion to their respective contributions, unless the Parties agree otherwise. Any dispute as to the disposition of such assets shall be resolved as provided in Section 20 of this Agreement.

B. The CKH Act shall govern any change of organization or reorganization of a District. This Agreement is intended to allow for the administration and operation of a Combined Water System on behalf of the Parties, until:

i. City annexations result in 70% of a District's territory and 70% of the registered voters of a District being within the City's limits; or
ii. satisfaction of other provisions of the CKH Act or other provisions of state law authorize a merger of the District with the City or establishing the District as a subsidiary district of the City;

in which event this Agreement will be deemed to be the affected Parties' joint request to LAFCO, pursuant to Government Code Sections 56078 and 57105, to either merge the District with the City or establish the District as a subsidiary district of the City with the City Council serving as the Board of Directors of the District.

C. If any of the Parties to this Agreement receives grant funding of $1,000,000 or more to develop capital assets to serve more than one of those Parties, the City shall apply to LAFCO to combine the Parties to benefit from the capital asset into a new or existing public entity to own and operate that asset, if and as required by the terms of the grant. If the Cortese-Knox-Hertzberg Act does not authorize the City to make the application, the City shall invite LAFCO to exercise its own authority to initiate the change of organization. Each of the Parties to this Agreement agrees to support such a change of organization and, by making this Agreement, authorizes the City to propose such changes of organization on its behalf.

Section 12. TRANSFER, MODIFICATION, AND USE OF WATER RIGHTS.

To achieve the goal of applying and using the water rights of all Parties collectively to serve the customers of all Parties, and the eventual customers of the Combined Water System, without limit or restriction, and in recognition of the eventual need to operate, maintain, and administer the Parties' water resources and transmission and treatment systems as a Combined Water System, the Parties agree to the following:

A. Within 60 days of the execution of this Agreement, each Party shall identify and disclose (1) all water rights it currently holds and uses, (2) how it must modify or amend the water rights to allow a Combined Water System to use the water rights, (3) to the extent possible, the process and procedure each Party must undertake to allow a different entity to use of the water rights as part of a Combined Water System, including any necessary approvals, and (4) a plan and estimated time period to modify and transfer such water rights.

B. The Parties shall take any and all actions which are necessary and appropriate to modify, amend or transfer the water rights of the Parties to UVWA, the City, or other entity that will own or operate the Combined Water System, for the collective use of such water rights within the service areas of all Parties, if possible. Each Party shall support and cooperate with the other Parties to effectuate the modification, amendment to, or transfer of, its water rights, including, but not limited to, granting approvals, signing agreements, meeting and working with local and state officials and regulators, responding to and defending against protests, objections, and legal challenges to the modification, amendment, or transfer of water rights, and the Parties agree to separately or collectively conduct and support any required environmental review in support of the modification, amendment to, or transfer of, the water rights of the Parties.

C. While the Parties are undertaking efforts to modify, amend, or transfer their water rights, each Party will, as necessary to effectuate the purpose of this Agreement and to the extent feasible, allow its water rights to be used collectively, even if on a temporary or short-term basis, by the Combined Water System. Each Party, however, will still have the primary right and authority to continue to use its respective water rights within its current service areas and for the benefit of its current customers, up to the time that the rights are transferred to, or obtained for the benefit of, the Combined Water System.

D. The Parties agree to initiate, fund, and pursue all efforts necessary to modify, amend, or transfer the water rights of the Parties for use in the Combined Water System, but UVWA and all Parties will ultimately be responsible for costs, expenses and fees associated with and arising out of such efforts, and the Parties will have the right to seek reimbursement from UVWA for recovery of such costs, expenses, and fees.

E. If a Party withdraws from this Agreement, the Agreement is terminated, or the Combined Water

System ceases to function or exist, the affected Party or Parties will retain all of its or their water rights, or if necessary the rights shall revert to the original right holder, and the Parties will take any and all actions which are necessary and appropriate and shall support and cooperate with the other Parties to return or restore the water rights to the Party that formerly held such rights. The water rights of a withdrawing Party shall remain dedicated and committed to the Combined Water System until the later of the withdrawal date or the date those rights may be lawfully used by the withdrawing Party alone.

F. Notwithstanding any other provision of this Agreement, the Parties agree, represent, and confirm that they will endeavor to and will take any and all reasonable and necessary steps to ensure that the customers of each Party will continue to receive a clean, safe, and reliable water supply at all times, without delay or disruption.

G. Notwithstanding the foregoing, this Agreement does not and shall not be interpreted to authorize or require the use of a water right or related asset other than as permitted by law, nor shall this Agreement require or authorize any act in contravention of any third-party rights, to the extent any of the water rights or other assets of the Parties are subject to liens for debt and other such claims.

Section 13. AMENDMENT TO AGREEMENT.

The Water Executive Committee may recommend an amendment to this Agreement. This Agreement may only be amended by approval of all the Parties to this Agreement. The Water Executive Committee shall forward a proposed amendment with its recommendation to the legislative body of each Party. The proposal shall be adopted, properly executed, and returned to the Water Executive Committee if the Party approves the amendment. This Section 13 shall not prevent the Parties from adopting an amendment to this Agreement that is not recommended by the Water Executive Committee.

Section 14. ADDITIONAL PARTIES TO THE AGREEMENT.

A public agency, as that term is defined in the JEP Act (Government Code section 6500), located in Mendocino County may become a Party to this Agreement upon:

1. Its approval and execution of this Agreement as required by law, and;
2. Approval of the Water Executive Committee.

Section 15. NOTICES.

Whenever notice or other communication is permitted or required by this Agreement, it shall be deemed given when (i) personally delivered or (ii) when received, if delivered by overnight courier or email (if email receipt is acknowledged in writing), or (iii) 48 hours after it is deposited in the United States mail with proper first-class postage affixed thereto and addressed as follows:

To City:

City of Ukiah
Attn: Mayor and City Manager
300 Seminary Ave.
Ukiah, CA 95482
Email: swhite@cityofukiah.com

To Millview County Water District:
Millview County Water District
Attn: Mr. Tim Price
151 Laws Ave.
Ukiah, CA 95482
Email: jwalker@willowcwd.org

To Redwood Valley County Water District:
Redwood Valley County Water District
Attn: Mr. Tom Schoeneman
151 Laws Ave.
Ukiah, CA 95482
Email: jwalker@willowcwd.org

A Party may change the address and email address to which notices shall be sent by giving notice of the change as provided herein.

Section 16. SEVERABILITY.

Except as otherwise provided in this Section 16, should any part, term, portion, or provision of this Agreement or the application thereof to any person or circumstances be in conflict with any state or federal law, or otherwise be rendered unenforceable or ineffectual, including by amendment or repeal of a statute, the validity of the remaining parts, terms, portions or provisions, or the application thereof to other persons or circumstances shall be deemed severable and shall not be affected thereby, provided such remaining portions or provisions can be construed in substance to continue to constitute the Agreement that the Parties intended to enter into in the first instance. The City's promise to provide Services is dependent on and not severable from the validity and enforceability of Sections 7, 8 and 10.B.

Section 17. HOLD HARMLESS AND INDEMNITY.

To the fullest extent permitted by law, each of UVWA and the Parties (the "Indemnifying Party") agrees to save, indemnify, defend and hold harmless UVWA and each other Party and its officers, agents and employees ("Indemnified Parties") from any liability, claims, suits, actions, arbitration proceedings, administrative proceedings, regulatory proceedings, losses, expenses, or costs of any kind, whether actual, alleged or threatened, including reasonable and actual attorney fees and costs, court costs, interest, defense costs, and expert witness fees, which arise out of, or are in any way attributable in whole or in part to, negligent or intentional acts or omissions of an Indemnifying Party or its employees except such losses as arise from the sole negligence or intentional act of an Indemnified Party.

Section 18. LEGAL REPRESENTATION AND ADVICE.

In the course of performing this Agreement, each Party shall seek legal advice from its own counsel. If a legal matter or issue relates to two or more Parties where the Parties involved will benefit from joint representation, the Parties may choose to be represented by the same legal counsel so long as no conflict of interest arises by such representation and the representation is permitted by the Rules of Professional Conduct of the California State Bar. In that event, the Parties may agree on an apportionment of costs, if applicable, as allowed by law. Under any circumstances when two or more Parties are represented by the same legal counsel, no Party may bind the others to a settlement agreement without the written consent of the other Parties to be bound.

Section 19. INSURANCE.

A. Each Party shall be responsible for maintaining a program of insurance that shall cover each Party's indemnification obligations; provided funding is provided in a budget approved by the Water Executive Committee to pay the premiums for said insurance or the Water Executive Committee elects to provide insurance coverage for all Parties. While the City provides the Services pursuant to Section 6 of this Agreement under rates adopted pursuant to Section 5: (i) no District need fund insurance at its own expense and (ii) the Water Executive Committee shall maintain or, at its option, fund directors and officer's liability coverage for each of the Districts.

B. Without in any way affecting the indemnity herein provided and in addition thereto, unless the Executive Committee provides insurance to cover the Parties, each Party shall secure and maintain throughout the Agreement the following types of insurance:

1. WORKERS' COMPENSATION.
   A program of Workers' Compensation Insurance or a state-approved self-insurance in an amount and form to meet all applicable requirements of the Labor Code of the State of California, including Employer's Liability with $250,000 limits covering all persons providing services on behalf of each Party and all risks to such persons under this Agreement. This coverage may be waived if a Party's legislative body certifies that the Party has no employees and does not treat volunteers as employees for worker's compensation purposes.

2. COMPREHENSIVE GENERAL AND AUTOMOBILE LIABILITY INSURANCE.
   This coverage is to include contractual coverage and automobile liability coverage for owned, hired, and non-owned vehicles. The policy or self-insurance shall have combined single limits for bodily injury and property damage of not less than two million dollars ($2,000,000.00). This requirement can be waived by the Water Executive Committee, if the Board of Directors of a District certifies that it has no vehicles and that no non-owned, uninsured vehicles are used on District business.

3. ADDITIONAL NAMED INSURED.
   All policies, and/or memoranda of coverage, except Workers' Compensation, shall contain additional endorsements naming each Party and its officers, employees, and agents as additional named insureds with respect to liabilities arising out of each Party's performance hereunder.

4. POLICIES PRIMARY AND NON-CONTRIBUTORY.
   All policies required above are to be the primary and non-contributory with any insurance or self-insurance carried or administered by each Party.

Section 20. MEDIATION AND DISPUTE RESOLUTION.

A. Except as otherwise provided in Sections 10.B and 11.A, if (1) any dispute arises at any time between or among the Parties regarding interpretation or implementation of this Agreement that does not concern a decision of the Water Executive Committee, or (2) if a minority of members of the Water Executive Committee file a written appeal with the Water Executive Committee within 14 days of a decision or action of the Water Executive Committee, or (3) if one or more Parties fails or refuses to follow the order or direction of the Water Executive Committee or breaches this Agreement, the Parties will, in the first instance, attempt in good faith to meet to discuss and informally resolve the dispute through their representatives or their designees. The Parties must give written notice of the existence and subject of a dispute, which notice shall commence the dispute resolution process of this Agreement.

B. If, within 30 days of service of notice of a dispute, the Parties cannot resolve the disputed issue through informal mediation, unless extended by mutual agreement of all Parties, the matter shall be submitted to JAMS, or a comparable mediation service, or a mutually agreeable mediator, for formal mediation by a single mediator who should have technical or legal expertise or experience with water resources and supplies, utility services, or local government agencies. The mediator will be selected by unanimous consent of the Parties, but if unanimous consent cannot be obtained, the mediator will be selected at random from a list of mediators maintained by the Water Executive Committee based on the qualifications set forth in this paragraph.

C. Any Party may commence formal mediation by providing to the mediator and the other Parties a written request for mediation, setting forth the subject of the dispute and the relief requested. If the formal mediation process has not concluded or has not resolved the dispute within 60 days of a written request for mediation, the mediation process will be deemed completed, unless the Parties extend the 60-day period in writing.

D. If the dispute is not resolved by informal or formal mediation, each Party will be free to pursue whatever legal or equitable remedies may be available. No Party shall be permitted to file a legal action without first complying with the requirements of this Section 20. This provision shall not waive or otherwise affect the applicable provisions of law governing claims against a public entity or the applicable statutes of limitation.

E. The fees and expenses incurred as a result of any dispute resolution activities, including attorney fees, mediator fees and costs, expert costs, and other expenses, shall be borne solely by the Parties involved in the dispute and participating in the mediation. The Parties involved in the dispute will share the mediator's expenses on an equal basis. No Party shall be deemed the prevailing party for purposes of recovery of fees, costs, or expenses.

Section 21. ADDITIONAL DOCUMENTS AND AGREEMENTS.

The Parties agree to cooperate in the execution of any additional documents or agreements that may be required to carry out the terms of this Agreement.

Section 22. SUCCESSORS.

This Agreement shall bind and inure to the benefit of all successors and assigns of the Parties and their respective directors, officers, agents, servants, and employees, and the successors and assigns of each of them, separately and collectively.

Section 23. WARRANTY OF LEGAL AUTHORITY.

The Parties' Legislative Bodies have each authorized execution of this Agreement, as evidenced by the signatures below. Those who sign below warrant for the benefit of the Parties for which they do not sign that they have actual authority to execute this Agreement and to bind to it the Party for which they sign.

Section 24. ASSIGNMENT / DELEGATION.

No Party shall assign, sublet, or transfer any interest in this Agreement or any duty hereunder without written consent of the other Parties, and no assignment shall be of any force or effect whatsoever unless and until the other Parties shall have so consented.

Section 25. NO THIRD-PARTY BENEFICIARY.

This Agreement is only for the benefit of UVWA and the Parties as municipal or public entities and shall not be construed or deemed to operate as an agreement for the benefit of any third party and no third party shall have any right of action or obtain any right to benefits or position of any kind by reason of this Agreement.

Section 26. GOVERNING LAW.

This Agreement shall be governed by and construed in accordance with the laws of the State of California.

Section 27. AGREEMENT CONTROLLING.

In the event of a conflict between the text of this Agreement and any attachment to it, the text shall prevail.

Section 28. ENTIRE AGREEMENT; COUNTERPARTS.

This Agreement, including its attachments, is intended both as the final expression of the Agreement among the Parties with respect to the included terms and as a complete and exclusive statement of the terms of the Agreement. This Agreement may be transmitted electronically and executed in counterparts, each such executed electronic copy shall be admissible for any purpose and in any judicial or administrative proceeding as evidence of the agreement between the Parties. Signatures may be exchanged by emailed pdf or other electronic form with the same force as original signatures.

Section 29. EXHIBITS.

All exhibits to which reference is made are incorporated into this Agreement as though fully set forth at length, whether or not actually attached.

IN WITNESS THEREOF, the Parties hereto have caused this Agreement to be executed and attested by their proper officers thereunto duly authorized as of the day and year first above written.

TERM SHEET

Proposed Purchase or Lease-Purchase of Willow Capital Assets

Parties
Buyer/Lessee: City of Ukiah ("City")
Seller/Lessor: Willow County Water District ("District")

---

1. Purpose

This Term Sheet outlines the principal terms and conditions for the City's acquisition of certain capital assets currently owned by the District (collectively, the "Equipment"). The acquisition may occur through either (a) an outright cash purchase, or (b) a five-year lease-purchase agreement with a bargain purchase option, as described below.

---

2. Equipment

The Equipment subject to this transaction consists of the capital assets listed below, along with the agreed values as documented in Exhibit A. The total amount to be settled between the City and the District for all equipment is **$219,670.00**.

Asset	Agreed Value
2018 Multiquip Whisperwatt DCA25SSIU4F Generator	$12,800.00
2010 Airman PDS185S Compressor	$12,000.00
1987 John Deere 310C Backhoe	$12,000.00
2019 Kubota Z411 Mower	$4,899.00
2019 Kubota L4701 Tractor with Attachments	$30,000.00
2018 Ford F650 SD Dump Truck	$59,000.00
2010 Ford Ranger Regular Cab Pickup	$5,405.00
2005 Ford F250 Super Duty Super Cab Pickup	$6,312.00
2013 Ford F150 Regular Cab Pickup	$5,063.00
2016 Ford F150 Regular Cab Pickup	$9,760.00
2019 Ford F150 Regular Cab Pickup (Unit 3301)	$16,250.00
2020 Ford F150 Regular Cab Pickup (Unit 3304)	$16,506.00

Asset	Agreed Value
2019 Ford F150 Regular Cab Pickup (Unit 3305)	$14,392.00
2016 Ford F150 Regular Cab Pickup (Unit 3306)	$5,796.00
2016 Ford F150 Regular Cab Pickup (Unit 3307)	$9,487.00

Total Agreed Value: $219,670.00

---

3. Purchase Price

- The total purchase price for the Equipment shall be **$219,670.00**, representing the aggregate of the agreed values for each item listed in Section 2 and Exhibit A.
- This amount shall be accepted by both parties as the fair market value for purposes of the sale or lease-purchase transaction.
- The total of $219,670.00 shall serve as the principal amount under any lease-purchase arrangement.

---

4. Payment Structure

Cash Purchase:

- The City shall pay the total agreed purchase price of **$219,670.00** in full upon execution of the purchase agreement.
- Payment shall be made in cash or by wire transfer to the District within thirty (30) days of approval by both governing bodies.

---

5. Maintenance, Operation, and Insurance

- The City shall be responsible for all maintenance, operation, registration, and insurance of the Equipment during the lease term.
- The City shall have full right to use, operate, and maintain the Equipment for all municipal purposes.

---

6. Title and Risk of Loss

- Title shall remain with the District during the lease term and shall transfer to the City upon final payment and exercise of the purchase option.
- The City shall bear all risk of loss, theft, or damage during the lease period.

---

7. Improvements and Modifications

The City may make capital improvements, repairs, or modifications to any Equipment in its discretion. Any such improvements shall become part of the Equipment and property of the City upon completion of the purchase.

---

8. Termination and Purchase Option

The City may terminate the lease-purchase agreement at any time by purchasing the Equipment for the total stated value less all principal payments made to date.

---

9. Representations and Warranties

All Equipment is sold or leased "as is," "where is," without warranty, express or implied, except as specifically set forth in the final purchase or lease-purchase agreement.

---

10. Conditions Precedent

- Approval by the City Council of Ukiah and the District Board of Directors.
- Execution of a definitive Purchase Agreement or Lease-Purchase Agreement consistent with this Term Sheet.

---

11. Exhibits

Agenda Item No: 8.f.

MEETING DATE/TIME: 11/19/2025

ITEM NO: 2025-1307

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Adoption of Resolution Authorizing the City of Ukiah to Submit a Regional Payment Program Application on Behalf of Itself as Lead Participant and All Non-Lead Participants for All City/County Payment Programs with CalRecycle.

DEPARTMENT: Public Works

PREPARED BY: Seth Strader, Administrative Analyst

PRESENTER: Tim Eriksen, Director of Public Works/City Engineer

ATTACHMENTS:

1. Proposed Resolution

Summary: Council will consider approving and adopting a resolution authorizing the City of Ukiah to submit a Regional Payment Program Application on behalf of itself as lead participant and all non-lead participants for all City/County payment programs with CalRecycle.

Background: CalRecycle offers different annual payment programs to assist jurisdictions in the collection and disposal of recyclable waste. These funds can be used for drop-off programs, public education, litter prevention and cleanup, infrastructure for businesses and to support existing recycling programs. Cities and counties are eligible for funds based on population.

Discussion: This resolution will allow the City of Ukiah to apply for these funds and act as the lead participant for a regional application, which allows for one application to be submitted on the behalf of other program participants to allow for efficient allocation of program efforts and grant funds.

Historically, the County of Mendocino acted as the lead participant and these program funds were then distributed to the Mendocino Solid Waste Management Authority (MSWMA), a local Joint Powers Authority (JPA) made up of the County of Mendocino and the cities of Fort Bragg, Willits, and Ukiah. With the City of Ukiah now performing the administrative work for MSWMA, this resolution is needed for City staff to be able to apply for these funds for the JPA members. These funds will continue to be used for programs and clean-up efforts performed and contracted by MSWMA.

Staff recommends approving and adopting the resolution (Attachment 1) to authorize the City of Ukiah to submit a Regional Payment Program Application on behalf of itself as lead participant and all non-lead participants for all City/County payment programs with CalRecycle.

Recommended Action: Adopt resolution authorizing the City of Ukiah to submit a Regional Payment Program Application on behalf of itself as lead participant and all non-lead participants for all City/County payment programs with CalRecycle.

RESOLUTION NO. 2025-

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF UKIAH AUTHORIZING SUBMITTAL OF REGIONAL PAYMENT PROGRAM APPLICATIONS AND RELATED AUTHORIZATIONS FOR ALL PAYMENT PROGRAMS

WHEREAS:

1. The California Public Resources Code authorizes the Department of Resources Recycling and Recovery (CalRecycle) to administer various Payment Programs; and

2. In furtherance of this authority, CalRecycle is required to establish procedures governing the administration of the Payment Programs; and

3. The Payment Program allows regional participation; and

4. CalRecycle's procedures for administering Payment Programs require, among other things, a Regional Applicant's governing body to declare by resolution certain authorizations related to the administration of the Payment Programs.

NOW, THEREFORE, BE IT RESOLVED that:

1. The City Council of the City of Ukiah authorizes City of Ukiah to submit a Regional Payment Program application on behalf of itself as Lead Participant and all Non-Lead Participants for all Payment Programs**.**

2. The Signature Authorities identified below, are hereby authorized to determine and submit a list of the Non-Lead Participants in accordance with CalRecycle requirements.

3. The City Manager, or their designee, are hereby authorized as Signature Authority to execute on behalf of all participants all documents necessary to implement and close out the programs.

4. These authorizations are effective until rescinded by this governing body.

AGENDA SUMMARY REPORT

SUBJECT: Review and Consider Introduction by Title Only of an Ordinance Adding Chapter 9 to Division 2 of Ukiah City Code to Regulate Sidewalk Vending on Public Property and in the Public Right-of-Way.

DEPARTMENT: Community Development

PREPARED BY: Darcy Vaughn, Assistant City Attorney, Jesse Davis, Chief Planning Manager

PRESENTER: Darcy Vaughn, Assistant City Attorney and Jesse Davis, AICP/Chief Planning Manager

ATTACHMENTS:

1. Sidewalk Vending Ordinance
2. Senate Bill 946, Safe Sidewalk Vending Act

Summary: This public hearing is for Council to review and consider introduction by title only of an Ordinance adding a new Chapter 9 to Division 2 of the Ukiah City Code to regulate sidewalk vending on public property and within the public right-of-way. At this time, however, Staff is recommending the Council review and provide input on the Ordinance for introduction at a future date not yet certain.

Background: In recent years, the City of Ukiah has experienced a steady increase in sidewalk vending activity, particularly in public spaces including commercial corridors, street intersections, and residential neighborhoods. Unauthorized vending activity has also increased during annual City events (e.g., Sunday Concerts in the Park and Pumpkin Fest). This trend has underscored the need for a balanced, enforceable regulatory framework that accounts for the interdisciplinary nature of enforcement between the Ukiah Police Department and Community Development Department Code Enforcement Division, the use of public property, and efficient licensing procedures for street vendors, in particular.

In June 2025, the City convened an interdepartmental working group that included the Ukiah Police Department Chief, the Chief Building Official, the Community Development Director, the Project and Grant Administrator within the City Manager's Office, and the Community Services Supervisor, as well as the City Attorney's Office, to develop an Ordinance (Attachment 1) to address these related street-vending issues. The enforcement framework developed is substantially based on the regulatory scope authorized under Senate Bill 946 (Attachment 2), the Safe Sidewalk Vending Act, which permits local governments to impose time, place, and manner restrictions on sidewalk vending activities only when those restrictions are directly tied to objective health, safety, or welfare concerns. All proposed limitations on sidewalk vending set forth in this Ordinance, including spacing requirements, sidewalk clearance standards, and sanitary requirements, were structured to meet this statutory threshold.

As part of the development process, the team conducted a comparative review of sidewalk vending ordinances adopted by the Cities of Dublin, Hayward, Alameda, Santa Cruz, Pacifica, Santa Monica, and Santa Rosa. These peer jurisdictions provide practical models for regulating sidewalk vending, as they were recently adopted and reflect the requirements of SB 946. SB 946 decriminalized sidewalk vending statewide and established the legal framework within which cities and counties may regulate sidewalk vending activities. The legislation is intended to promote economic inclusion, particularly for low income and immigrant communities, while preserving the authority of local governments to adopt objective health, safety, and welfare regulations. Under SB 946, local regulations must be narrowly tailored, not unduly restrictive, and may not

impose criminal penalties solely for vending without a permit. Although SB 946 was heavily shaped by street vending conditions in larger metropolitan areas, the statute applies uniformly to all California cities and counties, including smaller and more rural jurisdictions such as Ukiah.

Discussion: In drafting this Ordinance, Staff intentionally avoided restrictions and regulations prohibited by SB 946, including regulations based on economic competition, community preference, or generalized neighborhood bans on sidewalk vending. Instead, operational conditions are narrowly tailored to ensure legal compliance while maintaining safe and accessible public spaces.

This Ordinance establishes operational standards and location restrictions to govern vending activities that take place on public sidewalks, pedestrian paths, and other components of the public right-of-way. These rules apply uniformly across the City and are aligned with state law, specifically Government Code Sections 51036 to 51039 (SB 946).

The Ordinance is applicable to all individuals engaged in the sale of goods or food items from non-permanent setups, including roaming and stationary sidewalk vendors. It mandates that vendors obtain and display a City-issued sidewalk vending permit and business license and, where applicable, a Mendocino County Health Permit and a California Seller's Permit. The Ordinance also holds vendors accountable for maintaining public health and safety standards, complying with Americans with Disabilities Act accessibility requirements, and avoiding obstructions to pedestrian or vehicular traffic.

Key operational limitations include prohibiting vending near fire hydrants, driveways, emergency exits, transit stops, schools during operational hours, and at or near special events or certified farmers' markets without appropriate authorization to participate in the events.

The primary intent behind this Ordinance is to comply with SB 946 while striking a balance between allowing economic opportunities for small vendors and protecting public spaces, ensuring that vending does not compromise safety, accessibility, public health, or effective transportation corridors. It also enables effective enforcement by outlining a penalty structure for violations, establishing a permit revocation process, and providing for appeals for vending permits and licenses. This regulatory approach provides the City with the tools to manage sidewalk vending in a manner that supports economic inclusion while preserving public resources and quality of life.

During the final preparation of this Ordinance, Staff realized additional details still need to be analyzed and determined. Such details include, but are not necessarily limited to, the preparation of a mobile (sidewalk) vendor permit application, development of a process for the permitting and inspection of sidewalk vendors, and the establishment of a sidewalk vendor permit fee. Staff is therefore recommending that Council review and provide input on the Ordinance, with introduction of the Ordinance to be scheduled at a future date not yet certain.

Recommended Action: Review and provide input on the Ordinance adding a new Chapter 9 to Division 2 of the Ukiah City Code to regulate sidewalk vending on public property and within the public right-of-way. Introduce and possibly adopt the Ordinance at a future date not yet certain.

ORDINANCE NO.

ORDINANCE OF THE CITY COUNCIL OF THE CITY OF UKIAH ADDING A NEW CHAPTER 9 TO DIVISION 2 OF THE CITY CODE TO REGULATE SIDEWALK VENDING ON PUBLIC PROPERTY AND IN THE PUBLIC RIGHT OF WAY.

The City Council of the City of Ukiah hereby ordains as follows:

SECTION ONE. FINDINGS

1. Unregulated sidewalk vending has the potential to create obstructions in the public right-of-way, endanger pedestrians, and impede access for emergency services, necessitating additional municipal oversight and enforcement.
2. Sidewalk vending involving food sales can introduce health and sanitation risks if not properly regulated. Requiring appropriate health permits and on-site trash disposal ensures the cleanliness and safety of public spaces.
3. Maintaining minimum clear path widths on sidewalks is essential for compliance with the Americans with Disabilities Act (ADA) and ensures that all individuals, including those with mobility challenges, have safe access to public walkways.
4. Restricting sidewalk vending in residential zones and near sensitive uses such as schools and emergency infrastructure protects the character and function of these areas.
5. The Ordinance preserves fair and equitable access to public space, ensuring that vending activities do not conflict with permitted events, farmers markets, or parades.

SECTION TWO.

Chapter 9 is hereby added to Division 2 of the Ukiah City Code and shall read as follows:

CHAPTER 9 SIDEWALK VENDING

§ 2750 PURPOSE AND INTENT

The purpose of this Chapter is to set forth specific regulations to govern the vending of various goods from locations which are not permanent and that are temporarily located in the public right of way. In addition, this Chapter is intended to protect against unsafe conditions and health, safety, or welfare concerns of the community that result from the operation of sidewalk vendors on public sidewalks or a pedestrian path, consistent with the provisions of Government Code §§ 51036—51039. The requirements set forth in this Chapter are intended to protect the public's health, safety, and welfare by ensuring that vendors on public property provide safe and sanitary conditions for consumers and the general public, are adequately insured, and are properly licensed or permitted with the City and licensed with other agencies.

Nothing in the Chapter shall be construed to limit the City's ability to enforce, or remedies for enforcing, laws of general applicability or other provisions of this Code against sidewalk vendors, or

to take any other enforcement actions against sidewalk vendors that are not prohibited by state or federal law, or which are allowed by this Code.

The provisions of this Chapter are not intended to apply to the permitting process and regulations for food vendors permitted at special events in the City.

§ 2751 DEFINITIONS

A. Any words or phrases not defined within this Chapter shall be defined as set forth in current dictionaries. If no dictionary defines a particular term, the City Community Development Director shall have the authority to define the term or equate it to a defined term that is similar in nature.

B. For purposes of this Chapter, the words and phrases set out herein shall have the following meanings:

CART means any pushcart, stand, display, pedal-driven cart, wagon, showcase, rack, or other non-motorized conveyance, and includes a stationary cart or a roaming cart.

MENDOCINO COUNTY HEALTH PERMIT means any and all licenses, permits, certifications, and courses required and issued by the Mendocino County Environmental Health Services Division to vend food within the city in accordance with this Chapter.

ROAMING SIDEWALK VENDOR has the same meaning as set forth in Government Code section 51036(b) and as may be amended from time to time, and includes a sidewalk vendor who moves from place to place and stops only to complete a transaction.

SIDEWALK means any paved surface in the public right-of-way provided for the use of pedestrians and includes pedestrian paths.

SIDEWALK VENDING means the sale of food or merchandise from a pushcart, stand, display, pedal-driven cart, wagon, showcase, rack, or other non-motorized conveyance, or from one's person, upon a public sidewalk or other pedestrian path.

SIDEWALK VENDOR has the same meaning as set forth in Government Code section 51036(a) and as may be amended from time to time, and includes a person who sells food or merchandise from a pushcart, stand, display, pedal-driven cart, wagon, showcase, rack, or other non-motorized conveyance, or from one's person, upon a public sidewalk or other pedestrian path.

STATIONARY SIDEWALK VENDOR has the same meaning as set forth in Government Code section 51036(c) and as may be amended from time to time, and includes a sidewalk vendor who vends from a fixed location.

VEND OR VENDING means the sale of any goods, wares, merchandise, prepared, pre-packaged; or unprepared, unpackaged food or food stuff of any kind.

VENDING PERMIT means a permit issued by the Business Services Division of the City of Ukiah Community Development Department to undertake sidewalk vending within the city in accordance with this Chapter.

§ 2752 LICENSING AND PERMITS

All sidewalk vendors are required to obtain:

A. A Business License pursuant to Division 2, Chapter 1 of this Code.

B. A Vending Permit issued pursuant to this Chapter. Sidewalk vendors must comply with the terms and conditions set forth in the Vending Permit.

C. A Seller's Permit issued by the California Department of Tax and Fee Administration ("CDTFA") and any additional licenses from state or local agencies to the extent required by law.

D. A Mendocino County health permit for food-related vending, if applicable.

§ 2753 OPERATIONAL REQUIREMENTS

A. Each cart used by a sidewalk vendor must display a valid Business License, Vending Permit, Seller's Permit, and, if applicable, a Mendocino County Health Permit.

B. No stationary sidewalk vendor may operate in any residential zone.

C. In order to prevent obstructions of the public right-of-way, the total display area footprint of the cart, including the cart itself and any accompanying display, signage, or related items, shall not exceed a length of 72 inches, a width of 54 inches, or a height, including roof, awning, or canopy, of 78 inches. The area of any roof, awning, or canopy must not exceed the area footprint of the cart.

D. In order to comply with the Americans with Disabilities Act (ADA) regulations and with the accessibility requirements set forth in the California Building Code, the total display area footprint of the cart must allow for 48 inches, or as the law updates, of clear width walking space of any sidewalk where the cart is located.

E. Sidewalk vendors may not set up tables, chairs, or other structures, unless otherwise authorized by the City in the conditions to the Vending Permit.

F. Sidewalk vendors may not access a City power source without authorization from the City, nor a private power source without authorization from such private property owner or agent.

G. In order to preserve sanitary conditions in all public rights-of-way, all sidewalk vendors shall provide a trash receptacle for customers and must ensure proper disposal of customer and vendor trash. The trash receptacle must be large enough to accommodate customer trash without resort to existing trash receptacles located on any block for use by the general public. A sidewalk vendor may not dispose of customer trash in existing trash receptacles on sidewalks.

H. In order to preserve sanitary conditions in all public rights-of-way, all sidewalk vendors shall maintain a clean and trash-free area, including a sanitized and neat appearing cart, within a ten-foot radius around the vendor's cart during hours of operation and shall ensure that such area is clean and trash-free before relocating or closing.

I. In order to prevent damage to public property and prevent obstructions of the public right-of-way, no cart may be chained or fastened to any pole, sign, tree, or other object in the public right-of-way.

J. In order to preserve the safety of the public, and prevent misuse of carts, no cart may be left unattended at any time.

K. In order to preserve the safety of the public, to prevent misuse of carts, and to prevent obstructions of the public right-of-way, no cart may be stored, parked, or left overnight on any public street or right-of-way, or in any public park or other public property.

L. In order to preserve the safety of vehicular travelers, no sidewalk vendor may solicit business from or conduct business with persons in motor vehicles.

M. In order to preserve the safety of vehicular travelers and pedestrians, and to preserve public peace and welfare, no cart may be outfitted with any equipment, signage, or mechanism that endangers or detracts from the health, safety, or welfare of the public by causing an excessive distraction to motorists or interfering with nearby residences, business, or pedestrians including, but not limited to, sound amplification, flashing lights, smoke, steam, bubbles, gas-powered generators, or excessive fumes.

N. In order to preserve the safety of vehicular travelers and pedestrians, any cart operated before sunrise or after sunset, or in location with insufficient lighting, shall be equipped with sufficient lighting or reflectors to alert pedestrians and vehicular travelers to the presence of the cart.

O. In order to prevent obstructions of the public right-of-way, all signage related to the vending operation shall be affixed to the cart.

P. In order to prevent obstructions of the public right-of-way, all merchandise sold by a sidewalk vendor must be stored within that vendor's cart or attached receptacle or other receptacle approved by the City.

Q. In order to preserve sanitary conditions in all public rights-of-way, all sidewalk vendors shall immediately clean up any food, grease, or other fluid or item related to their sidewalk vending activities that are spilled or discharged. Disposal of trash, food, grease, or other materials to any storm drain, creek, or waterway is prohibited. Vendors shall not dump, drain, or discard any fouled, spoiled, or unused product, which includes draining ice coolers, drink containers, and/or miscellaneous containers on the ground.

R. In order to preserve sanitary conditions in all public rights-of-way, all sidewalk vendors shall comply with all applicable state, county, and city health and safety regulations and permitting and licensing requirements. In particular, if food is prepared and/or sold, sidewalk vendors must comply with the California Retail Food Code set forth at Part 7 of Division 104 of the California Health and Safety Code (commencing at Section 113700).

S. In order to preserve the safety of the public, all sidewalk vendors shall not use an open flame on or within any cart. Any sidewalk vendor using cooking equipment shall have a fire extinguisher. Propane, natural gas, or butane cylinder tanks must be 20-gallon tanks or less, stored in an upright position during use and positioned in such a way to prevent falling, tipping, and tampering, be

properly ventilated, and must contain a shut-off valve and a pressure regulator, having a hose of a type approved for use by the manufacturer with the equipment.

§ 2753 VENDING PERMITS

A. To apply for or renew a Vending Permit, the sidewalk vendor applicant must file an application with the Business Services Division of the Community Development Department, accompanied by an application or renewal fee in an amount established by resolution of the City Council. The application or renewal shall be in a form prescribed by the Director of the Community Development Department and shall contain the following:

1. Valid identification, such as a State of California driver's license or identification number, an individual taxpayer identification number, or a municipal identification number, or any other government-issued identification card.

2. The name, address, e-mail address, and telephone number of the sidewalk vendor.

3. Proposed hours and days of operation.

4. Whether the sidewalk vendor intends to operate a stationary vending cart or a roaming vending cart.

5. Proposed location of operation.

a. An application for placement of a stationary vending cart in a commercial or industrial area of the city must contain the proposed location, marked by major cross streets, and a photo or sketch of such location.

b. An application for a roaming vending cart in a residential area of the city must contain a sketch or description of the route the sidewalk vendor will travel.

c. If a cart will be used, a description of the cart including dimensions.

6. The type of merchandise or food offered for sale or exchange.

7. Proof of a valid Business License issued pursuant to this Code.

8. A valid CDTFA Seller’s Permit and any additional licenses from state or local agencies to the extent required by law.

9. Proof of a policy or policies of comprehensive general liability insurance, in an amount as approved by the City, against any injury, death, loss, or damage as a result of wrongful or negligent acts or omissions by the permittee, with an endorsement naming the City as an additional insured.

10. A Mendocino County health permit for food-related vending, if applicable.

11. A certificate of completion of a food handler course, if applicable.

12. A declaration that the information provided to the city is true and correct.

13. Any other information as may be required by the Administrator.

B. Vending Permits will expire one year after the date of issuance and will be subject to renewal.

C. A Vending Permit shall only permit the operation of one vending cart or other type of conveyance at any one time.

D. Vending Permits are not transferable.

E. In accordance with Government Code § 51038, personally identifiable information, as defined in Section 51038, will be confidential and will not be disclosed and shall be exempt from disclosure under the California Public Records Act.

F. The Director of Community Development may require inspection of the cart or other conveyance as a condition of Permit issuance.

G. If there is any prior history of violations under this chapter, the Director of Community Development may review any such violations in its review of renewal requests and consider those violations when imposing conditions on a renewal Permit.

H. The Director of Community Development or their designee may revoke a Vending Permit for a fourth or subsequent violation of this Chapter within a twenty-four-month period.

I. A person whose Vending Permit is revoked pursuant to this Chapter may not renew their Vending Permit for one year.

J. Persons who are denied Vending Permits or whose Vending Permits have been revoked pursuant to this Chapter may appeal by filing a written notice of appeal with the City's Hearing Officer. The appeal must be filed with the Chief Code Enforcement Official within ten work days after receipt of the notice of denial or revocation. The appeal hearing shall be conducted pursuant to the appeal hearing procedure set forth in Section 3456 of this Code for appeals to the Hearing Officer. The Hearing Officer shall hear and determine the final appeal and the decision of the Hearing Officer shall be final.

§ 2754 LOCATION LIMITATIONS

In order to ensure access to public rights-of-way by pedestrians and emergency personnel, and avoid interference with vehicular traffic, certified farmers' markets, swap meets, and City-permitted special events, sidewalk vendors shall not operate in the following areas of the public right-of-way:

A. Any area other than a public sidewalk or pedestrian path.

B. Within 15 feet of a fire hydrant, fire call box, or other emergency facility.

C. Within five feet of an entrance to or emergency exit of any building or business during the hours that the building or business is open to the public.

D. Within ten feet of the outer edge of a driveway or driveway apron.

E. Within ten feet of a transit stop.

F. Adjacent to any marked loading zone or bus zone.

G. Within five feet of a curb return.

H. Any location that would impede entering or exiting a parked vehicle.

I. Any location or pathway that impedes the flow of pedestrian traffic by reducing the clear space to less than four feet or impedes access to or the use of abutting property, including, but not limited to, residences and places of business.

J. Within 100 feet in any direction of the nearest vendor or concessionaire participating in a certified farmers' market or City-hosted community yard sale during the operating hours of the certified farmers' market or City-hosted community yard sale unless vendor has been issued a Vending Permit that authorizes them to vend as part of the certified farmers' market or City-hosted community yard sale.

K. Within 100 feet of a City-permitted special event including, but not limited to, parades, concerts, and street fairs, unless vendor has received a permit to vend as part of the event. For moving events, vending shall be prohibited within 100 feet of any portion of the approved event route. For stationary events, vending shall be prohibited within 100 feet of the parcel and/or site boundary for the location of the event.

L. Within 300 feet of the property line of any public or private school grounds between 7:00 a.m. and 6:00 p.m. on school days, and while the same is in use, including for afterschool childcare, enrichment classes and sports.

M. Upon or within any roadway, median strip, or dividing section.

N. Any public sidewalk location when the straight path would not allow for 48 inches, or as the law updates, of clear width walking space of any sidewalk to comply with the Americans with Disabilities Act (ADA) regulations and with the accessibility requirements set forth in the California Building Code.

O. Any public sidewalk where there is a 180 degree turn path for sidewalk ramps and corner curbs when the location would not allow for 42 inches approaching the turn, 48 inches at the turn, and 42 inches leaving the turn, or as the law updates, of clear width walking space of any sidewalk to comply with ADA regulations.

P. Stationary sidewalk vendors shall not vend within 150 feet of another stationary sidewalk vendor.

Q. Sidewalk vendors are prohibited from entering or encroaching onto private property while engaging in sidewalk vending activities.

R. No sidewalk vendor shall operate within 100 feet of any structure that is abandoned, vacant, declared hazardous, or posted with a notice of violation or subject to a building, fire, or safety-related permit restricting occupancy or access.

§ 2755 VENDING IN CITY PARKS

Sidewalk vendors vending in parks must comply with the following additional requirements:

A. No stationary sidewalk vendor may operate in a City-owned or City-operated park if the operator of the park has signed an agreement for concessions that exclusively permits the sale of food or merchandise by the concessionaire.

B. Sidewalk vendors shall stop vending upon the designated closing time of the park.

C. Vending is permitted between 8:00 am and sunset in parks where there is no designated closing time.

§ 2756 ENFORCEMENT AND PENALTIES

A. It shall be the duty of the Director of Community Development to enforce each and all of the provisions of this Chapter. The Director may delegate this authority to the Chief Code Enforcement Official. Every member of the Code Enforcement Division of the Community Development Department is directed to assist the Director and Official in the enforcement of this Chapter.

B. Unless otherwise provided, any violation of any of the provisions of this Chapter by a sidewalk vendor who has a valid sidewalk vending permit from the City shall be punishable by an administrative fine according to the following provisions:

1. An administrative fine of $100 for a first violation.

2. An administrative fine of $200 for a second violation within one year of the first violation.

3. An administrative fine of $500 for each additional violation within one year of the first violation.

4. Possible revocation a sidewalk vending permit for a fourth or subsequent violation of this Chapter within a twenty-four-month period as set forth in Section 2753.

C. Unless otherwise provided, a person engaged in sidewalk vending without a valid city sidewalk Vending Permit shall be issued an administrative fine according to the following provisions:

1. An administrative fine of $250 for a first violation.

2. An administrative fine of $500 for a second violation within one year of the first violation.

3. An administrative fine of up to $1000 for each additional violation within one year of the first violation.

D. Failure to pay an administrative fine shall not be punishable as an infraction or misdemeanor.

E. Additional fines, fees, assessments, or any other financial conditions beyond those authorized in this Section shall not be assessed.

F. When assessing an administrative fine pursuant to this Section, the City shall take into consideration the person's ability to pay the fine. The City shall provide the person with notice of his or her right to request an ability-to-pay determination and shall make available instructions or other materials for requesting an ability-to-pay determination at adjudication or while the judgment remains unpaid, including when a case is delinquent or has been referred to a comprehensive collection program.

G. If the person meets the criteria described in subdivision (a) or (b) of Section 68632 of the Government Code, the City shall accept, in full satisfaction, twenty percent (20%) of the administrative fine, or may offer the following alternatives:

1. Community service in lieu of paying the total administrative fine.

2. Waiver of the administrative fine.

3. An alternative disposition.

SECTION THREE.

1. Publication: Within fifteen (15) days after its adoption, this Ordinance shall be published once in a newspaper of general circulation in the City of Ukiah. In lieu of publishing the full text of the Ordinance, the City may publish a summary of the Ordinance once 5 days prior to its adoption and again within fifteen (15) days after its adoption.

2. Effective Date: The ordinance shall become effective thirty (30) days after its adoption.

3. Severability: If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Ordinance, or its application to any person or circumstance, is for any reason held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Ordinance, or its application to any other person or circumstance. The City Council of the City of Ukiah hereby declares that it would have adopted each section, subsection, subdivision, paragraph, sentence, clause or phrase hereof, irrespective of the fact that any one or more other sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases hereof be declared invalid or unenforceable.

Senate Bill No. 946

CHAPTER 459

An act to add Chapter 6.2 (commencing with Section 51036) to Part 1 of Division 1 of Title 5 of the Government Code, relating to sidewalk vendors.

[Approved by Governor September 17, 2018. Filed with Secretary of State September 17, 2018.]

LEGISLATIVE COUNSEL'S DIGEST

SB 946, Lara. Sidewalk vendors.

Existing law authorizes a local authority, by ordinance or resolution, to adopt requirements for the public safety regulating any type of vending and the time, place, and manner of vending from a vehicle upon a street.

This bill would prohibit a local authority, as defined, from regulating sidewalk vendors, except in accordance with the provisions of the bill. The bill would provide that a local authority is not required to adopt a new program to regulate sidewalk vendors if the local authority has established an existing program that substantially complies with the provisions of the bill. The bill would apply these provisions to a chartered or general law city, county, or city and county.

The bill would require a local authority that elects to adopt a sidewalk vending program to, among other things, not require a sidewalk vendor to operate within specific parts of the public right-of-way, except when that restriction is directly related to objective health, safety, or welfare concerns, and not restrict sidewalk vendors to operate only in a designated neighborhood or area, except as specified. The bill would authorize a local authority to, by ordinance or resolution, adopt additional requirements regulating the time, place, and manner of sidewalk vending, as specified, if the requirements are directly related to objective health, safety, or welfare concerns. The bill would also authorize a local authority to prohibit sidewalk vendors in areas located within the immediate vicinity of a permitted certified farmers' market and a permitted swap meet, as specified, and to restrict or prohibit sidewalk vendors within the immediate vicinity of an area designated for a temporary special permit issued by the local authority, as specified. A violation would be punishable only by an administrative fine, as specified, pursuant to an ability-to-pay determination, and proceeds would be deposited in the treasury of the local authority.

The bill would require the dismissal of any criminal prosecutions under any local ordinance or resolution regulating or prohibiting sidewalk vendors that have not reached final judgment. The bill would also authorize a

person who is currently serving, or who completed, a sentence, or who is subject to a fine, for a conviction of a misdemeanor or infraction for sidewalk vending, as specified, to petition for dismissal of the sentence, fine, or conviction.

Existing constitutional provisions require that a statute that limits the right of access to the meetings of public bodies or the writings of public officials and agencies be adopted with findings demonstrating the interest protected by the limitation and the need for protecting that interest.

This bill would make legislative findings to that effect.
Vote: majority Appropriation: no Fiscal Committee: no Local Program: no

THE PEOPLE OF THE STATE OF CALIFORNIA DO ENACT AS FOLLOWS:

SECTION 1. (a) The Legislature finds and declares all of the following:

(1) Sidewalk vending provides important entrepreneurship and economic development opportunities to low-income and immigrant communities.

(2) Sidewalk vending increases access to desired goods, such as culturally significant food and merchandise.

(3) Sidewalk vending contributes to a safe and dynamic public space.

(4) The safety and welfare of the general public is promoted by encouraging local authorities to support and properly regulate sidewalk vending.

(5) The safety and welfare of the general public is promoted by prohibiting criminal penalties for violations of sidewalk vending ordinances and regulations.

(6) This act applies to any city, county, or city and county, including a charter city. The criminalization of small business entrepreneurs, and the challenges that those entrepreneurs face as a result of a criminal record, are matters of statewide concern. Further, unnecessary barriers have been erected blocking aspiring entrepreneurs from accessing the formal economy, harming California's economy in the process, and disrupting the regulation of business, which is a matter of statewide concern. Moreover, California has an interest in the regulation of traffic, a matter of statewide concern, whether in ensuring the appropriate flow of traffic or in ensuring the safety of pedestrians on the road or the sidewalk.

(b) It is the intent of the Legislature to promote entrepreneurship and support immigrant and low-income communities.

SEC. 2. Chapter 6.2 (commencing with Section 51036) is added to Part 1 of Division 1 of Title 5 of the Government Code, to read:

CHAPTER 6.2. Sidewalk Vendors

51036. For purposes of this chapter, the following definitions apply:

(a) "Sidewalk vendor" means a person who sells food or merchandise from a pushcart, stand, display, pedal-driven cart, wagon, showcase, rack, or other nonmotorized conveyance, or from one's person, upon a public sidewalk or other pedestrian path.

(b) "Roaming sidewalk vendor" means a sidewalk vendor who moves from place to place and stops only to complete a transaction.

(c) "Stationary sidewalk vendor" means a sidewalk vendor who vends from a fixed location.

(d) "Local authority" means a chartered or general law city, county, or city and county.

51037. (a) A local authority shall not regulate sidewalk vendors except in accordance with Sections 51038 and 51039.

(b) Nothing in this chapter shall be construed to affect the applicability of Part 7 (commencing with Section 113700) of Division 104 of the Health and Safety Code to a sidewalk vendor who sells food.

(c) Nothing in this chapter shall be construed to require a local authority to adopt a new program to regulate sidewalk vendors if the local authority has established an existing program that substantially complies with the requirements in this chapter.

51038. (a) A local authority may adopt a program to regulate sidewalk vendors in compliance with this section.

(b) A local authority's sidewalk vending program shall comply with all of the following standards:

(1) A local authority shall not require a sidewalk vendor to operate within specific parts of the public right-of-way, except when that restriction is directly related to objective health, safety, or welfare concerns.

(2) (A) A local authority shall not prohibit a sidewalk vendor from selling food or merchandise in a park owned or operated by the local authority, except the local authority may prohibit stationary sidewalk vendors from vending in the park only if the operator of the park has signed an agreement for concessions that exclusively permits the sale of food or merchandise by the concessionaire.

(B) Notwithstanding subparagraph (A), a local authority may adopt additional requirements regulating the time, place, and manner of sidewalk vending in a park owned or operated by the local authority if the requirements are any of the following:

(i) Directly related to objective health, safety, or welfare concerns.

(ii) Necessary to ensure the public's use and enjoyment of natural resources and recreational opportunities.

(iii) Necessary to prevent an undue concentration of commercial activity that unreasonably interferes with the scenic and natural character of the park.

(3) A local authority shall not require a sidewalk vendor to first obtain the consent or approval of any nongovernmental entity or individual before he or she can sell food or merchandise.

(4) (A) A local authority shall not restrict sidewalk vendors to operate only in a designated neighborhood or area, except when that restriction is directly related to objective health, safety, or welfare concerns.

(B) Notwithstanding subparagraph (A), a local authority may prohibit stationary sidewalk vendors in areas that are zoned exclusively residential, but shall not prohibit roaming sidewalk vendors.

(5) A local authority shall not restrict the overall number of sidewalk vendors permitted to operate within the jurisdiction of the local authority, unless the restriction is directly related to objective health, safety, or welfare concerns.

(c) A local authority may, by ordinance or resolution, adopt additional requirements regulating the time, place, and manner of sidewalk vending if the requirements are directly related to objective health, safety, or welfare concerns, including, but not limited to, any of the following:

(1) Limitations on hours of operation that are not unduly restrictive. In nonresidential areas, any limitations on the hours of operation for sidewalk vending shall not be more restrictive than any limitations on hours of operation imposed on other businesses or uses on the same street.

(2) Requirements to maintain sanitary conditions.

(3) Requirements necessary to ensure compliance with the federal Americans with Disabilities Act of 1990 (Public Law 101-336) and other disability access standards.

(4) Requiring the sidewalk vendor to obtain from the local authority a permit for sidewalk vending or a valid business license, provided that the local authority issuing the permit or business license accepts a California driver's license or identification number, an individual taxpayer identification number, or a municipal identification number in lieu of a social security number if the local authority otherwise requires a social

security number for the issuance of a permit or business license, and that the number collected shall not be available to the public for inspection, is confidential, and shall not be disclosed except as required to administer the permit or licensure program or comply with a state law or state or federal court order.

(5) Requiring the sidewalk vendor to possess a valid California Department of Tax and Fee Administration seller's permit.

(6) Requiring additional licenses from other state or local agencies to the extent required by law.

(7) Requiring compliance with other generally applicable laws.

(8) Requiring a sidewalk vendor to submit information on his or her operations, including, but not limited to, any of the following:

(A) The name and current mailing address of the sidewalk vendor.

(B) A description of the merchandise offered for sale or exchange.

(C) A certification by the vendor that to his or her knowledge and belief, the information contained on the form is true.

(D) The California seller's permit number (California Department of Tax and Fee Administration sales tax number), if any, of the sidewalk vendor.

(E) If the sidewalk vendor is an agent of an individual, company, partnership, or corporation, the name and business address of the principal.

(d) Notwithstanding subdivision (b), a local authority may do both of the following:

(1) Prohibit sidewalk vendors in areas located within the immediate vicinity of a permitted certified farmers' market or a permitted swap meet during the limited operating hours of that certified farmers' market or swap meet. A "certified farmers' market" means a location operated in accordance with Chapter 10.5 (commencing with Section 47000) of Division 17 of the Food and Agricultural Code and any regulations adopted pursuant to that chapter. A "swap meet" means a location operated in accordance with Article 6 (commencing with Section 21660) of Chapter 9 of Division 8 of the Business and Professions Code, and any regulations adopted pursuant to that article.

(2) Restrict or prohibit sidewalk vendors within the immediate vicinity of an area designated for a temporary special permit issued by the local authority, provided that any notice, business interruption mitigation, or other rights provided to affected businesses or property owners under the local authority's temporary special permit are also provided to any sidewalk vendors specifically permitted to operate in the area, if applicable. For purposes of this paragraph, a temporary special permit is a permit issued by the local authority for the temporary use of, or encroachment on, the sidewalk or other public area, including, but not limited to, an encroachment permit, special event permit, or temporary event permit, for purposes including, but not limited to, filming, parades, or outdoor concerts. A prohibition of sidewalk vendors pursuant to this paragraph shall only be effective for the limited duration of the temporary special permit.

(e) For purposes of this section, perceived community animus or economic competition does not constitute an objective health, safety, or welfare concern.

51039. (a) (1) A violation of a local authority's sidewalk vending program that complies with Section 51038 is punishable only by the following:

(A) An administrative fine not exceeding one hundred dollars ($100) for a first violation.

(B) An administrative fine not exceeding two hundred dollars ($200) for a second violation within one year of the first violation.

(C) An administrative fine not exceeding five hundred dollars ($500) for each additional violation within one year of the first violation.

(2) A local authority may rescind a permit issued to a sidewalk vendor for the term of that permit upon the fourth violation or subsequent violations.

(3) (A) If a local authority requires a sidewalk vendor to obtain a sidewalk vending permit from the local authority, vending without a sidewalk vending permit may be punishable by the following in lieu of the administrative fines set forth in paragraph (1):

(i) An administrative fine not exceeding two hundred fifty dollars ($250) for a first violation.

(ii) An administrative fine not exceeding five hundred dollars ($500) for a second violation within one year of the first violation.

(iii) An administrative fine not exceeding one thousand dollars ($1,000) for each additional violation within one year of the first violation.

(B) Upon proof of a valid permit issued by the local authority, the administrative fines set forth in this paragraph shall be reduced to the administrative fines set forth in paragraph (1), respectively.

(b) The proceeds of an administrative fine assessed pursuant to subdivision (a) shall be deposited in the treasury of the local authority.

(c) Failure to pay an administrative fine pursuant to subdivision (a) shall not be punishable as an infraction or misdemeanor. Additional fines, fees, assessments, or any other financial conditions beyond those authorized in subdivision (a) shall not be assessed.

(d) (1) A violation of a local authority's sidewalk vending program that complies with Section 51038, or a violation of any rules or regulations adopted prior to January 1, 2019, that regulate or prohibit sidewalk vendors in the jurisdiction of a local authority, shall not be punishable as an infraction or misdemeanor, and the person alleged to have violated any of those provisions shall not be subject to arrest except when permitted under law.

(2) Notwithstanding any other law, paragraph (1) shall apply to all pending criminal prosecutions under any local ordinance or resolution regulating or prohibiting sidewalk vendors. Any of those criminal prosecutions that have not reached final judgment shall be dismissed.

(e) A local authority that has not adopted rules or regulations by ordinance or resolution that comply with Section 51037 shall not cite, fine, or prosecute a sidewalk vendor for a violation of any rule or regulation that is inconsistent with the standards described in subdivision (b) Section 51038.

(f) (1) When assessing an administrative fine pursuant to subdivision (a), the adjudicator shall take into consideration the person's ability to pay the fine. The local authority shall provide the person with notice of his or her right to request an ability-to-pay determination and shall make available instructions or other materials for requesting an ability-to-pay determination. The person may request an ability-to-pay determination at adjudication or while the judgment remains unpaid, including when a case is delinquent or has been referred to a comprehensive collection program.

(2) If the person meets the criteria described in subdivision (a) or (b) of Section 68632, the local authority shall accept, in full satisfaction, 20 percent of the administrative fine imposed pursuant to subdivision (a).

(3) The local authority may allow the person to complete community service in lieu of paying the total administrative fine, may waive the administrative fine, or may offer an alternative disposition.

(g) (1) A person who is currently serving, or who completed, a sentence, or who is subject to a fine, for a conviction of a misdemeanor or infraction for sidewalk vending, whether by trial or by open or negotiated plea, who would not have been guilty of that offense under the act that added this section had that act been in effect at the time of the offense, may petition for dismissal of the sentence, fine, or conviction before the trial court that entered the judgment of conviction in his or her case.

(2) Upon receiving a petition under paragraph (1), the court shall presume the petitioner satisfies the criteria in paragraph (1) unless the party opposing the petition proves by clear and convincing evidence that the petitioner does not satisfy the criteria. If the petitioner satisfies the criteria in paragraph (1), the court shall

grant the petition to dismiss the sentence or fine, if applicable, and dismiss and seal the conviction, because the sentence, fine, and conviction are legally invalid.

(3) Unless requested by the petitioner, no hearing is necessary to grant or deny a petition filed under paragraph (1).

(4) If the court that originally sentenced or imposed a fine on the petitioner is not available, the presiding judge shall designate another judge to rule on the petition.

(5) Nothing in this subdivision is intended to diminish or abrogate any rights or remedies otherwise available to the petitioner.

(6) Nothing in this subdivision or related provisions is intended to diminish or abrogate the finality of judgments in any case not falling within the purview of this chapter.

SEC. 3. The Legislature finds and declares that Section 2 of this act, which adds Section 51038 to the Government Code, imposes a limitation on the public's right of access to the meetings of public bodies or the writings of public officials and agencies within the meaning of Section 3 of Article I of the California Constitution. Pursuant to that constitutional provision, the Legislature makes the following findings to demonstrate the interest protected by this limitation and the need for protecting that interest:

The Legislature finds and declares that in order to protect the privacy of a sidewalk vendor with regard to his or her California driver's license or identification number, individual taxpayer identification number, or municipal identification number, when that number is collected in lieu of a social security number for purposes of the issuance of a permit or business license, it is necessary that the sidewalk vendor's number be confidential, except as provided in this act.

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Receive Presentation on 2025 Ukiah Valley Fire Authority Fuels Crew Accomplishments and Authorize the City Manager to Negotiate and Execute a Memorandum of Understanding Between the City of Ukiah and the Mendocino County Fire Safe Council for the Use of the Ukiah Valley Fire Authority Fuels Crew.

DEPARTMENT: Fire

PREPARED BY: Justin Buckingham, Battalion Chief

PRESENTER: Justin Buckingham, Battalion Chief, UVFA

ATTACHMENTS:

1. Draft UVFA-MCFSC MOU
2. UVFA Fuels Crew Accomplishments

Summary: Council will receive a presentation on 2025 Ukiah Valley Fire Authority Fuels Crew accomplishments and consider authorizing the City Manager to negotiate and execute a Memorandum of Understanding between the City of Ukiah and the Mendocino County Fire Safe Council for the use of the Ukiah Valley Fire Authority Fuels Crew.

Background: In 2024, the City of Ukiah received a grant from the United States Department of Agriculture (USDA) to establish a dedicated Fuels Crew within the Ukiah Valley Fire Authority (UVFA). The primary objective of this program is to conduct wildfire mitigation and vegetation management work throughout Mendocino County. Under the terms of the grant, the City is required to treat a minimum of **200 acres** of hazardous fuels during the performance period.

The Mendocino County Fire Safe Council has a long-standing record of implementing state and federally funded wildfire mitigation projects across the region. To improve coordination and streamline project delivery, the Fire Safe Council has proposed establishing a Memorandum of Understanding (MOU) with the City of Ukiah. This agreement would allow the UVFA Fuels Crew to perform work on approved Fire Safe Council projects, contributing directly to the City's USDA grant performance metrics.

Discussion: The proposed MOU (Attachment 1) provides a framework for UVFA and the Fire Safe Council to collaborate on turnkey projects identified through approved grant programs. Under the agreement, UVFA will provide labor and equipment as available, while the Fire Safe Council will oversee project coordination, site selection, and compliance with grant requirements.

The MOU specifies that there will be **no exchange of funds** between the two parties. In alignment with USDA grant and City priorities, the UVFA Crew's project work will initially be concentrated in areas adjacent to the Ukiah Valley, and then expand to include high-priority projects throughout Mendocino County. Work performed by the UVFA Fuels Crew will occur during active grant periods, ensuring all activities align with the scope and intent of the USDA grant and the Fire Safe Council's project objectives.

This partnership supports regional wildfire resilience, enhances interagency coordination, and maximizes the impact of grant-funded fuel reduction efforts throughout Mendocino County.

Staff requests Council receive a presentation on 2025 Ukiah Valley Fire Authority Fuels Crew accomplishments (Attachment 2) and authorize the City Manager to negotiate and execute a Memorandum of

Understanding (Attachment #1) between the City of Ukiah and the Mendocino County Fire Safe Council for the use of the Ukiah Valley Fire Authority Fuels Crew.

Recommended Action: Receive Presentation on 2025 Ukiah Valley Fire Authority Fuels Crew Accomplishments and authorize the City Manager to negotiate and execute Memorandum of Understanding between the City of Ukiah and the Mendocino County Fire Safe Council for the use of the Ukiah Valley Fire Authority Fuels Crew.

MEMORANDUM OF UNDERSTANDING BETWEEN
CITY OF UKIAH
AND
MENDCOCINO COUNTY FIRE SAFE COUNCIL

This Memorandum of Understanding (MOU) is made and entered into by and between the City of Ukiah (City) and the Mendocino County Fire Safe Council (MCFSC).

WHEREAS, Ukiah Valley Fire Authority (UVFA) is the name under which the City operates fire, medical, and other emergency and non-emergency services, including fuels reduction, in the City and in the boundaries of the Ukiah Valley Fire District; and

WHEREAS, UVFA's Fuels Reduction Crew (UVFA Crew), funded by its Ukiah Valley and Mendocino Hazardous Fuels Reduction Project, Community Wildfire Defense Grant, is intended (among other things) to "increase fire resiliency in the Ukiah Valley area and throughout Mendocino County, California, which are at-risk local communities; and

WHEREAS, in alignment with grant and City priorities, the UVFA Crew's project work will initially be concentrated in areas adjacent to the Ukiah Valley but will then branch out to high-priority projects throughout Mendocino County; and

WHEREAS, project locations and activities will be selected by the Fire Chief in consultation with the Mendocino County Fire Safe Council; and

WHEREAS, MCFSC has identified such projects and has obtained landowner permission for needed fuel reduction work by crews that are subcontracted to MCFSC; and

WHEREAS, the MCFSC has a need for assistance in performing such projects,

The parties agree as follows:

A. When the UVFA agrees to assign UVFA Crew to work on a project proposed by the MCFSC, MCFSC agrees to:

    1. Pay any project costs pre-specified in writing by UVFA and agreed to by MCFSC (e.g., onsite potra potty facilities) that directly related to and necessitated by such projects, except for wages, salaries, and other remuneration paid to UVFA employees, or UVFA Crew, and the cost of their equipment and support, and that are not otherwise covered by UVFA's Fuel Crew Grant Funding.

    2. Demonstrate the availability of adequate plans and specifications, sufficient funds, materials, supplies, and equipment, adequate technical supervision, and any special labor requirements to complete such projects.

    3. Obtain the approvals, notification, and permits required by any state, federal, or local agency necessary to commence construction, fuels management, or operation of such projects.

    4. Hold an orientation meeting with UVFA Crew at the commencement of such projects to explain the technical aspects, execution of, and need for such projects.

B. From proposals submitted by the MCFSC, UVFA shall select those projects meeting the priorities and resources of UVFA. UVFA shall submit evaluations to MCFSC that set forth any special requirements or conditions related to the projects. By so doing, with reference to any such

evaluations subsequently approved by MCFSC, UVFA agrees to provide labor, crew, supervision, normal transportation, food, and such tools as UVFA determines to be available. Upon receipt of MCFSC's acceptance of such evaluations, projects shall be assigned to UVFA Crew management where they will be scheduled in accordance with the priorities and resources of UVFA.

C. Timing

1. MCFSC recognizes that fire suppression, other emergency activities, or other fuel reduction projects may have priority over any other work for UVFA Crew.

2. MCFSC further recognizes that the resources of UVFA Crew are limited and work requirements of UVFA Crew may be altered in priority from time to time.

3. Projects will be performed within the rules and regulations of UVFA which may require temporary suspension or permanent cessation of projects due to emergency conditions as defined by such rules and regulations.

4. The Parties agree that any justified delays by either party shall be excused and costs caused by such delays shall be borne by the party incurring such costs.

D. Work performed under this MOU will be under the immediate supervision of UVFA officials. However, UFVA Crew will be instructed to also follow basic MCFSC contractor guidelines for fuel reduction projects. The MCFSC will provide such operation supervision, technical assistance, guidance, and inspection, as it considers necessary to properly complete the work.

E. Work performed on behalf of MCFSC does not in any way convey to UVFA or UVFA Crew or any persons working with UFVA in the performance of said work, employee status that would extend to them the benefits afforded to permanent employees of MCFSC.

F. Upon start of each project, or any phase thereof, permission is hereby granted to UVFA to place upon the project site a sign or emblem consistent in size and design to its surroundings, indicating the participation of UVFA and as is consistent with UVFA's grant obligations.

G. Neither party shall use the name of the other party in any form or manner in advertisements nor other information released to the public without the prior written approval of the other party. This Section is not intended to prohibit either party from legally complying with the California Public Records Act (PRA).

H. Each party, to the extent permitted by law, agrees to indemnify and hold harmless the other party, its officers, agents, and employees from all claims, demands, or liability arising out of the indemnifying party's performance under this MOU except where such injury or damage arose from the sole negligent or intentional acts or omissions of the other party.

I. Neither party may assign this MOU or any interest herein without the written consent of the other party.

J. Subject to the provisions herein, all remedies allowed by law are available to either party for enforcement of this MOU. Any waiver of rights by either party on any matter related to this MOU shall not be deemed to be a waiver on any other matter relating to the MOU.

K. All provisions of this MOU constitute essential elements of the agreed exchange that is the subject matter of this MOU. Accordingly, if any of these provisions are determined to be invalid, illegal, or

unenforceable in any material respect, the remainder of this MOU is not enforceable against either of the Parties except as may be necessary to effect payment for services already rendered.

L. This MOU may be modified by mutual written agreement of the parties.

M. This MOU takes effect shall remain in effect until December 31, 2028, unless terminated prior to that date by 60 days written notice from one party to the other.

By signing below, I CERTIFY that I fully reviewed and agreed to the contents of the Memorandum of Understanding.

Ukiah Valley Fire Authority - Fire Fuels Crew 2025

Fuels Mitigation Accomplishments and Partnerships

Introduction

- The UVFA Fire Fuels Crew was established to reduce wildfire risk, enhance defensible space, and support regional fire resilience.
- Since the start of 2025, the crew has completed projects across multiple high-risk areas, contributing to public safety and community protection.

Project Overview

- Total Projects Completed: 5 Major Areas
- Total Acres: 50 (30 in the western hills)
- Project Areas:
- 1. Low Gap Park
- 2. Russian River Estates
- 3. Great Redwood Trail
- 4. Airport Property
- 5. CAL FIRE Collaboration Projects

Low Gap Park Project

- Created shaded fuel breaks and cleared overgrown vegetation along park trails and perimeter zones.
- Reduced ladder fuels and improved defensible space along the homes in the western hills.

CITY VIEW
TRAIL

Russian River Estates Project

- Conducted defensible space clearing around access roads.
- Targeted high-density fine dead fuels adjacent to the only road into/out of the development.

Great Redwood Trail Project

- Improved visibility and access along trail corridors.
- Removed encroaching brush, hazardous trees, and annual grasses.
- Created buffers along the buildings adjacent to the railroad right-of-way.

Airport Property Project

- Cleared dead and hazard trees around runway perimeters.
- Reduced fine fuel loads to mitigate ignition potential near flight operations.

CAL FIRE Collaborative Projects

Supported CAL FIRE with prescribed burns and pile ignition operations.

Gained valuable field experience in controlled fire operations and interagency coordination.

Summary & Acknowledgements

- Over 50 acres treated since inception.
- Multiple agency partnerships established.
- Tangible improvements to community fire resilience.
- Acknowledgements:
- - Ukiah Valley Fire Authority
- - City of Ukiah
- - CAL FIRE

Building a More Resilient Ukiah Valley and Mendocino County

- Thank you to our crew members, partners, and community for the continued support.

Agenda Item No: 14.b.

MEETING DATE/TIME: 11/19/2025

ITEM NO: 2025-1298

City of Ukiah

AGENDA SUMMARY REPORT

SUBJECT: Receive Updates on City Council Committee and Ad Hoc Assignments, and, if Necessary, Consider Modifications to Assignments and/or the Creation/Elimination of Ad Hoc(s); Including the Possible Disbandment of the Zoning Reform Ad Hoc, and the Creation of an Airport Infill Policy Ad Hoc.

DEPARTMENT: City Clerk **PREPARED BY:** Kristine Lawler, City Clerk

PRESENTER: Mayor Crane and Various Councilmembers

ATTACHMENTS:

1. 2025 City Council Special Assignments and Ad Hocs

Summary: City Council members will provide reports and updates on their committee and ad hoc assignments. If necessary, the Council may consider modifications.

Background: City Council members are assigned to a number of committees and ad hoc activities. These assignments are included as Attachment 1.

Discussion: Previously, the City Council discussed having more time allocated to reporting on committee and ad hoc activities. Often, the Council Reports section of the regular agenda is rushed due to impending business (i.e., public hearings), and not enough time is afforded for reports beyond community activities.

In an effort to foster regular updates on committee and ad hoc assignments, this item is being placed on the agenda to provide the City Council members an expanded opportunity to report on assignments and modify assignments as necessary.

The Community Development Department has two recommendations: 1) to disband the Zoning Reform Ad Hoc, as the Ad Hoc's work has concluded (note the Downtown Zoning Code Ad Hoc, which is separate from the Zoning Reform Ad Hoc, is still active and meeting on a regular basis); and 2) to create a new Airport Infill Policy Ad Hoc. Per direction within Section 3.3.5 (f) of the Ukiah Municipal Airport Land Use Compatibility Plan (UKIALUCP) that “the preference of this policy is that all parcels eligible for Infill nonresidential development be identified at one time by the Local Agency” [City], the purpose of this new Ad Hoc would be to work with Staff to fulfill this objective. Once this is accomplished, Staff would present the identified parcels to the Mendocino County Airport Land Use Commission for review and consideration.

Recommended Action: Receive report(s). The Council will consider modifications to committee and ad hoc assignments along with the creation/elimination ad hoc(s); including the disbandment of the Zoning Reform Ad Hoc, and the creation and appointment of an Airport Infill Policy Ad Hoc.

*Note: Changing the composition of an existing ad-hoc among current councilmembers after work has begun presents potential Brown Act issues. Requests for fully filled ad-hocs are represented on the draft, but staff does not recommend changes except to fill vacated assignments. The current requests on the sheet for fully composed ad-hocs are primarily intended to convey interest in topics covered by these ad-hoc committees for possible future consideration of new assignments.
